3. Amendment of subsection (b)(6) and NOTE filed 1-26-95; operative 1-26-95 pursuant to Government Code section 11343.4(d) (Register 95, No. 4). Note: Under section 209(e)(2) of the Federal Clean Air Act (42 U.S.C. § 7543(e)(2)), California is required to receive authorization from the Administrator of the U.S. Environmental Protection Agency (U.S. EPA) prior to enforcing its regulations regarding new off-road vehicles and engines. Accordingly, the Air Resources Board will not seek to enforce the off-highway recreational vehicle regulations until such time as it receives authorization from the U.S. EPA.

4. Amendment of section heading and subsection (a), new subsection (b)(6) and subsection renumbering filed 10-28-99; operative 11-27-99 (Register 99, No. 44).

§ 2139. Testing.

After the vehicles have been accepted and restorative maintenance, if any, has been performed, the ARB or its designated laboratory shall perform the applicable emission tests pursuant to the following:

(a) For passenger cars and light-duty trucks, in-use compliance emission tests shall be performed pursuant to section 1960.1 or 1961, Title 13, California Code of Regulations, as applicable.

(b) For medium-duty vehicles certified according to the chassis standards and test procedures specified in section 1960.1 or 1961, Title 13, California Code of Regulations and the documents incorporated by reference therein, in-use compliance emission tests shall be performed pursuant to section 1960.1 or 1961, Title 13, California Code of Regulations, as applicable.

(c) For medium-duty engines and vehicles certified according to the optional engine test procedures specified in section 1956.8, Title 13, California Code of Regulations and the documents incorporated by reference therein, in-use compliance emission tests shall be performed pursuant to one of the following procedures:

(1) The engines of medium-duty vehicles may be tested pursuant to the engine test procedures specified in section 1956.8, provided that the manufacturer or its designated laboratory conduct procurement and enforcement testing pursuant to Sections 2136 through 2140, Title 13, California Code of Regulation, at the manufacturer's expense.

For manufacturers that have only one engine family or test group, the manufacturer or its designated laboratory that have more than one engine family or test group, the manufacturer or its designated laboratory shall procure no more than fifteen vehicles per engine family or test group. For manufacturers that have more than one engine family or test group, the manufacturer or its designated laboratory shall procure and test at the manufacturer's expense no more than one-third of its engine families or test groups and no more than fifteen vehicles from each engine family or test group. For the purposes of this section, "one-third" of a manufacturer's engine families or test groups shall be determined by dividing the number of distinct engine families or test groups by three, adding 0.5, and truncating the result to the nearest whole number.

The specific engine families or test groups subject to enforcement testing shall be selected by the ARB. The manufacturer or its designated laboratory shall begin the engine procurement process within 10 working days of notification by the ARB and shall complete testing within 100 working days of notification by the ARB. The Executive Officer shall approve the manufacturer's procurement procedures in advance of their use by the manufacturer. The Executive Officer shall approve a manufacturer's procurement procedures if engines are screened according to the criteria specified in section 2137, Title 13, California Code of Regulations and selected randomly from registration records compiled and prepared by R. L. Polk and Company or a comparable source. In addition, no vehicle shall be selected for enforcement testing with mileage less than 60 percent of the useful-life mileage without prior approval from the Executive Officer. The manufacturer shall permit an ARB representative to witness procurement, restorative maintenance, and enforcement testing. The Executive Officer shall have the authority to accept or reject a test engine based upon criteria specified in section 2137. Once an engine has been tested and determined to be in compliance with the current in-use emission standards, no further testing will be performed on subsequent engine families or test groups that carry-over the durability data of the tested engine family or test group.

Notwithstanding the above, if a manufacturer fails to demonstrate compliance with the emission standards after one-third of its engine families or test groups have been tested, additional engine families or test groups shall be tested, by the manufacturer or its designated laboratory, at the manufacturer's expense, until compliance is demonstrated on one-third of the engine families or test groups or all of a manufacturer's engine families or test groups have been tested. In addition, any engine family or test group which has been tested and determined to be in noncompliance shall be retested by the manufacturer each subsequent year until compliance with the applicable emission standards has been demonstrated. Notwithstanding the above, the ARB may conduct engine enforcement testing pursuant to the engine test procedures specified in section 1956.8, at their own expense.

(2) Medium-duty vehicles may be tested according to the chassis test procedures specified in section 1960.1(k) or 1961, as applicable, if a manufacturer develops correlation factors which establish the relationship between engine and chassis testing for each engine family or test group and submits these correlation factors within one year after the beginning of production. The correlation factors shall be applied to the measured in-use engine exhaust emission data to determine the in-use engine exhaust emission levels. All correlation factors and supporting data included in a manufacturer's application must be submitted to and approved by the Executive Officer in advance of their use by a manufacturer. Correlation factors intended to apply to a specific engine family or test group shall be applicable for each vehicle model incorporating that specific engine. Manufacturers shall submit test data demonstrating the applicability of the correlation factors for vehicle models comprising a minimum of 80 percent of their engine sales for that specific engine family or test group. The correlation factors for the remaining fleet may be determined through an engineering evaluation based upon a comparison with similar vehicle models. The Executive Officer shall approve a submitted correlation factor if it accurately corresponds to other established empirical and theoretical correlation factors and to emission test data available to the Executive Officer.

A manufacturer may choose to use the results from the chassis in-use testing as a screening test. If an engine family or test group does not demonstrate compliance with any of the applicable in-use engine standards, as determined from the chassis test data and the applied correlation factors, the manufacturer shall be subject to the requirements and cost of in-use compliance engine testing, as specified in section 2139(c)(1). The manufacturer shall be subject to engine testing for any non-complying engine family or test group for each subsequent year until compliance with the engine emission standards is demonstrated.

Subsequent to approval of the correlation factors, the Executive Officer may make a determination that the original correlation factors are not valid. Such a determination may be based upon in-use emission data, including chassis and engine testing. Upon determination that the correlation factors for a specific engine family or test group are not valid, the manufacturer of the engine family or test group shall be subject to the enforcement testing requirements and costs of in-use compliance engine testing, as specified in section 2139(c)(1).

(3) The manufacturer shall choose one of the procedures specified in subsections (c)(1) through (c)(2). The Executive Officer shall permit the use of alternative test procedures if the Executive Officer determines the alternative test procedure adequately predicts the exhaust emissions from the engine test procedure specified in section 1956.8, Title 13, California Code of Regulations. Such a determination may be based upon correlation with test data from the engine test procedures.

(4) The time limits specified in subsections (c)(1) and (c)(2) may be extended by the Executive Officer if the manufacturer demonstrates that the time limits specified could not be achieved due to reasons beyond the reasonable control of the manufacturer.

(d) For heavy-duty engines and vehicles, in-use compliance emission tests shall be performed pursuant to section 1956.8, Title 13, California Code of Regulations.

(e) For motorcycles, in-use compliance emission tests shall be performed pursuant to section 1958, Title 13, California Code of Regulations.

(f) For off-road motorcycles and all-terrain vehicles, in-use compliance tests shall be performed pursuant to section 2412, Title 13, California Code of Regulations. The in-use compliance testing shall use the same test procedure utilized for the specific vehicle's original certification testing.

(g) For off-road compression-ignition engines, in-use compliance tests shall be performed pursuant to Section 2423, Title 13, California Code of Regulations. The in-use compliance testing shall use the same test procedure utilized for the specific engine's original certification testing.

(h) For spark-ignition inboard and sterndrive marine engines, in-use compliance tests shall be performed pursuant to section 2442, Title 13, California Code of Regulations. The in-use compliance testing shall use the same test procedure utilized for the specific engine's original certification testing.

(i) For any emission in-use compliance test performed pursuant to subsections (a) through (h), the ARB may waive a specific test for subsequent vehicle samples if results from vehicle samples already tested are deemed sufficient to establish complying emission levels. The ARB shall inform the manufacturer at least 30 days prior to enforcement testing of its vehicles or engines and shall permit a manufacturer representative to observe the enforcement testing.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43104 and 43105, Health and Safety Code. Reference: Sections 39002, 39003, 43000, 43009.5, 43013, 43018, 43100, 43101, 43101.5, 43102, 43103, 43104, 43105, 43106, 43107, 43204-43205.5 and 43211-43213, Health and Safety Code.

HISTORY

1. Renumbering and amendment of text previously incorporated by reference in section 2112 to section 2139 filed 1-24-90; operative 2-23-90 (Register 90, No. 8). For prior history, see Registers 86, No. 38 and 83, No. 17.
2. New subsections (a), (b), (c), (d), (e) and (f) filed 8-2-91; operative 9-2-91 (Register 91, No. 49).
3. Amendment of subsection (c)(2) filed 8-30-91; operative 9-30-91 (Register 92, No. 14).
4. New subsection (f), subsection relettering, and amendment of newly designated subsection (g) and NOTE filed 1-26-95; operative 1-26-95 pursuant to Government Code section 11343.4(d) (Register 95, No. 4). Note: Under section 209(e)(2) of the Federal Clean Air Act (42 U.S.C. § 7543(e)(2)), California is required to receive authorization from the Administrator of the U.S. Environmental Protection Agency (U.S. EPA) prior to enforcing its regulations regarding new off-road vehicles and engines. Accordingly, the Air Resources Board will not seek to enforce the off-highway recreational vehicle regulations until such time as it receives authorization from the U.S. EPA.
5. Amendment of subsections (a), (b), (c)(1) and (c)(2) filed 10-28-99; operative 11-27-99 (Register 99, No. 44).
6. New subsection (g), subsection relettering and amendment of newly designated subsection (h) filed 12-28-2000; operative 12-28-2000 pursuant to Government Code section 11343.4(d) (Register 2000, No. 52).
7. New subsection (h), subsection relettering and amendment of newly designated subsection (i) filed 7-22-2002; operative 8-21-2002 (Register 2002, No. 30).

§ 2140. Notification and Use of Test Results.

(a) The Executive Officer shall notify the manufacturer in writing if the in-use vehicle enforcement test results indicate that the test fleet contains three or more failures of the same emission-related component. Upon receipt of the notification, the manufacturer shall submit an emissions information report in accordance with Title 13, California Code of Regulations, Sections 2146 and 2147. The engine family, test group or sub-group manufacturer shall be subject to recall when a specific emission-related failure occurred in three or more test vehicles, unless the Executive Officer determines from the emissions information report that a recall is unnecessary.

(b) If the results of the in-use vehicle emission tests conducted pursuant to Section 2139 indicate that the average emissions of the test vehicles for any pollutant exceed the applicable emission standards specified in Title 13, California Code of Regulations, Sections 1960.1, 1961, 1956.8, 1958, 2412, 2423 or 2442, the entire vehicle population so represented shall be deemed to exceed such standards. The Executive Officer

shall notify the manufacturer of the test results and upon receipt of the notification, the manufacturer shall have 45 days to submit an influenced recall plan in accordance with Sections 2113 through 2121, Title 13, California Code of Regulations. If no such recall plan is submitted, the Executive Officer may order corrective action including recall of the affected vehicles in accordance with Sections 2122 through 2135, Title 13, California Code of Regulations.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43105, Health and Safety Code. Reference: Sections 43000, 43009.5, 43013, 43018, 43101, 43104, 43105, 43106, 43107, 43204–43205.5 and 43211–43213, Health and Safety Code.

HISTORY

1. Renumbering and amendment of text previously incorporated by reference in Section 2112 to Section 2140 filed 1–24–90; operative 2–23–90 (Register 90, No. 8). For prior history, see Registers 86, No. 38 and 83, No. 17.
2. Amendment of subsection (b) and NOTE filed 1–26–95; operative 1–26–95 pursuant to Government Code section 11343.4(d) (Register 95, No. 4). Note: Under section 209(e)(2) of the Federal Clean Air Act (42 U.S.C. § 7543(e)(2)), California is required to receive authorization from the Administrator of the U.S. Environmental Protection Agency (U.S. EPA) prior to enforcing its regulations regarding new off-road vehicles and engines. Accordingly, the Air Resources Board will not seek to enforce the off-highway recreational vehicle regulations until such time as it receives authorization from the U.S. EPA.
3. Amendment filed 10–28–99; operative 11–27–99 (Register 99, No. 44).
4. Amendment of subsection (b) filed 12–28–2000; operative 12–28–2000 pursuant to Government Code section 11343.4(d) (Register 2000, No. 52).
5. Amendment of subsection (b) filed 7–22–2002; operative 8–21–2002 (Register 2002, No. 30).

Article 2.4. Procedures for Reporting Failures of Emission-Related Components

§ 2141. General Provisions.

(a) The provisions regarding applicability of the failure reporting procedures and the definitions shall be the same as those set forth in Title 13, California Code of Regulations, Sections 2111 and 2112, except that this Section 2141 does not apply to off-road compression-ignition engines, as defined in Section 2421. The provisions of this Article shall apply to the vehicles and engines specified in section 2111 manufactured up to and including the 2009 model year, plus their useful lives. This Article shall not apply to vehicles and engines manufactured for the 2010 model year and thereafter.

(b) The requirement to file emission warranty information reports and field information reports for a given class or category of vehicles or engines shall be applicable for the warranty period but not to exceed the useful-life period of the vehicles or engines beginning with the 1990 model-year vehicles or engines.

(c) The requirement to file an emissions information report for a given class or category of vehicles or engines shall be applicable for the useful-life period of the vehicles or engines.

(d) In the case of motor vehicles or engines for which certification of the exhaust and evaporative emission control systems is granted to different manufacturers, the information reporting responsibility in subsections (b) and (c) above shall be assigned to the certifying manufacturer.

NOTE: Authority cited: Sections 39600, 39601, 43105 and 43106, Health and Safety Code. Reference: Sections 43000, 43009.5, 43018, 43101, 43104, 43105, 43106, 43107 and 43204–43205.5, Health and Safety Code.

HISTORY

1. New section filed 1–24–90; operative 2–23–90 (Register 90, No. 8).
2. Amendment of subsection (a) filed 12–28–2000; operative 12–28–2000 pursuant to Government Code section 11343.4(d) (Register 2000, No. 52).
3. Amendment of section and NOTE filed 12–5–2007; operative 1–4–2008 (Register 2007, No. 49).

§ 2142. Alternative Procedures.

(a) A vehicle manufacturer may use an alternative procedure to those specified in Sections 2144(a) and 2145(a), provided the Executive Officer has determined that the alternative procedure will produce substantially equivalent results. In making such a determination, the Executive Officer shall consider the capacity of the alternative procedure to:

- (1) ensure early detection of failing components within the useful life of the vehicles or engines;
- (2) track failing components by engine family;
- (3) assure prompt notification of the Executive Officer when a systemically failing component is indicated;
- (4) provide objective, complete and easily monitored data; and
- (5) be audited by the Executive Officer.

(b) If, in order to comply with the requirements of Section 2142(a), 2144(a) or 2145(a), a manufacturer elects to develop a system based upon a sampling of representative California dealerships, such plan must be reviewed and approved by the Executive Officer prior to its implementation.

NOTE: Authority cited: Sections 39600, 39601 and 43105, Health and Safety Code. Reference: Sections 43000, 43009.5, 43018, 43101, 43104, 43105, 43106, 43107 and 43204–43205.5, Health and Safety Code.

HISTORY

1. New section filed 1–24–90; operative 2–23–90 (Register 90, No. 8).

§ 2143. Failure Levels Triggering Recall.

An engine family, test group or a subgroup shall be subject to a recall when the number of failures of a specific emission-related component exceeds the failure level set forth below, unless the Executive Officer determines from the emission information report that a recall is unnecessary pursuant to the criteria set forth in Section 2148(a) and (b). Vehicles or engines in an engine family or test group are subject to recall at the following failure levels: 4 percent or 50 (whichever is greater) for 1990 through 1991 model year vehicles or engines; 3 percent or 50 (whichever is greater) for 1992 through 1993 model-year vehicles or engines; and 2 percent or 50 (whichever is greater) for 1994 and subsequent model-year vehicles or engines. The Executive Officer may extend the applicability of the 4 or 3 percent failure levels if he/she determines that proceeding to the next lower level will create an excessive administrative burden on the ARB or the vehicle manufacturers without a corresponding benefit in the reduction of emissions.

NOTE: Authority cited: Sections 39600, 39601 and 43105, Health and Safety Code. Reference: Sections 43000, 43009.5, 43018, 43101, 43104, 43105, 43106, 43107 and 43204–43205.5, Health and Safety Code.

HISTORY

1. New section filed 1–24–90; operative 2–23–90 (Register 90, No. 8).
2. Amendment filed 10–28–99; operative 11–27–99 (Register 99, No. 44).

§ 2144. Emission Warranty Information Report.

(a) A manufacturer shall:

(1) Review warranty claim records for each engine family or test group on a quarterly basis to determine and compile by cumulative total the number of claims made for emission-related components. The data compiled shall be based on all warranty claims, without any prescreening of data as to the validity of the claims. In the case of heavy-duty vehicles or engines, a manufacturer may use nationwide data for monitoring warranty claims of a California-certified engine family or test group which is also certified by the United States Environmental Protection Agency.

(2) Categorize warranty claims for each engine family or test group by the specific emission control component replaced or repaired.

(3) On the basis of data obtained subsequent to the effective date of these regulations, file an emission warranty information report for each quarter when the cumulative number of unscreened warranty claims for a specific emission-related component or repair represent at least one percent or twenty five (whichever is greater) of the vehicles or engines of a California-certified engine family or test group.

(b) The emission warranty information report shall contain the following information in substantially the format outlined below:

(1) The manufacturer's corporate name.

(2) A description of each class or category of California-certified vehicles or engines affected by a warranty replacement or warranty repair of a specific emission-related component, including model year and engine family or test group.

(3) The number and percentage of vehicles or engines in each engine family or test group for which a warranty replacement or warranty repair of a specific emission-related component was identified.

(4) A short description of the specific emission-related component that was replaced or repaired under warranty.

(c) Emission warranty information reports shall be submitted not more than 25 days after the close of a calendar quarter. Subsequent to the filing of an emission warranty information report, a manufacturer shall submit quarterly reports updating the number and percentage of emission-related warranty claims with the most recent information, unless a recall has been implemented. Emission warranty information reports and updates shall be submitted to the Chief, Mobile Source Operations Division, 9528 Telstar Avenue, El Monte, CA 91731.

(d) The records described in Section 2144(a)(1) of these procedures and the records used under the alternative procedure described in Section 2142(a) of these procedures shall be made available to the Executive Officer upon request.

NOTE: Authority cited: Sections 39600, 39601 and 43105, Health and Safety Code. Reference: Sections 43000, 43009.5, 43018, 43101, 43104, 43105, 43106, 43107 and 43204-43205.5, Health and Safety Code.

HISTORY

1. New section filed 1-24-90; operative 2-23-90 (Register 90, No. 8).
2. Amendment of subsections (a)(1)-(3), (b)(2), (b)(3) and (c) filed 10-28-99; operative 11-27-99 (Register 99, No. 44).

§ 2145. Field Information Report.

(a) On the basis of data obtained and reported pursuant to Section 2144 of these procedures, a manufacturer shall file a field information report not more than 45 days after an emission warranty information report indicates that a cumulative total of unscreened warranty claims for a specific emission-related component is found to exist in excess of the percentage of vehicles specified in Section 2143, unless the manufacturer has committed to perform a recall by notifying the ARB of its intent in writing within the 45-day period. A recall plan must be submitted within 45 days of that notice.

(b) All field information reports shall be submitted to the Chief, Mobile Source Operations Division, 9528 Telstar Avenue, El Monte, CA 91731, and shall contain the following information in substantially the format outlined below:

- (1) The manufacturer's corporate name.
- (2) A field information report number assigned by the manufacturer which shall be used in all related correspondence.
- (3) A description of each class or category of California-certified vehicles or engines affected including make, model, model-year, engine family or test group and such other information as may be required to identify the vehicles or engines affected. The description shall include those engine families or test groups related to the affected engine family or test group through common certification test data allowed under Title 40, Code of Federal Regulations, Section 86.085-24(f), as amended December 10, 1984 or Title 40 Code of Federal Regulations, Section 86.1839-01, as adopted May 4, 1999 ("carry-over" and "carry-across" engine families).
- (4) A description of the emission-related component that failed or was replaced or repaired under warranty, the failure and the probable cause of the failure.

(5) The number and percentage of vehicles or engines in each engine family or test group for which a failure of a specific emission-related component was identified.

(6) The total number and percentage of unscreened warranty claims and failures of a specific emission-related component projected to occur during the engine family's or test group's useful life and a description of the method used to project this number.

(7) An estimated date when the failure of a specific emission-related component will reach the levels specified in Section 2143 of these procedures.

NOTE: Authority cited: Sections 39600, 39601 and 43105, Health and Safety Code. Reference: Sections 43000, 43009.5, 43018, 43101, 43104, 43105, 43106, 43107 and 43204-43205.5, Health and Safety Code.

HISTORY

1. Renumbering and amendment of text previously incorporated by reference in Section 2111 to Section 2145 filed 1-24-90; operative 2-23-90 (Register 90, No. 8). For prior history, see Registers 86, No. 38 and 83, No. 17.
2. Amendment of subsections (b), (b)(3), (b)(5) and (b)(6) filed 10-28-99; operative 11-27-99 (Register 99, No. 44).

§ 2146. Emissions Information Report.

(a) A manufacturer shall file an emissions information report:

(1) For 1990 and subsequent model-year vehicles or engines, when the failure of a specific emission-related component exceeds the percentages specified in Section 2143 of these procedures. An emissions information report shall not be required sooner than 45 days after the field information report has been submitted to the Executive Officer.

(2) Not more than 45 days after the Executive Officer, with cause, requires such a report. For purposes of this section, "cause" shall be based upon any information in ARB possession which indicates that a failure of significant scope is occurring which might necessitate a recall, including but not limited to the in-use enforcement test results specified in Section 2140(a) above, and information gathered from ARB in-use surveillance activities, Smog Check inspections, and consumer complaints.

(3) For 1982 through 1989 model-year vehicles or engines, not more than 15 days after a specific emission-related defect is determined to exist in twenty-five or more vehicles or engines of the same model year. A defect shall be determined in accordance with procedures established by a manufacturer to identify safety-related defects.

(b) No emissions information report shall be required if a manufacturer has committed to perform a recall by notifying the ARB of its intent in writing after the failure of a specific emission-related component exceeds the percentages specified in Section 2143 of these procedures. A recall plan shall be submitted within 45 days of the manufacturer's notification of intent to perform a recall.

(c) All emissions information reports shall be submitted to the Chief, Mobile Source Operations Division, 9528 Telstar Avenue, El Monte, CA 91731, and shall contain the following information in substantially the format outlined below. For purposes of this section, the term "failure" shall be considered synonymous with the term "defect" for those emissions information reports filed pursuant to subsection (a)(3), above.

- (1) The manufacturer's corporate name.
- (2) The field information report number from which the failure was first reported, if applicable.
- (3) A description of each class or category of California-certified vehicles or engines affected by the failure including make, model, model-year, engine family or test group, and such other information as may be required to identify the vehicles or engines affected.
- (4) A description of the emission-related component that failed, the failure and the probable cause of failure.
- (5) A description of any driveability problems or impact on other vehicle or engine performance factors such as fuel economy and cold starting likely to result from the failure.
- (6) For emissions information reports filed pursuant to Section 2146(a)(1) and (2), a description of how emissions will be affected over the useful life of the vehicles or engines due to the failure.
- (7) For emissions information reports filed pursuant to Section 2146(a)(3), an evaluation of the emission impact of the failure and any available emission data which relate to the failure.

NOTE: Authority cited: Sections 39600, 39601 and 43105, Health and Safety Code. Reference: Sections 43000, 43009.5, 43018, 43101, 43104, 43105, 43106, 43107 and 43204-43205.5, Health and Safety Code.

HISTORY

1. New section filed 1-24-90; operative 2-23-90 (Register 90, No. 8).
2. Amendment of subsections (c) and (c)(3) filed 10-28-99; operative 11-27-99 (Register 99, No. 44).

§ 2147. Demonstration of Compliance with Emission Standards.

(a) In order to overcome the presumption of noncompliance set forth in Title 13, California Code of Regulations, Section 2123(b), the average emissions of the vehicles and engines with the failed emission-related

component must comply with applicable emission standards. A manufacturer may demonstrate compliance with the emission standards by following the procedures set forth in either subsection (b) or subsection (c) of this section.

(b) A manufacturer may test properly maintained in-use vehicles with the failed emission-related component pursuant to the applicable certification emission tests specified in Title 13, California Code of Regulations, Section 1960.1 or 1961, as applicable, for passenger cars, light-duty trucks and medium-duty vehicles, Section 1956.8 for heavy-duty engines and vehicles, Section 1958 for motorcycles, and Section 2442 for inboard and sterndrive marine engines. The emissions shall be projected to the end of the vehicle's or engine's useful life using in-use deterioration factors. The in-use deterioration factors shall be chosen by the manufacturer from among the following:

(1) "Assigned" in-use deterioration factors provided by the ARB on a manufacturer's request and based on ARB in-use testing; or,

(2) deterioration factors generated during certification, provided adjustments are made to account for vehicle aging, customer mileage-accumulation practices, type of failed component, component failure mode, effect of the failure on other emission-control components, commercial fuel and lubricant quality, and any other factor which may affect the vehicle's or engine's operating conditions; or,

(3) subject to approval by the Executive Officer, a manufacturer-generated deterioration factor. The Executive Officer shall approve such deterioration factor if it is based on in-use data generated from certification emission tests performed on properly maintained and used vehicles in accordance with the procedures set forth in Section 1960.1 or 1961 of Title 13 of the California Code of Regulations as applicable for passenger cars, light-duty trucks, and medium-duty vehicles; Section 1956.8 of Title 13 of the California Code of Regulations for heavy duty vehicles and engines; and Section 1958 of Title 13 of the California Code of Regulations for motorcycles, and if the vehicles from which it was derived are representative of the in-use fleet with regard to emissions performance and are equipped with similar emission control technology as vehicles with the failed component.

(c) In lieu of the vehicle or engine emission testing described in subsection (b) above and subject to approval by the Executive Officer, a manufacturer may perform an engineering analysis, laboratory testing or bench testing, when appropriate, to demonstrate the effect of the failure.

NOTE: Authority cited: Sections 39600, 39601 and 43105, Health and Safety Code. Reference: Sections 43000, 43009.5, 43018, 43101, 43104, 43105, 43106, 43107 and 43204-43205.5, Health and Safety Code.

HISTORY

1. New section filed 1-24-90; operative 2-23-90 (Register 90, No. 8).
2. Amendment of subsections (b) and (b)(3) filed 10-28-99; operative 11-27-99 (Register 99, No. 44).
3. Amendment of subsection (b) filed 7-22-2002; operative 8-21-2002 (Register 2002, No. 30).

§ 2148. Evaluation of Need for Recall.

(a) Once the emission information report is filed, the Executive Officer shall evaluate the failure to determine whether a recall is necessary. Factors to be considered shall include but are not limited to the following:

- (1) the validity of the data;
- (2) the emission impact of the failure on individual vehicles or engines;
- (3) the possibility of induced tampering due to driveability problems resulting from the failure;
- (4) the effects of the failure on performance, fuel economy, and safety;
- (5) the failure rates and the timing and extent of a remedy if no recall is required; and
- (6) other factors specific to the failure.

(b) Notwithstanding subsection (a) above, a recall shall not be required if the manufacturer submits information with the emissions information report which demonstrates to the satisfaction of the Executive Officer that the failure:

- (1) is limited to an emission-related component on a less-than-substantial percentage of vehicles and does not represent a pervasive defect

in design, application, or execution which is likely to affect a substantial number of such emission-related components during the useful life of the vehicle or engines, and

(2) is likely to be corrected under the warranty program or other in-use maintenance procedure shortly after the inception of the problem.

(c) If a manufacturer can identify a subgroup of an engine family or test group which is subject to a failure, a recall may be limited to that subgroup with Executive Officer approval.

NOTE: Authority cited: Sections 39600, 39601 and 43105, Health and Safety Code. Reference: Sections 43000, 43009.5, 43018, 43101, 43104, 43105, 43106, 43107 and 43204-43205.5, Health and Safety Code.

HISTORY

1. New section filed 1-24-90; operative 2-23-90 (Register 90, No. 8).
2. Amendment of subsection (c) filed 10-28-99; operative 11-27-99 (Register 99, No. 44).

§ 2149. Notification and Subsequent Action.

(a) The Executive Officer shall notify the manufacturer of the evaluation results. If the Executive Officer deems a noncompliance exists, a manufacturer shall have 15 days upon receipt of ARB notification to notify the ARB in writing of its intent to perform a recall. A manufacturer may initiate one of the following recalls:

(1) A voluntary recall if the emissions information report submitted was required pursuant to Section 2146(a)(1) or (a)(3) of these procedures;

(2) An influenced recall if the emissions information report submitted was required pursuant to Section 2146(a)(2) of these procedures.

(b) If no notification to perform a voluntary or influenced recall is submitted by the manufacturer within the 15-day period specified in subsection (a) above, the ARB may initiate further investigation which could lead, respectively, to an influenced or ordered recall of the subject vehicles or engines.

(c) Following notification of noncompliance by the ARB, a manufacturer shall submit within 45 days a recall plan in accordance with Section 2113(a) or (b), Title 13, California Code of Regulations.

NOTE: Authority cited: Sections 39600, 39601 and 43105, Health and Safety Code. Reference: Sections 43000, 43009.5, 43018, 43101, 43104, 43105, 43106, 43107, 43204-43205.5, 43211-43213 and 43107, Health and Safety Code.

HISTORY

1. New section filed 1-24-90; operative 2-23-90 (Register 90, No. 8).

Article 3. Surveillance Testing

§ 2150. Assembly-Line Surveillance.

(a) Each manufacturer offering new vehicles for sale in California shall make available to the state board at reasonable times and upon reasonable written notice its facilities for the purpose of observing assembly-line testing conducted pursuant to Article 1.

(b) Upon request, facilities at the assembly-line shall be made available for the state board to conduct its own assembly-line tests with the manufacturer's or the state board's own equipment. In lieu of the state board's surveillance testing at assembly-lines, a manufacturer and the executive officer of the state board may agree

(1) to the state board's surveillance testing in California at a point or points mutually satisfactory to both, or

(2) to surveillance being conducted by an independent laboratory pursuant to instructions of the executive officer. The executive officer shall endeavor to conduct assembly-line surveillance testing under this subdivision with respect to manufacturers whose assembly-lines are outside the continental United States.

NOTE: Authority cited: Sections 39600, 39601 and 43202, Health and Safety Code. Reference: Sections 39002, 39003, 39500, 43100, 4302 and 43210, Health and Safety Code.

HISTORY

1. Amendment of subsection (a) filed 10-17-73 as procedural and organizational; effective upon filing (Register 73, No. 42).
2. Amendment filed 12-5-73 as an emergency; effective upon filing. Certificate of Compliance included (Register 73, No. 49).
3. New subsection (c) filed 3-6-74; effective thirtieth day thereafter (Register 74, No. 10).

4. Repealer of subsection (c) filed 5-23-75; effective thirtieth day thereafter (Register 75, No. 21).
5. Amendment filed 11-30-83; effective thirtieth day thereafter (Register 83, No. 49).

§ 2151. New Motor Vehicle Dealer Surveillance.

(a) No dealer shall sell, or offer or deliver for sale a new passenger car, light-duty truck, or medium-duty vehicle which is required to meet emission standards adopted pursuant to Chapter 2 (commencing with Section 43100) of Part 5 of Division 26 of the Health and Safety Code, unless such vehicle conforms to the following requirements:

- (1) Ignition timing set to manufacturer's specification with an allowable tolerance of $\pm 3^\circ$
- (2) Idle speed is set to manufacturer's specification with an allowable tolerance of ± 100 rpm;
- (3) Required exhaust and evaporative emission controls, such as EGR valves, are operating properly;
- (4) Vacuum hoses and electrical wiring for emission controls are correctly routed; and
- (5) Idle mixture is set to manufacturer's specification or according to manufacturer's recommended service procedure.

(b) The executive officer or his/her authorized representative shall, pursuant to Health and Safety Code Section 43012, conduct inspection and surveillance of new motor vehicles at dealerships to verify conformity with the requirements set forth in paragraph (a). Functional tests, steady-state inspection tests, and other tests as reasonably necessary shall be performed. The California Motor Vehicle Inspection Program emission test standards in Section 2176 applicable to the appropriate model year may be used by the executive officer or his/her authorized representative to verify the compliance of new motor vehicles with the requirements of subparagraph (a). Exceeding the limits specified in Section 2176 shall be deemed a violation of the requirements of subparagraph (a). Costs such as those enumerated in Section 2153 shall be borne by the manufacturers.

(c) Violation of the requirements set forth in paragraph (a) may result in one or more of the following sanctions:

- (1) Dealer liability for a civil penalty pursuant to Health and Safety Code Section 43212; for the purpose of this section, the word "distributor" in Section 43212 includes dealers;
- (2) Dealer infraction liability for violation of Vehicle Code Section 24007(b) or 27156; or
- (3) Any other remedy against a manufacturer or dealer provided for by law.

NOTE: Authority cited: Sections 39600, 39601 and 43211, Health and Safety Code. Reference: Sections 39002, 39003, 39500, 43000, 43009, 43012, 43210, 43211, 43212 and 43600, Health and Safety Code; and Sections 24007(b), 27156 and 27157, Vehicle Code.

HISTORY

1. Amendment filed 12-12-78; effective thirtieth day thereafter (Register 78, No. 50). For prior history, see Register 77, No. 12.
2. Amendment filed 11-30-83; effective thirtieth day thereafter (Register 83, No. 49).

§ 2152. Surveillance of Used Cars at Dealerships.

(a) No dealer shall sell, or offer or deliver for sale a used passenger car, light-duty truck, or medium-duty vehicle which is required to meet emission standards adopted pursuant to Chapter 1 (commencing with Section 43000) of Part 5 of Division 26 of the Health and Safety Code, unless such vehicle conforms to the following requirements:

- (1) Ignition timing set to retrofit device or vehicle manufacturer's specification with an allowable tolerance $\pm 3^\circ$;
- (2) Idle speed set to retrofit device or vehicle manufacturer's specification with an allowable tolerance of ± 100 rpm;
- (3) Required exhaust and evaporative emission controls, such as EGR valves, are operating properly;
- (4) Vacuum hoses and electrical wiring for emission controls are correctly routed and connected; and
- (5) Idle mixture set to retrofit device or vehicle manufacturer's specification or according to manufacturer's recommended service procedure.

(b) The requirements set forth in subparagraphs (a)(1) through (a)(5) shall also apply to a dealer when servicing emission related components. However, only that requirement(s) appropriate to the service performed shall apply.

(c) The executive officer or his/her authorized representative shall, pursuant to Health and Safety Code Section 43012, conduct inspection and surveillance of used motor vehicles at dealerships to verify conformity with the requirements set forth in paragraphs (a) and (b). Functional tests, steady-state inspection tests, and other tests as reasonably necessary, shall be performed. In addition, the California Motor Vehicle Inspection Program emission test standards in Section 2176 applicable to the appropriate model year may be used by the executive officer or his/her authorized representative to verify compliance with the requirements of subparagraph (a). Exceeding the limits specified in Section 2176 shall be deemed a violation of the requirements of subparagraph (a).

(d) Violation of the requirements set forth in paragraphs (a) and (b) may result in one or more of the following sanctions:

- (1) Dealer infraction liability for violation of Vehicle Code Section 24007(b) or 27156;
- (2) Action against the dealer's license pursuant to Vehicle Code Section 11713; or
- (3) Any other remedy against a manufacturer or dealer provided for by law.

NOTE: Authority cited: Sections 39600, 39601 and 43211, Health and Safety Code. Reference: Sections 39002, 39003, 43009, 43012, 43100 and 43600, Health and Safety Code; and Sections 11713, 24007(b), 27156, 27157 and 27157.5, Vehicle Code.

HISTORY

1. New section filed 5-23-75; effective thirtieth day thereafter (Register 75, No. 21).
2. Amendment of section and NOTE filed 3-16-77; effective thirtieth day thereafter (Register 77, No. 12).
3. Amendment filed 12-12-78; effective thirtieth day thereafter (Register 78, No. 50).
4. Editorial correction to subsection (a) (Register 79, No. 10).
5. Amendment filed 11-30-83; effective thirtieth day thereafter (Register 83, No. 49).

§ 2153. Reimbursement of Costs.

In connection with surveillance of emissions from new vehicles prior to their retail sale, the manufacturers of such vehicles shall pay fees to permit the state board to recover the state board's direct and indirect costs in conducting such surveillance. These costs will be computed on a person-hour basis according to time spent on each manufacturer, and shall include personnel salaries, administrative overhead, travel time and expenses. With respect to surveillance conducted away from the state board's Vehicle Testing Laboratory, if more than one manufacturer is involved in a particular trip, travel time and expenses shall be apportioned among them according to time spent in surveillance of each manufacturer's vehicles. The computations used in establishing fees will periodically be revised and shall be available upon request.

NOTE: Authority cited: Sections 39600, 39601 and 43203, Health and Safety Code. Reference: Section 43210, Health and Safety Code.

HISTORY

1. New section filed 12-5-73 as an emergency; effective upon filing. Certificate of Compliance included (Register 73, No. 49).
2. Amendment of NOTE filed 3-16-77; effective thirtieth day thereafter (Register 77, No. 12).
3. Amendment filed 11-30-83; effective thirtieth day thereafter (Register 83, No. 49).

Article 4. Certificates of Compliance

§ 2160. Certificates of Compliance Exemptions—New and Used Diesel Vehicles over 6,000 Pounds Gross Weight Rating.

NOTE: Authority cited: Section 4000.1(e), Vehicle Code; and Sections 39600 and 39601, Health and Safety Code. Reference: Section 4000.1(e), Vehicle Code; and Sections 43150-43156, Health and Safety Code.

HISTORY

1. Amendment filed 12-21-76 as an emergency; effective upon filing (Register 76, No. 52). For prior history, see Register 76, No. 1.
2. Amendment of NOTE filed 3-16-77; effective thirtieth day thereafter (Register 77, No. 12).
3. Certificate of Compliance as to filing of 12-21-76 filed 4-1-77 (Register 77, No. 14).
4. Amendment filed 10-25-78; effective thirtieth day thereafter (Register 78, No. 43).
5. Amendment filed 11-30-83; effective thirtieth day thereafter (Register 83, No. 49).
6. Amendment filed 2-9-84; effective thirtieth day thereafter (Register 84, No. 6).
7. Change without regulatory effect repealing section filed 3-18-96 pursuant to section 100, title 1, California Code of Regulations (Register 96, No. 12).

§ 2161. Certificates of Compliance Exemptions—New and Used Diesel Vehicles, 6,000 Pounds or Less Gross Weight Rating.

NOTE: Authority cited: Section 4000.1(e), Vehicle Code; and Sections 39600 and 39601, Health and Safety Code. Reference: Section 4000.1(e), Vehicle Code; and Sections 43150-43156, Health and Safety Code.

HISTORY

1. New section filed 10-25-78; effective thirtieth day thereafter (Register 78, No. 43).
2. Amendment filed 11-30-83; effective thirtieth day thereafter (Register 83, No. 49).
3. Amendment filed 2-9-84; effective thirtieth day thereafter (Register 84, No. 6).
4. Change without regulatory effect repealing section filed 3-18-96 pursuant to section 100, title 1, California Code of Regulations (Register 96, No. 12).

§ 2162. Certificates of Compliance Exemptions—New and Used Motorcycles.

NOTE: Authority cited: Section 4000.1(e), Vehicle Code; and Sections 39600 and 39601, Health and Safety Code. Reference: Section 4000.1(e), Vehicle Code; and Sections 43150-43156, Health and Safety Code.

HISTORY

1. New section filed 2-9-84; effective thirtieth day thereafter (Register 84, No. 6).
2. Change without regulatory effect repealing section filed 3-18-96 pursuant to section 100, title 1, California Code of Regulations (Register 96, No. 12).

§ 2163. Certificates of Compliance Exemptions for Used Motorcycles.

Certificates of Compliance are not required upon transfer of ownership and registration of motorcycles, nor upon initial registration of motorcycles with odometer readings of over 7,500 miles. This section shall become effective on September 1, 1984, and shall supersede the provisions of Section 2162 on that date.

NOTE: Authority cited: Section 4000.1(e), Vehicle Code; and Sections 39600 and 39601, Health and Safety Code. Reference: Sections 4000.1(e) and 4000.2, Vehicle Code; and Sections 43150-43156, Health and Safety Code.

HISTORY

1. New section filed 2-9-84; effective thirtieth day thereafter (Register 84, No. 6).

§ 2164. Certificates of Compliance Exemptions for Used Diesel-Powered Passenger Cars, Light-Duty Trucks, and Medium-Duty Vehicles.

Certificates of Compliance are not required upon transfer of ownership and registration of diesel-powered passenger cars, light-duty trucks, and medium-duty vehicles, nor upon initial registration of diesel-powered passenger cars, light-duty trucks, and medium-duty vehicles with odometer readings of over 7,500 miles. This section shall become effective on September 1, 1984, and shall supersede the provisions of Sections 2160 and 2161 on that date.

NOTE: Authority cited: Section 4000.1(e), Vehicle Code; and Sections 39600 and 39601, Health and Safety Code. Reference: Sections 4000.1(e) and 4000.2, Vehicle Code; and Sections 43150-43156, Health and Safety Code.

HISTORY

1. New section filed 2-9-84; effective thirtieth day thereafter (Register 84, No. 6).

§ 2165. Certificates of Compliance Exemptions for Used Heavy-Duty Diesel Vehicles.

Certificates of Compliance are not required upon transfer of ownership and registration of heavy-duty diesel vehicles, nor upon initial registration of heavy-duty diesel vehicles with an odometer reading of over

7,500 miles. This section shall become effective on September 1, 1984, and shall supersede the provisions of Sections 2160 and 2161 on that date.

NOTE: Authority cited: Section 4000.1(e), Vehicle Code; and Sections 39600 and 39601, Health and Safety Code. Reference: Sections 4000.1(e) and 4000.2, Vehicle Code; and Sections 43150-43156, Health and Safety Code.

HISTORY

1. New section filed 2-9-84; effective thirtieth day thereafter (Register 84, No. 6).

Article 5. Procedures for Reporting Failures of Emission-Related Equipment and Required Corrective Action

§ 2166. General Provisions.

(a) The provisions of this article apply to:

(1) California-certified 2010 and subsequent model-year passenger cars, light-duty trucks, medium-duty vehicles, heavy-duty vehicles, and motorcycles.

(2) California-certified engines used in such vehicles.

(b) For the purposes of this article, the definitions shall be the same as those set forth in Title 13, California Code of Regulations, Section 2035 (c) and Section 2166.1.

(c) These procedures shall not apply to zero emission vehicles and those vehicles certified under Health and Safety Code 44201.

(d) The Executive Officer may waive any or all of the requirements of this Article if he or she determines that the requirement constitutes an undue burden on the manufacturer. In making this determination, the Executive Officer may, but is not required to, consider the emissions impact, except as provided in 2168(f), or the economic impact of the requirement.

(e) This article contains procedures for reporting emissions warranty information and procedures for determining, and the facts constituting, compliance or failure of compliance with and violations of test procedures based on emissions warranty information. This article also contains procedures for requiring recalls or other corrective action based on such information. Nothing in this article shall limit the Executive Officer's authority pursuant to Health and Safety Code section 43105 to require recalls or other corrective action in other types of situations.

(f) Each part of this article shall be deemed severable, and in the event that any part of this article is held to be invalid, the remainder of this article shall continue in full force and effect.

NOTE: Authority cited: Sections 39500, 39600, 39601, 43013, 43018, 43100, 43101, 43102, 43104, 43105, 43106, 43107 and 43806, Health and Safety Code; and Section 28114, Vehicle Code. Reference: Sections 39002, 39003, 39500, 39667, 43000, 43009.5, 43013, 43017, 43018, 43100, 43101, 43101.5, 43102, 43104, 43105, 43106, 43107, 43202, 43204, 43205, 43205.5, 43206, 43210, 43211, 43212, 43213 and 43806, Health and Safety Code; and Section 28114, Vehicle Code.

HISTORY

1. New article 5 (sections 2166-2174) and section filed 12-5-2007; operative 1-4-2008 (Register 2007, No. 49).

§ 2166.1. Definitions.

(a) "Capture rate" means the percentage of in-use vehicles subject to recall which must be corrected to bring the class or category of vehicles into compliance. The number of vehicles subject to recall shall be based on the actual number of vehicles in use as verified by the Department of Motor Vehicles registration records, or vehicle or engine registration records compiled and prepared by R. L. Polk and Company or a comparable source at the time a recall is initiated.

(b) "Corrective Action" refers to any action taken by the manufacturer to remedy a violation of emission standards or test procedures. Corrective action may include recall, extended warranty, or other action ordered by the Executive Officer. The Executive Officer may order direct notification of corrective action to vehicle or engine owners.

(c) "Days", when computing any period of time, means normal working days on which a manufacturer is open for business, unless otherwise noted.

(d) "Emission control component" or "emission-related component" means a device, system, or assembly described in the manufacturer's approved application for certification which is considered to be a "warranted part" pursuant to Title 13, California Code of Regulations, Division 3, Chapter 1, Article 6 and subject to this Article.

(e) "Emission Warranty Claim" means an adjustment, inspection, repair or replacement of a specific emission-related component within the statutory warranty period for which the vehicle or engine manufacturer is invoiced or solicited by a repairing agent for compensation pursuant to Title 13, California Code of Regulations, Division 3, Chapter 1, Article 6 and subject to this Article.

(f) "Executive Officer" means the Executive Officer of the Air Resources Board or his or her authorized representative.

(g) "Exhaust after-treatment device" means any device or system designed to oxidize, reduce or trap post-combustion exhaust emissions, including those components that transport the exhaust emissions from the engine to the after-treatment device, described in the manufacturer's application for certification, and installed on a vehicle or engine certified for sale in California.

(h) "Extended Warranty" means corrective action required by the Executive Officer that extends the warranty time and mileage periods for a specific emissions-related component pursuant to this article. For passenger cars, light-duty trucks, medium-duty vehicles and engines, and heavy-duty vehicles and engines used in such vehicles, the extended warranty shall be equal to the applicable certified useful life period of that vehicle or engine. The Executive Officer may order direct notification of corrective action to vehicle or engine owners. The extended warranty on hybrid electric vehicle battery packs used for vehicle propulsion shall be limited to the lesser of 1) the applicable useful life of the vehicle or 2) 10 years.

(i) "Emission Warranty Information Reporting Termination Point" means the point at which the requirement to submit the Emission Warranty Information Reports terminates. Emission Warranty Information Reports shall be updated until one year after the statutory warranty time period for a given model year ends (e.g., a 2010 model year engine family with a three year or 50,000 mile warranty period would be reported until the end of the 2013 calendar year). The only exception is PZEV vehicles which will be limited to a 12 year reporting period and the seven year or 70,000 mile high price components will be limited to a reporting period of 5 years.

(j) "Influenced Emission Recall" means an inspection, repair, adjustment, or modification program initiated and conducted by a manufacturer or its agent or representative as a result of any evidence of noncompliance to remedy any nonconformity for which direct notification of vehicle or engine owners is necessary.

(k) "Nonconformity" or "noncompliance" exists whenever an engine family, test group or subgroup of vehicles is determined to be in violation of test procedures pursuant to this Article.

(l) "Ordered Recall" or "recall" means an inspection, repair, adjustment, or modification program required by the Executive Officer and conducted by the manufacturer or its agent or representative to remedy any nonconformity for which direct notification of vehicle or engine owners may be required.

(m) "Quarterly reports" refer to the following calendar periods: January 1–March 31, April 1–June 30, July 1–September 30, October 1–December 31.

(n) "Systemic Failure" means any emission-control component as defined in this article, found to have valid failures that represent at least four percent or 50 vehicles or engines (whichever is greater) of the vehicles or engines of a California certified engine family or test group, pursuant to this Article.

(o) "Ultimate purchaser" has the same meaning as defined in section 39055.5 of the Health and Safety Code.

(p) For the purposes of this article, "useful life" means the following, however, nothing in this subsection alters the applicability provisions of section 2166.

(1) For Class I motorcycles and motorcycle engines (50 to 169 cc or 3.1 to 10.4 cu. in.), a period of use of five years or 12,000 kilometers (7,456 miles), whichever first occurs.

(2) For Class II motorcycles and motorcycle engines (170 to 279 cc or 10.4 to 17.1 cu. in.), a period of use of five years or 18,000 kilometers (11,185 miles), whichever first occurs.

(3) For Class III motorcycles and motorcycle engines (280 cc and larger or 17.1 cu. in. and larger), a period of use of five years or 30,000 kilometers (18,641 miles), whichever first occurs.

(4) For 2001 and subsequent-model year medium-duty low-emission, ultra-low-emission and super-ultra-low-emission vehicles certified to the primary standards in section 1961(a)(1), and motor vehicle engines used in such vehicles, a period of use of ten years or 120,000 miles, whichever occurs first. For 2001 and subsequent medium-duty low-emission, ultra-low-emission and super-ultra-low-emission vehicles certified to the optional 150,000 mile standards in section 1961(a)(1), and motor vehicle engines used in such vehicles, a period of use of fifteen years or 150,000 miles, whichever occurs first. For all other 1995 and subsequent model-year medium-duty vehicles and motor vehicle engines used in such vehicles, a period of use of eleven years or 120,000 miles, whichever occurs first.

(5) For those passenger cars and light-duty trucks certified to the primary standards in section 1961(a)(1), the useful life shall be ten years or 120,000 miles, whichever occurs first. For 2001 and subsequent passenger car and light-duty truck low-emission, ultra-low-emission and super-ultra-low-emission vehicles certified to the optional 150,000 mile standards in section 1961(a)(1), and motor vehicle engines used in such vehicles, a period of use of fifteen years or 150,000 miles, whichever occurs first. For those 2003 and subsequent model year passenger cars, light-duty trucks, and medium-duty vehicles, certified pursuant to Title 13, California Code of Regulations, section 1962, a period of use of fifteen years or 150,000 miles, whichever occurs first.

(6) For 2004 and subsequent model-year light heavy-duty diesel engines, for carbon monoxide, particulate, and oxides of nitrogen plus non-methane hydrocarbons emissions standards, a period of use of 10 years or 110,000 miles, whichever first occurs, or any alternative useful life period approved by the Executive Officer.

(7) For 2004 and subsequent model-year medium heavy-duty diesel engines, for carbon monoxide, particulate, and oxides of nitrogen plus non-methane hydrocarbons emissions standards, a period of use of ten years or 185,000 miles, whichever first occurs; or any alternative useful life period approved by the Executive Officer.

(8) For 2004 and subsequent model-year heavy heavy-duty diesel engines, 2004 and subsequent model-year heavy-duty diesel urban buses, 2004 and subsequent model-year heavy-duty diesel engines to be used in urban buses, and 2004 and subsequent model year hybrid-electric urban buses for carbon monoxide, particulate, and oxides of nitrogen plus non-methane hydrocarbon emissions standards, a period of use of 10 years or 435,000 miles, or 22,000 hours, whichever first occurs, or any alternative useful life period approved by the Executive Officer.

(A) The useful life limit of 22,000 hours of this definition is effective as a limit to the useful life only when an accurate hours meter is provided by the manufacturer with the engine and only when such hours meter can reasonably be expected to operate properly over the useful life of the engine.

(B) For an individual engine, if the useful life hours limit of 22,000 hours is reached before the engine reaches 10 years or 100,000 miles, the useful life shall become 10 years or 100,000 miles, whichever occurs first, as required under Clean Air Act section 202(d) (42 U.S.C. 7521(d)).

(9) For 2004 and subsequent model-year heavy-duty Otto-cycle engines, for carbon monoxide, particulate, and oxides of nitrogen plus non-methane hydrocarbon emissions standards, a period of use of 10 years or 110,000 miles, whichever first occurs.

(q) "Valid failure" or "valid failure rate" means an emission-control component or emission-related component that was properly diagnosed and replaced under warranty by an authorized warranty station and repre-

sents the true and accurate failures of a specific component after legitimate screening (as specified in Section 2168) of the applicable warranty data authorized and acceptable to the Executive Officer, pursuant to this Article.

(r) "Vehicle or engine manufacturer" means the manufacturer granted certification for a motor vehicle or motor vehicle engine.

(s) "Violation of test procedures" means violation of any portion of any test procedure made applicable to motor vehicles by Division 26, Part 5 of the Health and Safety Code or by Division 3 of Title 13 of the California Code of Regulations or any test procedure violation determined pursuant to this article.

(t) "Voluntary Recall" means an inspection, repair, adjustment, or modification program voluntarily initiated and conducted by a manufacturer or its agent or representative to remedy any nonconformity, pursuant to this Article, for which direct notification of vehicle or engine owners may be necessary.

NOTE: Authority cited: Sections 39500, 39600, 39601, 43013, 43018, 43100, 43101, 43102, 43104, 43105, 43106, 43107 and 43806, Health and Safety Code; and Section 28114, Vehicle Code. Reference: Sections 39002, 39003, 39500, 39667, 43000, 43009.5, 43013, 43017, 43018, 43100, 43101, 43101.5, 43102, 43104, 43105, 43106, 43107, 43202, 43204, 43205, 43205.5, 43206, 43210, 43211, 43212, 43213 and 43806, Health and Safety Code; and Section 28114, Vehicle Code.

HISTORY

1. New section filed 12-5-2007; operative 1-4-2008 (Register 2007, No. 49).

§ 2167. Emission Warranty Information Report.

(a) A manufacturer shall:

(1) Review California emission warranty claim records for each California-certified engine family or test group on a quarterly basis to determine and compile by cumulative total the number of claims made for emission-related components. The data compiled shall be based on all emission warranty claims, without any prescreening of data as to the validity of the claims. In the case of heavy-duty vehicles or engines, a manufacturer may use nationwide data for monitoring emission warranty claims of a California-certified engine family or test group which is also certified by the United States Environmental Protection Agency.

(2) Categorize emission warranty claims for each engine family or test group by the specific emission control component replaced or repaired, or in the case of multiple components with the same part number that are replaced in single service event, shall be counted as one warranted repair for that service event.

(3) On the basis of data obtained subsequent to the effective date of these regulations, file an emission warranty information report for each calendar year if the cumulative number of unscreened emission warranty claims for a specific emission-related component or repair represent at least four percent or fifty (whichever is greater) of the vehicles or engines of a California-certified engine family or test group.

(4) The filing of an emission warranty information report for a partial zero emission vehicle shall be limited to exhaust after-treatment devices, computer related repairs including calibration updates, and any emission-control device not subject to the 15 year or 150,000 mile emission control warranty provisions for such vehicles. A zero emission energy storage device used for traction power (such as battery, ultracapacitor, or other electric storage device) is not required to be reported. The Executive Officer may add emission-related components to this list as technology changes.

(b) The emission warranty information report shall be submitted in an electronic format as specified by the ARB. The file must be structured so that the test group or engine family name and the part number are the primary file keys. These two data fields are unique and cannot be duplicated within the data file or changed in subsequent Emission Warranty Information Report submissions unless approved by the ARB database administrator. The electronic file shall include the following information:

(1) The California-certified test group or engine family.

(2) Part number, labor operation code or some other nomenclature that uniquely identifies a given component within a test group or engine family.

(3) The name of the specific emission-related component being replaced or repaired. The component name may not be changed in subsequent Emission Warranty Information Reports unless approved by the ARB database administrator.

(4) A repair code to indicate if the emission-related component was repaired or replaced.

(5) The warranty coverage pursuant to Title 13, California Code of Regulations, Division 3, Chapter 1, Article 6 for each reported component.

(6) The California sales volume, the number of cumulative claims and percentage of vehicles or engines in each engine family or test group for which a warranty replacement or warranty repair of a specific emission-related component was identified (i.e., the percentage of vehicles or engines is equal to the cumulative number of unscreened emission warranty claims for a specific emission-related component or repair divided by the sales volume of the California-certified engine family or test group).

(7) Time frame of the Emission Warranty Information Report being submitted.

(8) The models of the test group or engine family for each component being repaired or replaced.

(9) An action status report code as dictated by the ARB database administrator.

(c) Emission warranty information reports shall be submitted not more than 25 days after the end of each calendar year until the emission warranty information reporting termination point is reached. The Executive Officer may request that a manufacturer file quarterly emission warranty information reports for a specific emission-related component(s) for a specified period of time. Emission warranty information reports and updates shall be submitted and provided on electronic media to the Chief, Mobile Source Operations Division, 9480 Telstar Avenue, Suite 4, El Monte, CA 91731 and/or can be emailed to a designated ARB staff.

(d) The records described in this section shall be made available to the Executive Officer upon request.

NOTE: Authority cited: Sections 39500, 39600, 39601, 43013, 43018, 43100, 43101, 43102, 43104, 43105, 43106, 43107 and 43806, Health and Safety Code; and Section 28114, Vehicle Code. Reference: Sections 39002, 39003, 39500, 39667, 43000, 43009.5, 43013, 43017, 43018, 43100, 43101, 43101.5, 43102, 43104, 43105, 43106, 43107, 43202, 43204, 43205, 43205.5, 43206, 43210, 43211, 43212, 43213 and 43806, Health and Safety Code; and Section 28114, Vehicle Code.

HISTORY

1. New section filed 12-5-2007; operative 1-4-2008 (Register 2007, No. 49).

§ 2168. Supplemental Emissions Warranty Information Report.

(a) A manufacturer shall file a Supplemental Emissions Warranty Information Report within 60 days after an emission warranty information report as specified in Section 2167 indicates that a cumulative total of unscreened emission warranty claims for a specific emission-related component represents at least ten percent or 100 components (whichever is greater) of the vehicles or engines of a engine family or test group. The manufacturer must continue to update and report the Supplemental Emissions Warranty Information Report on a quarterly basis. A manufacturer shall submit an updated Supplemental Emissions Warranty Information Report within 60 days after each calendar quarter until the emission warranty information reporting termination point is reached for the specific emission component being reported or corrective action is launched for the reported emission component. With the approval of the Executive Officer, manufacturers may delay or terminate the submission of the Supplemental Emissions Warranty Information Report.

(b) If a manufacturer demonstrates to the satisfaction of the Executive Officer that a systemic emission component failure has occurred early within the statutory emission warranty period, as defined below, then the Executive Officer may decide not to require the manufacturer to perform corrective action on the affected vehicles or engines. To prove that a systemic emission-related component failure occurred early within the statutory emission warranty period, the manufacturer must demonstrate in the Supplemental Emissions Warranty Information Report to the Execu-

tive Officer's satisfaction, that a systemic failure exists in a specific subgroup of vehicles or engines within an engine family or test group and has been satisfactorily corrected under warranty within 18 months after the last vehicle or engine of the affected engine family or test group in a model year was manufactured. In such a case, the manufacturer may not be subject to additional corrective action for the subject engine family, test group or subgroup, but must demonstrate to the Executive Officer the upper limit of the early emission component failure rate and the date it will terminate. Should the emission component failure rate exceed the rate established by the manufacturer by an additional valid failure rate of four percent or 50 vehicles (whichever is greater) the manufacturer must refile a Supplemental Emissions Warranty Information Report pursuant to this Article (making it subject to further corrective action) or implement the corrective action as ordered pursuant to sections 2169–2171.

(c) Subject to approval of the Executive Officer, as part of the Supplemental Emissions Warranty Information Report, the manufacturer may be allowed to screen out or remove emission warranty claims for components that were subsequently determined to have failed due to abuse, neglect or improper maintenance, or for any warranty repairs that were performed solely for customer satisfaction purposes or due to misdiagnosis. The manufacturer must demonstrate to the satisfaction of the Executive Officer, using good engineering judgment based on emission component failure analysis data and representative statistical sampling, that the emission components replaced or repaired under these emission warranty claims are free from mechanical defects and perform to the manufacturer's specifications and all other applicable requirements.

(d) As part of the Supplemental Emissions Warranty Information Report, the manufacturer may be allowed to screen out or remove emission warranty claims for secondary component failures that directly resulted from an established primary emission component failure. The manufacturer must demonstrate to the satisfaction of the Executive Officer that the primary failure is the direct cause for the secondary component failure and that secondary failure will cease after the primary failure is corrected.

(e) A Supplemental Emissions Warranty Information Report may not be required if the manufacturer commits to perform a recall on any emission control component by notifying the ARB of its commitment in writing. In such a case, the manufacturer may screen the components to be recalled from the Emission Warranty Information Report. However, if the recall applies to a sub-group of vehicles or engines, or if the recall is not deemed acceptable by the Executive Officer, the uncorrected vehicles or engines are still subject to reporting requirements and corrective action pursuant to this Article. Also, if the components replaced under recall fail within the warranty period reaching four percent or 50 vehicles or engines (whichever is greater) within an engine family or test group, the manufacturer must report these emission warranty claims pursuant to this Article and may be required to perform corrective action.

(f) If a manufacturer demonstrates to the satisfaction of the Executive Officer that a systemic emission component failure will not have an emissions impact under any conceivable circumstance, then no corrective action shall be required for the affected vehicles or engines. The Executive Officer need not base this determination on emissions testing.

(g) If a manufacturer demonstrates to the satisfaction of the Executive Officer that a computer OBD recalibration or update is not being performed to correct an emissions exceedance or an OBD compliance issue, then no corrective action shall be required for the affected vehicles or engines.

(h) All Supplemental Emissions Warranty Information Reports shall be submitted to the Chief, Mobile Source Operations Division, 9480 Telstar Avenue Suite No. 4, El Monte, CA 91731 and shall contain the following information in substantially the format outlined below.

(i) Upon the manufacturer's request and with the approval of the Executive Officer, any reported emission component that is replaced as part of a corrective action may be waived from further reporting requirements.

(j) The Supplemental Emission Warranty Information report shall be submitted in an electronic format as specified by the ARB. Supplemental Emissions Warranty Information Reports shall contain the following data:

(1) The manufacturer's corporate name.

(2) Each Supplemental Emissions Warranty Information Report shall be filed individually for each emission-related component that reached the specified reporting level as indicated in (a) of this section. Manufacturers shall designate a unique supplemental emissions warranty information report number to assist in tracking individual emission-related component problems. The nomenclature format for assigning a tracking number shall follow the sequence using the manufacturer's four digit name designation followed by the letters SEWIR, the calendar year filed and then a three digit sequential number. An example of this format would be as follows: MFRX-SEWIR-2010-001.

(3) A description of each class or category of California-certified vehicles or engines affected including make, model, model-year, engine family or test group and such other information as may be required to identify the vehicles or engines affected. The description shall include those engine families or test groups related to the affected engine family or test group through common certification test data allowed under Title 40, Code of Federal Regulations, Section 86.085–24(f), as amended December 10, 1984 or Title 40 Code of Federal Regulations, Section 86.1839–01, as adopted May 4, 1999 ("carry-over" and "carry-across" engine families).

(4) A description of the emission-related component that failed, the failure, the probable cause of failure and the emission-related component part number. A description of all other vehicles that contain the failing component. A description of whether the failure has been detected by the On-Board Diagnostic system in the affected vehicles or engines as required by title 13 CCR sections 1968.1–1968.5, 1971.1 or by the Engine Manufacturer Diagnostic system in the affected vehicles or engines as required by title 13 CCR section 1971.

(5) Manufacturers conducting computer recalibrations or reflashes shall explain the vehicle conditions/parameters that are being changed by the recalibration action. The manufacturer must also indicate if OBD compliance requirements are being remedied.

(6) Any information necessary to make the demonstrations provided in subsections (b)–(g) above.

(7) A statement whether the cumulative total of valid failures for a specific emission-related component represents at least 4 percent or 50 (whichever is greater) of the vehicles or engines within a California certified engine family or test group. On the basis of data obtained and reported pursuant to this article, a manufacturer may determine that a cumulative total of valid failures for a specific emission-related component is found to exist in less than 4 percent or 50 (whichever is greater) of the vehicles or engines of a California certified engine family or test group. If this is the case, the manufacturer must supply the following information:

(A) The number and percentage of vehicles or engines in each engine family or test group for which a failure of a specific emission-related component was identified.

(B) The total number and percentage of unscreened emission warranty claims and failures of a specific emission-related component projected to occur during the engine family's or test group's useful life and a description of the method used to project this number.

(C) An estimated date when the failure of a specific emission-related component will reach 4 percent or 50 (whichever is greater).

(D) If the failure of a specific emission-related component is found to exist in less than 4 percent or 50 (whichever is greater), provide a brief explanation why the vehicles with this specific component replacement or repair are being repaired.

(k) The Executive Officer shall determine whether the valid failure rate of a specific emission-related component has reached the level of a systemic failure, based on the information provided pursuant to this sec-

tion. In making this determination, the Executive Officer need not consider economic impacts, or, except as provided in section 2168 (f), emissions impacts. The Executive Officer may request that any information submitted pursuant to this section be supplemented.

NOTE: Authority cited: Sections 39500, 39600, 39601, 43013, 43018, 43100, 43101, 43102, 43104, 43105, 43106, 43107 and 43806, Health and Safety Code; and Section 28114, Vehicle Code. Reference: Sections 39002, 39003, 39500, 39667, 43000, 43009.5, 43013, 43017, 43018, 43100, 43101, 43101.5, 43102, 43104, 43105, 43106, 43107, 43202, 43204, 43205, 43205.5, 43206, 43210, 43211, 43212, 43213 and 43806, Health and Safety Code; and Section 28114, Vehicle Code.

HISTORY

1. New section filed 12-5-2007; operative 1-4-2008 (Register 2007, No. 49).

§ 2169. Recall and Corrective Action for Failures of Exhaust After-Treatment Devices.

(a) A manufacturer shall recall an engine family, test group or subgroup of vehicles or engines to correct the systemic failure of an exhaust after-treatment device, as defined in Section 2166.1 when valid failures for the exhaust after-treatment device meet or exceed four percent or 50 (whichever is greater) of the vehicles or engines within an engine family or test group, as determined by the Executive Officer pursuant to Section 2168.

(b) At the sole discretion of the Executive Officer, the manufacturer shall perform corrective action, including, but not limited to, providing an extended warranty as defined in Section 2166.1, for the circumstances specified in (a), either as an alternative to or supplement to the corrective action specified in (a).

NOTE: Authority cited: Sections 39500, 39600, 39601, 43013, 43018, 43100, 43101, 43102, 43104, 43105, 43106, 43107 and 43806, Health and Safety Code; and Section 28114, Vehicle Code. Reference: Sections 39002, 39003, 39500, 39667, 43000, 43009.5, 43013, 43017, 43018, 43100, 43101, 43101.5, 43102, 43104, 43105, 43106, 43107, 43202, 43204, 43205, 43205.5, 43206, 43210, 43211, 43212, 43213 and 43806, Health and Safety Code; and Section 28114, Vehicle Code.

HISTORY

1. New section filed 12-5-2007; operative 1-4-2008 (Register 2007, No. 49).

§ 2170. Recall and Corrective Action for Other Emission-Related Component Failures (On-Board Diagnostic-Equipped Vehicles and Engines).

(a) In the case of any vehicle or engine equipped with an ARB approved on-board diagnostic (OBD) system in accordance with Section 1968.1-1968.5 and 1971.1, the manufacturer shall perform corrective action, including, but not limited to, providing an extended warranty as defined in Section 2166.1, to correct the systemic failure of emission control components other than exhaust after-treatment devices, when valid failures for any emission control component in the engine family or test group meet or exceed four percent or 50 (whichever is greater) of the vehicles or engines within an engine family or test group, as determined by the Executive Officer pursuant to Section 2168.

(b) At the sole discretion of the Executive Officer, the manufacturer shall conduct a recall for the circumstances specified in (a), either as an alternative to or supplement to the corrective action specified in (a).

(c) At the sole discretion of the Executive Officer, manufacturers that warrant their vehicles, engines or components as defined in Title 13, California Code of Regulations, Division 3, Chapter 1, Article 6 for the full useful life period may not, be required to perform corrective action on systemic failures of emission-control components (with the exception of exhaust after-treatment devices), found to meet or exceed four percent or 50 (whichever is greater) of the vehicles or engines within an engine family or test group.

NOTE: Authority cited: Sections 39500, 39600, 39601, 43013, 43018, 43100, 43101, 43102, 43104, 43105, 43106, 43107 and 43806, Health and Safety Code; and Section 28114, Vehicle Code. Reference: Sections 39002, 39003, 39500, 39667, 43000, 43009.5, 43013, 43017, 43018, 43100, 43101, 43101.5, 43102, 43104, 43105, 43106, 43107, 43202, 43204, 43205, 43205.5, 43206, 43210, 43211, 43212, 43213 and 43806, Health and Safety Code; and Section 28114, Vehicle Code.

HISTORY

1. New section filed 12-5-2007; operative 1-4-2008 (Register 2007, No. 49).

§ 2171. Recall and Corrective Action for Vehicles Without On-Board Diagnostic Systems, Vehicles with Non-Compliant On-Board Diagnostic Systems, or Vehicles with On-Board Computer Malfunction.

(a) If vehicles or engines not equipped with on-board diagnostic (OBD) systems, or OBD-equipped vehicles or engines that do not detect emission-control failures as required by title 13 CCR sections 1968.1-1968.5 and 1971.1, have systemic failures of emission-control components (including exhaust after-treatment devices), found to meet or exceed four percent or 50 (whichever is greater) valid failures within an engine family or test group, the required corrective action will be the recall of all affected vehicles or engines in the engine family or test group as determined by the Executive Officer pursuant to Section 2168. If vehicles or engines have systemic failures of on-board computers, found to meet or exceed four percent or 50 (whichever is greater) valid failures within an engine family or test group the required corrective action will also be the recall of all affected vehicles or engines, as determined by the Executive Officer pursuant to Section 2168.

(b) At the sole discretion of the Executive Officer, the manufacturer shall perform corrective action, including, but not limited to, providing an extended warranty as defined in Section 2166.1, for the circumstances specified in (a), either as an alternative to or supplement to the recall specified in (a).

(c) At the sole discretion of the Executive Officer, manufacturers that warrant their vehicles, engines or components as defined in Title 13, California Code of Regulations, Division 3, Chapter 1, Article 6 for the full useful life period may not, be required to perform corrective action on systemic failures of emission-control components (with the exception of exhaust after-treatment devices), found to meet or exceed four percent or 50 (whichever is greater) of the vehicles or engines within an engine family or test group.

NOTE: Authority cited: Sections 39500, 39600, 39601, 43013, 43018, 43100, 43101, 43102, 43104, 43105, 43106, 43107 and 43806, Health and Safety Code; and Section 28114, Vehicle Code. Reference: Sections 39002, 39003, 39500, 39667, 43000, 43009.5, 43013, 43017, 43018, 43100, 43101, 43101.5, 43102, 43104, 43105, 43106, 43107, 43202, 43204, 43205, 43205.5, 43206, 43210, 43211, 43212, 43213 and 43806, Health and Safety Code; and Section 28114, Vehicle Code.

HISTORY

1. New section filed 12-5-2007; operative 1-4-2008 (Register 2007, No. 49).

§ 2172. Notification of Required Recall or Corrective Action by the Executive Officer.

The Executive Officer shall notify the manufacturer when recall or corrective action is required. The Executive Officer's notification shall include a description of each class or category of vehicles or engines encompassed by the determination of nonconformity, shall set forth the factual basis for the determination and shall designate a date no earlier than 45 days from the date of receipt of such notification (no earlier than 90 days for recalls) by which the manufacturer shall submit a plan to remedy the nonconformity unless the manufacturer can show good cause for the Executive Officer to extend the deadline.

NOTE: Authority cited: Sections 39500, 39600, 39601, 43013, 43018, 43100, 43101, 43102, 43104, 43105, 43106, 43107 and 43806, Health and Safety Code; and Section 28114, Vehicle Code. Reference: Sections 39002, 39003, 39500, 39667, 43000, 43009.5, 43013, 43017, 43018, 43100, 43101, 43101.5, 43102, 43104, 43105, 43106, 43107, 43202, 43204, 43205, 43205.5, 43206, 43210, 43211, 43212, 43213 and 43806, Health and Safety Code; and Section 28114, Vehicle Code.

HISTORY

1. New section filed 12-5-2007; operative 1-4-2008 (Register 2007, No. 49).

§ 2172.1. Ordered or Voluntary Corrective Action Plan.

(a) Unless a public hearing is requested by the manufacturer, the manufacturer shall submit a recall or corrective action plan to the Chief, Mobile Source Operations Division, 9480 Telstar Avenue, Suite 4, El Monte, CA 91731, within the time limit specified in the notification is-

sued pursuant to Section 2172. The Executive Officer may grant the manufacturer an extension upon good cause shown.

(b) The recall or corrective action plan shall contain the following:

(1) A description of each class or category of vehicles or engines to be recalled or subject to corrective action, including the engine family, test group or sub-group thereof, the model-year, the make, the model, and such other information as may be required to identify the vehicles or engines to be recalled or subjected to corrective action.

(2) A description of the nonconformity and the specific modifications, alterations, repairs, corrections, adjustments or other changes to be made to bring the vehicles or engines into conformity with the requirements of this article including a brief summary of the data and technical studies which support the manufacturer's decision regarding the specific corrections to be made. Nonconformities shall be addressed by replacing a nonconforming component with an improved, conforming component.

(3) A description of the method by which the manufacturer will determine the names and addresses of vehicle or engine owners and the method by which they will be notified.

(4) A description of the procedure to be followed by vehicle or engine owners to obtain correction of the nonconformity including the date on or after which the owner can have the nonconformity remedied, the time reasonably necessary to perform the labor required to correct the nonconformity, and the designation of facilities at which the nonconformity can be remedied. The repair shall be completed within a reasonable time designated by the Executive Officer from the date the owner delivers the vehicle or engine for repair. This requirement becomes applicable on the date designated by the manufacturer as the date on or after which the owner can have the nonconformity remedied.

(5) If some or all of the nonconforming vehicles or engines are to be remedied by persons other than dealers or authorized warranty agents of the manufacturer, a description of such class of persons and a statement indicating that the participating members of the class will be properly equipped to perform such remedial action.

(6) A copy of the letter of notification to be sent to vehicle or engine owners.

(7) A description of the system by which the manufacturer will ensure that an adequate supply of parts will be available to perform the repair under the recall or corrective action plan including the date by which an adequate supply of parts will be available to initiate the repair campaign, and the method to be used to assure the supply remains both adequate and responsive to owner demand.

(8) A copy of all necessary instructions to be sent to those persons who are to perform the repair under the recall or corrective action plan.

(9) Any other information, reports, or data which the Executive Officer may reasonably determine to be necessary to evaluate the recall plan or other corrective action.

NOTE: Authority cited: Sections 39500, 39600, 39601, 43013, 43018, 43100, 43101, 43102, 43104, 43105, 43106, 43107 and 43806, Health and Safety Code; and Section 28114, Vehicle Code. Reference: Sections 39002, 39003, 39500, 39667, 43000, 43009.5, 43013, 43017, 43018, 43100, 43101, 43101.5, 43102, 43104, 43105, 43106, 43107, 43202, 43204, 43205, 43205.5, 43206, 43210, 43211, 43212, 43213 and 43806, Health and Safety Code; and Section 28114, Vehicle Code.

HISTORY

1. New section filed 12-5-2007; operative 1-4-2008 (Register 2007, No. 49).

§ 2172.2. Approval and Implementation of Corrective Action Plan.

If the Executive Officer finds that the recall or corrective action plan is designed effectively to correct the nonconformity and complies with the provisions of Section 2172.1, he or she will so notify the manufacturer in writing. Upon receipt of the approval notice from the Executive Officer, the manufacturer shall commence implementation of the approved plan. Notification of vehicle or engine owners and the implementation of repairs shall commence within 45 days of the receipt of notice unless the manufacturer can show good cause for the Executive Officer to extend the deadline.

NOTE: Authority cited: Sections 39500, 39600, 39601, 43013, 43018, 43100, 43101, 43102, 43104, 43105, 43106, 43107 and 43806, Health and Safety Code; and Section 28114, Vehicle Code. Reference: Sections 39002, 39003, 39500, 39667, 43000, 43009.5, 43013, 43017, 43018, 43100, 43101, 43101.5, 43102, 43104, 43105, 43106, 43107, 43202, 43204, 43205, 43205.5, 43206, 43210, 43211, 43212, 43213 and 43806, Health and Safety Code; and Section 28114, Vehicle Code.

HISTORY

1. New section filed 12-5-2007; operative 1-4-2008 (Register 2007, No. 49).

§ 2172.3. Notification of Owners.

(a) Manufacturers shall notify vehicle or engine owners of a recall or other corrective action by first class mail or by such other means as approved by the Executive Officer. For good cause, the Executive Officer may require the use of certified mail to ensure an effective notification.

(b) The manufacturer shall use all reasonable means necessary to locate vehicle or engine owners. For good cause, the Executive Officer may require the manufacturer to use motor vehicle registration lists available from State or commercial sources to obtain the names and addresses of vehicle or engine owners to ensure effective notification.

(c) The Executive Officer may require subsequent notification by the manufacturer to vehicle or engine owners by first class mail or other reasonable means. For good cause, the Executive Officer may require the use of certified mail to ensure effective notification.

(d) The notification of vehicle or engine owners shall contain the following:

(1) The statement: "The California Air Resources Board has determined that your (vehicle or engine) has an emission control component problem that requires corrective action".

(2) A statement that the nonconformity of any such vehicles or engines will be remedied at the expense of the manufacturer.

(3) A statement that eligibility may not be denied solely on the basis that the vehicle or engine owner used parts not manufactured by the original equipment vehicle manufacturer, or had repairs performed by outlets other than the vehicle or engine manufacturer's franchised dealers.

(4) A clear description of the components which will be affected by the recall or other corrective action and a general statement of the measures to be taken to correct the nonconformity.

(5) A statement that such nonconformity, if not repaired, may cause the vehicle or engine to fail an emission inspection or Smog Check test when such tests are required under State law.

(6) A description of the adverse effects, if any, that an uncorrected nonconformity would have on the performance, fuel economy, or drivability of the vehicle or engine or to the function of other engine components.

(7) A description of the procedure which the vehicle or engine owner should follow to obtain correction of the nonconformity including the date on or after which the owner can have the nonconformity remedied, the time reasonably necessary to correct the nonconformity, and a designation of the facilities at which the nonconformity can be remedied.

(8) A statement that a certificate showing that the vehicle or engine has been repaired under the recall program shall be issued by the service facilities and that such a certificate may be required as a condition of vehicle registration or operation, as applicable.

(9) A card to be used by a vehicle or engine owner in the event the vehicle or engine to be recalled has been sold. Such card should be addressed to the manufacturer, have postage paid, and shall provide a space in which the owner may indicate the name and address of the person to whom the vehicle or engine was sold.

(10) The statement: "In order to ensure your full protection under the emission warranty made applicable to your (vehicle or engine) by State or Federal law, and your right to participate in future recalls, it is recommended that you have your (vehicle or engine) serviced as soon as possible. Failure to do so could be determined to be a lack of proper maintenance of your (vehicle or engine)."

(11) A telephone number provided by the manufacturer, which may be used to report difficulty in obtaining recall repairs.

(e) The manufacturer shall not condition eligibility for repair on the proper maintenance or use of the vehicle or engine except for strong or compelling reasons and with approval of the Executive Officer; however, the manufacturer shall not be obligated to repair a component which has been removed or altered so that the recall action cannot be performed without additional cost.

(f) No notice sent pursuant to Section 2172.1(b)(8), above, nor any other communication sent to vehicle or engine owners or dealers shall contain any statement, express or implied, that the nonconformity does not exist or will not degrade air quality.

(g) The manufacturer shall be informed of any other requirements pertaining to the notification under this section which the Executive Officer has determined are reasonable and necessary to ensure the effectiveness of the recall campaign.

NOTE: Authority cited: Sections 39500, 39600, 39601, 43013, 43018, 43100, 43101, 43102, 43104, 43105, 43106, 43107 and 43806, Health and Safety Code; and Section 28114, Vehicle Code. Reference: Sections 39002, 39003, 39500, 39667, 43000, 43009.5, 43013, 43017, 43018, 43100, 43101, 43101.5, 43102, 43104, 43105, 43106, 43107, 43202, 43204, 43205, 43205.5, 43206, 43210, 43211, 43212, 43213 and 43806, Health and Safety Code; and Section 28114, Vehicle Code.

HISTORY

1. New section filed 12-5-2007; operative 1-4-2008 (Register 2007, No. 49).

§ 2172.4. Repair Label.

(a) The manufacturer shall require those who perform the repair under the recall plan to affix a label to each vehicle or engine repaired or, when required, inspected under the recall plan.

(b) The label shall be placed in a location as approved by the Executive Officer and shall be fabricated of a material suitable for such location and which is not readily removable.

(c) The label shall contain the recall campaign number and a code designating the facility at which the repair, inspection for repair, was performed.

NOTE: Authority cited: Sections 39500, 39600, 39601, 43013, 43018, 43100, 43101, 43102, 43104, 43105, 43106, 43107 and 43806, Health and Safety Code; and Section 28114, Vehicle Code. Reference: Sections 39002, 39003, 39500, 39667, 43000, 43009.5, 43013, 43017, 43018, 43100, 43101, 43101.5, 43102, 43104, 43105, 43106, 43107, 43202, 43204, 43205, 43205.5, 43206, 43210, 43211, 43212, 43213 and 43806, Health and Safety Code; and Section 28114, Vehicle Code.

HISTORY

1. New section filed 12-5-2007; operative 1-4-2008 (Register 2007, No. 49).

§ 2172.5. Proof of Correction Certificate.

The manufacturer shall require those who perform the recall repair to provide the owner of each vehicle or engine repaired with a certificate, through a protocol and in a format prescribed by the Executive Officer, which indicates that the noncomplying vehicle or engine has been corrected under the recall program.

NOTE: Authority cited: Sections 39500, 39600, 39601, 43013, 43018, 43100, 43101, 43102, 43104, 43105, 43106, 43107 and 43806, Health and Safety Code; and Section 28114, Vehicle Code. Reference: Sections 39002, 39003, 39500, 39667, 43000, 43009.5, 43013, 43017, 43018, 43100, 43101, 43101.5, 43102, 43104, 43105, 43106, 43107, 43202, 43204, 43205, 43205.5, 43206, 43210, 43211, 43212, 43213 and 43806, Health and Safety Code; and Section 28114, Vehicle Code.

HISTORY

1. New section filed 12-5-2007; operative 1-4-2008 (Register 2007, No. 49).

§ 2172.6. Preliminary Tests.

The Executive Officer may require the manufacturer to conduct tests on components and vehicles or engines incorporating a proposed correction, repair, or modification reasonably designed and necessary to demonstrate the effectiveness of the correction, repair, or modification.

NOTE: Authority cited: Sections 39500, 39600, 39601, 43013, 43018, 43100, 43101, 43102, 43104, 43105, 43106, 43107 and 43806, Health and Safety Code; and Section 28114, Vehicle Code. Reference: Sections 39002, 39003, 39500, 39667, 43000, 43009.5, 43013, 43017, 43018, 43100, 43101, 43101.5, 43102, 43104, 43105, 43106, 43107, 43202, 43204, 43205, 43205.5, 43206, 43210, 43211, 43212, 43213 and 43806, Health and Safety Code; and Section 28114, Vehicle Code.

HISTORY

1. New section filed 12-5-2007; operative 1-4-2008 (Register 2007, No. 49).

§ 2172.7. Communication with Repair Personnel.

The manufacturer shall provide to the Executive Officer a copy of all communications which relate to the recall plan directed to dealers and other persons who are to perform the repair. Such copies shall be mailed to the Executive Officer contemporaneously with their transmission to dealers and other persons who are to perform the repair under the recall plan.

NOTE: Authority cited: Sections 39500, 39600, 39601, 43013, 43018, 43100, 43101, 43102, 43104, 43105, 43106, 43107 and 43806, Health and Safety Code; and Section 28114, Vehicle Code. Reference: Sections 39002, 39003, 39500, 39667, 43000, 43009.5, 43013, 43017, 43018, 43100, 43101, 43101.5, 43102, 43104, 43105, 43106, 43107, 43202, 43204, 43205, 43205.5, 43206, 43210, 43211, 43212, 43213 and 43806, Health and Safety Code; and Section 28114, Vehicle Code.

HISTORY

1. New section filed 12-5-2007; operative 1-4-2008 (Register 2007, No. 49).

§ 2172.8. Recordkeeping and Reporting Requirements.

(a) The manufacturer shall maintain sufficient records to enable the Executive Officer to conduct an analysis of the adequacy of the recall or corrective action campaign. The records shall include, for each class or category of vehicle or engine, but need not be limited to, the following:

- (1) Engine family involved and recall or corrective action campaign number as designated by the manufacturer.
- (2) Date owner notification was begun, and date completed.
- (3) Number of vehicles or engines involved in the recall or corrective action campaign.
- (4) Number of vehicles or engines known or estimated to be affected by the nonconformity.
- (5) Number of vehicles or engines inspected pursuant to the recall plan and found to be affected by the nonconformity.
- (6) Number of inspected vehicles or engines.
- (7) Number of vehicles or engines receiving repair under the recall plan.
- (8) Number of vehicles or engines determined to be unavailable for inspection or repair under the recall plan due to exportation, theft, scrapping, or for other reasons (specify).
- (9) Number of vehicles or engines determined to be ineligible for recall action due to removed or altered components.
- (10) A listing of the identification numbers of vehicles or engines subject to recall but for whose repair the manufacturer has not been invoiced.

This listing shall be supplied in a standardized computer data storage format to be specified by the Executive Officer. The frequency of this submittal, as specified in subsection (c) below, may be changed by the Executive Officer depending on the needs of recall enforcement.

(11) Any service bulletins transmitted to dealers which relate to the nonconformity and which have not previously been submitted.

(12) All communications transmitted to vehicle or engine owners which relate to the nonconformity and which have not previously been submitted.

(b) If the manufacturer determines that the original responses to subsections (a)(3) and (4) of these procedures are incorrect, revised figures and an explanatory note shall be submitted. Responses to subsections (a)(5), (6), (7), (8), and (9) shall be cumulative totals.

(c) Unless otherwise directed by the Executive Officer, the information specified in subsection (a) of these procedures shall be included in six quarterly reports, beginning with the quarter in which the notification of owners was initiated, or until all nonconforming vehicles or engines involved in the campaign have been remedied, whichever occurs sooner. Such reports shall be submitted no later than 25 days after the close of each calendar quarter.

(d) The manufacturer shall maintain in a form suitable for inspection, such as computer information storage devices or card files, and shall make available to the Executive Officer or his or her authorized representative upon request, lists of the names and addresses of vehicle or engine owners:

- (1) To whom notification was given;
 (2) Who received remedial repair or inspection under the recall plan;
 and
 (3) Who were denied eligibility for repair due to removed or altered components.

(e) The records and reports required by these procedures shall be retained for not less than one year beyond the useful life of the vehicles or engines involved, or one year beyond the reporting time frame specified in subsection (c) above, whichever is later.

NOTE: Authority cited: Sections 39500, 39600, 39601, 43013, 43018, 43100, 43101, 43102, 43104, 43105, 43106, 43107 and 43806, Health and Safety Code; and Section 28114, Vehicle Code. Reference: Sections 39002, 39003, 39500, 39667, 43000, 43009.5, 43013, 43017, 43018, 43100, 43101, 43101.5, 43102, 43104, 43105, 43106, 43107, 43202, 43204, 43205, 43205.5, 43206, 43210, 43211, 43212, 43213 and 43806, Health and Safety Code; and Section 28114, Vehicle Code.

HISTORY

1. New section filed 12-5-2007; operative 1-4-2008 (Register 2007, No. 49).

§ 2172.9. Extension of Time.

The Executive Officer may extend any deadline in the plan if he or she finds in writing that a manufacturer has shown good cause for such extension.

NOTE: Authority cited: Sections 39500, 39600, 39601, 43013, 43018, 43100, 43101, 43102, 43104, 43105, 43106, 43107 and 43806, Health and Safety Code; and Section 28114, Vehicle Code. Reference: Sections 39002, 39003, 39500, 39667, 43000, 43009.5, 43013, 43017, 43018, 43100, 43101, 43101.5, 43102, 43104, 43105, 43106, 43107, 43202, 43204, 43205, 43205.5, 43206, 43210, 43211, 43212, 43213 and 43806, Health and Safety Code; and Section 28114, Vehicle Code.

HISTORY

1. New section filed 12-5-2007; operative 1-4-2008 (Register 2007, No. 49).

§ 2173. Penalties.

Failure by a manufacturer to carry out all recall or corrective action campaigns ordered by the Executive Officer pursuant to this article shall constitute a violation of this article and Health and Safety Code Section 43105. Civil penalties may be assessed for that violation and for any other violation of any other requirement of this article.

NOTE: Authority cited: Sections 39500, 39600, 39601, 43013, 43018, 43100, 43101, 43102, 43104, 43105, 43106, 43107 and 43806, Health and Safety Code; and Section 28114, Vehicle Code. Reference: Sections 39002, 39003, 39500, 39667, 43000, 43009.5, 43013, 43017, 43018, 43100, 43101, 43101.5, 43102, 43104, 43105, 43106, 43107, 43202, 43204, 43205, 43205.5, 43206, 43210, 43211, 43212, 43213 and 43806, Health and Safety Code; and Section 28114, Vehicle Code.

HISTORY

1. New section filed 12-5-2007; operative 1-4-2008 (Register 2007, No. 49).

§ 2174. Availability of Public Hearing.

(a) The manufacturer may request a public hearing pursuant to the procedures set forth in Sections 60040 to 60053, Title 17, California Code of Regulations to contest the finding of nonconformity pursuant to this Article and the necessity for or the scope of any ordered recall, or other

ordered corrective action. Notwithstanding any other provision of law, including title 13 or title 17 of California Code of Regulations, the record in any public hearing conducted pursuant a request made under this section shall be limited to: (i) the information provided to the Executive Officer under sections 2167-2168 and the Executive Officer's response thereto prior to the date the Executive Officer's notification is issued pursuant to section 2172, (ii) the Executive Officer's notification issued pursuant to section 2172, and (iii) new relevant evidence that could not, with reasonable diligence have been discovered and included in the information provided to the Executive Officer under sections 2167-2168 for the Executive Officer's notification issued pursuant to section 2172. At the hearing evidence of economic impact and evidence of emissions impact, except as provided in Section 2168(f), is irrelevant.

(b) If a manufacturer requests a public hearing pursuant to subsection (a) above, and if the Executive Officer's determination of nonconformity is confirmed at the hearing, the manufacturer shall submit a recall or corrective action plan identical to the one required by Section 2172.1 within the time periods specified in the Executive Officer's notification under section 2172 from receipt of the Board's decision.

NOTE: Authority cited: Sections 39500, 39600, 39601, 43013, 43018, 43100, 43101, 43102, 43104, 43105, 43106, 43107 and 43806, Health and Safety Code; and Section 28114, Vehicle Code. Reference: Sections 39002, 39003, 39500, 39667, 43000, 43009.5, 43013, 43017, 43018, 43100, 43101, 43101.5, 43102, 43104, 43105, 43106, 43107, 43202, 43204, 43205, 43205.5, 43206, 43210, 43211, 43212, 43213 and 43806, Health and Safety Code; and Section 28114, Vehicle Code.

HISTORY

1. New section filed 12-5-2007; operative 1-4-2008 (Register 2007, No. 49).

Chapter 3. Highway and Mandatory Inspection Emission Standards

Article 1. General Provisions

§ 2175. Highway Exhaust Emissions—Light-Duty Vehicles.

(a) The state board finds the standards for exhaust emissions set forth in Table 1 to be the maximum allowable emissions of pollutants from light-duty (6,000 pounds or less gross vehicle weight) and medium-duty (8,500 pounds or less gross vehicle weight) gasoline-powered vehicles when inspected at California Highway Patrol roadside inspection lanes.

(b) The inspection shall consist of exhaust emission measurements from the vehicle with the air injection system (if any) connected. Hydrocarbon and carbon monoxide concentrations shall be determined by non-dispersive infrared instrumentation.

The idle mode test shall be performed with the transmission set in neutral gear with the engine at its normal operating temperature.

Table 1
Highway Inspection Standards

Category Number	Model Year	Emission Control System	No. of Cylinder	Idle Standards* HC PPM CO %
1	1955-1965		5 or more	800 8.50
2	1966-1970	with air injection	5 or more	450 5.00
3	1966-1970	without air injection	5 or more	550 7.00
4	1971-1972	with air injection	5 or more	300 4.00
5	1971-1972	without air injection	5 or more	450 6.50
6	1973-1974	with air injection	5 or more	200 3.50
7	1973-1974	without air injection	5 or more	450 6.50
8	1955-1967		4 or less	1200 8.00
9	1968-1970	with air injection	4 or less	400 5.50
10	1968-1970	without air injection	4 or less	900 7.50
11	1971-1972	with air injection	4 or less	400 5.50
12	1971-1972	without air injection	4 or less	400 6.50
13	1973-1974	with air injection	4 or less	300 4.50
14	1973-1974	without air injection	4 or less	350 6.50
15	1975+	no catalyst	ALL	150 3.00
16	1975+	catalyst without air injection	ALL	200 4.00
17	1975+	catalyst with air injection	ALL	100 1.00
18	1975+	three-way catalyst	ALL	80 1.00

*HC (ppm) is defined as hydrocarbons in parts per millions of hexane by volume and CO (%) is defined as carbon monoxide in percent by volume.

NOTE: Authority cited: Sections 39600, 39601 and 43101, Health and Safety Code; and Sections 27157 and 27157.5, Vehicle Code. Reference: Sections 39002, 39003, 39500, 43000 and 43101, Health and Safety Code; and Sections 27157 and 27157.5, Vehicle Code.

HISTORY

1. Amendment of NOTE filed 3-16-77; effective thirtieth day thereafter (Register 77, No. 12). For prior history, see Register 75, No. 21.
2. Amendment filed 11-30-83; effective thirtieth day thereafter (Register 83, No. 49).

§ 2175.5. Exemption of Vehicles.

In cases of conflict with manufacturer's specifications, the executive officer may by Executive Order exempt certain vehicles from a standard set forth in Section 2175 above or set appropriate separate standards. A list of such vehicle(s) or class(es) of vehicles shall be distributed to the California Highway Patrol and the Bureau of Automotive Repair.

NOTE: Authority cited: Sections 39600, 39601 and 43101, Health and Safety Code; and Sections 27157 and 27157.5, Vehicle Code. Reference: Sections 39002, 39003, 39500, 43000 and 43101, Health and Safety Code; and Sections 27157 and 27157.5, Vehicle Code.

HISTORY

1. New section filed 3-4-75; effective thirtieth day thereafter (Register 75, No. 10).
2. Amendment of NOTE filed 3-16-77; effective thirtieth day thereafter (Register 77, No. 12).
3. Amendment filed 11-30-83; effective thirtieth day thereafter (Register 83, No. 49).

§ 2176. Mandatory Inspection Exhaust Emissions—Light-Duty and Medium-Duty Vehicles.

(a) Pursuant to Section 43010, Chapter 1, Part 5, Division 26 of the Health and Safety Code, exhaust emissions from light-duty (6,000 pounds or less gross vehicle weight) and medium-duty (8,500 pounds or less gross vehicle weight) gasoline-powered vehicles subject to inspection pursuant to Chapter 20.4 (commencing with Section 9889.50) of Division 3 of the Business and Professions Code shall not exceed the standards set forth in this section by vehicle class as shown in Table 1.

(b) The inspection shall consist of exhaust emission measurements from the vehicle with the air injection system (if any) connected. Hydrocarbon, carbon monoxide, and oxides of nitrogen concentrations shall be determined by non-dispersive infrared instrumentation.

The cruise mode test shall be performed first on a chassis dynamometer at the speeds and loads shown in the following table:

Loading Class	Number of Cylinders	Vehicle Shipping Weight	Speed (mph)	Loading (Hp)
1	4 or less	—	4 ± 1	10 ± 1
2	5 or 6	—	40 ± 1	15 ± 1.5
3	7 or more	less than 3,250 lbs.	40 ± 1	17.5 ± 1.5
4	7 or more	3,250 lbs. or more	40 ± 1	20 ± 1.5

A vehicle which cannot reach the speed and load specified in the table above, or which by its original design cannot be tested at cruise on an inspection center dynamometer, may be exempted from the cruise mode of the test. Vehicles owned by licensed fleet operators may be exempted from cruise mode test, provided an underhood functional inspection is performed on these vehicles, in addition to idle mode test. An idle mode test may be performed on vehicles at one lane inspection centers wherever dynamometers are inoperative.

The idle mode test shall be performed with the transmission set in neutral gear with the engine at its normal operating temperature. The cruise mode test shall be performed with automatic transmission in drive and with manual transmission set in high gear but overdrive will be disengaged.

(c) In the event of a conflict between the emission standards set forth in subdivision (a) and a manufacturer's specifications for a particular engine family or group of vehicles (defined by make, model year, and emission control system), as demonstrated by an excessive failure rate, by valid assembly-line data of the vehicle manufacturer, or by other data available to the executive officer, the executive officer may by Executive Order exempt such engine families or groups of vehicles from the standards set forth in subdivision (a) and set appropriate separate emission standards.

Table 1
Two Mode MVIP Standards

Category Number	Model Year	Emission Control System	No. of Cylinders	Idle Standards*		40 MPH Cruise Standards*		
				HC PPM	CO %	HC PPM	CO %	NO _x ** PPM
1	1955–1965		5 or more	800	8.50	400	6.50	NO STD
2	1966–1970	with air injection	5 or more	450	5.00	350	4.00	2400
3	1966–1970	without air injection	5 or more	550	7.00	350	4.50	3000
4	1971–1972	with air injection	5 or more	300	4.00	200	2.00	2200
5	1971–1972	without air injection	5 or more	450	6.50	250	3.00	3200
6	1973–1974	with air injection	5 or more	200	3.50	150	2.00	1700
7	1973–1974	without air injection	5 or more	400	6.50	250	2.50	2600
8	1955–1967		4 or less	1200	8.00	400	6.50	NO STD
9	1968–1970	with air injection	4 or less	400	5.50	300	4.50	3200
10	1968–1970	without air injection	4 or less	900	7.50	300	6.00	3000
11	1971–1972	with air injection	4 or less	400	5.50	300	4.00	3000
12	1971–1972	without air injection	4 or less	400	6.50	300	5.00	3400
13	1973–1974	with air injection	4 or less	300	4.50	250	4.00	1700
14	1973–1974	without air injection	4 or less	350	6.50	250	4.00	2600
15	1975 +	no catalyst	ALL	150	3.00	150	1.50	2100
16	1975 +	catalyst without air injection	ALL	200	4.00	150	1.50	2200
17	1975 +	catalyst with air injection	ALL	100	1.00	100	1.00	1500
18	1975 +	three-way catalyst	ALL	80	1.00	80	1.00	1000

*HC (ppm) is defined as hydrocarbons in parts per million of hexane by volume, CO (%) is defined as carbon monoxide in percent by volume, and NO_x (ppm) is defined as oxides of nitrogen in parts per million in nitric oxide by volume.

NOTE: Authority cited: Sections 39600, 39601 and 43010, Health and Safety Code; and Sections 9889.50 and 9889.51, Business and Professions Code. Reference: Sections 39002, 39003, 39500, 43000, 43013 and 43600, Health and Safety Code; and Section 9889.50, Business and Professions Code.

HISTORY

1. New section filed 9–18–74; effective thirtieth day thereafter (Register 74, No. 38).
2. Amendment filed 3–4–75; effective thirtieth day thereafter (Register 75, No. 10).
3. Amendment filed 3–16–79 as an emergency; designated effective 3–16–79. Certificate of Compliance included (Register 79, No. 11).
4. Amendment of typographical error in subsection (a) of 3–16–79 emergency order; filed 4–11–79 as procedural and organizational; effective upon filing (Register 79, No. 15).
5. Editorial correction of History Note 4 (Register 79, No. 18).
6. Amendment of subsection (c) filed 9–20–79 as an emergency; effective upon filing (Register 79, No. 38). Certificate of Compliance included.
7. Amendment filed 5–8–80; designated effective 7–1–80 (Register 80, No. 19).
8. Repealer and new section filed 6–19–81; effective thirtieth day thereafter (Register 81, No. 25).
9. Editorial correction of subsection (b) (Register 81, No. 31).
10. Editorial correction of Table 1 (Register 82, No. 4).
11. Amendment 11–30–83; effective thirtieth day thereafter (Register 83, No. 49).

§ 2177. Guidelines for Issuance of Certificate of Compliance.

For participants in the Methanol Fuel Experimental Program, the emission control systems listed below, as originally installed on the vehicle, are to be inspected annually. The original equipment systems shall be functioning properly in order to obtain a valid Certificate of Compliance. In addition, each vehicle's ignition system shall be inspected and exhaust carbon monoxide emissions shall be measured. No vehicle which has an ignition misfire or carbon monoxide emissions in excess of the idle emission standards contained in Section 2176 shall receive a Certificate of Compliance.

1. Exhaust Gas Recirculation (EGR) System
 - a. EGR valve and control components, and carburetor spacer if applicable.
2. Air Injection System
 - a. Air Pump.

b. Valves affecting distribution of flow.

c. Distribution manifold including connection to exhaust manifold.

3. Catalyst or Thermal Reactor System

a. Catalytic converter and associated mounting hardware.

b. Thermal reactor and lined or coated exhaust manifolds.

c. Exhaust port liner and/or double walled exhaust pipe.

4. Evaporative Emission Control System

a. Vapor storage canister.

b. Vapor–liquid separator.

c. Canister Purge system.

5. Positive Crankcase Ventilation (PCV) System

a. PCV valve.

b. Oil filler cap.

6. Miscellaneous Items Used in Above Systems

a. Vacuum and time sensitive valves and switches.

b. Electronic controls including computer or microprocessor and all input sensors including the exhaust gas oxygen sensor.

NOTE: Authority cited: Sections 39515, 39600 and 39601, Health and Safety Code; and Sections 27157 and 27157.5, Vehicle Code. Reference: Sections 39003, 39500, 43000, 43004, 43006, 43009 and 43013, Health and Safety Code; and Sections 5115, 5117, 27157 and 27157.5, Vehicle Code.

HISTORY

1. New section filed 6–2–83; effective thirtieth day thereafter (Register 83, No. 23).

Chapter 3.5. Heavy–Duty Diesel Smoke Emission Testing, and Heavy–Duty Vehicle Emission Control System Inspections

§ 2180. Applicability.

Unless otherwise noted, this chapter applies to all diesel–powered and gasoline–powered heavy–duty vehicles, including pre–1974 model–year vehicles, operating in the State of California.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43701 and 44011.6, Health and Safety Code. Reference: Sections 39002, 39003, 39010, 39033, 43000, 43013, 43018, 43701 and 44011.6, Health and Safety Code; and Section 505, Vehicle Code.

HISTORY

1. New section filed 10-21-91; operative 11-20-91 (Register 92, No. 9).
2. Redesignation and amendment of subchapter 3.5 to chapter 3.5 and amendment of section filed 5-4-98; operative 5-4-98 pursuant to Government Code section 11343.4(d) (Register 98, No. 19).
3. Amendment of section and NOTE filed 1-16-2007; operative 2-15-2007 (Register 2007, No. 3).

§ 2180.1. Definitions.

(a) The definitions of this section supplement and are governed by the definitions set forth in Chapter 2 (commencing with section 39010), Part 1, Division 26 of the Health and Safety Code. The following definitions shall govern the provisions of this chapter.

(1) "Authorized dealer" means a group of independent service and repair facilities that are recognized by the motor vehicle or engine manufacturer as being capable of performing repairs to factory specifications; including warranty repair work.

(2) "ARB post-repair inspection" means a repeat emission control system inspection, conducted by the Air Resources Board at an Air Resources Board-specified site, for the purpose of clearing a Citation issued under section 2185(a)(1)(C).

(3) "ARB post-repair test" means a repeat test, conducted by the Air Resources Board at an Air Resources Board-specified site, for the purpose of clearing a Citation issued under section 2185(a)(1)(C).

(4) "Basic penalty" means the civil penalty of (\$500) for a test procedure or emission control system inspection violation that is to be deposited in the Vehicle Inspection and Repair Fund.

(5) "Citation" means a legal notice issued by the Air Resources Board to the owner of a heavy-duty vehicle requiring the owner to repair the vehicle and to pay a civil penalty.

(6) "Day" means calendar day.

(7) "Defective" means a condition in which an emission control system or an emission control system component is malfunctioning due to age, wear, malmaintenance, or design defects.

(8) "Demonstration of correction" means the documents identified in section 2186.

(9) "Driver" has the same meaning as defined in California Vehicle Code section 305.

(10) "Emission control label" or "ECL" means the label required by the "California Motor Vehicle Emission Control Label Specifications", incorporated by reference in 13 CCR, section 1965, or Title 40, Code of Federal Regulations (CFR), Part 86, Subpart A.

(11) "Emission control system" means the pollution control components on an engine at the time its engine family is certified, including, but not limited to, the emission control label.

(12) "Executive Officer" means the Executive Officer of the Air Resources Board or his or her designee.

(13) "Federal emission standards" means the emission standards adopted by the U.S. Environmental Protection Agency, pursuant to Title 42 United States Code, section 7521(a), that are required to be met for the certification of heavy-duty vehicles or engines.

(14) "Fleet" means two (2) or more heavy-duty vehicles.

(15) "Heavy-duty commercial vehicle" means a "motor truck" designed, used, or maintained primarily for the transportation of property, as defined in section 410 of the Vehicle Code, and having a gross vehicle weight rating (GVWR) greater than 10,000 pounds.

(16) "Heavy-duty vehicle" means a motor vehicle having a manufacturer's maximum gross vehicle weight rating (GVWR) greater than 6,000 pounds, except passenger cars.

(17) "Inspection procedure" means the test procedure specified in section 2182 and the emission control system inspection specified in section 2183.

(18) "Inspection site" means an area including a random roadside location, a weigh station, or a fleet facility used for conducting the heavy-duty vehicle test procedure, emission control system inspection, or both.

(19) "Inspector" means an Air Resources Board employee with the duty of enforcing Health and Safety Code sections 43701(a) and 44011.6 and title 13, CCR sections 2180 through 2194.

(20) "Issuance" means the act of mailing or personally delivering a Citation to the owner.

(21) "Minimum penalty" means the (\$300) penalty that is to be deposited in the Diesel Emission Reduction Fund pursuant to Health and Safety Code section 44011.6(l).

(22) "Notice of Violation" means a legal notice issued to the owner of a heavy-duty vehicle powered by a pre-1991 model-year diesel engine with a measured smoke opacity exceeding 55 percent but not exceeding 69 percent, requiring the owner to repair the vehicle and submit a demonstration of correction.

(23) "Officer" means a uniformed member of the Department of the California Highway Patrol.

(24) "Opacity" means the percentage of light obstructed from passage through an exhaust smoke plume.

(25) "Owner" means either (A) the person registered as the owner of a vehicle by the California Department of Motor Vehicles (DMV), or its equivalent in another state, province, or country; or (B) a person shown by the registered owner to be legally responsible for the vehicle's maintenance. The person identified as the owner on the registration document carried on the vehicle at the time a Citation is issued shall be deemed the owner unless that person demonstrates that another person is the owner of the vehicle.

(26) "Removal from service" means the towing and storage of a vehicle under the auspices of the Department of the California Highway Patrol.

(27) "Repair facility" means any place where heavy-duty vehicles are repaired, rebuilt, reconditioned, or in any way maintained for the public at a charge, and fleet maintenance facilities.

(28) "SAE J1667" means Society of Automotive Engineers (SAE) Recommended Practice SAE J1667 "Snap-Acceleration Smoke Test Procedure for Heavy-Duty Diesel Powered Vehicles," as issued February 1996 ("1996-02"), which is incorporated herein by reference.

(29) "Schoolbus" means the same as defined in California Vehicle Code section 545.

(30) "Smokemeter" means a detection device used to measure the opacity of smoke in percent opacity.

(31) "Tampered" means missing, modified, or disconnected, or, as it applies to emission control labels, permanently obscured.

(32) "Test procedures," for the purpose of chapter 3.5, means the test procedures set forth in SAE J1667.

(33) "Uncleared Citation" means a Citation for which demonstration of correction and, if required, payment of any civil penalty, has not been made.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43701 and 44011.6, Health and Safety Code. Reference: Sections 39002, 39003, 39010, 39033, 43000, 43013, 43018, 43701 and 44011.6, Health and Safety Code; Sections 410 and 505, Vehicle Code; title 42 United States Code, section 7521(a); and title 40, Code of Federal Regulations Part 86, Subpart A.

HISTORY

1. New section filed 10-21-91; operative 11-20-91 (Register 92, No. 9).
2. Amendment of subsection (a)(29) filed 12-1-93; operative 1-1-95 (Register 93, No. 49).
3. Amendment filed 5-4-98; operative 5-4-98 pursuant to Government Code section 11343.4(d) (Register 98, No. 19).
4. Amendment of subsections (a)(1)-(2) and (a)(6), new subsection (a)(25), subsection renumbering and amendment of NOTE filed 3-21-2005; operative 3-21-2005 pursuant to Government Code section 11343.4 (Register 2005, No. 12).
5. New subsections (a)(1), (a)(6), (a)(13), (a)(15) and (a)(33), subsection renumbering, amendment of newly designated subsections (a)(10) and (a)(32) and amendment of NOTE filed 1-16-2007; operative 2-15-2007 (Register 2007, No. 3).
6. Change without regulatory effect amending subsections (a)(2)-(3), repealing subsection (a)(29) and renumbering subsections filed 5-23-2007 pursuant to section 100, title 1, California Code of Regulations (Register 2007, No. 21).

§ 2181. Responsibilities of the Driver and Inspector During the Inspection Procedure.

(a) Driver of heavy-duty diesel-powered vehicle. The driver of a heavy-duty diesel-powered vehicle selected to undergo the inspection procedure shall do all of the following:

- (1) Drive the vehicle to the inspection site upon direction of an officer.
- (2) Show proof of driver's license and vehicle registration to the inspector or officer upon request.
- (3) Perform the test procedure upon request by an inspector.
- (4) Open the vehicle door so that the inspector can observe the driver depress the accelerator pedal.
- (5) Permit an emission control system inspection and open the hood of the vehicle upon the request of the inspector.
- (6) As applicable, sign the Citation or Notice of Violation to acknowledge its receipt and sign the smoke test report to acknowledge performance of the test procedure.

(b) Driver of heavy-duty gasoline-powered vehicle. The driver of a heavy-duty gasoline-powered vehicle selected to undergo the inspection shall do all of the following:

- (1) Drive the vehicle to the inspection site upon direction of an officer.
- (2) Show proof of driver's license and vehicle registration to the inspector or officer upon request.
- (3) Permit an emission control system inspection and open the hood of the vehicle upon request of the inspector.
- (4) As applicable, sign the Citation or Notice of Violation to acknowledge its receipt.

(c) Inspector. The inspector in performing the inspection procedures shall do all of the following:

- (1) Advise the driver that refusal to submit to the inspection procedure is a violation of these regulations.
- (2) Obtain engine identification information from the vehicle when tested pursuant to section 2182 to determine which opacity standard specified in section 2182 applies.
- (3) Except as otherwise provided in section 2181(c)(4), issue a Citation to the driver of a vehicle that fails the test procedure or the emission control system inspection.
- (4) Issue a Notice of Violation to the driver of a vehicle powered by a pre-1991 model-year diesel engine with a measured smoke opacity exceeding 55 percent but not exceeding 69 percent, except where a Notice of Violation or Citation has been issued for the vehicle in the preceding 12 months.

(5) Issue a warning to the owner of a heavy-duty diesel-powered vehicle missing its emission control label that the label must be replaced and the engine number identification must be provided to the ARB within 45 days of written notification or receipt of a Citation under section 2183 from the ARB, or it will be conclusively presumed in any subsequent smoke opacity test where the emission control label remains missing that the vehicle is subject to the 40 percent smoke opacity standard in section 2182(a)(1), unless at the time of the subsequent test it is plainly evident from a visual inspection that the vehicle is powered by a pre-1991 model-year engine.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43701 and 44011.6, Health and Safety Code. Reference: Sections 39002, 39003, 39010, 39033, 43000, 43013, 43018, 43701 and 44011.6, Health and Safety Code; and Sections 260 and 305, Vehicle Code.

HISTORY

1. New section filed 10-21-91; operative 11-20-91 (Register 92, No. 9).
2. Amendment of subsection (c)(2) filed 12-1-93; operative 1-3-94 (Register 93, No. 49).
3. Amendment of section heading and section filed 5-4-98; operative 5-4-98 pursuant to Government Code section 11343.4(d) (Register 98, No. 19).
4. New subsections (a)(2), (a)(6), (b)(2) and (b)(6), subsection relettering, amendment of newly designated subsections (a)(5) and (b)(3) and amendment of NOTE filed 3-21-2005; operative 3-21-2005 pursuant to Government Code section 11343.4 (Register 2005, No. 12).
5. Amendment of subsections (a)(7), (b), (b)(4), (c) and (c)(3)-(6) and amendment of NOTE filed 1-16-2007; operative 2-15-2007 (Register 2007, No. 3).

6. Change without regulatory effect repealing subsection (a)(6), renumbering subsections and repealing subsection (c)(6) filed 5-23-2007 pursuant to section 100, title 1, California Code of Regulations (Register 2007, No. 21).

§ 2182. Heavy-Duty Diesel Vehicle Smoke Opacity Standards and Test Procedures; Excessive Smoke.

(a) Standards

(1) No heavy-duty vehicle powered by a 1991 or subsequent model-year diesel engine operating on the highways within the State of California shall exceed 40 percent smoke opacity when tested in accordance with this section unless its engine is exempted under subsection (c) or (d) below.

(2) No heavy-duty vehicle powered by a pre-1991 model-year diesel engine, operating on the highways within the State of California, shall exceed 55 percent smoke opacity when tested in accordance with this section unless its engine is exempted under subsection (c) or (d) below.

(b) Exemptions

(1) The Executive Officer shall exempt from subsections (a)(1) and (2) any engine family that is shown by the engine manufacturer to the satisfaction of the Executive Officer to exhibit smoke opacity greater than 40 percent or 55 percent respectively when in good operating condition and adjusted to the manufacturer's specifications. Such engine family(s) must comply with any technologically appropriate less stringent opacity standard identified by the Executive Officer based on a review of the data obtained from engines in good operating condition and adjusted to manufacturer's specifications.

(2) The Executive Officer shall exempt from subsections (a)(1) and (2) any 1991 and earlier model-year heavy-duty diesel engines that are equipped with carryover add-on aftermarket turbocharger kits approved by the ARB, and are shown by the kit or engine manufacturer to the satisfaction of the Executive Officer to exhibit smoke opacity greater than 40 percent or 55 percent respectively when in good operating condition and adjusted to manufacturer's specifications. Such engines must comply with any technologically appropriate less stringent opacity standard identified by the Executive Officer based on a review of the data obtained from engines in good operating condition and adjusted to manufacturer's specifications.

(3) Exemptions previously issued and in effect on January 1, 1996 shall remain in effect under the amendments to this section adopted on March 2, 1998 and effective on May 4, 1998.

(4) A manufacturer seeking an exemption under subsection (b) shall provide the ARB with the engine emissions data needed to exempt the engine family and determine technologically appropriate less stringent opacity standards.

(c) Effect of missing emission control label on applicable standard. When the owner of a heavy-duty diesel-powered vehicle receives a Citation or written notification from the ARB that the emission control label was missing during an inspection, the owner must replace the emission control label and provide the engine number identification to the ARB within 45 days of receipt of the notification in addition to paying applicable penalties under section 2185(a)(3). If the owner fails to comply with this requirement, it will be conclusively presumed in any subsequent smoke opacity test where the emission control label remains missing that the vehicle is subject to the 40 percent smoke opacity standard in section 2182(a)(1), unless at the time of the subsequent test it is plainly evident from a visual inspection that the vehicle is powered by a pre-1991 model-year engine.

(d) Excessive Smoke. A heavy-duty vehicle has excessive smoke if it fails to comply with the smoke opacity standard applicable under this section 2182.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43701 and 44011.6, Health and Safety Code. Reference: Sections 39002, 39003, 39010, 39033, 43000, 43013, 43018, 43701 and 44011.6, Health and Safety Code.

HISTORY

1. New section filed 10-21-91; operative 11-20-91 (Register 92, No. 9).
2. Amendment filed 12-1-93; operative 1-3-94 (Register 93, No. 49).

3. Amendment of section heading and section filed 5-4-98; operative 5-4-98 pursuant to Government Code section 11343.4(d) (Register 98, No. 19).
4. Amendment of subsection (c), repealer of subsection (e) and amendment of NOTE filed 1-16-2007; operative 2-15-2007 (Register 2007, No. 3).

§ 2183. Inspection of the Emission Control System on a Heavy-Duty Vehicle.

(a) Heavy-duty diesel-powered vehicles. No heavy-duty diesel-powered vehicle shall operate in California with tampered or defective emission control components. The ARB shall conduct a visual inspection of heavy-duty diesel-powered vehicles to determine whether emission control components have been tampered with or are defective. The inspection shall include, but is not limited to, the following:

- (1) The engine governor.
- (2) Any seals and/or covers protecting the air-fuel ratio adjustments.
- (3) Any fuel injection pump seals and covers.
- (4) The air cleaner and flow restriction indicator.
- (5) The exhaust gas recirculation valve.
- (6) The particulate matter trap system or catalytic converter system, including pipes and valves.
- (7) Related hoses, connectors, brackets, and hardware for these components.
- (8) Engine computer controls, related sensors, and actuators.
- (9) Emission control label (ECL).
- (10) Any other emissions-related components for a particular vehicle/engine as determined from the manufacturer's specifications, emission control label, certification data, or published vehicle parts manuals.

(b) Heavy-duty gasoline-powered vehicles. No heavy-duty gasoline-powered vehicle shall operate in California with tampered or defective emission control components. The ARB shall conduct a visual inspection of heavy-duty gasoline-powered vehicles to determine whether emission control components have been tampered with or are defective. The inspection shall include, but is not limited to, the following:

- (1) The air injection system.
- (2) The positive crankcase ventilation system.
- (3) The exhaust gas recirculation system.
- (4) The catalytic converter, including pipes and valves.
- (5) The evaporative emission control system.
- (6) Related hoses, connectors, brackets, and hardware for these components.
- (7) Engine computer controls, related sensors, and actuators.
- (8) On-Board Diagnostic (OBD) systems for 1994 and subsequent model year vehicles, if so equipped.
- (9) ECL.
- (10) Any other emissions-related component for a particular vehicle/engine as determined from the manufacturer's specifications, emission control label, certification data, or published vehicle parts manuals.

(c) No 1974 or newer diesel powered heavy-duty commercial vehicle shall operate in California without evidence that, at the time of manufacture, the installed engine met emission standards at least as stringent as applicable federal emission standards for the model year of the engine. The ARB shall base its determination on whether an engine meets the above requirements by inspecting the ECL affixed to the vehicle's engine.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43701 and 44011.6, Health and Safety Code. Reference: Sections 39002, 39003, 39010, 39033, 43000, 43013, 43018, 43701 and 44011.6, Health and Safety Code.

HISTORY

1. New section filed 10-21-91; operative 11-20-91 (Register 92, No. 9).
2. Amendment of section heading and subsections (a) and (b) filed 5-4-98; operative 5-4-98 pursuant to Government Code section 11343.4(d) (Register 98, No. 19).
3. Amendment of subsections (a), (a)(9), (b) and (b)(9), new subsection (c) and amendment of NOTE filed 1-16-2007; operative 2-15-2007 (Register 2007, No. 3).

§ 2184. Refusal to Submit to Inspection Procedure.

The refusal by an owner or driver of a vehicle to submit to the test procedure in section 2182 or to the emission control system inspection in

section 2183 constitutes a failure of the test procedure or inspection, unless the driver is cited by the California Highway Patrol for a violation of California Vehicle Code section 2813.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43701 and 44011.6, Health and Safety Code. Reference: Sections 39002, 39003, 39010, 39033, 43000, 43013, 43018, 43701 and 44011.6, Health and Safety Code. Sections 305, 505 and 2813, Vehicle Code.

HISTORY

1. New section filed 10-21-91; operative 11-20-91 (Register 92, No. 9).
2. Repealer of subsection (a) designator filed 5-4-98; operative 5-4-98 pursuant to Government Code section 11343.4(d) (Register 98, No. 19).
3. Amendment of section and NOTE filed 3-21-2005; operative 3-21-2005 pursuant to Government Code section 11343.4 (Register 2005, No. 12).
4. Change without regulatory effect amending section filed 5-23-2007 pursuant to section 100, title 1, California Code of Regulations (Register 2007, No. 21).

§ 2185. Civil Penalty Schedule.

(a) The owner of a heavy-duty vehicle that fails the test procedure or the emission controls system inspection, including by refusal to submit, is subject to the following penalty schedule:

(1) Heavy-Duty Vehicle Opacity and Tampering Penalties for Violating Sections 2182 and 2183(a) and (b), Except for Violations Involving a Tampered ECL.

(A) Except as provided below, the owner of a heavy-duty vehicle, that is cited for the first time pursuant to section 2182 or 2183 (a) and (b), other than for a tampered ECL, and for which demonstration of correction is provided and payment is made within 45 days from personal or certified mail receipt of the Citation, shall pay the minimum penalty of \$300. An owner who fails to correct the vehicle or pay the minimum penalty within 45 days of receipt of the Citation shall be assessed a penalty of \$800.

(B) The above penalty shall not apply to the first Citation received by an owner of a school bus, but the owner shall be subject to the penalty provisions of paragraphs 2185(a)(1)(A) and (C) respectively for second and any subsequent violations.

(C) The owner of a vehicle that is cited pursuant to section 2182 or 2183(a) and (b), other than for a tampered ECL, for a second time within a 12 month period for the same vehicle shall within 45 days from personal or certified mail receipt of the current Citation provide demonstration of correction and pay the penalty of \$1,500 and the minimum penalty of \$300 for a total of \$1,800, notwithstanding section 2185(c).

(D) The owner of a heavy-duty vehicle that violates section 2184 by refusing to submit to an inspection conducted under sections 2182 or 2183(a) and (b), including inspections for a tampered ECL, shall be assessed a penalty of \$800 for a first time violation. Subsequent violations of section 2184 for refusing to submit to an inspection under 2182 shall be subject to a penalty of \$1800.

(2) Penalties for a Tampered ECL under section 2183.

(A) An owner of any heavy-duty vehicle shall receive a Citation each time that ARB finds that the vehicle has a tampered ECL. For the first year following the effective date of the amended regulation, February 15, 2007, if the owner demonstrates to ARB that a new label has been affixed to the vehicle's engine within 45-days of receipt of the Citation pursuant to section 2186(a)(3) below, no penalty shall be assessed. An owner of a heavy-duty vehicle who has been issued a Citation for a tampered ECL label and who has failed to have a replacement label affixed to the engine within 45-days of service of the Citation as set forth in section 2186(a)(3) below shall be subject to a \$300 penalty.

(B) After the first year from the effective date of the amended regulation, February 15, 2007, the owner shall receive a citation assessing the owner a \$300 penalty. The fine shall only be waived if, at the time of inspection, the owner provides other documentation from the engine manufacturer or an authorized dealer that demonstrates compliance with section 2183(c), and provided the ECL is replaced pursuant to paragraph (A) above. The documentation shall identify the engine by serial number.

(3) Penalties for Violations of Section 2183(c). The owner of a heavy-duty commercial vehicle that is cited for a violation of section 2183(c) shall be subject to the following penalties:

(A) The owner shall be subject to a penalty of \$500 for each violation.

(B) For the purposes of section 2185(a)(3), it shall be presumed that a heavy-duty commercial vehicle with a tampered ECL is not in compliance with section 2183(c) and is subject to a \$500 penalty for each violation in addition to the penalties provided for under section 2185(a)(2). If the owner demonstrates to ARB that a new ECL has been affixed to the vehicle's engine within 45-days of receipt of the Citation, pursuant to section 2186(a)(3) below, and the ECL demonstrates that the vehicle's engine was designed to at least meet U.S. EPA promulgated emission standards for the year of the engine's manufacture, the penalty for violation of section 2183(c) shall be waived.

(b)(1) No Citation shall be issued to the owner of a heavy-duty vehicle powered by a pre-1991 model-year diesel engine on the basis of a measured smoke opacity exceeding 55 percent but not exceeding 69 percent, unless:

(A) the owner fails to provide a demonstration of correction within 45 days from personal or certified mail receipt of the Notice of Violation, or

(B) a Notice of Violation or Citation has been issued for the vehicle in the preceding 12 months.

(2) The owner of a heavy-duty vehicle that is the subject of a Notice of Violation and for which demonstration of correction is provided within 45 days from personal or certified mail receipt of the Notice of Violation shall not be subject to a penalty for the violation.

(3) The owner of a heavy-duty vehicle that is initially subject to a Notice of Violation, but is cited after a demonstration of correction is not provided within 45 days from personal or certified mail receipt of a Notice of Violation, shall be subject to the penalty in section 2185(a)(1)(A).

(4)(A) Where a heavy-duty vehicle with a pre-1991 engine inspected in accordance with section 2181 has a measured opacity exceeding 55 percent but not exceeding 69 percent within 12 months of issuance of a Notice of Violation for which a demonstration of correction was timely provided within the applicable 45-day period, a Citation shall be issued and the owner shall be subject to the penalty in section 2185(a)(1)(A).

(B) Where a heavy-duty vehicle with a pre-1991 engine inspected in accordance with section 2181 has a measured opacity exceeding 55 percent but not exceeding 69 percent within 12 months of issuance of a Notice of Violation for which a demonstration of correction was not timely provided within the applicable 45-day period, a Citation shall be issued and the owner shall be subject to the penalty in section 2185(a)(1)(C).

(c) If a heavy-duty vehicle fails the test procedure or an emission control system inspection one year or more after the date of its most recent failure, the owner of that vehicle shall be subject to the penalty schedule in section 2185(a)(1)(A) and (a)(1)(C).

(d) When a heavy-duty vehicle is cited after a bona fide change of ownership between non-related persons or entities, the new owner shall not be subject to the penalty schedule in section 2185(a)(1)(A) and (C) if the only Citations issued for the vehicle within the previous 12 months were issued prior to the change of ownership to the new owner.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43016, 43701 and 44011.6, Health and Safety Code. Reference: Sections 39002, 39003, 39010, 39033, 43000, 43013, 43016, 43018, 43701 and 44011.6, Health and Safety Code. Sections 305, 505 and 545, Vehicle Code.

HISTORY

1. New section filed 10-21-91; operative 11-20-91 (Register 92, No. 9).

2. Amendment filed 5-4-98; operative 5-4-98 pursuant to Government Code section 11343.4(d) (Register 98, No. 19).

3. Amendment filed 3-21-2005; operative 3-21-2005 pursuant to Government Code section 11343.4 (Register 2005, No. 12).

4. Change without regulatory effect amending subsection (a)(1)(B) filed 8-8-2005 pursuant to section 100, title 1, California Code of Regulations (Register 2005, No. 32).

5. Amendment of section and NOTE filed 1-16-2007; operative 2-15-2007 (Register 2007, No. 3).

6. Change without regulatory effect amending section filed 5-23-2007 pursuant to section 100, title 1, California Code of Regulations (Register 2007, No. 21).

§ 2186. Demonstration of Correction and Post-Repair Test or Inspection.

(a) Demonstration of Correction. The owner must demonstrate correction of the vehicle by submitting to the Air Resources Board documents demonstrating compliance with (1) or (2) or (3):

(1) Where repairs are made at a repair facility, a repair receipt or a completed work order which contains the following information:

(A) Name, address, and phone number of the facility;

(B) Name of mechanic;

(C) Date of the repair;

(D) Description of component replacement(s), repair(s), and/or adjustment(s); and

(E) Itemized list of replaced component(s), including description of part, part number, and cost;

(2) Where the owner makes his or her own repairs outside of a repair facility.

(A) An itemized receipt for the parts used in the repair, and

(B) A statement identifying that date and nature of the repairs made;

(3) The owner of the heavy-duty vehicle who has received a Citation for a tampered ECL shall:

(A) Have the engine manufacturer through its authorized dealer, affix an emission control label identical to the label that was installed on the engine at the time of its original manufacturer;

(B) Provide written verification from the heavy-duty vehicle/engine manufacturer or its authorized dealer that the label has been replaced. The written verification must include identification of the engine serial number.

(b) Statement of Correction. The owner must also submit to the Air Resources Board documents demonstrating compliance with (1) or (2):

(1) Where the Citation or Notice of Violation was based on a failure to meet the opacity standard applicable under section 2182, a smoke test report from a subsequent test showing that the repaired vehicle passed the applicable section 2182 standard along with a statement to that effect made under penalty of perjury by the person who conducted the subsequent test;

(2) Where the Citation or Notice of Violation was based on a failure to pass an emission control system inspection as specified in section 2183, a statement by a person, under penalty of perjury, that the person has reinspected any components identified in the Citation or Notice of Violation as defective or tampered and has determined that these components are correct, are installed, and are in good working order; or

[The next page is 240.3.]

(c) The Air Resources Board shall require an ARB post-repair test or an ARB post-repair inspection whenever:

(1) a submitted repair receipt or work order does not comply with (a) above;

(2) a repair receipt, work order or authorized dealer verification appears to be falsified; or

(3) a second and subsequent failures of the test procedure or an emission control system inspection on the vehicle occur within a one year period.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43701 and 44011.6, Health and Safety Code. Reference: Sections 39002, 39003, 39010, 39033, 43000, 43013, 43018, 43701 and 44011.6, Health and Safety Code. Section 505, Vehicle Code.

HISTORY

1. New section filed 10-21-91; operative 11-20-91 (Register 92, No. 9).
2. Amendment filed 5-4-98; operative 5-4-98 pursuant to Government Code section 11343.4(d) (Register 98, No. 19).
3. Amendment of section and NOTE filed 3-21-2005; operative 3-21-2005 pursuant to Government Code section 11343.4 (Register 2005, No. 12).
4. Amendment filed 1-16-2007; operative 2-15-2007 (Register 2007, No. 3).
5. Change without regulatory effect amending subsection (b) and repealing subsection (b)(3) filed 5-23-2007 pursuant to section 100, title 1, California Code of Regulations (Register 2007, No. 21).

§ 2187. Vehicles Removed from Service.

(a) Vehicles are subject to removal from service by the Department of the California Highway Patrol if requested by the Air Resources Board inspector, and if one or more uncleared Citations issued under section 2182 exist at the time of inspection.

(b) Upon payment by bank check, money order, or credit card of all unpaid penalties for a vehicle that has been removed from service, the Air Resources Board shall provide the owner, or designee, a release form for presentation to the Department of the California Highway Patrol.

(c) The release of the vehicle shall be subject to the condition that it be repaired and post-repair tested or inspected within 15 days.

NOTE: Authority cited: Sections 39600, 39601, 43013 and 44011.6, Health and Safety Code. Reference: Sections 39002, 39003, 39010, 39033, 43000, 43013, 43018 and 44011.6, Health and Safety Code. Section 505, Vehicle Code.

HISTORY

1. New section filed 10-21-91; operative 11-20-91 (Register 92, No. 9).
2. Amendment of subsection (c) filed 5-4-98; operative 5-4-98 pursuant to Government Code section 11343.4(d) (Register 98, No. 19).
3. Amendment of subsections (a) and (b) filed 1-16-2007; operative 2-15-2007 (Register 2007, No. 3).

§ 2188. Contesting a Citation.

The owner of a vehicle cited under these regulations may request a hearing pursuant to section 60075.1 et seq., title 17, California Code of Regulations.

NOTE: Authority cited: Sections 39600, 39601, 43013 and 44011.6, Health and Safety Code. Reference: Sections 39002, 39003, 39010, 39033, 43000, 43013, 43018, 43701 and 44011.6, Health and Safety Code.

HISTORY

1. New section filed 5-4-98; operative 5-4-98 pursuant to Government Code section 11343.4(d) (Register 98, No. 19).
2. Amendment of section and NOTE filed 1-16-2007; operative 2-15-2007 (Register 2007, No. 3).

§ 2189. Severability of Provisions.

If any subsection, paragraph, subparagraph, sentence, clause, phrase, or portion of this Chapter is, for any reason, held invalid, unconstitutional, or unenforceable by any court of competent jurisdiction, such portion shall be deemed as a separate, distinct, and independent provision, and such holding shall not affect the validity of the remaining portions of the regulation.

NOTE: Authority cited: Sections 39600, 39601, 43013 and 44011.6, Health and Safety Code. Reference: Sections 39002, 39003, 39010, 39033, 43000, 43013, 43018, 43701 and 44011.6, Health and Safety Code.

HISTORY

1. New section filed 1-16-2007; operative 2-15-2007 (Register 2007, No. 3).

Chapter 3.6. Periodic Smoke Inspections of Heavy-Duty Diesel-Powered Vehicles

§ 2190. Vehicles Subject to the Periodic Smoke Inspection Requirements.

These regulations shall be applicable, operative July 1, 1998, as follows:

(a) Except as provided in subsections (b), (c), (d), (e) and (f), the requirements of this chapter apply to all heavy-duty diesel-powered vehicles with gross vehicle weight ratings greater than 6,000 pounds which operate on the streets or highways within the State of California.

(b) Heavy-duty diesel-powered vehicles which are not part of a fleet or are employed exclusively for personal use are excluded from the requirements of this chapter.

(c) Heavy-duty diesel-powered vehicles which are registered under the International Registration Plan as authorized by Article 4 (commencing with section 8050), Chapter 4, Division 3 of the Vehicle Code and which have established a base state other than California (non-California based vehicles) are excluded from the requirements of this chapter.

(d) Heavy-duty diesel-powered vehicles which operate in California under the terms of Interstate Reciprocity Agreements as authorized by Article 3 (commencing with section 8000), Chapter 4, Division 3 of the Vehicle Code and which belong to fleets that are not based in California are excluded from the requirements of this chapter.

(e) Heavy-duty diesel-powered vehicles operating in California under the terms of any other apportioned registration, reciprocity, or bilateral prorate registration agreement between California and other jurisdictions and which belong to fleets that are not based in California are excluded from the requirements of this chapter.

(f) Heavy-duty diesel-powered vehicles operating in California under short-term vehicle registrations or permits of 90 days or less (including but not limited to 90-day temporary registrations and 4-day permits under Vehicle Code section 4004) are excluded from the requirements of this chapter.

NOTE: Authority cited: Sections 39600, 39601 and 43701(a), Health and Safety Code. Reference: Sections 39002, 39003, 39010, 39033, 43000, 43018, 43701(a), and 44011.6, Health and Safety Code.

HISTORY

1. New subchapter 3.6 and section filed 12-1-93; operative 1-1-95 (Register 93, No. 49).
2. Amendment of first sentence filed 11-30-95; operative 12-30-95 (Register 95, No. 48).
3. Redesignation and amendment of subchapter 3.6 to chapter 3.6, new section heading and amendment of section filed 5-4-98; operative 5-4-98 pursuant to Government Code section 11343.4(d) (Register 98, No. 19).

§ 2191. Definitions.

(a) The definitions of this section supplement and are governed by the definitions set forth in Chapter 2 (commencing with Section 39010), Part 1, Division 26 of the Health and Safety Code. The provisions of this chapter shall also be governed by the definitions set forth in section 2180.1, Title 13, California Code of Regulations including the following modifications:

(1) "Fleet" means any group of 2 or more heavy-duty diesel-powered vehicles which are owned or operated by the same agency or entity.

(2) "Test opacity" means the opacity of smoke from a vehicle when measured in accordance section 2193(e).

NOTE: Authority cited: Section 39600, 39601 and 43701(a), Health and Safety Code. Reference: Sections 39002, 39003, 39010, 39033, 43000, 43018, 43701(a) and 44011.6, Health and Safety Code.

HISTORY

1. New section filed 12-1-93; operative 1-1-95 (Register 93, No. 49).
2. Amendment filed 5-4-98; operative 5-4-98 pursuant to Government Code section 11343.4(d) (Register 98, No. 19).

§ 2192. Vehicle Inspection Responsibilities.

(a) The owner of a heavy-duty diesel-powered vehicle subject to the requirements of this chapter shall do all of the following:

(1) Test the vehicle for excessive smoke emissions periodically according to the inspection intervals specified in section 2193(a), (b), and (c).

(2) Measure the smoke emissions for each test using the test procedure specified in section 2193(e).

(3) Record the smoke test opacity levels and other required test information as specified in section 2194.

(4) Have the vehicle repaired if it exceeds the applicable smoke opacity standard specified in section 2193(e).

(5) Record the vehicle repair information as specified in section 2194.

(6) Conduct a post-repair smoke test to determine if the vehicle complies with the applicable smoke opacity standard.

(7) Record the post-repair smoke test results as specified in section 2194.

(8) If the vehicle does not comply with the applicable smoke opacity standard after the test required by section 2192(a)(7), make additional repairs to achieve compliance, and record the smoke test results as specified in section 2194.

(9) Keep the records specified in section 2194 for two years after the date of inspection.

(10) Permit an Air Resources Board inspector to review the inspection records specified in section 2194 at owner/operator designated fleet locations by appointment.

NOTE: Authority cited: Sections 39600, 39601 and 43701(a), Health and Safety Code. Reference: Sections 39002, 39003, 39033, 43000, 43016, 43018, 43701(a) and 44011.6, Health and Safety Code.

HISTORY

1. New section filed 12-1-93; operative 1-1-95 (Register 93, No. 49).
2. Amendment of subsections (a)-(a)(2), (a)(4) and (a)(8) filed 5-4-98; operative 5-4-98 pursuant to Government Code section 11343.4(d) (Register 98, No. 19).
3. New subsection (a)(9), subsection renumbering and amendment of NOTE filed 3-21-2005; operative 3-21-2005 pursuant to Government Code section 11343.4 (Register 2005, No. 12).
4. Change without regulatory effect repealing subsection (a)(9) and renumbering subsections filed 5-23-2007 pursuant to section 100, title 1, California Code of Regulations (Register 2007, No. 21).

§ 2193. Smoke Opacity Inspection Intervals, Standards, and Test Procedures.

(a) Initial phase-in. Vehicles which are subject to the requirements of this chapter on the operative date of these regulations shall be tested for smoke opacity (and repaired if the applicable smoke opacity standard is exceeded) in accordance with the requirements of section 2192 pursuant to the applicable following schedule:

(1) Fleets of five or more vehicles subject to this chapter:

(A) At least 25 percent of the fleet's vehicles within 180 calendar days of the effective date of these regulations;

(B) At least 50 percent of the fleet's vehicles within 270 calendar days of the effective date of these regulations;

(C) At least 75 percent of the fleet's vehicles within 365 calendar days of the effective date of these regulations; and

(D) The fleet's remaining vehicles no later than 455 calendar days after the effective date of these regulations.

(2) For fleets of 2 to 4 vehicles, at least one vehicle must be tested in the initial 180 day period, and in each subsequent 90 calendar day period, until all vehicles in the fleet have been tested.

(b) New fleets. Fleets which first become subject to the requirements of this chapter subsequent to the effective date of these regulations must be tested in accordance with section 2192 within the applicable time intervals reflected in subsection (a) above, beginning on the date the fleet becomes subject to these regulations.

(c) Annual testing. Once a vehicle subject to the requirements of this chapter has been tested in accordance with subsection (a) or (b), or has been acquired by a fleet owner after the effective date of these regulations, the vehicle must periodically be tested for smoke opacity (and repaired if the applicable smoke opacity standard is exceeded) in accordance with the requirements of section 2192 within 12 months of the previous test conducted under this section 2193.

(d) Exemption for vehicles powered by 1994 or subsequent model-year engines. Any heavy-duty vehicle powered by a 1994 or subsequent model-year engine is exempt from the testing requirements of this section until January 1 of the calendar year that is four years after the model year of the engine, and is to be treated as having been acquired by the owner on that January 1. For example, 1995 model-year engine will be exempt until January 1, 1999.

(e) Smoke opacity standards and test procedures.

(1) Except as otherwise provided in subsection (e)(2) below, the smoke opacity standards and test procedures are those specified in section 2182, Titled 13, California Code of Regulations.

(2) Prior to July 1, 1999, if a repair facility is not equipped with an operable SAE J1667 smokemeter, vehicles may be tested at the repair facility in accordance with the smoke opacity test procedures and opacity standards set forth in section (e)(3). These are the test procedures and opacity standards originally established for the heavy-duty diesel vehicle roadside inspection program in 1991.

(3) Optional smoke opacity test procedures and standards prior to July 1, 1999.

(A) Standards.

1. The maximum smoke opacity standard for a 1991 or subsequent model-year heavy-duty diesel-powered vehicle with a Federal peak smoke engine certification level of 35 percent peak opacity or less is 40 percent when tested in accordance with section 2193(e)(3)(B) and (C).

2. The maximum smoke opacity standard for any other heavy-duty diesel-powered vehicle is 55 percent when tested in accordance with section 2193(e)(3)(B) and (C).

3. The above standards do not apply to an engine exempted under section 2182(b).

(B) Equipment. The smoke opacity measurement equipment shall consist of a light extinction type smokemeter which includes an optical detection unit, a control/indicator unit, and a strip chart recorder.

1. The smokemeter shall comply with the specifications provided in the Society of Automotive Engineers (SAE) procedure J1243, "Diesel Emission Production Audit Test Procedure," May 1988, which is incorporated herein by reference, section 7.4 and shall be calibrated according to specifications in SAE procedure J1243, section 8.2.

2. The strip chart recorder shall comply with specifications in SAE procedure J1243, section 7.5, subsections 1-4 (May 1988).

(C) Procedure. The test procedure shall consist of preparation, preconditioning, and test phases:

1. In the preparation phase, the vehicle shall be placed at rest, the transmission shall be placed in neutral, and the vehicle wheels shall be properly restrained to prevent any rolling motion.

2. In the preconditioning phase, the vehicle shall be put through a snap-idle cycle two or more times until two successive measured smoke levels are within ten (10) opacity percent of each other. The smokemeter shall be rechecked prior to the preconditioning sequence to determine that its zero and span setting are adjusted according to specifications in SAE procedure J1243, section 8.1 (May 1988).

3. In the test procedure phase, the vehicle shall be put through the snap-idle cycle three times.

4. The opacity shall be measured during the preconditioning and test phases with a smokemeter and shall be recorded continuously on the chart recorder during each snap-idle cycle. The maximum instantaneous value recorded by the chart recorder shall be the opacity reading.

5. The test opacity to determine the compliance with (A)1. and (A)2. above shall be the average of the two meter readings with the least difference in opacity values. If all three readings have successive equivalent differences between them, the test opacity shall be the average of the three readings.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43701(a), Health and Safety Code. Reference: Sections 39002, 39003, 39033, 43000, 43013, 43018, 43701(a) and 44011.6, Health and Safety Code.

HISTORY

1. New section filed 12-1-93; operative 1-1-95 (Register 93, No. 49).

2. Amendment of subsection (a) filed 11-30-95; operative 12-30-95 (Register 95, No. 48).
3. Amendment of section heading and section filed 5-4-98; operative 5-4-98 pursuant to Government Code section 11343.4(d) (Register 98, No. 19).

§ 2194. Record Keeping Requirements.

(a) The owner of a vehicle subject to the requirements of this chapter shall record the following information when performing the smoke opacity testing:

- (1) The brand name and model of the opacity meter.
- (2) The dates of last calibration of the opacity meter and chart recorder.
- (3) The name of the smoke meter operator who conducted the test.
- (4) The name and address of the contracted smoke test facility or vehicle repair facility that conducted the test (if applicable).
- (5) The applicable smoke opacity standard for the tested vehicle.
- (6) Vehicle identification number, vehicle's engine year, engine make, and engine model, and test date. Fleet designated vehicle identification numbers are also acceptable.
- (7) The initial smoke test opacity levels (for three successive test readings).
- (8) An indication of whether the vehicle passed or failed the initial smoke test.
- (9) The post-repair test date.
- (10) The post-repair smoke test opacity levels (for three successive test readings).
- (11) An indication of whether the vehicle passed or failed the post-repair smoke test.
- (12) For vehicles that have failed the smoke test and have been repaired, the vehicle repair information specified in section 2186(a), Title 13, California Code of Regulations.

NOTE: Authority cited: Sections 39600, 39601 and 43701, Health and Safety Code. Reference: Sections 39002, 39003, 39033, 43000, 43018, 43701 and 44011.6, Health and Safety Code.

HISTORY

1. New section filed 12-1-93; operative 1-1-95 (Register 93, No. 49).
2. Amendment of subsections (a) and (a)(2) filed 5-4-98; operative 5-4-98 pursuant to Government Code section 11343.4(d) (Register 98, No. 19).
3. Repealer of subsection (a)(2), subsection renumbering and new subsections (b)-(b)(1)(D) filed 3-21-2005; operative 3-21-2005 pursuant to Government Code section 11343.4 (Register 2005, No. 12).
4. Change without regulatory effect repealing subsections (b)-(b)(1)(D) filed 5-23-2007 pursuant to section 100, title 1, California Code of Regulations (Register 2007, No. 21).

Chapter 4. Criteria for the Evaluation of Motor Vehicle Pollution Control Devices and Fuel Additives

Article 1. Fuel Additives and Prototype Emission Control Devices

§ 2200. Applicability.

This article shall apply to all motor vehicle fuel additives and to all prototype motor vehicle pollution control devices proposed for sale in California.

NOTE: Authority cited: Sections 39600, 39601, 43014 and 43833, Health and Safety Code. Reference: Sections 39002, 39003, 39040, 39500, 43000 and 43204, Health and Safety Code; and Section 27156, Vehicle Code.

HISTORY

1. New section filed 11-28-77; effective thirtieth day thereafter (Register 77, No. 49).
2. Amendment filed 11-30-83; effective thirtieth day thereafter (Register 83, No. 49).

§ 2201. General Policy.

NOTE: Authority cited: Sections 39600, 39601, 43011, 43014 and 43833, Health and Safety Code. Reference: Sections 39002, 39003 and 43000, Health and Safety Code; and Section 27156, Vehicle Code.

HISTORY

1. Repealer of Subchapter 4 (Sections 2200-2206) and new Subchapter 4 (Sections 2200-2206) filed 11-22-74 as an emergency; effective upon filing (Register 74, No. 47).
2. Certificate of Compliance filed 12-19-74 (Register 74, No. 51).
3. Amendment of NOTE filed 3-16-77; effective thirtieth day thereafter (Register 77, No. 12).
4. Renumbering of Section 2200 to 2201 filed 11-28-77; effective thirtieth day thereafter (Register 77, No. 49).
5. Amendment filed 11-30-83; effective thirtieth day thereafter (Register 83, No. 49).
6. Repealer filed 8-22-96; operative 9-21-96 (Register 96, No. 34).

§ 2202. Performance Requirements.

NOTE: Authority cited: Sections 39600, 3601, 43011 and 43833, Health and Safety Code. Reference: Sections 39002, 39003, 39500, 43000 and 43013, Health and Safety Code; and Section 27156, Vehicle Code.

HISTORY

1. Renumbering of Section 2201 to 2202 filed 11-28-77; effective thirtieth day thereafter (Register 77, No. 49).
2. Amendment filed 11-30-83; effective thirtieth day thereafter (Register 83, No. 49).
3. Repealer filed 8-22-96; operative 9-21-96 (Register 96, No. 34).

§ 2203. Submission Requirements.

Proposals submitted for evaluation must be accompanied by an executed copy of the state board's hold harmless agreement, which is available upon request from any state board office. Persons submitting a control device or fuel additive for evaluation shall set forth, in writing, a description of the device or additive and its application to the control of motor vehicle emissions in sufficient detail, including drawings and schematic diagrams, so that its operation and principles can be understood by reviewers. Performance claims shall be supported by test data. The test procedure and instrumentation used to obtain the data shall be described.

NOTE: Authority cited: Sections 39600, 39601, 43014 and 43833, Health and Safety Code. Reference: Sections 39002, 39003, 39500 and 43000, Health and Safety Code; and Section 27156, Vehicle Code.

HISTORY

1. Renumbering of Section 2202 to 2203 filed 11-28-77; effective thirtieth day thereafter (Register 77, No. 49).
2. Amendment filed 11-30-83; effective thirtieth day thereafter (Register 83, No. 49).

§ 2204. Initial Evaluation.

The information submitted shall be reviewed by the state board's staff in an initial evaluation to decide if the device or additive has the potential for reducing vehicular emissions or the method is sufficiently unique in its application to warrant laboratory tests by the state board. The results of the initial evaluation will be reported in writing and/or by personal conference with the person submitting the information.

NOTE: Authority cited: Sections 39600, 39601 and 43014, Health and Safety Code. Reference: Sections 39002, 39003, 39500 and 43000, Health and Safety Code; and Section 27156, Vehicle Code.

HISTORY

1. Renumbering of Section 2203 to 2204 filed 11-28-77; effective thirtieth day thereafter (Register 77, No. 49).
2. Amendment filed 11-30-83; effective thirtieth day thereafter (Register 83, No. 49).

§ 2205. Laboratory Tests.

(a) Device. When the initial evaluation indicates that the control approach warrants a laboratory test, the submitter must provide a working system which is to be subjected to the appropriate laboratory test. The basis for the evaluation of the results of the laboratory tests will be a comparison of the test data with applicable reference standards. Each component of a multi-component system may be examined and tested to determine its relative contribution in the overall reduction in emissions by the system.

Upon completion of the above tests, the submitter will be notified in writing of the test results. If the results show the device does not have the potential to meet applicable emission standards, the evaluation procedure will be terminated.

If the test shows promising results, a secondary stage evaluation may be undertaken. This may include, but not be limited to, replicating the tests previously performed and the testing of emissions from several vehicles with the device. If the tests from the second stage of evaluation show promising results, a final stage of testing may be undertaken. This may involve the use of fleet vehicles.

(b) Fuel Additive. In accordance with the general policy stated in Section 2200, an application for testing of a motor vehicle fuel additive may be made to the state board by an additive manufacturer. The "Test Procedures for Gasoline and Diesel Vehicle Fuel Additives," adopted by the state board on July 10, 1974, shall be followed in the testing of fuel additives. The state board may charge an application fee, not to exceed the cost of the tests, for any testing conducted pursuant to this section.

NOTE: Authority cited: Sections 39600, 39601, 43014 and 43833, Health and Safety Code. Reference: Sections 39002, 39003, 39500, 43000 and 43204, Health and Safety Code; and Section 27156, Vehicle Code.

HISTORY

1. Renumbering of Section 2204 to 2205 filed 11-28-77; effective thirtieth day thereafter (Register 77, No. 49).
2. Amendment filed 11-30-83; effective thirtieth day thereafter (Register 83, No. 49).

§ 2206. Fee Schedule.

(a) General Provisions.

(1) Purpose: The following fee schedule is adopted pursuant to Section 43833 of the California Health and Safety Code and the "Test Procedures for Gasoline and Diesel Vehicle Fuel Additives," adopted by the state board on July 10, 1974. The fees are designed to cover the cost of the tests actually conducted under the test program on additives for which the manufacturer has requested testing. Individual test programs will be as agreed upon by the applicant and the state board.

(2) Applicability: These provisions are applicable to tests conducted under the state board's "Test Procedures for Gasoline and Diesel Vehicle Fuel Additives," dated July 10, 1974.

(b) Collection of Fees. All fee remittances are to be made payable to State of California, Air Resources Board, 9528 Telstar Avenue, El Monte, CA 91731.

(c) Fee Schedule. The state board's fuel additive test procedure specifies different phases of testing. Depending on the extent of the test activity, each applicant will be charged according to the following fee schedule:

(1) Gasoline Fuel Additive.

(A) Chemical Analysis.

1. Initial evaluation—\$400.00.
2. Required chemical analysis and toxicological evaluation at cost (subdivision (e)).

(B) Preliminary Test.

1. Engine test (consisting of 32 data points under steady state engine operating conditions)—\$650.00.
2. Vehicle test (two cold start CVS-1975 comparative tests)—\$1,500.00.

The manufacturer will be charged at cost for vehicle rental fee incurred by the state board to obtain the required vehicle for testing.

(C) Fleet Test.

At Cost (subdivision (e)).

(2) Diesel Fuel Additive.

(A) Chemical Analysis.

1. Initial evaluation—\$400.00.
2. Required chemical analysis and toxicological evaluation at cost (subdivision (e)).

(B) Engine Tests.

1. Engine Test (two comparative tests, each consisting of a 13-mode emission test and an exhaust smoke test)—\$1,200.00.

2. Vehicle Test.

per 13-mode emission test—\$500.00

per exhaust smoke test—\$250.00

per two cold-start CVS-1975 comparative tests—\$1,500.00

The manufacturer will be charged at cost for vehicle rental fee incurred by the state board to obtain the required vehicle for testing.

(d) Payment of Fees. Each applicant requesting evaluation of an additive shall remit with the application the fee specified in Subsection (c)(1)(A)1. or (c)(2)(A)1. above for the initial evaluation. At the conclusion of this evaluation, the applicant will, where appropriate, be notified of suggested additional testing, if any, to be conducted by the state board staff on the applicant's product. The applicable fee shall be paid to the state board prior to the commencement of any further testing. Failure to pay the fee will result in termination of the test evaluation by the state board.

(e) Contract Provisions. The state board may engage independent laboratories to conduct evaluation tests in accordance with the test procedures specified by the state board. The actual cost for such tests will be charged to the applicant.

NOTE: Authority cited: Sections 39600, 39601 and 43833, Health and Safety Code. Reference: Sections 39002, 39003, 39500, 43000 and 43204, Health and Safety Code; and Section 27156, Vehicle Code.

HISTORY

1. Amendment of subsection (c) filed 12-19-74 as an emergency; effective upon filing. Certificate of Compliance included (Register 74, No. 51).
2. Amendment of subsection (a) filed 3-16-77; effective thirtieth day thereafter (Register 77, No. 12).
3. Renumbering of Section 2205 to 2206 filed 11-28-77; effective thirtieth day thereafter (Register 77, No. 49).
4. Amendment filed 11-30-83; effective thirtieth day thereafter (Register 83, No. 49).

§ 2207. Observation of Laboratory Tests.

The submitter may observe laboratory tests of his/her device or additive.

NOTE: Authority cited: Sections 39600 and 39601, Health and Safety Code. Reference: Sections 39002, 39003, 39500, 43000 and 43204, Health and Safety Code; and Section 27156, Vehicle Code.

HISTORY

1. Renumbering of Section 2206 to 2207 filed 11-28-77; effective thirtieth day thereafter (Register 77, No. 49).
2. Amendment filed 11-30-83; effective thirtieth day thereafter (Register 83, No. 49).

Article 2. Aftermarket Parts

§ 2220. Applicability.

This article shall apply to all aftermarket parts which are sold, offered for sale, or advertised for sale for use on motor vehicles which are subject to California or federal emissions standards. To the extent applicable, the results of any tests conducted pursuant to Article 1 may be used in total or partial fulfillment of the requirements of this article.

NOTE: Authority cited: Sections 39600 and 39601, Health and Safety Code; and Sections 27156, 38390 and 38391, Vehicle Code. Reference: Sections 39002, 39003, 39500, 43000 and 43204, Health and Safety Code.

HISTORY

1. New Article 2 (Sections 2220-2226) filed 11-28-77; effective thirtieth day thereafter (Register 77, No. 49).
2. Amendment filed 11-30-83; effective thirtieth day thereafter (Register 83, No. 49).

§ 2221. Replacement Parts.

(a) Any replacement part subject to the provisions of this article shall be presumed to be in compliance with this article unless the executive officer makes a finding to the contrary pursuant to Section 2224(a).

(b) The manufacturer of any replacement part subject to the provisions of this article shall maintain sufficient records, such as performance specifications, test data, or other information, to substantiate that such a replacement part is in compliance with this article. Such records shall be open for reasonable inspection by the executive officer or his/her representative. All such records shall be maintained for four years from the year of manufacture of the replacement part.

NOTE: Authority cited: Sections 39000, 39002, 39003, 39500, 39600, 39601 and 43150, Health and Safety Code. Reference: Sections 27156, 38391 and 38395, Vehicle Code; and Sections 43000 and 43644, Health and Safety Code.

HISTORY

1. Amendment filed 11-30-83; effective thirtieth day thereafter (Register 83, No. 49).

§ 2222. Add-On Parts and Modified Parts.

(a) As used in this section, the terms "advertise" and "advertisement" include, but are not limited to, any notice, announcement, information, publication, catalog, listing for sale, or other statement concerning a product or service communicated to the public for the purpose of furthering the sale of the product or service.

(b)(1) Except for publishers as provided in subsection 3, no person or company doing business solely in California or advertising only in California shall advertise any device, apparatus, or mechanism which alters or modifies the original design or performance of any required motor vehicle pollution control device or system unless such part, apparatus, or mechanism has been exempted from Vehicle Code section 27156, and the limitations of the exemption, if any, are contained within the advertisement in type size to give reasonable notice of such limitations.

(2) Except for publishers as provided in subsection 3, no person or company doing business in interstate commerce shall advertise in California any device, apparatus, or mechanism which alters or modifies the original design or performance of any required motor vehicle pollution control device or system and not exempted from Vehicle Code section 27156 unless each advertisement contains a legally adequate disclaimer in type size adequate to give reasonable notice of any limitation on the sale or use of the device, apparatus, or mechanism.

(3) No publisher, after receipt of notice from the state board or after otherwise being placed on notice that the advertised part is subject to and has not been exempted from the provisions of Vehicle Code section 27156, shall make or disseminate or cause to be made or disseminated before the public in this state any advertisement for add-on or modified parts subject to the provisions of this article, which have not been exempted from Vehicle Code section 27156, unless such advertisement clearly and accurately states the legal conditions, if any, on sale and use of the parts in California.

(4) The staff of the state board shall provide, upon request, model language which satisfies these requirements.

(c) No person shall advertise, offer for sale, or install a part as a motor vehicle pollution control device or as an approved or certified device, when in fact such part is not a motor vehicle pollution control device or is not approved or certified by the state board.

(d) No person shall advertise, offer for sale, sell, or install an add-on or modified part as a replacement part.

(e) The Executive Officer may exempt add-on and modified parts based on an evaluation conducted in accordance with the "Procedures for Exemption of Add-on and Modified Parts," adopted by the state board on November 4, 1977, as amended June 1, 1990.

(f) Each person engaged in the business of retail sale or installation of an add-on or modified part which has not been exempted from Vehicle Code section 27156 shall maintain records of such activity which indicate date of sale, purchaser name and address, vehicle model and work performed if applicable. Such records shall be open for reasonable inspection by the Executive Officer or his/her representative. All such records shall be maintained for four years from the date of sale or installation.

(g) A violation of any of the prohibitions set forth in this section shall be grounds for the Executive Officer to invoke the provisions of section 2225.

(h)(1) Prior to January 1, 2009, the Executive Officer shall exempt new aftermarket catalytic converters from the prohibitions of California Vehicle Code sections 27156 and 38391 based on an evaluation conducted in accordance with the "California Evaluation Procedures for New Aftermarket Non-Original Equipment Catalytic Converters" as adopted by the state board on August 19, 1988.

(2) On or after January 1, 2009, the Executive Officer shall exempt new aftermarket catalytic converters from the prohibitions of California Vehicle Code sections 27156 and 38391 based on an evaluation con-

ducted in accordance with the "California Evaluation Procedures for New Aftermarket Catalytic Converters" as adopted by the state board on October 25, 2007.

(3) No person shall install, sell, offer for sale or advertise, any new aftermarket catalytic converter in California unless it has been exempted pursuant to the procedures as provided in this subsection.

(4) For the purposes of this regulation, a new aftermarket catalytic converter is a catalytic converter which is constructed of all new materials, is not a replacement part as defined in Title 13, California Code of Regulations, section 1900, and is not an original equipment catalytic converter. A catalytic converter which includes any new material or construction not equivalent to the materials or construction of the original equipment catalytic converter (e.g., an original equipment catalytic converter can with a new non-original equipment substrate) shall also be considered a new aftermarket catalytic converter.

(i)(1) On or after July 1, 2008, or after 30 days from the date of filing of this subsection with the Secretary of State, whichever is later, no person shall install, sell, offer for sale, or advertise any used, recycled, or salvaged catalytic converter in California.

(2) Prior to July 1, 2008, or 30 days from the date of filing of this subsection with the Secretary of State, whichever is later, no person shall install, sell, offer for sale or advertise, any used, recycled, or salvaged catalytic converter in California unless the catalytic converter has been exempted pursuant to the "Procedures for Exemption of Add-On Parts and Modified Parts," adopted by the state board on November 4, 1977, as amended June 1, 1990.

(3) For the purposes of this regulation, a "used catalytic converter" is a catalytic converter which is not a new aftermarket catalytic converter as defined in Subsection (h)(4), or a replacement part as defined in section 1900.

NOTE: Authority cited: Sections 39600, 39601, 43000, 43000.5 and 43011, Health and Safety Code; and Sections 27156, 38391 and 38395, Vehicle Code. Reference: Sections 39002, 39003, 39500, 43000, 43000.5, 43011, 43204, 43205 and 43644, Health and Safety Code; and Sections 27156, 38391 and 38395, Vehicle Code.

HISTORY

1. Amendment filed 7-6-81; effective thirtieth day thereafter (Register 81, No. 28).
2. Amendment filed 11-30-83; effective thirtieth day thereafter (Register 83, No. 49).
3. New subsections (h) and (i) filed 2-15-89; operative 3-17-89 (Register 89, No. 8).
4. Amendment of subsection (e) filed 7-17-90; operative 8-16-90 (Register 90, No. 35).
5. Amendment of section and NOTE filed 6-10-2008; operative 7-10-2008 (Register 2008, No. 24).

§ 2223. Specific Criteria.

NOTE: Authority cited: Section 39601, Health and Safety Code; and Section 27156, Vehicle Code. Reference: Sections 39002, 39003, 39500, and 43000, Health and Safety Code.

HISTORY

1. Repealer filed 7-6-81; effective thirtieth day thereafter (Register 81, No. 28).

§ 2224. Surveillance.

(a) Replacement parts. The executive officer may order, for cause, the manufacturer of any replacement part subject to the provisions of this article to submit any records relating to such part which are maintained pursuant to section 2221(b) above. The executive officer may order, for cause, the manufacturer of any replacement part subject to the provisions of this article to submit a reasonable number of parts typical of the manufacturer's production for testing and evaluation. If, after a review of all records submitted by the manufacturer and of the results of any tests conducted by the state board's staff, the executive officer finds that such part is not in fact a replacement part, the executive officer may invoke section 2225. Replacement parts evaluated pursuant to this section shall be compared with the specifications contained in the applicable vehicle manufacturer's application for certification.

(b) Add-on parts and modified parts. The executive officer may order, for cause, the manufacturer of any add-on part or modified part subject to the provisions of this article to submit a reasonable number of parts

typical of the manufacturer's production for testing and evaluation. In-use performance will also be evaluated. This will include Inspection and Maintenance requirements and compliance with onboard diagnostic system regulations. If, after a review of the results of any tests or evaluations conducted by the state board's staff and of any information submitted by the manufacturer, the executive officer finds that an add-on part or a modified part does not conform to the "Procedures for Exemption of Add-on and Modified Parts," the executive officer may invoke section 2225. NOTE: Authority cited: Sections 39600, 39601 and 43011, Health and Safety Code; and Section 27156, Vehicle Code. Reference: Sections 39002, 39003, 39500, 43000 and 43204, Health and Safety Code.

HISTORY

1. Amendment filed 7-6-81; effective thirtieth day thereafter (Register 81, No. 28).
2. Amendment filed 11-30-83; effective thirtieth day thereafter (Register 83, No. 49).
3. Amendment of subsection (b) filed 7-17-90; operative 8-16-90 (Register 90, No. 35).

§ 2225. Enforcement Action.

(a) When this section is invoked pursuant to other sections of this article, the executive officer may issue a cease and desist order and may require the person to submit a plan for correcting any deficiencies found by the state board. The executive officer may order any of the actions contained in the plan, and/or may declare a part to be not in compliance with Vehicle Code Section 27156 unless he/she finds the plan adequate to correct the deficiencies found by the state board. The plan may be required to include such corrective actions as the cessation of sale of non-complying parts, the recall of any non-complying parts already sold, and corrective advertising to correct misleading information regarding the emission control capabilities of the device and to ensure compliance with California's laws. The executive officer may also seek fines for violations of Vehicle Code Section 27156, or other laws or regulations, as applicable.

(b) When this section is invoked by the executive officer on either his/her own initiative or in response to complaints received, an investigation may be made by the executive officer or his/her representative to gather evidence regarding continuing violations of this article by any person engaged in the business of advertising, offering for sale, selling, or installing an add-on or modified part.

(c) Any person against whom enforcement action (other than the filing of an action in court) is initiated pursuant to this section may request a public hearing to review the enforcement action.

(d) Nothing in this article shall prohibit the executive officer from taking any other action provided for by law, including the prosecution of an action in court.

NOTE: Authority cited: Sections 39515, 39516, 39600 and 39601, Health and Safety Code. Reference: Sections 39002, 39003, 39500, 43000, 43600, 43641 and 43644, Health and Safety Code; and Sections 27156, 38391 and 38395, Vehicle Code.

HISTORY

1. Repealer of former Section 2225 and renumbering and amendment of former Section 2226 to Section 2225 filed 11-30-83; effective thirtieth day thereafter (Register 83, No. 49).

Chapter 4.2. Certification of Exhaust Emission Control Devices for Controlling Carbon Monoxide from Portable and from Mobile Internal Combustion Engines Used in Enclosed Structures

§ 2230. Requirements.

No exhaust emission control device for controlling carbon monoxide from portable and from mobile internal combustion engines used in enclosed structures shall be certified by the Air Resources Board unless such devices operate within the standards for said pollutant set by the Oc-

cupational Safety and Health Standards Board pursuant to Section 6701 of the Labor Code, and meet the criteria set forth in this Chapter. The standards for carbon monoxide set by the Occupational Safety and Health Standards Board for such devices appear in Title 8, California Code of Regulations, Section 5146.

The test procedures for determining compliance with these standards are set forth in "Test Procedures for Portable and Mobile Internal Combustion Engines Used Inside Buildings" dated September 13, 1967.

NOTE: Authority cited: Sections 39600 and 39601, Health and Safety Code; Sections 6702 and 6703, Labor Code. Reference: Sections 6701, 6702 and 6703, Labor Code.

HISTORY

1. Change without regulatory effect renumbering chapter heading and renumbering and amending former section 2275 to section 2230 filed 9-17-91 pursuant to section 100, title 1, California Code of Regulations (Register 92, No. 4).

§ 2231. Other Criteria.

No device controlling exhaust emissions from portable and from mobile internal combustion engines used in enclosed structures shall be certified by the Air Resources Board unless it meets the following criteria:

(a) Such device shall operate so that, with engine maintenance which is characteristic of general usage by the users thereof, its emissions are within the limits established by the State Standards.

(b) Function or malfunction of the device shall not create a hazardous condition.

NOTE: Authority cited: Sections 39600 and 39601, Health and Safety Code; Sections 6702 and 6703, Labor Code. Reference: Sections 6701, 6702 and 6703, Labor Code.

HISTORY

1. Change without regulatory effect renumbering former section 2276 to section 2231 and adding NOTE filed 9-17-91 pursuant to section 100, title 1, California Code of Regulations (Register 92, No. 4).

Chapter 4.4. Specifications for Fill Pipes and Openings of Motor Vehicle Fuel Tanks

§ 2235. Requirements.

New 1977 and subsequent model-year gasoline-fueled motor vehicles and 1993 and subsequent model-year methanol-fueled passenger cars, light-duty trucks, medium-duty vehicles and heavy-duty vehicles shall not be sold, offered for sale or registered in California unless such vehicles comply with the Air Resources Board's "Specifications for Fill Pipes and Openings of Motor Vehicle Fuel Tanks," dated March 19, 1976 as last amended January 22, 1990 or, in the case of motorcycles, are exempted pursuant to Chapter 1, Article 2, Section 1976(b).

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43104, 43107 and 43835, Health and Safety Code. Reference: Sections 39003, 43000, 43013, 43018, 43101, 43104, 43106, 43204 and 43835, Health and Safety Code; and Sections 28111 and 28112, Vehicle Code.

HISTORY

1. Change without regulatory effect renumbering chapter heading and renumbering and amending former section 2290 to section 2235 filed 9-17-91 pursuant to section 100, title 1, California Code of Regulations (Register 92, No. 4).

Chapter 5. Standards for Motor Vehicle Fuels

Article 1. Standards for Gasoline

Subarticle 1. Gasoline Standards That Became Applicable Before 1996

§ 2250. Degree of Unsaturation for Gasolines Sold Before April 1, 1996.

(a) No person shall sell or supply within the South Coast Basin (as defined on January 1, 1976) as a fuel for motor vehicles as defined by the Vehicle Code of the State of California, a gasoline having a degree of un-

saturation greater than that indicated by a Bromine Number of 30 as determined according to the "Test Method for Determining Bromine Number of Gasoline," as adopted by the Air Resources Board on August 13, 1987 and incorporated herein by reference.

(b) For the purpose of this rule, the term "gasoline" means any fuel

which is commonly or commercially known or sold as gasoline, or any fuel sold to power a vehicle certified by the state board as a gasoline-powered vehicle without modifying the vehicle.

(c) This section shall not apply to gasoline sold or supplied on or after April 1, 1996, except for gasoline that is supplied from a small refiner's

[The next page is 243.]

California refinery prior to March 1, 1998, and that qualifies for treatment under section 2272(a).

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101 and 43831, Health and Safety Code; and *Western Oil and Gas Ass'n v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975). Reference: Sections 39000-39003, 39010, 39500, 39515, 39516, 39606, 41511, 43000, 43000, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. Amendment filed 7-15-76 as procedural and organizational; designated effective 9-1-76 (Register 76, No. 29).
2. Amendment filed 3-3-83; effective thirtieth day thereafter (Register 83, No. 10).
3. Amendment filed 9-25-87; operative 10-25-87 (Register 87, No. 40).
4. Change without regulatory effect amending article heading filed 9-17-91 pursuant to section 100, title 1, California Code of Regulations (Register 92, No. 4).
5. New subarticle 1. heading and subsection (c) and amendment of section heading and NOTE filed 11-16-92; operative 12-16-92 (Register 92, No. 47).
6. Amendment of subarticle 1 heading filed 9-13-96; operative 10-13-96 (Register 96, No. 37).
7. Change without regulatory effect amending subarticle heading filed 1-6-97 pursuant to section 100, title 1, California Code of Regulations (Register 97, No. 2).

§ 2251. Reid Vapor Pressure for Gasoline.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101 and 43830, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39606, 43000, 43013, 43016, 43018, 43101 and 43830, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. Amendment filed 5-20-75 as procedural and organizational; effective upon filing (Register 75, No. 21).
2. Amendment filed 3-2-76 as procedural and organizational; effective upon filing (Register 76, No. 10).
3. Amendment of subsections (a) and (e) filed 7-15-76 as procedural and organizational; designated effective 9-1-76 (Register 76, No. 29).
4. Repealer and new section filed 7-1-80 as an emergency; effective upon filing. Certificate of Compliance included (Register 80, No. 27).
5. Amendment of NOTE filed 3-3-83; effective thirtieth day thereafter (Register 83, No. 10).
6. Amendment filed 5-6-91; operative 5-6-91 (Register 91, No. 24).
7. Change without regulatory effect amending section filed 9-17-91 pursuant to section 100, title 1, California Code of Regulations (Register 92, No. 4).
8. Change without regulatory effect repealing section filed 3-18-96 pursuant to section 100, title 1, California Code of Regulations (Register 96, No. 12).

§ 2251.1. Waiver of Reid Vapor Pressure Standard for Gasoline Produced in California.

NOTE: Authority cited: Sections 39600, 39601, Health and Safety Code. Reference: Sections 41511, 43101, Health and Safety Code.

HISTORY

1. New section filed 6-1-79 as an emergency; effective upon filing (Register 79, No. 22).
2. Amendment of subsection (c) and new subsection (f) filed 7-11-79 as an emergency; effective upon filing (Register 79, No. 28).
- * Amendment expiration date based upon emergency order filed 6-1-79.
3. Amendment of subsection (a) filed 9-12-79 as an emergency; effective upon filing (Register 79, No. 37). A Certificate of Compliance must be filed within 120 days or emergency language will be repealed on 1-10-80.
4. Expired by own terms (Register 80, No. 5).

§ 2251.2. Waiver of Reid Vapor Pressure Standard for Gasoline Imported into California.

NOTE: Authority cited: Sections 39600, 39601, Health and Safety Code. Reference: Sections 41511, 43101, Health and Safety Code.

HISTORY

1. New section filed 6-1-79 as an emergency; effective upon filing (Register 79, No. 22).
2. Exhibit A incorporated by reference into Sections 2251.1 and 2251.2 filed 6-1-79 as an emergency; effective upon filing (Register 79, No. 22).
3. Amendment filed 9-12-79 as an emergency; effective upon filing (Register 79, No. 37). A Certificate of Compliance must be filed within 120 days or emergency language will be repealed on 1-10-80.
4. Expired by own terms (Register 80, No. 5).

§ 2251.5. Reid Vapor Pressure of Gasoline Sold After January 1, 1992, and Before March 1, 1996.

(a) Regulatory Standards.

(1) Basic Regulatory Standard.

(A) Starting January 1, 1992, within each of the air basins during the regulatory period set forth in section (a)(1)(B), no person shall sell, offer for sale, dispense, supply, offer for supply, or transport California gasoline which has a Reid vapor pressure exceeding 7.80 pounds per square inch.

(B) Basic Regulatory Control Periods.

1. April 1 through October 31:

South Coast Air Basin and Ventura County
San Diego Air Basin
Southeast Desert Air Basin

2. May 1 through September 30:

Great Basin Valley Air Basin

3. May 1 through October 31:

San Francisco Bay Area Air Basin

San Joaquin Valley Air Basin

Sacramento Valley Air Basin

Mountain Counties Air Basin

Lake Tahoe Air Basin

4. June 1 through September 30:

North Coast Air Basin

Lake County Air Basin

Northeast Plateau Air Basin

5. June 1 through October 31:

North Central Coast Air Basin

South Central Coast Air Basin (Excluding Ventura County)

(2) Additional Regulatory Standards for Gasoline Sold, Supplied or Transferred from a Production or Import Facility.

(A) Starting January 1, 1992, no producer or importer shall sell, offer for sale, supply, or offer to supply from its California production facility or California import facility in an air basin during the regulatory period specified in section (a)(2)(B), California gasoline which has a Reid vapor pressure exceeding 7.80 pounds per square inch. Starting January 1, 1992, no person shall transport directly from a California production facility or California import facility in an air basin during the regulatory period set forth in section (a)(2)(B), California gasoline which has a Reid vapor pressure exceeding 7.80 pounds per square inch.

(B) Additional Regulatory Control Periods.

1. March 1 through March 31:

South Coast Air Basin and Ventura County

San Diego Air Basin

Southeast Desert Air Basin

2. April 1 through April 30:

San Francisco Bay Area Air Basin

San Joaquin Valley Air Basin

Sacramento Valley Air Basin

Great Basin Valley Air Basin

Mountain Counties Air Basin

Lake Tahoe Air Basin

3. May 1 through May 31:

North Central Coast Air Basin

South Central Coast Air Basin (Excluding Ventura County)

North Coast Air Basin

Lake County Air Basin

Northeast Plateau Air Basin

(3) Special Provisions for Blends of Gasoline Containing Ethanol.

(A) Any blend of gasoline containing at least 10 percent ethanol by volume shall not result in a violation of this section (a) unless the gasoline used in the blend exceeds the standards set forth in this section (a).

(B) Section (a)(3)(A) shall be effective only so long as Health and Safety Code section 43830 establishes special provisions for the volatility of gasoline blends containing at least 10 percent ethanol by volume.

(C) Any sale, offer for sale, supply, or transport of gasoline containing at least 4.9 percent ethanol by volume, which occurs in October 1993, October 1994, or October 1995, shall not constitute a violation of section (a)(1) unless the gasoline has a Reid vapor pressure exceeding 8.80 pounds per square inch.

(D) 1. Any sale, offer for sale, or supply of gasoline containing at least 4.9 percent ethanol by volume from a final distribution facility during the 15 days preceding a transition period shall not constitute a violation of section (a)(1) as long as:

a. The gasoline has a Reid vapor pressure not exceeding 8.80 pounds per square inch, and

b. The person selling or supplying the gasoline demonstrates to the satisfaction of the executive officer, prior to the sale or supply, that it is reasonably necessary to add ethanol to the gasoline to enable the calibration of metered ethanol blending equipment prior to the start of the regulatory control period.

2. Any transaction involving gasoline after it has been transferred from a final distribution facility shall not constitute a violation of section (a)(1) if the person engaged in the transaction demonstrates by affirmative defense that the sale, offer for sale or supply of the gasoline from the final distribution facility met the criteria set forth in section (a)(3)(D)(1).

3. For the purposes of this section (a)(3)(D), "final distribution facility," "transition period," and "regulatory control period" shall have the same meaning set forth in Title 13, California Code of Regulations, sections 2258(b) and 2258(a)(2).

(4)(A) Section (a)(1) shall not apply to a transaction occurring in an air basin during the basic regulatory control period where the person selling, supplying, or offering the gasoline demonstrates as an affirmative defense that, prior to the transaction, he or she has taken reasonably prudent precautions to assure that the gasoline will be delivered to a retail service station or bulk purchaser-consumer's fueling facility when the station or facility is not subject to a basic regulatory control period.

(B) Section (a)(2) shall not apply to a transaction occurring in an air basin during the additional regulatory control period for producers and importers where the person selling, supplying, offering or transporting the gasoline demonstrates as an affirmative defense that, prior to the transaction, he or she has taken reasonably prudent precautions to assure that the gasoline will be delivered to a retail service station or bulk purchaser-consumer's fueling facility located in an air basin not then subject to the basic regulatory control period or the additional control period for producers and importers.

(C) Section (a)(1) shall not apply to a transaction occurring in an air basin during the basic regulatory control period where the transaction involves the transfer of gasoline from a stationary storage tank to a motor vehicle fuel tank and the person selling, supplying, or offering the gasoline demonstrates as an affirmative defense that the last delivery of gasoline to the stationary storage tank occurred more than fourteen days before the start of the basic regulatory control period.

(5) For the purposes of section (a)(1), each sale of California gasoline at retail, and each dispensing of California gasoline into a motor vehicle fuel tank, shall also be deemed a sale or supply by any person who previously sold or supplied such gasoline in violation of section (a)(1).

(b) Definitions.

For the purposes of this section:

(1) "Bulk purchaser-consumer" means a person that purchases or otherwise obtains gasoline in bulk and then dispenses it into the fuel tanks or motor vehicles owned or operated by the person.

(2) "California gasoline" means gasoline sold or intended for sale as a motor vehicle fuel in California.

(3) "California production facility" means a facility in California at which gasoline is produced; it does not include a facility whose sole operation is to transfer gasoline or to blend additives into gasoline.

(4) "Ethanol" means ethyl alcohol which meets any additional requirements for ethanol or ethyl alcohol in Health and Safety Code section 43830.

(5) "Gasoline" means any fuel which is commonly or commercially known or sold as gasoline, or which is a mixture of more than 50 percent fuel commonly known or sold as gasoline and alcohol.

(6) "Importer" means any person who first accepts delivery in California of California gasoline.

(7) "Import facility" means the facility at which imported California gasoline is first received in California, including, in the case of California gasoline imported by cargo tank and delivered directly to a facility for dispensing gasoline into motor vehicles, the cargo tank in which the gasoline is imported.

(8) "Motor vehicle" has the same meaning as defined in section 415 of the Vehicle Code.

(9) "Produce" means to convert liquid compounds which are not gasoline into gasoline.

(10) "Producer" means any person who owns, leases, operates, controls or supervises a California production facility.

(11) "Supply" means to provide or transfer a product to a physically separate facility, vehicle, or transportation system.

(c) Sampling and Test Methods.

(1) Compliance with the standards set forth in section (a)(1) and (2) shall be determined by use of an applicable sampling methodology set forth in 13 CCR section 2296, and by use of either (A) the American Society for Testing and Materials Method ASTM D 328-58 (which is incorporated by reference herein), deleting paragraph 4(b) concerning sampling or (B) the test method set forth in Section 2297.

(2) For purposes of section (a)(3), the ethanol content of gasoline shall be determined by: (A) use of American Society of Testing and Materials Test Method D 4815-94 (which is incorporated by reference herein) to determine the mass percent of ethanol in the gasoline, and (B) conversion of the concentration of ethanol from percent by mass to percent by volume according to Section 14.3 of ASTM D 4815-94. The volume of ethanol shall include the volume of any denaturant approved for that purpose by the United States Bureau of Alcohol, Tobacco and Firearms, provided those denaturants do not exceed 5 percent of the volume of alcohol (including denaturants).

(d) Variances.

(1) Any person who cannot comply with the requirements set forth in section (a)(1) or (2) before January 1, 1994 because of reasons beyond the person's reasonable control may apply to the executive officer for a variance. The application shall set forth:

(A) the specific grounds upon which the variance is sought;

(B) the proposed date(s) by which compliance with the provisions of section (a)(1) or (2) will be achieved; and

(C) a plan reasonably detailing the method by which compliance will be achieved.

(2) Upon receipt of an application for a variance containing the information required in section (d)(1), the executive officer shall hold a hearing to determine whether, or under what conditions and to what extent, a variance from the requirements in section (a)(1) or (2) is necessary and will be permitted. Notice of the time and place of the hearing shall be sent to the applicant by certified mail not less than 20 days prior to the hearing. Notice of the hearing shall also be submitted for publication in the California Regulatory Notice Register and sent to every person who requests such notice, not less than 20 days prior to the hearing.

(3) At least 20 days prior to the hearing, the application for the variance shall be made available to the public for inspection. Interested members of the public shall be allowed a reasonable opportunity to testify at the hearing and their testimony shall be considered.

(4) No variance shall be granted unless all of the following findings are made:

(A) that, because of reasons beyond the reasonable control of the applicant, requiring compliance with section (a)(1) or (2) would result in an extraordinary economic hardship;

(B) that the public interest in mitigating the extraordinary hardship to the applicant by issuing the variance outweighs the public interest in avoiding any increased emissions of air contaminants which would result from issuing the variance; and

(C) that the compliance plan proposed by the applicant can reasonably be implemented and will achieve compliance as expeditiously as possible.

(5) No variance may be effective after December 31, 1993. Any variance order shall impose a substitute gasoline Reid vapor pressure limit as stringent as feasible under the circumstances, in no case to exceed 9.0 pounds per square inch. Any variance order shall specify a final compliance date by which the requirements in section (a)(1) or (2) will be achieved. Any variance order shall also contain a condition that specified increments of progress necessary to assure timely compliance be achieved, and such other conditions that the executive officer, as a result of the testimony received at the hearing, finds necessary to carry out the purposes of Division 26 of the Health and Safety Code.

(6) The executive officer may require, as a condition of granting a variance, that a cash bond, or a bond executed by two or more good and sufficient sureties or by a corporate surety, be posted by the party to whom the variance was granted to assure performance of any construction, alteration, repair, or other work required by the terms and conditions of the variance. Such bond may provide that, if the party granted the variance fails to perform such work by the agreed date, the cash bond shall be forfeited to the state board, or the corporate surety or sureties shall have the option of promptly remedying the variance default or paying to the state board an amount, up to the amount specified in the bond, that is necessary to accomplish the work specified as a condition of the variance.

(7) No variance which is issued due to conditions of breakdown, repair, or malfunction of equipment shall have a duration, including extensions, of more than six months.

(8) The executive officer may, after holding a hearing without complying with the provisions of sections (d)(2) and (d)(3), issue an emergency variance to a person from the requirements of sections (a)(1) upon a showing of reasonably unforeseeable extraordinary hardship and good cause that a variance is necessary. In connection with the issuance of an emergency variance, the executive officer may waive the requirements of section (d)(6). No emergency variance may extend for a period of more than 45 days. If the applicant for an emergency variance does not demonstrate that he or she can comply with the provisions of section (a)(1) or (2) within such 45-day period, an emergency variance shall not be granted unless the applicant makes a prima facie demonstration that the findings set forth in section (d)(4) should be made. The executive officer shall maintain a list of persons who have informed the executive officer in writing of their desire to be notified by telephone in advance of any hearing held pursuant to this section (d)(8), and shall provide advance telephone notice to any such person.

(9) A variance shall cease to be effective upon failure of the party to whom the variance was granted substantially to comply with any condition.

(10) Upon the application of any person, the executive officer may review and for good cause modify or revoke a variance from the requirements of section (a)(1) or (2) after holding a hearing in accordance with the provisions of sections (d)(2) and (d)(3).

(e) Sunset

This section shall not apply to gasoline sold or supplied on or after March 1, 1996.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101 and 43830, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 39606, 41511, 43000, 43016, 43018, 43101 and 43830, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 5-6-91; operative 5-6-91 (Register 91, No. 24).

2. Change without regulatory effect amending subsection (c) filed 9-17-91 pursuant to section 100, title 1, California Code of Regulations (Register 92, No. 4).
3. Amendment of subsection (a)(3)(B) and new subsection (a)(3)(C) filed 10-14-92; operative 10-14-92 pursuant to Government Code section 11346.2(d) (Register 92, No. 42).
4. Amendment of section heading and subsections (a), (a)(1)(B)(i), (a)(1)(B)(v), (a)(2)(B)(i), (a)(2)(B)(iii) and (a)(3)(B) and new subsection (a)(3)(C) filed 11-16-92; operative 12-16-92 (Register 92, No. 47).
5. New subsections (a)(3)(D)-(D)(3) and amendment of subsections (c)(1)-(2) filed 9-1-94; operative 9-1-94 (Register 94, No. 35).
6. Repealer of subsection (e), subsection relettering and amendment of NOTE filed 2-15-95; operative 2-15-95 pursuant to Government Code section 11343.4(d) (Register 95, No. 7).
7. Amendment of subsections (c)(1)-(2) filed 8-7-95; operative 8-7-95 pursuant to Government Code section 11343.4(d) (Register 95, No. 32).

§ 2252. Sulfur Content of Gasoline Represented as Unleaded Sold Before April 1, 1996.

(a) No person shall sell, offer for sale, or supply in California, as a fuel for motor vehicles, any gasoline represented as unleaded which has a sulfur content greater than 300 parts per million by weight.

(b) The maximum sulfur content limitations specified in subsection (a) shall be determined by ASTM Test Method 2622-87, or any other test method determined by the executive officer to give equivalent results.

(c) For the purpose of this section,

"Motor Vehicle" has the same meaning as defined in Section 415 of the Vehicle Code.

(d)(1) Any person who cannot comply with the requirements set forth in subsection (a) because of extraordinary reasons beyond the person's reasonable control may apply to the executive officer for a variance. The application shall set forth:

(A) the specific grounds upon which the variance is sought;

(B) the proposed date(s) by which compliance with the provisions of subsection (a) will be achieved; and

(C) a plan reasonably detailing the method by which compliance will be achieved.

(2) Upon receipt of an application for a variance containing the information required in subsection (d)(1), the executive officer shall hold a hearing to determine whether, and under what conditions and to what extent, a variance from the requirements established by subsection (a) is necessary and will be permitted. Notice of the time and place of the hearing shall be sent to the applicant by certified mail not less than 20 days prior to the hearing. Notice of the hearing shall also be submitted for publication in the California Regulatory Notice Register and sent to every person who requests such notice, not less than 20 days prior to the hearing.

(3) At least 20 days prior to the hearing, the application for the variance shall be made available to the public for inspection. Interested members of the public shall be allowed a reasonable opportunity to testify at the hearing and their testimony shall be considered.

(4) No variance shall be granted unless all of the following findings are made:

(A) that, because of reasons beyond the reasonable control of the applicant, requiring compliance with subsections (a) would result in an extraordinary economic hardship;

(B) that the public interest in mitigating the extraordinary hardship to the applicant by issuing the variance outweighs the public interest in avoiding any increased emissions of air contaminants which would result from issuing the variance.

(C) that the compliance plan proposed by the applicant can reasonably be implemented and will achieve compliance as expeditiously as possible.

(5) Any variance order shall specify final compliance date by which the requirements in subsection (a) will be achieved. Any variance order shall also contain a condition that specified increments of progress necessary to assure timely compliance be achieved, and such other conditions, including limitations on the sulfur content of unleaded gasoline or diesel

fuel produced for use in motor vehicles, that the executive officer, as a result of the testimony received at the hearing, finds necessary to carry out the purposes of Division 26 of the Health and Safety Code.

(6) The executive officer may require, as a condition of granting a variance, that a cash bond, or a bond executed by two or more good and sufficient sureties or by a corporate surety, be posted by the party to whom the variance was granted to assure performance of any construction, alteration, repair, or other work required by the terms and conditions of the variance. Such bond may provide that, if the party granted the variance fails to perform such work by the agreed date, the cash bond shall be forfeited to the state board, or the corporate surety or sureties shall have the option of promptly remedying the variance default or paying to the state board an amount, up to the amount specified in the bond, that is necessary to accomplish the work specified as a condition of the variance.

(7) No variance from the requirements set forth in subsection (a) based on a plan for compliance which includes the installation of major additional equipment shall have a duration of more than three years.

(8) No variance which is issued due to conditions of breakdown, repair, or malfunction of equipment shall have a duration, including extensions, of more than six months.

(9) The executive officer may, after holding a hearing without complying with the provisions of subsections (d)(2) and (3), issue an emergency variance to a person from the requirements of subsection (a) upon a showing or reasonably unforeseeable extraordinary hardship and good cause that a variance is necessary. In connection with the issuance of an emergency variance, the executive officer may waive the requirements of subsection (d)(6). No emergency variance may extend for a period of more than 45 days. If the applicant for an emergency variance does not demonstrate that he or she can comply with the provisions of subsection (a) within such 45-day period, an emergency variance shall not be granted unless the applicant makes a prima facie demonstration that the findings set forth in subsection (d)(4) should be made. The executive officer shall maintain a list of persons who have informed the executive officer in writing of their desire to be notified by telephone in advance of any hearing held pursuant to this paragraph (d)(9), and shall provide advance telephone notice to any such person.

(10) A variance shall cease to be effective upon failure of the party to whom the variance was granted substantially to comply with any condition.

(11) Upon the application of any person, the executive officer may review and for good cause modify or revoke a variance from the requirements of subsection (a) after holding a hearing in accordance with the provisions of subsections (d)(2) and (3).

(e) This section shall not apply to gasoline sold or supplied after April 1, 1996, except for gasoline that is supplied from a small refiner's California refinery prior to March 1, 1998, and that qualifies for treatment under section 2272(a).

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 39606, 41511, 43000, 43013, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. Amendment of section heading and new subsection (o) filed 9-25-89; operative 10-25-89 (Register 89, No. 39). For prior history, see Register 86, No. 52.
2. Amendment of subsection (a) and repealer of subsection (c) filed 7-12-91; operative 8-12-91 (Register 91, No. 43).
3. Change without regulatory effect amending section heading and text and relocating subsections to section 2280 filed 9-17-91 pursuant to section 100, title 1, California Code of Regulations (Register 92, No. 4).
4. Amendment of section heading and subsection (b) and new subsection (c) filed 11-16-92; operative 12-16-92 (Register 92, No. 47).

§ 2253. Average Lead Content of Gasoline Manufactured Before July 1, 1983.

NOTE: Authority cited: Sections 39600, 39601, 43013 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

Control District, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000-39003, 39500, 39515, 39516, 41511, 43000, 43103 and 43011, Health and Safety Code; and *Western Oil and Gas Ass'n v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 2-26-76; effective thirtieth day thereafter (Register 76, No. 9).
2. New subsections (h)-(n) filed 5-22-79 as an emergency; effective upon filing (Register 79, No. 21).
3. Exhibit A incorporated by reference into subsection (h) filed 5-22-79 as an emergency; effective upon filing (Register 79, No. 21).
4. Amendment of subsections (i) and (j) filed 7-11-79 as an emergency; effective upon filing (Register 79, No. 28).
- * Amendment expiration date based upon emergency order filed 5-22-79.
5. Subsections (h)-(n) expired by own terms (Register 80, No. 2).
6. New subsections (h) and (i) filed 1-8-80 as an emergency; effective upon filing (Register 80, No. 2). A Certificate of Compliance must be filed within 120 days or emergency language will be repealed on 5-8-80.
7. Certificate of Compliance filed 2-1-80 (Register 80, No. 5).
8. Amendment of section heading and new subsection (j) filed 2-2-83; effective thirtieth day thereafter (Register 83, No. 6).
9. Change without regulatory effect repealing Section 2253 filed 9-26-88 (Register 88, No. 41).

§ 2253.1. Exclusion of Gasoline Imported into California from Lead Requirements.

NOTE: Authority cited: Sections 39600 and 39601, Health and Safety Code. Reference: Sections 41511, 43013, and 43101, Health and Safety Code.

HISTORY

1. New section filed 6-14-79 as an emergency; effective upon filing (Register 79, No. 24).
2. Expired by own terms (Register 80, No. 5).

§ 2253.2. Lead in Gasoline Sold Before January 1, 1992.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil & Gas Ass'n v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000-39003, 39500, 39515, 39516, 41511, 43000, 43013, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil & Gas Ass'n v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 2-2-83; effective thirtieth day thereafter (Register 83, No. 6).
2. Amendment of subsections (c) and (m) filed 9-7-84; designated effective 10-1-84 pursuant to Government Code section 11346.2(d) (Register 84, No. 36).
3. New subsection (p) filed 7-12-91; operative 8-12-91 (Register 91, No. 43).
4. Editorial correction of subsection (k)(2) (Register 92, No. 5).
5. Change without regulatory effect repealing section filed 3-18-96 pursuant to section 100, title 1, California Code of Regulations (Register 96, No. 12).

§ 2253.4. Lead in Gasoline.

(a) Regulatory Standard.

(1) [Reserved]

(2) [Reserved]

(3) Starting January 1, 1994, no person shall sell, offer for sale, supply, or offer for supply any California gasoline:

(A) which is not represented as unleaded, or

(B) which has been produced with the use of any lead additive, or

(C) which contains more than 0.050 gram of lead per gallon or more than 0.005 gram of phosphorus per gallon, except as provided in subsection (d).

(4) Starting January 1, 1992, no person shall transfer a consumer gasoline additive containing lead into the fuel tank of a motor vehicle, other than an exempt off-road motor vehicle.

(5) Starting January 1, 1992, no person shall sell or offer for sale a consumer gasoline additive containing lead unless the additive container bears a conspicuous legend that use of the additive in passenger cars and other on-road vehicles is unlawful and can result in substantial penalties, and unless the marketing of the additive is directed exclusively towards use in exempt off-road motor vehicles and nonvehicular sources.

(b) Definitions.

For the purposes of this section:

(1) "California gasoline" means gasoline sold or intended for sale as a motor vehicle fuel in California.

(2) "Consumer gasoline additive" means any gasoline additive which is designed or marketed to be dispensed into the gasoline tank used to fuel a gasoline engine.

(3) "Exempt off-road vehicle" means any special construction equipment as defined in sections 565 and 570 of the Vehicle Code, and any implement of husbandry as defined in sections 36000 et seq. of the Vehicle Code.

(4) "Gasoline" means any fuel which is commonly or commercially known or sold as gasoline, or which is a mixture of any fuel commonly known or sold as gasoline and alcohol.

(5) "Lead additive" means any substance containing lead or lead compounds.

(6) "Motor vehicle" has the same meaning as defined in section 415 of the Vehicle Code.

(7) "Retail outlet" means any establishment at which gasoline is sold or offered for sale to the general public for use in motor vehicles other than exempt off-road vehicles.

(8) "Supply" means to provide or transfer a product to a physically separate facility, vehicle, or transportation system.

(c) Test Methods.

The lead content of gasoline shall be determined in accordance with American Society of Testing and Materials (ASTM) Method D3237-79, which is incorporated herein by reference. The phosphorous content of gasoline shall be determined in accordance with ASTM Method D3231-73, which is incorporated herein by reference.

(d) Exemptions.

Subsections (a)(1) and (3) shall not apply to California gasoline sold, offered from sale, supplied, or offered for supply by a person who demonstrates that:

(i) The gasoline is conspicuously identified as a fuel which may not lawfully be dispensed to motor vehicles other than exempt off-road vehicles; and

(ii) He or she has taken reasonable precautions to assure that the gasoline will not be sold or offered for sale at a retail outlet; and

(iii) Either the gasoline is being directly dispensed into the fuel tank of an exempt off-road vehicle, or the gasoline is the subject of a declaration under penalty of perjury by the purchaser, offeree or recipient stating that he or she will not sell, offer for sale, supply, or offer for supply the gasoline for use in motor vehicles other than exempt off-road vehicles.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil & Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 43000, 43013, 43016, 43018, and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 7-12-91; operative 8-12-91 (Register 91, No. 43).
2. Change without regulatory effect amending subsection (a)(3) filed 9-17-91 pursuant to section 100, title 1, California Code of Regulations (Register 92, No. 4).
3. Editorial correction of subsection (a)(1) (Register 95, No. 43).
4. Change without regulatory effect repealing subsections (a)(1) and (a)(2) filed 3-18-96 pursuant to section 100, title 1, California Code of Regulations (Register 96, No. 12).

§ 2254. Manganese Additive Content.

(a) Except as provided in subparagraph (b), no person shall add manganese or any manganese compound, including the compound methylcyclopentadienyl manganese tricarbonyl (MMT), to gasoline represented as unleaded intended to be sold, offered for sale, or delivered for sale at retail in the State of California.

(b) The prohibitions set forth in subparagraph (a) shall not apply to any person who has applied for and received from the Executive Officer written approval to add manganese or any manganese compound, including MMT, to gasoline represented as unleaded for the purpose of conducting tests or research into the effect thereof on vehicle emissions, fuel economy, performance, or for other related research objectives.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution*

Control District, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000-39003, 39500, 39515, 39516, 43000, 43013 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County APCD*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 8-1-77; effective thirtieth day thereafter (Register 77, No. 32).
2. Amendment filed 10-25-77 as an emergency; effective upon filing. Certificate of Compliance included (Register 77, No. 44).
3. Amendment of NOTE filed 3-3-83; effective thirtieth day thereafter (Register 83, No. 10).
4. Amendment of subsections (a) and (b) filed 7-12-91; operative 8-12-91 (Register 91, No. 43).

§ 2255. Sulfur Content of Diesel Fuel.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, and 43101 of the Health and Safety Code, and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 41511, 43000, 43016, 43018, and 43101, Health and Safety Code, and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 9-25-89; operative 10-25-89 (Register 89, No. 39).
2. Amendment of subsection(a) filed 10-9-90; operative 11-8-90 (Register 90, No. 45).
3. Change without regulatory effect renumbering former section 2255 to section 2281 filed 9-17-91 pursuant to section 100, title 1, California Code of Regulations (Register 92, No. 4).

§ 2256. Aromatic Hydrocarbon Content of Diesel Fuel.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101 of the Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 41511, 43000, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 9-25-89; operative 10-25-89 (Register 89, No. 39).
2. Change without regulatory effect renumbering former section 2256 to section 2282 filed 9-17-91 pursuant to section 100, title 1, California Code of Regulations (Register 92, No. 4).

§ 2257. Required Additives in Gasoline.

(a) Regulatory Standard.

(1) On or after January 1, 1992, no person shall sell, offer for sale, supply, or offer for supply any California gasoline unless at the time of the transaction:

[i] the producer, importer, or distributor of the gasoline has been issued a currently effective certification for California gasoline pursuant to subsection (c), originally dated no earlier than July 1, 1996. Existing certifications dated between July 1, 1996 and July 16, 1999 that meet the standards described in subsection (c)(1)(A)(i) and (c)(1)(A)(ii) [including those which used test method ASTM D 5500-94] are exempted from subsection (c)(1)(A)(iii), and

[ii] the gasoline contains at least the minimum concentration of the additive or additives identified in the final application for certification.

(2) Subsection (a)(1) shall not apply to transactions where the person selling, supplying, or offering the gasoline demonstrates that:

[i] the gasoline has not yet been sold, offered, or supplied from the final distribution facility, and either

[ii] the person has taken reasonably prudent precautions to assure that he or she will bring the gasoline into satisfaction with the requirements of subsection (a)(1) before it is sold, supplied or offered from the final distribution facility, or

[iii] at or before the time of the transaction the person has obtained a written statement from the purchaser, recipient, or offeree of the gasoline stating that he or she is a distributor who has been issued a currently effective certification pursuant to subsection (c), and will cause the gasoline to satisfy the requirements of subsection (a)(1) before it is sold, supplied or offered from the final distribution facility.

(3) Subsection (a)(1)[ii] shall not apply to the sale, supply, or offer of gasoline from a final distribution facility where the person selling, sup-

plying, or offering the gasoline demonstrates that the gasoline will be corrected to comply with section (a)(1)(ii) prior to the sale of gasoline from the retail outlet to be dispensed into motor vehicles. If such corrective action is taken, the producer, importer, or distributor of the gasoline must notify the Compliance Division of the Air Resources Board by telephone or in writing within 2 business days of the correction and must maintain records to document each occurrence in accordance with subsection (d).

(4) For the purposes of subsection (a)(1), each sale of gasoline at retail for use in a motor vehicle, and each supply of gasoline into a motor vehicle fuel tank, shall also be deemed a sale or supply by any person who previously sold or supplied such gasoline in violation of subsection (a)(1).

(b) Definitions.

For the purposes of this section:

(1) "Additive" means any substance or mixture of substances that is intentionally added to gasoline for the purpose of reducing or preventing fuel injection system or intake valve deposits, and that is not intentionally removed prior to the gasoline's sale or use.

(2) "Bulk purchaser-consumer" means a person who purchases or otherwise obtains gasoline in bulk and then dispenses it into the fuel tanks of motor vehicles owned or operated by the person.

(3) "California gasoline" means gasoline sold or intended for sale as a motor vehicle fuel in California.

(4) "Chemical composition" means the name, percentage by weight, and chemical identification of each compound in an additive.

(5) "Distributor" means any person who transports or stores or causes the transportation or storage of gasoline, produced or imported by another person, at any point between any producer's or importer's facility and any retail outlet or wholesale purchaser-consumer's facility.

(6) "Final distribution facility" means the stationary gasoline transfer point from which gasoline is transferred into the cargo tank truck, pipeline, or other delivery vessel from which the gasoline will be delivered to the facility at which the gasoline will be dispensed into motor vehicles.

(7) "Gasoline" means any fuel which is sold or intended for sale as a California motor vehicle fuel and is either: (a) commonly or commercially known or sold as gasoline, or (b) any fuel blend of gasoline as defined in (a) and alcohol in which the portion of gasoline is more than 50 percent of the total blend.

(8) "Gasoline production facility" means a facility in California at which gasoline is produced; it does not include a facility whose sole operation is to transfer gasoline or to blend additives into gasoline.

(9) "Importer" means any person who first accepts delivery of gasoline in California.

(10) "Import facility" means the facility at which imported gasoline is first received in California, including, in the case of gasoline imported by cargo tank and delivered directly to a facility for dispensing gasoline into motor vehicles, the cargo tank in which the gasoline is imported.

(11) "Motor vehicle" has the same meaning as defined in section 415 of the Vehicle Code.

(12) "Produce" means to convert liquid compounds which are not gasoline into gasoline.

(13) "Producer" means any person who produces California gasoline in California.

(14) "Retail outlet" means any establishment at which gasoline is sold or offered for sale for use in motor vehicles.

(15) "Supply" means to provide or transfer a product to a physically separate facility, vehicle, or transportation system.

(c) Certification Requirements.

(1)(A) No gasoline formulation shall be certified under this subsection (c) unless the applicant for certification demonstrates each of the following to the executive officer's satisfaction:

(i) The gasoline formulation meets a maximum of 50 milligrams averaged over all intake valves when tested in accordance with ASTM D 5500-98, which is incorporated herein by reference. As an alternative, intake valve deposits may be tested in accordance with subsection (c)(1)(A)(iii).

(ii) The gasoline formulation does not result in a flow loss of more than five percent for any fuel injector when tested in accordance with ASTM D 5598-95a, which is incorporated herein by reference.

(iii) The gasoline formulation meeting the requirements of (c)(1)(A)(i), does not result in more than 1300 milligrams total deposit weight, averaged over all four combustion chambers, or, does not result in more than 140 percent total deposit weight from all four combustion chambers, relative to the gasoline formulation containing no additive, when tested in accordance with the Stationary Source Division's Test Method for Evaluating Intake Valve and Combustion Chamber Deposits in Vehicle Engines, dated March 12, 1999, which is incorporated herein by reference.

(B) The executive officer may approve alternative test procedures for demonstrating satisfaction with any of the performance criteria set forth in subsection (c)(1)(A) if an applicant or potential applicant demonstrates to the executive officer's satisfaction that a gasoline formulation which meets the performance criteria of the alternative test procedure would also meet the performance criteria specified in subsection (c)(1)(A).

(2) Any producer, importer, or distributor may apply to the executive officer for certification of a gasoline formulation in accordance with this subsection (c). The application shall be in writing and shall include, at a minimum, the following:

(A) The name and chemical composition of the additive or additives in the gasoline formulation, except that if the chemical composition is not known to either the applicant or to the manufacturer of the additive (if other than the applicant), the applicant may provide a full disclosure of the chemical process of manufacture of the additive in lieu of its chemical composition.

(B) The minimum concentration of each additive in the gasoline formulation in terms of gallons of additive per thousand gallons of gasoline.

(C) The results of tests conducted on the gasoline formulation pursuant to the test procedures set forth in subsection (c)(1), all data generated by the tests, the identity of the entity which conducted each test, and a description of the quality assurance and quality control procedures used during the testing.

(D) Data demonstrating that the fuel used for certification testing ("certification test fuel") is representative of the gasoline formulation for which certification is requested. Properties of the certification test fuel must be at least 80 percent of the maximum properties of the gasoline formulation to be certified for the following: aromatic hydrocarbon content, olefin content, sulfur content, and oxygen content. The T90 distillation temperature of the certification test fuel cannot be less than 40 °F below the gasoline formulation for which certification is requested. All other certification test fuel properties must be representative of typical commercial gasoline.

(E) Data demonstrating how the certification test fuel was produced including a list of blend stocks, such as reformat, oxygenates, cracked stocks, alkylate, isomerate, straight run stocks and any other blend stocks, along with the percentage of the total which each blend stock comprises. Data may also be requested which demonstrates that the certification test fuel blend stocks are representative of typical California refinery blend stocks used for the production of California gasoline.

(F) The theoretical mechanism of action (if known) of the additive in meeting any of the performance criteria set forth in subsection (c)(1)(A).

(G) Copies of all material pertaining to the additive or additives in the gasoline formulation, submitted by the applicant to the U.S. Environmental Protection Agency pursuant to 40 CFR sections 79.6, 79.10 and 79.11. If the applicant has submitted no such material, copies of all material pertaining to the additive or additives in the gasoline formulation, submitted by the additive manufacturer to the U. S. Environmental Protection Agency pursuant to 40 CFR sections 79.6, 79.20 and 79.21.

(H) A test method reasonably adequate for determining the presence and concentration of each additive in the gasoline, including test method

reproducibility. The test method may involve identification of the presence of a surrogate marker substance if the applicant demonstrates that such test method will adequately demonstrate the presence and concentration of the additive.

(3) Within 30 days of receipt of an application, the executive officer shall advise the applicant in writing either that it is complete or that specified additional information is required to make it complete. Within 30 days of submittal of additional information, the executive officer shall advise the applicant in writing either that the application is complete, or that specified additional information or testing is still required before it can be deemed complete.

(4) If the executive officer finds that an application meets the requirements of this section and determines that the applicant has satisfactorily made the demonstrations identified in subsection (c)(1), then he or she shall issue an Executive Order certifying the gasoline fuel formulation. The executive officer shall act on a complete application within 30 days after the application is deemed complete.

(5) If the executive officer determines that the gasoline sold by a producer, importer or distributor contains the minimum concentration of additives identified in an applicable certification, but substantially fails to meet the performance criteria set forth in subsection (c)(1), the executive officer shall revoke or modify the prior certification as is necessary to assure that gasoline sold by the producer, importer or distributor meets the performance criteria set forth in subsection (c)(1). The executive officer shall not revoke or modify a prior certification order without first affording the applicant for the certification an opportunity for a hearing in accordance with title 17, California Code of Regulations, part III, chapter 1, subchapter 1, article 4 (commencing with section 60040). If the executive officer determines that a producer, importer or distributor would be unable to comply with this regulation as a direct result of a certification revocation or modification pursuant to this subsection, the executive officer may delay the effective date of such revocation or modification for such period of time as is necessary to permit the person to come into compliance in the exercise of all reasonable diligence.

(d) Recordkeeping.

(1) Each producer, importer, and distributor who has been issued a certification pursuant to subsection (c) must maintain records identifying each facility at which he or she adds an additive to California gasoline in order to comply with subsection (a)(1). For each such facility, the producer, importer or distributor must compile records showing on a monthly basis for each grade of gasoline:

[i] the volume of California gasoline supplied from the facility by the producer, importer or distributor,

[ii] the volume of California gasoline to which the producer, importer or distributor added the additive to comply with subsection (a)(1), and

[iii] the name and volume of each additive (or additive package) added to the California gasoline fuel. Records covering a month must be compiled no later than 30 days after the end of the month, and must be retained for at least two years after the end of the month.

(2) Any person required by subsection (d)(1) to compile and retain records must provide to the executive officer any such records within 20 days of a written request received from the executive officer or his/her designee before expiration of the period during which the records are required to be retained. Whenever such a person fails to provide records regarding a volume of California gasoline in accordance with this subsection (d)(2), the volume of California gasoline will be presumed to have been sold by the person in violation of subsection (a)(1).

Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 41511, 43000, 43016, 43018, and 43101, Health and Safety Code, and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975).

HISTORY

1. New section filed 7-12-91; operative 8-12-91 (Register 91, No. 43).

2. Amendment filed 9-13-96; operative 10-13-96 (Register 96, No. 37).

3. Amendment filed 5-17-99; operative 7-16-99 (Register 99, No. 21).

§ 2258. Oxygen Content of Gasoline in the Wintertime.

(a) Regulatory Standard.

(1) Starting November 1, 1992, within each of the air basins during the regulatory control period set forth in section (a)(2), no person shall sell, offer for sale, supply, offer for supply, or transport California gasoline unless the gasoline has an oxygen content of not less than 1.8 percent by weight and not more than 2.2 percent by weight.

(2) Regulatory Control Periods.

(A) October 1 through February 29

South Coast Air Basin and Ventura County

(B) October 1 through January 31

Sacramento Valley Air Basin

San Joaquin Valley Air Basin

San Francisco Bay Area Air Basin

Lake Tahoe Air Basin

Great Basin Valley Air Basin

Mountain Counties Air Basin

North Coast Air Basin

Lake County Air Basin

Northeast Plateau Air Basin

North Central Coast Air Basin

San Luis Obispo County

(C) November 1 through February 29

San Diego Air Basin

Southeast Desert Air Basin

Santa Barbara County

(3) Section (a)(1) shall not apply to transactions involving gasoline not meeting the minimum oxygen content standard where the person selling, supplying, or offering the gasoline demonstrates by affirmative defense that: [i] the gasoline has not yet been supplied from the final distribution facility, and [ii] the documents accompanying such gasoline clearly state that it does not comply with the minimum oxygen content standard in section (a)(1), and either [iii] the person has taken reasonably prudent precautions to assure that he or she will bring the gasoline within the standards in section (a)(1) before it is supplied from the final distribution facility, or [iv] at or before the time of the transaction the person has obtained a written statement from the purchaser, recipient, or offeree of the gasoline stating that he or she will take reasonably prudent precautions to assure that the gasoline is brought within the standards of section (a)(1) before it is supplied from the final distribution facility.

(4) Section (a)(1) shall not apply to a transaction occurring in an air basin during the regulatory control period where the person selling, supplying, or offering the gasoline demonstrates as an affirmative defense that, prior to the transaction, he or she has taken reasonably prudent precautions to assure that the gasoline will be delivered to a retail service station or bulk purchaser-consumer's fueling facility when the station or facility is not subject to a basic regulatory control period.

(5) Section (a)(1) shall not apply to a transaction occurring in an air basin during the regulatory control period where the transaction involves the transfer of gasoline from a stationary storage tank to a motor vehicle fuel tank and the person selling, supplying, or offering the gasoline demonstrates as an affirmative defense that the last delivery of gasoline to the stationary storage tank occurred more than fourteen days before the start of the regulatory control period.

(6)(A) The regulatory standards in section (a)(1) shall not apply to a transaction occurring in the air basin during a transition period, where the transaction involves the transfer of gasoline from a stationary storage tank to a motor vehicle fuel tank and the person selling, supplying, or offering the gasoline demonstrates as an affirmative defense that he or she has made, prior to the transaction, specific arrangements with a gasoline distributor for the delivery of an oxygenated or nonoxygenated gasoline blend containing oxygenates in quantities that will result in gasoline in the stationary storage tanks at the facility having an oxygen content of

from 1.8 percent to 2.2 percent by weight by the end of the transition period.

(B) The regulatory standards in section (a)(1) shall not apply to a transaction occurring in an air basin during a transition period, where the transaction involves the sale, offer for sale, supply, offer for supply, or transport of gasoline to a retail gasoline outlet or bulk purchaser-consumer's facility and the person selling, supplying, or offering the gasoline demonstrates as an affirmative defense that the gasoline is being distributed pursuant to a prior arrangement to deliver oxygenated or nonoxygenated gasoline to bring the retail gasoline outlet or bulk purchaser-consumer's facility into compliance with the regulatory standards in section (a)(1) by the end of the transition period.

(7) Section (a)(1) shall not apply to a transaction involving the sale, offer for sale, supply, or offer for supply of gasoline to a stationary storage tank at a retail gasoline outlet, or the transfer of gasoline from a stationary storage tank at a retail gasoline outlet to a motor vehicle fuel tank, if the person selling, offering, or supplying the gasoline demonstrates by affirmative defense all of the following:

(A) The retail gasoline outlet is within Modoc, Lassen, Sierra, Nevada, Placer, El Dorado, Alpine, Mono, Inyo, or San Bernardino counties, and is not within the Lake Tahoe or Sacramento Valley Air Basins.

(B) The final distribution facility from which the gasoline is being or has been delivered is outside California.

(C) The gasoline is being or has been delivered to the stationary storage tank by a tank truck having a total capacity not exceeding 4500 gallons.

(D) The stationary storage tank at the retail gasoline outlet has a total capacity not exceeding 2500 gallons, and

(E) The retail gasoline outlet has a monthly throughput not exceeding 10,000 gallons.

(8) For the purposes of section (a)(1), each sale of California gasoline at retail, and each dispensing of California gasoline into a motor vehicle fuel tank, shall also be deemed a sale or supply by any person who previously sold or supplied such gasoline in violation of section (a)(1).

(b) Definitions.

For the purposes of this section:

(1) "Bulk purchaser-consumer" means a person who purchases or otherwise obtains gasoline in bulk and then dispenses it into the fuel tanks of motor vehicles owned or operated by the person.

(2) "California gasoline" means gasoline sold or intended for sale as a motor vehicle fuel in California.

(3) "Distributor" means any person engaged in the business of transporting and delivering gasoline to a retail gasoline outlet or bulk purchaser-consumer's facility.

(4) "Final distribution facility" means the stationary gasoline transfer point from which gasoline is transferred into the cargo tank truck, pipeline, or other delivery vessel from which the gasoline will be delivered to the facility at which the gasoline will be dispensed into motor vehicles; except that a cargo tank truck is the final distribution facility where the cargo tank truck is used to transport gasoline and carries written documentation demonstrating that oxygenates, in quantities that will bring the gasoline into compliance with section 2258(a)(1), will be or have been blended directly into the cargo tank truck prior to delivery of the gasoline from the cargo tank truck to the facility at which the gasoline will be dispensed into motor vehicles.

(5) "Gasoline means any fuel which is commonly or commercially known or sold as gasoline.

(6) "Motor vehicle" has the same meaning as defined in section 415 of the Vehicle Code.

(7) "Northern California" means the area of California not contained within the South Central Coast, South Coast, Southeast Desert and San Diego Air Basins.

(8) "Southern California" means the area of California contained within the South Central Coast, South Coast, Southeast Desert and San Diego Air Basins.

(9) "Supply" means to provide or transfer a product to a physically separate facility, vehicle, or transportation system.

(10) "Transition period" means:

a. the first 15 days of any October regulatory control period.

b. November 1 to November 15, 1992, and

c. November 1 through November 15 of 1993, 1994, or 1995 in the San Diego Air Basin, the Southeast Desert Air Basin, and Santa Barbara County.

(c) Sampling Procedures and Test Methods.

Compliance with the oxygen content standards in this regulation shall be determined by use of an applicable sampling methodology set forth in Title 13, California Code of Regulations, section 2296, and use of American Society for Testing and Materials Test Method ASTM D 4815-94, which is incorporated herein by reference. Another test method may be used following a determination by the executive officer that the other method produces results equivalent to the results obtained with ASTM D 4815-94.

(d) Inability to Produce Conforming Gasoline in Extraordinary Circumstances.

In appropriate extreme and unusual circumstances (e.g., natural disaster or Act of God) which are clearly outside the control of the refiner, importer, or oxygenate blender and which could not have been avoided by the exercise of prudence, diligence, and due care, the executive officer may permit a refiner, importer, or oxygenate blender, for a brief period, to distribute gasoline which does not meet the requirements in section (a)(1) if:

(1) It is in the public interest to do so (e.g., distribution of the nonconforming gasoline is necessary to meet projected shortfalls which cannot otherwise be compensated for);

(2) The refiner, importer, or oxygenate blender exercised prudent planning and was not able to avoid the violation and has taken all reasonable steps to minimize the extent of the nonconformity;

(3) The refiner, importer, or oxygenate blender can show how the requirements for oxygenated gasoline will be expeditiously achieved;

(4) The refiner, importer, or oxygenate blender agrees to make up air quality detriment associated with the nonconforming gasoline, where practical; and

(5) The refiner, importer, or oxygenate blender pays to the Air Pollution Control Fund an amount equal to the economic benefit of the nonconformity minus the amount expended, pursuant to section (d)(4), in making up the air quality detriment.

(e) Effect of Supply Waiver Under Federal Clean Air Act.

(1) If the Administrator of the U.S. Environmental Protection Agency issues, pursuant to 42 U.S.C. section 7545(m)(3)(C), a waiver of the requirements of 42 U.S.C. section 7545(m)(2) applicable to a geographic area or areas of California, the requirements of section (a)(1) shall not apply in any air basin containing an area covered by the waiver, during the effective period of the waiver.

(2) If the Administrator of the U.S. Environmental Protection Agency issues, pursuant to 42 U.S.C. section 7545(m)(3)(C), a waiver of the requirements of 42 U.S.C. section 7545(m)(2) applicable to a geographic area or areas within Southern California, section (a)(1) shall not apply, during the effective period of the waiver, in any air basin in Southern California not containing any area required under 42 U.S.C. section 7545(m) to have a wintertime oxygenates program.

(3) If the Administrator of the U.S. Environmental Protection Agency issues, pursuant to 42 U.S.C. section 7545(m)(3)(C), a waiver of the requirements of 42 U.S.C. section 7545(m)(2) applicable to a geographic area or areas within Northern California, section (a)(1) shall not apply, during the effective period of the waiver, in any air basin in Northern California not containing any area required under 42 U.S.C. section 7545(m) to have a wintertime oxygenates program.

(f) Sunset. This section shall not apply to gasoline sold or supplied after February 29, 1996.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 41511, 43000, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975).

HISTORY

1. New section filed 10-14-92; operative 10-14-92 pursuant to Government Code section 11346.2(d) (Register 92, No. 42).
2. Amendment of subsections (a)(2)(B)-(C) and (a)(6)(B), new subsections (a)(7)-(a)(7)(E) and subsection redesignation and amendment of subsections (b)(10)(C)-(c) filed 9-1-94; operative 9-1-94 (Register 94, No. 35).
3. Amendment of subsection (c) filed 8-7-95; operative 8-7-95 pursuant to Government Code section 11343.4(d) (Register 95, No. 32).

§ 2259. Exemptions for Motor Vehicle Fuels Used in Test Programs.

(a)(1) Any person may request an exemption for fuel used in a test program by submitting an application to the executive officer that includes all the information listed in paragraphs (c), (d), (e), and (f) of this section.

(2) For the purpose of this section, "fuel requirement" means any requirement for a motor vehicle fuel established in Chapter 5 (Standards for Motor Vehicle Fuels) of Division 3, Title 13, California Code of Regulations.

(3) For the purpose of this section, "exemption" means an exemption from one or more fuel requirements that is granted by the executive officer for the purpose of research, motor vehicle or engine emissions certification, fuel certification or registration, or fuel additive certification or registration.

(4) For the purpose of this section, "test track" means a roadway that is closed to the general public, is used to test motor vehicles or motor vehicle fuels, and is not used to transport persons or property.

(b)(1) In order for an exemption to be granted, the applicant must demonstrate the following:

(A) The proposed test program has a purpose that constitutes an appropriate basis for exemption;

(B) The proposed test program necessitates the granting of an exemption;

(C) The proposed test program exhibits reasonableness in scope; and

(D) The proposed test program exhibits a degree of control consistent with the purpose of the program and the state board's monitoring requirements.

(2) Paragraphs (c), (d), (e), and (f) of this section describe what constitutes a sufficient demonstration for each of the four elements in paragraphs (b)(1)(A) through (D) of this section.

(3) Within 20 days of receipt of an application for an exemption, the executive officer shall advise the applicant in writing either that the application is complete or that specified additional information is required to make it complete. Within 15 days of submittal of additional information, the executive officer shall advise the applicant in writing either that the information submitted makes the application complete or that specified additional information is still required to make it complete. Within 20 days after the application is deemed complete, the executive officer shall grant or deny the application. Any denial shall be accompanied by a written statement of the reasons for denial.

(c) An appropriate purpose is limited to research, motor vehicle or engine emissions certification, fuel certification or registration, or fuel additive certification or registration. The exemption application must include a concise statement of the purpose(s) of the proposed test program.

(d) With respect to the necessity for an exemption, the applicant must identify each specific fuel requirement that would be violated by the test program, and demonstrate an inability to achieve the stated purpose in a practical manner without violating the identified fuel requirement(s). If any site of the proposed test program is located in an area that is classified as a nonattainment area for purposes of a state or federal ambient air quality standard, and the fuel requirement that would be violated is designed to reduce emissions of the pollutant, or a precursor of the pollutant, for which the area is classified as a nonattainment area, the applicant must

also demonstrate a practical inability to perform the test program in an area that is in attainment with respect to that pollutant.

(e) With respect to reasonableness, a test program must exhibit a duration of reasonable length, affect a reasonable number of vehicles or engines, and utilize a reasonable amount of noncomplying fuel. In this regard, the application for exemption must include:

(1) An estimate of the program's duration;

(2) An estimate of the maximum number of vehicles or engines involved in the program;

(3) The time or mileage duration of the test program;

(4) The range of the noncomplying properties of the fuel expected to be used in the program, and

(5) The quantity of fuel which exceeds the applicable standard that is expected to be used in the program.

(f) With respect to control, a program must be capable of affording the executive officer a monitoring capability. At a minimum, the application for exemption must also include:

(1) The technical nature of the test program;

(2) The site(s) of the program (including the street address, city, county, and zip code);

(3) The manner in which information on vehicles and engines used in the program will be recorded and made available to the executive officer;

(4) The manner in which results of the program will be recorded and made available to the executive officer;

(5) The manner in which information on the fuel used in the test program (including noncomplying properties, name, address, telephone number, and contact person of supplier, quantity, date received from the supplier) will be recorded and made available to the executive officer;

(6) The manner in which the distribution pumps will be labeled to insure proper use of the test fuel;

(7) The name, address, telephone number and title of the person(s) in the organization requesting an exemption from whom further information on the request may be obtained; and

(8) The name, address, telephone number and title of the person(s) in the organization requesting an exemption who will be responsible for recording and making the information specified in paragraphs (f)(3), (4), and (5) of this section available to the executive officer and the location in which such information will be maintained.

(g) An exemption shall be granted by the executive officer upon a demonstration that the requirements of paragraphs (b), (c), (d), (e) and (f) of this section have been met. The exemption will be granted in the form of memorandum of exemption signed by the applicant and the executive officer (or his delegate), which shall include such terms and conditions as the executive officer determines necessary to monitor the exemption and to carry out the purpose of this section. Any violation of such term or condition shall cause the exemption to be void.

(h) No fuel requirement shall apply to fuel used for an engine or vehicle dynamometer test, or to fuel used in the testing of motor vehicles or motor vehicle fuels on a test track.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 41511, 43000, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 2-15-95; operative 2-15-95 pursuant to Government Code section 11343.4(d) (Register 95, No. 7).

Subarticle 2. Standards for Gasoline Sold Beginning March 1, 1996

§ 2260. Definitions.

(a) For the purposes of this subarticle, the following definitions apply:

(1) "Alternative gasoline formulation" means a final blend of gasoline that is either a PM alternative gasoline formulation or a test-certified alternative gasoline formulation.

(2) "Averaging compliance option" means, with respect to a specific gasoline property, the compliance option set forth in section 2262.3(c).

(3) "ASTM" means the American Society of Testing and Materials.

(4) "Bulk purchaser-consumer" means a person that purchases or otherwise obtains gasoline in bulk and then dispenses it into the fuel tanks or motor vehicles owned or operated by the person.

(5) "Bulk plant" means an intermediate gasoline distribution facility where delivery of gasoline to and from the facility is solely by truck.

(6) "California gasoline" means:

(A) Gasoline sold, intended for sale, or made available for sale as a motor vehicle fuel in California; and

(B) Gasoline that is produced in California, and that the producer knows or reasonably should know will be offered for sale or supply at an out-of-state terminal or bulk plant at which it will be identified as gasoline produced in California and suitable for sale as a motor vehicle fuel in California.

(6.5) "California reformulated gasoline blendstock for oxygenate blending, or 'CARBOB,'" means a petroleum-derived liquid which is intended to be, or is represented as, a product that will constitute California gasoline upon the addition of a specified type and percentage (or range of percentages) of oxygenate to the product after the product has been supplied from the production or import facility at which it was produced or imported.

(6.6) "CaRFG Phase 2" means California Phase 2 reformulated gasoline.

(6.7) "CaRFG Phase 3" means California Phase 3 reformulated gasoline.

(6.8) "CARBOB limits" means, for a final blend of CARBOB, CARBOB specifications for maximum Reid vapor pressure, sulfur content, benzene content, olefin content, aromatic hydrocarbon content, T50 and T90, and maximum and minimum oxygen content, expressed to the number of significant figures identified for each property in the section 2262 standards table, and for any other property identified in a certification order issued by the Executive Officer pursuant to the "California Procedures for Evaluating Alternative Specifications for Gasoline Using Vehicle Emissions Testing," incorporated by reference in section 2266(a), if applicable.

(7) "Designated alternative limit" means an alternative gasoline specification limit, expressed in the nearest part per million by weight for sulfur content, nearest hundredth percent by volume for benzene content, nearest tenth percent by volume for aromatic hydrocarbon content, nearest tenth percent for olefin content, and nearest degree Fahrenheit for T90 and T50, which is assigned by a producer or importer to a final blend of California gasoline pursuant to section 2264.

(8) "Ethanol" means ethyl alcohol which meets any additional requirements for ethanol or ethyl alcohol in Health and Safety Code section 43830.

(9) "Executive Officer" means the executive officer of the Air Resources Board, or his or her designee.

(10) "Final blend" means a distinct quantity of gasoline or CARBOB which is introduced into commerce in California without further alteration which would tend to affect a regulated gasoline specification of the fuel.

(11) "Final distribution facility" means the stationary gasoline transfer point from which gasoline or CARBOB is transferred into the cargo tank truck, pipeline, or other delivery vessel from which the gasoline will be delivered to the facility at which the gasoline will be dispensed into motor vehicles; except that a cargo tank truck is the final distribution facility where the cargo tank truck is used to transport CARBOB and gasoline and carries written documentation demonstrating that the designated type and amount or range of amounts of oxygenates designated by the producer or importer will be or have been blended directly into the cargo tank truck prior to delivery of the resulting gasoline from the cargo tank truck to the facility at which the gasoline will be dispensed into motor vehicles.

(12) "Flat limit compliance option" means, with respect to a specific gasoline property, the compliance option set forth in section 2262.3(b), section 2262.4(b)(1), or section 2262.5(c).

(13) "Further process" means to perform any activity on gasoline, including distillation, treating with hydrogen, or blending, for the purpose of bringing the gasoline into compliance with the standards in this subarticle.

(14) "Gasoline" means any fuel that is commonly or commercially known, sold or represented as gasoline, including any volatile mixture of predominantly liquid hydrocarbons that is sold or represented as suitable for use in an automotive spark-ignition engine.

(15) "Imported California gasoline" means California gasoline which is transported into California and does not meet the definition in section 2260(a)(6)(B).

(16) "Import facility" means the storage tank to which imported California gasoline or CARBOB is first delivered in California, including, in the case of gasoline or CARBOB imported by cargo tank and delivered directly to a facility for dispensing gasoline into motor vehicles, the cargo tank in which the gasoline or CARBOB is imported.

(17) "Importer" means any person who first accepts delivery in California of imported California gasoline.

(18) "Motor vehicle" has the same meaning as defined in section 415 of the Vehicle Code.

(19) "Oxygenate" is any oxygen-containing, ashless, organic compound, such as an alcohol or ether, which, when added to gasoline increases the amount of oxygen in gasoline.

(19.3) "Oxygenate blending facility" means any facility (including a truck) at which oxygenate is added to gasoline or blendstock, and at which the quality or quantity of gasoline is not altered in any other manner except for the addition of deposit control additives or other similar additives.

(19.6) "Oxygenate blender" means any person who owns, leases, operates, controls, or supervises an oxygenate blending facility, or who owns or controls the blendstock or gasoline used or the gasoline produced at an oxygenate blending facility.

(20) "PM alternative gasoline formulation" means a final blend of gasoline that is subject to a set of PM alternative specifications assigned pursuant to section 2265(a).

(21) "PM alternative specifications" means the specifications for the following gasoline properties, as determined in accordance with section 2263 and expressed to the number of significant figures identified for each property in the section 2262 standards table: maximum Reid vapor pressure, maximum sulfur content, maximum benzene content, maximum olefin content, minimum and maximum oxygen content, maximum T50, maximum T90, and maximum aromatic hydrocarbon content.

(22) "PM averaging compliance option" means, with reference to a specific gasoline property, the compliance option for PM alternative gasoline formulations under which final blends of gasoline are assigned designated alternative limits in accordance with section 2264.

(23) "PM averaging limit" means a PM alternative specification that is subject to the PM averaging compliance option.

(24) "PM flat limit" means a PM alternative specification that is subject to the PM flat limit compliance option.

(25) "PM flat limit compliance option" means, with reference to a specific gasoline property, the compliance option under which each gallon of gasoline must meet the specification for the property contained in the PM alternative specifications.

(26)(A) "Produce" means, except as otherwise provided in section (a)(26)(B) or (a)(26)(C), to convert liquid compounds which are not gasoline into gasoline or CARBOB. When a person blends volumes of blendstocks which are not gasoline with volumes of gasoline acquired from another person, and the resulting blend is gasoline, the person conducting such blending has produced only the portion of the blend which was not previously gasoline. When a person blends gasoline with other

volumes of gasoline, without the addition of blendstocks which are not gasoline, the person does not produce gasoline.

(B) Where a person supplies gasoline to a refiner who agrees in writing to further process the gasoline at the refiner's refinery and to be treated as the producer of the gasoline, the refiner shall be deemed for all purposes under this article to be the producer of the gasoline.

(C) Where an oxygenate blender blends oxygenates into CARBOB which has already been supplied from a gasoline production facility or import facility, and does not alter the quality or quantity of the CARBOB or the resulting gasoline in any other manner except for the addition of deposit control additives or other similar additives, the oxygenate blender is not producing any portion of the resulting gasoline, and the producer or importer of the CARBOB is treated as the producer or importer of the full volume of the resulting gasoline.

(26.5) "Produced at a California production facility with the use of any oxygenate other than ethanol or MTBE" means produced at a California production facility in part by either (i) adding at the California production facility any oxygenate, other than ethanol or MTBE, in neat form to the California gasoline or to a blending component used in the gasoline; or (ii) using a blending component that contained greater than 0.10 weight percent total oxygen from oxygenates other than ethanol or MTBE when it was supplied to the California production facility.

(27) "Producer" means any person who owns, leases, operates, controls or supervises a California production facility.

(28) "Production facility" means a facility in California at which gasoline or CARBOB is produced. Upon request of a producer, the executive officer may designate, as part of the producer's production facility, a physically separate bulk storage facility which (A) is owned or leased by the producer, and (B) is operated by or at the direction of the producer, and (C) is not used to store or distribute gasoline or CARBOB that is not supplied from the production facility.

(28.5) "Qualifying small refiner" means a small refiner whose California refinery was used in 1998 and 1999 to produce and supply California gasoline meeting the CaRFG Phase 2 standards.

(29) "Qualifying volume" means, for each small refiner, a volume of gasoline determined in accordance with the following four steps, provided that the qualifying volume for Kern Oil & Refining Co.'s Bakersfield refinery shall not exceed 2,920,000 barrels per year (equal to 8000 barrels per day; 2,928,000 barrels per year in leap years):

(A) First, the barrel per calendar day "operating crude oil capacity" of the small refiner's refinery in March 1999 is identified, based on data which are reported to the executive officer from the California Energy Commission (CEC) and are derived from "Monthly Refinery Reports" (EIA 810) submitted to the CEC no later than June 30, 1999. If the CEC is unable to derive such data from the Monthly Refinery Reports for a particular small refiner, the executive officer shall determine the small refiner's operating crude oil capacity in March 1999 based on other publicly available and generally recognized sources.

(B) Second, this operating crude oil capacity is multiplied by 0.9794, representing the highest monthly refinery operating utilization rate in the California refining industry for January 1998 through March 1999, as compiled in the "Monthly Refinery Capacity Data Statewide" report of the CEC.

(C) Third, the resulting crude throughput volume is multiplied by the refinery's highest monthly ratio of gasoline produced to crude oil distilled in January 1998 through March 1999, based on data derived by the CEC from the Monthly Refinery Reports submitted to the CEC no later than June 30, 1999.

(D) Fourth, the resulting gasoline volume is multiplied by 365 to identify an annualized value. In the case of leap years, the gasoline volume is multiplied by 366 to identify the annualized value.

(29.5) "Racing vehicle" means a competition vehicle not used on public highways.

(30) "Refiner" means any person who owns, leases, operates, controls or supervises a refinery.

(31) "Refinery" means a facility that produces liquid fuels by distilling petroleum.

(32) "Small refiner" means any refiner who owns or operates a refinery in California that:

(A) Has and at all times had since January 1, 1978, a crude oil capacity of not more than 55,000 barrels per stream day;

(B) Has not been at any time since September 1, 1988, owned or controlled by any refiner that at the same time owned or controlled refineries in California with a total combined crude oil capacity of more than 55,000 barrels per stream day; and

(C) Has not been at any time since September 1, 1988, owned or controlled by any refiner that at the same time owned or controlled refineries in the United States with a total combined crude oil capacity of more than 137,500 barrels per stream day.

(32.5) "South Coast Area" means the counties of Los Angeles, Orange, Riverside, San Bernardino, and Ventura.

(33) "Stream day" means 24 consecutive hours of actual operation of a refinery.

(34) "Supply" means to provide or transfer a product to a physically separate facility, vehicle, or transportation system.

(35) "TC limits" means the set of specifications identified in a certification issued by the Executive Officer pursuant to the "California Procedures for Evaluating Alternative Specifications for Gasoline Using Vehicle Emissions Testing," incorporated by reference in section 2266(a).

(36) "Test-certified alternative gasoline formulation" means a final blend of gasoline that is subject to a set of specifications identified in a certification issued by the Executive Officer pursuant to the "California Procedures for Evaluating Alternative Specifications for Gasoline Using Vehicle Emissions Testing," incorporated by reference in section 2266(a).

Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39010, 39500, 39515, 39516, 41511, 43000, 43013, 43013.1, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New subarticle 2 and section filed 11-16-92; operative 12-16-92 (Register 92, No. 47).
2. Amendment filed 6-2-95; operative 7-3-95 (Register 95, No. 22).
3. New subsection (a)(6.5), amendment of subsections (a)(10)-(11) and (a)(16), new subsections (a)(19.3) and (a)19.6), and amendment of subsections (a)(26(A)), (a)(26)(C) and (a)(28) filed 2-28-96; operative 2-28-96 pursuant to Government Code section 11343.4(d) (Register 96, No. 9).
4. New subsections (a)(29.5) and (a)(32.5) filed 9-21-98; operative 9-21-98 pursuant to Government Code section 11343.4(d) (Register 98, No. 39).
5. Amendment of section and NOTE filed 8-3-2000; operative 9-2-2000 (Register 2000, No. 31).
6. Amendment of subsection (a)(1), new subsection (a)(6.8), amendment of subsections (a)(20)-(21) and new subsections (a)(35)-(36) filed 8-20-2001; operative 8-20-2001 pursuant to Government Code section 11343.4 (Register 2001, No. 34).
7. New subsection (a)(26.5) filed 5-1-2003; operative 5-1-2003 pursuant to Government Code section 11343.4 (Register 2003, No. 18).
8. Amendment of subsection (a)(16) filed 3-10-2005; operative 4-9-2005 (Register 2005, No. 10).

§ 2261. Applicability of Standards; Additional Standards.

(a) *Applicability of the CaRFG Phase 2 Standards.*

(1)(A) Unless otherwise specifically provided, the CaRFG Phase 2 cap limit standards set forth in section 2262, and the CaRFG Phase 2 cap limit compliance requirements in sections 2262.3(a), 2262.4(a), and 2262.5(a) and (b), shall apply:

1. starting April 15, 1996 to all sales, supplies, offers or movements of California gasoline except for transactions directly involving:

- a. the fueling of motor vehicles at a retail outlet or bulk purchaser-consumer facility, or
- b. the delivery of gasoline from a bulk plant to a retail outlet or bulk purchaser-consumer facility, and

2. starting June 1, 1996 to all sales, supplies, offers or movements of California gasoline, including transactions directly involving the fueling of motor vehicles at a retail outlet or bulk purchaser–consumer facility.

(B) The remaining CaRFG Phase 2 standards and requirements contained in this subarticle shall apply to all sales, supplies, or offers of California gasoline occurring on or after March 1, 1996.

(2) The CaRFG Phase 2 cap limit standards in section 2262 shall not apply to transactions directly involving the fueling of motor vehicles at a retail outlet or bulk purchaser–consumer facility, where the person selling, offering, or supplying the gasoline demonstrates as an affirmative defense that the exceedance of the pertinent standard was caused by gasoline delivered to the retail outlet or bulk purchaser–consumer facility prior to April 15, 1996, or delivered to the retail outlet or bulk purchaser–consumer facility directly from a bulk plant prior to June 1, 1996.

(b) *Applicability of the CaRFG Phase 3 Standards.*

(1)(A) Unless otherwise specifically provided, the CaRFG Phase 3 cap limit standards set forth in section 2262, and the CaRFG Phase 3 cap limit compliance requirements in 2262.3(a), 2262.4(a), and 2262.5(a) and (b), shall apply starting December 31, 2003. The CaRFG Phase 3 benzene and sulfur content cap limit standards in section 2262, and the CaRFG Phase 3 benzene and sulfur content cap limit compliance requirements in 2262.3(a), shall apply:

1. starting December 31, 2003 (for the benzene content cap limit and the 60 parts per million sulfur content cap limit) and December 31, 2005 (for the 30 parts per million sulfur content cap limit), to all sales, supplies or offers of California gasoline from the production facility or import facility at which it was produced or imported.

2. starting February 14, 2004 (for the benzene content cap limit and the 60 parts per million sulfur content cap limit) and February 14, 2006 (for the 30 parts per million sulfur content cap limit) to all sales, supplies, offers or movements of California gasoline except for transactions directly involving:

a. the fueling of motor vehicles at a retail outlet or bulk purchaser–consumer facility, or

b. the delivery of gasoline from a bulk plant to a retail outlet or bulk purchaser–consumer facility, and

3. starting March 31, 2004 (for the benzene content cap limit and the 60 parts per million sulfur content cap limit) and March 31, 2006 (for the 30 parts per million sulfur content cap limit) to all sales, supplies, offers or movements of California gasoline, including transactions directly involving the fueling of motor vehicles at a retail outlet or bulk purchaser–consumer facility.

(B) The remaining CaRFG Phase 3 standards and compliance requirements contained in this subarticle shall apply to all sales, supplies, or offers of California gasoline occurring on or after December 31, 2003.

(2) The CaRFG Phase 3 benzene and sulfur content cap limit standards in section 2262 shall not apply to transactions directly involving the fueling of motor vehicles at a retail outlet or bulk purchaser–consumer facility, where the person selling, offering, or supplying the gasoline demonstrates as an affirmative defense that the exceedance of the pertinent standard was caused by gasoline delivered to the retail outlet or bulk purchaser–consumer facility prior to February 14, 2004 (for the benzene content limit and the 60 parts per million sulfur content limit) or February 14, 2006 (for the 30 parts per million sulfur content limit) or delivered to the retail outlet or bulk purchaser–consumer facility directly from a bulk plant prior to March 31, 2004 (for the benzene content limit and the 60 parts per million sulfur content limit) or March 31, 2006 (for the 30 parts per million sulfur content limit).

(3) *Early Compliance with the CaRFG Phase 3 Standards Before December 31, 2003.*

(A) Any producer or importer wishing to supply from its production or import facility, before December 31, 2003, any final blends of gasoline subject to the CaRFG Phase 3 standards instead of the CaRFG Phase 2 standards may notify the executive officer of its wish to do so. The notification shall include all of the following:

1. The approximate date by which it intends to begin supplying from its production or import facility gasoline complying with the CaRFG Phase 3 standards if permitted to do so;

2. A reasonably detailed demonstration of the producer's or importer's ability and plans to begin supplying from its production or import facility substantial quantities of one or more grades of gasoline meeting the CaRFG Phase 3 standards on or after the date specified;

(B)1. Within 15 days of receipt of a request under section 2261(b)(3)(A), the executive officer shall notify the producer or importer making the request either that the request is complete, or specifying what additional information is necessary to make the request complete.

2. Within 15 days of notifying the producer or importer that the request is complete, the executive officer shall either grant or deny the request. If the request is granted the executive officer shall specify the date on which producers and importers may start to supply from their production or import facilities final blends that comply with the CaRFG Phase 3 standards. The executive officer shall grant the request if he or she determines it is reasonably likely that the producer or importer making the request will start supplying substantial quantities of one or more grades of gasoline complying with the CaRFG Phase 3 standards reasonably soon after the date specified. If the executive officer denies the request, he or she shall provide the producer or importer with a written statement explaining the reason for denial.

3. Upon granting a request made under section 2261(b)(3)(A), the executive officer shall notify interested parties of the date on which (i) producers and importers will be permitted to start supplying final blends of gasoline complying with the CaRFG Phase 3 standards, and (ii) the CaRFG Phase 2 cap limits for RVP and aromatics will become 7.20 psi and 35.0 volume percent respectively for gasoline downstream of the production or import facility. This notification shall be made by posting the pertinent information on the state board's Internet site, providing electronic mail notification to all persons subscribing to the state board's Fuels–General Internet electronic mail list, and mailing notice to all persons registered as motor vehicle fuel distributors under Health and Safety Code section 43026.

4. With respect to all final blends supplied from a production or import facility from the day specified by the executive officer in granting a request made under section 2261(b)(3)(A) through December 30, 2003, any producer or importer may comply with the CaRFG Phase 3 standards that apply starting December 31, 2003 as an alternative to the CaRFG Phase 2 standards. Whenever a producer or importer is supplying a final blend subject to the CaRFG Phase 3 standards pursuant to this section 2261(b)(3)(B)4., any notification required by sections 2264.2 or 2265(a) shall indicate that the final blend is subject to the CaRFG Phase 3 standards. When it is sold or supplied from the production or import facility, no such final blend may contain MTBE in concentrations greater than 0.60 volume percent, or contain a total of more than 0.10 weight percent oxygen collectively from all of the oxygenates identified in section 2262.6(c)(4) that have not received a determination by the California Environmental Council as described in section 2262.6(c)(1).

(c) California gasoline sold or supplied on or after March 1, 1996, is also subject to section 2253.4 (Lead/Phosphorus in Gasoline), section 2254 (Manganese Additive Content), and section 2257 (Required Additives in Gasoline). California gasoline that is supplied from a small refiner's California refinery prior to March 1, 1998, and that qualifies for treatment under section 2272(a), shall also be subject to section 2250 (Degree of Unsaturation of Gasoline) and section 2252 (Sulfur Content of Gasoline).

(d) The standards contained in this subarticle shall not apply to a sale, offer for sale, or supply of California gasoline to a refiner if: (1) the refiner further processes the gasoline at the refiner's refinery prior to any subsequent sale, offer for sale, or supply of the gasoline, and (2) in the case of standards applicable only to producers or importers, the refiner to whom the gasoline is sold or supplied is the producer of the gasoline pursuant to section 2260(a)(26)(B).

(e) The prohibitions in sections 2262.3(b) and (c), 2262.4(b), and 2262.5(c) shall not apply to gasoline which a producer or importer demonstrates was neither produced nor imported by the producer or importer.

(f) This subarticle 2, section 2253.4 (Lead/Phosphorus in Gasoline), section 2254 (Manganese Additive Content), and section 2257 (Required Additives in Gasoline) shall not apply to gasoline where the person selling, offering or supplying the gasoline demonstrates as an affirmative defense that the person has taken reasonably prudent precautions to assure that the gasoline is used only in racing vehicles.

Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 11–16–92; operative 12–16–92 (Register 92, No. 47). For prior history, see Register 92, No. 4.
2. Amendment filed 6–2–95; operative 7–3–95 (Register 95, No. 22).
3. Amendment of subsection (b) and new subsection (e) filed 9–21–98; operative 9–21–98 pursuant to Government Code section 11343.4(d) (Register 98, No.

39).

4. Amendment of section and NOTE filed 8–3–2000; operative 9–2–2000 (Register 2000, No. 31).
5. Amendment of subsection (f) filed 8–20–2001; operative 8–20–2001 pursuant to Government Code section 11343.4 (Register 2001, No. 34).
6. Amendment filed 12–24–2002; operative 12–24–2002 pursuant to Government Code section 11343.4 (Register 2002, No. 52).
7. Amendment of subsection (b)(3)(B)4. filed 5–1–2003; operative 5–1–2003 pursuant to Government Code section 11343.4 (Register 2003, No. 18).

§ 2262. The California Reformulated Gasoline Phase 2 and Phase 3 Standards.

The CaRFG Phase 2 and CaRFG Phase 3 standards are set forth in the following table. For all properties but Reid vapor pressure (cap limit only) and oxygen content, the value of the regulated property must be less than or equal to the specified limit. With respect to the Reid vapor pressure cap limit and the oxygen content flat and cap limit, the limits are expressed as a range, and the Reid vapor pressure and oxygen content must be less than or equal to the upper limit, and more than or equal to the lower limit. A qualifying small refiner may comply with the small refiner CaRFG Phase 3 standards, in place of the CaRFG Phase 3 standards in this section, in accordance with section 2272.

The California Reformulated Gasoline Phase 2 and Phase 3 Standards

Property	Flat Limits		Averaging Limits		Cap Limits	
	CaRFG Phase 2	CaRFG Phase 3	CaRFG Phase 2	CaRFG Phase 3	CaRFG Phase 2	CaRFG Phase 3
Reid Vapor Pressure ¹ (pounds per square inch)	7.00	7.00 or 6.90 ²	Not Applicable	Not Applicable	7.00 ³	6.40–7.20
Sulfur Content (parts per million by weight)	40	20	30	15	80	60 ⁴ 30 ⁴
Benzene Content (percent by volume)	1.00	0.80	0.80	0.70	1.20	1.10
Aromatics Content (percent by volume)	25.0	25.0	22.0	22.0	30.0 ³	35.0
Olefins Content (percent by volume)	6.0	6.0	4.0	4.0	10.0	10.0
T50 (degrees Fahrenheit)	210	213	200	203	220	220
T90 (degrees Fahrenheit)	300	305	290 ⁵	295	330	330
Oxygen Content (percent by weight)	1.8 – 2.2	1.8 – 2.2	Not Applicable	Not Applicable	1.8 ⁶ – 3.5 0 ⁶ – 3.5	1.8 ⁶ –3.5 ⁷ 0 ⁶ – 3.5 ⁷
Methyl tertiary-butyl ether (MTBE) and oxygenates other than ethanol	Not Applicable	Prohibited as provided in § 2262.6	Not Applicable	Not Applicable	Not Applicable	Prohibited as provided in § 2262.6

¹ The Reid vapor pressure (RVP) standards apply only during the warmer weather months identified in section 2262.4.

² The 6.90 pounds per square inch (psi) flat limit applies only when a producer or importer is using the evaporative emissions model element of the CaRFG Phase 3 Predictive Model, in which case all predictions for evaporative emissions increases or decreases made using the evaporative emissions model are made relative to 6.90 psi and the gasoline may not exceed the maximum RVP cap limit of 7.20 psi. Where the evaporative emissions model element of the CaRFG Phase 3 Predictive Model is not used, the RVP of gasoline sold or supplied from the production or import facility may not exceed 7.00 psi.

³ For sales, supplies, or offers of California gasoline downstream of the production or import facility starting on the date on which early compliance with the CaRFG Phase 3 standards is permitted by the executive officer under section 2261(b)(3), the CaRFG Phase 2 cap limits for Reid vapor pressure and aromatics content shall be 7.20 psi and 35.0 percent by volume respectively.

⁴ The CaRFG Phase 3 sulfur content cap limits of 60 and 30 parts per million are phased in starting December 31, 2003, and December 31, 2005, respectively, in accordance with section 2261(b)(1)(A).

⁵ Designated alternative limit may not exceed 310.

⁶ The 1.8 percent by weight minimum oxygen content cap only applies during specified winter months in the areas identified in section 2262.5(a).

⁷ If the gasoline contains more than 3.5 percent by weight oxygen from ethanol but no more than 10.0 volume percent ethanol, the maximum oxygen content cap is 3.7 percent by weight.

Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39010, 39500, 39515, 39516, 41511, 43000, 43013, 43013.1, 43016, 43018, 43101, 43830 and 43830.8, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 8–3–2000; operative 9–2–2000 (Register 2000, No. 31). For prior history see Register 92, No. 4.
2. Amendment of table footnotes filed 12–24–2002; operative 12–24–2002 pursuant to Government Code section 11343.4 (Register 2002, No. 52).
3. Amendments to Table (footnotes 2 and 7) filed 3–10–2005; operative 4–9–2005 (Register 2005, No. 10).
4. Amendment of table footnotes 1 and 2 filed 9–9–2005 as an emergency; operative 9–9–2005 (Register 2005, No. 37). A Certificate of Compliance must be transmitted to OAL by 1–10–2006 or emergency language will be repealed by operation of law on the following day.
5. Reinstatement of section as it existed prior to 9–9–2005 emergency amendment pursuant to Government Code section 11346.1(f) (Register 2006, No. 35). The repealed emergency language affecting footnote 1 of the Standards Table identified CarFG Phase 3 flat and cap maximum RVP limits of 9.00 psi during the 2005 Hurricane Katrina RVP relaxation period identified in section 2262.4.
6. Editorial amendment of HISTORY 5 (Register 2006, No. 42).

§ 2262.1. Standards for Reid Vapor Pressure.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39010, 39500, 39515, 39516, 41511, 43000, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 11–16–92; operative 12–16–92 (Register 92, No. 47).
2. Amendment of subsection (b)(2)(A) filed 2–28–96; operative 2–28–96 pursuant to Government Code section 11343.4(d) (Register 96, No. 9).
3. Amendment of subsections (a)(2)(A)–(E) and (b)(2)(A)–(C) and new subsection (c)(4) filed 9–21–98; operative 9–21–98 pursuant to Government Code section 11343.4(d) (Register 98, No. 39).
4. Renumbering of former section 2262.1 to section 2262.4 filed 8–3–2000; operative 9–2–2000 (Register 2000, No. 31).

§ 2262.2. Standards for Sulfur Content.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39010, 39500, 39515, 39516, 41511, 43000, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 11–16–92; operative 12–16–92 (Register 92, No. 47).
2. Amendment of subsections (b)–(c) and repealer of subsection (d) filed 6–2–95; operative 7–3–95 (Register 95, No. 22).
3. Amendment filed 9–21–98; operative 9–21–98 pursuant to Government Code section 11343.4(d) (Register 98, No. 39).
4. Repealer filed 8–3–2000; operative 9–2–2000 (Register 2000, No. 31).

§ 2262.3. Compliance With the CarFG Phase 2 and CarFG Phase 3 Standards for Sulfur, Benzene, Aromatic Hydrocarbons, Olefins, T50 and T90.

(a) Compliance with cap limits. No person shall sell, offer for sale, supply, offer for supply, or transport California gasoline which exceeds an applicable cap limit for sulfur, benzene, aromatic hydrocarbons, olefins, T50 or T90 set forth in section 2262.

(b) Compliance by producers and importers with the flat limits. No producer or importer shall sell, offer for sale, supply, or offer for supply from its production facility or import facility California gasoline which exceeds an applicable flat limit for the properties of sulfur, benzene, aromatic hydrocarbons, olefins, T50, or T90 set forth in section 2262, unless the gasoline (1) is subject to the averaging compliance option for the property in accordance with section 2264.2(a), (2) has been reported as a PM alternative gasoline formulation pursuant to section 2265(a), or (3) has been reported as a test-certified alternative gasoline formulation pursuant to section 2266(c).

(c) Optional compliance by producers and importers with the averaging limits. No producer or importer shall sell, offer for sale, supply, or offer for supply from its production facility or import facility California gasoline which is subject to the averaging compliance option for the properties of sulfur, benzene, aromatic hydrocarbons, olefins, T50 or T90 in accordance with section 2264.2(a) if any of the following occurs:

(1) The gasoline exceeds the applicable averaging limit for the property set forth in section 2262 and no designated alternative limit for the property has been established for the gasoline in accordance with the requirements of section 2264(a); or

(2) A designated alternative limit for the property has been established for the gasoline in accordance with the requirements of section 2264(a), and the gasoline exceeds the designated alternative limit for that property; or

(3) Where the designated alternative limit exceeds the averaging limit for the property, the exceedance is not fully offset in accordance with section 2264(c).

NOTE: Authority cited: Sections 39600, 39601, 43013, 43013.1, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39010, 39500, 39515, 39516, 41511, 43000, 43013, 43013.1, 43016, 43018, 43101 and 43830.8, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 11–16–92; operative 12–16–92 (Register 92, No. 47).
2. Amendment of subsections (b)–(c) and repealer of subsection (d) filed 6–2–95; operative 7–3–95 (Register 95, No. 22).
3. Amendment filed 9–21–98; operative 9–21–98 pursuant to Government Code section 11343.4(d) (Register 98, No. 39).
4. Repealer and new section filed 8–3–2000; operative 9–2–2000 (Register 2000, No. 31).
5. Amendment of section heading and subsection (b) filed 8–20–2001; operative 8–20–2001 pursuant to Government Code section 11343.4 (Register 2001, No. 34).

§ 2262.4. Compliance With the CarFG Phase 2 and CarFG Phase 3 Standards for Reid Vapor Pressure.

(a) *Compliance with the cap limits for Reid vapor pressure.*

(1) No person shall sell, offer for sale, supply, offer for supply, or transport California gasoline which exceeds the applicable cap limit for Reid vapor pressure within each of the air basins during the regulatory period set forth in section (a)(2).

(2) *Regulatory Control Periods.*

(A) *April 1 through October 31 (May 1 through October 31 in 2003 and 2004):*

South Coast Air Basin and Ventura County
San Diego Air Basin
Mojave Desert Air Basin
Salton Sea Air Basin

(B) *May 1 through September 30:*

Great Basin Valley Air Basin

(C) *May 1 through October 31:*

San Francisco Bay Area Air Basin
San Joaquin Valley Air Basin
Sacramento Valley Air Basin
Mountain Counties Air Basin

Lake Tahoe Air Basin

(D) *June 1 through September 30:*

North Coast Air Basin

Lake County Air Basin

Northeast Plateau Air Basin

(E) *June 1 through October 31:*

North Central Coast Air Basin

South Central Coast Air Basin (Excluding Ventura County)

(b) *Compliance by producers and importers with the flat limit for Reid vapor pressure.*

(1) *Reid vapor pressure standard for producers and importers.*

(A) In an air basin during the regulatory control periods specified in section (b)(2), no producer or importer shall sell, offer for sale, supply,

or offer for supply from its production facility or import facility California gasoline which has a Reid vapor pressure exceeding the applicable flat limit set forth in section 2262 unless the gasoline has been reported as a PM alternative gasoline formulation pursuant to section 2265(a) using the evaporative emissions model element of the CaRFG Phase 3 Predictive Model.

(B) In an air basin during the regulatory control periods specified in section (b)(2), no producer or importer shall sell, offer for sale, supply, or offer for supply from its production facility or import facility California gasoline which has been reported as a PM alternative gasoline formulation pursuant to section 2265(a) using the evaporative emissions model element of the CaRFG Phase 3 Predictive Model if the gasoline has a Reid vapor pressure exceeding the PM flat limit for Reid vapor pressure in the identified PM alternative specifications.

(2) *Regulatory control periods for production and import facilities.*

(A) 1. *March 1 through October 31 (Except as otherwise provided in (A)2. and (A)3. below):*

South Coast Air Basin and Ventura County
San Diego Air Basin
Mojave Desert Air Basin
Salton Sea Air Basin

2. In the areas identified in section 2262.4(b)(2)(A)1., California gasoline that is supplied March 1 through March 31, 2003 from a production or import facility that is qualified under this subsection is not subject to the prohibitions of section 2262.4(b)(1), as long as the gasoline either is designated as subject to the CaRFG Phase 3 standards, or is subject to the CaRFG Phase 2 standards and also meets the prohibitions in sections 2262.6(a)(1) and 2262.6(c) regarding the use of oxygenates. In order for a production or import facility to be qualified, the producer or importer must notify the Executive Officer in writing by February 14, 2003 that it has elected to have the facility be subject to this subsection during March 2003.

3. In the areas identified in section 2262.4(b)(2)(A)1., California gasoline that is supplied March 1 through March 31, 2004 from a production or import facility that was not qualified under section 2262.4(b)(2)(A)2. is not subject to the prohibitions of section 2262.4(b)(1).

(B) *April 1 through September 30:*

Great Basin Valley Air Basin

(C) *April 1 through October 31:*

San Francisco Bay Area Air Basin

San Joaquin Valley Air Basin

Sacramento Valley Air Basin

Mountain Counties Air Basin

Lake Tahoe Air Basin

(D) *May 1 through September 30:*

North Coast Air Basin

Lake County Air Basin

Northeast Plateau Air Basin

(E) *May 1 through October 31:*

North Central Coast Air Basin

South Central Coast Air Basin (Excluding Ventura County)

(c) *Applicability.*

(1) Section (a)(1) shall not apply to a transaction occurring in an air basin during a regulatory control period in section (a)(2) where the person selling, supplying, or offering the gasoline demonstrates as an affirmative defense that, prior to the transaction, he or she has taken reasonably prudent precautions to assure that the gasoline will be delivered to a retail service station or bulk purchaser-consumer's fueling facility when the station or facility is not subject to a regulatory control period in section (a)(2).

(2) Section (b) shall not apply to a transaction occurring in an air basin during the applicable regulatory control period for producers and importers where the person selling, supplying, offering or transporting the gasoline demonstrates as an affirmative defense that, prior to the transaction, he or she has taken reasonably prudent precautions to assure that the gas-

oline will be delivered to a retail service station or bulk purchaser-consumer's fueling facility located in an air basin not then subject to the regulatory control period for producers and importers set forth in section (b)(2).

(3) Section (a)(1) shall not apply to a transaction occurring in an air basin during the regulatory control period where the transaction involves the transfer of gasoline from a stationary storage tank to a motor vehicle fuel tank and the person selling, supplying, or offering the gasoline demonstrates as an affirmative defense that the last delivery of gasoline to the stationary storage tank occurred more than fourteen days before the start of the regulatory control period.

(4) Gasoline that is produced in California, and is then transported to the South Coast Air Basin, Ventura County, or the San Diego Air Basin by marine vessel shall be subject to the regulatory control periods for production and import facilities identified in section 2262.4(b)(2)(A).

NOTE: Authority cited: Sections 39600, 39601, 43013, 43013.1, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39010, 39500, 39515, 39516, 41511, 43000, 43013, 43013.1, 43016, 43018, 43101, 43830 and 43830.8, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 11-16-92; operative 12-16-92 (Register 92, No. 47).
2. Amendment of subsections (b)-(c) and repealer of subsection (d) filed 6-2-95; operative 7-3-95 (Register 95, No. 22).
3. Amendment filed 9-21-98; operative 9-21-98 pursuant to Government Code section 11343.4(d) (Register 98, No. 39).
4. Repealer of section and renumbering of former section 2262.1 to section 2262.4, including amendment of section heading, section and NOTE, filed 8-3-2000; operative 9-2-2000 (Register 2000, No. 31).
5. Amendment filed 12-24-2002; operative 12-24-2002 pursuant to Government Code section 11343.4 (Register 2002, No. 52).
6. Amendment of subsections (b)(1) and (c)(4) filed 3-10-2005; operative 4-9-2005 (Register 2005, No. 10).
7. New subsections (a)(2)(F) and (b)(2)(F) filed 9-9-2005 as an emergency; operative 9-9-2005 (Register 2005, No. 37). A Certificate of Compliance must be transmitted to OAL by 1-10-2006 or emergency language will be repealed by operation of law on the following day.
8. Reinstatement of section as it existed prior to 9-9-2005 emergency amendment pursuant to Government Code section 11346.1(f) (Register 2006, No. 35). The repealed emergency language affecting subsections (a)(2)(F) and (b)(2)(F) identified a Hurricane Katrina RVP relaxation period from 9-12-2005 through the end of the 2005 RVP season, during which a less stringent RVP standard of 9.00 psi applied pursuant to section 2262.
9. Editorial amendment of HISTORY 8 (Register 2006, No. 42).

§ 2262.5. Compliance With the Standards for Oxygen Content.

(a) *Compliance with the minimum oxygen content cap limit standard in specified areas in the wintertime.*

(1) Within the areas and periods set forth in section (a)(2), no person shall sell, offer for sale, supply, offer for supply, or transport California gasoline unless it has an oxygen content of not less than the minimum oxygen content cap limit in section 2262.

(2)(A) November 1 through February 29:

South Coast Area

Imperial County

(B) October 1 through October 31, (1996 through 2002 only):

South Coast Area

(b) *Compliance with the maximum oxygen content cap limit standard.*

No person shall sell, offer for sale, supply, or transport California gasoline which has an oxygen content exceeding the maximum oxygen content cap limit in section 2262, or which has an ethanol content exceeding 10.0 percent by volume.

(c) *Compliance by producers and importers with the flat limits for oxygen content.* No producer or importer shall sell, offer for sale, supply, or offer for supply from its production or import facility California gasoline which has an oxygen content less than flat limit for minimum oxygen content, or more than flat limit for maximum oxygen content, unless the gasoline has been reported as a PM alternative gasoline formulation pur-

suant to section 2265(a) or as an alternative gasoline formulation pursuant to section 2266(c), and complies with the standards contained in sections (a) and (b).

(d) *Restrictions on adding oxygenates to California gasoline after it has been supplied from the production or import facility.*

(1) *Basic Restriction.* No person may add oxygenates to California gasoline after it has been supplied from the production or import facility at which it was produced or imported, except where the person adding the oxygenates demonstrates that: [i] the gasoline to which the oxygenates are added has been reported as a PM alternative gasoline formulation pursuant to section 2265(a), or as an alternative gasoline formulation pursuant to section 2266(c), and has not been commingled with other gasoline, and [ii] both before and after the person adds the oxygenate to the gasoline, the gasoline has an oxygen content within the oxygen content specifications of the applicable PM alternative gasoline formulation or alternative gasoline formulation. Nothing in this section (d) prohibits adding oxygenates to CARBOB.

(2) *Bringing gasoline into compliance with the minimum oxygen content cap limit.* Notwithstanding section (d)(1), a person may add an oxygenate that is not prohibited under section 2262.6 to California gasoline that does not comply with an applicable minimum oxygen content cap limit under sections 2262 and 2262.5(a), where the person obtains the prior approval of the executive officer based on a demonstration that adding the oxygenate is necessary to bring the gasoline into compliance with the minimum oxygen content cap limit.

(e) *Application of prohibitions.*

(1) Section (a) shall not apply to a transaction occurring in the areas and periods shown in (a)(2) where the person selling, supplying, or offering the gasoline demonstrates as an affirmative defense that, prior to the transaction, he or she has taken reasonably prudent precautions to assure that the gasoline will not be delivered to a retail service station or bulk purchaser-consumer's fueling facility in the areas and periods shown in (a)(2).

(2)(A) Section (a) shall not apply to a transaction occurring in the South Coast Area in October 2000, 2001, 2002, or 2003, where the transaction involves the transfer of gasoline from a stationary storage tank to a motor vehicle fuel tank and the person selling, supplying, or offering the gasoline demonstrates as an affirmative defense that the last delivery of gasoline to the stationary storage tank occurred no later than September 16 of that year.

(B) Section (a) shall not apply to a transaction occurring in November either in Imperial County or, starting in 2004, in the South Coast Area, where the transaction involves the transfer of gasoline from a stationary storage tank to a motor vehicle fuel tank and the person selling, supplying, or offering the gasoline demonstrates as an affirmative defense that the last delivery of gasoline to the stationary storage tank occurred no later than October 17 of that year.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43013.1, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39010, 39500, 39515, 39516, 41511, 43000, 43013, 43013.1, 43016, 43018, 43101 and 43830.8, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 11-16-92; operative 12-16-92 (Register 92, No. 47).
2. Amendment of subsection (c) filed 6-2-95; operative 7-3-95 (Register 95, No. 22).
3. Amendment of subsections (a)(2)(C) and (d), repealer of subsection (e)(1) and subsection relettering filed 2-28-96; operative 2-28-96 pursuant to Government Code section 11343.4(d) (Register 96, No. 9).
4. Editorial correction of subsection (a)(2)(B) (Register 97, No. 10).
5. Amendment of subsections (a)-(a)(2)(C) and (e)(1), and new subsection (e)(2) filed 9-21-98; operative 9-21-98 pursuant to Government Code section 11343.4(d) (Register 98, No. 39).
6. Amendment of subsection (b) filed 3-31-99; operative 3-31-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 14).
7. Amendment of subsections (a)(2)(A)-(B), new subsection (a)(2)(C) and subsection relettering filed 9-8-99; operative 9-8-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 37).

8. Amendment of section heading, section and NOTE filed 8-3-2000; operative 9-2-2000 (Register 2000, No. 31).
9. Amendment of subsections (a)(2)(A)-(B), repealer of subsections (a)(2)(C)-(D), new subsection (e)(2)(A) and redesignation and amendment of former subsection (e)(2) as new subsection (e)(2)(B) filed 8-20-2001; operative 8-20-2001 pursuant to Government Code section 11343.4 (Register 2001, No. 34).
10. Amendment filed 12-24-2002; operative 12-24-2002 pursuant to Government Code section 11343.4 (Register 2002, No. 52).
11. Amendment of subsection (b) filed 3-10-2005; operative 4-9-2005 (Register 2005, No. 10).

§ 2262.6. Prohibition of MTBE and Oxygenates Other Than Ethanol in California Gasoline Starting December 31, 2003.

(a) *Basic MTBE prohibitions.*

(1) Starting December 31, 2003, no person shall sell, offer for sale, supply or offer for supply California gasoline which has been produced at a California production facility in part by either (i) adding at the California production facility any methyl tertiary-butyl ether (MTBE) in neat form to the California gasoline or to a blending component used in the gasoline; or (ii) using a blending component that contained greater than 0.60 volume percent MTBE when it was supplied to the California production facility.

(2) No person shall sell, offer for sale, supply or offer for supply California gasoline which contains MTBE in concentrations greater than: 0.60 volume percent starting December 31, 2003, 0.30 volume percent starting July 1, 2004, 0.15 volume percent starting December 31, 2005, and 0.05 volume percent starting July 1, 2007.

(b) *Phase-in of MTBE prohibitions.*

(1) *Phase-in of MTBE prohibitions starting December 31, 2003, and 2005.* In the first year in which a prohibition applies under section 2262.6(a) starting on December 31, the prohibition shall be phased in as follows:

(A) Starting December 31, for all sales, supplies, or offers of California gasoline by a producer or importer from its production facility or import facility.

(B) Starting the following February 14, for all other sales, supplies, offers or movements of California gasoline except for transactions directly involving:

1. the fueling of motor vehicles at a retail outlet or bulk purchaser-consumer facility, or
2. the delivery of gasoline from a bulk plant to a retail outlet or bulk purchaser-consumer facility.

(C) Starting the following March 31, for all remaining sales, supplies, offers or movements of California gasoline, including transactions directly involving the fueling of motor vehicles at a retail outlet or bulk purchaser-consumer facility.

(2) *Phase-in of MTBE prohibitions starting July 1, 2004 and 2007.* In the first year in which a prohibition applies under section 2262.6(a) starting on July 1, the prohibition shall be phased in as follows

(A) Starting July 1, for all sales, supplies, or offers of California gasoline by a producer or importer from its production facility or import facility.

(B) Starting the following August 15, for all other sales, supplies, offers or movements of California gasoline except for transactions directly involving:

1. the fueling of motor vehicles at a retail outlet or bulk purchaser-consumer facility, or
2. the delivery of gasoline from a bulk plant to a retail outlet or bulk purchaser-consumer facility.

(C) Starting the following October 1, for all remaining sales, supplies, offers or movements of California gasoline, including transactions directly involving the fueling of motor vehicles at a retail outlet or bulk purchaser-consumer facility.

(3) *Phase-in for low-throughput fueling facilities.* The prohibitions in section (a) starting respectively on December 31, 2003, July 1, 2004, December 31, 2005, and July 1, 2007, shall not apply to transactions directly

involving the fueling of motor vehicles at a retail outlet or bulk purchaser–consumer facility, where the person selling, offering, or supplying the gasoline demonstrates as an affirmative defense that the exceedance of the standard was caused by gasoline delivered to the retail outlet or bulk purchaser–consumer facility prior to the date on which the delivery became subject to the prohibition pursuant to the phase–in provisions in section (b).

(c) *Use of oxygenates other than ethanol or MTBE in California gasoline on or after December 31, 2003.*

(1) Starting December 31, 2003, no person shall sell, offer for sale,

supply or offer for supply California gasoline which has been produced at a California production facility with the use of any oxygenate other than ethanol or MTBE unless a multimedia evaluation of use of the oxygenate in California gasoline has been conducted and the California Environmental Policy Council established by Public Resources Code section 71017 has determined that such use will not cause a significant adverse impact on the public health or the environment.

(2) Starting December 31, 2003, no person shall sell, offer for sale, supply or offer for supply California gasoline which contains a total of

[The next page is 259.]

more than 0.10 weight percent oxygen collectively from all of the oxygenates identified in section (c)(4), other than oxygenates not prohibited by section (c)(1).

(3) Starting July 1, 2004, no person shall sell, offer for sale, supply or offer for supply California gasoline which contains a total of more than 0.06 weight percent oxygen collectively from all of the oxygenates identified in section (c)(4), other than oxygenates not prohibited by section (c)(1).

(4) *Covered oxygenates.* Oxygen from the following oxygenates is covered by the prohibitions in section 2262.6(c)(1), (2) and (3):

Methanol

Isopropanol

n-Propanol

n-Butanol

iso-Butanol

sec-Butanol

tert-Butanol

Tert-pentanol (*tert*-amylalcohol)

Ethyl *tert*-butylether (ETBE)

Diisopropylether (DIPE)

Tert-amylmethylether (TAME)

(5) The prohibitions in section 2262.6(c)(1) and (2), and in section 2262.6(c)(3), shall be phased in respectively as follows:

(A) Starting December 31, 2003 and July 1, 2004 respectively for all sales, supplies, or offers of California gasoline by a producer or importer from its production facility or import facility.

(B) Starting February 14, 2004 and August 15, 2004 respectively for all other sales, supplies, offers or movements of California gasoline except for transactions directly involving:

1. the fueling of motor vehicles at a retail outlet or bulk purchaser-consumer facility, or

2. the delivery of gasoline from a bulk plant to a retail outlet or bulk purchaser-consumer facility.

(C) Starting March 31, 2004 and September 30, 2004 respectively for all remaining sales, supplies, offers or movements of California gasoline, including transactions directly involving the fueling of motor vehicles at a retail outlet or bulk purchaser-consumer facility.

(6) *Phase-in for low-throughput fueling facilities.* The prohibitions in section 2262.6(c)(1) and (2), and in section 2262.6(c)(3), starting respectively on December 31, 2003 and July 1, 2004, shall not apply to transactions directly involving the fueling of motor vehicles at a retail outlet or bulk purchaser-consumer facility, where the person selling, offering, or supplying the gasoline demonstrates as an affirmative defense that the exceedance of the standard was caused by gasoline delivered to the retail outlet or bulk purchaser-consumer facility prior to the date on which the delivery became subject to the prohibition pursuant to the phase-in provisions in section 2262.6(c)(5).

NOTE: Authority cited: Sections 39600, 39601, 43013, 43013.1, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39010, 39500, 39515, 39516, 41511, 43000, 43013, 43013.1, 43016, 43018, 43101 and 43830.8, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975).

HISTORY

1. New section filed 11-16-92; operative 12-16-92 (Register 92, No. 47).
2. Amendment filed 6-2-95; operative 7-3-95 (Register 95, No. 22).
3. Amendment filed 9-21-98; operative 9-21-98 pursuant to Government Code section 11343.4(d) (Register 98, No. 39).
4. Repealer and new section filed 8-3-2000; operative 9-2-2000 (Register 2000, No. 31).
5. Amendment of section heading and section filed 12-24-2002; operative 12-24-2002 pursuant to Government Code section 11343.4 (Register 2002, No. 52).
6. Amendment filed 5-1-2003; operative 5-1-2003 pursuant to Government Code section 11343.4 (Register 2003, No. 18).
7. Amendment of subsections (c)(2)-(3) filed 3-10-2005; operative 4-9-2005 (Register 2005, No. 10).

§ 2262.7. Standards for Aromatic Hydrocarbon Content.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39010, 39500, 39515, 39516, 41511, 43000, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 11-16-92; operative 12-16-92 (Register 92, No. 47).
2. Amendment filed 6-2-95; operative 7-3-95 (Register 95, No. 22).
3. Amendment filed 9-21-98; operative 9-21-98 pursuant to Government Code section 11343.4(d) (Register 98, No. 39).
4. Repealer filed 8-3-2000; operative 9-2-2000 (Register 2000, No. 31).

§ 2262.9. Requirements Regarding Denatured Ethanol Intended For Use as a Blend Component in California Gasoline.

(a) Standards.

(1) *Standards for denatured ethanol.* Starting December 31, 2003, no person shall sell, offer for sale, supply or offer for supply denatured ethanol intended for blending with CARBOB or California gasoline that fails to comply with any of the following standards:

(A) *Standards for properties regulated by the CaRFG Phase 3 standards.*

1. A sulfur content not exceeding 10 parts per million;
2. A benzene content not exceeding 0.06 percent by volume; and
3. An olefins content not exceeding 0.5 percent by volume; and
4. An aromatic hydrocarbon content not exceeding 1.7 percent by volume.

(B) *Standards based on ASTM D 4806-99.* All test methods and standards identified in the title and the table below are incorporated herein by reference.

Specification	Value	Test method
Ethanol, vol.%, min.	92.1	ASTM D 5501-94(1998)E1
Methanol, vol.%, max.	0.5	
Solvent-washed gum, mg/100 ml, max.	5.0	ASTM D 381-00, air jet apparatus
Water content, vol.%, max.	1	ASTM E 203-96 or E 1064-00
Denaturant content, vol.%, min.	1.96	
vol.%, max.	4.76	
The only denaturants shall be natural gasoline, gasoline components, or unleaded gasoline.		
Inorganic Chloride content, mass ppm (mg/l), max.	40 (32)	Modification of ASTM D512-89(1999), Procedure C ¹
Copper content, mg/kg, max.	0.1	Modification of ASTM D1688-95, Test Method A ²
Acidity (as acetic acid), mass % (mg/l), max.	0.007 (56)	ASTM D 1613-96 (1999)
pHe	6.5 - 9.0	ASTM D 6423-99
Appearance	Visibly free of suspended or precipitated contaminants (clean and bright)	Determined at indoor ambient temperature unless otherwise agreed upon between the supplier and purchaser

Note 1: The modification of ASTM D 512-89(1999), Procedure C consists of using 5 ml of sample diluted with 20 ml of water in place of the 25 ml sample specified in the standard procedure. The water shall meet ASTM D 1193-99, Type II. The volume of the sample prepared by this modification will be slightly larger than 25 ml. To allow for the dilution factor, report the chloride ion present in the fuel ethanol sample as the chloride ion present in the diluted sample multiplied by five.

Note 2: The modification of ASTM D 1688-95, Test Method A (atomic absorption) consists of mixing reagent grade ethanol (which may be denatured according to the U.S. Bureau of Alcohol, Tobacco, and Firearms (BATF) of the U.S. Treas-

sure Department Formula 3A or 30, as set forth in 27 CFR sections 21.35 and 21.57, as in effect April 1, 2001) in place of water as the solvent or diluent for the preparation of reagents and standard solutions. However, this must not be done to prepare the stock copper solution described in 11.1 of ASTM D 1688-95. Because a violent reaction may occur between the acid and the ethanol, use water, as specified, in the acid solution part of the procedure to prepare the stock copper solution. Use ethanol for the rinse and dilution only.

(2) *Exemption.*

(A) *Inapplicability of basic standards.* The standards in section (a)(1)(A) do not apply to a quantity of denatured ethanol sold, offered for sale, supplied, or offered for supply by a person who demonstrates as an affirmative defense that:

1. The person has complied with section (c)(1)(B); and
2. He or she has taken reasonably prudent precautions to assure that the denatured ethanol will only be added to CARBOB which has been designed to be lawfully oxygenated with denatured ethanol having the properties identified in the document provided pursuant to section (c)(1)(B).

(B) *Substitute standards.* Starting December 31, 2003, no person shall sell, offer for sale, supply or offer for supply denatured ethanol that is intended for blending with CARBOB or California gasoline and is exempt pursuant to section (a)(2)(A), if the denatured ethanol fails to comply with any of the properties identified in the document provided pursuant to section (c)(1)(B).

(3) *Standards for products represented as appropriate for use as a denaturant in ethanol.*

(A) Except as otherwise provided in section (a)(3)(B), starting December 31, 2003, no person shall sell, offer for sale, supply or offer for supply a product represented as appropriate for use as a denaturant in ethanol intended for blending with CARBOB or California gasoline, if the denaturant has:

1. A benzene content exceeding 1.10 percent by volume; or
2. An olefins content exceeding 10.0 percent by volume; or
3. An aromatic hydrocarbon content exceeding 35.0 percent by volume.

(B) A person may sell, offer for sale, supply or offer for supply a product that is represented as only suitable for use as an ethanol denaturant in ethanol intended for blending with CARBOB or California gasoline if the denatured ethanol contains no more than a specified percentage of the denaturant that is less than 4.76 percent. In this case, the product must be prominently labeled as only lawful for use as a denaturant where the denatured ethanol contains no more than the specified percentage of the denaturant, and the seller, supplier or offeror must take reasonably prudent precautions to assure that the denaturant will not be used in concentrations greater than the specified percentage in ethanol intended for blending with CARBOB or California gasoline. If these conditions are met, the standards in section (a)(3)(A) for the denaturant will be adjusted by multiplying the stated values by $(4.76 \div \text{max.}\%)$, where "max.%" is the maximum percentage of denaturant specified for the denatured ethanol.

(b) *Test Methods.*

(1) In determining compliance with the denatured ethanol standards in section (a)(1)(A):

(A) The sulfur content of denatured ethanol shall be determined by ASTM D 5453-93, which is incorporated herein by reference.

(B) The aromatic hydrocarbon, benzene and olefins content of denatured ethanol shall be determined by sampling the denaturant and using the methods specified in section 2263 to determine the content of those compounds in the denaturant. The result will then be multiplied by 0.0476, except that where it is demonstrated that the denatured ethanol contains less than 4.76 percent denaturant, the result will be multiplied by the decimal fraction representing the percent denaturant.

(2) In determining compliance with the denaturant standards in section (a)(3), the aromatic hydrocarbon, benzene and olefins content of the de-

naturant shall be determined by the methods specified in section 2263 for determining the content of those compounds in gasoline.

(c) *Documentation required for the transfer of denatured ethanol intended for use as a blend component in California gasoline.*

(1)(A) Starting December 31, 2003, and except as provided in section (c)(1)(B), on each occasion that any person transfers custody or title of denatured ethanol intended for use as a blend component in California gasoline, the transferor shall provide the transferee a document that prominently states that the denatured ethanol complies with the standards for denatured ethanol intended for use as a blend component in California gasoline.

(B) Starting December 31, 2003, on each occasion that any person transfers custody or title of denatured ethanol that is intended to be added to CARBOB designated for blending with denatured ethanol exceeding any of the standards in section (a)(1)(A), the transferor shall provide the transferee a document that prominently identifies the maximum sulfur, benzene, olefin and aromatic hydrocarbon content of the denatured ethanol, and states that the denatured ethanol may only be lawfully added to CARBOB that is designated for blending with denatured ethanol having such properties.

(2) Starting December 31, 2003, any person who sells or supplies denatured ethanol intended for use as a blend component in California gasoline from the California facility at which it was imported or produced shall provide the purchaser or recipient a document that identifies:

(A) The name and address of the person selling or supplying the denatured ethanol, and identification of the person as the producer or importer of the denatured ethanol; and

(B) With respect to imported denatured ethanol, the name, location and operator of the facility(ies) at which the ethanol was produced and at which the denaturant was added to the ethanol. As an alternative, the document provided to the purchaser or recipient may identify the date and time the ethanol was supplied from its import or production facility, and state that the person selling or supplying the denatured ethanol from the California facility at which it was imported or produced maintains at the facility a list of the name, location, and operator of all of the facility(ies) at which the ethanol was produced and at which the denaturant was added to the ethanol. In this case, the person shall for at least two years maintain such information, and records identifying the entities that produced the ethanol and added the denaturant in each batch of denatured ethanol imported to the facility; during that two year period, the person shall make the information and records, available to the Executive Officer within five days after a request for the material.

Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975).

HISTORY

1. New section filed 8-20-2001; operative 8-20-2001 pursuant to Government Code section 11343.4 (Register 2001, No. 34).
2. Amendment filed 12-24-2002; operative 12-24-2002 pursuant to Government Code section 11343.4 (Register 2002, No. 52).
3. Amendment of subsections (a)(1), (a)(1)(A)2.-3., (a)(3)(A)1.-3. and (c)(2)(A)-(B) filed 3-10-2005; operative 4-9-2005 (Register 2005, No. 10).

§ 2263. Sampling Procedures and Test Methods.

(a) *Sampling Procedures.* In determining compliance with the standards set forth in this subarticle 2, an applicable sampling methodology set forth in 13 C.C.R. section 2296 shall be used.

(b) *Test Methods.*

(1) In determining compliance with the gasoline standards set forth in this subarticle 2, including those in the sections identified in Table 1, the test methods presented in Table 1 shall be used. All identified test methods are incorporated herein by reference.

Table 1

Section	Gasoline Specification	Test Method ^a
2262	Reid Vapor Pressure	ASTM D 323–58 ^b or 13 C.C.R. Section 2297
2262	Sulfur Content	ASTM D 2622–94 ^c , d or ASTM D 5453–93
2262	Benzene Content	ASTM D 5580–00 ^e
2262	Olefin Content	ASTM D 1319–95 ^f (Through December 31, 2001) ASTM D 6550–00 ^{g,h,i} (Starting January 1, 2002)
2262	Oxygen Content	ASTM D 4815–99
2262	T90 and T50	ASTM D 86–99 ^{a,e}
2262	Aromatic Hydrocarbon Content	ASTM D 5580–00 ^j
2262.5(b)	Ethanol Content	ASTM D 4815–99
2262.6	MTBE Content	ASTM D 4815–99
2262.6(c)	Oxygen from oxygenates identified in section 2262.6(c)(4)	ASTM D 4815–99

^a Do not report values below the limit of detection (LOD) specified in the test method. Where a test method does not specify a LOD, do not report values below the lower limit of the scope of the test method.

^b Delete paragraph 4(b) concerning sampling.

^c Make the following modifications to paragraph 9.1:

Low Level Sulfur Calibration Procedure

Reagents

Thiophene, at least 99% purity

2-Methylthiophene, at least 98% purity

Toluene, reagent grade

2,2,4-Trimethylpentane, reagent grade

Preparation of Stock Standard

Weigh standard materials thiophene (~0.7290 gm) and 2-methylthiophene (~0.7031 gm) separately into a tared volumetric flask and record the individual mass to 0.1 mg. Add "mixed solvent" containing 25% toluene and 75% iso-octane (by volume) into the flask to a net weight of approximately 50 gm and record the weight. This "Stock Standard" contains approximately 10 mg/gm sulfur. The actual sulfur concentration can be calculated as follows:

Sulfur from thiophene (gm) =

Weight of thiophene * 32.06% purity / 84.14

Sulfur from 2-methylthiophene (gm) =

Weight of 2-methylthiophene * 32.06% purity / 98.17

Sulfur concentration of Stock Standard (gm/gm) =

(sulfur from thiophene + sulfur from 2-methylthiophene) / net weight of the stock standard

Multiply the sulfur concentration by 1000 to convert the unit to mg/gm.

Preparation of Calibration Standards

Pipet 2.5 ml of the Stock Standard to 250 ml flask and dilute with the "mixed solvent" to the mark. The "Diluted Standard" contains approximately 100 mg/kg sulfur. Prepare 5, 10, 20, 30, 50, 75 ppm calibration standards by pipetting 5, 10, 20, 30, 50, 75 ml of the Diluted Standard into a 100 ml flask, respectively, and diluting with the "mixed solvent" to the mark. The actual concentration of the calibration standard should be determined from the stock standard. The standards with concentration ranging from 5 to 100 ppm and the "mixed solvent" are to be used for calibrating the instrument.

^d Replace ASTM D 2622–94 reproducibility values with the following:

Sulfur Content, ppm	Reproducibility
10 to 30	40.5% × Sulfur Content (ppm)
>30	19.2% × Sulfur Content (ppm)

^e The reproducibility of benzene is as follows:

Reproducibility = 0.1409 (X^{1.133}), where X = vol %

^f Add the following reproducibility statement for oxygenate-containing samples:

	Range	Reproducibility
Olefins	0.3 – 33	0.819(X) ^{0.6}

X = Volume %

^g Replace ASTM D6550–00 reproducibility equation with the following:

Reproducibility = 0.32 X^{0.5}

where X is between 0.3 and 25 mass % olefin

^h The conversion from mass % olefin to volume % olefin is defined as follows: volume % olefin = 0.857 * mass % olefin

ⁱ Replace the last sentence in ASTM D6550–00 section 1.1 with the following: The application range is from 0.3 to 25 mass % total olefins.

^j The reproducibility of total aromatic hydrocarbon is as follows:

Reproducibility = 1.4 volume %

(c) *Equivalent Test Methods*. Whenever this section provides for the use of a specified test method, another test method may be used following a determination by the executive officer that the other method produces results equivalent to the results with the specified method.

§ 2263.7. Multiple Notification Requirements.

Where a producer or importer is subject to multiple notification requirements pursuant to sections 2264(a)(2)(A), 2264.2(a)(2), 2264.2(b)(2), 2265(a)(2), 2266(c) or 2266.5(b), the producer shall combine the notifications to the extent practicable.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43013.1, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39010, 39500, 39515, 39516, 41511, 43000, 43013, 43013.1, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 2–28–96; operative 2–28–96 pursuant to Government Code section 11343.4(d) (Register 96, No. 9).
2. Amendment of NOTE filed 8–3–2000; operative 9–2–2000 (Register 2000, No. 31).

§ 2264. Designated Alternative Limits.

(a) Assignment of a designated alternative limit.

(1) A producer or importer that has elected to be subject to an averaging limit specified in section 2262 may assign a designated alternative limit to a final blend of California gasoline produced or imported by the producer or importer by satisfying the notification requirements in this section (a). In no case shall a designated alternative limit be less than the sulfur, benzene, olefin or aromatic hydrocarbon content, or T90 or T50, of the final blend shown by the sample and test conducted pursuant to

section 2270, or section 2266.5(a), as applicable. If a producer or importer intends to assign designated alternative limits for more than one gasoline specification to a given quantity of gasoline, the party shall identify the same final blend for all designated alternative limits for the gasoline.

(2)(A) The producer or importer shall notify the executive officer of the estimated volume (in gallons), the designated alternative limit, the blend identity, and the location of each final blend receiving a designated alternative limit. This notification shall be received by the executive officer before the start of physical transfer of the gasoline from the production or import facility, and in no case less than 12 hours before the producer or importer either completes physical transfer or commingles the final blend. A producer or importer may revise the reported estimated volume, as long as notification of the revised volume is received by the executive officer no later than 48 hours after completion of the physical transfer of the final blend from the production or import facility. If notification of the revised volume is not timely received by the executive officer, the reported estimated volume shall be deemed the reported actual volume.

(B) For each final blend receiving a designated alternative limit exceeding an applicable averaging limit in section 2262, the producer or importer shall notify the executive officer of the date and time of the start of physical transfer from the production or import facility, within 24 hours after the start of such physical transfer. For each final blend receiving a designated alternative limit less than an applicable averaging limit in section 2262, the producer or importer shall notify the executive officer of the date and time of the completion of physical transfer from the production or import facility, within 24 hours after the completion of such physical transfer.

(3) If, through no intentional or negligent conduct, a producer or importer cannot report within the time period specified in (a)(2) above, the producer or importer may notify the executive officer of the required data as soon as reasonably possible and may provide a written explanation of the cause of the delay in reporting. If, based on the written explanation and the surrounding circumstances, the executive officer determines that the conditions of this section (a)(3) have been met, timely notification shall be deemed to have occurred.

(4) The executive officer may enter into a written protocol with any individual producer or importer for the purposes of specifying how the requirements in section (a)(2) and (c) shall be applied to the producer's or importer's particular operations, as long as the executive officer reasonably determines that application of the regulatory requirements under the protocol is not less stringent or enforceable than application of the express terms of section (a)(2) and (c). Any such protocol shall include the producer's or importer's agreement to be bound by the terms of the protocol.

(5) Whenever the final blend of a producer or importer includes volumes of gasoline the party has produced or imported and volumes the party has neither produced nor imported, the producer's or importer's designated alternative limit shall be assigned and applied only to the volume of gasoline the party has produced or imported. In such a case, the producer or importer shall report to the executive officer in accordance with section (a) both the volume of gasoline produced and imported by the party, and the total volume of the final blend. The party shall also additionally report the sulfur content, benzene content, olefin content, aromatic hydrocarbon content, T90, and T50, as applicable, of the portion of the final blend neither produced nor imported by the party, determined as set forth in section 2270(b), or section 2266.5(a)(2), as applicable.

(b) Additional prohibitions regarding gasoline to which a designated alternative limit has been assigned.

(1) No producer or importer shall sell, offer for sale, or supply California gasoline in a final blend to which the producer or importer has assigned a designated alternative limit exceeding an applicable averaging limit in section 2262, where the total volume of the final blend sold, offered for sale, or supplied exceeds the volume reported to the executive officer pursuant to section (a).

(2) No producer or importer shall sell, offer for sale or supply California gasoline in a final blend to which the producer or importer has assigned a designated alternative limit less than an applicable averaging limit in section 2262, where the total volume of the final blend sold, offered for sale, or supplied is less than the volume reported to the executive officer pursuant to section (a).

(c) Offsetting exceedances of an applicable averaging limit.

(1) With respect to each property for which a producer or importer has elected to be subject to the averaging limit in section 2262, within 90 days before or after the start of physical transfer from a production or import facility of any final blend of California gasoline to which a producer has assigned a designated alternative limit for the property exceeding the applicable averaging limit in section 2262, the producer or importer shall complete physical transfer from the same production or import facility of California gasoline in sufficient quantity and with a designated alternative limit sufficiently below the applicable averaging limit in section 2262 to fully offset the extent to which the gasoline exceeded the applicable averaging limit in section 2262. In the case of benzene, olefins, or aromatic hydrocarbons, the total volume of benzene, olefins, or aromatic hydrocarbons in excess of the averaging limit must be offset within the specified time period; the total mass of sulfur and the degree gallons of T50 and T90 in excess of the averaging limit must be similarly offset.

For example, within 90 days before or after the start of physical transfer from a production or import facility of any final blend of California gasoline to which a producer has assigned a designated alternative limit for olefin exceeding 4.0 percent by volume, the producer or importer shall complete physical transfer from the same production or import facility of California gasoline in sufficient quantity and with a designated alternative limit sufficiently below 4.0 percent by volume to offset the volume of the olefins in excess of a limit of 4.0 percent by volume.

(2) A producer or importer may enter into a protocol with the Executive Officer under which the producer or importer is allowed to have up to six separate averaging banks at a single production or import facility, applicable to operationally distinct products (e.g. different grades of gasoline or oxygenated and nonoxygenated). The offset requirements will apply independently for each separate averaging bank. Once averaging is selected for a particular product, the compliance scheme for that product may only be changed if the change meets the applicable criteria and conditions in sections 2264.2 and 2265(c) with respect to that product. The protocol shall specify how the requirements in section (a)(2) and (c)(1) will be applied to the producer's or importer's particular operations and the separate averaging banks. In order to enter into the protocol, the Executive Officer must determine that application of the requirements under the protocol will not be less stringent or enforceable than application of the express terms of sections (a)(2) and (c). Any such protocol shall include the producer's or importer's agreement to be bound by the terms of the protocol.

(d) Designated alternative limits for PM alternative gasoline formulations. The producer or importer of a final blend of California gasoline that is subject to the PM averaging compliance option for one or more properties may assign a designated alternative limit to the final blend by satisfying the notification requirements of section 2264(a). The producer or importer of such a final blend shall be subject to all of the provisions of this section 2264, except that, with respect to that final blend, the PM averaging limit (if any) for for each property subject to the PM averaging compliance option shall replace any reference in this section 2264 to the averaging limit specified in section 2262.

Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 11-16-92; operative 12-16-92 (Register 92, No. 47).

2. Amendment of subsections (a)(1)–(5), (b)(1)–(2), and (h) and new subsection (i) filed 6–2–95; operative 7–3–95 (Register 95, No. 22).
3. Amendment of subsections (a)(1) and (a)(4)–(5) and new subsection (j) filed 2–28–96; operative 2–28–96 pursuant to Government Code section 11343.4(d) (Register 96, No. 9).
4. Editorial correction of subsection (j) (Register 97, No. 17).
5. Change without regulatory effect providing correct placement of subsection (j) filed 4–24–97 pursuant to section 100, title 1, California Code of Regulations (Register 97, No. 17).
6. Amendment of section and NOTE filed 8–3–2000; operative 9–2–2000 (Register 2000, No. 31).
7. Amendment of subsection (a)(4), redesignation and amendment of former subsection (c) as new subsection (c)(1) and new subsection (c)(2) filed 8–20–2001; operative 8–20–2001 pursuant to Government Code section 11343.4 (Register 2001, No. 34).

§ 2264.2. Election of Applicable Limit for Gasoline Supplied From a Production or Import Facility.

(a) Election of the averaging compliance option.

(1) A producer or importer selling or supplying a final blend of gasoline from its production or import facility may elect pursuant to this section 2264.2(a) to have the final blend subject to the averaging compliance option for one or more of the following properties: sulfur, benzene, olefins, aromatic hydrocarbons, T90 or T50. Once a producer or importer has made such an election for a gasoline property, all final blends subsequently sold or supplied from the production or import facility shall be subject to the averaging compliance option for that property until the producer or importer either (A) elects in accordance with section 2264.2(b) to have a final blend at the facility subject to the flat limit compliance option for that property, or (B) elects in accordance with section 2265(a) to sell or supply a final blend at the facility as a PM alternative gasoline formulation, or (C) elects in accordance with section 2266(c) to sell or supply a final blend at the facility as an alternative gasoline formulation.

(2) In order to elect to have a final blend subject to the averaging option for a gasoline property, the producer or importer shall notify the executive officer of such election and of the information identified in section 2264(a)(2)(A), within the time limits set forth in section 2264(a)(2)(A) and subject to section 2264(a)(3) and (4).

(b) Election of flat limit compliance option.

(1) A producer or importer selling or supplying a final blend of gasoline from its production or import facility may elect to have the final blend subject to the flat limit compliance option in accordance with this section 2264.2(b). No such election may be made if there are outstanding requirements to provide offsets for the gasoline property at the facility pursuant to section 2264(c).

(2) In order to elect to have a final blend subject to the flat limit compliance option for a gasoline property, the producer or importer shall notify the executive officer of such election and of the blend identity and the location of the final blend, within the time limits set forth in section 2264(a)(2)(A) and subject to section 2264(a)(3) and (4).

(3) Once a producer or importer has made an election under this section 2264.2(b) with respect to a gasoline property, all final blends subsequently sold or supplied from the production or import facility shall be subject to the flat limit compliance option for that property until the producer or importer either (A) elects in accordance with section 2264.2(a) to have a final blend at the facility subject to the averaging compliance option for that property, or (B) elects in accordance with section 2265(a) to sell or supply a final blend at the facility as a PM alternative gasoline formulation, or (C) elects in accordance with section 2266(c) to sell or supply a final blend at the facility as an alternative gasoline formulation.

(4) Once a producer or importer has made an election under this section 2264.2(b) with respect to a gasoline property of a final blend at a production or import facility, the producer or importer may not use any previously assigned designated alternative limit for that property to provide offsets pursuant to section 2264(c) for any final blend sold or supplied from the production or import facility subsequently to the election.

(c) *Inapplicability to elections for PM alternative gasoline formulations.*

Any election for a final blend to be subject to a PM averaging compliance option or a PM flat limit compliance option shall be made in accordance with section 2265 rather than this section 2264.2.

Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 6–2–95; operative 7–3–95 (Register 95, No. 22).
2. Repealer filed 8–3–2000; operative 9–2–2000 (Register 2000, No. 31).

§ 2265. Gasoline Subject to PM Alternative Specifications Based on the California Predictive Model.

(a) Election to sell or supply a final blend as a PM alternative gasoline formulation.

(1) In order to sell or supply from its production facility or import facility a final blend of California gasoline as a PM alternative gasoline formulation subject to PM alternative specifications, a producer or importer shall satisfy the requirements of this section (a).

(2) The producer or importer shall evaluate the candidate PM alternative specifications for gasoline subject to the CaRFG Phase 2 standards in accordance with the Air Resources Board's "California Procedures for Evaluating Alternative Specifications for Phase 2 Reformulated Gasoline Using the California Predictive Model," as adopted April 20, 1995 and last amended December 11, 1998, which is incorporated herein by reference. The producer or importer shall evaluate the candidate PM alternative specifications for gasoline subject to the CaRFG Phase 3 standards in accordance with the Air Resources Board's "California Procedures for Evaluating Alternative Specifications for Phase 3 Reformulated Gasoline Using the California Predictive Model," as corrected November 18, 2004, which is incorporated herein by reference (the two documents incorporated by reference in this section 2265(a)(2) are collectively referred to as the "Predictive Model Procedures"). If the PM alternative specifications meet the criteria for approval in the applicable Predictive Model Procedures, the producer shall notify the executive officer of: (A) The identity and location of the final blend; (B) the PM alternative specifications that will apply to the final blend, including for each specification whether it applies as a PM flat limit or a PM averaging limit; and (C) the numerical values for percent change in emissions for oxides of nitrogen, hydrocarbons, and potency-weighted toxic air contaminants as determined in accordance with the applicable Predictive Model Procedures. The notification shall be received by the executive officer before the start of physical transfer of the gasoline from the production or import facility, and in no case less than 12 hours before the producer or importer either completes physical transfer or commingles the final blend.

(3) Once a producer or importer has notified the executive officer pursuant to this section 2265(a) that a final blend of California gasoline is being sold or supplied from a production or import facility as a PM alternative gasoline formulation, all final blends of California gasoline subsequently sold or supplied from that production or import facility shall be subject to the same PM alternative specifications until the producer or importer either (A) designates a final blend at that facility as a PM alter-

native gasoline formulation subject to different PM alternative specifications. (B) elects in accordance with section 2264.2 to have a final blend at that facility subject to flat limit compliance options and/or averaging compliance options, or (C) elects in accordance with section 2266(c) to sell a final blend at that facility as an alternative gasoline formulation.

(4) The executive officer may enter into a written protocol with any individual producer or importer for the purposes of specifying how the requirements in section (a)(2) shall be applied to the producer's or importer's particular operations, as long as the executive officer reasonably determines that application of the regulatory requirements under the protocol is not less stringent or enforceable than application of the express terms of section (a)(2). Any such protocol shall include the producer's or importer's agreement to be bound by the terms of the protocol.

(5) If, through no intentional or negligent conduct, a producer or importer cannot report within the time period specified in section (a)(2) above, the producer or importer may notify the executive officer of the required data as soon as reasonably possible and may provide a written explanation of the cause of the delay in reporting. If, based on the written explanation and the surrounding circumstances, the executive officer determines that the conditions of this section (a)(5) have been met, timely notification shall be deemed to have occurred.

(b) *Prohibited activities regarding PM alternative gasoline formulations.*

(1) No producer or importer shall sell, offer for sale, supply, or offer for supply from its production or import facility California gasoline which is reported pursuant to section 2265(a) as a PM alternative gasoline formulation subject to PM alternative specifications if any of the following occur:

(A) The identified PM alternative specifications do not meet the criteria for approval in the applicable Predictive Model Procedures; or

(B) The producer was prohibited by section 2265(c) from electing to sell or supply the gasoline as a PM alternative gasoline formulation; or

(C) The gasoline fails to conform with any PM flat limit in the identified PM alternative specifications (see section 2262.4(b) in the case of specifications for Reid vapor pressure); or

(D) With respect to any property for which the producer or importer has identified a PM averaging limit.

1. the gasoline exceeds the applicable PM average limit, and no designated alternative limit for the property has been established for the gasoline in accordance with section 2264(a); or

2. a designated alternative limit for the property has been established for the gasoline in accordance with section 2264(a), and either of the following occur:

a. The gasoline exceeds the designated alternative limit for the property, or

b. Where the designated alternative limit for the property exceeds the PM averaging limit, the exceedance is not fully offset in accordance with the applicable provisions in section 2264(c).

(2) Where a producer or importer has elected to sell or supply a final blend of California gasoline as a PM alternative gasoline formulation in accordance with this section 2265, the final blend shall not be subject to section 2262.3(b) and (c), section 2262.4(b), and section 2262.5(c).

(c) Restrictions associated with elections to sell or supply final blends as PM alternative gasoline formulations.

(1) A producer or importer may not elect to sell or supply from its production or import facility a final blend of California gasoline as a PM alternative gasoline formulation if the producer or importer is subject to any outstanding requirements to provide offsets at the same production or import facility pursuant to section 2264(c).

(2) Once a producer or importer has elected to sell or supply from its production or import facility a final blend of California gasoline as a PM alternative gasoline formulation subject to a PM averaging compliance option for one or more properties, the producer or importer may not elect any other compliance option, including another PM alternative gasoline formulation, if there are outstanding requirements to provide offsets for such property or properties pursuant to section 2264(c). However, this

section (c)(2) shall not preclude a producer or importer under the circumstances described above from electing another PM alternative gasoline formulation where:

(A) the only changes are that either:

1. PM flat limits for one or more properties are changed to PM averaging limits, or

2. a single PM averaging limit for which there are no outstanding requirements to provide offsets is changed to a PM flat limit, and

(B) there are no changes to the PM alternative specifications for the remaining properties, and

(C) the new PM alternative formulation meets the criteria for approval in the applicable Predictive Model Procedures.

(3) Once a producer or importer has elected to sell or supply from its production or import facility a final blend of California gasoline as a PM alternative gasoline formulation, the producer or importer may not use any previously assigned designated alternative limit for a property to provide offsets pursuant to section 2264(c) for any final blend sold or supplied from the production or import facility subsequent to the election.

Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 6-2-95; operative 7-3-95 (Register 95, No. 22).

2. Amendment of subsection (c)(2) and new subsections (c)(A)-(C) filed 2-28-96; operative 2-28-96 pursuant to Government Code section 11343.4(d) (Register 96, No. 9).

3. Amendment of subsection (a)(2) filed 3-31-99; operative 3-31-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 14).

4. Amendment of section and NOTE filed 8-3-2000; operative 9-2-2000 (Register 2000, No. 31).

5. Amendment of subsection (a)(2) filed 8-20-2001; operative 8-20-2001 pursuant to Government Code section 11343.4 (Register 2001, No. 34).

6. Amendment of subsections (b) and (b)(1)(C) filed 12-24-2002; operative 12-24-2002 pursuant to Government Code section 11343.4 (Register 2002, No. 52).

7. Amendment of subsection (a)(2) filed 3-10-2005; operative 4-9-2005 (Register 2005, No. 10).

§ 2266. Certified Gasoline Formulations Resulting in Equivalent Emission Reductions Based on Motor Vehicle Emissions Testing.

(a) Certification of test-certified alternative gasoline formulations. Following application by a producer or importer, the executive officer may certify, and identify alternative specifications for, a test-certified alternative gasoline formulation pursuant to the Air Resources Board's "California Procedures for Evaluating Alternative Specifications for Gasoline Using Vehicle Emissions Testing," as last amended April 25, 2001, which is incorporated herein by reference.

(b) Prohibited activities regarding test-certified alternative gasoline formulations.

(1) No producer or importer shall sell, offer for sale, supply, or offer for supply from its production facility or import facility California gasoline which has been reported pursuant to section (c) as a test-certified alternative gasoline formulation, if it fails to conform with any of the alternative specifications identified in the certification order for the formulation, as determined in accordance with the test methods identified in the certification order.

(2) A producer or importer who has reported a final blend of gasoline as a test-certified alternative gasoline formulation shall not be subject to section 2262.3(b) or (c), section 2262.4(b), and section 2262.5(c).

(c) Notification regarding sales and supplies of a test-certified alternative gasoline formulation. A producer or importer intending to sell or supply a final blend of California gasoline from its production facility or import facility as a test-certified alternative gasoline formulation shall notify the executive officer in accordance with this section (c). The notification shall identify the final blend and the identification name of the test-

certified alternative gasoline formulation. The notification shall be received by the executive officer at least 12 hours before start of physical transfer of the final blend from the production or import facility. A producer or importer intending to have a series of its final blends be a specific test-certified alternative gasoline formulation may enter into a protocol with the executive officer for reporting such blends as long as the executive officer reasonably determines the reporting under the protocol would provide at least as much notice to the executive officer as notification pursuant to the express terms of this section (c).

HISTORY

1. New section filed 11-16-92; operative 12-16-92 (Register 92, No. 47).
2. Amendment of subsection (b)(2) and amendment of NOTE filed 8-3-2000; operative 9-2-2000 (Register 2000, No. 31).
3. Amendment of section heading and section filed 8-20-2001; operative 8-20-2001 pursuant to Government Code section 11343.4 (Register 2001, No. 34).

§ 2266.5. Requirements Pertaining to California Reformulated Gasoline Blendstock for Oxygen Blending (CARBOB) and Downstream Blending.

(a) *Application of the California gasoline standards to CARBOB.*

(1) *Applicability of standards and requirements to CARBOB.* All of the standards and requirements in sections 2261, 2262, 2262.3, 2262.4, 2262.5(a), (b), (c) and (e), 2262.6, 2264, 2264.2, 2265, 2266, 2267, 2268, 2270, 2271 and 2272 pertaining to California gasoline or transactions involving California gasoline also apply to CARBOB or transactions involving CARBOB. Whenever the term "California gasoline" is used in the sections identified in the preceding sentence, the term means "California gasoline or CARBOB." Whenever the term "gasoline" is used in section 2265(b)(1), the term means "California gasoline or CARBOB."

(2) *Determining whether a final blend of CARBOB complies with the standards for California gasoline.*

(A) *General.*

1. *Applicability.* This section (a)(2) governs the determination of whether a final blend of CARBOB complies with the standards for California gasoline that apply when the gasoline is sold or supplied from the production or import facility at which it was produced or imported. Section (a)(6) governs the determination of whether downstream CARBOB that has already been supplied from its production or import facility complies with the applicable cap limits for California gasoline.

2. Where a producer or importer has designated a final blend as CARBOB and has complied with all applicable provisions of this section 2266.5, the properties of the final blend for purposes of compliance with sections 2262, 2262.3, 2262.4, 2262.5, 2262.6, 2265 and 2266 shall be determined in accordance with section (a)(2)(B) or (a)(2)(C) as applicable.

3. If the producer or importer has not complied with all applicable provisions of this section 2266.5, the properties of the final blend for purposes of the producer's or importer's compliance with the limits for sulfur, benzene, aromatic hydrocarbons, olefins, T50, T90, and oxygen required by sections 2262.3, 2262.5, 2265 and 2266 shall be determined without using the CARBOB Model or adding oxygenate to the gasoline, and compliance with the flat limits for Reid vapor pressure and oxygenates required by sections 2262.4, 2262.6, 2265 and 2266 shall be determined in accordance with section (a)(2)(B) or (a)(2)(C) as applicable.

(B) *Determining whether a final blend of CARBOB complies with the standards for California gasoline by use of the CARBOB Model.*

1. A producer or importer may elect to have the CARBOB model used in determining whether a final blend designated as CARBOB complies with the standards applicable to California gasoline, by providing the notice in section (b)(1)(C). In this case, the CARBOB limits for the final

blend shall be determined in accordance with the "Procedures for Using the California Model for California Reformulated Gasoline Blendstocks for Oxygenate Blending (CARBOB)," as adopted April 25, 2001. The CARBOB's compliance with the assigned CARBOB limit for a property shall constitute compliance with the corresponding finished gasoline limit — be it a section 2262 flat limit, PM flat limit, TC limit, or (if no designated alternative limit has been established) section 2262 or PM averaging limit. In addition, where the producer or importer has elected to use the CARBOB model for a given final blend that is not being transferred from its production or import facility during the Reid vapor pressure control period for that facility set forth in section 2262.4(a), the final blend must have a Reid vapor pressure no lower than the value used in the T50 CARBOB model.

2. Notwithstanding section (a)(2)(B)1., where a final blend of CARBOB is sampled and analyzed by a state board inspector in accordance with section 2263 using the methodology in (a)(2)(C), the results may be used to establish a violation of applicable standards for California gasoline.

(C) *Determining whether a final blend of CARBOB complies with the standards for California gasoline by oxygenate blending and testing.* Except as otherwise provided in section (a)(2)(B), the properties of a final blend of CARBOB shall be determined for purposes of compliance with sections 2262, 2262.3, 2262.4, 2262.5, 2262.6, 2265 and 2266 by adding the specified type and amount of oxygenate to a representative sample of the CARBOB and determining the properties and characteristics of the resulting gasoline in accordance with an applicable test method identified in section 2263(b) or permitted under section 2263(c). Where the producer or importer has in accordance with section (b)(1)(E) designated a range for oxygen from denatured ethanol of 1.8 wt.% to 2.2 wt.% (or a range that is within 1.8 wt.% and 2.2 wt.% and includes 2.0 wt.%), denatured ethanol equal to 5.7 vol.% of the blended volume shall be added; where the designated range for oxygen from denatured ethanol is 2.5 wt.% to 2.9 wt.% (or is within 2.5 wt.% and 2.9% and includes 2.7 wt.%), denatured ethanol equal to 7.7 vol.% of the blended volume shall be added; and where the designated range for oxygen from denatured ethanol is 3.3 wt.% to 3.7 wt.% (or is within 3.3 wt.% and 3.7 wt.% and includes 3.5 wt.%), denatured ethanol equal to 10.0 vol.% of the blended volume shall be added. In all other cases where the designated range for oxygen from denatured ethanol is no greater than 0.4 wt.%, the amount of denatured ethanol added shall be the volume percent that results in an oxygen content at the midpoint of the range of oxygen, based on the following equation:

$$\text{Vol. \% Denatured Ethanol} = 620 \div [(218.8 \div \text{wt. \% oxygen}) - 0.40]$$

Where the producer or importer has in accordance with section (b)(1)(E) designated a range of amounts of oxygen that is greater than 0.4 wt.%, or an oxygenate other than denatured ethanol, the oxygenate shall be added in an amount that results in an oxygen content within 0.2 wt.% of the designated minimum oxygen level.

(D) *Characteristics of denatured ethanol used in determining whether a final blend of CARBOB complies with the standards for California gasoline.*

1. *Default denatured ethanol characteristics on or after December 31, 2003 when the CARBOB Model is used.* Except as provided in section (a)(2)(D)3., where a producer or importer has elected to use the CARBOB Model for a final blend of CARBOB supplied from its production or import facility on or after December 31, 2003, the following default denatured ethanol specifications shall be specified for the CARBOB Model:

Sulfur content:	10 parts per million
Benzene content:	0.06 volume percent
Olefin content:	0.5 volume percent
Aromatic hydrocarbon content:	1.7 volume percent

2. *Default denatured ethanol characteristics on or after December 31, 2003 when the CARBOB Model is not used.* Except as provided in section (a)(2)(D)3., where a producer or importer has not elected to use the CARBOB Model, denatured ethanol used as the oxygenate must have the following properties in determining whether CARBOB complies with the

standards applicable to California gasoline when it is supplied from the production facility or import facility on or after December 31, 2003:

Sulfur content:	3–10 parts per million
Benzene content:	0–0.06 volume percent
Olefin content:	0–0.5 volume percent
Aromatic hydrocarbon content:	0–1.7 volume percent

3. *Producer–or importer–specified characteristics of denatured ethanol used in determining whether a final blend of CARBOB complies with the standards for California gasoline.*

a. With respect to a final blend of CARBOB supplied from its production or import facility prior to December 31, 2003, the producer or importer must specify the properties of the oxygenate used in determining whether the final blend of CARBOB complies with the applicable California gasoline standards, by providing the notice in section (b)(1)(D). With respect to a final blend of CARBOB supplied from its production or import facility on or after December 31, 2003, the producer or importer may elect to specify the properties of the oxygenate in accordance with the preceding sentence. Where the producer or importer has elected to use the CARBOB model in connection with the final blend, the maximum value for each property identified in the section (b)(1)(D) notification shall be used for the CARBOB Model. Where the producer or importer has not elected to use the CARBOB model in connection with the final blend, the oxygenate used in oxygenate blending and testing in accordance with section (a)(2)(C)1. must not exceed the maximum value for each property identified in the section (b)(1)(D) notification; that oxygenate's specifications for each property may be under the maximum value for each property identified in the section (b)(1)(D) notification by no more than the following:

Sulfur content:	5 parts per million
Benzene content:	0.06 volume percent
Olefin content:	0.1 volume percent
Aromatic hydrocarbon content:	1.0 volume percent

b. *Maintaining oxygenate samples for use in compliance testing.* A producer or importer who is specifying the properties of the oxygenate used in a final blend of CARBOB in accordance with the preceding section (a)(2)(D)3.a. must maintain at the production or import facility, while the final blend is at the facility, oxygenate meeting the required specifications in quantities that are sufficient to enable state board inspectors to use the oxygenate in compliance determinations.

(E) *Protocol for determining whether a final blend of CARBOB complies with the standards for California gasoline.* The executive officer may enter into a written protocol with any individual producer or importer for the purpose of specifying a alternative method for determining whether a final blend of CARBOB complies with the standards for California gasoline, as long as the executive officer reasonably determines that application of the protocol is not less stringent or enforceable than application of the express terms of section (a)(2)(A)–(D). Any such protocol shall include the producer's or importer's agreement to be bound by the terms of the protocol.

(3) *Calculating the volume of a final blend of CARBOB.* Where a producer or importer has designated a final blend as CARBOB and has complied with all applicable provisions of this section 2266.5, the volume of the final blend shall be calculated for all purposes under section 2264 by adding the minimum designated amount of the oxygenate having the smallest volume designated by the producer or importer. If the producer or importer has not complied with any applicable provisions of this section 2266.5, the volume of the final blend for purposes of the refiner or producer's compliance with sections 2262, 2262.3, 2262.4, 2262.5, 2262.6, 2265 and 2266 shall be calculated without adding the amount of oxygenate to the CARBOB.

(4) *Specifications for a final blend of CARBOB when the CARBOB model is not being used.* A producer or importer who has not elected to use the CARBOB model pursuant to section (a)(2)(B) with regard to a final blend of CARBOB may not sell, offer for sale, supply or offer for sale that final blend of CARBOB from its production facility or import facility where the sulfur, benzene, olefin or aromatic hydrocarbon content of the CARBOB, when multiplied by (1 minus the designated maximum volume percent, expressed as a decimal fraction, that the oxygenate

will represent after it is added to the CARBOB), results in a sulfur, benzene, olefin or aromatic hydrocarbon content value exceeding the applicable limit for that property.

(5) *Assignment of designated alternative limits for CARBOB and for the oxygenated California gasoline where the producer or importer has elected to use the CARBOB model.*

(A) *Applicability.* This section (a)(5) applies where a producer or importer has elected to have the CARBOB model apply in connection with a final blend of CARBOB which is also subject to an averaging compliance option or a PM averaging compliance option for one or more properties.

(B) *Assignment of CARBOB designated alternative limit.* The producer or importer may assign a CARBOB designated alternative limit for the final blend of CARBOB by satisfying the notification requirements of section (a)(5)(D). In no case shall a CARBOB designated alternative limit be less than the sulfur, benzene, olefin or aromatic hydrocarbon content, or T90 or T50, of the final blend shown by the sample and test of the CARBOB conducted pursuant to section 2270. The CARBOB designated alternative limit shall be treated as the designated alternative limit under section 2262.3(c)(2), and a violation of section 2262.3(c)(2) will exist when the CARBOB exceeds the CARBOB designated alternative limit.

(C) *Determining the designated alternative limit for the final blend after the CARBOB is oxygenated.* Whenever a producer or importer has assigned a designated alternative limit for a final blend of CARBOB, the designated alternative limit for the final blend after the CARBOB is oxygenated shall be determined in accordance with the "Procedures for Using the California Model for California Reformulated Gasoline Blendstocks for Oxygenate Blending (CARBOB)," as adopted April 25, 2001. This will be the final blend's designated alternative limit for purposes of compliance with sections 2262.3(c)(3) and 2264(b) and (c).

(D) *Notification.* The producer or importer shall notify the executive officer of the CARBOB designated alternative limit, the designated alternative limit for the final blend after it is oxygenated, and all other information identified in section 2264(a)(2)(A), within the time limits set forth in section 2264(a)(2)(A) and subject to section 2264(a)(3) and (4).

(6) *Determining whether downstream CARBOB complies with the cap limits for California gasoline.*

(A) *Determining whether downstream CARBOB complies with the cap limits for California gasoline through the use of CARBOB cap limits derived from the CARBOB Model.* Whenever downstream CARBOB designated for ethanol blending has already been supplied from its production or import facility, the CARBOB's compliance with the cap limits for California gasoline may be determined by applying the CARBOB cap limits in the following table:

Property	CARBOB Cap Limits	
	CaRFG2	CaRFG3
Reid Vapor Pressure ¹ (pounds per square inch)	5.78	5.99
Sulfur Content (parts per million by weight)	89	66 ² 32 ²
Benzene Content (percent by volume)	1.33	1.22
Aromatics Content (percent by volume)	33.1	38.7
Olefins Content (percent by volume)	11.1	11.1
T50 (degrees Fahrenheit)	232 ³ 237 ³	232 ³ 237 ³
T90 (degrees Fahrenheit)	335	335

¹ The Reid vapor pressure standards apply only during the warmer weather months identified in section 2262.4.

² The CaRFG Phase 3 CARBOB cap limits for sulfur are phased in starting December 31, 2003, and December 31, 2005, in accordance with section 2261(b)(1)(A).

³ The first number applies to CARBOB that is subject to the Reid vapor pressure standard pursuant to section 2262.4, and the second number applies to CARBOB that is not subject to the Reid vapor pressure standard.

(B) *Determining whether downstream CARBOB complies with the cap limits for California gasoline by oxygenate blending and testing.* Whenever downstream CARBOB designated for oxygenate blending has already been supplied from its production or import facility, the CARBOB's compliance with the cap limits for California gasoline may be determined by adding the specified type and amount of oxygenate to a representative sample of the CARBOB and determining the properties and characteristics of the resulting gasoline in accordance with an applicable test method identified in section 2263(b) or permitted under section 2263(c). Denatured ethanol used as the oxygenate must have the properties set forth in section (a)(2)(D)2. Where the designated range for oxygen from denatured ethanol is 1.8 wt.% and 2.2 wt.% (or is within 1.8 wt.% and 2.2 wt.% and includes 2.0 wt.%), denatured ethanol equal to 5.7 vol.% of the blended volume shall be added; where the designated range for oxygen from denatured ethanol is 2.5 wt.% and 2.9 wt.% (or is within 2.5 wt.% and 2.9 wt.% and includes 2.7 wt.%), denatured ethanol equal to 7.7 vol.% of the blended volume shall be added; and where the designated range for oxygen from denatured ethanol is 3.3 wt.% to 3.7 wt.% (or is within 3.3 wt.% and 3.7 wt.% and includes 3/5 wt.%), denatured ethanol equal to 10.0 vol.% of the blended volume shall be added. In all other cases where the designated range for oxygen from denatured ethanol is no greater than 0.4 wt.%, the amount of denatured ethanol added shall be the volume percent that results in an oxygen content at the midpoint of the range of oxygen, based on the following equation:

$$\text{Vol.\% Denatured Ethanol} = 620 \div [(218.8 \div \text{wt.\% oxygen}) - 0.40]$$

Where the designated a range of amounts of oxygen is greater than 0.4 wt.%, or an oxygenate other than denatured ethanol is designated, the oxygenate shall be added in an amount that results in an oxygen content within 0.2 wt.% of the designated minimum oxygen level.

(C) *Protocols.* A person may enter into a protocol with the executive officer for the purpose of identifying more stringent specifications for the denatured ethanol used pursuant to section (a)(6)(B), or different CARBOB cap limits under section (a)(6)(A), if the executive officer reasonably determines that the specifications or cap limits are reasonably premised on the person's program to assure that the denatured ethanol added to the CARBOB by oxygenate blenders will meet the more stringent specifications.

(b) *Notification to ARB regarding the supply of CARBOB from the facility at which it was produced or imported.*

(1) A producer or importer supplying a final blend of CARBOB from the facility at which the producer or importer produced or imported the CARBOB must notify the executive officer of the information set forth below, along with any information required under section 2265(a)(2) (for a PM alternative gasoline formulation) or 2266(c) (for a test-certified alternative gasoline formulation). The notification must be received by the executive officer before the start of physical transfer of the final blend of CARBOB from the production or import facility, and in no case less than 12 hours before the producer or importer either completes physical transfer or commingles the final blend.

(A) The identity and location of the final blend;

(B) The designation of the final blend as CARBOB;

(C) If the producer or importer is electing to use the CARBOB model to determine whether the final blend complies with the standards applicable to California gasoline when it is supplied from the production facility or import facility, a statement of that election and

1. Each of the CARBOB limits that will apply to the final blend for properties not subject to the averaging compliance option or the PM averaging compliance option; and

2. For any property subject to the averaging compliance option or the PM averaging compliance option, the averaging or PM averaging limit for the CARBOB (the CARBOB is subject to this limit only if no designated alternative limit is assigned to the CARBOB pursuant to section 2266.5(a)(5)(B));

(D) If the producer or importer is specifying, pursuant to section (a)(2)(D)3., the properties of the oxygenate to be added downstream by

the oxygenate blender, a statement of that election, the type of oxygenate, and the oxygenate's specifications for the following properties:

Maximum sulfur content (nearest part per million by weight)

Maximum benzene content (nearest hundredth of a percent by volume)

Maximum olefin content (nearest tenth of a percent by volume)

Maximum aromatic hydrocarbon content (nearest tenth of a percent by volume)

(E) The designation of each oxygenate type or types and amount or range of amounts to be added to the CARBOB, and the applicable flat limit, PM alternative specification, or TC alternative specification for oxygen. The amount or range of amounts of oxygenate to be added shall be expressed as a volume percent of the gasoline after the oxygenate is added, in the nearest tenth of a percent. For any final blend of CARBOB except one that is subject to PM alternative specifications or TC alternative specifications, the amount of oxygenate to be added must be such that the resulting California gasoline will have a minimum oxygen content no lower than 1.8 percent by weight and a maximum oxygen content no greater than 2.2 percent by weight. For a final blend of CARBOB that is subject to PM alternative specifications, the amount or range of amounts of oxygenate to be added must be such that the resulting California gasoline has an oxygen content that meets the oxygen content PM alternative specification for the final blend. For a final blend of CARBOB that is subject to TC alternative specifications, the amount or range of amounts of oxygenate to be added must be such that the resulting California gasoline has an oxygen content that meets the oxygen content alternative specification for the final blend.

(2) *Applicability of notification to subsequent final blends.* The notification a producer or importer provides pursuant to section (b)(1)(B), (C), (D) and (E) for a final blend of CARBOB shall apply to all subsequent final blends of CARBOB or California gasoline supplied by the producer or importer from the same production or import facility until the producer or importer designates a final blend at that facility as either (i) California gasoline rather than CARBOB, or (ii) CARBOB subject to a new notification made pursuant to section (b)(1).

(3) *Allowance of late notifications.* If, through no intentional or negligent conduct, a producer or importer cannot report within the time period specified in (b)(1) above, the producer or importer may notify the executive officer of the required data as soon as reasonably possible and may provide a written explanation of the cause of the delay in reporting. If, based on the written explanation and the surrounding circumstances, the executive officer determines that the conditions of this section (b)(3) have been met, timely notification shall be deemed to have occurred.

(4) *Protocols.* The executive officer may enter into a written protocol with any individual producer or importer for the purpose of specifying how the requirements in section (b)(1) shall be applied to the producer's or importer's particular operations, as long as the executive officer reasonably determines that application of the regulatory requirements under the protocol is not less stringent or enforceable than application of the express terms of section (b)(1). Any such protocol shall include the producer's or importer's agreement to be bound by the terms of the protocol.

(c) [Reserved]

(d) *Documentation required when CARBOB is transferred.*

(1) *Required Documentation.* On each occasion when any person transfers custody or title of CARBOB, the transferor shall provide the transferee a document that prominently:

(A) States that the CARBOB does not comply with the standards for California gasoline without the addition of oxygenate,

(B) Identifies the applicable flat limit, PM alternative specification, or TC alternative specification for oxygen, and

(C) Identifies, consistent with the notification made pursuant to section (b), the oxygenate type or types and amount or range of amounts that must be added to the CARBOB to make it comply with the standards for California gasoline. Where the producer or importer of the CARBOB has

elected to specify the properties of the oxygenate pursuant to section (b)(1)(D), the document must also prominently identify the maximum permitted sulfur, benzene, olefin and aromatic hydrocarbon contents — not to exceed the maximum levels in the section (b)(1)(D) notification — of the oxygenate to be added to the CARBOB.

(2) *Compliance by pipeline operator.* A pipeline operator may comply with this requirement by the use of standardized product codes on pipeline tickets, where the code(s) specified for the CARBOB is identified in a manual that is distributed to transferees of the CARBOB and that sets forth all of the required information for the CARBOB.

(e) *Restrictions on transferring CARBOB.*

(1) *Required agreement by transferee.* No person may transfer ownership or custody of CARBOB to any other person unless the transferee has agreed in writing with the transferor that either:

(A) The transferee is a registered oxygenate blender and will add oxygenate of the type(s) and amount (or within the range of amounts) designated in accordance with section (b) before the CARBOB is transferred from a final distribution facility, or

(B) The transferee will take all reasonably prudent steps necessary to assure that the CARBOB is transferred to a registered oxygen blender who adds the type and amount (or within the range of amounts) of oxygenate designated in accordance with section (b) to the CARBOB before the CARBOB is transferred from a final distribution facility.

(2) *Prohibited sales of CARBOB from a final distribution facility.* No person may sell or supply CARBOB from a final distribution facility where the type and amount or range of amounts of oxygenate designated in accordance with section (b) has not been added to the CARBOB.

(f) *Restrictions on blending CARBOB with other products.*

(1) *Basic prohibition.* No person may combine any CARBOB that has been supplied from the facility at which it was produced or imported with any other CARBOB, gasoline, blendstock or oxygenate, except:

(A) *The specified oxygenate.*

1. The CARBOB may be blended with oxygenate of the type and amount (or within the range of amounts) specified by the producer or importer at the time the CARBOB was supplied from the production or import facility.

2. Where ethanol is the specified oxygenate and specifications for the ethanol are identified in the product transfer document for the CARBOB pursuant to section 2266.5(d)(1)(C), only ethanol meeting those specifications may be combined with the CARBOB.

3. Where ethanol is the specified oxygenate and specifications for the ethanol are not identified, only ethanol meeting the standards in section 2262.9(a) may be combined with the CARBOB.

(B) *Identically-specified CARBOB.* The CARBOB may be blended with other CARBOB for which the same oxygenate type, and the same amount (or range of amounts) of oxygen, was specified by the producer or importer at the time the CARBOB was supplied from the production or import facility. However, where specifications for the denatured ethanol to be added to the CARBOB have been established pursuant to section 2266.5(a)(2)(D)3, it may only be blended with other CARBOB for which the same denatured ethanol specifications have been set.

(C) *CARBOB specified for different oxygen level.* Where a person is changing from an initial to a new type of CARBOB stored in a storage tank at a terminal or bulk plant, and the conditions below are met; in this case, the CARBOB in the tank after the new type of CARBOB is added will be treated as that new type of CARBOB.

1. The change in service is for legitimate operational reasons and is not for the purpose of combining the different types of CARBOB;

2. The initial and new CARBOBs are designated for blending with different amounts (or ranges of amounts) of oxygen, and the change in oxygen content will not exceed 1.1 weight percent of the oxygenated gasoline blend;

3. The volume of the new CARBOB that is added to the tank is at least four times as large as the volume of the initial CARBOB in the tank, and

4. The sulfur content of the new CARBOB added to the tank is no more than 12 parts per million.

(D) *California gasoline not subject to RVP standard.* Where a person is changing from California gasoline to CARBOB as the product stored in a storage tank at a terminal or bulk plant and the conditions below are met; in this case the product in the tank, pipe or manifold after the new product is added will be treated as the new type of product.

1. The change in service is for legitimate operational reasons and is not for the purpose of combining the California gasoline and CARBOB and

2. The resulting blend of product in the tank is supplied from the terminal or bulk plant during a time that it is not subject to the standards for Reid vapor pressure under section 2262.4.

(E) *Limited amounts of California gasoline containing ethanol.* A person may add California gasoline containing ethanol to CARBOB at a terminal or bulk plant if all of the following conditions are met, in which case the resulting mixture will continue to be treated as CARBOB.

1. The gasoline is added to the CARBOB for one of the following operational reasons:

a. The gasoline resulted from oxygenating CARBOB at the terminal or bulk plant during calibration of oxygenate blending equipment; or

b. The gasoline resulted from the unintentional over- or under-oxygenation of CARBOB during the loading of a cargo tank truck at the terminal or bulk plant; or

c. The gasoline was pumped out of a gasoline storage tank at a motor vehicle fueling facility for legitimate operational reasons.

2. The non-oxygenate portion of the gasoline complies with the applicable cap limits for CARBOB in section 2266.5(a)(6).

3. The resulting mixture of CARBOB has an oxygen content not exceeding 0.1 percent by weight.

a. The oxygen content of the mixture may be determined arithmetically by [i] using the volume of the CARBOB prior to mixing based on calibrated tank readings, [ii] using the volume of the gasoline added based on calibrated meter readings, [iii] using the volume of the denatured ethanol in the gasoline being added based on direct calibrated meter readings of the denatured ethanol if available, [iv] calculating weight percent oxygen of the gasoline being added from volume percent denatured ethanol based on the following formula:

$$(\text{wt. \% oxygen}) \approx 218.8 / \{ [620 / (\text{vol. \% deEtOH})] + 0.40 \},$$

and [v] accounting for any oxygen in the CARBOB tank due to previous additions of gasoline to the tank.

b. If the meter readings described in section 2266.5(f)(1)(E)3.a.[iii] are not available, the oxygen content of the mixture may be determined arithmetically by [i] using the volume of the CARBOB prior to mixing based on calibrated tank readings, [ii] using the volume of the gasoline added based on calibrated meter readings, [iii] using the oxygen content of the gasoline in weight percent based on sampling and testing of the gasoline for denatured ethanol content in accordance with methods specified in section 2263, and [iv] accounting for any oxygen in the CARBOB tank due to previous additions of gasoline to the tank.

c. In making the determination described in section 2266.5(f)(1)(E)3.a. or b., the oxygen content of the mixture shall be calculated based on the following formula:

$$(\text{wt. \% oxygen}) \approx [(\text{volume CARBOB}) * (\text{wt. \% oxygen in CARBOB}) + (\text{volume gasoline}) * (\text{wt. \% oxygen in gasoline})] / [(\text{volume CARBOB}) + (\text{volume gasoline})].$$

4. Prior to the mixing, the operator of the terminal or bulk plant notifies the executive officer of the following:

a. The identity and location of the facility at which the mixing will take place;

b. The operational reason for adding the gasoline into the CARBOB;

c. The projected percentage oxygen content of the mixture.

5. The terminal or bulk plant operator maintains for two years records documenting the information identified in section 2266.5(f)(1)(E)4, and makes them available to the executive officer upon request.

(2) *Protocols.*

(A) *Protocols covering the changeover in service of a storage tank.* Notwithstanding section (f)(1), the executive officer may enter into a written protocol with any person to identify conditions under which the

person may lawfully combine CARBOB with California gasoline or other CARBOB during a changeover in service of a storage tank for a legitimate operational business reason. The executive officer may only enter into such a protocol if he or she reasonably determines that commingling of the two products will be minimized as much as is reasonably practical. Any such protocol shall include the person's agreement to be bound by the terms of the protocol.

(B) *Protocols for blending transmix into CARBOB.* Notwithstanding section (f)(1), the executive officer may enter into a written protocol with any person to identify conditions under which the person may lawfully blend transmix into CARBOB which has been supplied from its production or import facility. The executive officer may enter into such a protocol only if he or she reasonably determines that alternatives to the blending are not practical and the blending will not significantly affect the properties of the CARBOB gasoline into which the transmix is added. Any such protocol shall include the person's agreement to be bound by the terms of the protocol.

(C) *Protocols In Other Situations.* Notwithstanding section (f)(1), the executive officer may enter into a written protocol with any person to identify conditions under which the person may lawfully add California gasoline or other CARBOB to CARBOB in a storage tank at a terminal or bulk plant in situations other than those identified in sections 2266.5(f)(1)(C), (D), or (E), or (f)(2)(A) or (B). The executive officer may enter into such a protocol only if he or she reasonably determines that alternatives to the activity are not practical and the blending will not significantly affect the properties of the CARBOB into which the gasoline or CARBOB is added. The protocol shall include any of the conditions in section 2266.5(f)(1)(E) that the executive officer determines are necessary and appropriate. Any such protocol shall include the person's agreement to be bound by the terms of the protocol.

(g) *Requirements for oxygenate blenders.*

(1) *Registration and Certification.*

(A) *Registration.* Any oxygen blender must register with the executive officer by March 1, 1996, or at least 20 days before blending oxygenates with CARBOB, whichever occurs later. Thereafter, an oxygenate blender must register with the executive officer annually by January 1. The registration must be addressed to the attention of the Chief, Compliance Division, California Air Resources Board, P.O. Box 2815, Sacramento, CA, 95812.

(B) *Required contents of registration.* The registration must include the following:

1. The oxygen blender's contact name, telephone number, principal place of business which shall be a physical address and not a post office box, and any other place of business at which company records are maintained.

2. For each of the oxygen blender's oxygenate blending facilities, the facility name, physical location, contact name, and telephone number.

(C) *Issuance of certificate.* The executive officer shall provide each complying oxygen blender with a certificate of registration compliance no later than June 30. The certification shall be effective from no later than July 1, through June 30 of the following year. The certification shall constitute the oxygen blender's certification pursuant to Health and Safety Code section 43026.

(D) *Submittal of updated information.* Any oxygen blender must submit updated registration information to the executive officer at the address identified in section (g)(1)(A) within 30 days of any occasion when the registration information previously supplied becomes incomplete or inaccurate.

(2) *Requirement to add oxygenate to CARBOB.* Whenever an oxygenate blender receives CARBOB from a transferor to whom the oxygenate blender has represented that he/she will add oxygenate to the CARBOB, the oxygenate blender must add to the CARBOB oxygenate of the type(s) and amount (or within the range of amounts) identified in the documentation accompanying the CARBOB. If the documentation identifies the permitted maximum sulfur, benzene, olefin and aromatic hydrocarbon

contents of the oxygenate, the oxygenate blender must add an oxygenate that does not exceed the maximum permitted levels.

(3) *Additional requirements for terminal blending.* Any oxygenate blender who makes a final blend of California reformulated gasoline by blending any oxygenate with any CARBOB in any gasoline storage tank, other than a truck used for delivering gasoline to retail outlets or bulk purchaser-consumer facilities, shall, for each such final blend, determine the oxygen content and volume of the final blend prior to its leaving the oxygen blending facility, by collecting and analyzing a representative sample of gasoline taken from the final blend, using methodology set forth in section 2263.

(h) *Downstream blending of California gasoline with nonoxygenate blendstocks.*

(1) *Basic prohibition.* No person may combine California gasoline which has been supplied from a production or import facility with any nonoxygenate blendstock, other than vapor recovery condensate, unless the person can affirmatively demonstrate that (1) the blendstock that is added to the California gasoline meets all of the California gasoline standards without regard to the properties of the gasoline to which the blendstock is added, and (2) the person meets with regard to the blendstock all requirements in this subarticle applicable to producers of California gasoline.

(2) *Exceptions.*

(A) *Protocols.* Notwithstanding section (h)(1), the executive officer may enter into a written protocol with any person to identify conditions under which the person may lawfully blend transmix into California gasoline which has been supplied from its production or import facility. The executive officer may only enter into such a protocol if he or she reasonably determines that alternatives to the blending are not practical and the blending will not significantly affect the properties of the California gasoline into which the transmix is added. Any such protocol shall include the person's agreement to be bound by the terms of the protocol.

(B) *Blending to meet a cap limit.* Notwithstanding, section (h)(1) or 2262.5(d), a person may add nonoxygenate or oxygenated blendstock to California gasoline that does not comply with one or more of the applicable cap limits contained in section 2262, where the person obtains the prior approval of the executive officer based on a demonstration that adding the blendstock is a reasonable means of bringing the gasoline into compliance with the cap limits.

(i) *Restrictions during the RVP season on blending gasoline containing ethanol with California gasoline not containing ethanol.*

(1) *Basic prohibition.* Within each air basin during the Reid vapor pressure cap limit periods specified in section 2262.4(a)(2), no person may combine California gasoline produced using ethanol with California gasoline produced without using ethanol, unless the person can affirmatively demonstrate that: (A) the resulting blend complies with the cap limit for Reid vapor pressure set forth in section 2262, or (B) the person has taken reasonably prudent precautions to assure that the gasoline is not subject to the Reid vapor pressure cap limit either because of sections 2261(d) or (f) or 2262.4(c)(1) or (c)(3), or because the gasoline is no longer California gasoline.

(2) *Exception.* Section 2266.5(i)(1) does not apply to combining California gasolines that are in a motor vehicle's fuel tank.

Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39010, 39500, 39515, 39516, 41511, 43000, 43013, 43013.1, 43016, 43018, 43021 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 2-28-96; operative 2-28-96 pursuant to Government Code section 11343.4(d) (Register 96, No. 9).
2. Editorial correction of subsection (a)(1) (Register 2000, No. 31).
3. Amendment of section and NOTE filed 8-3-2000; operative 9-2-2000 (Register 2000, No. 31).

4. Amendment filed 8–20–2001; operative 8–20–2001 pursuant to Government Code section 11343.4 (Register 2001, No. 34).
5. Amendment filed 12–24–2002; operative 12–24–2002 pursuant to Government Code section 11343.4 (Register 2002, No. 52).
6. Amendment of subsection (h)(2) and redesignation and amendment of former subsections (h)(2)–(3) to subsections (h)(2)(A)–(B) filed 5–1–2003; operative 5–1–2003 pursuant to Government Code section 11343.4 (Register 2003, No. 18).
7. Amendment filed 3–10–2005; operative 4–9–2005 (Register 2005, No. 10).
8. Amendment of table footnotes 1 and 3 filed 9–9–2005 as an emergency; operative 9–9–2005 (Register 2005, No. 37). A Certificate of Compliance must be transmitted to OAL by 1–10–2006 or emergency language will be repealed by operation of law on the following day.
9. Reinstatement of section as it existed prior to 9–9–2005 emergency amendment pursuant to Government Code section 11346.1(f) (Register 2006, No. 35). The repealed emergency language affecting footnotes 1 and 3 of the subsection (a)(6)(A) table identified less stringent limits for RVP during the 2005 Hurricane Katrina RVP relaxation period identified in section 2262.4.
10. Editorial amendment of HISTORY 9 (Register 2006, No. 42).

§ 2267. Exemptions for Gasoline Used in Test Programs.

The executive officer shall consider and grant test program exemptions from the requirements of this subarticle in accordance with section 2259.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43013.1, 43018, 43101 and 43831, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975). Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 11–16–92; operative 12–16–92 (Register 92, No. 47).
2. Amendment of section heading, section and NOTE filed 2–15–95; operative 2–15–95 pursuant to Government Code section 11343.4(d) (Register 95, No. 7).
3. Amendment of NOTE filed 8–3–2000; operative 9–2–2000 (Register 2000, No. 31).

§ 2268. Liability of Persons Who Commit Violations Involving Gasoline That Has Not Yet Been Sold or Supplied to a Motor Vehicle.

(a) For the purposes of this subarticle, each sale of California gasoline at retail, and each dispensing of California gasoline into a motor vehicle fuel tank, shall also be deemed a sale or supply by any person who previously sold or supplied such gasoline in violation of any applicable section of this subarticle.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43013.1, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975). Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 11–16–92; operative 12–16–92 (Register 92, No. 47).
2. Amendment of NOTE filed 8–3–2000; operative 9–2–2000 (Register 2000, No. 31).

§ 2269. Submittal of Compliance Plans.

(a) Each producer shall, by September 1, 2000, submit to the executive officer a plan showing the producer's schedule for achieving compliance with the CARFG Phase 3 standards set forth in this subarticle. Each producer shall, by September 1, 2001, September 1, 2002, and September 1, 2003 submit an update of the plan. Each compliance plan and update shall include the projected sequence and dates of all key events pertaining to planning, financing, and construction of necessary refinery modifications.

Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 11–16–92; operative 12–16–92 (Register 92, No. 47).
2. Amendment of section and NOTE filed 8–3–2000; operative 9–2–2000 (Register 2000, No. 31).
3. Amendment filed 12–24–2002; operative 12–24–2002 pursuant to Government Code section 11343.4 (Register 2002, No. 52).

§ 2270. Testing and Recordkeeping.

(a)(1) The requirements of this section (a) shall apply to each producer and importer that has elected to be subject to an averaging limit in section 2262, or to a PM averaging limit. The references to sulfur content shall apply to each producer or importer that has elected to be subject to the section 2262 averaging limit for sulfur, or to a PM averaging limit for sulfur. The references to benzene content shall apply to each producer or importer that has elected to be subject to the section 2262 averaging limit for benzene, or to a PM averaging limit for benzene. The references to olefin content shall apply to each producer or importer that has elected to be subject to the section 2262 averaging limit for olefin content, or to a PM averaging limit for olefin content. The reference to T90 shall apply to each producer or importer that has elected to be subject to the section 2262 averaging limit for T90, or to a PM averaging limit for T90. The references to T50 shall apply to each producer or importer that has elected to be subject to the section 2262 averaging limit for T50, or to a PM averaging limit for T50. The references to aromatic hydrocarbon content shall apply to each producer or importer that has elected to be subject to the section 2262 averaging limit for aromatic hydrocarbon content, or to a PM averaging limit for aromatic hydrocarbon content.

(2) Each producer shall sample and test for the sulfur, aromatic hydrocarbon, olefin and benzene content, T50 and T90 in each final blend of California gasoline which the producer has produced, by collecting and analyzing a representative sample of gasoline taken from the final blend, using the methodologies specified in section 2263. If a producer blends gasoline components directly to pipelines, tankships, railway tankcars or trucks and trailers, the loading(s) shall be sampled and tested for the sulfur, aromatic hydrocarbon, olefin and benzene content, T50 and T90 by the producer or authorized contractor. The producer shall maintain, for two years from the date of each sampling, records showing the sample date, identity of blend sampled, container or other vessel sampled, final blend volume, sulfur, aromatic hydrocarbon olefin and benzene content, T50 and T90. All gasoline produced by the producer and not tested as California gasoline by the producer as required by this section shall be deemed to have a sulfur, aromatic hydrocarbon, olefin and benzene content, T50 and T90 exceeding the applicable averaging limit standards specified in section 2262, or exceeding the comparable PM averaging limits if applicable, unless the importer demonstrates that the gasoline meets those standards and limits.

(3) Each importer shall sample and test for the sulfur, aromatic hydrocarbon, olefin and benzene content, T50 and T90 in each final blend of California gasoline which the importer has imported by tankship, pipeline, railway tankcars, trucks and trailers, or other means, by collecting and analyzing a representative sample of the gasoline, using the methodologies specified in section 2263. The importer shall maintain, for two years from the date of each sampling, records showing the sample date, product sampled, container or other vessel sampled, the volume of the final blend, sulfur content, aromatic hydrocarbon, olefin and benzene content, T50 and T90. All gasoline imported by the importer and not tested as California gasoline by the importer as required by this section shall be deemed to have a sulfur, aromatic hydrocarbon, olefin and benzene content, T50 and T90 exceeding the applicable averaging limits standards specified in section 2262, or exceeding the comparable PM averaging limit(s) if applicable, unless the importer demonstrates that the gasoline meets those standards and limit(s).

(4) A producer or importer shall provide to the executive officer any records required to be maintained by the producer or importer pursuant to this section within 20 days of a written request from the executive officer if the request is received before expiration of the period during which the records are required to be maintained. Whenever a producer or importer fails to provide records regarding a final blend of California gaso-

line in accordance with the requirements of this section, the final blend of gasoline shall be presumed to have been sold by the producer or importer in violation of the applicable averaging limit standards in section 2262, or the PM averaging limit(s), to which the producer or importer has elected to be subject.

(5) The executive officer may enter into a protocol with any producer or importer for the purpose of specifying alternative sampling, testing, recordkeeping, or reporting requirements which shall satisfy the provisions of sections (a)(2) or (a)(3). The executive officer may only enter into such a protocol if s/he reasonably determines that application of the regulatory requirements under the protocol will be consistent with the state board's ability effectively to enforce the averaging limit standards in section 2262, the averaging limit compliance requirements in section 2262.3(c), and the PM averaging limit(s). Any such protocol shall include the producer's or importer's agreement to be bound by the terms of the protocol.

(b)(1) For each final blend which is sold or supplied by a producer or importer from the party's production facility or import facility, and which contains volumes of gasoline that party has produced and imported and volumes that the party neither produced nor imported, the producer or importer shall establish, maintain and retain adequately organized records containing the following information:

(A) The volume of gasoline in the final blend that was not produced or imported by the producer or importer, the identity of the person(s) from whom such gasoline was acquired, the date(s) on which it was acquired, and the invoice representing the acquisition(s).

(B) The sulfur, benzene, aromatic hydrocarbon, olefin and benzene content, T50 and T90 of the volume of gasoline in the final blend that was not produced or imported by the producer or importer, determined either by (A) sampling and testing, by the producer or importer, of the acquired gasoline represented in the final blend, or (B) written results of sampling and test of the gasoline supplied by the person(s) from whom the gasoline was acquired.

(2) A producer or importer subject to this section (b) shall establish such records by the time the final blend triggering the requirements is sold or supplied from the production or import facility, and shall retain such records for two years from such date. During the period of required

retention, the producer or importer shall make any of the records available to the executive officer upon request.

(c) In the event a producer or importer sells, offers for sale, or supplies, in California, gasoline which the producer claims is not California gasoline, such gasoline shall be presumed to exceed the standards that would be applicable pursuant to this subarticle if it was California gasoline. The producer or importer shall maintain, for two years from the date of any sale or supply of such gasoline, records demonstrating that the gasoline was not California gasoline, or that it complied with all of the standards of this subarticle 2, when it was sold or supplied by the producer.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43013.1, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39010, 39500, 39515, 39516, 41511, 43000, 43013, 43013.1, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 11-16-92; operative 12-16-92 (Register 92, No. 47).
2. Amendment of subsections (a)(1)-(5) and new subsection (c) filed 6-2-95; operative 7-3-95 (Register 95, No. 22).
3. Amendment of section and NOTE filed 8-3-2000; operative 9-2-2000 (Register 2000, No. 31).
4. Amendment of subsection (a)(3) filed 8-20-2001; operative 8-20-2001 pursuant to Government Code section 11343.4 (Register 2001, No. 34).
5. Amendment of subsection (a)(1) filed 12-24-2002; operative 12-24-2002 pursuant to Government Code section 11343.4 (Register 2002, No. 52).

§ 2271. Variances.

(a) *Applications for variances.* Any person who cannot comply with the standards or compliance requirements set forth in sections 2262, 2262.3, 2262.4, 2262.5 or 2262.6 because of reasons beyond the person's reasonable control may apply to the executive officer for a variance. Except for emergency variances as provided in section (h), the application shall be accompanied by a fee of \$6700.00 to cover the costs of processing the variance. If the applicant withdraws the application before the variance hearing is held, \$4100.00 of the fee shall be refunded. The application shall set forth:

- (1) The applicable section(s) from which the variance is sought;
- (2) The specific grounds upon which the variance is sought;

[The next page is 271.]

(3) The proposed date(s) by which compliance with the provisions of the applicable section(s) will be achieved; and

(4) A compliance plan reasonably detailing the method by which compliance will be achieved. That proposed compliance plan shall include increments of progress (i.e., specific events and dates) that describe periodic, measurable steps toward compliance during the proposed term of the variance.

(b)(1) *Notices and public hearings for variances.* Upon receipt of an application for a variance containing the information required in section (a), the executive officer shall hold a hearing to determine whether, or under what conditions and to what extent, a variance from the requirements of the applicable section(s) is necessary and will be permitted. Notice of the time and place of the hearing shall be sent to the applicant by certified mail not less than 20 days prior to the hearing. Notice of the hearing shall also be submitted for publication in the California Regulatory Notice Register and sent to every person who requests such notice, not less than 20 days prior to the hearing.

(2) *Treatment of confidential information.* Information submitted to the executive officer by a variance applicant may be claimed as confidential. Information claimed as confidential shall be handled in accordance with the procedures specified in Title 17, California Code of Regulations (CCR), sections 91000 to 91022 except that: (A) at the time the information is submitted, the submitter must provide accompanying documentation in support of the claim of confidentiality, including the documentation identified in section 91022(c), and (B) for the purposes of this section 2271, the time period specified in section 91022(e)(2) is 10 days instead of 21 days. The executive officer may consider such confidential information in reaching a decision to grant or deny a variance.

(c) *Public participation in the variance process.* At least 20 days prior to the hearing, the application for the variance shall be made available to the public for inspection. Interested members of the public shall be allowed a reasonable opportunity to submit written and oral testimony at the hearing and their testimony shall be considered.

(d) *Necessary findings for granting variances.* The decision to grant or deny a variance shall be based solely upon substantial evidence in the record of the variance proceeding. No variance shall be granted unless the executive officer makes all of the following findings:

(1) That, because of reasons beyond the reasonable control of the applicant, requiring compliance with the applicable section(s) would result in an extraordinary economic hardship;

(2) That the public interest in mitigating the extraordinary hardship by issuing the variance outweighs the public interest in avoiding any increased emissions of air contaminants which would result from issuing the variance; and

(3) That the compliance plan proposed by the applicant can reasonably be implemented and will achieve compliance as expeditiously as possible.

(e) *Factors to be considered in making the necessary findings for granting variances.*

In making the findings specified in section (d), the factors set forth below shall be considered. It is the responsibility of the applicant to provide the information necessary to adequately evaluate these factors.

(1) Regarding the finding specified in section (d)(1):

(A) To demonstrate that noncompliance is "beyond the reasonable control of the applicant," the applicant must demonstrate that reasonably diligent and timely efforts to achieve compliance have been made. Where a variance is sought from initial compliance with the CaRFG Phase 3 requirements, the applicant shall show that timely capital expenditures and efforts to obtain the permits for necessary refinery modifications have been made, and that the applicant has been reasonably diligent in attempting to follow the periodic compliance plans required by section 2269, "Submittal of Compliance Plans." Where a variance is sought due to a breakdown, the applicant shall demonstrate that the breakdown could not have been prevented or mitigated by the application of standard industrial practices. "Standard industrial practices" means elements of de-

sign, methods of operation, and levels of oversight and maintenance that are regarded as generally accepted practice in the applicant's type of business.

(B) To demonstrate that requiring compliance would result in an "extraordinary economic hardship," the applicant must make a substantial showing that no alternative to a variance would eliminate or mitigate the need for a variance. Potential alternatives that the applicant shall address include the following: 1. obtaining complying gasoline from outside sources, or obtaining blending materials that would allow production of complying gasoline, and 2. using the applicable California Predictive Model (as specified in Title 13, CCR, section 2265) to maximize the production of complying gasoline, or to minimize the degree of noncompliance, through the use of a PM alternative gasoline formulation. The applicant shall compare the economics of operations without a variance, for the period over which the variance is proposed, with the economics of operations after the variance compliance plan has been implemented (e.g., the economic hardship during the term of the variance shall be measured against the eventual cost of long-term compliance.) The operations may include facets of the applicant's business other than gasoline operations, if those facets are directly affected by the ability to conduct the gasoline business. An applicant may also address any supply shortages that could result from the failure to grant a variance and the economic affects of such shortages on the persons who do, or could, receive gasoline from the applicant.

(2) Regarding the finding specified in section (d)(2):

(A) The executive officer shall consider the potential effects of issuing or denying the variance on the applicant's customers, the producers of complying fuel, the general public, and upon air quality. The executive officer shall also consider whether granting the variance will place the applicant at a cost advantage over other persons, including those persons who produce complying gasoline.

(B) To evaluate the potential effect upon air quality, the excess emissions from granting the variance shall be estimated as follows:

1. *Exhaust emissions:* The fractional change in emissions from using the variance gasoline shall be estimated with the California Predictive Model (model). Inputs to the model shall be the limits to be placed on the regulated properties of the variance gasoline by the variance conditions and the limits set forth in section 2262 that correspond in form (flat or averaging) to the variance limits. For each air basin in which the variance gasoline will be sold, the estimate of excess exhaust emissions shall be the fractional change in emissions (output by the model), times the estimated fraction of gasoline use in the air basin represented by the variance gasoline, times the inventory of exhaust emissions from gasoline-powered vehicles in the air basin.

2. *Evaporative hydrocarbon emissions:* Excess evaporative emissions shall be estimated for a limit greater than 7.0 pounds per square inch (psi) on the Reid vapor pressure (RVP) of variance gasoline. This estimate shall apply only for the period when RVP is limited to 7.0 psi. The true vapor pressure corresponding to the RVP limit for variance gasoline shall be divided by the true vapor pressure corresponding to RVP at 7.0 pounds per square inch. For each air basin in which the variance gasoline will be sold, the estimate of excess evaporative emissions shall be that ratio, minus 1.0, times the estimated fraction of gasoline use in the air basin represented by the variance gasoline, times the inventory of emissions due to the evaporation of gasoline from all sources in the air basin.

(3) Regarding the finding specified in section (d)(3):

The applicant shall demonstrate why the proposed compliance plan is the most expeditious way to achieve compliance, and the applicant shall demonstrate sufficient control over the implementation of the plan to make the plan practical. In the case of a proposed variance that would begin on December 31, 2003, the compliance plan shall identify and provide a date for each key step that remains to be accomplished for attaining compliance. As applicable, these steps shall include financing, engineering plans, ordering and contracts, receipt of major equipment, commencement and completion of construction, and testing.

(f) *Conditions and fees in variance orders.* In imposing fees and conditions in variance orders, the executive officer shall take into account the potential for such fees and conditions to place the applicant at a cost advantage over other persons, including those persons who produce complying gasoline.

(1) *Conditions.*

(A) Any variance order shall specify a final compliance date by which the requirements of the applicable section(s) will be achieved. Any variance order shall also contain a condition that specified increments of progress necessary to assure timely compliance be achieved, and such other conditions that the executive officer, as a result of the testimony received at the hearing, finds necessary to carry out the purposes of Division 26 of the Health and Safety Code. Such conditions may include, but are not limited to, reporting requirements, limitations on the gasoline specifications, and the elements of the variance compliance plan as proposed by the applicant, with any modifications made by the executive officer.

(B) Any variance order granting a variance from 2262.4 shall impose a substitute gasoline Reid vapor pressure limit as stringent as feasible under the circumstances, in no case to exceed 9.0 pounds per square inch. For areas where, and in seasons when, federal regulations require a lesser maximum Reid vapor pressure limit, a variance order shall not impose a Reid vapor pressure limit that is less stringent than the federal limit.

(C) The executive officer may require, as a condition of granting a variance, that a cash bond, or a bond executed by two or more good and sufficient sureties or by a corporate surety, be posted by the party to whom the variance was granted to assure performance of any construction, alteration, repair, or other work required by the terms and conditions of the variance. Such bond may provide that, if the party granted the variance fails to perform such work by the agreed date, the cash bond shall be forfeited to the state board, or the corporate surety or sureties shall have the option of promptly remedying the variance default or paying to the state board an amount, up to the amount specified in the bond, that is necessary to accomplish the work specified as a condition of the variance.

(D) The variance order shall limit the amount of variance gasoline sold or supplied from the applicant's production or import facility during each 30-day period of the variance, or during such other time period as the executive officer may specify. In determining the limit on the amount of variance gasoline, the Executive Officer shall consider available data on the applicant's production of complying gasoline. The limit shall not exceed the applicant's capacity to produce complying gasoline.

(E) The variance order shall specify that once a quantity of variance gasoline has been sold or supplied by the applicant in accordance with the variance, subsequent transactions involving that variance gasoline by another producer, distributor, retailer, end user, or other person shall also be exempt from the applicable requirements.

(2) *Fees.* A fee of \$0.15 shall be levied on the applicant for each gallon of gasoline sold or released for sale under variance during the term of the variance. The fee shall be paid by the applicant periodically, in advance of the sale or release of variance gasoline in each period. The executive director shall specify the payment schedule in the variance order.

(g) *Duration of variances.*

(1) A variance shall be granted only for the minimum period necessary for the applicant to attain compliance with the applicable regulations. Except for a variance related to a physical catastrophe, no variance shall have a duration of more than 120 days; however, a variance may be extended for up to 90 additional days if the applicant demonstrates that the requirements of sections (d) and (e) are met. In order to receive an extension of a variance, the applicant must submit an application as specified in section (a), and a hearing must be held as specified in sections (b) and (c).

(2) *Variances related to a physical catastrophe.* Notwithstanding the provisions of section (g)(1), a refiner may be granted a variance with a duration of more than 120 days, or a variance extension of more than 90 days, if the applicant demonstrates that the additional time is necessary due to a physical catastrophe, and the requirements of sections (d) and (e)

are met. In order to receive a variance or variance extension, the applicant must submit an application as specified in section (a) and a hearing must be held as specified in sections (b) and (c). As used in this section, "physical catastrophe" means a sudden unforeseen emergency beyond the reasonable control of the refiner, causing the severe reduction or total loss of one or more critical refinery units that materially impact the refiner's ability to produce complying gasoline. "Physical catastrophe" does not include events which are not physical in nature such as design errors or omissions, financial or economic burdens, or any reduction in production that is not the direct result of qualifying physical damage.

(h) *Emergency variances.*

(1) The executive officer may, after holding a hearing without complying with the provisions of sections (b) and (c), issue an emergency variance to a person from the requirements of the applicable section(s) upon a showing of reasonably unforeseeable extraordinary hardship and good cause that a variance is necessary. The applicant for an emergency variance shall pay a fee of \$2500.00. Section (f) shall apply to emergency variances, except that a variance order is not required to specify a final compliance date by which the requirements of the applicable sections(s) will be achieved.

(2) No emergency variance may have a duration of more than 45 days. If the applicant for an emergency variance does not demonstrate that he or she can comply with the provisions of the applicable section(s) within such 45-day period, an emergency variance shall not be granted unless the applicant makes a prima facie demonstration that the findings set forth in section (d) should be made. The executive officer shall maintain a list of persons who have informed the executive officer in writing of their desire to be notified by telephone in advance of any hearing held pursuant to section (h), and shall provide advance telephone notice to any such person as soon as practicable, considering the nature of the emergency.

(i) *Situations in which variances shall cease to be effective.* A variance shall cease to be effective upon failure of the party to whom the variance was granted substantially to comply with any condition of the variance.

(j) *Modification and revocation of variances.* Upon the application of any person, the executive officer may review and for good cause modify or revoke a variance from the requirements the applicable section(s) after holding a hearing in accordance with the provisions of sections (b) and (c).

NOTE: Authority cited: Sections 39600, 39601, 43013, 43013.1, 43013.2, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975). Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 11-16-92; operative 12-16-92 (Register 92, No. 47).
2. Change without regulatory effect amending subsections (a), (a)(3)-(a)(4) and (d)(1)-(d)(3) filed 8-5-93 pursuant to section 100, title 1, California Code of Regulations (Register 93, No. 32).
3. Amendment of section and NOTE filed 2-15-96 as an emergency; operative 2-15-96 (Register 96, No. 7). A Certificate of Compliance must be transmitted to OAL by 6-14-96 or emergency language will be repealed by operation of law on the following day.
4. Certificate of Compliance as to 2-15-96 order transmitted to OAL 4-4-96 and filed 5-16-96 (Register 96, No. 20).
5. Amendment of section and NOTE filed 8-3-2000; operative 9-2-2000 (Register 2000, No. 31).
6. Amendment of subsection (e)(3) filed 12-24-2002; operative 12-24-2002 pursuant to Government Code section 11343.4 (Register 2002, No. 52).

§ 2272. CaRFG Phase 3 Standards for Qualifying Small Refiners.

(a) *CaRFG Phase 3 standards for qualifying small refiners.* In place of the CaRFG Phase 3 standards set forth in section 2262, a qualifying small refiner may elect to have a final blend of California gasoline supplied from the small refiner's refinery subject to the "small refiner CaRFG Phase 3 standards," which are identical to the CaRFG Phase 3 standards in section 2262 except that: (i) the flat limit for benzene content is 1.00 percent by volume (vol.%) instead of 0.80 vol.%, (ii) the flat limit

for aromatics content is 35.0 vol.% instead of 25.0 vol.%, (iii) the flat limit for T50 is 220° F. instead of 213° F., and (iv) the flat limit for T90 is 312° F. instead of 305° F. This election may only be made if the small refiner has been issued a currently effective certification pursuant to section (b) and the gasoline qualifies for treatment under section (c).

(b) *Certification of small refiners.*

(1) A small refiner wishing to produce gasoline subject to this section shall submit to the executive officer an application for certification on the Air Resources Board's ARB/SSD/CPB Form 00-3-1, for each of the small refiner's California refineries. The application shall be executed by a responsible corporate officer under penalty of perjury.

(2) The small refiner's application shall set forth: [A] the crude oil capacity of the refinery since January 1, 1978; [B] the crude oil capacities of all the refineries in California and the United States which are owned or controlled by, or under common ownership or control with, the small refiner since September 1, 1988; [C] data demonstrating that the refinery has the capacity to produce liquid fuels by distilling petroleum; and [D] a demonstration that the small refiner's California refinery was used in 1998 and 1999 to produce and supply California gasoline meeting the CaRFG Phase 2 standards.

(3) Within 30 days of receipt of the application, the executive officer shall grant or deny it in writing. The executive officer shall grant the application if he or she determines that: [A] the application contains all of the information identified in sections (b)(1) and (2) above, and [B] the applicant meets the definition of small refiner. Any denial of an application shall include a statement of the reasons for denial.

(c) *Criteria for qualifying gasoline.* Gasoline shall only be subject to treatment under this section if the small refiner demonstrates all of the following:

(1) The gasoline was produced by the small refiner at the small refiner's California refinery.

(2) The gasoline was supplied from the small refiner's California refinery in a calendar quarter in which 25 percent or more of the gasoline that was produced by the small refiner and that was supplied from the refinery in the calendar quarter was refined at the small refinery from crude oil. The volume of oxygenates in the gasoline shall not be counted in making this calculation. The period from December 31, 2003 through March 31, 2004 shall be treated as a calendar quarter under this section (c)(2).

(3) For the period December 31, 2003, through December 31, 2004, and for each subsequent calendar year, the gasoline was supplied from the small refiner's California refinery before the full qualifying volume of gasoline produced by the small refiner had been supplied from the refinery during that period or year. In calculating the volume of gasoline supplied from the refinery, the volume of oxygenates in the gasoline shall not be counted. Gasoline that is designated by the small refiner as subject to all of the CaRFG Phase 3 standards in section 2262, and is reported to the executive officer pursuant to a protocol entered into by the small refiner and the executive officer, shall not be counted against the qualifying volume.

(4) At the time the gasoline was supplied from the small refiner's refinery, the small refiner met the definition of a small refiner.

(5) The excess emissions of hydrocarbons, oxides of nitrogen, and potency-weighted toxics are offset pursuant to section 2282, title 13, California Code of Regulations. The excess emissions from gasoline subject to the small refiner CaRFG Phase 3 standards are: 0.0206 pounds of exhaust hydrocarbons per barrel, 0.0322 pounds of oxides of nitrogen per barrel, and the potency-weighted toxic emissions equivalent of 0.0105 pounds of benzene per barrel.

(d) *Compliance with applicable federal RFG requirements.* Any small refiner subject to this section shall comply with all applicable requirements of the federal reformulated gasoline regulations in 40 CFR Part 80 Subpart D, commencing with § 80.40.

(e) *Additional reporting requirements for small refiners.*

(1) In addition to the requirements of section 2270, each small refiner who qualifies for treatment under this section shall submit to the execu-

tive officer reports containing the information set forth below for each of the small refiner's California refineries, starting on the date on which a qualifying small refiner supplies from its refinery gasoline subject to the small refiner CaRFG Phase 3 standards. The reports shall be executed in California under penalty of perjury, and must be received within the time indicated below. December 31, 2003 through January 31, 2004 shall be treated as a month.

(A) The quantity of all gasoline, produced by the small refiner, that is supplied from the small refinery in each month, within 15 days after the end of the month, the quantity of all such gasoline that is California gasoline subject to the small refiner CaRFG3 standards, and the quantity of all such gasoline that is California gasoline not subject to the small refiner CaRFG3 standards;

(B) The identity and volume of each oxygenate contained in the gasoline described in section (e)(1)(A) above, within 15 days after the end of the month;

(C) For each calendar quarter, a statement whether 25 percent or more of the gasoline that was produced by the small refinery and that was supplied from the refinery in the calendar quarter was refined at the small refinery from crude oil, within 15 days after the close of such quarter;

(D) The date, if any, on which the small refiner completes treatment from its small refinery in the period December 31, 2003 through December 31, 2004, and in each subsequent calendar year, of the small refiner's qualifying volume of gasoline produced by the small refiner, calculated as described in section (c)(3), within 5 days after such date;

(E) Within 10 days after project completion, any refinery addition or modification which would affect the qualification of the refiner as a small refiner pursuant to the definition in section 2260(a)(22); and

(F) Any change of ownership of the small refiner or the small refiner's refinery, within 10 days after such change of ownership.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39010, 39500, 39515, 39516, 40000, 41511, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

1. New section filed 11-16-92; operative 12-16-92 (Register 92, No. 47).
2. Amendment of subsections (c)(2)-(3) filed 2-28-96; operative 2-28-96 pursuant to Government Code section 11343.4(d) (Register 96, No. 9).
3. Amendment of section heading, section and NOTE filed 8-3-2000; operative 9-2-2000 (Register 2000, No. 31).
4. Amendment of subsection (c)(5) filed 8-20-2001; operative 8-20-2001 pursuant to Government Code section 11343.4 (Register 2001, No. 34).
5. Amendment filed 12-24-2002; operative 12-24-2002 pursuant to Government Code section 11343.4 (Register 2002, No. 52).
6. Amendment of subsection (e)(1)(B) filed 5-1-2003; operative 5-1-2003 pursuant to Government Code section 11343.4 (Register 2003, No. 18).

§ 2273. Labeling of Equipment Dispensing Gasoline Containing MTBE.

(a) MTBE labeling requirement. All devices dispensing gasoline containing methyl tertiary butyl ether (MTBE) at filling stations, garages or other outlets where petroleum products are sold or offered for retail shall be marked with a conspicuous label at all times the product is offered for retail sale.

(1) The label shall state that the gasoline being dispensed "Contains MTBE. The State of California has determined that the use of this chemical presents a significant risk to the environment."

(2) The label shall be contrasting in color to the gasoline dispensing equipment and have capitalized lettering using not less than one-eighth inch high letters, except that "MTBE" shall have lettering using not less than five-eighths inch high letters with a stroke of not less than one-eighth inch in width and "Contains" shall have lettering using not less than one-quarter inch high letters.

(3) The label shall be placed on the gasoline dispensing equipment's vertical surface, on each side with gallonage and price meters.

(4) The label shall be conspicuous and legible to a customer when viewed from the driver's position inside the car.

(5) The label shall be capable of withstanding extremes of weather conditions for at least one year and shall be resistant to gasoline, oil, grease, solvents, detergents, and water. Damaged labels that are not legible shall be replaced.

(b) Residual levels of MTBE.

(1) The labeling requirements in section 2273(a) do not apply to equipment dispensing gasoline from a storage tank containing gasoline having an MTBE content of less than 0.6 percent by volume, as determined by American Society of Testing and Materials (ASTM) Test Method D 4815-99, which is incorporated herein by reference, or any other test method determined by the executive officer to give equivalent results.

(2) The labeling requirements in section 2273(a) do not apply where the equipment is dispensing gasoline from a storage tank containing gasoline having an MTBE content of less than 3.0 percent by volume, as determined by a test method identified in section 2273(b)(1), and the operator of the retail outlet demonstrates that the conditions in either section 2273(b)(2)(A), (B), (C) or (D) have occurred.

(A) The gasoline storage tank has been consecutively drained and refilled to at least 95 percent of capacity with gasoline containing less than 0.6 volume percent MTBE as specified in the following table.

<i>The percent of the total gasoline storage tank capacity that is emptied prior to refilling</i>	<i>The consecutive number of times the gasoline storage tank must be drained and refilled</i>
90%	2
80%	3
70%	3
60%	4
50%	6
40%	8
30%	11
20%	19
10%	60

(B) The gasoline storage tank has been consecutively drained and refilled to at least 95 percent of capacity with gasoline containing less than 0.6 volume percent MTBE according to the following equation.

$$N = -(0.222) + \log C_0 / \log (V_L / V_T)$$

Where:

N = The number of times the gasoline storage tank must be drained and refilled. If the resultant number is not an integer, it shall be rounded up to the nearest integer.

C₀ = The initial concentration, in volume percent, of MTBE in the gasoline storage tank.

V_L = The volume of gasoline (in gallons) left in the gasoline storage tank after each draining.

V_T = 95% of the capacity (in gallons) of the gasoline storage tank.

(C) The following equation has been applied to consecutive drainings and fillings of the gasoline in the storage tank, and the equation shows an MTBE content of less than 0.6 percent by volume. The initial MTBE concentration (C₀) of the gasoline in the storage tank when the equation is first applied shall be deemed to be 15 volume percent unless the MTBE content is determined in accordance with a testing methodology identified in section 2273(b)(1). For purposes of the equation, [i] the MTBE concentration of gasoline containing less than 0.6 volume percent MTBE shall be deemed to be zero, and [ii] the MTBE concentration of gasoline delivered with an invoice or other documentation stating that the gasoline contains MTBE shall be deemed to be 15 volume percent or, if the concentration of MTBE is stated on the documentation, that stated concentration. The executive officer shall make available upon request a computer program that may be used in applying the equation.

$$C = C_0(V_L / (V_L + V_D)) + C_D(V_D / (V_L + V_D))$$

Where:

C = The final concentration, in volume percent, of MTBE in the gasoline storage tank after the fuel delivery.

C₀ = The initial concentration, in volume percent, of MTBE in the gasoline storage tank before the fuel delivery.

C_D = The concentration, in volume percent, of MTBE in the fuel being delivered to the gasoline storage tank.

V_L = The volume of gasoline (in gallons) left in the gasoline storage tank prior to fuel delivery.

V_D = The volume of gasoline (in gallons) delivered to the gasoline storage tank.

(D) The gasoline has been consecutively drained and refilled in accordance with an alternative protocol which the executive officer has previously found in writing provides assurances of MTBE removal equivalent to the conditions in section 2273(b)(2)(A), (B), and (C).

(c) Responsibility for compliance. The operator of the retail gasoline outlet shall be responsible for compliance with the labeling requirements in section 2273(a).

(d) Deliveries of gasoline to retail outlets.

(1) Any person delivering gasoline to a retail gasoline outlet from December 16, 1999 through December 30, 2003 shall provide to the outlet operator or responsible employee, at the time of delivery of the fuel, an invoice, bill of lading, shipping paper, or other documentation which states whether the gasoline does or does not contain 0.6 percent by volume or more MTBE, and which may identify the volumetric amount of MTBE in the gasoline. For purposes of determining compliance with this section 2273(d), the volumetric MTBE content of gasoline shall be determined by ASTM Test Method D 4815-99, which is incorporated herein by reference, or any other test method determined by the executive officer to give equivalent results.

(2) No person shall deliver gasoline containing 0.6 percent by volume or more MTBE to a storage tank at a retail gasoline outlet unless at the time of the delivery either:

(A) All pumps dispensing gasoline from the storage tank are labeled as containing MTBE, or

(B) The party delivering the gasoline, or on whose behalf the delivery is being made, can demonstrate that it has received and is maintaining a nonsuperseded written notification from the operator of the retail gasoline outlet that all of the outlet's gasoline dispensing equipment, or all of the outlet's dispensing equipment dispensing gasoline of the grade being delivered, is labeled as containing MTBE.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39010, 39500, 39515, 39516, 41511, 43000, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 11-16-99; operative 12-16-99 (Register 99, No. 47).
2. Amendment of subsections (b)(1) and (d)(1) filed 8-20-2001; operative 8-20-2001 pursuant to Government Code section 11343.4 (Register 2001, No. 34).
3. Amendment of subsections (a)(1) and (d)(1) filed 5-1-2003; operative 5-1-2003 pursuant to Government Code section 11343.4 (Register 2003, No. 18).

§ 2273.5. Documentation Provided with Delivery of Gasoline to Retail Outlets.

Any person delivering gasoline to a retail gasoline outlet shall provide to the outlet operator or responsible employee, at the time of delivery of the fuel, an invoice, bill of lading, shipping paper, or other documentation which states whether the gasoline does or does not contain ethanol, and which may identify the volumetric amount of ethanol in the gasoline. If neither the outlet operator nor a responsible employee is at the outlet at the time of delivery, the documentation may be left at a reasonably secure location at the outlet.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39010, 39500, 39515, 39516, 41511, 43000, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n v.*

Orange County Air Pollution Control District, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 5-1-2003; operative 5-1-2003 pursuant to Government Code section 11343.4 (Register 2003, No. 18).

§ 2275. Requirements.

HISTORY

1. Amendment filed 6-6-75 as procedural and organizational; effective upon filing (Register 75, No. 23).
2. Change without regulatory effect renumbering and relocating chapter heading and renumbering and amending former section 2275 to section 2230 filed 9-17-91 pursuant to section 100, title 1, California Code of Regulations (Register 92, No. 4).
3. Editorial correction deleting chapter heading and amending HISTORY 2. (Register 92, No. 50).

§ 2276. Other Criteria.

HISTORY

1. Change without regulatory effect renumbering former section 2276 to section 2231 and adding NOTE filed 9-17-91 pursuant to section 100, title 1, California Code of Regulations (Register 92, No. 4).

Article 2. Standards for Diesel Fuel

§ 2280. Sulfur Content of Motor Vehicle Diesel Fuel Sold in the South Coast Air Basin or Ventura County Before October 1, 1993.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 39606, 41511, 43000, 43013, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. Change without regulatory effect adding new article heading, and relocating and amending former subsections of section 2252 to new section 2280 filed 9-17-91 pursuant to section 100, title 1, California Code of Regulations (Register 92, No. 4).
2. Change without regulatory effect repealing section filed 3-18-96 pursuant to section 100, title 1, California Code of Regulations (Register 96, No. 12).

§ 2281. Sulfur Content of Diesel Fuel.

(a) Regulatory Standard.

(1) *500 parts per million sulfur standard.* On or after October 1, 1993, no person shall sell, offer for sale, or supply any vehicular diesel fuel which has a sulfur content exceeding 500 parts per million by weight. Once the 15 parts per million sulfur content standard becomes applicable to an activity in accordance with the phase-in schedule in subsection (a)(3), the 500 parts per million sulfur content standard shall no longer apply to that activity.

(2) *15 parts per million sulfur standard.* Starting June 2006 in accordance with the phase-in schedule in subsection (a)(3), no person shall sell, offer for sale, supply or offer for supply any vehicular diesel fuel having a sulfur content exceeding 15 parts per million by weight.

(3) *2006 phase-in schedule.* The 15 parts per million sulfur standard in section (a)(2) shall apply in place of the 500 parts per million sulfur standard in section (a)(1):

(A) Starting June 1, 2006 to all sales, supplies or offers of vehicular diesel fuel from the production facility or import facility at which it was produced or imported.

(B) Starting July 15, 2006 to all sales, supplies, or offers of vehicular diesel fuel except for transactions directly involving:

1. The fueling of motor vehicles at a retail outlet or bulk purchaser-consumer facility, or

2. The delivery of vehicular diesel fuel from a bulk plant to a retail outlet or purchaser-consumer facility.

(C) Starting September 1, 2006 to all sales, supplies, offers or movements of vehicular diesel, including transactions directly involving the fueling of motor vehicles at a retail outlet or bulk purchaser-consumer facility.

(4) *Phase-in of 2006 standard at low-throughput facilities.* The 15 parts per million sulfur standard in section (a)(2) shall not apply to transactions directly involving the fueling of motor vehicles at a retail outlet or bulk purchaser-consumer facility, where the person selling, offering, or supplying the diesel fuel demonstrates as an affirmative defense that the exceedance of the pertinent standard was caused by diesel fuel delivered to the retail outlet or bulk purchaser-consumer facility prior to July 15, 2006, or delivered to the retail outlet or bulk purchaser-consumer facility directly from a bulk plant prior to September 1, 2006.

(5) *Applicability of standards to California nonvehicular diesel fuel.*

(A) Activities involving California nonvehicular diesel fuel (other than diesel fuel offered, sold or supplied solely for use in locomotives or marine vessels) are also subject to this section to the extent required by section 93114, title 17, California Code of Regulations. As adopted, section 93114 requires each air pollution control or air quality management district by December 12, 2004 to treat this section 2281 as applying to California nonvehicular diesel fuel (other than diesel fuel offered, sold or supplied solely for use in locomotives or marine vessels) as if it were vehicular diesel fuel, and to enforce those requirements regarding California nonvehicular diesel fuel, unless the district has proposed its own airborne toxic control measure to reduce particulate emissions from diesel-fueled engines through standards for nonvehicular diesel fuel.

(B) Activities involving California nonvehicular diesel fuel used in harborcraft and most diesel-electric intrastate locomotives are also subject to this section 2281 as if the fuel were vehicular diesel fuel, to the extent required by section 2299, title 13, California Code of Regulations, and section 93117, title 17, California Code of Regulations. As adopted, these regulations make nonvehicular diesel fuel used in most harborcraft in the South Coast Air Quality Management District subject to the requirements of this section 2281 starting January 1, 2006, and make all California nonvehicular diesel fuel used in most harborcraft and diesel-electric intrastate locomotives subject to this section 2281 starting January 1, 2007.

(6) Subsections (a)(1) and (2) shall not apply to a sale, offer for sale, or supply of diesel fuel to a refiner where the refiner further processes the diesel fuel at the refiner's refinery, prior to any subsequent sale, offer for sale, or supply of the diesel fuel.

(b) Definitions.

For the purposes of this section:

(0.2) "Bulk purchaser-consumer" means a person that purchases or otherwise obtains diesel fuel in bulk and then dispenses it into the fuel tanks of motor vehicles owned or operated by the person.

(0.5) "Bulk plant" means an intermediate diesel fuel distribution facility where delivery of diesel fuel to and from the facility is solely by truck.

(0.8) "California nonvehicular diesel fuel" means any diesel fuel that is not vehicular diesel fuel and that is sold or made available for use in engines in California.

(1) "Diesel fuel" means any fuel that is commonly or commercially known, sold or represented as diesel fuel, including any mixture of primarily liquid hydrocarbons — organic compounds consisting exclusively of the elements carbon and hydrogen — that is sold or represented as suitable for use in an internal combustion, compression-ignition engine.

(2) "Executive Officer" means the executive officer of the Air Resources Board, or his or her designee.

(3) "Further process" means to perform any activity on diesel fuel, including distillation, desulfurization, or blending, for the purpose of bringing the diesel fuel into compliance with the standard in subsection (a)(1).

(3.5) "Marine vessel" has the meaning set forth in section 39037.1 of the Health and Safety Code.

(4) "Motor vehicle" has the same meaning as defined in section 415 of the Vehicle Code.

(5) "Produce" means to convert liquid compounds which are not diesel fuel into diesel fuel.

(6) "Producer" means any person who produces vehicular diesel fuel in California.

(7) "Refiner" means any person who owns, leases, operates, controls or supervises a refinery.

(8) "Refinery" means a facility that produces liquid fuels by distilling petroleum.

(9) "Small refiner" means any refiner who owns or operates a refinery in California that:

(A) Has and at all times had since January 1, 1978, a crude oil capacity of not more than 50,000 barrels per stream day;

(B) Has not been at any time since September 1, 1988, owned or controlled by any refiner that at the same time owned or controlled refineries in California with a total combined crude oil capacity of more than 50,000 barrels per stream day; and

(C) Has not been at any time since September 1, 1988, owned or controlled by any refiner that at the same time owned or controlled refineries in the United States with a total combined crude oil capacity of more than 137,500 barrels per stream day.

(10) "Stream day" means 24 consecutive hours of actual operation of a refinery.

(11) "Supply" means to provide or transfer a product to a physically separate facility, vehicle, or transportation system.

(12) "Vehicular diesel fuel" means any diesel fuel (A) which is not conspicuously identified as a fuel which may not lawfully be dispensed into motor vehicle fuel tanks in California; or (B) which the person selling, offering for sale, or supplying the diesel fuel knows will be dispensed into motor vehicle fuel tanks in California; or (C) which the person selling, offering for sale, or supplying the diesel fuel in the exercise of reasonable prudence should know will be dispensed into motor vehicle fuel tanks in California, and that is not the subject of a declaration under penalty of perjury by the purchaser, offeree or recipient stating that s/he will not sell, offer for sale, or transfer the fuel for dispensing, or dispense the fuel, into motor vehicle fuel tanks in California.

(c) Test Method.

(1) *Test Method for 500 ppm sulfur standard.* The sulfur content of diesel fuel limitation of 500 parts per million specified in subsection (a)(1) shall be determined by ASTM Test Method D 2622-94, which is incorporated herein by reference, or any other test method determined by the executive officer to give equivalent results.

(2) *Test Method for 15 ppm sulfur standard.* The sulfur content of diesel fuel limitation of 15 parts per million specified in subsection (a)(2) shall be determined by ASTM Test Method D 5453-93, which is incorporated herein by reference, or any other test method determined by the executive officer to give equivalent results.

(d) Presumed Sulfur Content of Diesel Fuel Represented As Being for Nonvehicular Use.

(1) All diesel fuel which has been identified or represented as a fuel which may not be dispensed into motor vehicles in California, and which would otherwise be subject to the 500 parts per million by weight sulfur content standard in subsection (a)(1), shall be deemed to have a sulfur content exceeding 500 parts per million by weight, as determined by a test method identified in subsection (c)(1), unless the fuel is tested in accordance with a method identified in subsection (c)(1) and is shown to have a sulfur content of 500 parts per million by weight or less.

(2) All diesel fuel which has been identified or represented as a fuel which may not be dispensed into motor vehicles in California, and which would otherwise be subject to the 15 parts per million by weight sulfur content standard in subsection (a)(2), shall be deemed to have a sulfur content exceeding 15 parts per million by weight, as determined by a test method identified in subsection (c)(2), unless the fuel is tested in accordance with a method identified in subsection (c)(2) and is shown to have a sulfur content of 15 parts per million by weight or less.

(e) Variances.

(1) Any person who cannot comply with the requirements set forth in subsection (a)(1) or (a)(2) as applicable because of reasons beyond the person's reasonable control may apply to the executive officer for a variance. The application shall set forth:

(A) the specific grounds upon which the variance is sought;

(B) the proposed date(s) by which compliance with the provisions of subsection (a)(1) or (a)(2) will be achieved; and

(C) a plan reasonably detailing the method by which compliance will be achieved.

(2) Upon receipt of an application for a variance containing the information required in subsection (e)(1), the executive officer shall hold a hearing to determine whether, or under what conditions and to what extent, a variance from the requirements in subsection (a)(1) or (a)(2) as applicable is necessary and will be permitted. Notice of the time and place of the hearing shall be sent to the applicant by certified mail not less than 20 days prior to the hearing. Notice of the hearing shall also be submitted for publication in the California Regulatory Notice Register and sent to every person who requests such notice, not less than 20 days prior to the hearing.

(3) At least 20 days prior to the hearing, the application for the variance shall be made available to the public for inspection. Interested members of the public shall be allowed a reasonable opportunity to testify at the hearing and their testimony shall be considered.

(4) No variance shall be granted unless all of the following findings are made:

(A) that, because of reasons beyond the reasonable control of the applicant, requiring compliance with subsection (a)(1) or (a)(2) as applicable would result in an extraordinary economic hardship;

(B) that the public interest in mitigating the extraordinary hardship to the applicant by issuing the variance outweighs the public interest in avoiding any increased emissions of air contaminants which would result from issuing the variance.

(C) that the compliance plan proposed by the applicant can reasonably be implemented and will achieve compliance as expeditiously as possible.

(5) Any variance order shall specify a final compliance date by which the requirements in subsection (a)(1) or (a)(2) as applicable will be achieved. Any variance order shall also contain a condition that specified increments of progress necessary to assure timely compliance be achieved, and such other conditions, including limitations on the sulfur content of diesel fuel produced for use in motor vehicles, that the executive officer, as a result of the testimony received at the hearing, finds necessary to carry out the purposes of division 26 of the Health and Safety Code.

(6) The executive officer may require, as a condition of granting a variance, that a cash bond, or a bond executed by two or more good and sufficient sureties or by a corporate surety, be posted by the party to whom the variance was granted to assure performance of any construction, alteration, repair, or other work required by the terms and conditions of the variance. Such bond may provide that, if the party granted the variance fails to perform such work by the agreed date, the cash bond shall be forfeited to the state board, or the corporate surety or sureties shall have the option of promptly remedying the variance default or paying to the state board an amount, up to the amount specified in the bond, that is necessary to accomplish the work specified as a condition of the variance.

(7) No variance from the requirements set forth in subsection (a)(1) or (a)(2) as applicable based on a plan for compliance which includes the installation of major additional equipment shall be issued to a producer where installation of the equipment was not included in a compliance plan or first update submitted pursuant to subsection (f). No such variance shall have a duration of more than three years.

(8) No variance which is issued due to conditions of breakdown, repair, or malfunction of equipment shall have a duration, including extensions, of more than six months.

(9) The executive officer may, after holding a hearing without complying with the provisions of subsections (e)(2) and (e)(3), issue an emergency variance to a person from the requirements of subsections (a)(1) or (a)(2) as applicable upon a showing of reasonably unforeseeable extraordinary hardship and good cause that a variance is necessary. In connection with the issuance of an emergency variance, the executive officer

may waive the requirements of subsection (e)(6). No emergency variance may extend for a period of more than 45 days. If the applicant for an emergency variance does not demonstrate that he or she can comply with the provisions of subsection (a)(1) or (a)(2) as applicable within such 45-day period, an emergency variance shall not be granted unless the applicant makes a prima facie demonstration that the findings set forth in subsection (e)(4) should be made. The executive officer shall maintain a list of persons who have informed the executive officer in writing of their desire to be notified by telephone in advance of any hearing held pursuant to this paragraph (e)(9), and shall provide advance telephone notice to any such person.

(10) A variance shall cease to be effective upon failure of the party to whom the variance was granted substantially to comply with any condition.

(11) Upon the application of any person, the executive officer may review and for good cause modify or revoke a variance from the requirements of subsection (a)(1) or (a)(2) as applicable after holding a hearing in accordance with the provisions of subsections (e)(2) and (e)(3).

(g) Submittal of Compliance Plan. Each producer shall, by September 1, 2004, submit to the executive officer a plan showing the producer's schedule for achieving compliance with subsection (a)(2). Each producer shall, by July 1, 2005, submit an update of the plan.

NOTE: Authority cited: Sections 39600, 39601, 39667, 43013, 43018, and 43101 of the Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39010, 39500, 39515, 39516, 39667, 41511, 43000, 43016, 43018, and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. Change without regulatory effect renumbering former section 2255 to section 2281 filed 9-17-91 pursuant to section 100, title 1, California Code of Regulations (Register 92, No. 4).
2. New subsections (h)–(h)(5) filed 10-21-93 as an emergency; operative 10-21-93 (Register 93, No. 43). A Certificate of Compliance must be transmitted to OAL by 2-18-94 or emergency language will be repealed by operation of law on the following day.
3. Repeal of subsections (h)(1)–(h)(5) by operation of Government Code section 11346.1(f) (Register 94, No. 18).
4. Amendment of subsection (c) filed 7-25-97; operative 8-24-97 (Register 97, No. 30).
5. Amendment filed 7-15-2004; operative 8-14-2004 (Register 2004, No. 29).
6. New subsection (a)(5)(A) designator and new subsection (a)(5)(B) filed 7-5-2005; operative 8-4-2005 (Register 2005, No. 27).

§ 2282. Aromatic Hydrocarbon Content of Diesel Fuel.

(a) Regulatory Standard.

(1) On or after October 1, 1993, except as otherwise provided in this subsection (a), no person shall sell, offer for sale, or supply any vehicular diesel fuel unless:

(A) The aromatic hydrocarbon content does not exceed 10 percent by volume; or

(B) The vehicular diesel fuel has been reported in accordance with all of the requirements of subsection (d), and:

1. The aromatic hydrocarbon content does not exceed the designated alternative aromatic hydrocarbon limit, and

2. Where the designated alternative aromatic hydrocarbon limit exceeds 10 percent by volume, the excess aromatic hydrocarbon content is fully offset in accordance with subsection (d); or

(C) The vehicular diesel fuel has been reported in accordance with all of the requirements of subsection (g)(7), and meets all of the specifications for a certified diesel fuel formulation identified in an applicable Executive Order issued pursuant to subsection (g)(6); or

(D) The vehicular diesel fuel has been reported in accordance with all of the requirements of subsection (h)(2), and meets all of the designated equivalent limits set forth in subsection (h)(1); or

(E) The vehicular diesel fuel is exempt under subsection (e) and:

1. The aromatic hydrocarbon content does not exceed 20 percent by volume; or

2. The vehicular diesel fuel has been reported in accordance with all of the requirements of subsection (d) and

a. The aromatic hydrocarbon content does not exceed the designated alternative limit, and

b. Where the designated alternative limit exceeds 20 percent by volume, the excess aromatic hydrocarbon content is fully offset in accordance with subsection (d), treating all references in subsection (d) to 10 percent by volume as references to 20 percent by volume; or

3. The vehicular diesel fuel has been reported in accordance with all of the requirements of subsection (g)(7), and meets all of the specifications for a certified diesel fuel formulation identified in an applicable Executive Order issued pursuant to subsections (g)(6) and (g)(8).

(2) Applicability of standards to California nonvehicular diesel fuel.

(A) Activities involving California nonvehicular diesel fuel (other than diesel fuel offered, sold or supplied solely for use in locomotives or marine vessels) are also subject to this section to the extent required by section 93114, title 17, California Code of Regulations. As adopted, section 93114 requires each air pollution control or air quality management district by December 12, 2004 to treat this section 2282 as applying to California nonvehicular diesel fuel (other than diesel fuel offered, sold or supplied solely for use in locomotives or marine vessels) as if it were vehicular diesel fuel, and to enforce those requirements regarding California nonvehicular diesel fuel, unless the district has proposed its own airborne toxic control measure to reduce particulate emissions from diesel-fueled engines through standards for nonvehicular diesel fuel.

(B) Activities involving California nonvehicular diesel fuel used in harborcraft and most diesel-electric intrastate locomotives are also subject to this section 2282 as if the fuel were vehicular diesel fuel, to the extent required by section 2299, title 13, California Code of Regulations, and section 93117, title 17, California Code of Regulations. As adopted, these regulations make nonvehicular diesel fuel used in most harborcraft in the South Coast Air Quality Management District subject to the requirements of this section 2282 starting January 1, 2006, and make all California nonvehicular diesel fuel used in most harborcraft and diesel-electric intrastate locomotives subject to this section 2282 starting January 1, 2007.

(3) Subsection (a)(1) shall not apply to a sale, offer for sale, or supply of vehicular diesel fuel to a refiner where the refiner further processes the diesel fuel at the refiner's refinery prior to any subsequent sale, offer for sale, or supply of the diesel fuel.

(b) Definitions.

For the purposes of this section:

(0.5) "Aromatic hydrocarbon" has the same meaning as "total aromatic hydrocarbons."

(0.7) "California nonvehicular diesel fuel" means any diesel fuel that is not vehicular diesel fuel and that is sold or made available for use in engines in California.

(1) "Chemical composition" means the name and percentage by weight of each compound in an additive and the name and percentage by weight of each element in an additive.

(2) "Designated alternative limit" means an alternative aromatic hydrocarbon limit, expressed in percent aromatic hydrocarbon content by volume, which is assigned by a producer or importer to a final blend of vehicular diesel fuel pursuant to subsection (d).

(3) "Diesel fuel" means any fuel that is commonly or commercially known, sold or represented as diesel fuel, including any mixture of primarily liquid hydrocarbons — organic compounds consisting exclusively of the elements carbon and hydrogen — that is sold or represented as suitable for use in an internal combustion, compression-ignition engine.

(4) "Exempt volume" means:

(A) Except as otherwise provided in subsection (b)(4)(B), 65 percent of the average of the three highest annual production volumes of distillate fuel reported for a small refiner's California refinery in the period 1983 to 1987, inclusive, to the California Energy Commission (CEC) as required by the Petroleum Industry Information Reporting Act of 1980 (Public Resources Code Sections 25350 et seq.); provided that for any small refiner that reported no distillate fuel production for two or more

years in the 1983–1987 period and that has installed hydrotreating processes which allow the production of diesel fuel with a sulfur content of 500 parts per million or less, exempt volume may be calculated as 65 percent of the average annual production volumes of distillate fuel reported for the small refiner's California refinery for 1989 and 1990.

(B) In the case of a small refiner who, in an application or amended application submitted pursuant to subsection (e)(2), notifies the executive officer of its election to be subject to this subsection (b)(4)(B), a volume determined in accordance with the following four steps:

1. First, the barrel per calendar day "operable crude oil capacity" of the small refiner's refinery for 1991 and 1992 is identified, based on data which are reported to the Executive Officer from the CEC and are derived from "Monthly Refining Reports" (EIA 810, Revised 1/89) submitted to the CEC no later than June 20, 1994. If the CEC is unable to derive such data from the "Monthly Refining Reports" for a particular small refiner, the executive officer shall determine the small refiner's operable crude oil capacity for 1991 and 1992 based on other publicly available and generally recognized sources.

2. Second, this operable crude oil capacity is multiplied by 0.9011, representing the overall refinery utilization rate (crude oil run divided by operable crude oil capacity) in the California refining industry for 1991 and 1992, as derived from reports of crude oil run and operable capacity in the "Quarterly Oil Reports" issued by the CEC.

3. Third, the resulting crude throughput volume is multiplied by the average of the refinery's two highest ratios of distillate produced to crude oil distilled in the period 1988 through 1992, based on distillate production data recorded by the CEC from MO-7 reporting forms (Revised 11-87) submitted to the CEC no later than June 30, 1994 and from crude oil run data derived by the CEC from "Monthly Refining Reports" submitted to the CEC no later than June 30, 1994, and is further multiplied by 365 to identify an annualized value.

4. Fourth, the resulting annual volume of distillate production is multiplied by a fraction determined in accordance with this subsection (b)(4)(B)4., which represents the average proportion of small refiners' distillate production that has been sold as diesel fuel for use in motor vehicles in California from 1988 through 1992. The fraction shall be based on the activities of all small refiners who during October 1, 1993 through June 30, 1994 lawfully produced and supplied vehicular diesel fuel. With respect to each such small refiner, the executive officer shall calculate a single fraction representing the average of the refiner's two highest annual ratios of [a] diesel fuel produced by the small refiner and sold for use in California motor vehicles to [b] distillate produced, over the period 1988 through 1992. In calculating these ratios, distillate production shall be based on distillate production data recorded by the CEC from MO-7 reporting forms (Revised 11-87) submitted to the CEC no later than June 30, 1994, and the volume of diesel fuel produced by the small refiner and sold for use in California motor vehicles shall be derived from sales data certified by authorized representatives of the small refiners and such other information from the small refiners deemed necessary by the executive officer. The executive officer shall then combine the single fractions for each such small refiner. The annual distillate production volume identified pursuant to subsection (b)(4)(B)3. shall be multiplied by the fraction that represents the average of the single fractions for each small refiner.

(5) "Executive Officer" means the executive officer of the Air Resources Board, or his or her designee.

(6) "Final blend" means a distinct quantity of diesel fuel which is introduced into commerce in California without further alteration which would tend to affect the fuel's aromatic hydrocarbon content.

(7) "Formulation" means the composition of a diesel fuel represented by a test fuel submitted pursuant to subsection (g).

(8) "Further process" means to perform any activity on diesel fuel, including distillation, treating with hydrogen, or blending, for the purpose of bringing the diesel fuel into compliance with the standards in subsection (a)(1).

(9) "Hydrotreatment process" means a type of hydrotreating process in which hydrogen is used in the presence of heat, pressure, and catalysts to saturate aromatic hydrocarbons in order to produce low-aromatic hydrocarbon content diesel fuel.

(10) "Importer" means any person who first accepts delivery in California of vehicular diesel fuel.

(11) "Import facility" means the facility at which imported diesel fuel is first received in California, including, in the case of diesel fuel imported by cargo tank and delivered directly to a facility for dispensing diesel fuel into motor vehicles, the cargo tank in which the diesel fuel is imported.

(12) "Marine vessel" has the meaning set forth in section 39037.1 of the Health and Safety Code.

(13) "Motor vehicle" has the same meaning as defined in Section 415 of the Vehicle Code.

(14) "Polycyclic aromatic" (also referred to as "polynuclear aromatic hydrocarbons" or "PAH") means an organic compound containing two or more aromatic rings.

(15)(A) "Produce" means to convert liquid compounds which are not diesel fuel into diesel fuel. When a person blends volumes of blendstocks which are not diesel fuel with volumes of diesel fuel acquired from another person, and the resulting blend is diesel fuel, the person conducting such blending has produced only the portion of the blend which was not previously diesel fuel. When a person blends diesel fuel with other volumes of diesel fuel, without the addition of blendstocks which are not diesel fuel, the person does not produce diesel fuel.

(B) Subsection (b)(15)(A) notwithstanding, for the purposes of subsection (e) only, a small refiner who blends volumes of blendstocks which are not diesel fuel, or volumes of diesel fuel having an aromatic hydrocarbon content exceeding 20 percent by volume, with diesel fuel acquired from another person, in order to make diesel fuel having an aromatic hydrocarbon content not exceeding 20 percent by volume, shall be deemed to have produced the entire volume of the resulting blend and the person who initially converted non-diesel compounds into the acquired diesel fuel has also produced the volume of acquired diesel fuel.

(16) "Producer" means any person who produces vehicular diesel fuel in California.

(17) "Refiner" means any person who owns, leases, operates, controls or supervises a refinery.

(18) "Refinery" means a facility that produces liquid fuels by distilling petroleum. A small refiner's refinery includes all bulk storage and bulk distribution facilities jointly owned or leased with the facility that produces liquid fuels by distilling petroleum.

(19) "Small refiner" means any refiner who owns or operates a refinery in California that:

(A) Has and at all times had since January 1, 1978, a crude oil capacity of not more than 55,000 barrels per stream day;

(B) Has not been at any time since September 1, 1988, owned or controlled by any refiner that at the same time owned or controlled refineries in California with a total combined crude oil capacity of more than 55,000 barrels per stream day; and

(C) Has not been at any time since September 1, 1988, owned or controlled by any refiner that at the same time owned or controlled refineries in the United States with a total combined crude oil capacity of more than 137,500 barrels per stream day.

(20) "Straight-run California diesel fuel" means diesel fuel produced from crude oil which is commercially available in California by distillation, without the use of cracking or other chemical conversion processes.

(21) "Stream day" means 24 consecutive hours of actual operation of a refinery.

(22) "Supply" means to provide or transfer a product to a physically separate facility, vehicle, or transportation system.

(23) "Vehicular diesel fuel" means any diesel fuel (A) which is not conspicuously identified as a fuel which may not lawfully be dispensed

into motor vehicle fuel tanks in California; or (B) which the person selling, offering for sale, or supplying the diesel fuel knows will be dispensed into motor vehicle fuel tanks in California; or (C) which the person selling, offering for sale, or supplying the diesel fuel in the exercise of reasonable prudence should know will be dispensed into motor vehicle fuel tanks in California, and that is not the subject of a declaration under penalty of perjury by the purchaser, offeree or recipient stating that s/he will not sell, offer for sale, or transfer the fuel for dispensing, or dispense the fuel, into motor vehicle fuel tanks in California.

(c) Test Method. Compliance with the aromatic hydrocarbon content limitations specified in this section 2282 shall be determined by ASTM Test Method D 5186-96, which is incorporated herein by reference. The following correlation equation shall be used to convert the SFC results in mass percent to volume percent.

Correlation Equation: Aromatic Hydrocarbons expressed in % by volume = $0.916 \times (\text{Aromatic Hydrocarbons expressed in \% by weight}) + 1.33$

(d) Designated Alternative Limit Designated Alternative Aromatic Hydrocarbon Limit.

(1) A producer or importer may assign a designated alternative limit in accordance with this subsection (d) to a final blend of vehicular diesel fuel produced or imported by the producer or importer. In no case may the designated alternative limit be less than the aromatic hydrocarbon content of the final blend shown by the sample and test conducted pursuant to subsection (f).

(2) The producer or importer shall notify the executive officer of the volume (in gallons) and the designated alternative limit of the final blend. This notification shall be received by the executive officer before the start of physical transfer of the diesel fuel from the production or import facility, and in no case less than 12 hours before the producer either completes physical transfer or commences the final blend.

(3) Within 90 days before or after the start of physical transfer of any final blend of vehicular diesel fuel to which a producer or importer has assigned a designated alternative limit exceeding 10 percent, the producer or importer shall complete physical transfer from the production or import facility of vehicular diesel fuel in sufficient quantity and with a designated alternative limit sufficiently below the limit specified in subsection (a)(1)(A) to offset the volume of aromatic hydrocarbons in the diesel fuel reported in excess of the limit.

(4) If, through no intentional or negligent conduct, a producer or importer cannot report within the time period specified in subsection (d)(2), then the producer or importer shall notify the executive officer of the required data as soon as reasonably possible and shall provide a written explanation of the cause of the delay in reporting. If, based on the written explanation and the surrounding circumstances, the executive officer determines that the conditions of this subsection (d)(4) are met, timely notification shall be deemed to have occurred.

(5) The executive officer may enter into a protocol with any individual producer or importer for the purposes of specifying how the requirements in subsections (d)(2) and (3) shall be applied to the producer's or importer's particular operations, as long as the executive officer reasonably determines that application of the regulatory requirements under the protocol is not less stringent or enforceable than application of the express terms of subsections (d)(2) and (3). Any such protocol shall include the producer's or importer's agreement to be bound by the terms of the protocol.

(6) No person shall sell, offer for sale, or supply vehicular diesel fuel, in a final blend to which a producer or importer has assigned a designated alternative limit exceeding 10 percent aromatics content, where the total volume of the final blend sold, offered for sale, or supplied exceeds the volume reported to the executive officer pursuant to subsection (d)(2) or (5).

(7) No person shall sell, offer for sale or supply vehicular diesel fuel, in a final blend to which a producer or importer has assigned a designated

alternative limit less than 10 percent aromatics content, where the total volume of the final blend sold, offered for sale, or supplied is less than the volume reported to the executive officer pursuant to subsection (d)(2) or (5).

(8) Whenever the final blend of a producer includes volumes of diesel fuel the producer has produced and volumes it has not produced, the producer's designated alternative limit shall apply only to the volume of diesel fuel the producer has produced. In such a case, the producer shall report to the ARB in accordance with subsection (d)(2) both the volume of diesel fuel produced and the total volume of the final blend.

(e) Small Refiner Diesel Fuel.

(1) The provisions of subsection (a)(1)(A), (B), and (C) shall not apply to the diesel fuel that is produced by a small refiner at the small refiner's California refinery and that is first consecutively supplied from the refinery as vehicular diesel fuel in each calendar year, up to the small refiner's exempt volume (up to one quarter of the small refiner's exempt volume for the period from October 1, 1993–December 31, 1993). Diesel fuel which is designated by the small refiner as not exempt under this section (e), and which is reported to the executive officer pursuant to a protocol entered into between the small refiner and the executive officer, shall not be counted against the exempt volume and shall not be exempt under this subsection (e). This exemption shall not apply to any diesel fuel supplied from a small refiner's refinery in any calendar quarter in which less than 25 percent of the diesel fuel supplied from the refinery was produced from the distillation of crude oil at the refinery. The foregoing notwithstanding in the case of any small refiner that pursuant to subsection (a)(4) has not been subject to subsection (a)(1) until October 1, 1994, all vehicular diesel fuel produced by the small refiner at the small refiner's California refinery and supplied from the refinery from October 1, 1994 through December 31, 1994, shall be exempt from the provisions of subsection (a)(1)(A), (B) and (C), up to the quarterly volume limits imposed by the executive officer in connection with issuance of suspension orders pursuant to section 2281(g). These quarterly volume limits are as follows: Kern Oil & Refining, 714,100 barrels; Paramount Petroleum, 1,064,700 barrels; and Powerline Oil Company, 1,419,600 barrels.

(2) To qualify for an exemption under this subsection (e), a refiner shall submit to the executive officer an application for exemption executed in California under penalty of perjury, on the Air Resources Board's ARB/SSD/CPB Form 89-9-1, for each of the small refiner's California refineries. The application shall specify the crude oil capacity of the refinery at all times since January 1, 1978, the crude oil capacities of all the refineries in California and the United States which are owned or controlled by, or under common ownership or control with, the small refiner since September 1, 1988, data demonstrating that the refinery has the capacity to produce liquid fuels by distilling petroleum, and copies of the reports made to the California Energy Commission as required by the Petroleum Industry Reporting Act of 1980 (Public Resources Code sections 25350 et seq.) showing the annual production volumes of distillate fuel at the small refiner's California refinery for 1983 through 1987. Within 90 days of receipt of the application, the executive officer shall grant or deny the exemption in writing. The exemption shall be granted if the executive officer determines that the applicant has demonstrated that s/he meets the provisions of subsection (b)(19), and shall identify the small refiner's exempt volume. The exemption shall immediately cease to apply at any time the refiner ceases to meet the definition of small refiner in subsection (b)(19).

(3) In addition to the requirements of subsection (f) below, each small refiner who is covered by an exemption shall submit to the executive officer reports containing the information set forth below for each of the small refiner's California refineries. The reports shall be executed in California under penalty of perjury, and must be received within the time indicated below:

(A) The quantity, ASTM grade, aromatic hydrocarbon content, and batch identification of all diesel fuel, produced by the small refiner, that is supplied from the small refinery in each month as vehicular diesel fuel, within 15 days after the end of the month;

(B) For each calendar quarter, a statement whether 25 percent or more of the diesel fuel transferred from the small refiner's refinery was pro-

duced by the distillation of crude oil at the small refiner's refinery, within 15 days after the close of such quarter;

(C) The date, if any, on which the small refiner completes transfer from its small refinery in a calendar year of the maximum amount of vehicular diesel fuel which is exempt from subsection (a)(1)(A) and (B) pursuant to subsection (e), within 5 days after such date;

(D) Within 10 days after project completion, any refinery addition or modification which would affect the qualification of the refiner as a small refiner pursuant to subsection (b)(19); and

(E) Any change of ownership of the small refiner or small refiner's refinery, within 10 days after such change of ownership.

(4) Whenever a small refiner fails to provide records identified in subsection (e)(3)(A) or (B) in accordance with the requirements of those subsections, the vehicular diesel fuel supplied by the small refiner from the small refiner's refinery in the time period of the required records shall be presumed to have been sold or supplied by the small refiner in violation of section (a)(1)(A).

(5) Offsetting Excess Emissions From Gasoline Subject to the Small Refiner CaRFG Phase 3 Standards.

(A) Annual elections. No later than December 22 of each calendar year starting with 2002, a small refiner who is also a qualifying small refiner as defined in the CaRFG regulations (section 2260(a)(28.5)) may by notification to the executive officer make the following elections:

1. Whether the small refiner elects to produce gasoline subject to the small refiner CaRFG Phase 3 standards in section 2272(a) in the coming year;

2. If electing to produce small refiner CaRFG Phase 3, whether the refiner elects the option of accepting a reduced exempt volume in the coming year to offset the excess emissions;

3. If electing to produce small refiner CaRFG Phase 3 but not to accept a reduced exempt volume, the refiner must elect for the coming year either (i) to produce offset small refiner diesel fuel with an exempt volume determined in accordance with section (b)(4), or (ii) to produce cleaner offset small refiner diesel fuel with an exempt volume expanded by 25 percent and restrictions on sales of high-aromatics California nonvehicular diesel fuel.

(B) Effect of election.

1. Election not to produce small refiner CaRFG Phase 3. If a small refiner does not elect to produce gasoline subject to the small refiner CaRFG Phase 3 standards for a particular year, no gasoline sold or supplied from the small refiner's refinery in that year will qualify for the small refiner CaRFG Phase 3 standards in section 2272(a).

2. Election to accept a reduced exempt volume for small refiner diesel fuel. If a small refiner elects to accept a reduced exempt volume under section (f)(5)(A), the executive officer shall assign a substitute exempt volume for the year that is reduced sufficiently to offset the excess emissions of hydrocarbons, oxides of nitrogen, and potency-weighted toxics that would result from production of the small refiner's full qualifying volume of gasoline subject to the CaRFG Phase 3 standards. In the case of Kern Oil and Refining Co., its reduced exempt volume of small refiner diesel fuel would be 825,995 barrels per year (equal to 2263 bpd; 828,258 barrels per year in leap years) in place of 2,337,825 barrels per year (equal to 6405 bpd; 2,344,230 in leap years).

3. Election to retain the preexisting exempt volume and produce offset small refiner diesel fuel. If the small refiner elects to be subject to the exempt volume determined in accordance with section (b)(4), the executive officer shall adjust the aromatics and cetane number of the standards applicable to the small refiner sufficient to offset the potential increased emissions identified pursuant to section 2272(c)(5). In the case of Kern Oil and Refining Co., its exempt volume for the year would be 2,337,825 barrels per year (equal to 6405 bpd; 2,344,230 barrels per year in leap years). Any small refiner diesel fuel it sells or supplies as a certified alternative formulation equivalent to a 20 percent aromatics reference fuel must have an aromatic hydrocarbon content that is 2 percentage points lower, and a cetane number that is 0.5 higher, than is specified for the alternative formulation. Any small refiner diesel fuel it sells or supplies which is not designated as a certified alternative formulation must have

an aromatic hydrocarbon content not exceeding 18 percent, or be subject to the designated alternative limit provisions in subsection (d) with all designated alternative limits above 18 percent by volume fully offset in accordance with subsection (d).

4. Election of expanded exempt volume with requirement for cleaner offset small refiner diesel fuel. If the small refiner elects to produce offset small refiner diesel fuel with an expanded exempt volume, its exempt volume for the year will be 125 percent of its exempt volume determined in accordance with section (b)(4). The executive officer shall adjust the aromatics and cetane number of the standards applicable to the potential volume of small refiner sufficient to offset the potential increased emissions identified pursuant to section 2272(c)(5). The small refiner will be prohibited during the year from selling or supplying diesel fuel that it has produced and is intended for nonvehicular applications in California unless the fuel meets the U.S. EPA's standards for diesel fuel for use in motor vehicles in 40 CFR sec. 80.29 as it existed July 1, 2000. In the case of Kern Oil and Refining Co., its exempt volume for the year would be 2,922,190 barrels per year (equivalent to 8006 bpd; 2,930,196 in leap years). Any small refiner diesel fuel it sells or supplies in the year as a certified alternative formulation equivalent to a 20 percent aromatics reference fuel must have an aromatic hydrocarbon content that is 3.5 percentage points lower, and a cetane number that is 0.5 higher, and an additive content that is 0.02 percentage points higher, than is specified for the alternative formulation. Any small refiner diesel fuel it sells or supplies which is not designated as a certified alternative formulation shall have an aromatic hydrocarbon content not exceeding 14 percent.

5. Additional requirement to sell or supply ultra-low sulfur diesel fuel. In addition to the requirements in section (f)(5)(B)1. through (f)(5)(B)4., a small refiner that elects to produce gasoline subject to the CaRFG Phase 3 standards for a year must sell or supply in that year up to 100 bpd of diesel fuel having a sulfur content not exceeding 30 ppm and an aromatic hydrocarbon content not exceeding 20 percent, to the extent there are buyers wishing to acquire that diesel fuel on commercially reasonable terms.

(C) Early opt-in to produce small refiner CaRFG Phase 3. To the extent that the sale or supply of gasoline subject to the CaRFG Phase 3 standards before December 31, 2002 is permitted by section 2261(b)(3), a qualifying small refiner may elect to have to option of producing gasoline subject to the small refiner CaRFG Phase 3 standards for a full year or the remainder of a year prior to December 31, 2002. In that case, section (e)(5)(B)2.-5. would apply on a pro rata basis to the portion of the year on and after the effective date of the election, and the preexisting requirements would apply on a pro rata basis to the portion of the year prior to the effective date of the election.

(f) Testing and Recordkeeping.

(1) Each producer shall sample and test for aromatic hydrocarbon content each final blend of vehicular diesel fuel which the producer has produced, in accordance with an applicable test method identified in subsection (c). If a producer blends diesel fuel components directly to pipelines, tankships, railway tankcars, or trucks and trailers, the loading(s) shall be sampled and tested for aromatic hydrocarbon content by the producer or authorized contractor. The producer shall maintain, for two years from the date of each sampling, records showing the sample date, product sampled, container or other vessel sampled, final blend volume, and the aromatic hydrocarbon content. In the event a producer sells, offers for sale, or supplies diesel fuel which the producer claims is not vehicular diesel fuel and which has an aromatic hydrocarbon content exceeding the standard set forth in subsection (a)(1), such producer shall maintain, for two years from the date of any sale or supply of the fuel, records demonstrating that the diesel fuel was not vehicular diesel fuel when it was sold or supplied by the producer. All diesel fuel produced by the producer and not tested as vehicular diesel fuel by the producer pursuant to this subsection shall be deemed to have an aromatic hydrocarbon content exceeding 10 percent, unless the producer demonstrates that the diesel fuel meets the requirements of subsection (a)(1).

(2) Each importer shall sample and test for aromatic hydrocarbon content each shipment of vehicular diesel fuel which the importer has imported by tankship, pipeline, railway tankcars, trucks and trailers, or other means, in accordance with an applicable test method identified in subsection (c). The importer shall maintain, for two years from the date of each sampling, records showing the sample date, product sampled, container or other vessel sampled, the volume of the shipment, and the aromatic hydrocarbon content. All diesel fuel imported by the importer and not tested as vehicular diesel fuel by the importer pursuant to this subsection shall be deemed to have an aromatic hydrocarbon content exceeding 10 percent, unless the importer demonstrates that the diesel fuel meets the requirements of subsection (a)(1).

(3) A producer or importer shall provide to the executive officer any records required to be maintained by the producer or importer pursuant to this subsection (d) within 20 days of a written request from the executive officer if the request is received before expiration of the period during which the records are required to be maintained. Whenever a producer or importer fails to provide records regarding a final blend of vehicular diesel fuel in accordance with the requirements of this subsection, the final blend of diesel fuel shall be presumed to have been sold by the producer in violation of subsection (a)(1).

(4) The executive officer may perform any sampling and testing deemed necessary to determine compliance by any person with the requirements of subsection (a) and may require that special samples be drawn and tested at any time.

(5) The executive officer may enter into a protocol with any producer, importer, or person who sells, offers for sale, or transfers diesel fuel to a producer for the purpose of specifying alternative sampling, testing, recordkeeping, or reporting requirements which shall satisfy the provisions of subsections (f)(1), (f)(2), or (e)(3). The executive officer may only enter into such a protocol if s/he reasonably determines that application of the regulatory requirements under the protocol will be consistent with the state board's ability effectively to enforce the provisions of subsection (a). Any such protocol shall include the producer's or importer's agreement to be bound by the terms of the protocol.

(g) Certified Diesel Fuel Formulations Resulting in Equivalent Emissions Reductions.

(1) The executive officer, upon application of any producer or importer, may certify diesel fuel formulations in accordance with this subsection (g). The applicant shall initially submit a proposed test protocol to the executive officer. The proposed test protocol shall include: (A) the identify of the entity proposed to conduct the tests described in subsection (g)(4); (B) test procedures consistent with the requirements of this subsection (g); (C) test data showing that the candidate fuel meets the specifications for No. 2-D diesel fuel set forth in ASTM D975-81 (which is incorporated herein by reference), and identifying the characteristics of the candidate fuel set forth in subsection (g)(2); (D) test data showing that the fuel to be used as the reference fuel satisfies the specifications identified in subsection (g)(3); (E) reasonably adequate quality assurance and quality control procedures; and (F) notification of any outlier identification and exclusion procedure that will be used, and a demonstration that any such procedure meets generally accepted statistical principles.

Within 20 days of receipt of a proposed test protocol, the executive officer shall advise the applicant in writing either that it is complete or that specified additional information is required to make it complete. Within 15 days of submittal of additional information, the executive officer shall advise the applicant in writing either that the information submitted makes the proposed test protocol complete or that specified additional information is still required to make it complete. Within 20 days after the proposed test protocol is deemed complete, the executive officer shall either approve the test protocol as consistent with this subsection (g) or advise the applicant in writing of the changes necessary to make the test protocol consistent with this subsection (g). Any notification of approval of the test protocol shall include the name, telephone number, and address of the executive officer's designee to receive notifications pur-

suant to subsection (g)(4)(C)(ii). The tests shall not be conducted until the protocol is approved by the executive officer.

Upon completion of the tests, the applicant may submit an application for certification to the executive officer. The application shall include the approved test protocol, all of the test data, a copy of the complete test log prepared in accordance with subsection (g)(4)(C)(ii), a demonstration that the candidate fuel meets the requirements for certification set forth in this subsection (g), and such other information as the executive officer may reasonably require.

Within 20 days of receipt of an application, the executive officer shall advise the applicant in writing either that it is complete or that specified additional information is required to make it complete. Within 15 days of submittal of additional information, the executive officer shall advise the applicant in writing either that the information submitted makes the application complete or that specified additional information is still required to make it complete. Within 30 days after the application is deemed complete, the executive officer shall grant or deny the application. Any denial shall be accompanied by a written statement of the reasons for denial.

(2) *The candidate fuel.*

(A)1. The applicant shall supply the candidate fuel to be used in the comparative testing pursuant to subsection (g)(4).

2. The candidate fuel shall meet the specifications for No. 2-D diesel fuel set forth in ASTM D975-81, which is incorporated herein by reference, and shall also meet the requirements in subsections (g)(2)(A)3. and 4.

3.a. Except as otherwise provided in subsection (g)(2)(A)3.b., the candidate fuel shall meet the following specifications, which are identical to the comparable specifications for the reference fuel identified in subsection (g)(3):

<i>Property</i>	<i>ASTM Test Method</i>	<i>Candidate Fuel Specifications</i>
Gravity, API	D287-82	33-39
Viscosity at 40°C, cSt	D455-83	2.0-4.1
Flash point, °F, (min.)	D93-80	130
Distillation, °F		
IBP	D86-96	340-420
10% REC.		400-490
50% REC.		470-560
90% REC.		550-610
EP		580-660

b. The candidate fuel's value for one or more of the properties listed in the subsection (g)(2)(A)3.a. table may be outside the specification in the table if the applicant is specifying the property and candidate fuel's value pursuant to subsection (g)(2)(C).

4.a. Except for a property to which subsection (g)(2)(A)3.b applies, the gravity, viscosity, flash point and distillation values of the candidate fuel may not differ from the corresponding values of the reference fuel used in the engine emissions testing by more than one-half of the permitted range for the property. For example, if the API gravity of the reference fuel is 33, then the API gravity of the candidate fuel may not exceed 36.

b. The candidate fuel's value for one or more of the properties listed in the subsection (g)(2)(A)3.a. table may differ from the corresponding value of the reference fuel used in the engine emissions testing by more than one-half of the permitted range for the property if the applicant is specifying the property and candidate fuel's value pursuant to subsection (g)(2)(C).

(B) The following characteristics of the candidate fuel shall be determined as the average of three tests conducted in accordance with the referenced test method (the ASTM methods are incorporated herein by reference):

1.a. For formulations certified prior to August 14, 2004, sulfur content (not to exceed 500 ppm) by ASTM D2622-94;

b. For formulations certified on or after August 14, 2004, sulfur content (not to exceed 15 ppm) by ASTM D5453-93;

2. Total aromatic hydrocarbon content, by ASTM D5186-96;

3. Polycyclic aromatic hydrocarbon content, by ASTM D5186-96;

4. Nitrogen content, by ASTM D4629-96;
5. Cetane number, by ASTM D613-84;
6. Identity and concentration of each additive, by a test method specified by the applicant and determined by the executive officer to adequately determine the presence and concentration of the additive.

(C) The applicant may also specify any other parameters for the candidate fuel in addition to those listed in subsection (g)(2)(B), along with the test method for determining the parameters. The applicant shall provide the chemical composition of each additive in the candidate fuel, except that if the chemical composition of an additive is not known to either the applicant or to the manufacturer of the additive (if other), the applicant may provide a full disclosure of the chemical process of manufacture of the additive in lieu of its chemical composition.

(3) *The reference fuel.*

(A) The reference fuel used in the comparative testing described in subsection (g)(4) shall be produced from straight-run California diesel fuel by a hydrodearomatization process and shall have the characteristics set forth below under "General Reference Fuel Specifications" (the listed ASTM methods are incorporated herein by reference):

Reference Fuel Specifications

Property	ASTM Test Method	General Reference Fuel Specifications	Small Refiner Reference Fuel Specifications
Sulfur Content	D2622-94 ¹ D5453-93 ²	500 ppm max. ¹ 15 ppm max. ²	500 ppm max. ¹ 15 ppm max. ²
Aromatic Hydrocarbon Content, Vol. %	D5186-96	10% max.	20% max.
Polycyclic Aromatic Hydrocarbon Content, WT. %	D5186-96	1.4% max.	4% max.
Nitrogen Content	D4629-96	10 ppm max.	90 ppm max.
Natural Cetane Number	D613-84	48 minimum	47 minimum
Gravity, API	D287-82	33-39	33-39
Viscosity at 40°C, cSt	D445-83	2.0-4.1	2.0-4.1
Flash point, °F, (min.)	D93-80	130	130
Distillation, °F	D86-96		
IBP		340-420	340-420
10 % REC		400-490	400-490
50 % REC		470-560	470-560
90 % REC		550-610	550-610
EP		580-660	580-660

¹ This test method and sulfur content maximum applies to all reference fuels used for formulations certified prior to August 14, 2004.

² This test method and sulfur content maximum applies to all reference fuels used for formulations certified on or after August 1, 2004.

(B) Where the candidate fuel's value for one or more properties is outside the specification in the table in subsection (g)(2)(A)3.a as permitted by subsection (g)(2)(A)3.b., the reference fuel's value for that property may not be on the opposite side of the mid-point of the range shown in the table.

(4)(A) Exhaust emission tests using the candidate fuel and the reference fuel shall be conducted in accordance with the "California Exhaust Emission Standards and Test Procedures for 1985 and Subsequent Model Heavy-Duty Diesel-Powered Engines and Vehicles," as incorporated by reference in Title 13, California Code of Regulations, Section 1956.8(b). The tests shall be performed using a Detroit Diesel Corporation Series-60 engine, or, if the executive officer determines that the Series-60 is no longer representative of the post-1990 model year heavy-duty diesel engine fleet, another engine found by the executive office to be representative of such engines. A determination by the executive officer that an engine is no longer representative shall not affect the certification of a diesel fuel formulation based on prior tests using that engine pursuant to a protocol approved by the executive officer.

(B) The comparative testing shall be conducted by a party or parties that are mutually agreed upon by the executive officer and the applicant. The applicant shall be responsible for all costs of the comparative testing.

(C)1. The applicant shall use one of the following test sequences:

a. If both cold start and hot start exhaust emission tests are conducted, a minimum of five exhaust emission tests shall be performed on the engine with each fuel, using either of the following sequences, where "R" is the reference fuel and "C" is the candidate fuel: RC RC RC RC RC and

(continuing in the same order), or RC CR RC CR RC (and continuing in the same order).

The engine mapping procedures and a conditioning transient cycle shall be conducted with the reference fuel before each cold start procedure using the reference fuel. The reference cycle used for the candidate shall be the same cycle as that used for the fuel preceding it.

b. If only hot start exhaust emission tests are conducted, one of the following test sequences shall be used throughout the testing, where "R" is the reference fuel and "C" is the candidate fuel:

Alternative 1: RC CR RC CR (continuing in the same order for a given calendar day; a minimum of twenty individual exhaust emission tests must be completed with each fuel)

Alternative 2: RR CC RR CC (continuing in the same order for a given calendar day; a minimum of twenty individual exhaust emission tests must be completed with each fuel)

Alternative 3: RRR CCC RRR CCC (continuing in the same order for a given calendar day; a minimum of twenty-one individual exhaust emission tests must be completed with each fuel)

For all alternatives, an equal number of tests shall be conducted using the reference fuel and the candidate fuel on any given calendar day. At the beginning of each calendar day, the sequence of testing shall begin with the fuel that was tested at the end of the preceding day. The engine mapping procedures and a conditioning transient cycle shall be conducted after every fuel change and/or at the beginning of each day. The reference cycle generated from the reference fuel for the first test shall be used for all subsequent tests. For alternatives 2 and 3, each paired or triplicate series of individual tests shall be averaged to obtain a single value which would be used in the calculations conducted pursuant to section (g)(5)(C).

2. The applicant shall submit a test schedule to the executive officer at least one week prior to commencement of the tests. The test schedule shall identify the days on which the tests will be conducted, and shall provide for conducting the test consecutively without substantial interruptions other than those resulting from the normal hours of operations at the test facility. The executive officer shall be permitted to observe any tests. The party conducting the testing shall maintain a test log which identifies all tests conducted, all engine mapping procedures, all physical modifications to or operational tests of the engine, all recalibrations or other changes to the test instruments, and all interruptions between tests and the reason for each such interruption. The party conducting the tests or the applicant shall notify the executive officer by telephone and in writing of any unscheduled interruption resulting in a test delay of 48 hours or more, and of the reason for such delay. Prior to restarting the test, the applicant or person conducting the tests shall provide the executive officer with a revised schedule for the remaining tests. All tests conducted in accordance with the test schedule, other than any tests rejected in accordance with an outlier identification and exclusion procedure included in the approved test protocol, shall be included in the comparison of emissions pursuant to subsection (g)(5).

(D) In each test of a fuel, exhaust emissions of oxides of nitrogen (NOx) and particulate matter (PM) shall be measured. In addition, for each test the soluble organic fraction (SOF) of the particle matter in the exhaust emissions shall be determined in accordance with the Air Resources Board's "Test Method for Soluble Organic Fraction (SOF) Extraction" dated April 1989, which is incorporated herein by reference.

(5) The average emissions during testing with the candidate fuel shall be compared to the average emissions during testing with the reference fuel, applying one-sided Student's *t* statistics as set forth in Snedecar and Cochran, *Statistical Methods* (7th ed.), page 91, Iowa State University Press, 1980, which is incorporated herein by reference. The executive officer shall issue a certification pursuant to this paragraph only if he or she makes all of the determinations set forth in subsections (g)(5)(A) and (B) below, after applying the criteria in subsection (g)(5)(C).

(A) The average individual emissions of NOx, PM, and SOF, respectively, during testing with the candidate fuel do not exceed the average

individual emissions of NO_x, PM, and SOF, respectively, during testing with the reference fuel.

(B) Use of any additive identified pursuant to subsection (g)(2)(B)6. in heavy-duty engines will not increase emissions of noxious or toxic substances which would not be emitted by such engines operating without the additive.

(C) In order for the determinations in subsection (g)(5)(A) to be made, for each referenced pollutant the candidate fuel shall satisfy the following relationship:

$$\bar{X}_c < \bar{X}_R + \delta - S_p \sqrt{\frac{2}{n}} \cdot t(a, 2n-2)$$

Where: \bar{X}_c = Average emissions during testing with the candidate fuel
 \bar{X}_R = Average emissions during testing with the reference fuel
 δ = tolerance level equal to 1 percent of \bar{X}_R for NO_x, 2 percent of \bar{X}_R for PM, and 6 percent of \bar{X}_R for SOF.
 S_p = Pooled standard deviation
 $t(a, 2n-2)$ = The one-sided upper percentage point of t distribution with $a = 0.15$ and $2n-2$ degrees of freedom
 n = Number of tests of candidate and reference fuel

(6) If the executive officer finds that a candidate fuel has been properly tested in accordance with this subsection (g), and makes the determinations specified in subsection (g)(5), then he or she shall issue an Executive Order certifying the diesel fuel formulation represented by the candidate fuel. The Executive order shall identify all of the characteristics of the candidate fuel determined pursuant to subsection (g)(2). The Executive Order shall provide that the certified diesel fuel formulation has the following specifications: (1) a sulfur content, total aromatic hydrocarbon content, polycyclic aromatic hydrocarbon content, and nitrogen content not exceeding that of the candidate fuel, (2) a cetane number not less than that of the test fuel, (3) any additional fuel specification required under subsection (g)(2)(A)3.b, and (4) presence of all additives that were contained in the candidate fuel, in a concentration not less than in the test fuel, except for an additive demonstrated by the applicant to have the sole effect of increasing cetane number. All such characteristics shall be determined in accordance with the test methods identified in subsection (g)(2). The Executive Order shall assign an identification name to the specific certified diesel fuel formulation.

(7) In order for a producer or importer of a final blend to comply with subsection (a) through the sale, offer for sale or supply of a certified diesel fuel formulation, the producer or importer shall notify the executive officer in accordance with this subsection (g)(7). The notification shall identify the final blend and the identification name of the certified diesel fuel formulation. The notification shall be received by the executive officer at least 12 hours before start of physical transfer of the final blend from the production or import facility. A producer or importer intending to have a series of its final blends be a specific certified formulation may enter into a protocol with the executive officer for reporting such blends as long as the executive officer reasonably determines the reporting under the protocol would provide at least as much notice to the executive officer as notification pursuant to the express terms of this subsection (g)(7).

(8) A small refiner may apply for certification of a diesel fuel formulation to be sold pursuant to subsection (a)(1)(C). All of the provisions of this subsection (g) shall apply to certification of such a diesel fuel formulation, except the reference fuel in the comparative testing described in subsection (g)(4) shall have the characteristics set forth under "Small Refiner Reference Fuel Specifications" in the table in subsection (g)(3).

(9) (A) If the executive officer determines that a commercially available diesel fuel blend meets all of the specifications of a certified diesel

fuel formulation set forth in an Executive Order issued pursuant to subsection (g)(6), but does not meet the criteria in subsection (g)(5) when tested in accordance with subsection (g)(4), the executive officer shall modify the certification order as is necessary to assure that diesel fuel blends sold commercially pursuant to the certification will meet the criteria set forth in subsection (g)(5). The modifications to the order may include additional specifications or conditions, or a producer of the commercially available diesel fuel blend found not to meet the criteria.

(B) The executive officer shall not modify a prior certification order without the consent of the applicant and of the producer of the commercially available diesel fuel blend found not to meet the criteria, unless the applicant and producer are first afforded an opportunity for a hearing in accordance with Title 17, California Code of Regulations, Part III, Chapter 1, Subchapter 1, Article 4 (commencing with Section 60040). If the executive officer determines that a producer would be unable to comply with this regulation as a direct result of an order modification pursuant to this subsection, the executive officer may delay the effective date of such modification for such period of time as is necessary to permit the producer to come into compliance in the exercise of all reasonable diligence.

(10) Any diesel fuel formulation certified in accordance with this subsection (g) as it existed before the amendments effective 12/26/91 shall no longer be considered certified after 12/26/91 unless the executive officer determines that the test data submitted with the application demonstrates that the diesel fuel formulation satisfies the criteria for certification in subsection (g) as amended effective 12/26/91.

(h) Designated Equivalent Limits.

(1) *Designated equivalent limits.* The designated equivalent limits under this section 2282 are set forth in the following table. Compliance with the limits for the properties shall be determined by the specified ASTM methods, which are incorporated herein by reference.

Property	Equivalent Limit	Test Method
Aromatic Hydrocarbon Content (% by wt.)	≤ 21.0	ASTM D5186-96
PAH Content (% by wt.)	≤ 3.5	ASTM D5186-96
API Gravity	≥ 36.9	ASTM D287-82
Cetane Number	≥ 53	ASTM D613-84
Nitrogen Content (ppmw)	≤ 500	ASTM D4629-96
Sulfur Content (ppmw)	≤ 160 before 6/1/06 ≤ 15 starting 6/1/06	ASTM D2262-94 before 6/1/06 ASTM D5453-93 starting 6/1/06

(2) *Notification requirements.* In order for a producer or importer of a final blend to comply with subsection (a) through the sale, offer for sale or supply of diesel fuel subject to all of the designated equivalent limits in subsection (h)(1), the producer or importer shall notify the executive officer in accordance with this subsection (h)(2). The notification shall identify the final blend subject to the designated equivalent limits and must be received by the executive officer at least 12 hours before start of physical transfer of the final blend from the production or import facility. A producer or importer intending to have a series of its final blends be subject to the designated equivalent limits may enter into a protocol with the executive officer for reporting such blends as long as the executive officer reasonably determines the reporting under the protocol would provide at least as much notice to the executive officer as notification pursuant to the express terms of this subsection (h)(2).

(i) Variances.

(1) Any person who cannot comply with the requirements set forth in subsection (a)(1) because of reasons beyond the person's reasonable control may apply to the executive officer for a variance. The application shall set forth:

(A) the specific grounds upon which the variance is sought;

(B) the proposed date(s) by which compliance with the provisions of subsection (a)(1) will be achieved; and

(C) a plan reasonably detailing the method by which compliance will be achieved.

(2) Upon receipt of an application for a variance containing the information required in subsection (i)(1), the executive officer shall hold a hearing to determine whether, or under what conditions and to what extent, a variance from the requirements in subsection (a)(1) is necessary and will be permitted. Notice of the time and place of the hearing shall be sent to the applicant by certified mail not less than 20 days prior to the

hearing. Notice of the hearing shall also be submitted for publication in the California Regulatory Notice Register and sent to every person who requests such notice, not less than 20 days prior to the hearing.

(3) At least 20 days prior to the hearing, the application for the variance shall be made available to the public for inspection. Interested members of the public shall be allowed a reasonable opportunity to testify at the hearing and their testimony shall be considered.

(4) No variance shall be granted unless all of the following findings are made:

(A) that, because of reasons beyond the reasonable control of the applicant, requiring compliance with subsection (a)(1) would result in an extraordinary economic hardship;

(B) that the public interest in mitigating the extraordinary hardship to the applicant by issuing the variance outweighs the public interest in avoiding any increased emissions of air contaminants which would result from issuing the variance.

(C) that the compliance plan proposed by the applicant can reasonably be implemented and will achieve compliance as expeditiously as possible.

(5) Any variance order shall specify a final compliance date by which the requirements in subsection (a)(1) will be achieved. Any variance order shall also contain a condition that specified increments of progress necessary to assure timely compliance be achieved, and such other conditions, including limitations on the aromatic hydrocarbon content of diesel fuel produced for use in motor vehicles, that the executive officer, as a result of the testimony received at the hearing, finds necessary to carry out the purposes of Division 26 of the Health and Safety Code.

(6) The executive officer may require, as a condition of granting a variance, that a cash bond, or a bond executed by two or more good and sufficient sureties or by a corporate surety, be posted by the party to whom the variance was granted to assure performance of any construction, alteration, repair, or other work required by the terms of conditions of the variance.

Such bond may provide that, if the party granted the variance fails to perform such work by the agreed date, the cash bond shall be forfeited to the state board, or the corporate surety or sureties shall have the option of promptly remedying the variance default or paying to the state board an amount, up to the amount specified in the bond, that is necessary to accomplish the work specified as a condition of the variance.

(7) [Reserved]

(8) No variance which is issued due to conditions of breakdown, repair, or malfunction of equipment shall have a duration, including extensions, of more than six months.

(9) The executive officer may, after holding a hearing without complying with the provisions of subsections (i)(2) and (i)(3), issue an emergency variance to a person from the requirements of subsection (a)(1) upon a showing of reasonably unforeseeable extraordinary hardship and good cause that a variance is necessary. In connection with the issuance of an emergency variance, the executive officer may waive the requirements of subsection (i)(6). No emergency variance may extend for a period of more than 45 days. If the applicant for an emergency variance does not demonstrate that he or she can comply with the provisions of subsection (a)(1) within such 45-day period, an emergency variance shall not be granted unless the applicant makes a prima facie demonstration that the findings set forth in subsection (i)(4) should be made. The executive officer shall maintain a list of persons who have informed the executive officer in writing of their desire to be notified by telephone in advance of any hearing held pursuant to this subsection (i)(9), and shall provide advance telephone notice to any such person.

(10) A variance shall cease to be effective upon failure of the party to whom the variance was granted substantially to comply with any condition.

(11) Upon the application of any person, the executive officer may review and for good cause modify or revoke a variance from the requirements of subsection (a)(1) after holding a hearing in accordance with the provisions of subsections (i)(2) and (i)(3).

(j) Whenever this section provides for the use of a specified test method, another test method may be used following a determination by the executive officer that the other method produces results equivalent to the results with the specified method.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39010, 39500, 39515, 39516, 41511, 43000, 43013, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. Change without regulatory effect renumbering former section 2256 to section 2282 filed 9-17-91 pursuant to section 100, title 1, California Code of Regulations (Register 92, No. 4).
2. Amendment of subsections (a)(4), (c)(2), (g)(1)-(6), and (j)(1)-(2) and adoption of subsections (g)(5)(D) and (g)(10) filed 11-25-91; operative 12-26-91 (Register 92, No. 13).
3. New subsections (l)-(l)(3) filed 10-21-93 as an emergency; operative 10-21-93 (Register 93, No. 43). A Certificate of Compliance must be transmitted to OAL by 2-18-94 or emergency language will be repealed by operation of law on the following day.
4. Repeal of subsections (l)(1)-(l)(3) by operation of Government Code section 11346.1(f) (Register 94, No. 18).
5. Amendment of subsection (e)(1) filed 9-29-94; operative 9-29-94 (Register 94, No. 39).
6. Amendment filed 7-24-95; operative 7-24-95 pursuant to Government Code section 11343.4(d) (Register 95, No. 30).
7. Editorial correction of subsection (g)(4)(C)(i)2. (Register 95, No. 43).
8. New subsection (b)(0.5), amendment of subsections (b)(14) and (c)(1), repealer of subsection (c)(2), amendment of subsections (g)(2)(A)-(D) and (g)(3) filed 7-25-97; operative 8-24-97 (Register 97, No. 30).
9. Amendment of subsections (b)(19)(A)-(B) and new subsections (e)(5)-(e)(5)(C) filed 8-20-2001; operative 8-20-2001 pursuant to Government Code section 11343.4 (Register 2001, No. 34).
10. Amendment filed 7-15-2004; operative 8-14-2004 (Register 2004, No. 29).
11. New subsection (a)(2)(A) designator, new subsection (a)(2)(B) and amendment of NOTE filed 7-5-2005; operative 8-4-2005 (Register 2005, No. 27).

§ 2283. Exemptions for Diesel Fuel Used in Test Programs.

The executive officer shall consider and grant test program exemptions from the requirements of this Article in accordance with section 2259.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 39606, 41511, 43000, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 2-15-95; operative 2-15-95 pursuant to Government Code section 11343.4(d) (Register 95, No. 7).

§ 2284. Lubricity of Diesel Fuel.

(a) Regulatory Standard.

(1) *Standard starting in 2005*

(A) *Basic standard.* Starting in January 1, 2005 in accordance with the phase-in schedule in section (a)(2), no person shall sell, offer for sale, supply, or offer for supply any vehicular diesel fuel unless at the time of the transaction the diesel fuel meets a minimum lubricity level of a maximum wear scar diameter of 520 microns based on American Society for Testing and Materials (ASTM) test method D6079-02, Standard Test Method for Evaluating Lubricity of Diesel Fuels by the High Frequency Reciprocating Rig (HFRR), which is incorporated herein by reference.

(B) *Sunset.* The standard in section 2284(a)(1)(A) does not apply at any time that California diesel fuel must meet a minimum lubricity level of a maximum wear scar diameter of 520 microns based on ASTM test method D6079, Standard Test Method for Evaluating Lubricity of Diesel Fuels by the High Frequency Reciprocating Rig (HFRR), pursuant to section 4143, title 4, California Code of Regulations.

(2) *2005 phase-in schedule.* The lubricity standard in section (a)(1) shall apply:

(A) Starting January 1, 2005 to all sales, supplies, or offers of vehicular diesel fuel from the production facility or import facility at which it was produced or imported.

(B) Starting February 15, 2005 to all sales, supplies, or offers of vehicular diesel fuel except for transactions directly involving:

1. The fueling of motor vehicles at a retail outlet or bulk purchaser-consumer facility, or

2. The delivery of vehicular diesel fuel from a bulk plant to a retail outlet or purchaser-consumer facility.

(C) Starting April 1, 2005 to all sales, supplies, offers or movements of vehicular diesel, including transactions directly involving the fueling of motor vehicles at a retail outlet or bulk purchase-consumer facility.

(3) *Standard starting in 2006.* [Reserved]

(4) *2006 phase-in schedule.* [Reserved]

(5) *Exception for upstream activities.* Subsection (a)(1) shall not apply to transactions where the person selling, supplying, or offering the motor vehicle diesel fuel demonstrates that: (i) the diesel fuel has not yet been sold, offered, or supplied from the final distribution facility, (ii) the diesel fuel is identified as fuel to which a lubricity additive must be added before the diesel fuel is supplied from the final distribution facility; and either (iii) the person has taken reasonably prudent precautions to assure that he or she will bring the diesel fuel into satisfaction with the requirements of subsection (a)(1) before it is sold, supplied or offered from the final distribution facility, or (iv) at or before the time of the transaction the person has obtained a written statement from the purchaser, recipient, or offeree of the diesel fuel stating that he or she will take reasonably prudent precautions to assure that the diesel fuel will be brought into compliance with the requirements of subsection (a)(1) before it is sold, supplied or offered from the final distribution facility.

(6) *Correction of diesel fuel downstream of the final distribution facility.* Subsection (a)(1) shall not apply to the sale, supply, or offer of vehicular diesel fuel from a final distribution facility where the person selling, supplying, or offering the diesel fuel demonstrates that the diesel fuel will be corrected to comply with subsection (a)(1) as applicable prior to the sale of diesel fuel from the retail outlet. If such corrective action is taken, the producer, importer, or distributor of the diesel fuel must notify the Enforcement Division of the Air Resources Board by telephone or in writing within 2 business days of the correction. The person must also maintain records to document each occurrence for at least one year, and make the records available to the Executive Officer or his/her designee within 20 days of a written request. This subsection (a)(6) exception does not apply to vehicular diesel fuel found by an enforcement inspector to be in non-compliance, unless the person selling, supplying, or offering the diesel fuel affirmatively demonstrates that he or she would have corrected the diesel fuel independent of the inspection.

(7) *Applicability of standards to California nonvehicular diesel fuel.*

(A) Activities involving California nonvehicular diesel fuel (other than diesel fuel offered, sold or supplied solely for use in locomotives or marine vessels) are also subject to this section to the extent required by section 93114, title 17, California Code of Regulations. As adopted, section 93114 requires each air pollution control or air quality management district by December 12, 2004 to treat this section 2284 as applying to California nonvehicular diesel fuel (other than diesel fuel offered, sold or supplied solely for use in locomotives or marine vessels) as if it were vehicular diesel fuel, and to enforce those requirements regarding California nonvehicular diesel fuel, unless the district has proposed its own airborne toxic control measure to reduce particulate emissions from diesel-fueled engines through standards for nonvehicular diesel fuel.

(B) Activities involving California nonvehicular diesel fuel used in harborcraft and most diesel-electric intrastate locomotives are also subject to this section 2284 as if the fuel were vehicular diesel fuel, to the extent required by section 2299, title 13, California Code of Regulations, and section 93117, title 17, California Code of Regulations. As adopted, these regulations make nonvehicular diesel fuel used in most harborcraft in the South Coast Air Quality Management District subject to the requirements of this section 2284 starting January 1, 2006, and make all

California nonvehicular diesel fuel used in most harborcraft and diesel-electric intrastate locomotives subject to this section 2284 starting January 1, 2007.

(b) Definitions. For the purposes of this section:

(1) "Bulk purchaser-consumer" means a person that purchases or otherwise obtains diesel fuel in bulk and then dispenses it into the fuel tanks of motor vehicles owned or operated by the person.

(2) "Bulk plant" means an intermediate diesel fuel distribution facility where delivery of diesel fuel to and from the facility is solely by truck.

(3) "California nonvehicular diesel fuel" means any diesel fuel that is not vehicular diesel fuel and that is sold or made available for use in engines in California.

(4) "Diesel fuel" means any fuel that is commonly or commercially known, sold or represented as diesel fuel, including any mixture of primarily liquid hydrocarbons that is sold or represented as suitable for use in an internal combustion, compression-ignition engine.

(5) "Executive Officer" means the executive officer of the Air Resources Board, or his or her designee.

(6) "Marine vessel" has the meaning set forth in section 39037.1 of the Health and Safety Code.

(7) "Motor vehicle" has the same meaning as defined in section 415 of the Vehicle Code.

(8) "Produce" means to convert liquid compounds which are not diesel fuel into diesel fuel.

(9) "Producer" means any person who produces vehicular diesel fuel in California.

(10) "Refiner" means any person who owns, leases, operates, controls or supervises a refinery.

(11) "Refinery" means a facility that produces liquid fuels by distilling petroleum.

(12) "Supply" means to provide or transfer a product to a physically separate facility, vehicle, or transportation system.

(13) "Vehicular diesel fuel" means any diesel fuel (A) which is not conspicuously identified as a fuel which may not lawfully be dispensed into motor vehicle fuel tanks in California; or (B) which the person selling, offering for sale, or supplying the diesel fuel knows will be dispensed into motor vehicle fuel tanks in California; or (C) which the person selling, offering for sale, or supplying the diesel fuel in the exercise of reasonable prudence should know will be dispensed into motor vehicle fuel tanks in California, and that is not the subject of a declaration under penalty of perjury by the purchaser, offeree or recipient stating that s/he will not sell, offer for sale, or transfer the fuel for dispensing, or dispense the fuel, into motor vehicle fuel tanks in California.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 41511, 43000, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 7-15-2004; operative 8-14-2004 (Register 2004, No. 29).
2. Amendment of subsections (a)(1)(A) and (a)(2)(A)-(C) and new subsection (a)(2.5) filed 12-16-2004 as an emergency; operative 1-1-2005 (Register 2004, No. 51). A Certificate of Compliance must be transmitted to OAL by 5-2-2005 or emergency language will be repealed by operation of law on the following day.
3. New subsection (a)(7)(A) designator and new subsection (a)(7)(B) filed 7-5-2005; operative 8-4-2005 (Register 2005, No. 27).
4. Reinstatement of section as it existed prior to 12-16-2004 emergency amendment by operation of Government Code section 11346.1(f) (Register 2006, No. 7). The repealed emergency language affecting subsections (a)(1) and (a)(2)(A)-(C) delayed starting dates for the lubricity standard of subsection (a)(1) for some vehicular diesel fuels until May 1, 2005.

§ 2285. Exemption from Diesel Fuel Requirements for Military-Specification Fuels Used in Qualifying Military Vehicles.

(a) Exemption for military-specification fuel used in qualifying military vehicles. The vehicular diesel fuel standards in sections 2281, 2282, and 2284 do not apply to military specification fuel that is sold, offered

for sale, supplied, offered for supply, stored, dispensed, or transported for use in:

(1) Vehicles for which the U.S. Environmental Protection Agency has granted a national security exemption under 40 CFR § 85.1708 from motor vehicle emissions standards under 40 CFR Part 86, or which are exempted from regulation under 40 CFR § 85.1703(a)(3) because of features ordinarily associated with military combat or tactical vehicles such as armor and/or weaponry, or military tactical vehicles that are exempt from the California motor vehicle emission standards pursuant to section 1905, title 13, California Code of Regulations; or

(2) Tactical military motor vehicles that are not subject to a national security exemption from motor vehicle emission standards but for national security purposes (for purposes of readiness for deployment overseas) need to be fueled with the same fuel as motor vehicles for which EPA has granted a national security exemption, provided that such fuel is:

(A) Used only in vehicles identified in section (a)(1) or this section (a)(2);

(B) Segregated from non-exempt vehicle diesel fuel at all points in the distribution system; and

(C) Dispensed from a fuel pump stand or tank that is prominently labeled as containing fuel that is not lawful for use in diesel vehicles other than excluded military vehicles, or from a fueling truck. Any such fuel pump stand or tank may also be labeled with the appropriate designation of the fuel, such as "JP-8."

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 41511, 43000, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 7-15-2004; operative 8-14-2004 (Register 2004, No. 29).

Article 3. Specifications for Alternative Motor Vehicle Fuels

§ 2290. Definitions.

(a) For the purposes of this article, the following definitions apply:

(1) "Alternative fuel" means any fuel which is commonly or commercially known or sold as one of the following: M-100 fuel methanol, M-85 fuel methanol, E-100 fuel ethanol, E-85 fuel ethanol, compressed natural gas, liquefied petroleum gas, or hydrogen.

(2) "ASTM" means the American Society for Testing Materials.

(3) "Motor vehicle" has the same meaning as defined in section 415 of the Vehicle Code.

(4) "Supply" means to provide or transfer a product to a physically separate facility, vehicle, or transportation system.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39010, 39500, 40000, 43000, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New article 3 heading and section filed 12-9-92; operative 1-1-93 (Register 92, No. 50). For prior history, see Register 92, No. 4.

§ 2291. Basic Prohibitions.

(a) Starting January 1, 1993, no person shall sell, offer for sale or supply an alternative fuel intended for use in motor vehicles in California unless it conforms with the applicable specifications set forth in this article 3.

(b) An alternative fuel shall be deemed to be intended for use in motor vehicles in California if it is:

(1) stored at a facility which is equipped and used to dispense that type of alternative fuel to motor vehicles, or

[The next page is 276.7.]

(2) delivered or intended for delivery to a facility which is equipped and used to dispense that type of alternative fuel to motor vehicles, or

(3) sold, offered for sale or supplied to a person engaged in the distribution of motor vehicle fuels to motor vehicle fueling facilities, unless the person selling, offering or supplying the fuel demonstrates that he or she has taken reasonably prudent precautions to assure that the fuel will not be used as a motor vehicle fuel in California.

(c) For the purposes of this section, each retail sale of alternative fuel for use in a motor vehicle, and each supply of alternative fuel into a motor vehicle fuel tank, shall also be deemed a sale or supply by any person who previously sold or supplied such alternative fuel in violation of this section.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39010, 39500, 40000, 43000, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 12-9-92; operative 1-1-93 (Register 92, No. 50).

§ 2292.1. Fuels Specifications for M100 Fuel Methanol.

The following standards apply to M-100 fuel methanol

(The identified test methods are incorporated herein by reference):

Specifications for M-100 Fuel Methanol

Specification	Value	Test Method
Methanol	96 vol. % (min.)	As determined by the distillation range below
Distillation	4.0°C (range)	ASTM D 1078-86. At 95% by volume distilled. Must include 64.6 + 0.1°C
Other alcohols and ethers	2 mass % (max.)	ASTM D 4815-89
Hydrocarbons, gasoline or diesel fuel derived	2 mass % (max.)	ASTM D 4815-89, and then subtract concentration of alcohols, ethers and water from 100 to obtain percent hydrocarbons
Specific gravity	0.792 + 0.002 @ 20°C	ASTM D 891-89
Acidity as acetic acid	0.01 mass % (max.)	ASTM D 1613-85
Total chlorine as chloride	0.0002 mass % (max.)	ASTM D 2988-86
Lead	2 mg/1 (max.) ^a	ASTM D 3229-88
Phosphorus	0.2 mg/1 (max.) ^b	ASTM D 3231-89
Sulphur	0.002 mass % (max.)	ASTM D 2622-87
Gum, heptane washed	5 mg/1 (max.)	ASTM D 381-86
Total particulates	5 mg/1 (max.)	ASTM D 2276-89, modified to replace cellulose acetate filter with a 0.8 micron pore size membrane filter
Water	0.3 mass % (max.)	ASTM E 203-75
Appearance	Free of turbidity, suspended matter and sediment	Visually determined at 25°C by proc. A of ASTM D 4176-86
Bitterant	c	
Odorant	d	

^a No added lead.

^b No added phosphorous.

^c The M-100 fuel methanol at ambient conditions must have a distinctive and noxious taste, for purposes of preventing purposeful or inadvertent human consumption. Applicable 1/1/95.

^d The M-100 fuel methanol upon vaporization at ambient conditions must have a distinctive odor potent enough for its presence to be detected down to a concentration in air of not over 1/5 (one-fifth) of the lower limit of flammability. Applicable 1/1/95.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39010, 39500, 40000, 43000, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 12-9-92; operative 1-1-93 (Register 92, No. 50).

2. New footnote (e) filed 8-4-95; operative 8-4-95 pursuant to Government Code section 11343.4(d) (Register 95, No. 31).

3. Amendment of section heading and incorporated test methods filed 9-23-96; operative 10-23-96 (Register 96, No. 39).

§ 2292.2. Specifications for M-85 Fuel Methanol.

The following standards apply to M-85 fuel methanol

(The identified test methods are incorporated herein by reference):

Specifications for M-85 Fuel Methanol

Specification	Value	Test Method
Methanol plus higher alcohols	84 vol. % (min.)	Annex A1 to the ASTM-D-2 Proposal P-232, Draft 8-9-91
Higher alcohols (C2-C8)	2 vol. % (max.)	ASTM D 4815-89
Hydrocarbons + aliphatic ethers ^a	13-16 vol. %	ASTM D 4815-89, and then subtract concentration of alcohols, ethers and water from 100 to obtain percent hydrocarbons
Vapor pressure, dry ^b		Methods contained in Title 13, Section 2262 are preferred. ASTM D 4953-90 is an alternative method, however, in case of dispute about the vapor pressure, the value determined by the methods contained in Title 13, Section 2262 shall prevail over the value calculated by ASTM D 4953-90, including its precision statement
Luminosity		Shall produce a luminous flame, which is visible under maximum daylight conditions, throughout the entire burn duration
Acidity as acetic acid	0.005 mass % (max.)	ASTM D 1613-85
Total chlorine as chloride	0.0002 mass % (max.)	ASTM D 3120-87 modified for the det. of organic chlorides, and ASTM D 2988-86
Lead	2 mg/1 (max.) ^c	ASTM D 3229-88
Phosphorous	0.2 mg/1 (max.) ^d	ASTM D 3231-89
Sulfur	0.004 mass % (max.)	ASTM D 2622-87
Gum, heptane washed	5 mg/100 ml (max.)	ASTM D 381-86
Specification	Value	Test Method
Total particulates	0.6 mg/1 (max.)	ASTM D 2276-89, modified to replace cellulose acetate filter with a 0.8 micron pore size membrane filter
Water	0.5 mass % (max.)	ASTM E 203-75
Appearance	Free of turbidity, suspended matter and sediment	Visually determined at 25°C by Proc. A of ASTM D 4176-86

^aHydrocarbon fraction shall have a final maximum boiling point of 225 degrees C by ASTM method D 86-90, oxidation stability of 240 minutes by ASTM test method D 525-88 and No. 1 maximum copper strip corrosion by ASTM method D 130-88. Ethers must be aliphatic. No manganese added. Adjustment of RVP must be performed using common blending components from the gasoline stream. Starting on 4/1/96, the hydrocarbon fraction must also meet specifications for benzene, olefin content, aromatic hydrocarbon content, maximum T90 and maximum T50 found in California Code of Regulations, Title 13 sections 2262.3, 2262.4, 2262.7 and 2262.6 (T90 & T50), respectively.

^bRVP range of 7.0 to 9.0 psi for those geographical areas and times indicated for A, A/B, B/A and B volatility class fuels in Table 2 of ASTM D 4814-91b. RVP range of 9.0 to 13.1 psi for those geographical areas and times indicated for B/C, C/B, C, C/D and D/C volatility fuels. RVP range of 10.9 to 13.1 psi for those geographical areas and times indicated for D, D/E, E/D and E volatility fuels. Geographical areas referenced in this note shall be adjusted to reflect the air basin boundaries set forth in Title 17, California Code of Regulations, sections 60100 through 60113.

^cNo added lead.

^dNo added phosphorus.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39010, 39500, 40000, 43000, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 12-9-92; operative 1-1-93 (Register 92, No. 50).

§ 2292.3. Specifications for E-100 Fuel Ethanol.

The following standards apply to E-100 fuel ethanol
(The identification test methods are incorporated herein by reference):

Specifications for E-100 Fuel Ethanol

<i>Specification</i>	<i>Value</i>	<i>Test Method</i>
Ethanol	92 vol. % (min.)	ASTM D 3545-90 ^a
Other alcohols and ethers	2 mass % (max.)	ASTM D 4815-89
Hydrocarbons, gasoline or diesel fuel derived	5 mass % (max.)	ASTM D 4815-89, and then subtract concentration of alcohols, ethers and water from 100 to obtain percent hydrocarbons
Acidity as acetic acid	0.007 mass % (max.)	ASTM D 1613-85
Total chlorine as chloride	0.0004 mass % (max.)	ASTM D 3120-87 modified for the determination of organic chlorides, and ASTM D 2988-86
Copper	0.07 mg/l (max.)	ASTM D 1688-90 as modified in ASTM D 4806-88
Lead	2 mg/l (max.) ^b	ASTM D 3229-88
Phosphorus	0.2 mg/l (max.) ^c	ASTM D 3231-89
Sulfur	0.002 mass % (max.)	ASTM D 2622-87
Gum, heptane washed	5 mg/l (max.)	ASTM D 381-86
Total particulates	5 mg/l (max.)	ASTM D 2276-89, modified to replace cellulose acetate filter with a 0.8 micron pore size membrane filter
Water	1.25 mass % (max.)	ASTM E 203-75
Appearance	Free of turbidity, suspended matter and sediment	Visually determined at 25°C by Proc. A of ASTM D 4176-86

^aThe denaturant must meet the ASTM D 4806-88 specification for denatured fuel ethanol, except the denaturant cannot be rubber hydrocarbon solvent. The final blend specifications for E-100 take precedence over the ASTM D 4806-88 specifications.

^bNo added lead.

^cNo added phosphorus.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39010, 39500, 40000, 43000, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 12-9-92; operative 1-1-93 (Register 92, No. 50).

§ 2292.4. Specifications for E-85 Fuel Ethanol.

The following standards apply to E-85 fuel ethanol
(The identified test methods are incorporated herein by reference):

Specifications for E-85 Fuel Ethanol

<i>Specification</i>	<i>Value</i>	<i>Test Method</i>
Ethanol	79 vol. % (min.)	ASTM D 3545-90 ^a
Other alcohols	2 vol. % (max.)	ASTM D 4815-89
Hydrocarbons + aliphatic ethers ^b	15-21 vol. %	ASTM D 4815-89, and then subtract concentration of alcohols, ethers and water from 100 to obtain percent hydrocarbons. The denaturant is included in this percentage.

Specification

Vapor pressure, dry^c

Value

Test Method

Methods contained in Title 13, Section 2262 must be used. ASTM D 4953-90 is an alternative method, however, in case of dispute about the vapor pressure, the value determined by the methods contained in Title 13, Section 2262 shall prevail over the value calculated by ASTM D 4953-90, including its precision statement

Acidity as acetic acid	0.007 mass % (max.)	ASTM D 1613-85
Total chlorine as chloride	0.0004 mass % (max.)	ASTM D 3120-87 modified for the det. of organic chlorides, and ASTM D 2988-86
Copper	0.07 mg/l (max.)	ASTM D 1688-90 as modified in ASTM D 4806-88
Lead	2 mg/l (max.) ^d	ASTM D 3229-88
Phosphorus	0.2 mg/l (max.) ^e	ASTM D 3231-89
Sulfur	0.004 mass % (max.)	ASTM D 2622-87

Specification

Value

Test Method

Gum, heptane washed	5 mg/100 ml (max.)	ASTM D 381-86
Total particulates	5 mg/l (max.)	ASTM D 2276-89, modified to replace cellulose acetate filter with a 0.8 micron pore size membrane filter
Water	1.25 mass % (max.)	ASTM E 203-75
Appearance	Free of turbidity, suspended matter and sediment	Visually determined at 25°C by Proc. A of ASTM D 4176-86

^aThe denaturant must meet the ASTM D 4806-88 specification for denatured fuel ethanol, except the denaturant cannot be rubber hydrocarbon solvent. The final blend specifications for E-85 take precedence over the ASTM D 4806-88 specifications.

^bHydrocarbon fraction shall have a final maximum boiling point of 225 degrees C by ASTM method D 86-90, oxidation stability of 240 minutes by ASTM test method D 525-88 and No. 1 maximum copper strip corrosion by ASTM method D 130-88. Ethers must be aliphatic. No manganese added. Adjustment of RVP must be performed using common blending components from the gasoline stream. Starting 4/1/96, the hydrocarbon fraction must also meet specification for benzene, olefin content, aromatic hydrocarbon content, maximum T90 and maximum T50 found in California Code of Regulations, Title 13 sections 2262.3, 2262.4, 2262.7 and 2262.6 (T90 & T50), respectively.

^cRVP range of 6.5 to 8.7 for those geographical areas and times indicated for A, A/B, B/A and B volatility class fuels in Table 2 of ASTM D 4814-91b. RVP range of 7.3 to 9.4 for those geographical areas and times indicated for B/C, C/B, C, C/D and D/C volatility fuels. RVP range of 8.7 to 10.2 for those geographical areas and times indicated for D, D/E, E/D and E volatility fuels. Geographical areas referenced in this note shall be adjusted to reflect the air basin boundaries set forth in Title 17, California Code of Regulations, section 60100 through 60113.

^dNo added lead.

^eNo added phosphorus.

Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 12-9-92; operative 1-1-93 (Register 92, No. 50).

§ 2292.5. Specifications for Compressed Natural Gas.

The following standards apply to compressed natural gas
(The identified test methods are incorporated herein by reference):

Specifications for Compressed Natural Gas

<i>Specification</i>	<i>Value</i>	<i>Test Method</i>
Hydrocarbons (expressed as mole percent)		
Methane	88.0% (min.)	ASTM D 1945-81
Ethane	6.0% (max.)	ASTM D 1945-81
C ₃ and higher HC	3.0% (max.)	ASTM D 1945-81
C ₆ and higher HC	0.2% (max.)	ASTM D 1945-81
Other Species (expressed as mole percent unless otherwise indicated)		

Specification	Value	Test Method
Hydrogen	0.1% (max.)	ASTM D 2650-88
Carbon monoxide	0.1% (max.)	ASTM D 2650-88
Oxygen	1.0% (max.)	ASTM D 1945-81
Inert gases		
Sum of CO ₂ and N ₂	1.5-4.5 % (range)	ASTM D 1945-81
Water	a	
Particulate matter	b	
Odorant	c	
Sulfur	16 ppm by vol. (max.)	Title 17 CCR Section 94112

^aThe dewpoint at vehicle fuel storage container pressure shall be at least 10°F below the 99.0% winter design temperature listed in Chapter 24, Table 1, Climatic Conditions for the United States, in the American Society of Heating, Refrigerating and Air Conditioning Engineer's (ASHRAE) Handbook, 1989 fundamentals volume. Testing for water vapor shall be in accordance with ASTM D 1142-90, utilizing the Bureau of Mines apparatus.

^bThe compressed natural gas shall not contain dust, sand, dirt, gums, oils, or other substances in an amount sufficient to be injurious to the fueling station equipment or the vehicle being fueled.

^cThe natural gas at ambient conditions must have a distinctive odor potent enough for its presence to be detected down to a concentration in air of not over 1/5 (one-fifth) of the lower limit of flammability.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39010, 39500, 40000, 43000, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 12-9-92; operative 1-1-93 (Register 92, No. 50).

§ 2292.6. Specifications for Liquefied Petroleum Gas.

The following standards apply to liquefied petroleum gas
(The identified test methods are incorporated herein by reference):

Specifications for Liquefied Petroleum Gas

Specification	Value	Test Method
Propane	85.0 vol. % (min.) ^a	ASTM D 2163-87
Vapor pressure at 100°F	208 psig (max.)	ASTM D 1267-89 ASTM D 2598-88 ^b
Volatility residue: evaporated temp., 95% or	-37°F (max.)	ASTM D 1837-86
butanes	5.0 vol. % (max.)	ASTM D 2163-87
Butenes	2.0% (max.)	ASTM D 2163-87
Pentenes and heavier	0.5 vol. % (max.)	ASTM D 2163-87
Propene	10.0 vol. % (max.)	ASTM D 2163-87
Residual matter: residue on evap. of 100 ml oil stain observ.	0.05 ml (max.) pass ^c	ASTM D 2158-89 ASTM D 2158-89
Corrosion, copper strip	No. 1 (max.)	ASTM D 1838-89
Sulfur	80 ppmw (max.)	ASTM D 2784-89
Moisture content	pass	ASTM D 2713-86
Odorant	d	

^aPropane shall be required to be a minimum of 80.0 volume percent starting on January 1, 1993. Starting on January 1, 1999, the minimum propane content shall be 85.0 volume percent.

^bIn case of dispute about the vapor pressure of a product, the value actually determined by Test Method ASTM D 1267-89 shall prevail over the value calculated by Practice ASTM D 2598-88.

^cAn acceptable product shall not yield a persistent oil ring when 0.3 ml of solvent residue mixture is added to a filter paper, in 0.1 ml increments and examined in daylight after 2 min. as described in Test Method ASTM 2158-89.

^dThe liquefied petroleum gas upon vaporization at ambient conditions must have a distinctive odor potent enough for its presence to be detected down to a concentration in air of not over 1/5 (one-fifth) of the lower limit of flammability.

Within five years from the effective date of adoption or implementation, whichever comes later, of the amendments approved December 11, 1998, the Air Resources Board, in consultation with the Secretary for Environmental Protection, shall review the provisions of this chapter to determine whether it should be retained, revised or repealed.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39010, 39500, 40000, 43000, 43013, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 12-9-92; operative 1-1-93 (Register 92, No. 50).
2. Amendment filed 4-13-95; operative 4-13-95 pursuant to Government Code section 11343.4(d) (Register 95, No. 15).
3. Amendment of footnotes a and c filed 1-6-98; operative 1-6-98 pursuant to Government Code section 11343.4(d) (Register 98, No. 2).
4. Amendment of section and NOTE filed 12-8-99; operative 1-7-2000 (Register 99, No. 50).

§ 2292.7. Specifications for Hydrogen.

The following standards apply for hydrogen
(The identified test methods are incorporated herein by reference):

Specifications for Hydrogen

Specification	Value	Test Method
Hydrogen	98.0 mole % (min.)	ASTM D 1946-90
Combined hydrogen, water, oxygen and nitrogen	99.9 mole % (min.)	ASTM D 1946-90 for hydrogen, nitrogen and nitrogen oxygen; ASTM D 1142-90 for water using the Bureau of Mines apparatus
Total hydrocarbons	0.01 mole % (max.)	ASTM D 1946-90
Particulate matter	a	
Odorant	b	

^aThe hydrogen shall not contain dust, sand, dirt, gums, oils, or other substances in an amount sufficient to be injurious to the fueling station equipment or the vehicle being fueled.

^bStarting 1/1/95, the hydrogen fuel at ambient conditions must have a distinctive odor potent enough for its presence to be detected down to a concentration in air of not over 1/5 (one-fifth) of the lower limit of flammability. This requirement applies only to hydrogen which is introduced into the vehicle fuel storage system in gaseous form.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39010, 39500, 40000, 43000, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 12-9-92; operative 1-1-93 (Register 92, No. 50).

§ 2293. Equivalent Test Methods.

(a) Whenever sections 2292.1 thru 2292.7 provide for the use of a specified test method, another test method may be used following a determination by the Executive Officer that the other test method produces results equivalent to the results obtained with the specified method.

HISTORY

1. New section filed 12-9-92; operative 1-1-93 (Register 92, No. 50).

§ 2293.5. Exemptions for Alternative Motor Vehicle Fuel Used in Test Programs.

The executive officer shall consider and grant test program exemptions from the requirements of this Article in accordance with section 2259.

Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 2-15-95; operative 2-15-95 pursuant to Government Code section 11343.4(d) (Register 95, No. 7).

Article 4. Sampling and Test Procedures

§ 2296. Motor Fuel Sampling Procedures.

(a) "Scope." This method covers procedures for obtaining representative samples of motor fuel and blending components used to make motor fuel.

(b) "Summary of method." It is necessary that the samples be truly representative of the product in question. The precautions required to ensure the representative character of the samples are numerous and depend upon the tank, carrier, container or line from which the sample is being obtained, the type and cleanliness of the sample container, and the sampling procedure that is to be used. A summary of the sampling procedures and their application is presented in Table 1. Each procedure is suitable for sampling a material under definite storage, transportation, or container conditions. The basic principle of each procedure is to obtain a sample in such manner and from such locations in the tank or other container that the sample will be truly representative of the product.

(c) "Description of terms."

(1) "Average sample" is one that consists of proportionate parts from all sections of the container.

(2) "All-levels sample" is one obtained by submerging a stoppered beaker or bottle to a point as near as possible to the draw-off level, then opening the sampler and raising it at a rate such that it is about 3/4 full (maximum 85 percent) as it emerges from the liquid. An all-levels sample is not necessarily an average sample because the tank volume may not be proportional to the depth and because the operator may not be able to raise the sampler at the variable rate required for proportionate filling. The rate of filling is proportional to the square root of the depth of immersion.

(3) "Running sample" is one obtained by lowering an unstoppered beaker or bottle from the top of the liquid to the level of the bottom of the outlet connection or swing line, and returning it to the top of the liquid at a uniform rate of speed such that the beaker or bottle is about 3/4 full when withdrawn from the liquid.

(4) "Spot sample" is one obtained at some specific location in the tank by means of a thief bottle, or beaker.

(5) "Top sample" is a spot sample obtained 6 inches (150 mm) below the top surface of the liquid (Figure 1).

(6) "Upper sample" is a spot sample taken at the mid-point of the upper third of the tank contents (Figure 1).

(7) "Middle sample" is a spot sample obtained from the middle of the tank contents (Figure 1).

(8) "Lower sample" is a spot sample obtained at the level of the fixed tank outlet or the swing line outlet (Figure 1).

(9) "Clearance sample" is a spot sample taken 4 inches (100 mm) below the level of the tank outlet (Figure 1).

(10) "Bottom sample" is one obtained from the material on the bottom surface of the tank, container, or line at its lowest point.

(11) "Drain sample" is one obtained from the draw-off or discharge valve. Occasionally, a drain sample may be the same as a bottom sample, as in the case of a tank car.

(12) "Continuous sample" is one obtained from a pipeline in such manner as to give a representative average of a moving stream.

(13) "Mixed sample" is one obtained after mixing or vigorously stirring the contents of the original container, and then pouring out or drawing off the quantity desired.

(14) "Nozzle sample" is one obtained from a motor fuel service station pump nozzle which dispenses motor fuel from a underground storage tank.

(15) "Motor fuel" shall mean, for the purpose of this sampling procedure, gasoline (including gasoline containing oxygenates), diesel fuel, or any blending components that are used to make such fuel.

(d) "Sample containers."

(1) Sample containers may be clear or brown glass bottles, or cans. The clear glass bottle is advantageous because it may be examined visually for cleanliness, and also allows visual inspection of the sample for free water or solid impurities. The brown glass bottle affords some protection from light. The only cans permissible are those with the seams soldered on the exterior surface with a flux of rosin in a suitable solvent. Such a flux is easily removed with gasoline, whereas many others are very difficult to remove.

(2) "Container closure." Cork or glass stoppers, or screw caps of plastic or metal, may be used for glass bottles; screw caps only shall be used for cans to provide a vapor-tight closure seal. Corks must be of good quality, clean and free from holes and loose bits of cork. Never use rubber stoppers. Contact of the sample with the cork may be prevented by wrapping tin or aluminum foil around the cork before forcing it into the bottle. Glass stoppers must be a perfect fit. Screw caps must be protected by a disk faced with tin or aluminum foil, or other material that will not affect petroleum or petroleum products.

(3) "Cleaning procedure." All sample containers must be absolutely clean and free of water, dirt, lint, washing compounds, naphtha, or other solvents, soldering fluxes or acids, corrosion, rust, and oil. Before using a container, rinse it with Stoddard solvent or other naphtha of similar volatility. (It may be necessary to use sludge solvents to remove all traces of sediment and sludge from containers previously used.) Then wash the container with strong soap solution, rinse it thoroughly with tap water, and finally with distilled water. Dry either by passing a current of clean, warm air through the container or by placing it in a hot dust-free cabinet at 104 degrees Fahrenheit (40 degrees centigrade) or higher. When dry, stopper or cap the container immediately.

(e) "Sampling apparatus." The sampling apparatus is described in detail under each of the specific sampling procedures. Clean, dry, and free all sampling apparatus from any substance that might contaminate the material, using the procedure described in (d)(3).

(f) "Time and place of sampling." When loading or discharging product, take samples from both shipping and receiving tanks, and from the pipeline if required.

(1) "Ship or barge tanks." Sample each product after the vessel is loaded or just before unloading.

(2) "Tank cars." Sample the product after the car is loaded or just before unloading.

NOTE: When taking samples from tanks suspected of containing flammable atmospheres, precautions should be taken to guard against ignitions due to static electricity. Metal or conductive objects, such as gage tapes, sample containers, and thermometers, should not be lowered into or suspended in a compartment or tank which is being filled or immediately after cessation of pumping. A waiting period of approximately one minute will generally permit a substantial relaxation of the electrostatic charge; under certain conditions a longer period may be deemed advisable.

(g) "Obtaining samples."

(1) Directions for sampling cannot be made explicit enough to cover all cases. Extreme care and good judgment are necessary to ensure samples that represent the general character and average condition of the material. Clean hands are important. Clean gloves may be worn but only when absolutely necessary, such as in cold weather, or when handling materials at high temperature, or for reasons of safety. Select wiping cloths so that lint is not introduced, contaminating samples.

(2) As many petroleum vapors are toxic and flammable, avoid breathing them or igniting them from an open flame or a spark produced by static.

(3) When sampling relatively volatile products (more than 2 pounds (0.14 kg/cm²) RVP), the sampling apparatus shall be rinsed and allowed to drain before drawing the sample. If the sample is to be transferred to another container, this container shall also be rinsed with some of the volatile product and then drained. When the actual sample is emptied into this container, the sampling apparatus should be upended into the opening of the sample container and remain in this position until the contents have been transferred so that no unsaturated air will be entrained in the transfer of the sample.

(h) "Handling samples."

(1) "Volatile samples." It is necessary to protect all volatile samples of product from evaporation. Transfer the product from the sampling apparatus to the sample container immediately. Keep the container closed except when the material is being transferred. When samples of more than 16 pounds (1.12 kgf/cm²) RVP are being obtained, be sure to use containers strong enough to meet local safety regulations. After delivery to the laboratory, volatile samples should be cooled before the container is opened.

(2) "Container outage." Never completely fill a sample container, but allow adequate room for expansion, taking into consideration the temperature of the liquid at the time of filling and the probable maximum temperature to which the filled container may be subjected.

(i) "Shipping samples." To prevent loss of liquid and vapors during shipment, and to protect against moisture and dust, cover the stoppers of glass bottles with plastic caps that have been swelled in water, wiped dry, placed over the tops of the stoppered bottles, and allowed to shrink tightly in place. The caps of metal containers must be screwed down tightly and checked for leakage. Postal and express office regulations applying to the shipment of flammable liquids must be observed.

(j) "Labeling sample containers."

(1) Label the container immediately after a sample is obtained. Use waterproof and oilproof ink or a pencil hard enough to dent the tag, since soft pencil and ordinary ink markings are subject to obliteration from moisture, oil smearing, and handling. Include the following information:

- (A) Date and time (the period elapsed during continuous sampling),
- (B) Name of the sample,
- (C) Name or number and owner of the vessel, car, or container,
- (D) Brand and grade of material, and
- (E) Reference symbol or identification number.

(k) "Sampling procedures." The standard sampling procedures described in this method are summarized in Table 1. Alternative sampling procedures may be used if a mutually satisfactory agreement has been reached by the parties involved and such agreement was put in writing and signed by authorized officials.

(1) "Bottle or beaker sampling." The bottle or beaker sampling procedure is applicable for sampling liquids of 16 pounds (1.12 kgf/cm²) RVP or less in tank cars, tank trucks, shore tanks, ship tanks, and barge tanks.

(A) "Apparatus." A suitable sampling bottle or beaker as shown in Figure 2 is required. Recommended diameter of opening in the bottle or beaker is 3/4 inch (19 mm).

(B) "Procedure."

1. "All-levels sample." Lower the weighted, stoppered bottle or beaker as near as possible to the draw-off level, pull out the stopper with a sharp jerk of the cord or chain and raise the bottle at a uniform rate so that it is about 3/4 full as it emerges from the liquid.

2. "Running sample." Lower the unstoppered bottle or beaker as near as possible to the level of the bottom of the outlet connection or swing line and then raise the bottle or beaker to the top of the liquid at a uniform rate of speed such that it is about 3/4 full when withdrawn from the liquid.

3. "Upper, middle, and lower samples." Lower the weighted, stoppered bottle to the proper depths (Figure 1) as follows:

Upper sample	middle of upper third of the tank contents
Middle sample	middle of the tank contents
Lower sample	level of the fixed tank outlet or the swing-line outlet

Pull out the stopper with a sharp jerk of the cord or chain and allow the bottle or beaker to fill completely at the selected level, as evidenced by the cessation of air bubbles. When full, raise the bottle or beaker, pour off a small amount, and stopper immediately.

4. "Top sample." Obtain this sample (Figure 1) in the same manner as specified in (k)(1)(B)3. but at 6 inches (150 mm) below the top surface of the tank contents.

5. "Handling." Stopper and label bottle samples immediately after taking them, and deliver to the laboratory in the original sampling bottles.

(2) "Tap sampling." The tap sampling procedure is applicable for sampling liquids of 26 pounds (1.83 kgf/cm²) RVP or less in tanks which are equipped with suitable sampling taps or lines. This procedure is recommended for volatile stocks in tanks of the breather and balloon roof type, spheroids, etc. (Samples may be taken from the drain cocks of gage glasses, if the tank is not equipped with sampling taps.) When obtaining a sample for RVP or distillation analysis, use the assembly as shown in Figure 3. When obtaining a sample for other than RVP or distillation analysis, the assembly as shown in Figure 3 need not be used.

NOTE: If RVP is more than 16 pounds (1.12 kgf/cm²) but not more than 26 pounds (1.83 kgf/cm²) a cooling bath as shown in section (l)(6). Figure 5, shall be used between the tank tap and the sample container to cool the sample and prevent volatilization of low-boiling components.

(A) "Apparatus."

1. "Tank taps." The tank should be equipped with at least three sampling taps placed equidistant throughout the tank height. On tanks that are not equipped with floating roofs, each sample tap should extend into the a minimum of 10 cm (4 in.). A standard 1/4 inch pipe with suitable valve is satisfactory.

2. "Tube." A delivery tube that will not contaminate the product being sampled and long enough to reach to the bottom of the sample container is required to allow submerged filling. When a cooling bath is used while tap sampling, a similar suitable tube should be used between the tank tap and the cooler inlet.

3. "Sample containers." Use clean, dry glass bottles of convenient size and strength to receive the samples. In some cases, metal containers may be used instead of glass bottles.

(B) "Procedure."

1. Before a sample is drawn, flush the tap (or gage glass drain cock) and line until they are purged completely. Connect the clean delivery tube to the tap. Draw upper, middle, or lower samples directly from the respective taps after the flushing operation. Stopper and label the sample container immediately after filling, and deliver it to the laboratory.

2. When a sample cooler is used during the tap sampling operation, flush the tap (or gage glass drain cock). Then, using a section of clean tubing, connect the tap to the cooler inlet. Flush the cooler thoroughly, after which connect the clean delivery tube to the cooler outlet and proceed with the sampling operation.

(3) "Continuous sampling." The continuous sampling procedure is applicable for sampling liquids of 16 pounds (1.12 kgf/cm²) RVP or less and semiliquids in pipelines, filling lines, and transfer lines. The continuous sampling may be done manually or by using automatic devices.

(A) "Apparatus."

1. "Sampling probe." The function of the sampling probe is to withdraw from the flow stream a portion that will be representative of the entire stream. The apparatus assembly for continuous sampling is shown in Figure 4. Probe designs that are commonly used are as follows:

a. A tube extending to the center of the line and beveled at a 45 degree angle facing upstream (Figure 4(a)).

b. A long-radius forged elbow or pipe bend extending to the center line of the pipe and facing upstream. The end of the probe should be reamed to give a sharp entrance edge (Figure 4(b)).

c. A closed-end tube with a round orifice spaced near the closed end which should be positioned in such a way that the orifice is in the center of the pipeline and is facing the stream as shown in Figure 4(c).

2. Since the fluid pumped may not in all cases be homogeneous, the position and size of the sampling probe should be such as to minimize stratification or dropping out of heavier particles within the tube or the displacement of the product within the tube as a result of variation in gravity of the flowing stream. The sampling probe should be located preferably in a vertical run of pipe and as near as practicable to the point where the product passes to the receiver. The probe should always be in a horizontal position.

a. The sampling lines should be as short as practicable and should be cleared before any samples are taken.

b. A suitable device for mixing the fluid flow to ensure a homogeneous mixture at all rates of flow and to eliminate stratification should be installed upstream of the sampling tap. Some effective devices for obtaining a homogeneous mixture are as follows: Reduction in pipe size; a series of baffles; orifice or perforated plate; and a combination of any of these methods.

c. The design or sizing of these devices is optional with the user, as long as the flow past the sampling point is homogeneous and stratification is eliminated.

3. To control the rate at which the sample is withdrawn, the probe or probes should be fitted with valves or plug cocks.

4. "Automatic sampling devices" that meet the standards set out in (3)(A)5. may be used in obtaining samples of gasoline. The quantity of sample collected must be of sufficient size for analysis, and its composition should be identical with the composition of the batch flowing in the line while the sample is being taken. An automatic sampler installation necessarily includes not only the automatic sampling device that extracts the samples from the line, but also a suitable probe, connecting lines, auxiliary equipment, and a container in which the sample is collected. Automatic samplers may be classified as follows:

a. "Continuous sampler, time cycle (nonproportional) types." A sampler designed and operated in such a manner that it transfers equal increments of liquid from the pipeline to the sample container at a uniform rate of one or more increments per minute is a continuous sampler.

b. "Continuous sampler, flow-responsive (proportional) type." A sampler that is designed and operated in such a manner that it will automatically adjust the quantity of sample in proportion to the rate of flow is a flow-responsive (proportional) sampler. Adjustment of the quantity of sample may be made either by varying the frequency of transferring equal increments of sample to the sample container, or by varying the volume of the increments while maintaining a constant frequency of transferring the increments to the sample container. The apparatus assembly for continuous sampling is shown in Figure 4.

c. "Intermittent sampler." A sampler that is designed and operated in such a manner that it transfers equal increments of liquid from a pipeline to the sample container at a uniform rate of less than one increment per minute is an intermittent sampler.

5. "Standards of installation." Automatic sampler installations should meet all safety requirements in the plant or area where used, and should comply with American National Standard Code for Pressure Piping, and other applicable codes (ANSI B31.1). The sampler should be so installed as to provide ample access space for inspection and maintenance.

a. Small lines connecting various elements of the installation should be so arranged that complete purging of the automatic sampler and of all lines can be accomplished effectively. All fluid remaining in the sampler and the lines from the preceding sampling cycle should be purged immediately before the start of any given sampling operation.

b. In those cases where the sampler design is such that complete purging of the sampling lines and the sampler is not possible, a small pump should be installed in order to circulate a continuous stream from the sampling tube past or through the sampler and back into the line. The automatic sampler should then withdraw the sample from the sidestream through the shortest possible connection.

c. Under certain conditions, there may be a tendency for water and heavy particles to drop out in the discharge line from the sampling device and appear in the sample container during some subsequent sampling period. To circumvent this possibility, the discharge pipe from the sampling device should be free of pockets or enlarged pipe areas, and preferably should be pitched downward to the sample container.

d. To ensure clean, free-flowing lines, piping should be designed for periodic cleaning.

6. "Field calibration." Composite samples obtained from the automatic sampler installation should be verified for quantity performance in a manner that meets with the approval of all parties concerned, at least once a month and more often if conditions warrant. In the case of time-cycle samplers, deviations in quantity of the sample taken should not exceed

± 5 percent for any given setting. In the case of flow-responsive samplers, the deviation in quantity of sample taken per 1,000 barrels of flowing stream should not exceed ± 5 percent. For the purpose of field-calibrating an installation, the composite sample obtained from the automatic sampler under test should be verified for quality by comparing on the basis of physical and chemical properties, with either a properly secured continuous nonautomatic sample or tank sample. The tank sample should be taken under the following conditions:

a. The batch pumped during the test interval should be diverted into a clean tank and a sample taken within one hour after cessation of pumping.

b. If the sampling of the delivery tank is to be delayed beyond one hour, then the tank selected must be equipped with an adequate mixing means. For valid comparison, the sampling of the delivery tank must be completed within eight hours after cessation of pumping, even though the tank is equipped with a motor-driven mixer.

c. When making a normal full-tank delivery from a tank, a properly secured sample may be used to check the results of the sampler if the parties mutually agree to this procedure.

7. "Receiver." The receiver must be a clean, dry container of convenient size to receive the sample. All connections from the sample probe to the sample container must be free of leaks. Two types of container may be used, depending upon service requirements.

a. "Atmospheric container." The atmospheric container shall be constructed in such a way that it retards evaporation loss and protects the sample from extraneous material such as rain, snow, dust, and trash. The construction should allow cleaning, interior inspection, and complete mixing of the sample prior to removal. The container should be provided with a suitable vent.

b. "Closed container." The closed container shall be constructed in such a manner that it prevents evaporation loss. The construction must allow cleaning, interior inspection and complete mixing of the sample prior to removal. The container should be equipped with a pressure-relief valve.

(B) "Procedure."

1. "Nonautomatic sample."

a. Adjust the valve or plug cock from the sampling probe so that a steady stream is drawn from the probe. Whenever possible, the rate of sample withdrawal should be such that the velocity of liquid flowing through the probe is approximately equal to the average linear velocity of the stream flowing through the pipeline. Measure and record the rate of sample withdrawal as gallons per hour. Divert the sample stream to the sampling container continuously or intermittently to provide a quantity of sample that will be of sufficient size for analysis.

2. "Automatic sampling." Purge the sampler and the sampling lines immediately before the start of a sampling operation. If the sample design is such that complete purging is not possible, circulate a continuous stream from the probe past or through the sampler and back into the line. Withdraw the sample from the side stream through the automatic sampler using the shortest possible connections. Adjust the sampler to deliver not less than 1 and not more than 40 gallons (151 liters) of sample during the desired sampling period. For time-cycle samplers, record the rate at which sample increments were taken per minute. For flow-responsive samplers, record the proportion of sample to total stream. Label the samples and deliver them to the laboratory in the containers in which they were collected.

(4) "Nozzle sampling." The nozzle sampling procedure is applicable for sampling product from a service station underground storage tank.

(A) "Apparatus." Sample containers conforming with (d)(1) should be used. A spacer, as shown in Figure 6, shall be used, if appropriate. When obtaining a sample for RVP or distillation analysis, an ice water bath and nozzle extension, as shown in Figure 7, shall be used. When obtaining a sample for other than RVP or distillation analysis, neither the ice water bath nor the nozzle extension need to be used.

(B) "Procedure."

1. When obtaining a sample for RVP or distillation analysis, conduct the sampling in the following manner: Immediately after gasoline has been delivered from pump and pump has been reset, deliver a small amount of product into the sample container, using spacer (Figure 6), if needed, on the pump nozzle (vapor recovery type). Rinse sample container and dump product into waste container. Insert nozzle extension (Figure 7) into sample container and insert pump nozzle into extension with slot over air bleed hole (if the extension is equipped with a slot). Replace sample container in chilling medium and fill slowly through nozzle extension to 70–80 percent full (Figure 8). Remove nozzle extension. Cap container at once. Check for leaks. Discard container and resample if leak occurs. If container is leak tight, place container in a cold chest of ice water.

2. When obtaining a sample for other than RVP or distillation analysis, the following procedure may be used instead of the procedure in (k)(4)(B)1: Immediately after product has been delivered from pump and pump has been reset, deliver a small amount of product into the sample container, using spacer (Figure 6), if needed, on the pump nozzle (vapor recovery type). Rinse sample container and dump product into waste container. Fill slowly with the nozzle to 70–80 percent full. Cap container at once. Check for leaks. Discard container and resample if leak occurs.

(I) "Special precautions and instructions for RVP Sampling."

(1) "Precautions." Vapor pressures are extremely sensitive to evaporation losses and to slight changes in composition. When obtaining, storing, or handling samples, observe the necessary precautions to ensure samples representative of the product and satisfactory for RVP tests. Official samples should be taken by, or under the immediate supervision of a person of judgment, skill, and sampling experience. Never prepare composite samples for RVP testing. Make certain that containers which are to be shipped by common carrier conform to Interstate Commerce Commission, state, or local regulations. When flushing or purging lines or containers, observe the pertinent regulations and precautions against fire, explosion, and other hazards.

(2) "Sample containers." Use containers of not less than 1 quart (1 liter) nor more than 2 gallons (7.5 liters) capacity, of sufficient strength to withstand the pressures to which they may be subjected, and of a type that will permit replacement of the cap or stopper with suitable connections for transferring the sample to the gasoline chamber (if applicable) of the vapor pressure apparatus. Open-type containers have a single opening which permits sampling by immersion. Closed-type containers have two openings, one in each end (or the equivalent thereof), fitted with valves suitable for sampling by water displacement or by purging.

(3) "Transfer connections." The transfer connection for the open-type container consists of an air tube and a liquid delivery tube assembled in a cap or stopper. The air tube extends to the bottom of the container. One end of the liquid delivery tube is flush with the inside face of the cap or stopper and the tube is long enough to reach the bottom of the gasoline chamber while the sample is being transferred to the chamber. The transfer connection for the closed-type container consists of a single tube with a connection suitable for attaching it to one of the openings of the sample container. The tube is long enough to reach the bottom of the gasoline chamber while the sample is being transferred.

(4) "Sampling open tanks." Use clean containers of the open type when sampling open tanks and tank cars. An all-level sample obtained by the bottle procedure, (k)(1) is recommended. Before taking the sample, flush the container by immersing it in the product to be sampled. Then obtain the sample immediately. Fill to 70–80 percent and close it promptly. Label the container and deliver it to the laboratory.

(5) "Sampling closed tanks." Containers of either the open or closed type may be used to obtain samples from closed or pressure tanks. If an

open type container is used, follow the cooling bath procedure described in (I)(7) or (I)(10). If the closed type is used, obtain the sample using the water displacement procedure, (I)(8), or the purging procedure, (I)(9). The water displacement procedure is preferable because the flow of product involved in the purging procedure may be hazardous.

(6) "Cooling bath." A bath (Figure 5) of sufficient size to hold the sample container and a cooling coil of about 25 feet (8 m) of copper tubing (3/8 inch (9 mm) or less outside diameter) shall be required when using the procedure described in (I)(7). One end of the coil is provided with a connection for attaching it to the tank sampling tap or valve. The other end is fitted with a suitable valve (outlet) of good quality. A removable copper tube of 3/8 inch or less outside diameter and of sufficient length to reach the bottom of the sample container shall be connected to the open end of the outlet valve.

(7) "Cooling bath procedure." When using a cooling bath and a container of the open type, keep it at a temperature of 32 degrees to 40 degrees Fahrenheit (0 degrees to 4.5 degrees centigrade) during the sampling operation by using the cooling bath (Figure 5). Connect the coil to the tank sampling tap or valve and flush it with a sufficient amount of product to ensure complete purging. When obtaining a sample, throttle the outlet valve so that the pressure in the coil will be approximately the same as that in the tank. Fill the container once to wash and cool it, and discard the wash product. Then draw the sample immediately. Pour off enough so that the container will be 70–80 percent full and close it promptly. Label the container and deliver it to the laboratory.

(8) "Water displacement procedure." Completely fill the closed-type container with water and close the valves. The water should be at the same temperature or lower than that of the product to be sampled. While permitting a small amount of product to flow through the fittings, connect the top or inlet valve of the container to the tank sampling tap or valve. Then open all valves on the inlet side of the container. Open the bottom or outlet valve slightly to allow the water to be displaced slowly by the sample entering the container. Regulate the flow so that there is no appreciable change in pressure within the container. Close the outlet valve as soon as gasoline discharges from the outlet; then in succession close the inlet valve and the sampling valve on the tank. Disconnect the container and withdraw enough of the contents so that it will be 70–80 percent full. If the vapor pressure of the product is not high enough to force liquid from the container, open both the upper and lower valves slightly to remove the excess. Promptly seal and label the container, and deliver it to the laboratory.

(9) "Purging procedure." Connect the inlet valve of the closed-type container to the tank sampling tap or valve. Throttle the outlet valve of the container so that the pressure in it will be approximately equal to that in the container being sampled. Allow a volume of product equal to at least twice that of the container to flow through the sampling system. Then close all valves, the outlet valve first, the inlet valve of the container second, and the tank sampling valve last, and disconnect the container immediately. Withdraw enough of the contents so that the sample container will be 70–80 percent full. If the vapor pressure of the product is not high enough to force liquid from the container, open both the upper and lower valves slightly to remove the excess. Promptly seal and label the container and deliver it to the laboratory.

(10) "Nozzle sampling procedure." When using a container of the open type, keep it at a temperature of 32 degrees to 40 degrees Fahrenheit (0 degree to 4.5 degrees centigrade) when sampling by the nozzle sampling procedure. The container may be chilled by placing it into an ice chest containing ice (frozen water). The sampling is accomplished following the procedure in (k)(4).

Table 1
Summary of Sampling Procedures and Applicability

<i>Type of container</i>	<i>Procedure</i>	<i>Paragraph</i>
Storage tanks, ship and barge tanks, tank cars, tank trucks	Bottle sampling	(k)(1)
Storage tanks with taps	Tap sampling	(k)(2)
Pipes and lines	Continuous line sampling	(k)(3)
Service station under-ground storage tanks	Nozzle sampling	(k)(4)

Orange County APCD*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. Change without regulatory effect renumbering article heading and former section 2261 to section 2296 filed 9-17-91 pursuant to section 100, title 1, California Code of Regulations (Register 92, No. 4).
2. Amendment of section heading, subsections (a)-(c), (c)(3) and (c)(14), new subsection (c)(15), amendment of subsections (d), (d)(2), (e)-(f), (g), (g)(3)-(h)(1), (i)-(k), (k)(1)(B)(2), (k)(2), and (k)(4)-(B)1., new subsection (k)(4)(B)2., amendment of subsections (1)-(1)(7), Table 1, Figure 5, Figure 7, and NOTE filed 10-14-92; operative 10-14-92 pursuant to Government Code section 11346.2(d) (Register 92, No. 42).
3. Amendment of subsections (k)(2)-(k)(2)(A) and amendment of NOTE filed 8-20-2001; operative 8-20-2001 pursuant to Government Code section 11343.4 (Register 2001, No. 34).
4. Amendment of subsection (k)(2) filed 12-24-2002; operative 12-24-2002 pursuant to Government Code section 11343.4 (Register 2002, No. 52).

§ 2297. Test Method for the Determination of the Reid Vapor Pressure Equivalent Using an Automated Vapor Pressure Test Instrument.

(a) Scope.

(1.0) This test method covers the determination of the total pressure, exerted in vacuum, by air-containing, volatile, petroleum products. The test method is suitable for testing samples with boiling points above 0°C (32°F) that exert a vapor pressure between 7 and 130 kPa (1.0 and 19 psi) at 37.8°C (100°F) at a vapor-to-liquid ratio of 4:1. The test method is suitable for testing gasoline samples which contain oxygenates. No account is made of dissolved water in the sample. (Samples can also be tested at other vapor-to-liquid ratios, temperatures and pressures, but the Precision and Bias as described in section (k) do not necessarily apply.)

(2.0) This test method covers the use of automated vapor pressure instruments that perform measurements on liquid specimen sizes in the range from 1 to 10 ml.

(3.0) Standard values are specified in SI units (International System of Units). The values given in parentheses are provided for information purposes only.

(4.0) This test method may involve hazardous materials, operations, and equipment. This test method does not purport to address all of the safety problems associated with its use. It is the responsibility of the user of this test method to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use. For specific hazard statements, see section (g)(5.0).

(b) Summary of Test Method.

(1.0) A known volume of chilled, air-saturated sample is introduced into a thermostatically controlled test chamber, the internal volume of which is five times that of the total test specimen introduced into the chamber. A vacuum is applied to the chamber in accordance with the manufacturer's instructions. After introduction into the test chamber the test specimen is allowed to reach thermal equilibrium at the test temperature, 37.8°C (100°F). The resulting rise in pressure in the chamber is measured using a pressure transducer sensor and indicator.

(2.0) Only the sum of the partial pressure of the sample and the partial pressure of the dissolved air (commonly known as the total pressure) are used in this test method. Note that some instruments may call this pressure measurement by another term. Also note that some instruments are capable of measuring the absolute pressure of the specimen as well.

(3.0) The measured total vapor pressure is converted to a Reid vapor pressure equivalent (RVPE) by use of a calibration equation (section (i)(1.0)). This calculation converts the measured total pressure to the Reid vapor pressure (RVP) expected from the American Society of Testing and Materials (ASTM) Test Method D 323–58.

(c) Apparatus.

(1.0) Vapor Pressure Apparatus – An appropriate instrument, designed for the intended use should be selected. The minimum performance level for the automated vapor pressure test instrument is that the instrument shall perform as well as, or better than, the precision criteria set forth in the ASTM D323–58, which is incorporated herein by reference. The ASTM D323–58 states a repeatability value of 0.2 psi and a reproducibility value of 0.3 psi. The instrument shall provide accurate results which are comparable to the RVP measured by the ASTM 323–58. Typically, the type of apparatus suitable for use in this test method employs a small volume test chamber incorporating a transducer for pressure measurements and associated equipment for thermostatically controlling the chamber temperature and for evacuating the test chamber.

(1.1) The test chamber shall be designed to contain between 5 and 50 ml of liquid and vapor and be capable of maintaining a vapor-to-liquid ratio between 3.95 to 1.00 and 4.05 to 1.00.

(1.2) The pressure transducer shall have a minimum operational range from 0 to 177 kPa (0 to 25.6 psi) with a minimum resolution of 0.1 kPa (0.01 psi) and a minimum accuracy of ± 0.3 kPa (± 0.05 psi). The pressure measurement system shall include associated electronics and readout devices to display the resulting pressure reading.

(1.3) The thermostatically controlled heater shall be used to maintain the test chamber at $37.8 \pm 0.1^\circ\text{C}$ ($100 \pm 0.2^\circ\text{F}$) for the duration of the test.

(1.4) A platinum resistance thermometer shall be used for measuring the temperature of the test chamber. The minimum temperature range of the measuring device shall be from ambient to 60°C (140°F) with a resolution of 0.1°C (0.2°F) and accuracy of 0.1°C (0.2°F).

(1.5) The vapor pressure apparatus shall have provisions for introduction of the test specimen into the test chamber and for the cleaning or purging of the chamber following the test.

(2.0) A vacuum pump (if required by the manufacturer's instructions) shall be capable of reducing the pressure in the test chamber to less than 0.01 kPa (0.001 psi) absolute.

(3.0) A syringe (optional, depending on sample introduction mechanism employed with each instrument) shall be gas-tight. The syringe shall be 1 to 20-ml capacity with a $\pm 1\%$ or better precision. The capacity of the syringe should not exceed two times the volume of the test speci-

men being dispensed.

(4.0) Ice Water Bath or Refrigerator (Air Bath): for chilling the samples and syringe to temperatures between and 1°C (32 to 34°F).

(5.0) Mercury Barometer (if required by the manufacturer's instructions): in the 0 to 120 kPa (0 to 17.4 psi) range.

(6.0) McLeod Vacuum Gage (if required by the manufacturer's instructions): to cover at least the range from 0 to 0.67 kPa (0 to 5 mm Hg).

(d) Sampling.

(1.0) Obtain a sample in accordance with title 13, California Code of Regulations, section 2296.

(2.0) The extreme sensitivity of vapor pressure measurements to losses through evaporation and the resulting changes in composition is such as to require the utmost precaution and most meticulous care in the handling of samples.

(3.0) Protect samples from excessive high temperatures prior to testing. This can be accomplished by storage in an appropriate ice water bath or refrigerator.

(4.0) Do not test samples stored in leaky containers. Discard and obtain another sample if leaks are detected.

(e) Preparation of Apparatus.

(1.0) Prepare the instrument for operation in accordance with the manufacturer's instructions.

(2.0) Clean and prepare the test chamber as required to avoid contamination of the test specimen.

(3.0) For instruments that require that the test chamber be evacuated prior to the introduction of the test specimen: Prior to specimen introduction, visually determine from the instrument display that the test chamber pressure is stable and does not exceed 0.1 kPa (0.01 psi). When the pressure is not stable or exceeds this value, check that the chamber is clean of volatile materials remaining in the chamber from a previous specimen or check the calibration of the transducer.

(4.0) If a syringe is used for introduction of the specimen, chill it to between 0 and 4.5°C (32 and 40°F) in an ice water bath or a refrigerator before drawing in the specimen. Avoid water contamination of the syringe reservoir by suitably sealing the outlet of the syringe during the cooling process.

(5.0) For instruments using a pre-heated test chamber: Prior to introduction of the test specimen check that the temperature of the test chamber is within the required range from $37.8 \pm 0.1^\circ\text{C}$ ($100 \pm 0.2^\circ\text{F}$).

(f) Calibration.

(1.0) Pressure Transducer:

(1.1) Check the calibration of the pressure transducer on a monthly basis or when needed as indicated from the quality control checks (section (g)). The calibration of the pressure transducer is checked using two reference points, zero pressure (<0.1 kPa) and the ambient barometric pressure.

(1.2) Connect a McLeod gage to the vacuum source in line with the test chamber. Apply a vacuum to the test chamber. When the McLeod gage registers a pressure less than 0.1 kPa (0.8 mm Hg, or 0.01 psi), adjust the pressure transducer control to zero or to the actual reading on the McLeod gage as dictated by the instrument design and manufacturer's instructions.

(1.3) Open the test chamber to the atmosphere and observe the pressure transducer reading. If the pressure reading is not equal to the ambient barometric pressure, then adjust the pressure transducer span control until the appropriate reading is observed. Ensure that the instrument is set to display the total pressure and not a calculated or corrected value.

(1.4) Repeat steps (f)(1.2) and (f)(1.3) until the zero and barometric pressures read correctly without further adjustments.

(2.0) Thermometer – Check the calibration of the platinum resistance thermometer used to monitor the temperature of the test chamber at least every six months against a National Institute on Standards and Technology (NIST) traceable thermometer.

(g) Quality Control Checks.

(1.0) Check the performance of the instrument each day it is in use by running a quality control sample consisting of a pure solvent of known vapor pressure similar to the vapor pressure of the samples to be tested. Treat the pure solvent quality control check sample in the same manner as a sample (section (h)). Record the total vapor pressure (do not calculate a Reid vapor pressure equivalent) in a log for the purpose of tracking the instrument's performance. If the total vapor pressure differs from the previous entry (for the same pure solvent) in the log by more than ± 1.0 kPa (0.15 psi), then check the instrument calibration (section (f)). If the trend of the log shows variations of more than ± 1.0 kPa (0.15 psi) (for the same pure solvent), also check the instrument calibration.

(2.0) Some of the possible reference pure materials and their corresponding absolute vapor pressures include:

cyclohexane	22.5 kPa	(3.27 psi)
cyclopentane	68.3 kPa	(9.92 psi)
2,2-dimethylbutane	67.9 kPa	(9.86 psi)
2,3-dimethylbutane	51.1 kPa	(1.41 psi)
2-methylpentane	46.7 kPa	(6.77 psi)
toluene	7.1 kPa	(1.03 psi)

(The total pressure values cited were obtained from Phillips Petroleum Co., Bartlesville, OK, or the Table of Physical Constants, National Gas Producer Association.)

(3.0) Purity of Reagents – Use chemicals of at least 99% purity for quality control checks. Unless otherwise indicated, it is intended that all reagents conform to the specifications of the Committee on Analytical Reagents of the American Chemical Society where such specifications are available. ("Reagent Chemicals, American Chemical Society Specifications," Am. Chemical Soc., Washington, DC. For suggestions on the testing of reagents not listed by the American Chemical Society, see "Reagent Chemicals and Standards," by Joseph Rosin, D. Van Nostrand Co, Inc., New York, NY and the "United States Pharmacopeia.") Lower purities can be used, provided it is first ascertained that the reagent is of sufficient purity to permit its use without lessening the accuracy of the determination.

(4.0) The chemicals in this section are suggested for use in quality control procedures; not for instrument calibration.

(5.0) **WARNING**—Cyclohexane, cyclopentane, 2,2-dimethylbutane, 3,2-dimethylbutane, 2-methylpentane, and toluene are extremely flammable. They are an aspiration hazard and are harmful if inhaled. They are also a skin irritant on repeated contact.

(h) Procedure.

(1.0) Sample Temperature – Cool the sample container and contents in an ice water bath or refrigerator to the 0 to 1°C (32 to 34°F) range prior to opening the sample container. Allow sufficient time to reach this temperature.

(2.0) Verification of Sample Container Filling – After the sample reaches thermal equilibrium at 0 to 1°C, take the container from the ice water bath or refrigerator, wipe dry with an absorbent material, unseal and examine the ullage. With a suitable gage, determine that the liquid content in the container is between 70 to 80% of the volume of the container capacity.

(2.1) Discard the sample if the liquid content of the container is less than 70% of the volume of the container capacity.

(2.2) If the liquid content of the container is more than 80% of the volume of the container capacity, pour out enough sample to bring the liquid contents within the 70 to 80% volume range.

(3.0) Air Saturation of Sample in Sample Container

(3.1) After determining that the liquid content in the sample container is between 70 to 80% full, reseal the container and shake vigorously. Return the container to the ice water bath or refrigerator for a minimum of 2 minutes.

(4.0) Remove the sample from the ice water bath or refrigerator, dry the exterior of the container with absorbent material, uncup, insert a transfer tube or syringe (section (e)(4.0)). Draw a bubble-free aliquot of sample into a gas tight syringe or transfer tube and deliver this test specimen to the test chamber as rapidly as possible. The total time between

opening the chilled sample container and inserting/securing the syringe into the sealed test chamber shall not exceed 1 minute.

(5.0) The vapor pressure determination shall be performed on the first test specimen withdrawn from a sample container. Successive vapor pressure determinations can be made on the remaining test material in the same container if the container had been tightly sealed immediately after the previous vapor pressure determination.

(6.0) Follow the manufacturer's instructions for the introduction of the test specimen into the test chamber, and for the operation of the instrument to obtain a total vapor pressure result for the test specimen.

(7.0) Set the instrument to read the result in terms of total vapor pressure. If the instrument is capable of calculating a Reid vapor pressure equivalent value, ensure that only the parameters described in section (i)(2.0) are used.

(8.0) Verification of Single Phase – After drawing a test specimen and introducing it into the instrument for analysis, check the remaining sample for phase separation. If the sample is contained in a glass container, this observation can be made prior to sample transfer. If the sample is contained in a non-transparent container, mix the sample thoroughly and immediately pour a portion of the remaining sample into a glass container and observe for evidence of phase separation. If the sample is not clear and bright or if a second phase is observed, discretion shall be used to determine if the sample is truly representative.

(9.0) Record the total vapor pressure reading from the instrument to the nearest 0.1 kPa (0.01 psi). For instruments that do not automatically record or display a stable pressure value, manually record the pressure indicator reading every minute to the nearest 0.1 kPa; and, when three successive readings agree to within 0.1 kPa, record the result to the nearest 0.1 kPa (0.01 psi).

(i) Calculation.

(1.0) Calibration Equation – Calculate the Reid vapor pressure equivalent (RVPE) using the following calibration equation. Ensure that the instrument reading used in this equation corresponds to the total pressure and has not been corrected by an automatically programmed correction factor.

Equation 1:

$$RVPE = aX - b$$

where:

"RVPE" is the vapor pressure value (in psi) that would be expected from test method ASTM D323–58;

"a" is the correlative relationship of test data from the specific automated vapor pressure test instrument and test data from ASTM D323–58;

"X" is the total vapor pressure value (in psi) as determined by the specific automated vapor pressure test instrument;

"b" is the offset of the test data between the specific automated vapor pressure test instrument and the test data from ASTM D323–58.

The data used for determining the calibration equation for each instrument shall be obtained during an Air Resources Board vapor pressure test program. The data shall consist of test results obtained from the analysis of identical samples by the automated instrument and by ASTM D323–58. Vapor pressure test programs may be conducted on a periodic basis as needed. The Air Resources Board conducted such a program and determined that the following automated vapor pressure test instruments meet the requirements of section (c). The data from the test program were used to arrive at the calibration equations for these instruments. The calibration equations are as follows:

1. Grabner Instruments,
Model: CCA–VP (laboratory Grabner) $RVPE = (.965) x - .304$
2. Grabner Instruments,
Model: CCA–VPS (portable Grabner) $RVPE = (.972) x - .715$
3. Stanhope–Seta Limited,
Model: Setavap $RVPE = (.961) x - .577$

(2.0) The calculation described in section (i)(1.0), above, can be accomplished automatically by the instrument, if so equipped, and in such cases the user shall not apply any further corrections.

(j) Report.

(1.0) Report the Reid vapor pressure equivalent to the nearest 0.1 kPa (0.01 psi).

(k) Precision and Bias.

(1.0) Precision – The precision of this test method as determined by the statistical examination of interlaboratory test results is as follows:

(1.1) Repeatability – The difference between successive test results obtained by the same operator with the same apparatus under constant operating conditions on identical test material would, in the long run, in the correct operation of the test method exceed the following value only in one case in twenty. The repeatability values for the specific automated vapor pressure test instruments listed in section (i)(1.0) are:

- | | |
|---|-----------|
| 1. Grabner Instruments,
Model: CCA-VP (laboratory Grabner) | 0.084 psi |
| 2. Grabner Instruments,
Model: CCA-VPS (portable Grabner) | 0.084 psi |
| 3. Stanhope-Seta Limited
Model: Setavap | 0.10 psi |

(1.2) Reproducibility — The difference between two single and independent test results obtained by different operators working in different laboratories using the same make and model test instrument on identical test material would, in the long run, in the correct operation of the test method exceed the following value only in one case in twenty. The reproducibility values for the specific automated vapor pressure test instruments listed in section (i)(1.0) are:

- | | |
|---|----------|
| 1. Grabner Instruments,
Model: CCA-VP (laboratory Grabner) | 0.13 psi |
| 2. Grabner Instruments,
Model: CCA-VPS (portable Grabner) | 0.21 psi |
| 3. Stanhope-Seta Limited
Model: Setavap | 0.32 psi |

(2.0) Bias – A relative bias was observed between the total pressure obtained using this test method and the Reid vapor pressure obtained using ASTM Test Method D323–58. This bias is corrected by the use of the calibration equation in section (i)(1.0) which calculates a Reid vapor pressure equivalent value from the observed total pressure.

Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 10–14–92; operative 10–14–92 pursuant to Government Code section 11346.2(d) (Register 92, No. 42).
2. Repealer filed 9–1–94; operative 9–1–94 (Register 94, No. 35).

Chapter 5.1. Standards for Fuels for Nonvehicular Sources

§ 2299. Standards for Nonvehicular Diesel Fuel Used in Diesel–Electric Intrastate Locomotives and Harborcraft.

(a) Requirements.

(1) Standards for Nonvehicular Diesel Fuel Used in Harborcraft in the South Coast Air Quality Management District (SCAQMD) Beginning January 1, 2006. Beginning January 1, 2006, California nonvehicular diesel fuel sold, offered for sale, or supplied within the SCAQMD for use in harborcraft is subject to all of the requirements of Title 13 CCR sections 2281 (sulfur content), 2282 (aromatic hydrocarbons content) and 2284 (lubricity) applicable to vehicular diesel fuel, and shall be treated under those sections as if it were vehicular diesel fuel.

(2) Standards for Nonvehicular Diesel Fuel Used in Intrastate Diesel–Electric Locomotives and Harborcraft Beginning January 1, 2007. Beginning January 1, 2007, California nonvehicular diesel fuel sold, offered for sale, or supplied for use in diesel–electric intrastate locomotives or harborcraft is subject to all of the requirements of title 13 CCR sections 2281 (sulfur content), 2282 (aromatic hydrocarbons content) and 2284 (lubricity) applicable to vehicular diesel fuel, and shall be treated under those sections as if it were vehicular diesel fuel.

(3) Exemption for military specification fuel used in military vessels. The requirements of this section do not apply to military specification fuel that is sold, offered for sale, or supplied for use in marine vessels owned or operated by the armed forces of the United States.

(b) Definitions.

(1) “California nonvehicular diesel fuel” means any diesel fuel that is not vehicular diesel fuel as defined respectively in title 13 CCR sections 2281(b), 2282(b), or 2284(b) and that is sold or made available for use in engines in California.

(2) “Diesel–electric locomotive” means a locomotive using electric power provided by a diesel engine that drives a generator or alternator; the electrical power produced then drives the wheels using electric motors.

(3) “Diesel fuel” means any fuel that is commonly or commercially known, sold or represented as diesel fuel, including any mixture of primarily liquid hydrocarbons that is sold or represented as suitable for use in an internal combustion, compression–ignition engine.

(4) “Harborcraft” means any marine vessel that meets all of the following criteria:

(A) The vessel does not carry a “registry” (foreign trade) endorsement on its United States Coast Guard certificate of documentation, and is not registered under the flag of a country other than the United States;

(B) The vessel is less than 400 feet in length overall (LOA) as defined in 50 CFR § 679.2 as adopted June 19, 1996;

(C) The vessel is less than 10,000 gross tons (GT ITC) per the convention measurement (international system) as defined in 46 CFR § 69.51–.61, as adopted September 12, 1989; and

(D) The vessel is propelled by a marine diesel engine with a per–cylinder displacement of less than 30 liters.

(5) “Intrastate diesel–electric locomotive” means:

(A) A diesel–electric locomotive that operates within California for which at least 90 percent of its annual fuel consumption, annual hours of operation, or annual rail miles traveled occur within California. This definition would typically include, but not be limited to, diesel–electric locomotives used in the following operations: passenger intercity and commuter, short haul, short line, switch, industrial, port, and terminal operations;

(B) An intrastate diesel–electric locomotive does not include those diesel–electric locomotives that:

1. Meet the U.S. Environmental Protection Agency Tier II locomotive emission standards, and

2. Primarily move freight into and out of the South Coast Air Quality Management District, and

3. Have been included as a diesel–electric locomotive operating in the South Coast Nonattainment Area under paragraph IV.B. of the Memorandum of Mutual Understandings and Agreements for the South Coast Locomotive Fleet Average Emissions Program, dated July 2, 1998.

(C) (This subsection reserved for consideration of diesel–electric locomotives that meet the U.S. Environmental Protection Agency Tier II

locomotive emission standards and primarily move freight within California outside of the South Coast Air Quality Management District.)

(6) "Locomotive" means a piece of on-track equipment designed for moving or propelling cars that are designed to carry freight, passengers or other equipment, but which itself is not designed or intended to carry freight, passengers (other than those operating the locomotive) or other equipment.

(7) "Marine vessel" means any ship, boat, watercraft, or other artificial contrivance used as a means of transportation on water.

(c) Alternative Emission Reduction Plan for Intrastate Diesel-Electric Locomotives. For an owner or operator of an intrastate diesel-electric locomotive who has submitted an alternative emission reduction plan (plan) that contains a substitute fuel(s) and/or emission control strategy(s) and has been approved by the Executive Officer, compliance with the alternative emission reduction plan (plan) shall constitute compliance with the requirements of subsection (a)(2). In order to be approved, the plan must do all of the following:

(1) Identify or define the total fuel consumption and total emissions that would be associated with the activities of the diesel-electric locomotives were the owner or operator to comply with subsection (a)(2).

(2) Define a substitute fuel(s) and/or emission control strategy(s) for the plan.

(3) Identify the emission reductions that are attributable to the substitute fuel(s) and/or emission control strategy(s) relative to the emission reductions achieved through compliance with subsection (a)(2).

(4) Demonstrate that the substitute fuel(s) and/or emission control strategy(s) in the plan provide equivalent or better emission benefits than would be achieved through compliance with subsection (a)(2). The emission benefits achieved under the plan shall be targeted towards residents in those parts of the state most impacted by diesel-electric locomotive emissions.

(5) The plan shall contain adequate enforcement provisions.

NOTE: Authority cited: Sections 39600, 39601, 43013 and 43018, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39515, 39516, 41511, 43013, 43016 and 43018, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New chapter 5.1 (section 2299) and section filed 7-5-2005; operative 8-4-2005 (Register 2005, No. 27).

§ 2299.1. Emission Limits and Requirements for Auxiliary Diesel Engines and Diesel-Electric Engines Operated on Ocean-Going Vessels Within California Waters and 24 Nautical Miles of the California Baseline.

(a) Purpose.

The purpose of this section is to reduce emissions of diesel particulate matter (PM), nitrogen oxides, and sulfur oxides from the use of auxiliary diesel engines and diesel-electric engines on ocean-going vessels within any of the waters subject to this regulation ("Regulated California Waters").

(b) Applicability.

(1) Except as provided in subsection (c), this section applies to any person who owns, operates, charters, rents, or leases any ocean-going vessel that operates in any of the Regulated California Waters, which include all of the following:

(A) all California internal waters;

(B) all California estuarine waters;

(C) all California ports, roadsteads, and terminal facilities (collectively "ports");

(D) all waters within 3 nautical miles of the California baseline, starting at the California-Oregon border and ending at the California-Mexico border at the Pacific Ocean, inclusive;

(E) all waters within 12 nautical miles of the California baseline, starting at the California-Oregon border and ending at the California-Mexico border at the Pacific Ocean, inclusive;

(F) all waters within 24 nautical miles of the California baseline, starting at the California-Oregon border to 34.43 degrees North, 121.12 degrees West, inclusive; and

(G) all waters within the area, not including islands, between the California baseline and a line starting at 34.43 degrees North, 121.12 degrees West; thence to 33.50 degrees North, 118.58 degrees West; thence to 32.65 degrees North, 117.81 degrees West; and ending at the California-Mexico border at the Pacific Ocean, inclusive.

(2) Except as provided in subsection (c), this section applies to tanker and nontanker ocean-going vessels that are flagged in, registered in, entitled to fly the flag of, or otherwise operating under the authority of the United States ("U.S.-flagged") or any other country ("foreign-flagged").

(3) Nothing in this section shall be construed to amend, repeal, modify, or change in any way any applicable U.S. Coast Guard requirements. Any person subject to this section shall be responsible for ensuring compliance with both U.S. Coast Guard regulations and the requirements of this section, including but not limited to, obtaining any necessary approvals, exemptions, or orders from the U.S. Coast Guard.

(c) Exemptions.

(1) The requirements of this section do not apply to ocean-going vessel voyages that are comprised of continuous and expeditious navigation through any of the Regulated California Waters for the purpose of traversing such bodies of water without entering California internal or estuarine waters or calling at a port, roadstead, or terminal facility. "Continuous and expeditious navigation" includes stopping and anchoring only to the extent such stopping and anchoring are required by the U.S. Coast Guard; rendered necessary by force majeure or distress; or made for the purpose of rendering assistance to persons, ships, or aircraft in danger or distress. This exemption does not apply to the passage of an ocean-going vessel that engages in any of the prejudicial activities specified in United Nations Convention on the Law of the Seas (UNCLOS) 1982, Article 19, subpart 2. Further, notwithstanding any Coast Guard mandated stops or stops due to force majeure or the rendering of assistance, this exemption does not apply to a vessel that was otherwise scheduled or intended to enter California internal or estuarine waters or call at a port, roadstead or terminal facility.

(2) The requirements of this section do not apply to slow-speed two-stroke diesel engines as defined in subsection (d).

(3) The requirements of this section do not apply to auxiliary engines on-board ocean-going vessels owned or operated by any branch of local, state, federal government, or by a foreign government, when such vessels are operated within the Regulated California Waters on government non-commercial service. However, such vessels are encouraged to act in a manner consistent, so far as is reasonable and practicable, with this section.

(4) The requirements of this section do not apply to auxiliary engines while operating on liquefied natural gas or compressed natural gas.

(5) The requirements of this section, including the payment of Non-compliance Fees as provided in subsection (h), do not apply to the master of the vessel ("master") if the master reasonably and actually determines that compliance with this section would endanger the safety of the vessel, its crew, its cargo or its passengers because of severe weather conditions, equipment failure, fuel contamination, or other extraordinary reasons beyond the master's reasonable control. This exemption applies only as long as and to the extent necessary to secure the safety of the vessel, its crew, its cargo, or its passengers and provided that;

(A) the master takes all reasonable precautions after the conditions necessitating the exemption have ended to avoid or minimize repeated claims of exemption under this subsection;

(B) the master notifies the Executive Officer of a safety exemption claim within 24 hours after the end of each such episode (i.e., the period of time during which the emergency conditions exist that necessitate the safety exemption claim, as provided in paragraph (5) above); and

(C) the master submits to the Executive Officer, within 4 working days after the notification in paragraph (B) above, all documentation neces-

sary to establish the conditions necessitating the safety exemption and the date(s), local time, and position of the vessel (longitude and latitude) in Regulated California Waters at the beginning and end of the time period during which a safety exemption is claimed under this subsection. All documentation required under this paragraph shall be provided in English.

(d) Definitions.

For purposes of this section, the following definitions apply:

- (1) "ASTM" means ASTM International.
- (2) "Auxiliary engine" means an engine on an ocean-going vessel designed primarily to provide power for uses other than propulsion, except that all diesel-electric engines shall be considered "auxiliary diesel engines" for purposes of this regulation.
- (3) "Baseline" means the mean lower low water line along the California coast, as shown on the following National Oceanic and Atmospheric Administration (NOAA) Nautical Charts as authored by the NOAA Office of Coast Survey, which are incorporated herein by reference:
 - (A) Chart 18600, Trinidad Head to Cape Blanco (January 2002);
 - (B) Chart 18620, Point Arena to Trinidad Head (June 2002);
 - (C) Chart 18640, San Francisco to Point Arena (August 2005);
 - (D) Chart 18680, Point Sur to San Francisco (June 2005);
 - (E) Chart 18700, Point Conception to Point Sur (July 2003);
 - (F) Chart 18720, Point Dume to Purisima Point (January 2005); and
 - (G) Chart 18740, San Diego to Santa Rosa Island (April 2005).
- (4) "Compliance Period" means the calendar year or other continuous period during which an approved Alternative Control of Emissions (ACE) plan is or will be in effect as specified in subsection (g).
- (5) "Diesel Engine" means an internal combustion, compression-ignition (CI) engine with operating characteristics significantly similar to the theoretical diesel combustion cycle. The regulation of power by controlling fuel supply in lieu of a throttle is indicative of a compression ignition engine.
- (6) "Diesel Particulate Matter" means the particles found in the exhaust of diesel engines, which may agglomerate and adsorb other species to form structures of complex physical and chemical properties.
- (7) "Diesel-electric engine" means a diesel engine connected to a generator that is used as a source of electricity for propulsion or other uses.
- (8) "Emission Control Strategy" means any device, system, or strategy employed to reduce emissions from a diesel engine, including, but not limited to, utilization of shore-side electrical power, diesel oxidation catalysts, selective catalytic reduction systems, diesel particulate filters, alternative diesel fuels, water emulsified fuels, lower sulfur fuels, and any combination of the above.
- (9) "Estuarine Waters" means an arm of the sea or ocean that extends inland to meet the mouth of a river.
- (10) "Executive Officer" means the executive officer of the Air Resources Board (ARB), or his or her designee.
- (11) "Hydrocarbon (HC)" means the sum of all hydrocarbon air pollutants.
- (12) "Internal Waters" means any navigable river or waterway within the State of California.
- (13) "IMO" means the International Maritime Organization.
- (14) "ISO" means the International Organization for Standardization.
- (15) "Marine Diesel Oil" means any fuel that meets all the specifications for DMB grades as defined in Table I of International Standard ISO 8217, as revised in 2005, which is incorporated herein by reference.
- (16) "Marine Gas Oil" means any fuel that meets all the specifications for DMX or DMA grades as defined in Table I of International Standard ISO 8217, as revised in 2005, which is incorporated herein by reference.
- (17) "Master" means the person who operates a vessel or is otherwise in charge of the vessel's operations.
- (18) "Military Vessel" means any ship, boat, watercraft, or other contrivance used for any purpose on water, and owned or operated by the armed services.
- (19) "Nitrogen Oxides (NOx)" means compounds of nitric oxide (NO), nitrogen dioxide (NO₂), and other oxides of nitrogen, which are

typically created during combustion processes and are major contributors to smog formation and acid deposition.

(20) "Non-Methane Hydrocarbons (NMHC)" means the sum of all hydrocarbon air pollutants except methane.

(21) "Ocean-going Vessel" means a commercial, government, or military vessel meeting any one of the following criteria:

(A) a vessel with a "registry" (foreign trade) endorsement on its United States Coast Guard certificate of documentation, or a vessel that is registered under the flag of a country other than the United States;

(B) a vessel greater than or equal to 400 feet in length overall (LOA) as defined in 50 CFR § 679.2, as adopted June 19, 1996;

(C) a vessel greater than or equal to 10,000 gross tons (GT ITC) pursuant to the convention measurement (international system) as defined in 46 CFR 69.51-.61, as adopted September 12, 1989; or

(D) a vessel propelled by a marine compression ignition engine with a per-cylinder displacement of greater than or equal to 30 liters.

(22) "Operate" means steering or otherwise running the vessel or its functions while the vessel is underway, moored, anchored, or at dock.

(23) "Own" means having all the incidents of ownership, including the legal title, of a vessel whether or not that person lends, rents, or pledges the vessel; having or being entitled to the possession of a vessel as the purchaser under a conditional sale contract; or being the mortgagor of a vessel.

(24) "Particulate Matter" means any airborne finely divided material, except uncombined water, which exists as a liquid or solid at standard conditions (e.g., dust, smoke, mist, fumes or smog).

(25) "Person" includes all of the following:

(A) any person, firm, association, organization, partnership, business trust, corporation, limited liability company, or company;

(B) any state or local governmental agency or public district, or any officer or employee thereof;

(C) the United States or its agencies, to the extent authorized by federal law.

(26) "Regulated California Waters" means all of the following:

(A) all California internal waters;

(B) all California estuarine waters;

(C) all California ports, roadsteads, and terminal facilities (collectively "ports");

(D) all waters within 3 nautical miles of the California baseline, starting at the California-Oregon border and ending at the California-Mexico border at the Pacific Ocean, inclusive;

(E) all waters within 12 nautical miles of the California baseline, starting at the California-Oregon border and ending at the California-Mexico border at the Pacific Ocean, inclusive;

(F) all waters within 24 nautical miles of the California baseline, starting at the California-Oregon border to 34.43 degrees North, 121.12 degrees West, inclusive; and

(G) all waters within the area, not including any islands, between the California baseline and a line starting at 34.43 degrees North, 121.12 degrees West; thence to 33.50 degrees North, 118.58 degrees West; thence to 32.65 degrees North, 117.81 degrees West; and ending at the California-Mexico border at the Pacific Ocean, inclusive.

(27) "Roadstead" means any facility that is used for the loading, unloading, and anchoring of ships.

(28) "Slow Speed Engine" means an engine with a rated speed of 150 revolutions per minute or less.

(29) "Sulfur Oxides" means compounds of sulfur dioxide (SO₂), and other oxides of sulfur, which are typically created during combustion of sulfur containing fuels.

(30) "Tanker" means a self-propelled vessel constructed or adapted primarily to carry, or that carries, oil or hazardous material in bulk as cargo or cargo residue.

(31) "Two-stroke Engine" means an internal combustion engine which operates on a two stroke cycle where the cycle of operation completes in one revolution of the crankshaft.

(32) "Vessel" means any tugboat, tanker, freighter, passenger ship, barge, or other boat, ship, or watercraft, except those used primarily for recreation and any of the following:

(A) a seaplane on the water;

(B) a watercraft specifically designed to operate on a permanently fixed course, the movement of which is restricted to a fixed track or arm to which the watercraft is attached or by which the watercraft is controlled.

(e) Requirements.

(1) Emission Limits.

Except as provided in subsections (c), (g) and (h), no person subject to this section shall operate any auxiliary diesel engine, while the vessel is operating in any of the Regulated California Waters, which emits levels of diesel PM, NO_x, or SO_x in exceedance of the emission rates of those pollutants that would result had the engine used the following fuels:

(A) Beginning January 1, 2007:

1. marine gas oil, as defined in subsection (d); or

2. marine diesel oil, as defined in subsection (d), with a sulfur content of no more than 0.5 percent by weight;

(B) Beginning January 1, 2010: marine gas oil with a sulfur content of no more than 0.1 percent by weight.

(C) Compliance with subsection (e)(1) is presumed if the person operates the regulated engine(s) with the fuels as specified in subsection (e)(1)(A) and (e)(1)(B).

(2) Recordkeeping, Reporting, and Monitoring Requirements.

(A) Recordkeeping.

Beginning January 1, 2007, any person subject to this section shall retain and maintain records in English that contain the following information for at least three years following the date when the records were made:

1. The date, local time, and position (longitude and latitude) of the vessel for each entry into and departure from any of the Regulated California Waters, excluding any voyages exempted from the requirements of this section under subsection (c)(1);

2. The date, local time, and position (longitude and latitude) of the vessel at the initiation and completion of any fuel switching procedures used to comply with subsection (e)(1) prior to entry into any of the Regulated California Waters;

3. The date, local time, and position (longitude and latitude) of the vessel at the initiation and completion of any fuel switching procedures within any of the Regulated California Waters; completion of fuel switching procedures occurs the moment all engines subject to this section have completely transitioned from operation on one fuel to another fuel;

4. The type of each fuel used (e.g. marine gas oil) in each auxiliary engine operated in any of the Regulated California Waters; and

5. The types, amounts, and the actual percent by weight sulfur content of all fuels purchased for use on the vessel, as reported by the fuel supplier or a fuel testing firm.

(B) Reporting and Monitoring.

1. Any person subject to this section shall provide in writing the information specified in subsection (e)(2)(A) to the Executive Officer upon request, either within 24 hours or by a later date approved by the Executive Officer on a case-by-case basis. To the extent the person already collects the information specified in subsection (e)(2)(A) in English to comply with other regulatory requirements or standard practices, the person may provide the requested information in a format consistent with those other regulatory requirements or standard practices.

2. Any person subject to this section shall provide to the Executive Officer upon request additional information the Executive Officer determines to be necessary to determine compliance with this section, including, but not limited to:

a. the make, model, rated power, and serial numbers of all auxiliary engines subject to subsection (e)(1);

b. the capacity and locations of all fuel tanks on the vessel; and

c. piping diagrams and specifications for mixing tanks or other fuel handling equipment applicable to auxiliary engines.

3. Any person subject to this section shall provide to the Executive Officer access to the vessel for the purpose of determining compliance with this section, including but not limited to, access to and review of records and information required under subsection (e)(2)(A) or (e)(2)(B)2., and for the purpose of collecting fuel samples for testing and analysis.

(f) Violations.

(1) Any person who is subject to this section and commits a violation of any provision, standard, criteria or requirement in this section is subject to the penalties, injunctive relief, and other remedies specified in Health and Safety Code, section 42400 et seq.; other applicable sections in the Health and Safety Code; and other applicable provisions as provided under California law for each violation. Nothing in this section shall be construed to limit or otherwise affect any applicable penalties or other remedies available under federal law.

(2) Any failure to meet any provision, standard, criteria or requirement in this section, including but not limited to the applicable emission limits; recordkeeping requirements; Noncompliance Fee provision; and Alternative Control of Emissions (ACE) provision, including the requirements of any approved ACE plans, shall constitute a single, separate violation of this section for each hour that a person operates an ocean-going vessel within the Regulated California Waters until such provision, standard, criteria or requirement has been met.

(3) Any person who is subject to this section is liable for meeting the requirements of this section, notwithstanding any contractual arrangement that person may have with any third-parties.

(g) Alternative Control of Emissions (ACE) Plan In Lieu of Meeting Subsection (e)(1).

For purposes of this subsection, the terms "ACE" and "ACE plan" shall have the same meaning, unless otherwise noted.

(1) Requirements.

(A) The purpose of this subsection is to allow any person ("person" or "applicant") the option of complying with the requirements of this subsection (g) in lieu of the requirements of subsection (e)(1). Under this subsection (g), alternative emission control strategies can be implemented in lieu of meeting the requirements of subsection (e)(1), provided the alternative strategies result in emissions of diesel PM, NO_x, and SO_x from the auxiliary diesel engines that are no greater than the emissions that would have occurred under subsection (e)(1), over the applicable compliance period.

(B) An applicant wishing to participate in an ACE may include one or more vessels in the ACE, but the applicant shall only include vessels that the person owns or operates under their direct control. For purposes of this subsection, "direct control" shall include, but not be limited to, vessels for which the applicant has a contract, lease, or other arrangement with a third-party for the third-party to operate the vessel.

(C) No vessel shall be included in more than one ACE plan.

(D) No ACE plan shall have a compliance period greater than 1 calendar year or a continuous 12-month period. Except as provided in paragraph (E) below, upon completion of a compliance period, an approved ACE plan shall continue to be in effect for another compliance period of equal length, provided the following are met:

1. the applicant provides updated information for all elements of the approved ACE plan to the Executive Officer at least 30 days prior to the end of the first compliance period; and

2. the updated information demonstrates that compliance with this subsection will continue for the next compliance period.

(E) No ACE plan shall be extended for another compliance period if:

1. the Executive Officer has determined that violations of the ACE provisions have occurred and the Executive Officer revokes the ACE plan as specified in subsection (g)(3);

2. the applicant elects to cancel an approved ACE plan. Applicants who cancel operation under an approved ACE are subject to the emission requirements of subsection (e)(1) and all other requirements of this section upon the effective date of the cancellation. An ACE plan that is cancelled prior to the end of its approved compliance period shall have its

compliance period adjusted to end at the effective date of cancellation; or

3. the applicant proposes to substantially change the alternative emission control strategies in their approved ACE plan, as determined by the Executive Officer. Applicants proposing to substantially change the alternative emission control strategies in their ACE plan shall be subject to the application process for new applications, as specified in subsection (g)(2).

(F) In addition to other requirements specified in this subsection (g), no proposed ACE plan shall be approved unless the applicant demonstrates to the satisfaction of the Executive Officer all of the following:

1. the alternative emission control strategies under the proposed ACE plan will result in emissions of diesel PM, NO_x, and SO_x from the auxiliary diesel engines that are no greater than the emissions that would have occurred under subsection (e)(1) over the applicable compliance period; and

2. surplus emission reductions achieved at one port will not result in increased emissions at a second port, relative to the emissions that would have occurred at the second port prior to implementation of this section.

(G) Emission control strategy is as defined in subsection (d)(8).

(H) The ACE plan application demonstrating compliance with this subsection shall contain, at a minimum, the following information:

1. the company name, address, and contact information;

2. the vessel(s) name, country flag, and IMO identification number;

3. the make, model, serial numbers and other information that uniquely identify each engine on the affected vessel(s) subject to the ACE;

4. documentation, calculations, emissions test data, or other information that demonstrates that the emission reductions from the auxiliary engines subject to the ACE will be equivalent to or greater than the emission reductions that would have been achieved upon compliance with subsection (e)(1). The emission reductions shall be calculated for diesel PM, NO_x, and SO_x, and shall be expressed in pounds of each pollutant;

5. information on the California ports expected to be visited by the affected vessel(s) during the compliance period that the ACE will be in effect, the anticipated dates of those visits, and the potential planned over-sea routes to and from these ports; and

6. the proposed recordkeeping, reporting, monitoring, and testing procedures that the applicant plans to use to demonstrate continued compliance with the ACE.

(I) Emission reduction calculations used to demonstrate equivalence with the requirements of subsection (e)(1) shall include only diesel PM, NO_x, and SO_x emissions from auxiliary engines operating within any of the Regulated California Waters.

(J) Use of Shore-Side Power.

1. Except as otherwise provided in this subsection (g)(1)(J), vessels in an ACE that utilize shore-side power in lieu of their auxiliary diesel engines while at dockside shall be considered to meet the emission reduction requirements of the ACE during:

a. all travel within Regulated California Waters from a previous port to the California port terminal where shore-side power is used;

b. time spent secured ("docked") at the California port terminal where shore-side power is used; and

c. all travel within Regulated California Waters from the California port where shore-side power is utilized to the next port visited.

2. For the purposes of paragraph 1 above, "utilizing shore-side power" means:

a. connecting to electricity supplied by a utility company, or another source with emissions per unit of delivered energy equivalent to or lower than the January 1, 2007 levels specified in title 17, CCR, sections 94200-94214, "Distributed Generation Certification Program;" and

b. shutting down all auxiliary engines subject to this control measure no later than one hour after the vessel is secured at the port terminal, and continuously thereafter until no more than one hour prior to when the vessel leaves the terminal.

3. Except as otherwise provided in paragraph 5 below, if a vessel operating under an approved ACE visits two California ports in succession,

and the vessel utilizes shore-side power at the first port but not at the second port visited, the vessel shall not be considered to meet the emission reduction requirements of the ACE during the time it is docked at the second port and any subsequent travel within Regulated California Waters from this port.

4. Except as otherwise provided in paragraph 5 below, if a vessel operating under an approved ACE visits two California ports in succession, and the vessel utilizes shore-side power at the second port but not at the first port visited, the vessel shall not be considered to meet the emission reduction requirements of the ACE during travel within Regulated California Waters to this first port or during the time the vessel is docked at the first port. Travel from the first port to the second port where shore-side power is utilized shall be deemed to meet the emission reduction requirements of the ACE.

5. The provisions in paragraphs 3 and 4 above notwithstanding, if a passenger cruise vessel operating under an approved ACE visits a California port, utilizes shore-side power at that port, then leaves that port and moors (i.e., drops anchor) at another offshore location away from a port, roadstead or terminal facility (e.g., Catalina Island or off Monterey), the mooring stop shall not be deemed as a second port visit. However, a person subject to this provision shall meet the emission limits in subsection (e)(1) for all auxiliary diesel engines on the passenger cruise vessel (i.e., all diesel-electric engines) during the entire time the vessel is moored.

(K) Any person subject to an approved ACE shall maintain operating records in a manner and form as specified by the Executive Officer in the approved ACE. Required records may include, but are not limited to, information on fuel usage, routes, port calls, maintenance procedures, and emissions test results. Such records and reports shall be retained for a period of not less than three (3) years and shall be submitted to the Executive Officer in the manner specified in the approved ACE and upon request by the Executive Officer, either within 24 hours or by a later date approved by the Executive Officer.

(L) Emission reductions included in an ACE shall not include reductions that are otherwise required by any State, federal or international rule, regulation, or statute.

(M) No person may comply with this section by operating under an ACE unless the applicant has first been notified in writing by the Executive Officer that the ACE application has been approved. Prior to such approval, applicants shall comply with the provisions of this section, including the emission limits in subsection (e)(1).

(N) No person may comply with this section by operating under an ACE that has been revoked as provided in subsections (g)(2)(G) and (g)(3).

(2) Application Process.

(A) Applications for an ACE shall be submitted in writing to the Executive Officer for evaluation.

(B) The Executive Officer shall establish an internet site ("ACE internet site") in which all documents pertaining to an ACE application will be made available for public review. The Executive Officer shall also provide a copy of all such documents to each person who has requested copies of the documents; these persons shall be treated as interested parties. The Executive Officer shall provide two separate public comment periods during the ACE Application process, as specified in this subsection (g)(2).

(C) Completeness Determination.

Within 15 days after receiving an ACE application, the Executive Officer shall notify the applicant whether the application is deemed sufficiently complete to proceed with further evaluation. If the application is deemed incomplete, the notification shall identify the application's deficiencies. The Executive Officer shall have an additional 15-day period for reviewing each set of documents or information submitted in response to an incomplete determination. Nothing in this subsection prohibits the Executive Officer from requesting additional information from the applicant, during any part of the ACE application process, which the Executive Officer determines is necessary to evaluate the application.

(D) Notice of Completeness and 30-Day First Public Comment Period.

After an ACE application has been deemed complete, the Executive Officer shall provide a 30-day public comment period to receive comments on any element of the ACE application and whether the Executive Officer should approve or disapprove the ACE application based on the contents and merits of the application. The Executive Officer shall notify all interested parties of the following:

1. the applicant(s);
2. the start and end dates for the 30-day first comment period; and
3. the address of the ACE internet site where the application is posted.

The Executive Officer shall also make this notification available for public review on the ACE internet site.

(E) Proposed Action and 15-Day Second Public Comment Period.

Within 30 days after the first public comment period ends, the Executive Officer shall notify the applicant and all interested parties of ARB's proposed approval or disapproval. This notification shall propose to approve the application as submitted, disapprove the application, or approve the ACE application with modifications as deemed necessary by the Executive Officer. The notification shall identify the start and end dates for the 15-day second public comment period. During the second public comment period, any person may comment on the Executive Officer's proposed approval or disapproval of the ACE application and any element of the application. The Executive Officer shall also make this notification available for public review on the ACE internet site.

(F) Final Action.

Within 15 days after the second public comment period ends, the Executive Officer shall take final action to either approve or deny an ACE application and shall notify the applicant accordingly. If the application is denied or modified, the Executive Officer shall state the reasons for the denial or modification in the notification. The notification to the applicant and approved ACE plan, if applicable, shall be made available to the public on the ACE internet site. In addition, the Executive Officer shall consider and address all comments received during the first and second public comment periods, and provide responses to each comment on the ACE internet site.

(G) Notification to the Executive Officer of Changes to an Approved ACE.

The applicant shall notify the Executive Officer in writing within 30 days upon learning of any information that would alter the emissions estimates submitted during any part of the ACE application process. If the Executive Officer has reason to believe that an approved ACE has been granted to a person that no longer meets the criteria for an ACE, the Executive Officer may, pursuant to subsection (g)(3) below, modify or revoke the ACE as necessary to assure that the applicant and subject vessel(s) will meet the emission reduction requirements in this section.

(3) Revocation or Modification of Approved ACEs.

With 30-days notice to the ACE holder, the Executive Officer may revoke or modify, as needed, an approved ACE if there have been multiple violations of the ACE provisions or the requirements of the approved ACE plan; or if the Executive Officer has reason to believe that an approved ACE has been granted that no longer meets the criteria or requirements for an ACE or the applicant can no longer comply with the requirements of the approved ACE in its current form. Public notification of a revocation or modification of an approved ACE shall be made available on the ACE internet site.

(h) Noncompliance Fee In Lieu of Meeting Subsection (e)(1).

The Executive Officer may permit a person to pay noncompliance fees in lieu of meeting the requirements of subsection (e)(1). Payment of the fees notwithstanding, all other provisions of this section shall continue to apply. No person shall be permitted to pay the fees unless the person meets the notification requirements in subsection (h)(1) and the requirements in either subsections (h)(2), (h)(3), or (h)(4), as specified below:

(1) Notification Requirements.

Before the person's vessel enters Regulated California Waters, the Executive Officer must receive notice that the person will not meet the

requirements of subsection (e)(1) while operating within Regulated California Waters, but the person will instead meet the requirements of this subsection (h). If the Executive Officer has not received such notice and the person enters Regulated California Waters, the person will be in violation of this section and will not be permitted to pay the fees in lieu of meeting the requirements of subsection (e)(1).

(2) Noncompliance for Reasons Beyond a Person's Reasonable Control.

Any person wishing to pay the fees under this subsection (h)(2) shall meet the following criteria:

(A) Demonstration of Need.

The person shall, through adequate documentation, demonstrate to the Executive Officer's satisfaction that the person's noncompliance with the requirements of subsection (e)(1) is beyond the person's reasonable control. For the purposes of this paragraph, "beyond the person's reasonable control" applies only when one or more of the following sets of circumstances (1, 2, or 3) applies:

1. Unplanned Redirection.

This provision applies only when all of the following criteria are met:

a. after leaving the last port of call, the person's vessel was redirected from his/her original, officially logged, non-California destination to a California port, roadstead, or terminal facility ("port"); and

b. the vessel does not contain a quantity of fuel sufficient for the auxiliary engines to meet the requirements of subsection (e)(1) and cannot comply using the alternative emission control strategies under an approved ACE.

2. Inadequate Fuel Supply.

This provision applies only when all of the following criteria are met:

a. the person made good faith efforts to acquire a quantity of fuel sufficient for the vessel's auxiliary engines to meet the requirements of subsection (e)(1); and

b. the person was unable to acquire fuel sufficient for the engines to meet the requirements of subsection (e)(1) and cannot comply using the alternative emission control strategies under an approved ACE.

3. Inadvertent Purchase of Defective Fuel.

This provision applies only when all of the following criteria are met:

a. based on the fuel supplier's certification of the fuel specifications, the person reasonably believed, and relied on such belief, that the fuel the person purchased on the route from the vessel's home port to California would enable the auxiliary engines to meet the requirements of subsection (e)(1);

b. the person determined that the vessel's auxiliary engines in fact will not meet the requirements of subsection (e)(1) using any of the fuel purchased under paragraph 3.a. above and the person cannot comply using the alternative emission control strategies under an approved ACE; and

c. the vessel is already on its way to California, and there are no other ports of call on the vessel's route where fuel can be purchased sufficient to meet the requirements of subsection (e)(1).

(B) Payment of Fees.

Upon meeting the requirements of paragraph (A) in this subsection (h)(2), the person shall pay the fees for every port visit, as specified in subsection (h)(5) below.

(C) Executive Officer Review.

For the purposes of verifying the demonstration of need as specified in paragraph (A) above, the Executive Officer may consider and rely on any facts or circumstances the Executive Officer believes are appropriate, including but not limited to: the fuel supplier's ability or failure to provide adequate fuel ordered by the person; any material misrepresentation by the fuel supplier concerning the fuel specifications; the reasonableness of the person's reliance on fuel suppliers with a history of supplying fuel inadequate for meeting the requirements of subsection (e)(1); and force majeure.

(3) Noncompliance for Vessels to Be Taken Out of Service for Modifications.

If a person cannot meet the requirements of subsection (e)(1) without vessel modifications, and such modifications cannot be completed prior

to the effective date of subsection (e)(1), the Executive Officer may permit the person to pay the fees as specified in this subsection. This provision also applies to vessels that will undergo modifications pursuant to an Executive Officer approved Alternative Control of Emissions (ACE) Plan. The vessel must be scheduled to complete the necessary modifications (e.g. during a dry dock operation) as soon as possible, but no later than 5 years after the effective date of this section. For this provision to apply, the person shall meet all of the following criteria:

(A) Demonstration of Need.

The person shall provide the Executive Officer a Compliance Retrofit Report, signed by the Chief Engineer of the person's vessel, which:

1. identifies the specific vessel modifications ("modifications") (e.g. installation of additional fuel tanks) the person plans to use for meeting the requirements of subsection (e)(1) or an ACE Plan;
2. identifies the specific date by which the modifications will be completed (e.g. while the vessel is in dry dock); and
3. demonstrates to the satisfaction of the Executive Officer that the modifications will be made at the earliest possible date (e.g. the vessel has been scheduled for the earliest available dry dock appointment).

(B) Payment of Fees.

Upon meeting the requirements of paragraph (A) in this subsection (h)(3), the person shall pay the fees for every port visit, as specified in subsection (h)(5) below.

(C) Proof of Modifications Actually Performed.

Within ten (10) business days after the scheduled or actual completion of the modifications, whichever occurs first, the person shall provide written certification to the Executive Officer that the modifications specified under this subsection (h)(3) have been completed. If the modifications have not been completed, the person shall certify which modifications have been completed, which have not, and the anticipated completion date for the remaining modifications. The notification requirement specified in this paragraph, the notification requirements in subsection (h)(1) above, and the fee provisions in subsection (h)(5) below shall apply until all the modifications have been completed.

(4) Noncompliance Based on Infrequent Visits and Need for Vessel Modifications.

If a person cannot meet the requirements of subsection (e)(1) without modifications for the vessel at issue, and that vessel will make no more than two California port visits per calendar year, and no more than 4 California port visits after January 1, 2007 during the life of the vessel, the Executive Officer may permit the person to pay the fees as specified in this subsection.

(A) Demonstration of Need.

The person shall demonstrate to the satisfaction of the Executive Officer that modifications to the vessel are necessary to meet the requirements of subsection (e)(1), and that the vessel shall meet the visitation limits specified in this subsection (h)(4).

(B) Payment of Fees.

Upon meeting the requirements of paragraph (A) above, the person shall pay the fees for every port visit up to a maximum of 4 visits, as specified in subsection (h)(5) below.

(5) Calculation and Payment of Fees.

For each port visit, the person who elects to pay the fees pursuant to this subsection (h) shall pay the applicable fees shown in Table 1. For purposes of this provision, "port visit" shall include all stops at a port, roadstead, or terminal facility in Regulated California Waters, as well as all moorings (i.e., the ship drops anchor) at an offshore location in Regulated California Waters away from a port, roadstead or terminal facility (e.g., Catalina Island or off Monterey). For each port visit, the person shall deposit the fees in the port's Noncompliance Fee Settlement and Air Quality Mitigation Fund prior to leaving the California port or by a later date approved by the Executive Officer on a case-by-case basis:

(A) After January 1, 2007, each instance of a vessel stopping or anchoring at a port or offshore in Regulated California Waters shall count as one port visit, and the port visits shall be cumulative.

Table 1: Noncompliance Fee Schedule, Per Vessel

<i>Visit</i>	<i>Fee</i>	
	<i>Diesel-Electric Vessels</i>	<i>Other Vessels</i>
1 st Port Visited	\$32,500	\$13,000
2 nd Port Visited	\$65,000	\$26,000
3 rd Port Visited	\$97,500	\$39,000
4 th Port Visited	\$130,000	\$52,000
5 th or more Port Visited	\$162,500	\$65,000

(B) The fees shown in Table 1 shall be assessed by the Executive Officer at the time of the port visit. However, if for any reason the person is not notified by the Executive Officer of the assessed fee by the end of the port visit, the person shall nevertheless be responsible for payment of the appropriate fee as specified in this subsection (h) prior to leaving the California port or by a later date approved by the Executive Officer on a case-by-case basis.

(C) The Executive Officer shall enter into enforceable agreements with each port that will receive the fees. The agreements shall require that the fees be used by the ports only to fund projects that will substantially reduce emissions of diesel PM, NOx, and SOx from on-site sources, sources within 2 miles of port boundaries, or ocean-going vessels operated within the Regulated California Waters, except that the fees shall not be used to fund projects on vessels from which noncompliance fees were paid. Fees intended for ports that do not have such agreements at the time the fees are paid shall be deposited into the California Air Pollution Control Fund.

(i) Test Methods.

The following test methods or alternative test methods that are demonstrated to the written satisfaction of the Executive Officer to be equally or more accurate, shall be used to determine compliance with this section:

(1) Test methods used to determine whether fuels meet the requirements of marine gas oil (DMA or DMX) or marine diesel oil (DMB), as specified in subsection (e)(1), shall be the methods specified in International Standard ISO 8217 (as revised in 2005), which is incorporated herein by reference.

(2) The sulfur content of fuels shall be determined pursuant to International Standard ISO 8754 (as adopted in 2003), which is incorporated herein by reference.

(j) Sunset, Technology Re-evaluation, and Baseline and Test Method Review.

(1) If the Executive Officer determines that the International Maritime Organization or the United States Environmental Protection Agency have adopted regulations for auxiliary diesel engines and diesel-electric engines that will achieve equivalent or greater emission reductions from ocean-going vessels in California compared to the emission reductions resulting from this regulation, the Executive Officer shall propose to the Board for its consideration the termination of the requirements of this section or other modifications to the section as deemed appropriate by the Executive Officer.

(2) On or before July 1, 2008, the Executive Officer shall re-evaluate the feasibility of the emission limits based on using marine gas oil with no greater than 0.1 percent sulfur by weight specified in subsection (e)(1)(B). The re-evaluation shall consider, but not be limited to:

(A) the availability of 0.1 percent sulfur marine gas oil at bunkering ports worldwide;

(B) the ability of petroleum refiners and marine fuel suppliers to deliver 0.1 percent sulfur fuel by January 1, 2010;

(C) fuel lubricity;

(D) compatibility of the 0.1 percent sulfur marine gas oil with heavy fuel oil during fuel transitions; and

(E) the additional cost of 0.1 percent sulfur fuel compared to marine gas oil with other sulfur content levels.

(3) Pursuant to paragraph (2) of this subsection (j), if the Executive Officer determines that modifications to subsection (e)(1)(B) are necessary, the Executive Officer shall propose appropriate changes to the Board prior to January 1, 2009.

(4) The Executive Officer shall periodically review the California baseline determinations by the National Oceanic and Atmospheric Administration (NOAA) to determine if updates to the baseline maps incorporated by reference in this section are necessary. If modifications to the baseline maps are determined to be necessary, the Executive Officer shall conduct a public hearing as soon as practicable to amend this section accordingly.

(5) The Executive Officer shall periodically review the test methods incorporated by reference in this section to determine if updates to the referenced methods are necessary. If updates to the test methods are determined to be necessary, the Executive Officer shall conduct a public hearing as soon as practicable to amend this section accordingly.

(k) Severability.

Each part of this section shall be deemed severable, and in the event that any part of this section is held to be invalid, the remainder of this section shall continue in full force and effect.

NOTE: Authority cited: Sections 39600, 39601, 41511, 43013 and 43018, Health and Safety Code. Reference: Sections 39000, 39001, 39515, 39516, 41510, 41511, 43013, 43016 and 43018, Health and Safety Code; and *Western Oil and Gas Ass'n v. Orange County Air Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975).

HISTORY

1. New section filed 12-6-2006; operative 12-6-2006 pursuant to Government Code section 11343.4 (Register 2006, No. 49).
2. Change without regulatory effect amending subsections (b)(1)(G) and (d)(26)(G) filed 7-2-2008 pursuant to section 100, title 1, California Code of Regulations (Register 2008, No. 27).

Chapter 8. Clean Fuels Program

§ 2300. Definitions.

(a) The following definitions apply to Chapter 8.

(1) "Affiliate" means any person who owns or controls, is owned or controlled by, or is under common ownership and control with, another person.

(2) "CEC" means the Energy Resources, Conservation and Development Commission.

(3) "Clean alternative fuel" means any fuel used as the certification fuel in a low-emission vehicle, other than the primary gasoline or diesel fuel used in exhaust emission certification testing pursuant to the ARB's "California Exhaust Emission Standards and Test Procedures for 1988 Through 2000 Model Passenger Cars, Light-Duty Trucks and Medium-Duty Vehicles" as incorporated by reference in Title 13, California Code of Regulations, section 1960.1, or "California Exhaust Emission Standards and Test Procedures for 2001 and Subsequent Model Passenger Cars, Light-Duty Trucks and Medium-Duty Vehicles" as incorporated by reference in Title 13, California Code of Regulations, section 1961.

(4) "CNG" means compressed natural gas.

(4.3) "Compliance year" means the 12 month period running from May 1 through April 30.

(4.7) "Dedicated vehicle" means a low-emission vehicle designed and engineered to be operated solely on a clean alternative fuel, and not on gasoline or any mixture of gasoline and the clean alternative fuel.

(5) "Designated clean fuel" means any clean alternative fuel other than electricity.

(6) "Distribute" means to physically transfer from a production or importation facility and irrevocably release into commerce for use as a motor vehicle fuel in California.

(7) "Distributor" has the same meaning as defined in section 20999 of the Business and Professions Code.

(8) "Dual-fuel vehicle" means any motor vehicle that is engineered and designed to be capable of operating on gasoline, and on liquified petroleum gas, CNG or liquified natural gas.

(9) "Executive officer" means the executive officer of the Air Resources Board, or his or her designee.

(10) "Fleet operator" means, for any given calendar year, the operator in that year of fifteen or more low-emission vehicles that are certified on a particular designated clean fuel and that are under common ownership or operation in California.

(10.5) "Fleet vehicle" means one of fifteen or more low-emission vehicles that are certified on a particular designated clean fuel and that are under common ownership or operation in California.

(11) "Flexible-fuel vehicle" means any alcohol-fueled motor vehicle that is engineered and designed to be operated using any gasoline-alcohol mixture or blend.

(12) "Franchise," "franchisor," and "franchisee" have the same meaning as defined in section 20999 of the Business and Professions Code.

(13) "Gasoline supplier" means any person, including affiliates of such person, who produces gasoline for use in California or imports gasoline into California.

(14) "Import" means to bring motor vehicle fuel into California for the first time for use in motor vehicles in California.

(15) "Liquid designated clean fuel" means any designated clean fuel that is dispensed into motor vehicles in liquid form.

(16) "Low-emission vehicle" means any vehicle certified to the transitional low-emission vehicle, low-emission vehicle, ultra-low-emission vehicle, super ultra-low emission vehicle, or zero-emission vehicle standards established in Title 13, California Code of Regulations, sections 1960.1 or 1961.

(17) "Major breakdown" means an unforeseeable mechanical or electrical failure of CNG dispensing equipment which cannot in the exercise of reasonable diligence be repaired in 72 hours or less.

(19) "Minor breakdown" means an unforeseeable mechanical or electrical failure of CNG dispensing equipment which can in the exercise of reasonable diligence be repaired in 72 hours or less.

(20) "Non-retail facility" means any establishment at which a designated clean fuel is supplied or offered for supply to motor vehicles, but is not supplied or offered to the general public.

(21) "Owner/lessor" means:

(A) In the case of a retail gasoline outlet which is owned, leased or controlled by a franchisor, and which the franchisee is authorized or permitted, under the franchise, to employ in connection with the sale of gasoline, the franchisor.

(B) In the case of a retail gasoline outlet which is owned, leased or controlled by a refiner or a distributor, and is operated by the refiner or distributor or his agent, the refiner or distributor.

(C) In the case of all other retail gasoline outlets, the owner of the retail gasoline outlet.

(22) "Primary designated clean fuel" means a designated clean fuel for which a substitute fuel has been proposed or designated pursuant to section 2317.

(23) "Produce" means, in the case of any liquid motor vehicle fuel, to convert in California liquid compounds which do not constitute the fuel into the fuel.

(24) "Quarter" means the three month calendar quarters January-March, April-June, July-September, and October-December.

(25) "Refiner" has the same meaning as defined in section 20999 of the Business and Professions Code.

(26) "Refinery" means a facility that produces gasoline by means that include distilling petroleum.

(27) "Selected retail clean fuel outlet" means a specific retail clean fuel outlet which is equipped to store and dispense a designated clean fuel in order to comply with section 2302.

(28) "Retail clean fuel outlet" means an establishment which is equipped to dispense a designated clean fuel to motor vehicles and at which the designated clean fuel is sold or offered for sale to the general public for use in motor vehicles without the use of a key or card key and without the need to establish an account.

(29) "Retail gasoline outlet" means any establishment at which gasoline is sold or offered for sale to the general public for use in motor vehicles.

(31) "Vehicle conversion" means a modification of a gasoline or diesel fueled vehicle, not certified to a low-emission vehicle standard, to a vehicle which uses a designated clean fuel and which is capable of meeting low-emission vehicle exhaust emissions standards as demonstrated either by installation of an ARB-approved conversion system that achieves such low-emission standards or by individual vehicle testing.

Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 8-30-91; operative 9-30-91 (Register 92, No. 14).
2. Redesignation of subchapter 8 as chapter 8 and amendment of section filed 12-8-2000; operative 1-7-2001 (Register 2000, No. 49).

§ 2301. Equipping Retail Gasoline Outlets in the SCAQMD to Dispense Designated Clean Fuels in 1994 through 1996.

HISTORY

1. New section filed 8-30-91; operative 9-30-91 (Register 92, No. 14).
2. Repealer filed 12-8-2000; operative 1-7-2001 (Register 2000, No. 49).

§ 2302. Equipping Retail Gasoline Outlets or Other Outlets to Dispense Designated Clean Fuels.

(a) Any person who is the owner/lessor of an operating retail gasoline outlet shall, for each designated clean fuel, equip at least the required minimum number for each year, as determined in accordance with section 2307(d), of his or her retail gasoline outlets in the state, or of other outlets in the state, so that the outlets are retail clean fuel outlets for the designated clean fuel. The required minimum number of retail clean fuel outlets for each compliance year shall apply to the entire compliance year. The requirements of this section shall apply at all times during which a person is an owner/lessor of an operating retail gasoline outlet. The requirements of this section shall in any case be deemed satisfied with regard to a designated clean fuel if all of the owner/lessor's operating retail gasoline outlets are equipped as retail outlets for the designated clean fuel.

(b) In the case of any designated clean fuel which is in gaseous form, the dispensing equipment required by this section shall be designed for a minimum of four hours of high volume operation per day. For all retail gasoline outlets or other that are claimed by the owner/lessor to be equipped in order to satisfy the requirements of this section, the owner/lessor shall notify the operator in writing that the outlet is so equipped.

NOTE: Authority cited: Sections 39600, 39601, 39667, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 39667, 43000, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 8-30-91; operative 9-30-91 (Register 92, No. 14).
2. Amendment of section heading and section filed 12-8-2000; operative 1-7-2001 (Register 2000, No. 49).

§ 2303. Determination of Total Projected Maximum Volumes of Designated Clean Fuels.

The executive officer shall determine the total projected maximum volume of each designated clean fuel for each year, at least fourteen months before the start of the year, in accordance with this section.

(a) *Identification of designated clean fuels.* The executive officer shall determine what designated clean fuels are expected to be used as the certification fuel in low-emission vehicles in the year. This determination shall be based on registration records of the Department of Motor Vehicles and projected production estimates submitted by motor vehicle manufacturers to the executive officer pursuant to the "California Exhaust Emission Standards and Test Procedures for 1988 Through 2000 Model Passenger Cars, Light-Duty Trucks and Medium-Duty Vehicles" as incorporated by reference in Title 13, California Code of Regulations, section 1960.1, and the "California Exhaust Emission Standards and Test Procedures for 2001 and Subsequent Model Passenger Cars, Light-Duty Trucks and Medium-Duty Vehicles" as incorporated by reference in Title 13, California Code of Regulations, section 1961.

(b) *Estimation of number of designated clean fuel vehicles.*

(1) For each designated clean fuel identified pursuant to section 2303(a), the executive officer shall make an estimate of the number of low-emission vehicles certified on the fuel for each calendar year.

The estimate shall be the sum of: [i] the number of low-emission vehicles certified on the fuel that vehicle manufacturers have projected to be produced in the corresponding model year and the prior model year for sale in California; [ii] one-sixth of the number of low-emission vehicles certified on the fuel that vehicle manufacturers project to produce for the model year that is two years prior to the year for which the calculations are being made; and [iii] the number of low-emission vehicles certified on the fuel that are registered with the Department of Motor Vehicles through July 30 of the year two years prior to the year for which the estimates are being made.

(2) The vehicle manufacturers' projections used for the estimates made under this section 2303(b) shall be the reports of projected production data submitted by motor vehicle manufacturers to the executive officer pursuant to the "California Exhaust Emission Standards and Test Pro-

[The next page is 277.]

cedures for 1988 Through 2000 Model Passenger Cars, Light-Duty Trucks and Medium-Duty Vehicles” as incorporated by reference in Title 13, California Code of Regulations, section 1960.1, or “California Exhaust Emission Standards and Test Procedures for 2001 and Subsequent Model Passenger Cars, Light-Duty Trucks and Medium-Duty Vehicles” as incorporated by reference in Title 13, California Code of Regulations, section 1961.

(c) *Determination of total projected maximum volumes of designated clean fuel.* For each designated clean fuel identified pursuant to section 2303(a), the executive officer shall estimate the total projected maximum volume (TPMV) of the designated clean fuel for the year. The total projected maximum volume for each designated clean fuel shall be the sum of the maximum demand volumes (MXDV) calculated by model-year and vehicle class (passenger car, light-duty truck, or medium-duty vehicle).

The following equation shall be used to calculate total projected maximum volumes:

$$TPMV = \sum_{\text{model year } (y)} \left[\sum_{\text{vehicle class } (i)} MXDV(\text{vehicle class } i, \text{model year } y) \right]$$

Where: *TPMV* is the total projected maximum volume (gasoline equivalent gallons per year for a liquid fuel and therms per year for a gaseous fuel) for a particular clean fuel.

MXDV is the maximum demand volume for a particular clean fuel within vehicle class *i* and model-year *y* as calculated in the next paragraph of text.

Model-year y is, in turn, each vehicle model-year since and including 1994.

Vehicle class i is, in turn, each of three classes of vehicles: passenger cars (PC), light-duty trucks (LDT) or medium-duty vehicles (MDV).

Maximum demand volume for a designated clean fuel (for a given model-year and vehicle class) shall equal the number of vehicles (as determined in section 2303(b)) in a particular vehicle class certified on a particular fuel, multiplied by the average miles travelled per year per vehicle by those vehicles, divided by the average fuel economy of those vehicles.

The following equation shall be used to calculate maximum demand volumes:

MXDV

(vehicle class *i*, model year *y*) =

$$\frac{(\text{number of vehicles certified on fuel}) \times (\text{AMT per vehicle})}{(\text{average fuel economy})}$$

Where: *MXDV* is the maximum demand volume (gasoline equivalent gallons per year for a liquid fuel and therms per year for a gaseous fuel) for a particular clean fuel within vehicle class *i* and model year *y*.

Vehicle class i is one of three possible classes of vehicles—passenger cars (PC), light-duty trucks (LDT) or medium-duty vehicles (MDV).

Model-year y is, in turn, each vehicle model-year since and including 1994.

Number of vehicles certified on fuel shall be determined pursuant to section 2303(b), and shall be calculated separately for vehicles of the same model year and vehicle class (PC, LDT, MDV).

AMT per vehicle is the average vehicle miles traveled per year per low-emission vehicle, based on annual mileage accrual rates for motor vehicles for a specific model year and vehicle class derived from the current version of the ARB’s EMFAC

emission inventory model and other reasonably available relevant information.

Average fuel economy represents the estimated fuel economy in miles per gasoline equivalent gallon (mpg) (or miles per therm in the case of gaseous fuels) of low-emission vehicles of the same model year and vehicle class. The average fuel economy estimates shall be determined by the executive officer based on the fuel economy estimates provided by the vehicle manufacturers pursuant to the “California Exhaust Emission Standards and Test Procedures for 1988 Through 2000 Model Passenger Cars, Light-Duty Trucks and Medium-Duty Vehicles” and the “California Exhaust Emission Standards and Test Procedures for 2001 and Subsequent Model Passenger Cars, Light-Duty Trucks and Medium-Duty Vehicles,” which are incorporated by reference in Title 13, California Code of Regulations, sections 1960.1 and 1961, and on other reasonably available relevant information.

(d) *Characterization of certain dual-fuel or flexible-fuel vehicles.* Any dual-fuel or flexible-fuel vehicle which is certified to meet, while operated on gasoline or diesel fuel, low-emission vehicle standards at least as stringent as the most stringent low-emission vehicle standards to which the vehicle is certified while operated on a fuel other than gasoline shall not be included in the determination pursuant to section 2303(b) of the number of low-emission vehicles certified on a designated clean fuel.

NOTE: Authority cited: Sections 39600, 39601, 39667, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass’n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 39667, 43000, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass’n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 8–30–91; operative 9–30–91 (Register 92, No. 14).
2. Editorial correction of Reference cite (Register 95, No. 15).
3. Amendment filed 12–8–2000; operative 1–7–2001 (Register 2000, No. 49).

§ 2303.5. Identification of Designated Clean Fuels Projected to Reach the Trigger Level in a Particular Year.

(a) *The trigger level requirement.*

(1) *Number of designated clean fuel vehicles necessary to trigger a retail clean fuel outlet requirement.* There shall be no retail clean fuel outlets for a designated clean fuel required in a year unless the statewide number of low-emission vehicles projected by the executive officer for that fuel in accordance with section 2303(b) is 20,000 or greater, after discounting the number of fleet vehicles by 75 percent or a smaller discount factor determined in accordance with section 2303.5(a)(2).

(2) *Reducing the discount factor for fleet vehicles.* The discount factor for fleet vehicles is intended to reflect the approximate percentage of clean fuel that will be dispensed to the fleet vehicles from facilities other than retail clean fuel outlets in the year for which the trigger determination is being made. If the executive officer determines, based on the reports filed pursuant to section 2313 and on any other relevant reasonably available information, that a specified lower percentage of the clean fuel dispensed to the fleet vehicles will likely be dispensed from facilities other than retail clean fuel outlets, the executive officer shall discount the number of fleet vehicles by that specified lower percentage.

(b) *Yearly projections regarding the trigger level.* For each year, the executive officer shall identify any designated clean fuels he or she projects will for the first time be the fuel for a sufficient number of low-emission vehicles to reach the trigger level set forth in section 2303.5(a). At least sixteen months before the start of the year, the executive officer shall notify interested parties of the fuel or fuels identified, and shall make available a summary of the information and analysis relied upon, including the fleet discount factor applied. The notification shall also identify any other designated clean fuel that the executive officer projects will miss the trigger level by no more than 30 percent, with the information and analysis relied upon being made available. The notice shall be

provided to trade associations representing gasoline refiners, distributors and retailers, representative environmental groups, and any person who has requested in writing to receive such notices.

(c) *Requests to revise trigger level projections.* Any interested party may request in writing that the executive officer revise the trigger determination or fleet discount factor for any designated clean fuel, and may submit any relevant information supporting a revised determination. In order to be considered by the executive officer, the written request and supporting information must be received no more than 30 days after issuance of the notice. The executive officer shall consider any requests that are timely submitted, and shall issue his or her final trigger determination and fleet discount factor no less than fourteen months before the start of the year in question.

NOTE: Authority cited: Sections 39600, 39601, 39667, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 39667, 43000, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 12-8-2000; operative 1-7-2001 (Register 2000, No. 49).

§ 2304. Determination of Total and Additional Number of Retail Clean Fuel Outlets Required for Each Designated Clean Fuel in Each Year.

The executive officer shall, for each designated clean fuel, determine the total number of retail clean fuel outlets required for each year, and the total number of additional retail clean fuel outlets required for the first time in the year, in accordance with this section. The executive officer shall make the determination at least fourteen months before the start of the year.

(a) *Determination of total number of retail clean fuel outlets required for each designated clean fuel in each year.* The executive officer shall determine for each designated clean fuel the total number of retail clean fuel outlets that shall be required for that designated fuel in each year, calculated as follows:

(1) *Formula for calculating required number of clean fuel outlets.*

Except as otherwise provided in this section 2304(a), the total number of clean fuel outlets that shall be required for each designated clean fuel for each year shall be calculated as follows:

Required Clean Fuel Outlets	=	Total Projected Maximum Clean Fuel Volume	-	Discounted Clean Fuel Volume for Fleet Vehicles	+	Total Clean Fuel Volume From Vehicle Conversions
-----------------------------------	---	--	---	--	---	---

Clean Fuel Throughput Volume per Station

Where: *Total Projected Maximum Clean Fuel Volume* shall be determined in accordance with the procedures set forth in section 2303(c).

Discounted Clean Fuel Volume for Fleet Vehicles means the total volume of the designated clean fuel (adjusted to gasoline volumes on an energy equivalent basis) estimated to be used in fleet vehicles during the year, multiplied by the discount factor determined pursuant to section 2303.5(a) for the designated clean fuel for the year in which the retail clean fuel outlet trigger was reached. This figure shall be determined by the executive officer using the methodology in section 2303(c), the reports filed pursuant to section 2313 and any other relevant reasonably available information.

Total Clean Fuel Volume from Vehicle Conversions means the total amount of the designated clean fuel (adjusted to gasoline volumes on an energy equivalent basis) for each vehicle class from conversions. This figure shall be determined by the executive officer based on information provided by the Department of Motor Vehicles and on any other relevant reasonably available information.

Clean Fuel Throughput Volume Per Station for liquid fuel shall be 300,000 gasoline equivalent gallons per year for each designated clean fuel, except that once more than five percent of all retail gasoline outlets are required to be equipped to dispense a particular liquid clean fuel, the clean fuel throughput volume per station shall be 600,000 gasoline equivalent gallons for purposes of calculating the number of required retail clean fuel outlets in excess of five percent of all retail gasoline outlets. For gaseous fuel, the clean fuel throughput volume per station shall be 400,000 therms per year.

(2) *Executive officer adjustments to the number of required retail clean fuel outlets.*

(A) *Reducing projected clean fuel volume to reflect the volume of gasoline used in dual-fuel or flexible-fuel vehicles.* For each year, the executive officer shall determine for each designated clean fuel the percentage of the low-emission vehicles identified for the year pursuant to section 2303(b) that will be dual-fuel or flexible-fuel vehicles. The executive officer shall further determine the approximate percentage of the fuel used during the year in these dual-fuel or flexible-fuel vehicles that will be gasoline rather than the designated clean fuel and multiply that percentage by 0.85. The executive officer shall then discount the "Total Projected Maximum Clean Fuel Volume" attributed to these vehicles in the section 2304(a)(1) equation by the adjusted percentage. The determinations are to be based on the information sources identified in section 2303(a) and on any other relevant reasonably available information.

(B) *Change to the discount for fleet vehicles.* If the executive officer determines that the discount factor applied to the calculation of the Clean Fuel Volume for Fleet Vehicles in the equation in section 2304(a)(1) does not accurately reflect the approximate percentage of clean fuel that will be dispensed to the fleet vehicles from facilities other than retail clean fuel outlets projected 18 months from the start of the year for which the number of required clean fuel outlets is being determined, he or she shall revise the discount factor so that it is an accurate reflection of that percentage. The determination shall be based on reports filed pursuant to section 2313 and on any other relevant reasonably available information.

(C) *Reducing the number of required retail clean fuel outlets to reflect certain preexisting outlets.*

1. For each year, the executive officer shall determine for each designated clean fuel the number of retail clean fuel outlets that [i] are owned or leased by persons who are not owners/lessors of any retail gasoline outlets, [ii] have a design capacity as set forth in section 2302(b) where applicable, [iii] satisfy the provisions of section 2309(b), and [iv] are operating as of fifteen months before the start of the year for which the determination is being made.

2. For each year, the executive officer shall reduce the total number of required clean fuel outlets required for each designated clean fuel, as determined pursuant to sections 2304(a)(1), (a)(2)(A) and (a)(2)(B) by the number of retail clean fuel outlets determined in accordance with section 2304(a)(2)1.. The executive officer shall notify the owner/lessor of each retail clean fuel outlet included in the determinations made pursuant to this section 2304(a)(2), and no such outlet may be constructively allocated pursuant to section 2308.

(D) *Notification regarding any adjustments.* If the executive officer makes an adjustment pursuant to section 2304(a)(2)(A), (B) or (C) for a given year, he or she shall notify interested parties of the adjustment and the underlying basis for the adjustment, at least fourteen months before the start of the year. The notice shall be provided to trade associations representing gasoline refiners, distributors and retailers, representative environmental groups, and any person who has requested in writing to receive such notices.

(E) *Requests to revise the executive officer's adjustments.* Any interested party may request in writing that the executive officer revise the adjustments, and may submit any relevant information supporting revised determinations. In order to be considered by the executive officer, the written request and supporting information must be received no more than 30 days after issuance of the notice. The executive officer shall con-

sider any requests that are timely submitted, and shall issue his or her final determinations no less than twelve months before the start of the year in question. At the same time, the executive officer shall make any resulting modifications to the determinations and notifications made pursuant to sections 2304(b), 2306 and 2307.

(b) *Determination of total number of additional clean fuel outlets required each year for each designated clean fuel.* For each year, the executive officer shall determine, for each designated clean fuel, the total number of additional retail clean fuel outlets required for the first time to be in place in that year. This figure shall be determined by subtracting the total number of required retail clean fuel outlets determined in accordance with section 2304 (a) for the previous year, from the total number of required clean fuel outlets determined in accordance with 2304(a) for the previous year, from the total number of required clean fuel outlets determined in accordance with 2304(a) for the year for which the calculations are being made.

2. Amendment of section heading and section filed 12-8-2000; operative 1-7-2001 (Register 2000, No. 49).

§ 2305. Allocation Among Major Gasoline Suppliers of Additional and Total Number of Retail Clean Fuel Outlets in the SCAQMD Required for Each Designated Clean Fuel in Each Year from 1994 Through 1996.

HISTORY

1. New section filed 8-30-91; operative 9-30-91 (Register 92, No. 14).
2. Editorial correction of Reference cite (Register 95, No. 15).
3. Repealer filed 12-8-2000; operative 1-7-2001 (Register 2000, No. 49).

§ 2306. Identification of Affected Owner/Lessors Required to Equip Additional Retail Clean Fuel Outlets Each Year.

For each year, at least fourteen months before the start of the year, the executive officer shall identify for each designated clean fuel the affected retail gasoline outlet owner/lessors who will be required to equip retail gasoline outlets or other retail outlets to dispense that fuel. An affected station owner/lessor is any person who is the owner/lessor of a number of retail gasoline outlets equal to or greater than the minimum ownership level (MOL) for the year, calculated as follows:

$$\text{Minimum Ownership Level (MOL)} = \frac{\text{Sum of the Numbers of Additional Retail Clean Fuel Outlets for All Designated Clean Fuels}}{\text{Number of Non-Clean Fuel Retail Outlets}}$$

Sum of the Numbers of Additional Retail Clean Fuel Outlets for All Designated Clean Fuels

Where: *Number of Non-Clean Fuel Retail Outlets* is calculated by subtracting the sum of the required retail clean fuel outlets determined in accordance with section 2304(a) for all designated clean fuels for the previous year, from the total number of retail gasoline outlets statewide estimated by the executive officer based on the reports submitted pursuant to section 2312 and other reasonably available relevant information.

Sum of the Numbers of Additional Retail Clean Fuel Outlets for All Designated Clean Fuels is the sum of the total additional number of clean fuel outlets calculated for the year for each designated clean fuel in accordance with section 2304(b).

The executive officer shall round the result of the calculation for minimum ownership level to the nearest integer.

NOTE: Authority cited: Sections 39600, 39601, 39667, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference:

HISTORY

1. New section filed 8-30-91; operative 9-30-91 (Register 92, No. 14).
2. Amendment of section heading, section and NOTE filed 12-8-2000; operative 1-7-2001 (Register 2000, No. 49).

§ 2307. Allocation Among Affected Owner/Lessors of the Total Number of Retail Clean Fuel Outlets.

For each year, the executive officer shall, for each designated clean fuel, make the determinations set forth in this section.

(a) *Allocation among affected owner/lessors of the number of additional retail clean fuel outlets for each year.*

For each year, the executive officer shall determine the number of additional retail clean fuel outlets that each affected owner/lessor of retail gasoline outlets is required for the first time to have in place in the state. This number shall be calculated, for each designated clean fuel, by multiplying the owner/lessor's number of non-clean fuel retail gasoline outlets (determined in accordance with section 2307(b)) by the clean fuel fraction (determined in accordance with section 2307(c)), rounded to the nearest integer using conventional rounding. If the resulting number is less than zero, the number shall be adjusted to zero.

(b) *Determination of an owner/lessor's number of non-clean fuel retail gasoline outlets.* The executive officer shall determine an owner/lessor's number of non-clean fuel retail gasoline outlets by subtracting the sum of the owner/lessor's total required minimum number of retail clean fuel outlets for all designated clean fuels in the preceding year as determined pursuant to section 2307(d), from the owner/lessor's total number of retail gasoline outlets (based on reports submitted pursuant to section 2312 and other reasonably available relevant information).

(c) *Determination of clean fuel fraction.*

For each designated clean fuel, the executive officer shall calculate the clean fuel fraction for each designated clean fuel as follows:

$$\text{Clean Fuel Fraction} = \frac{\text{Total Number of Retail Clean Fuel Retail Outlets}}{\text{Number of Non-Clean Fuel Outlets Owned by All Affected Owner/Lessors}}$$

Number of Non-Clean Fuel Outlets Owned by All Affected Owner/Lessors

Where: *Total Additional Number of Retail Clean Fuel Outlets* is the total number of additional retail clean fuel outlets required for the year for the particular clean fuel in accordance with section 2304(b).

Number of Non-Clean Fuel Outlets Owned by All Affected Owner/Lessors is calculated by subtracting the sum of the required retail outlets determined in accordance with section 2304(a) for all clean fuels from the sum of the number of retail gasoline outlets owned or leased by all of the affected owners and lessors estimated by the executive officer based on the reports submitted pursuant to section 2312 and other reasonably available relevant information.

(d) *Determination of each owner/lessor's total required minimum number of retail clean fuel outlets for each clean fuel for each year.*

For each year, each owner/lessor's required minimum number of retail clean fuel outlets for each designated clean fuel in the state shall consist of the number of additional retail clean fuel outlets that the owner/lessor is required for the first time to have in place in the year as determined in accordance with section 2307(a), added to the sum of the numbers of additional retail clean fuel outlets required of the owner/lessor for the first time in each of the previous years as determined in accordance with section 2307(a). The required minimum number of an owner/lessor's retail clean fuel outlets for each designated clean fuel in a year shall not be less than the required minimum number of such outlets for the previous year, except that there shall be no required minimum number outlets for a designated clean fuel in any year for which the number of vehicles estimated by the executive officer pursuant to section 2303(b) is less than 20,000.

(e) *Notification of owner/lessors.*

At least fourteen months before the start of each year, the executive officer shall notify each affected owner/lessor in writing of the owner/lessor's required minimum number of clean fuel outlets for each designated clean fuel for the year. The written notification shall include a detailed analysis of how the number was derived.

NOTE: Authority cited: Sections 39600, 39601, 39667, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 39667, 43000, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 8-30-91; operative 9-30-91 (Register 92, No. 14).
2. Amendment of section heading, section and NOTE filed 12-8-2000; operative 1-7-2001 (Register 2000, No. 49).

§ 2308. Constructive Allocation of Retail Clean Fuel Outlets.

(a) Any owner/lessor of a retail gasoline outlet, and any person who is the owner/lessor of a retail clean fuel outlet which is not a retail gasoline outlet, may constructively allocate one or more retail clean fuel outlets to the owner/lessor of a retail gasoline outlet, for purposes of demonstrating compliance with the requirements in section 2302, as long as the requirements of this section are met.

(b) Any agreement to constructively allocate a retail clean fuel outlet pursuant to this section shall be in writing. The constructive allocation shall be in calendar year increments, and shall not cover less than one calendar year. The agreement shall be executed before the start of the first year of constructive allocation covered by the agreement.

(c) A retail clean fuel outlet may not be constructively allocated unless it meets any applicable dispensing capacity requirements set forth in section 2302(b).

(d) If the retail clean fuel outlet being constructively allocated is not a retail gasoline outlet, the person making the constructive allocation shall obtain prior approval from the executive officer. The executive officer shall approve the constructive allocation if s/he determines that the facility is adequately accessible for fueling motor vehicles by the general public with the designated clean fuel.

(e) Any person who constructively allocates a retail clean fuel outlet for a designated clean fuel shall be deemed to be the owner/lessor of that retail clean fuel outlet and shall be subject to the requirements of sections 2309(b) and (c)(1) during the period covered by the constructive allocation agreement.

(f) The owner/lessor of any retail clean fuel outlet which is constructively allocated shall notify the operator in writing that it is claimed to be equipped in order to satisfy the requirements of section 2302, as applicable.

(g) Any person who constructively allocates a retail clean fuel outlet to an owner/lessor shall submit a report to the executive officer by January 10 of each year covered by the constructive allocation agreement. The report shall be executed in California under penalty of perjury and shall contain the following information.

(1) The name, address and telephone number of the person making the constructive allocation.

(2) The street address of each retail clean fuel outlet constructively allocated, the type of designated clean fuel dispensed at the outlet, the business interest in the outlet of the person making the constructive allocation, and the brand, trade, or other name under which the business at the outlet is conducted.

(3) For each constructively allocated retail clean fuel outlet, the name and address of the owner/lessor to whom the outlet was constructively allocated, and the starting and ending dates of the constructive allocation.

(4) The name of the operator of the retail clean fuel outlet.

(h) Any owner/lessor who receives a constructive allocation of a retail clean fuel outlet shall submit a report to the executive officer by January 10 of each year covered by the constructive allocation agreement. The

report shall be executed in California under penalty of perjury and shall contain the following information.

(1) The name, address and telephone number of the owner/lessor.

(2) The street address of each retail clean fuel outlet constructively allocated, the type of designated clean fuel dispensed at the outlet, and the brand, trade, or other name under which the business at the outlet is conducted.

(3) For each constructively allocated retail clean fuel outlet, the name and address of the person constructively allocating the outlet, and the starting and ending dates of the constructive allocation.

(4) A copy of the executed constructive allocation agreement.

NOTE: Authority cited: Sections 39600, 39601, 39667, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 39667, 43000, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 8-30-91; operative 9-30-91 (Register 92, No. 14).
2. Amendment filed 12-8-2000; operative 1-7-2001 (Register 2000, No. 49).

§ 2309. Responsibilities of Owner/Lessors of Selected Retail Clean Fuel Outlets.

(a) *Locations of required clean fuel outlets.*

(1) For each designated clean fuel, in determining the locations of required retail clean fuel outlets, an owner/lessor shall provide a reasonable geographical dispersion of the outlets and place the outlets in locations that are reasonably near the existing and anticipated areas of operation of low-emission vehicles that operate on the designated clean fuel, and are convenient to drivers of such vehicles. Any retail clean fuel outlet that was equipped to dispense a designated clean fuel as part of the CEC's California Methanol Fuel Demonstration Program shall be deemed to satisfy these criteria.

(2) At least eight months before the start of each year (by April 30 of the previous year), each owner/lessor who has received a notification pursuant to section 2307(e) indicating that s/he will be required to have in place additional retail clean fuel outlets for that year shall submit to the executive officer proposed locations for such outlets and optional locations equal to at least 20 percent off the proposed locations, identified by street address, ZIP code, and Universal Transverse Mercator (UTM) coordinates. The submittal shall include any outlets that are or may be constructively allocated to the owner/lessor pursuant to section 2308. Following submittal, the owner/lessor shall consult with designees of the executive officer, and with the CEC's executive officer or his or her designees, on the optimal locations for new retail clean fuel outlets.

(3) The owner/lessor shall notify the executive officer of the final locations of all new retail clean fuel outlets for the year, no later than five months before the start of the year (by July 31).

(b) *Requirements regarding facilities at selected clean fuel outlets at retail gasoline outlets.*

Each owner/lessor of a selected retail clean fuel outlet at a retail gasoline outlet shall, with respect to each such outlet:

(1) Locate the designated clean fuel dispenser(s) in a location substantially as accessible and visible to a customer entering the station as are the gasoline dispensers, and providing substantially the same convenience of ingress and egress as exists for the gasoline dispensers at the outlet; provided that any dispenser equipped prior to January 1, 1993 to dispense a designated clean fuel as part of the CEC's California Methanol Fuel Demonstration Program shall be deemed to satisfy this criterion.

(2) Ensure that the designated clean fuel dispensers are substantially as well-marked and as clearly identified as the gasoline dispensers with regard to the type of fuel.

(3) Maintain lighting which keeps the designated clean fuel dispenser area substantially as well-illuminated as the gasoline dispensing area when the outlet operates at night.

(4) Ensure that customers using designated clean fuel dispensers will have, within the same service mode (e.g. self serve or full serve), substan-

tially the same access to services and facilities such as canopy coverage, air and water, vending, and restrooms as do customers purchasing gasoline, unless the owner/lessor has, in the preceding 12 months, demonstrated to the satisfaction of the executive officer that providing such a service or facility is prohibited by local ordinance or applicable safety codes.

(5) Prominently display directions on use of the clean fuel dispensing equipment.

(6) Maintain the designated clean fuel dispensing equipment in good operating condition.

(c) *Requirements regarding facilities at selected clean fuel outlets at which gasoline is not offered to the public.* Each owner/lessor of a selected retail clean fuel outlet at which gasoline is not offered to the public shall, with respect to each such outlet:

(1) Locate the designated clean fuel dispenser(s) in a location that is readily accessible from main streets and highways.

(2) Ensure that the designated clean fuel dispensers are available for public use during normal business hours without the use of a key or card-key.

(3) Ensure that a customer is able to pay for his or her fuel purchase without establishment of an account with the outlet owner or operator.

(4) If the outlet is operated after dark, maintain commercially reasonable lighting levels to provide user safety.

(5) Prominently display directions on use of the clean fuel dispensing equipment.

(d) *Requirements regarding supply of designated clean fuels to selected retail clean fuel outlets.*

(1) Whenever the operator of a selected retail clean fuel outlet requests that the owner/lessor of the outlet provide for the delivery, within a specified time not less than 72 hours from the request, of specified commercially reasonable quantities of the designated clean fuel to the outlet on commercially reasonable terms, the owner/lessor shall be jointly liable with the operator for any violations at the outlet of section 2310(a)(1) starting with the requested time of delivery and ending with the next delivery of commercially reasonable quantities of the clean fuel to the outlet, unless the owner/lessor does one of the following:

[i] supplies the specified quantity of designated clean fuel to the outlet, within the specified time, on commercially reasonable terms, or

[ii] identifies a third party willing to supply, within the specified time, the specified quantity of designated clean fuel to the outlet on commercially reasonable terms.

However, an owner/lessor's failure to satisfy the conditions set forth in [i] and [ii] shall not result in liability under this section if the owner/lessor demonstrates that s/he was prevented from satisfying the conditions by a natural disaster such as an earthquake or flood, an act of war or an act by a public enemy, a civil disorder or riot, the expropriation or confiscation of facilities or property, or the operation of law.

(2) Whenever an owner/lessor is required to submit a notification regarding final outlet locations to the executive officer pursuant to section 2309(a)(3), the notification shall include a description of the means by which the owner/lessor intends to comply with section 2309(c)(1). The description shall include, but need not be limited to, [i] a description of any facility that is or will be owned or leased by the owner/lessor for the production or importation of the designated clean fuel, including the throughput capacity of such facility; [ii] the identities of any third parties with whom the owner/lessor has or plans to have contracts to supply the designated clean fuel, and the minimum volumes of the designated clean fuel subject to such contracts; [iii] if the owner/lessor will not have a designated clean fuel production or import facility, or a contract for supply of the fuel, a description of the manner in which supply of the designated clean fuel will be arranged; [iv] a description, including location and capacity, of any facilities that are or will be owned or leased by the owner/lessor for the loading of the designated clean fuel into tank cars, vessels, or tank trucks; and [v] the identities of any parties with whom the owner/lessor has, or plans to have, contracts for the delivery of the designated

clean fuel to the retail clean fuel outlets, and the facilities from which such parties will make such deliveries.

(e) *Annual reports regarding compliance with section 2302.*

(1) For each calendar year, each owner/lessor who is required to equip one or more retail gasoline outlets as a retail clean fuel shall submit to the executive officer by January 10 of the year a report containing the information set forth below regarding compliance with section 2302. The information shall be categorized by each designated clean fuel. The reports shall be executed in California under penalty of perjury.

(A) The street address of each of the owner/lessor's retail gasoline outlets claimed to be equipped as a retail clean fuel outlet to satisfy the requirements of section 2302.

(B) For each such outlet, the type of designated clean fuel dispensed at the outlet, the brand, trade, or other name under which the business at the outlet is conducted, and the name of the operator of the outlet.

NOTE: Authority cited: Sections 39600, 39601, 39667, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 39667, 43000, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 8-30-91; operative 9-30-91 (Register 92, No. 14).

2. Amendment filed 12-8-2000; operative 1-7-2001 (Register 2000, No. 49).

§ 2310. Responsibilities of Operators of Selected Retail Clean Fuel Outlets.

(a) The operator of a selected retail clean fuel outlet equipped to dispense gasoline shall, whenever gasoline is offered for sale at the outlet, do all of the following with respect to the designated clean fuel(s) that the outlet is equipped to dispense:

(1) Store a commercially reasonable quantity of the designated clean fuel at the outlet and offer the fuel for sale to the public, during the same hours that gasoline is offered for sale. However, an operator shall not be liable for failure to comply with this section 2310(a)(1) if the operator demonstrates s/he was unable to comply because of a natural disaster such as an earthquake or flood, and act of war or an act by a public enemy, a civil disorder or riot, the expropriation or confiscation of facilities or property, or the operation of law.

(2) Maintain the designated clean fuel dispensing equipment in good operation conditions.

(3) Keep the designated clean fuel dispenser area substantially as well-illuminated as the gasoline dispensing area during nighttime operation.

(4) Keep the designated clean fuel dispenser area and pad substantially as clean as the gasoline dispenser area and pad.

(b) The operator of a selected retail clean fuel outlet not equipped to dispense gasoline to the general public shall do all of the following with respect to the designated clean fuel(s) that the outlet is equipped to dispense:

(1) Maintain reasonable access to the clean fuel dispensing equipment.

(2) Maintain the designated clean fuel dispensing equipment in good operating condition.

(3) Provide a payment option that does not require the purchaser to establish an account with the operator.

(c) The operator of any selected retail clean fuel outlet shall do all of the following with respect to the designated clean fuel(s) that the outlet is equipped to dispense:

(1) If the designated clean fuel dispensers are at any time in a consumer self-service mode, post at all times in a conspicuous and convenient location directions illustrating the use of the dispensing equipment.

(2) Display on the premises a sign which discloses that the clean fuel outlet offers the designated clean fuel for sale, and which is clearly visible from the street or highway adjacent to the outlet, provided that the operator shall not be required to display a sign in a manner inconsistent with applicable local ordinances.

(3) Conspicuously post, on the designated clean fuel dispenser, the price of the clean fuel volume that provides the energy provided by a gallon of gasoline. This price shall be calculated for liquid fuels by multiplying the price of a volumetric gallon of the fuel by the values in the table below. In the case of CNG, the price shall be posted as 1.18 multiplied by the price of one therm of compressed natural gas.

Fuel	Price Multiplier
Gasoline	1.00
LPG	1.27
Methanol (M100)	2.08
M85	1.79
Ethanol (E100)	1.54
E85	1.43

NOTE: Authority cited: Sections 39600, 39601, 39667, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 39667, 43000, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 8–30–91; operative 9–30–91 (Register 92, No. 14).
2. Amendment filed 12–8–2000; operative 1–7–2001 (Register 2000, No. 49).

§ 2311. Relief from Liability Caused by Breakdowns of CNG Dispensing Equipment.

(a) An owner/lessor or operator of a selected clean fuel outlet equipped to dispense CNG shall not be liable for violations of sections 2302, 2309(b) or 2310(a) resulting from a minor breakdown if:

(1) The owner/lessor or operator reports the breakdown to the executive officer within 4 hours of the time the person knows or reasonably should know of the breakdown, including the time, location, and nature of the breakdown;

(2) The equipment is repaired as quickly as possible in the exercise of reasonable diligence, in no case in more than 72 hours;

(3) Within 12 hours of repair of the equipment, the owner/lessor or operator reports to the executive officer that the repairs have been completed, and describes the corrective measures, if any, taken to avoid breakdowns in the future; and

(4) The owner/lessor or operator is able to demonstrate that the breakdown did not result from inadequate or improper maintenance, operator error, or other reasons within the control of the owner/lessor or operator.

(b) An owner/lessor or operator of a selected clean fuel outlet equipped to dispense CNG shall not be liable for violations of sections 2302, 2309(b) or 2310(a) resulting from a major breakdown if the owner/lessor or operator:

(1) Reports the breakdown to the executive officer within 4 hours of the time the person knows or reasonably should know of the breakdown, including the time, location, and nature of the breakdown;

(2) Within 7 days of the breakdown, submits to the executive officer is writing a report that:

(A) Demonstrates to the reasonable satisfaction of the executive officer that the breakdown did not result from inadequate or improper maintenance, operator error, or other reasons within the reasonable control of the owner/lessor or operator; and

(B) Identifies a plan reasonably detailing how the CNG dispensing equipment will be repaired or replaced as soon as possible with the exercise of reasonable diligence, including a final completion date no later than six months following the date of the breakdown; and

(3) Completes the repair or replacement [i] by the final completion date identified in the submitted plan, or [ii] by such earlier completion date designated by the executive officer, within 14 days of receipt of the plan, as reasonably feasible based on review of the plan.

NOTE: Authority cited: Sections 39600, 39601, 39667, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 39667, 43000, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 8–30–91; operative 9–30–91 (Register 92, No. 14).
2. Amendment of subsections (a) and (b) filed 12–8–2000; operative 1–7–2001 (Register 2000, No. 49).

§ 2311.5. Notification by Executive Officer of Reporting Obligations.

For each year starting with 2002, the executive officer shall determine whether there is a substantial possibility that the 20,000 vehicle trigger level in section 2304(a)(1) will for the first time be reached for one or more designated clean fuels. The executive officer shall identify any such designated clean fuel at least 22 months before the start of the year. The executive officer shall then take prompt and reasonable steps to provide notice of the identified fuel and applicable reporting obligations to: (1) all owner/lessors of retail gasoline outlets, (2) all fleet operators, and (3) all persons engaged in the business of distributing the identified fuel for use in motor vehicles.

NOTE: Authority cited: Sections 39600, 39601, 39667, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 39667, 43000, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 12–8–2000; operative 1–7–2001 (Register 2000, No. 49).

§ 2312. Reports by Owner/Lessors of Retail Gasoline Outlets.

(a) Once the executive officer has identified a designated clean fuel under section 2311.5, by July 31 of the year the identification was made and by July 31 of every year thereafter, each owner/lessor of a retail gasoline outlet shall report to the executive officer the total number of retail gasoline outlets in the state of which the person is the owner/lessor, the street address of the retail gasoline outlet, and the owner/lessor's business interest in the outlet.

NOTE: Authority cited: Sections 39600, 39601, 39667, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 39667, 43000, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 8–30–91; operative 9–30–91 (Register 92, No. 14).
2. Amendment filed 12–8–2000; operative 1–7–2001 (Register 2000, No. 49).

§ 2313. Reports by Fleet Operators.

Once the executive officer has identified a particular designated clean fuel under section 2311.5, every fleet operator shall, for any year in which the fleet operator reasonably expects to operate fleet vehicles certified on a designated clean fuel, supply the following information to the executive officer, at least eighteen months (by June 30) before the start of the year:

(1) The expected number of low-emission vehicles in the fleet to be operated in the year that will be certified on a designated clean fuel, categorized by designated clean fuel.

(2) The total volume of each designated clean fuel expected to be used by the vehicles in the year.

(3) The total volume of designated clean fuel expected to be supplied to the fleet operator's low-emission vehicles during the year from the fleet operator's own dispensing facilities and from facilities that are not retail clean fuel outlets.

(4) The actual vehicle miles traveled for the prior 12 month period and the estimated vehicle miles travelled for the year in question.

(5) The extent to which operations using the designated clean fuel would be expanded due to increased availability of the designated clean fuel at retail clean fuel outlets.

NOTE: Authority cited: Sections 39600, 39601, 39667, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 39667, 43000, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n.*

v. *Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 8–30–91; operative 9–30–91 (Register 92, No. 14).
2. Amendment filed 12–8–2000; operative 1–7–2001 (Register 2000, No. 49).

§ 2314. Reporting Requirements for Persons Who Distribute Designated Clean Fuels for Use in Motor Vehicles.

Starting with the beginning of the year after the Executive Officer the executive officer identifies a particular designated clean fuel under section 2311.5, each person who in a quarter distributes a designated clean fuel for use in motor vehicles shall, within 45 days after the end of the quarter, submit to the executive officer a report containing the following information for each designated clean fuel:

(1) The volume of the designated clean fuel that was produced by the person and that was distributed in the quarter for use in motor vehicles.

(2) The volume of the designated clean fuel that was imported by the person and that was distributed in the quarter for use in motor vehicles.

NOTE: Authority cited: Sections 39600, 39601, 39667, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 39667, 43000, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 8–30–91; operative 9–30–91 (Register 92, No. 14).
2. Amendment of first paragraph filed 12–8–2000; operative 1–7–2001 (Register 2000, No. 49).

§ 2315. Determination of Violations

(a) Violations of section 2302.

At any time that an owner/lessor fails to have equipped the number of retail gasoline outlets required by section 2302 to be equipped to be a retail clean fuel outlet for a designated clean fuel, the owner/lessor shall be deemed to have sold or supplied gasoline to motor vehicles in violation of these regulations. For each day that the owner/lessor violates section 2302, the first ten motor vehicles fueled at one of the owner/lessor's retail gasoline outlets shall be deemed to have been unlawfully fueled for each retail gasoline outlet not equipped as required. If an owner/lessor claims to comply with the requirements of section 2302 on the basis of retail clean fuel outlets constructively allocated pursuant to section 2308, such facilities shall not satisfy the owner/lessor's obligations if the requirements in section 2308 for constructive allocation are not met.

(b) Violations of section 2309(b).

Whenever the owner/lessor of a selected retail clean fuel outlet violates section 2309(b) with respect to the outlet, the gasoline sold or supplied by the owner/lessor in violation of these regulations. For each day that the owner/lessor violates section 2309(b) with respect to a selected retail clean fuel outlet, the first five motor vehicles fueled that day at the outlet with gasoline shall be deemed to have been unlawfully fueled by the owner/lessor.

(c) Violations of section 2310.

Whenever the operator of a selected retail clean fuel outlet violates section 2310 with respect to the outlet, the gasoline sold or supplied at the outlet shall be deemed to have been sold or supplied by the operator violates section 2310, the first five motor vehicles fueled that day with gasoline at the outlet shall be deemed to have been unlawfully fueled by the operator.

NOTE: Authority cited: Sections 39600, 39601, 39667, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 39667, 43000, 43013, 43016, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 8–30–91; operative 9–30–91 (Register 92, No. 14).
2. Amendment of section and NOTE filed 12–8–2000; operative 1–7–2001 (Register 2000, No. 49).

§ 2316. Determinations of Energy Equivalency of Fuels.

Whenever implementation of this chapter requires values for the energy contents of fuels, the lower heating values in the following table shall be used.

Fuel	Volumetric Energy Contents	
		BTUs per gallon
Gasoline		116,500
LPG		91,500
Methanol (M100)		56,500
M85		65,000
Ethanol (E100)		75,700
E85		81,800
CNG		1000 BTU/scf

NOTE: Authority cited: Sections 39600, 39601, 39667, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 39667, 43000, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 8–30–91; operative 9–30–91 (Register 92, No. 14).
2. Amendment of first paragraph filed 12–8–2000; operative 1–7–2001 (Register 2000, No. 49).

§ 2317. Satisfaction of Designated Clean Fuel Requirements with a Substitute Fuel.

(a) Any person may petition the state board to designate by regulation a substitute fuel which may be used instead of a primary designated clean fuel to satisfy any requirements in this chapter pertaining to a designated clean fuel. The state board shall designate such a substitute fuel if it is satisfied that the petitioner has demonstrated all of the following:

(1) That use of the fuel in low-emission vehicles certified on the primary designated clean fuel will result in emissions of NMOG (on a reactivity-adjusted basis), NOx, and CO no greater than the corresponding emissions from such vehicles fueled with the primary designated clean fuel, as determined pursuant to the procedures set forth in the "California Test Procedure for Evaluating Substitute Fuels and New Clean Fuels," as adopted November 2, 1993, which is incorporated herein by reference.

(2) That use of the fuel in low-emission vehicles certified on the primary designated clean fuel will result in potential health risks from exposure to benzene, 1,3-butadiene, formaldehyde, and acetadehyde in the aggregate no greater than the corresponding potential health risks for such vehicles fueled with the primary designated clean fuel, as determined pursuant to the procedures set forth in the "California Test Procedure for Evaluating Substitute Fuels and New Clean Fuels," as adopted November 2, 1993, which is incorporated herein by reference.

(3) That if the proposed substitute fuel may be used to fuel any motor vehicle other than low-emission vehicles certified on the primary designated clean fuel:

(A) Use of the substitute fuel in such other motor vehicles would not increase emissions of NMOG (on a reactivity-adjusted basis), NOx, and CO as determined pursuant to the procedures set forth in the "California Test Procedure for Evaluating the Emission Impacts of Substitute Fuels or New Clean Fuels," as adopted November 2, 1993, which is incorporated herein by reference; and

(B) Use of the substitute fuel in such other motor vehicles would result in potential health risks from exposure to benzene, 1,3-butadiene, formaldehyde, and acetadehyde in the aggregate no greater than the corresponding potential health risk from the emissions from such vehicles when operating on their customary fuel, as determined pursuant to the procedures set forth in the "California Test Procedure for Evaluating the Emission Impacts of Substitute Fuels or New Clean Fuels," as adopted November 2, 1993, which is incorporated herein by reference; and

(C) Use of the substitute fuel in such other motor vehicles would not result in increased deterioration of the emission control system on the vehicle and would not void the warranties of any such vehicles.

(b) Whenever the state board designates a substitute fuel pursuant to this section, the state board shall also establish by regulation required specifications for the substitute fuel.

(c) Commencing with the effective date of a regulatory action of the state board designating a substitute fuel pursuant to this section, any person may satisfy his or her obligations under this chapter pertaining to a primary designated clean fuel, in whole or in part, by substituting the substitute fuel in place of the primary designated clean fuel.

NOTE: Authority cited: Sections 39600, 39601, 39667, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 39667, 43000, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 8–30–91; operative 9–30–91 (Register 92, No. 14).
2. Amendment of subsections (a)(1), (a)(2), and (a)(3)(A)–(C) filed 11–2–93; operative 12–2–93 (Register 93, No. 45).
2. Amendment of subsections (a) and (c) filed 12–8–2000; operative 1–7–2001 (Register 2000, No. 49).

§ 2318. Sunset for Particular Designated Clean Fuels.

This Chapter 8, shall cease to apply to a particular designated clean fuel once the number of retail clean fuel outlets offering the designated clean fuel represent at least ten percent of all retail gasoline outlets.

NOTE: Authority cited: Sections 39600, 39601, 39667, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975). Reference: Sections 39000, 39001, 39002, 39003, 39500, 39515, 39516, 39667, 43000, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Air Pollution Control District*, 14 Cal. 3d 411, 121 Cal. Rptr. 249 (1975).

HISTORY

1. New section filed 12–8–2000; operative 1–7–2001 (Register 2000, No. 49).

Employer–Based Emissions Reduction Goal =

$$\left(\begin{array}{l} \text{Average Daily} \\ \text{Peak Period Employees} \\ \text{as defined in district rules} \end{array} \right) \times \left(\frac{1}{\text{AVR Base}} - \frac{1}{\text{AVR Goal}} \right) \times \left(\begin{array}{l} \text{Annual Commute} \\ \text{Emission Factor} \end{array} \right)$$

Example: If peak employees equal 100, AVR Base is 1.2, AVR Goal is 1.5, and Annual Commute Emission Factor for Reactive Organic Gases (ROG) in 1995 is 21 lbs/year, then the Employer–Based Emissions Reduction Goal for ROG equals:

$$\left(100 \right) \times \left(\frac{1}{1.2} - \frac{1}{1.5} \right) \times \left(21 \right) = 336 \text{ lbs/year of ROG}$$

(b) The state board shall provide the districts with district–specific annual commute emission factors to be used in the emissions formula and shall periodically update these factors. The factors shall be in a format that allows for varying trip lengths.

(c) Air districts shall give employers with employment sites in more than one air district the option to use the formula as set forth in subdivision (a) of this section to determine emission reduction goals for any or all of their employment sites.

NOTE: Authority cited: Sections 39600, 39601, 40717.5(d) and 40916(c), Health and Safety Code. Reference: Sections 40717, 40717.1, 40717.5, 40916, 40918, 40919, 40920 and 40920.5, Health and Safety Code.

HISTORY

1. New section filed 12–21–95; operative 1–20–96 (Register 95, No. 51).

Subchapter 8.5. Emissions Formula for Employer–Based Trip Reductions

§ 2330. Applicability.

This subchapter shall be applicable to any air pollution control or air quality management district which adopts or amends a rule or regulation which establishes employer–based trip reduction requirements.

HISTORY

1. New subchapter 8.5 and section filed 12–21–95; operative 1–20–96 (Register 95, No. 51).

§ 2331. Definitions.

The following definitions shall apply to this subchapter:

(a) “AVR Base” is the average vehicle ridership based on the most recent survey of employees at the site or an average value provided by the air district. Employers shall have the option to choose either value.

(b) “AVR Goal” is the average vehicle ridership goal for a given year provided by the air district or implementing agency.

(c) “Annual Commute Emission Factor” is the annual emission factor, expressed in pounds per year, for a given year and pollutant based on a typical commute vehicle fleet, peak period speed distributions and temperatures, and average commute trip lengths for a given area.

HISTORY

1. New section filed 12–21–95; operative 1–20–96 (Register 95, No. 51).

§ 2332. Emissions Formula.

(a) Air pollution control districts and air quality management districts shall use the following emissions formula, or an algebraic expression of the formula which produces the same mathematical results, to determine employer–based emissions reduction goals equivalent to employer–based trip reduction goals:

Chapter 9. Off–Road Vehicles and Engines Pollution Control Devices

Article 1. Small Off–Road Engines

§ 2400. Applicability.

(a)(1) This article applies to small off–road engines produced on or after January 1, 1995 and any equipment produced on or after January 1, 1995 that uses such engines.

(2) Every new small off–road engine that is manufactured for sale, sold, or offered for sale in California, or that is introduced, delivered or imported into California for introduction into commerce, and that is sub-

ject to any of the standards prescribed in this article must be covered by an Executive Order, issued pursuant to this article.

(3) This article does not apply to compression-ignition engines, as defined in Section 2421, below 25 horsepower, produced during the 2000 and later model years or any equipment that uses such engines produced during the 2000 and later model years.

(4) This article may apply to zero-emission small off-road equipment.

(b) Each part of this article is severable, and in the event that any part of this article is held to be invalid, the remainder of this article remains in full force and effect.

(c)(1) For purposes of this article, military tactical vehicles or equipment means vehicles or equipment owned by the U.S. Department of Defense and/or the U.S. military services and used in combat, combat support, combat service support, tactical or relief operations, or training for such operations.

(2) This article shall not apply to engines used in off-road military tactical vehicles or equipment which have been exempted from regulations under the federal national security exemption, 40 CFR, subpart J, section 90.908. It shall also not apply to those vehicles and equipment covered by the definition of military tactical vehicle that are commercially available and for which a federal certificate of conformity has been issued under 40 CFR Part 90, subpart B.

(3) On January 1, 1997, the U.S. Department of Defense shall submit to the ARB a list of all vehicle and equipment types that are exempted under the above provisions and which are located in the State of California. If any additional vehicle and equipment types are added to the list during the previous 12 months, the U.S. Department of Defense shall update the list and submit it to the ARB by January 1 of the following year.

NOTE: Information regarding authorization to adopt regulations that are included in this chapter for nonpreempted nonroad vehicles or engines pursuant to section 209(e) of the federal Clean Air Act (42 U.S.C. 7543(e)) may be obtained from the Air Resources Board at 9528 Telstar Avenue, El Monte, California 91731.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43150-43154, 43205.5 and 43210-43212, Health and Safety Code.

HISTORY

1. New section filed 5-1-92; operative 6-1-92 (Register 92, No. 19).
2. Amendment of subsection (a)(1) and NOTE filed 10-4-93; operative 11-3-93 (Register 93, No. 41).
3. Change without regulatory effect amending article heading, subsections (a)(1) and (b) and NOTE filed 12-22-93 pursuant to title 1, section 100, California Code of Regulations (Register 93, No. 52).
4. Amendment of subsections (a)(1)-(2) filed 7-24-95; operative 7-24-95 pursuant to Government Code section 11343.4(d) (Register 95, No. 30).
5. New subsections (c)(1)-(c)(3) filed 7-3-96; operative 7-3-96 pursuant to Government Code section 11343.4(d) (Register 96, No. 27).
6. Amendment of article heading, section and NOTE filed 3-23-99; operative 3-23-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 13).
7. Amendment of subsection (a)(2) and new subsection (a)(3) filed 12-28-2000; operative 12-28-2000 pursuant to Government Code section 11343.4(d) (Register 2000, No. 52).
8. Amendment of subsection (a)(1) and new subsection (a)(4) filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2401. Definitions.

(a) The definitions in Section 1900 (b), Chapter 1, Title 13 of the California Code of Regulations, apply with the following additions:

(1) "ARB Enforcement Officer" means any officer or employee of the Air Resources Board so designated in writing by the Executive Officer or by the Executive Officer's designee.

(2) "Assembly-line tests" are those tests or inspections that are performed on or at the end of the assembly-line.

(3) "Averaging" means the exchange of emission credits among engine families within a given manufacturer's product line.

(4) "Banking" means the retention of small off-road engine emission credits by the manufacturer generating the emission credits for use in future model year averaging or trading as permitted by these regulations.

(5) "Basic engine" means an engine manufacturer's unique combination of engine displacement, number of cylinders, fuel system, emission control system and other engine and emission control system characteristics specified by the Executive Officer.

(6) "Calendar year" is the twelve month period commencing on January 1 through December 31.

(7) "Certification emission reduction credits" means the amount of emission reduction or exceedance, by an engine family, below or above the applicable HC+NO_x (or NMHC+NO_x, as applicable) or Particulate Matter emission standard, respectively. Family emission levels (FEL) below the standard create "positive credits," while FELs above the standard create "negative credits." Some or all of these credits may be revoked if the Executive Officer's review of the end-of-year reports or any subsequent audit action(s) reveals problems or errors of any nature with credit computations.

(A) "Projected credits" refer to emission credits based on the projected applicable production/sales volume of the engine family.

(B) "Reserved credits" are emission credits generated within a model year available for reporting to the Executive Officer at the end of the model year.

(C) "Actual credits" refer to emission credits based on California's share, determined by market analysis, of actual federal production/sales volume as contained in the end-of-year reports submitted to the Executive Officer.

(8) "Certification value" means the product of the measured emissions of the prototype engine at zero hours and the (calculated or assigned) deterioration factor.

(9) "Blue Sky Series engine" means a small off-road engine meeting the requirements of Section 2403(b)(2)(A).

(10) "Complete engine assembly" or "Engine configuration" means an assembly of a basic engine and all of the specific applicable components (e.g., air inlet, fuel and exhaust systems, etc.) and calibrations (e.g., carburetor jet size, valve timing, etc.) required for the assembly to be installed into a new unit of equipment.

(11) "Crankcase emissions" means airborne substances emitted into the atmosphere from any portion of the engine crankcase ventilation or lubrication system.

(12) "Deterioration factor" means the calculated or assigned number that represents the certification engine's emissions change over the durability period. It is multiplied by zero hour (new) engine test results to determine the engine family compliance level. The deterioration factor is determined as per Part II, Section 3 of the 1995-2004 Test Procedures and Subpart B, Section 90.104 of the 2005 and Later Test Procedures. See "Emissions Durability Period," below.

(13) "Emission control system" includes any component, group of components, or engine modification that controls or causes the reduction of substances emitted from an engine.

(14) "Emissions durability period" is the period that represents an engine's useful life. The emissions durability period is selected from the choices listed in Part II, Section 1 of the 1995-2004 Test Procedures and Subpart B, Section 90.104 of the 2005 and Later Test Procedures. The durability periods are also noted in the table in section 2403(b). The emissions durability period is used to determine an engine family's deterioration factors and in the calculation of certification and production emission reduction credits.

(15) "Emissions durability values" means emissions from an engine that has accumulated service equivalent to that engine's emissions durability period, or the result of the product of the zero hour (new) engine test results and the appropriate deterioration factor (e.g., the certification values). The Executive Officer must approve the methods of service accumulation before the manufacturer begins service accumulation.

(16) "Emission-related defect" means a defect in design, materials, or workmanship in a device, system, or assembly described in the approved application for certification which affects any applicable parameter, specification, or component enumerated in Appendix A to Article 2.1, Chapter 2, Division 3, Title 13, California Code of Regulations or listed in the Emission Warranty Parts List pursuant to section 2405(d).

(17) "End of assembly-line" is defined as that place where the final inspection test or production line test is performed.

(18) "Engine family" is a subclass of a basic engine based on similar emission characteristics. The engine family is the grouping of engines that is used for the purposes of certification.

(19) "Engine family name" means a multi-character alphanumeric sequence that represents certain specific and general information about an engine family.

(20) "Engine manufacturer" means the manufacturer granted certification.

(21) "Exhaust emissions" means substances emitted into the atmosphere from any opening downstream from the exhaust port of an engine.

(22) "Extreme nonattainment area" means any area classified as an extreme ozone nonattainment area by the U.S. Environmental Protection Agency pursuant to Section 181(a) of the Clean Air Act, as amended, including Orange County and the portions of Los Angeles, San Bernardino and Riverside Counties described as extreme ozone nonattainment areas in Title 40, section 81.305 of the Code of Federal Regulations.

(23) "Family emission level" or "FEL" means an emission level that is declared by the manufacturer to serve for the averaging, banking, and trading program and in lieu of an emission standard for certification. The FEL serves as the engine family's emission standard for emissions compliance efforts. If the manufacturer does not declare an FEL for an engine family, the applicable emissions standard must be treated as that engine family's FEL for the purposes of any provision of this Article.

(24) "Final calendar quarter production" is defined as the calendar quarter in which the production of an engine family ends.

(25) "First calendar quarter production" is defined as the calendar quarter in which the production of an engine family begins.

(26) "Fuel system" means the combination of any of the following components: fuel tank, fuel pump, fuel lines, oil injection metering system, carburetor or fuel injection components, or all fuel system vents.

(27) "Gross engine malfunction" is defined as one yielding an emission value greater than the sum of the mean plus three (3) times the standard deviation. This definition shall apply only for determination of control limits.

(28) "Horizontal-shaft engine" means any engine that is designed to operate with the axis of the crankshaft in a horizontal position.

(29) "Incomplete engine assembly" means a basic engine assembly that does not include all of the components necessary for designation as a complete engine assembly, and is marketed in order to be a part of, and assembled into, a new unit of equipment that is marketed to ultimate purchasers.

(30) "Model year" means the manufacturer's annual production period that includes January 1 of a calendar year or, if the manufacturer has no annual production period, the calendar year.

(31) "Off-road vehicle" or "Off-road equipment" means any non-stationary device, powered by an internal combustion engine or motor, used primarily off the highways to propel, move, or draw persons or property including any device propelled, moved, or drawn exclusively by human power, and used in, but not limited to, any of the following applications: Marine Vessels, Construction/Farm Equipment, Locomotives, Small Off-Road Engines, Off-Road Motorcycles, and Off-Highway Recreational Vehicles.

(32) "Point of first retail sale" means the point that the engine is first sold directly to the ultimate purchaser. Generally, this point is the retail engine or equipment dealer. If the engine is sold first to an equipment manufacturer for installation in a piece of equipment, the equipment manufacturer is the point of first retail sale if the equipment manufacturer

cannot demonstrate to a reasonable certainty that the engine will be exported or destined for retail sale outside California.

(33) "Production emission reduction credits" means the amount of emission reduction or exceedance by an engine family below or above, respectively, the applicable FEL to which the engine family is certified. Emission reductions below the standard are considered "positive credits," while emission exceedances above the standard are considered "negative or required credits." (See Section 2409.)

(34) "Production line test" is defined as the emissions test performed on a sample of production engines produced for sale in California and conducted according to the Emissions Standards and Test Procedures specified in Section 2403(b) and (d).

(35) "Sales" or "Eligible sales" means the actual or calculated sales of an engine family in California for the purposes of averaging, banking or trading. Upon Executive Officer approval, an engine manufacturer may calculate its eligible sales through market analysis of actual federal production or sales volume. Actual sales are sales calculated at the end of a model year based on that model year's production, rather than on estimates of production.

(36) "Scheduled maintenance" means any adjustment, repair, removal, disassembly, cleaning, or replacement of components or systems required by the engine manufacturer that is performed on a periodic basis to prevent part failure or equipment or engine malfunction, or anticipated as necessary to correct an overt indication of malfunction or failure for which periodic maintenance is not appropriate.

(37) "Small off-road engine" means any engine that produces a gross horsepower less than 25 horsepower (at or below 19 kilowatts for 2005 and later model year), or is designed (e.g., through fuel feed, valve timing, etc.) to produce less than 25 horsepower (at or below 19 kilowatts for 2005 and later model year), that is not used to propel a licensed on-road motor vehicle, an off-road motorcycle, an all-terrain vehicle, a marine vessel, a snowmobile, a model airplane, a model car, or a model boat. If an engine family has models below 25 horsepower (at or below 19 kilowatts) and models at or above 25 horsepower (above 19 kilowatts), only the models under 25 horsepower (at or below 19 kilowatts) would be considered small off-road engines. Uses for small off-road engines include, but are not limited to, applications such as lawn mowers, weed trimmers, chain saws, golf carts, specialty vehicles, generators and pumps. All engines and equipment that fall within the scope of the preemption of Section 209(e)(1)(A) of the Federal Clean Air Act, as amended, and as defined by regulation of the Environmental Protection Agency, are specifically not included within this category. Any compression-ignition engine, as defined in Section 2421, produced during the 2000 and later model years shall not be defined as a small off-road engine.

(38) "Small off-road equipment" means any off-road equipment powered by a small off-road engine, or comparable electric motor or other power source.

(39) "Third-party distributor" is a party that is not an engine or equipment manufacturer, and that engages in wholesale or retail sales of complete or incomplete small off-road engine assemblies.

(40) "Trading" means the exchange of small off-road engine emission credits between manufacturers.

(41) "Ultimate purchaser" means the first person who in good faith purchases a new small off-road engine or equipment using such an engine for purposes other than resale.

(42) "Unscheduled maintenance" means any inspection, adjustment, repair, removal, disassembly, cleaning, or replacement of components or systems that is performed to correct or diagnose a part failure that was not anticipated.

(43) "Vertical-shaft engine" means any engine that is designed to operate with the axis of the crankshaft in a vertical position.

(44) "Warrantable condition" means any condition of an engine that requires the manufacturer to take corrective action pursuant to Section 2405.

(45) "Warranted part" means any emissions-related part installed on an engine by the equipment or engine manufacturer, or installed in a warranty repair, that is listed on the warranty parts list.

(46) "Warranty period" means the period of time that the engine or part is covered by the warranty provisions.

(47) "Warranty station" means a service facility authorized by the equipment or engine manufacturer to perform warranty repairs. This includes all manufacturer distribution centers that are franchised to service the subject equipment or engines.

(48) "Zero-emission small off-road equipment" means any small off-road equipment that produces zero emissions of any criteria pollutant (or precursor pollutant) under any and all possible operational modes and conditions.

HISTORY

1. New section filed 5-1-92; operative 6-1-92 (Register 92, No. 19).
2. Repealer of NOTE filed 10-4-93; operative 11-3-93 (Register 93, No. 41).
3. Change without regulatory effect amending NOTE filed 12-22-93 pursuant to title 1, section 100, California Code of Regulations (Register 93, No. 52).
4. Amendment of NOTE filed 7-24-95; operative 7-24-95 pursuant to Government Code section 11343.4(d) (Register 95, No. 30).
5. Amendment of section and NOTE filed 3-23-99; operative 3-23-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 13).

§ 2403. Exhaust Emission Standards and Test Procedures—Small Off-Road Engines.

(a) This section applies to small off-road engines produced on or after January 1, 1995.

(b)(1) Exhaust emissions from small off-road engines manufactured for sale, sold, or offered for sale in California, or that are introduced, delivered or imported into California for introduction into commerce, must not exceed:

Exhaust Emission Standards
grams per brake horsepower-hour
[grams per kilowatt-hour]

Calendar Year	Engine Class ⁽¹⁾	Hydrocarbon plus Oxides of Nitrogen ⁽²⁾	Hydrocarbon ⁽²⁾	Carbon Monoxide	Oxides of Nitrogen	Particulate
1995	I	12.0	—	300	—	0.9 ⁽³⁾
	II	10.0	—	300	—	0.9 ⁽³⁾
	III ⁽⁴⁾	—	220	600	4.0	—
	IV ⁽⁴⁾	—	180	600	4.0	—
	V ⁽⁴⁾	—	120	300	4.0	—
1996 to 1999	I	12.0 ⁽⁵⁾	—	350	—	0.9 ⁽³⁾
	II	10.0 ⁽⁵⁾	—	350	—	0.9 ⁽³⁾
	III ⁽⁴⁾	—	220 ⁽⁵⁾	600	4.0 ⁽⁵⁾	—
	IV ⁽⁴⁾	—	180 ⁽⁵⁾	600	4.0 ⁽⁵⁾	—
	V ⁽⁴⁾	—	120 ⁽⁵⁾	300	4.0 ⁽⁵⁾	—

Exhaust Emission Standards for Spark-Ignition Engines
grams per brake horsepower-hour
[grams per kilowatt-hour]

Model Year	Engine Class	Durability Periods (hours)	Hydrocarbon plus Oxides of Nitrogen ⁽²⁾	Carbon Monoxide	Particulate
2000-2001 ⁽⁵⁾	0-65 cc, inclusive	50/125/300	54 [72]	400 [536]	1.5 ⁽⁴⁾ [2.0]

	>80 cc – <225cc	NA	16.1	467	
	Vertical-shaft Engine				
2006	>80 cc – <225 cc	125/250/500	16.1	549	
	≥225 cc	125/250/500	12.1	549	
	>80 cc – <225 cc	125/250/500	10.0	549	
	≥225 cc	125/250/500	12.1	549	
2007	>80 cc – <225 cc	125/250/500	10.0	549	
	≥225 cc	125/250/500	12.1	549	
2008 and subsequent	>80 cc – <225cc	125/250/500	10.0	549	
	≥225 cc	125/250/500/1000	8.0	549	

(1) “Class I” means small off-road engines greater than 65 cc to less than 225 cc in displacement.

“Class II” means small off-road engines greater than or equal to 225 cc in displacement.

“Class III” means small off-road engines less than 20 cc in displacement.

“Class IV” means small off-road engines 20 cc to less than 50 cc in displacement.

“Class V” means small off-road engines greater than or equal to 50 cc to 65 cc in displacement.

(2) The Executive Officer may allow gaseous-fueled (i.e., propane, natural gas) engine families, that satisfy the requirements of the regulations, to certify to either the hydrocarbon plus oxides of nitrogen or hydrocarbon emission standard, as applicable, on the basis of the non-methane hydrocarbon (NMHC) portion of the total hydrocarbon emissions.

(3) Applicable to all diesel-cycle engines.

(4) Applicable to all two-stroke engines.

(5) Engines used exclusively in snowthrowers and ice augers need not certify to or comply with the HC and NO_x standards or the crankcase requirements at the option of the manufacturer.

(6) Engines used exclusively to power products which are used exclusively in wintertime, such as snowthrowers and ice augers, at the option of the engine manufacturer, need not certify to or comply with standards regulating emissions of HC+NO_x or NMHC+NO_x, as applicable. If the manufacturer exercises the option to certify to standards regulating such emissions, such engines must meet such standards. If the engine is to be used in any equipment or vehicle other than an exclusively wintertime product such as a snowthrower or ice auger, it must be certified to the applicable standard regulating emissions of HC+NO_x or NMHC+NO_x as applicable.

(2) Low-emitting Blue Sky Series engine requirements.

Voluntary standards. Engines may be designated “Blue Sky Series” engines by meeting:

(A) All applicable requirements of this Article, and

(B) The following voluntary exhaust emission standards, which apply to all certification and compliance testing. Blue Sky Series engines shall not be included in the averaging, banking, and trading program. Zero-

emission small off-road equipment may certify to the Blue Sky Series emission standards. Manufacturers of zero-emission small off-road equipment are not required to perform emissions testing, but must file an application of certification and comply with the administrative requirements outlined in the 2005 and Later Test Procedures to certify their equipment for sale in California.

Voluntary Emission Standards
(grams per kilowatt-hour)

<i>Model Year</i>	<i>Displacement Category</i>	<i>Hydrocarbon plus Oxides of Nitrogen</i>	<i>Carbon Monoxide</i>	<i>Particulate*</i>
2005 and subsequent	<50 cc	25	536	2.0
	50–80 cc, inclusive	36	536	2.0
2007 and subsequent	>80 cc – <225 cc	5.0	549	
2008 and subsequent	≥225 cc	4.0	549	

* Applicable to all two-stroke engines

(3) Evaporative emission requirements for small off-road engines are specified in Title 13, Chapter 15, Article 1.

(c)(1) For the 2000 through 2006 model years, manufacturers of small spark-ignited off-road engines between 65 and 225 cc displacement that are manufactured for sale, offered for sale, or sold in any extreme non-attainment area, or introduced, delivered or imported into any such extreme non-attainment area for sale to an ultimate purchaser in an extreme non-attainment area, and that are produced by manufacturers who produce more than 40,000 engines per year between 65 and 225 cc for sale in such areas (based on data for engines produced for sale in such areas in model year 1998), must meet the additional requirements of this subsection and achieve the additional emission reductions in subparagraph (3).

(2) No later than May 1, 1999, each manufacturer subject to this subsection shall submit a plan to achieve additional emission reductions. The plan shall include the following:

(A) An identification of the specific measures from subparagraph (4) that the manufacturer intends to implement in the extreme nonattainment areas, including but not limited to identification of engine families that in model years 2000 and 2001 will meet the exhaust emissions reduction requirements of subsection (b) for 2002 and subsequent model years prior to required implementation, and the projected sales volumes of such engine families in the extreme nonattainment areas;

(B) Data documenting the emissions performance of engines included in the plan when operated on fuels meeting the requirements of Chapter

5, Article 1, subarticle 2 of this Title applicable in the extreme nonattainment areas; and

(C) A description of the provisions made by the manufacturer to assure that all engines offered for sale or sold in the extreme nonattainment areas (or introduced, delivered or imported into the extreme nonattainment areas for sale to an ultimate purchaser in that area) will meet the requirements of the plan, including but not limited to a description of the methods to be used to determine actual sales of engines in the extreme nonattainment areas; provided, that in the case of manufacturers that maintain data on actual or projected Statewide engine sales, the Executive Officer may approve provisions that demonstrate compliance with the plan on a Statewide basis.

(3) The plans submitted under this subsection shall in the aggregate provide for emissions reductions and controls by or from the group of engines produced by the submitting manufacturers that are equal to or greater than the difference between: 1) reductions that would have been achieved in the extreme nonattainment areas in calendar years 2000, 2001, 2005 and 2010 by all manufacturers of engines greater than 65 cc displacement that would have met the emissions reduction requirements proposed in the staff report contained in Mail-Out MSC-98-02 released February 6, 1998; and 2) those same engines meeting the requirements of subsection (b). The Executive Officer shall determine whether a plan meets this requirement based on the estimated model year 1998 sales in the extreme nonattainment areas available at time of plan submission by manufacturers covered by this subsection, and using a proportional allocation between such manufacturers based upon such estimated sales.

(4) The manufacturer's plan shall achieve additional emission reductions or controls through one or more of the following measures:

(A) The certification and introduction of engines greater than 65 cc meeting the standards in subsection (b) before the applicable model year;

(B) The voluntary certification of engines not subject to emission reductions requirements of the ARB due to preemption under section 222 of U.S. Public Law No. 101-549. A manufacturer choosing voluntarily to certify an engine shall also certify that it will honor all compliance and warranty requirements set forth in the provisions of this Title for that engine;

(C) The certification of engines to Family Emission Levels below the standards in subsection (b), or of engines that otherwise generate emissions credits under section 2408 of this Article and that are not used for any other purpose;

(D) The certification of engines to useful life periods longer than the maximum requirements set forth in subsection (b);

(E) The introduction of engines that achieve in-use reductions in engine evaporative emissions demonstrated by procedures acceptable to the Executive Officer;

(F) The use of emission credits generated by the manufacturer pursuant to section 2409 of this Article and that are not used for any other purpose; and

(G) Other measures approved in advance by the Executive Officer.

(5) The plan shall also demonstrate that at least 60 percent of engines greater than 65 cc sold in extreme nonattainment areas comply in model years 2000 and 2001 with the standards in subsection (b) applicable to the 2006 model year. The percentage shall be calculated based on the total projected sales by all manufacturers of engines greater than 65 cc in the extreme nonattainment areas in those model years, and shall be proportionally allocated between the manufacturers subject to this subsection.

(6) The provisions of this subsection are not applicable to engines offered for sale or sold outside an extreme nonattainment area, or introduced, delivered or imported into an extreme nonattainment area for sale to an ultimate purchaser outside an extreme nonattainment area.

(7) The Executive Officer shall determine if a plan timely submitted under this subsection meets the requirements of this subsection no later than June 1, 1999. The Executive Officer shall not issue any executive orders for individual engine families subject to the plan until the plan is approved. The manufacturer shall submit annual reports to the Executive

Officer demonstrating compliance with the plan approved by the Executive Officer and may, at its discretion, propose revisions to its plan on an annual basis. If, on the basis of information contained in a manufacturer's annual report or any other information, the Executive Officer finds that the manufacturer is not in compliance with an approved plan, the Executive Officer may direct the manufacturer to submit a revised plan; *provided*, that no such revision shall be required solely as a result of gain or loss in market share in the extreme nonattainment areas during the period while this subsection remains in effect. The Executive Officer shall act upon any proposed revision of a plan within 30 days of receipt. Pending approval of a revised plan, the Executive Officer shall not issue any Executive Orders for individual engine families subject to the revised plan. These actions of the Executive Officer are in addition to any remedies available under this Article or Part 5 of Division 26 of the Health & Safety Code.

(d) The test procedures for determining compliance with the standards for exhaust emissions from new small off-road engines are set forth in "California Exhaust Emission Standards and Test Procedures for 1995-2004 Small Off-Road Engines," adopted March 20, 1992, and last amended July 26, 2004 or "California Exhaust Emission Standards and Test Procedures for 2005 and Later Small Off-Road Engines," adopted July 26, 2004, as applicable, which is incorporated herein by reference.

(e) Averaging. For new 2000 and subsequent model year small off-road engines, a manufacturer may comply with the standards established in paragraph (b), above, by choosing either to certify an engine family to the standards or to use the corporate average described below.

(1) For each model year, the corporate average value for a pollutant is defined by the following equation:

$$\frac{\sum_{j=1}^n (\text{FEL}_j) (\text{Sales}_j \text{ Power}_j) (\text{Load Factor}) (\text{EDP}_j) - \text{credits expended}}{\sum_{j=1}^n (\text{Sales}_j \text{ Power}_j) (\text{Load Factor}) (\text{EDP}_j)} = \text{AVG}$$

where n = the number of small off-road engine families.

FEL = the Family emission level for an engine family.

Sales_j = eligible sales of engine family j.

Power_j = sales-weighted maximum modal power, in horsepower or kilowatt as applicable, of engine family j, or an alternative approved by the Executive Officer.

EDP_j = Emissions durability period of engine family j.

AVG = For a given pollutant (HC+NO_x, CO, or Particulate Matter), a manufacturer's corporate average of the exhaust emissions from those California small off-road engines subject to the California corporate average pollutant exhaust emission standard, as established by an Executive Order certifying the California production for the model year. Engines certified to voluntary standards of 2403(b)(2) are not eligible for corporate averaging.

Credits expended = HC+NO_x or Particulate Matter credits, as defined in Sections 2408 and 2409, that are expended by the manufacturer to adjust the corporate average. This term has no meaning for any pollutants other than HC+NO_x and Particulate Matter.

Load Factor = For Test Cycle A and Test Cycle B, the Load Factor = 47% (i.e., 0.47). For Test Cycle C, the Load Factor = 85% (i.e., 0.85). For approved alternate test procedures, the load factor must be calculated according to the Load Factor formula found in paragraph (f)(1) of section 2408.

(2) The manufacturer's average pollutant exhaust emissions must meet the corporate average standard at the end of the manufacturer's production for the model year. At the end of the model year, the manufacturer must calculate a corrected corporate average using actual rather than projected sales. Any discrepancy must be made up with emission reduction credits as explained in paragraph (3).

(3) All excess HC+NO_x or Particulate Matter emissions resulting from final non-compliance with the California standard must be made up with emission reduction credits or through incorporation in the following model year's corporate average.

(A) Emission reduction credits expended within the next model year to remedy final non-compliance will be used at a rate of 1 gram to 1 gram.

(B) Emission reduction credits expended after the end of the next model year to remedy final non-compliance must be used at a rate of 1.5 grams to 1 gram.

(f) In 1995 and subsequent years, fire and police departments, and other entities that specialize in emergency response may purchase emergency equipment powered by a non-California certified engine only when such equipment with a California-certified engine is not available. For purposes of this section, a request to purchase emergency equipment powered by a non-California certified engine must be submitted for approval to the Executive Officer.

(g)(1) No new engines below 225 cc may be produced for sale to replace pre-1995 model equipment after January 1, 1999, unless such new engines comply with the 1995 model emission standards.

(2)(A) A new small off-road engine equal to or greater than 225 cc, intended solely to replace an engine in a piece of off-road equipment that was originally produced with an engine manufactured prior to the applicable implementation date as described in paragraph (b), shall not be subject to the emissions requirements of paragraph (b) provided that:

1. The engine manufacturer has ascertained that no engine produced by itself or the manufacturer of the engine that is being replaced, if different, and certified to the requirements of this article, is available with the appropriate physical or performance characteristics to repower the equipment; and

2. Unless an alternative control mechanism is approved in advance by the Executive Officer, the engine manufacturer or its agent takes ownership and possession of the engine being replaced; and

3. The replacement engine is clearly labeled with the following language, or similar alternate language approved in advance by the Executive Officer:

THIS ENGINE DOES NOT COMPLY WITH CALIFORNIA OFF-ROAD OR ON-HIGHWAY EMISSION REQUIREMENTS. SALE OR INSTALLATION OF THIS ENGINE FOR ANY PURPOSE OTHER THAN AS A REPLACEMENT ENGINE IN AN OFF-ROAD VEHICLE OR PIECE OF OFF-ROAD EQUIPMENT WHOSE ORIGINAL ENGINE WAS NOT CERTIFIED IS A VIOLATION OF CALIFORNIA LAW SUBJECT TO CIVIL PENALTY.

(B) At the beginning of each model year, the manufacturer of replacement engines must provide, by engine model, an estimate of the number of replacement engines it expects to produce for California for that model year.

(C) At the conclusion of the model year, the manufacturer must provide, by engine model, the actual number of replacement engines produced for California during the model year, and a description of the physical or performance characteristics of those models that indicate that certified replacement engine(s) were not available as per paragraph (A).

(h) Any new equipment engine certified to comply with California emission standards and test procedures for on-road or other off-road applications may, upon approval by the Executive Officer, be in compliance with these regulations.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43150-43154, 43205.5 and 43210-43212, Health and Safety Code.

HISTORY

1. New section filed 5-1-92; operative 6-1-92 (Register 92, No. 19).
2. Amendment of subsections (a), (b), (b)(4)(ii), (c), (d), (e) and NOTE filed 10-4-93; operative 11-3-93 (Register 93, No. 41).
3. Change without regulatory effect repealing article heading and amending NOTE filed 12-22-93 pursuant to title 1, section 100, California Code of Regulations (Register 93, No. 52).
4. Amendment of subsection (c) filed 10-18-94; operative 10-18-94 pursuant to Government Code section 11346.2(d) (Register 94, No. 42).

5. Amendment filed 7-24-95; operative 7-24-95 pursuant to Government Code section 11343.4(d) (Register 95, No. 30).
6. Amendment of subsections (b) and (c) filed 8-29-96; operative 8-29-96 pursuant to Government Code section 11343.4(d) (Register 96, No. 35).
7. Editorial correction of Table and subsection (f) (Register 97, No. 8).
8. Amendment of Table and new subsection (b)(6) filed 2-20-97; operative 2-20-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 8).
9. Amendment of section heading, section and NOTE filed 3-23-99; operative 3-23-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 13).
10. Change without regulatory effect amending subsection (c)(7) filed 7-7-99 pursuant to section 100, title 1, California Code of Regulations (Register 99, No. 28).
11. Amendment of table contained within subsection (b) and amendment of subsection (d) filed 12-28-2000; operative 12-28-2000 pursuant to Government Code section 11343.4(d) (Register 2000, No. 52).
12. Amendment filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2404. Emission Control Labels and Consumer Information — 1995 and Later Small Off-Road Engines.

(a) Purpose. The Air Resources Board recognizes that certain emissions-critical or emissions-related parts must be properly identified and maintained in order for engines to meet the applicable emission standards. In addition, the Board recognizes that information regarding engines' emissions levels may influence consumer choice. These specifications require engine or equipment manufacturers to affix a label (or labels) on each production engine (or equipment, as applicable) to provide the engine or equipment owner and service mechanic with information necessary for the proper maintenance of these parts in customer use. These specifications further require engine or equipment manufacturers to make information regarding relative emissions levels available to potential ultimate purchasers. For engines used in auxiliary power systems which, in turn, are used to comply with the diesel-fueled commercial vehicle idling requirements of title 13, CCR, section 2485(c)(3)(A), additional labeling requirements for the engine or equipment manufacturers apply, as set forth in section 35.B.4 of the "California Exhaust Emission Standards and Test Procedures for 2004 and Subsequent Model Heavy-Duty Diesel Engines and Vehicles," as incorporated by reference in title 13, CCR, section 1956.8(b).

(b) Applicability. These specifications apply to

(1) 1995 and later small off-road engines, that have been certified to the applicable emission standards pursuant to Health and Safety Code Section 43013.

(2) Engine manufacturers and original equipment manufacturers, as applicable, that have certified such engines; and

(3) Original equipment manufacturers, regardless of whether they have certified the engine, if their equipment obscures the emissions control label of such certified engines.

(c) Engine Label Content and Location.

(1) A plastic or metal tune-up label must be welded, riveted or otherwise permanently attached by the engine manufacturer to an area on the engine (i.e., block or crankcase) in such a way that it will be readily visible to the average person after installation of the engine in the equipment. If such an attachment is not feasible, the Executive Officer may allow the label to be attached on components of the engine or equipment assembly (as applicable) that satisfy the requirements of Subsection (c)(2). Such labels must be attached on all engine assemblies (incomplete and complete) that are produced by an engine manufacturer.

(2) In selecting an acceptable location, the engine manufacturer must consider the possibility of accidental damage (e.g., possibility of tools or sharp instruments coming in contact with the label). Each engine label(s) must be affixed in such a manner that it cannot be removed without destroying or defacing the label, and must not be affixed to any engine (or equipment, as applicable) part that is likely to be replaced during the engine's (or equipment's, as applicable) useful life. The engine label must not be affixed to any engine (or equipment, as applicable) component that is easily detached from the engine. If the manufacturer claims there is in-

adequate space to affix the label, the Executive Officer will determine a suitable location.

(3) The engine label information must be written in the English language and use block letters and numerals (i.e., sans serif, upper-case characters) that must be of a color that contrasts with the background of the label.

(4) The engine label must contain the following information:

(A) The label heading must read: "IMPORTANT ENGINE INFORMATION" or "IMPORTANT EMISSION INFORMATION."

(B) The full corporate name or trademark of the engine manufacturer.

1. An engine manufacturer may request the Executive Officer's approval to delete its name and trademark, and substitute the name and trademark of another engine manufacturer, original equipment manufacturer, or third-party distributor.

2. Such an approval does not relieve the engine manufacturer granted an engine family Executive Order of any requirements imposed on the applicable engines by this Article.

(C) For alternate-fuel or dual-fuel engines, "THIS ENGINE IS CERTIFIED TO OPERATE ON (specify operating fuel(s))."

(D) Identification of the Exhaust Emission Control System. The method utilized to identify the exhaust emission control systems must conform to the emission-related nomenclature and abbreviations method provided in the Society of Automotive Engineers' recommended practice J1930, "Electrical/Electronic Systems Diagnostic Terms, Definitions, Abbreviations and Acronyms—Equivalent to ISO/TR 15031-2: April 30, 2002", April 2002; and as specified in Section 1977, Title 13, California Code of Regulations.

(E) For otto-cycle engines, the maintenance specifications and adjustments recommended by the engine manufacturer, including, as applicable: valve lash, ignition timing, idle air/fuel mixture setting procedure and value (e.g., idle CO, idle speed drop), and high idle speed. For diesel-cycle engines, the specifications and adjustments recommended by the engine manufacturer, including, as applicable: initial injection timing, and fuel rate (in mm³/stroke) at rated power. These specifications must indicate the proper transmission position, (if applicable), during tune-up and what accessories, if any, should be in operation, and what systems, if any (e.g., vacuum advance, air pump), should be disconnected during the tune-up. If the engine manufacturer does not recommend adjustment of the foregoing specifications, the engine manufacturer may include in lieu of the "specifications" the single statement "NO OTHER ADJUSTMENTS NEEDED." For all engines, the instructions for tune-up adjustments must be sufficiently clear on the engine label to preclude the need for a mechanic or equipment owner to refer to another document in order to correctly perform the adjustments.

(F) Any specific fuel or engine lubricant requirements (e.g., lead content, research octane number, engine lubricant type).

(G) The date of engine manufacture (month and year).

(H) An unconditional statement of compliance with the appropriate calendar year (for 1995–1999) or model year(s) (for 2000 and later) California regulations; for example, "THIS ENGINE MEETS 2005 CALIFORNIA EXH EMISSION REGULATIONS FOR SMALLS OFF-ROAD ENGINES." For engines certified to emission standards subject to a durability period as set forth in §2403(b), the durability period must be stated in the owner's manual.

(I) Engine displacement (in cubic centimeters) of the engine upon which the engine label is attached.

(J) The engine family identification (i.e., engine family name).

(5) If there is insufficient space on the engine to accommodate an engine label that contains all of the information required in Subsection (4) above, the Executive Officer may allow the engine manufacturer to modify the engine label as follows:

(A) Exclude the information required in Subsections (4)(C), (D), (E), (F), and (I) from the engine label. The fuel or lubricant information must be specified elsewhere on the engine, or in the owner's manual.

(B) Substitute the information required in Subsection (4)(E) with the statement: "REFER TO OWNER'S MANUAL FOR MAINTENANCE

SPECIFICATIONS AND ADJUSTMENTS." When such a statement is used, the information required by Subsection (4)(E) must appear in the owner's manual.

(C) Exclude the information required by Subsection (4)(G) on the engine label if the date the engine was manufactured is stamped permanently on the engine, and this stamped date is readily visible.

(D) Make such other reasonable modifications or abbreviations as may be approved by the Executive Officer.

(d) An engine label may state that the engine conforms to any applicable federal, Canadian, or European emission standards for new equipment engines; or any other information that the engine manufacturer deems necessary for, or useful to, the proper operation and satisfactory maintenance of the engine.

(e) Supplemental Engine Label Content and Location.

(1) When a final equipment assembly that is marketed to any ultimate purchaser is manufactured and the engine label attached by the engine manufacturer is obscured (i.e., not readily visible), the manufacturer of the final equipment assembly (i.e., original equipment manufacturer) must attach a supplemental engine label upon the engine or equipment. The supplemental engine label must be plastic or metal, must meet the visibility, durability and formatting requirements of paragraphs (f), (g) and (h), and must be welded, riveted or otherwise attached permanently to an area of the engine or equipment assembly so as to be readily visible to the average person.

(2) The original equipment manufacturer required to attach a supplemental engine label must consider the possibility of accidental damage to the supplemental engine label in the determination of the label location. Such a label must not be attached to any engine or equipment component that is likely to be replaced during the useful life of the engine or equipment (as applicable). Such a label must not be attached to any engine or equipment component that is detached easily from the engine or equipment (as applicable).

(3) The supplemental engine label information must be written in the English language and use block letters and numerals (i.e., sans serif, upper-case characters) that must be of a color that contrasts with the background of the label.

(4) A supplemental engine label must contain the information as specified in Subsection (c)(4) (and (I), as applicable), except that the date of engine manufacture specified in (c)(4)(G) may be deleted from the supplemental engine label. When the date of engine manufacture does not appear on the supplemental engine label, the responsible original equipment manufacturer must display (e.g., label, stamp, etc.) the date elsewhere on the engine or equipment so as to be readily visible.

(f) As used in these specifications, readily visible to the average person means that a label is readable from a distance of 46 centimeters (18 inches) without any obstructions from equipment or engine parts (including all engine manufacturer or original equipment manufacturer (as applicable) available optional equipment) except for flexible parts (e.g., vacuum hoses, ignition wires) that can be moved out of the way without disconnection. Alternatively, information required by these specifications to be printed on the engine and supplemental engine (as applicable) must be no smaller than 2 millimeters in height provided that no equipment or engine parts (including all manufacturer available optional equipment), except for flexible parts, obstruct the label(s).

(g) The labels and any adhesives used must be designed to withstand, for the engine's or equipment's useful life, typical equipment environmental conditions in the area where the labels required by this section are attached. Typical equipment environmental conditions include, but are not limited to, exposure to engine fuels, lubricants and coolants (e.g., gasoline, motor oil, water, ethylene glycol). The engine manufacturer must submit, with its certification application, a statement attesting that its labels comply with these requirements.

(h) The engine manufacturer must obtain approval from the Executive Officer for all label formats and locations in conjunction with the engine family certification. Approval of the specific maintenance settings is not required; however, the format for all such settings and tolerances, if any,

(B) The Air Index Label must be noticeable from a distance of 150 centimeters (59 inches) without any obstructions by equipment or engine parts, including all engine manufacturer or original equipment manufacturer (as applicable) available optional equipment. For engines that are installed in an engine compartment that is easily accessible to the ultimate purchaser, this subsection (l)(5)(B) may be satisfied by a generic label or hang tag stating "LOOK INSIDE THE ENGINE COMPARTMENT FOR IMPORTANT EMISSIONS INFORMATION," or by other means, subject to the Executive Officer's approval.

(C) The Air Index Label must be located in at least one of the following locations:

1. included on the engine label;
2. included as an additional engine label, designed and intended for removal only by the ultimate purchaser; or
3. included as an engine or equipment hang-tag designed or intended for removal only by the ultimate purchaser;

(D) For engines 0–65 cc (up to 80 cc beginning with the 2005 model year), inclusive, the engine manufacturer must also arrange for a label with the engine family's Air Index to be attached to the equipment packaging.

(E) The Executive Officer, upon request, may waive or modify the form of the Air Index Label or may approve alternative forms, sizes or locations, provided that the intent of the Air Index Label requirement is met.

(6) The labeling and consumer information provisions of subsection (l) shall not apply to engines that are not the primary power source of the equipment in which they are installed or to engines that are installed in equipment that the engine or equipment manufacturer can demonstrate, to the Executive Officer's reasonable satisfaction, are used almost exclusively in commercial applications in which consumer information are not likely to affect a purchasing decision.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43017, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43150–43154, 43205.5 and 43210–43212, Health and Safety Code.

HISTORY

1. New section filed 5–1–92; operative 6–1–92 (Register 92, No. 19).
2. Amendment of section heading and subsections (b), (b)(1), (b)(4)(H) and NOTE filed 10–4–93; operative 11–3–93 (Register 93, No. 41).
3. Change without regulatory effect amending NOTE filed 12–22–93 pursuant to title 1, section 100, California Code of Regulations (Register 93, No. 52).
4. Amendment filed 7–24–95; operative 7–24–95 pursuant to Government Code section 11343.4(d) (Register 95, No. 30).
5. Amendment of section heading, section and NOTE filed 3–23–99; operative 3–23–99 pursuant to Government Code section 11343.4(d) (Register 99, No. 13).
6. Amendment of subsection (c)(4)(A), redesignation of subsections (c)(4)(A)(i)–(ii) as (c)(4)(A)1.–2., amendment of subsections (c)(4)(D), (c)(4)(H), (d) and (l)(2), redesignation of subsections (l)(5)(C)(i)–(iii) as (l)(5)(C)1.–3. and amendment of subsection (l)(5)(D) filed 9–20–2004; operative 10–20–2004 (Register 2004, No. 39).
7. Amendment of subsection (a) filed 10–16–2006; operative 11–15–2006 (Register 2006, No. 42).

§ 2405. Defects Warranty Requirements for 1995 and Later Small Off-Road Engines.

(a) Applicability. This section applies to 1995 and later small off-road engines. The warranty period begins on the date the engine or equipment is delivered to an ultimate purchaser.

(b) General Emissions Warranty Coverage. The manufacturer of each small off-road engine must warrant to the ultimate purchaser and each subsequent purchaser that the engine is:

(1) Designed, built, and equipped so as to conform with all applicable regulations adopted by the Air Resources Board pursuant to its authority in Chapters 1 and 2, Part 5, Division 26 of the Health and Safety Code; and

(2) Free from defects in materials and workmanship that cause the failure of a warranted part to be identical in all material respects to the part as described in the engine manufacturer's application for certification for a period of two years.

(c) The warranty on emissions-related parts will be interpreted as follows:

(1) Any warranted part that is not scheduled for replacement as required maintenance in the written instructions required by Subsection (d) must be warranted for the warranty period defined in Subsection (b)(2). If any such part fails during the period of warranty coverage, it must be repaired or replaced by the engine manufacturer according to Subsection (4) below. Any such part repaired or replaced under the warranty must be warranted for the remaining warranty period.

(2) Any warranted part that is scheduled only for regular inspection in the written instructions required by Subsection (d) must be warranted for the warranty period defined in Subsection (b)(2). A statement in such written instructions to the effect of "repair or replace as necessary" will not reduce the period of warranty coverage. Any such part repaired or replaced under warranty must be warranted for the remaining warranty period.

(3) Any warranted part that is scheduled for replacement as required maintenance in the written instructions required by Subsection (d) must be warranted for the period of time prior to the first scheduled replacement point for that part. If the part fails prior to the first scheduled replacement, the part must be repaired or replaced by the engine manufacturer according to Subsection (4) below. Any such part repaired or replaced under warranty must be warranted for the remainder of the period prior to the first scheduled replacement point for the part.

(4) Repair or replacement of any warranted part under the warranty provisions of this article must be performed at no charge to the owner at a warranty station.

(5) Notwithstanding the provisions of Subsection (4) above, warranty services or repairs must be provided at all manufacturer distribution centers that are franchised to service the subject engines.

(6) The owner must not be charged for diagnostic labor that leads to the determination that a warranted part is in fact defective, provided that such diagnostic work is performed at a warranty station.

(7) The engine manufacturer is liable for damages to other engine components proximately caused by a failure under warranty of any warranted part.

(8) Throughout the engine's warranty period defined in Subsection (b)(2), the engine manufacturer must maintain a supply of warranted parts sufficient to meet the expected demand for such parts.

(9) Any replacement part may be used in the performance of any warranty maintenance or repairs and must be provided without charge to the owner. Such use will not reduce the warranty obligations of the engine manufacturer.

(10) Add-on or modified parts that are not exempted by the Air Resources Board may not be used. The use of any non-exempted add-on or modified parts will be grounds for disallowing a warranty claim made in accordance with this article. The engine manufacturer will not be liable under this article to warrant failures of warranted parts caused by the use of a non-exempted add-on or modified part.

(11) The Executive Officer may request and, in such case, the engine manufacturer must provide, any documents that describe that manufacturer's warranty procedures or policies.

(d) Each manufacturer must include a copy of the following emission warranty parts list with each new engine, using those portions of the list applicable to the engine.

(1) Fuel Metering System

(A) Carburetor and internal parts (and/or pressure regulator or fuel injection system).

(B) Air/fuel ratio feedback and control system.

(C) Cold start enrichment system.

(2) Air Induction System

(A) Controlled hot air intake system.

(B) Intake manifold.

(C) Air filter.

(3) Ignition System

(A) Spark Plugs.

- (B) Magneto or electronic ignition system.
 - (C) Spark advance/retard system.
 - (4) Exhaust Gas Recirculation (EGR) System
 - (A) EGR valve body, and carburetor spacer if applicable.
 - (B) EGR rate feedback and control system.
 - (5) Air injection System
 - (A) Air pump or pulse valve.
 - (B) Valves affecting distribution of flow.
 - (C) Distribution manifold.
 - (6) Catalyst or Thermal Reactor System
 - (A) Catalytic converter.
 - (B) Thermal reactor.
 - (C) Exhaust manifold.
 - (7) Particulate Controls
 - (A) Traps, filters, precipitators, and any other device used to capture particulate emissions.
 - (8) Miscellaneous items Used in Above Systems
 - (A) Vacuum, temperature, and time sensitive valves and switches.
 - (B) Electronic controls.
 - (C) Hoses, belts, connectors, and assemblies.
 - (e) Each manufacturer must furnish with each new engine written instructions for the maintenance and use of the engine by the owner. The instructions must be consistent with this article and applicable regulations contained herein.
 - (f) Each engine manufacturer must submit the documents required by Subsection (d) with the engine manufacturer's application for engine certification for approval by the Executive Officer. Approval by the Executive Officer of the documents required by Subsection (d) is a condition of certification. The Executive Officer will approve or disapprove the documents required by Subsection (d) within 90 days of the date such documents are received from the engine manufacturer. Any disapproval must be accompanied by a statement of the reasons thereof. In the event of disapproval, the engine manufacturer may file for an adjudicative hearing pursuant to Title 17, California Code of Regulations, Section 60040 et seq., to review the decision of the Executive Officer.
 - (g) In the application for engine certification, each engine manufacturer must include a statement regarding the maintenance of the engine for clean air. The statement must include, but not be limited to, information on carburetor adjustment, air filter care and replacement schedule, spark plug maintenance and inspection, proper fuel/oil ratio for low emissions, use of appropriate fuel, proper fueling and fuel mixing, proper method of disposing of oil and oil containers, engine maintenance, and a maintenance schedule to ensure that the owner returns to a servicing center to check for deposits, debris build-up, etc.
- NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43150-43154, 43205.5 and 43210-43212, Health and Safety Code.

HISTORY

1. New section filed 5-1-92; operative 6-1-92 (Register 92, No. 19).
2. Amendment of section heading, subsection (a) and NOTE filed 10-4-93; operative 11-3-93 (Register 93, No. 41).
3. Change without regulatory effect repealing article heading and amending subsection (e) and NOTE filed 12-22-93 pursuant to title 1, section 100, California Code of Regulations (Register 93, No. 52).
4. Amendment of subsections (f)-(g) filed 7-24-95; operative 7-24-95 pursuant to Government Code section 11343.4(d) (Register 95, No. 30).
5. Amendment of section heading, section and NOTE filed 3-23-99; operative 3-23-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 13).
6. Amendment of subsection (c)(10) filed 8-29-2000; operative 9-28-2000 (Register 2000, No. 35).
7. Redesignation of subsections (d)(1)(i)-(d)(8)(iii) as subsections (d)(1)(A)-(d)(8)(C) filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2405.1. Emission-Related Defect Reporting Requirements.

- (a) Applicability. This section applies to 2005 model year and later

small off-road engines. The requirement to report emission-related defects affecting a given class or category of engines will remain applicable for five years from the end of the calendar year in which such engines were manufactured.

(b) A manufacturer must file a defect information report whenever, on the basis of data obtained subsequent to the effective date of these regulations:

(1) The manufacturer determines, in accordance with procedures established by the manufacturer to identify either safety-related or performance defects, that a specific emission-related defect exists; and

(2) A specific emission-related defect exists in 25 or more engines of a given engine family manufactured in the same Executive Order or model year.

(c) No report must be filed under this section for any emission-related defect corrected prior to the sale of the affected engines to ultimate purchasers.

(d) The manufacturer must submit defect information reports to Chief, Mobile Source Operations Division, Air Resources Board, 9528 Telstar, El Monte, CA 91731, not more than 15 working days after an emission-related defect is found to affect 25 or more engines manufactured in the same Executive Order or model year. Information required by paragraph (e) of this section that is either not available within 15 working days or is significantly revised must be submitted the Executive Officer as it becomes available.

(e) Each defect report must contain the following information in substantially the format outlined below:

(1) The manufacturer's corporate name.

(2) A description of the defect and part number(s).

(3) A description of each class or category of engines potentially affected by the defect including make, model, model year, calendar year produced, and any other information required to identify the engines affected.

(4) For each class or category of engine described in response to paragraph (e)(3) of this section, the following must also be provided:

(A) The number of engines known or estimated to have the defect and an explanation of the means by which this number was determined.

(B) The address of the plant(s) at which the potentially defective engines were produced.

(5) An evaluation of the emissions impact of the defect and a description of any operational problems which a defective engine might exhibit.

(6) Emission data which relate to the defect.

(7) An indication of any anticipated manufacturer follow-up.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43150-43154, 43205.5 and 43210-43212, Health and Safety Code.

HISTORY

1. New section filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2405.2. Voluntary Emission Recall Program.

(a) When any manufacturer initiates a voluntary emissions recall campaign involving 25 or more engines, the manufacturer must submit a report describing the manufacturer's voluntary emissions recall plan as prescribed by this section within 15 working days prior to the date owner notification was issued. The report must contain the following:

(1) A description of each class or category of engines recalled including the number of engines to be recalled, the model year, the make, the model, and such other information as may be required to identify the engines recalled;

(2) A description of the specific modifications, alterations, repairs, corrections, adjustments, or other changes to be made to correct the engines affected by the emission-related defect;

(3) A description of the method by which the manufacturer will notify engine owners and, if applicable, the method by which the manufacturer will determine the names and addresses of engine owners;

(4) A description of the proper maintenance or use, if any, upon which the manufacturer conditions eligibility for repair under the recall plan, an explanation of the manufacturer's reasons for imposing any such conditions, and a description of the proof to be required of an engine owner to demonstrate compliance with any such conditions;

(5) A description of the procedure to be followed by engine owners to obtain correction of the nonconformity. This may include designation of the date on or after which the owner can have the nonconformity remedied, the time reasonably necessary to perform the labor to remedy the defect, and the designation of facilities at which the defect can be remedied;

(6) A description of the class of persons other than dealers and authorized warranty agents of the manufacturer who will remedy the defect;

(7) When applicable, three copies of any letters of notification to be sent engine owners;

(8) A description of the system by which the manufacturer will assure that an adequate supply of parts is available to perform the repair under the plan, and that the supply remains both adequate and responsive to owner demand;

(9) Three copies of all necessary instructions to be sent to those persons who are to perform the repair under the recall plan;

(10) A description of the impact of the proposed changes on fuel consumption, performance, and safety of each class or category of engines to be recalled;

(11) A sample of any label to be applied to engines which participated in the voluntary recall campaign.

(b) The manufacturer must submit at least one report on the progress of the recall campaign. Such report must be submitted no later than 18 months from the date notification was begun and include the following information:

(1) The methods used to notify both engine owners, dealers and other individuals involved in the recall campaign;

(2) The number of engines known or estimated to be affected by the emission-related defect and an explanation of the means by which this number was determined;

(3) The number of engines actually receiving repair under the plan; and

(4) The number of engines determined to be ineligible for remedial action due to a failure to properly maintain or use such engines.

(c) Send the defect report, voluntary recall plan, and the voluntary recall progress report to: Chief, Mobile Source Operations Division, Air Resources Board, 9528 Telstar Avenue, El Monte, CA 91731.

(d) Retain the information gathered by the manufacturer to compile the reports for not less than five years from the date of the manufacture of the engines. The manufacturer must make this information available to duly authorized officials of the ARB upon request.

(e) The filing of any report under the provisions of this section does not affect a manufacturer's responsibility to file reports or applications, obtain approval, or give notice under any provision of law.

(f) The act of filing an Emission Defect Information Report is inconclusive as to the existence of a defect subject to the warranty provided by section 2405.

(g) A manufacturer may include on each page of its Emission Defect Information Report a disclaimer stating that the filing of a Defect Information Report pursuant to these regulations is not conclusive as to the applicability of the warranty provided by section 2405.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43150-43154, 43205.5 and 43210-43212, Health and Safety Code.

HISTORY

1. New section filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2405.3. Ordered Recalls.

(a)(1) If the Executive Officer determines that a substantial number of any class or category of engines, although properly maintained and used, do not conform to the regulations prescribed under Section 2400-2409, Chapter 9, Title 13 of the California Code of Regulations, when in actual use throughout their durability period (as defined under section 2403), the Executive Officer shall immediately notify the manufacturer of such nonconformity and require the manufacturer to submit a plan for remedying the nonconformity of the engines with respect to which such notification is given.

(A) The manufacturer's plan shall provide that the nonconformity of any such engines which are properly used and maintained will be remedied at the expense of the manufacturer.

(B) If the manufacturer disagrees with such determination of nonconformity and so advises the Executive Officer, the Executive Officer shall afford the manufacturer and other interested persons an opportunity to present their views and evidence in support thereof at a public hearing pursuant to Article 1, Subchapter 1.25, Chapter 1, Division 3, Title 17, California Code of Regulations. Unless, as a result of such hearing, the Executive Officer withdraws such determination of nonconformity, the Executive Officer shall, within 60 days after the completion of such hearing, order the manufacturer to provide prompt notification of such nonconformity in accordance with paragraph (a)(2) of this section. The manufacturer shall comply in all respects with the requirements of this subpart.

(2) Any notification required to be given by the manufacturer under paragraph (a)(1) of this section with respect to any class or category of engines shall be given to dealers, ultimate purchasers, and subsequent purchasers (if known) in such manner and containing such information as required in section 2405.1(d).

(3)(A) Prior to an ARB ordered recall, the manufacturer may perform a voluntary emissions recall pursuant to regulations at section 2405.2. Such manufacturer is subject to the reporting and recordkeeping requirements of section 2405.2(c) and (d).

(B) Once ARB determines that a substantial number of engines fail to conform with the requirements of Section 2400-2409, Chapter 9, Title 13 of the California Code of Regulations, the manufacturer will not have the option of a voluntary recall.

(b) The manufacturer bears all cost obligation a dealer incurs as a result of a requirement imposed by paragraph (a) of this section. The transfer of any such cost obligation from a manufacturer to a dealer through franchise or other agreement is prohibited.

(c) Any inspection of an engine for purposes of paragraph (a)(1) of this section, after its sale to the ultimate purchaser, is to be made only if the owner of such engine voluntarily permits such inspection to be made, except as may be provided by any state or local inspection program.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43150-43154, 43205.5 and 43210-43212, Health and Safety Code.

HISTORY

1. New section filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2406. Emission Control System Warranty Statement.

(a) Each manufacturer must furnish a copy of the following statement with each new 1995 and later small off-road engine, using those portions of the statement applicable to the engine.

CALIFORNIA EMISSION CONTROL WARRANTY STATEMENT YOUR WARRANTY RIGHTS AND OBLIGATIONS

The California Air Resources Board (and manufacturer's name, optional) is pleased to explain the emission control system warranty on your (year(s)) (equipment type or small off-road) engine. In California, new small off-road engines must be designed, built and equipped to meet the State's stringent anti-smog standards. (Manufacturer's name) must warrant the emission control system on your (equipment

type or small off-road) engine for the periods of time listed below provided there has been no abuse, neglect or improper maintenance of your small off-road engine.

Your emission control system may include parts such as the carburetor or fuel-injection system, the ignition system, and catalytic converter. Also included may be hoses, belts, connectors and other emission-related assemblies.

Where a warrantable condition exists, (manufacturer's name) will repair your (equipment type or small off-road) engine at no cost to you including diagnosis, parts and labor.

MANUFACTURER'S WARRANTY COVERAGE:

The 1995 and later small off-road engines are warranted for two years.

If any emission-related part on your engine is defective, the part will be repaired or replaced by (manufacturer's name).

OWNER'S WARRANTY RESPONSIBILITIES:

– As the (equipment type or small off-road) engine owner, you are responsible for the performance of the required maintenance listed in your owner's manual. (Manufacturer's name) recommends that you retain all receipts covering maintenance on your (equipment type or small off-road) engine, but (manufacturer's name) cannot deny warranty solely for the lack of receipts or for your failure to ensure the performance of all scheduled maintenance.

– As the (equipment type or small off-road) engine owner, you should however be aware that (manufacturer's name) may deny you warranty coverage if your (equipment type or small off-road) engine or a part has failed due to abuse, neglect, improper maintenance or unapproved modifications.

– You are responsible for presenting your (equipment type or small off-road) engine to a (manufacturer's name) distribution center as soon as a problem exists. The warranty repairs should be completed in a reasonable amount of time, not to exceed 30 days.

If you have any questions regarding your warranty rights and responsibilities, you should contact (Insert chosen manufacturer's contact) at 1-XXX-XXX-XXXX.

(b) Commencing with the 1995 calendar year, each manufacturer must furnish with each new engine a warranty statement that generally describes the obligations and rights of the manufacturer and owner under this article. Manufacturers must also include in the warranty statement a phone number the consumer may use to obtain their nearest franchised service center.

(c) Each manufacturer must submit the documents required by Subsections (a) and (b) with the manufacturer's preliminary application for new engine certification for approval by the Executive Officer. The Executive Officer may reject or require modification of the documents to the extent the submitted documents do not satisfy the requirements of Subsections (a) and (b). Approval by the Executive Officer of the documents required by Subsections (a) and (b) will be a condition of certification. The Executive Officer will approve or disapprove the documents required by Subsections (a) and (b) within 90 days of the date such documents are received from the manufacturer. Any disapproval must be accompanied by a statement of the reasons therefore. In the event of disapproval, the manufacturer may petition the Board to review the decision of the Executive Officer.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43150-43154, 43205.5 and 43210-43212, Health and Safety Code.

HISTORY

1. New section filed 5-1-92; operative 6-1-92 (Register 92, No. 19).
2. Amendment of subsection (a), Manufacturer's Warranty Coverage, subsection (b) and NOTE filed 10-4-93; operative 11-3-93 (Register 93, No. 41).
3. Change without regulatory effect amending NOTE filed 12-22-93 pursuant to title 1, section 100, California Code of Regulations (Register 93, No. 52).
4. Amendment of subsections (a)-(b) filed 7-24-95; operative 7-24-95 pursuant to Government Code section 11343.4(d) (Register 95, No. 30).
5. Amendment of section and NOTE filed 3-23-99; operative 3-23-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 13).

§ 2407. New Engine Compliance and Production Line Testing—New Small Off-Road Engine Selection, Evaluation, and Enforcement Action.

(a) Compliance Test Procedures.

(1) The Executive Officer may, with respect to any new engine family or subgroup being sold, offered for sale, or manufactured for sale in California, order an engine manufacturer to make available for compliance testing and/or inspection a reasonable number of engines, and may direct that the engines be delivered to the state board at the Haagen-Smit Laboratory, 9528 Telstar Avenue, El Monte, California or where specified by the Executive Officer. The Executive Officer may also, with respect to any new engine family or subgroup being sold, offered for sale, or manufactured for sale in California, have an engine manufacturer compliance test and/or inspect a reasonable number of engines at the engine manufacturer's facility under the supervision of an ARB Enforcement Officer. Engines must be selected at random from sources specified by the Executive Officer according to a method approved by the Executive Officer, that, insofar as practical, must exclude engines that would result in an unreasonable disruption of the engine manufacturer's distribution system.

A subgroup may be selected for compliance testing only if the Executive Officer has reason to believe that the emissions characteristics of that subgroup are substantially in excess of the emissions of the engine family as a whole.

(2) For all 1995 and subsequent small off-road engines selected for compliance testing, the selection and testing of engines and the evaluation of data must be made in accordance with the procedures set forth herein.

(3) These procedures are applicable, commencing with the 1995 calendar year, to any engine family or any subgroup within an engine family selected for compliance testing pursuant to this section.

(4) All testing must be conducted in accordance with the applicable calendar year (for 1995-1999) or model year (for 2000 and later) certification emission test procedures. Any adjustable engine parameters must be set to values or positions that are within the range available to the ultimate purchaser as determined by the ARB Enforcement Officer. For example, an engine carburetor with an adjustable idle fuel/air mixture must be compliance tested at any mixture position requested by the ARB Enforcement Officer that is within the range of adjustment available to the end-use operator. Engine service accumulation (i.e., break-in) before testing may be performed on test engines to the same extent it is performed on production line testing engines (See subsection (d)). No break-in or modifications, adjustments, or special preparation or maintenance will be allowed on engines chosen for compliance testing without the written consent of the Executive Officer. Such consent must not be unreasonably withheld where such adjustment or alteration is required to render the engine testable and reasonably operative.

(5) If the engine manufacturer elects to specify a different break-in or adjustments, they will be performed by the engine manufacturer under the supervision of ARB personnel.

(6) Correction of damage or maladjustment that may reasonably be found to have resulted from shipment of the engine is permitted only after test of the engine, except where 100 percent of the engine manufacturer's production is given that inspection or maintenance by the engine manufacturer's own personnel. The engine manufacturer may request that the engine be repaired from shipping damage, and be retested. If the Executive Officer concurs, the engine may be retested, and the original test results may be replaced by the after-repair test results.

(7) Engines must be randomly chosen from the selected engine family or subgroup. Each chosen engine must be tested according to the "California Exhaust Emission Standards and Test Procedures for 1995-2004 Small Off-Road Engines" ("Emission Standards and Test Procedures"), adopted March 20, 1992, and last amended July 26, 2004, or "California Exhaust Emission Standards and Test Procedures for 2005 and Later Small Off-Road Engines," adopted July 26, 2004, as applicable, to determine its emissions. Unique specialty hardware and personnel normally

necessary to prepare the engine for the performance of the test as set forth in the Procedures must be supplied by the engine manufacturer within seven days after the request for such speciality hardware or personnel. Failure to supply this unique speciality hardware or personnel may not be used by the engine manufacturer as a cause for invalidation of the subsequent tests.

(8) Engines must be tested in groups of five until a "Pass" or "Fail" decision is reached for each pollutant independently for the engine family or subgroup in accordance with the following table:

<i>Number of Engines Tested</i>	<i>Decide "Fail" If "U" is greater than or equal to</i>	<i>Decide "Pass" If "U" is less than or equal to</i>
5	2.18	-0.13
10	2.11	0.51
15	2.18	0.88
20	2.29	1.16

where:

$$U = \frac{\sum_{i=1}^n (x_i - \mu_0)}{\sqrt{\frac{\sum_{i=1}^n (x_i - \mu_0)^2}{n}}}$$

x_i = the projected emissions of one pollutant for the i th engine tested.

μ_0 = the applicable calendar year emission standard for that pollutant.

n = the number of engines tested.

(9) The Executive Officer will find that a group of engines has failed the compliance testing pursuant to the above table if the Executive Officer finds that the average emissions of the engines within the selected engine family or subgroup exceed the applicable calendar year new engine emission standard for at least one pollutant.

(10) If no decision can be reached after 20 engines have been tested, the Executive Officer will not make a "Fail" decision for the selected engine family or subgroup on the basis of these 20 tests alone. Under these circumstances the Executive Officer will elect to test 10 additional engines. If the average emissions from the 30 engines tested exceed any one of the exhaust emission standards for which a "Pass" decision has not been previously made, the Executive Officer will render a "Fail" decision.

(11) If the Executive Officer determines, in accordance with the procedures set forth in Subsection (a) that an engine family or any subgroup within an engine family, exceeds the emission standards for one or more pollutants, the Executive Officer will:

(A) Notify the engine manufacturer that the engine manufacturer may be subject to revocation or suspension of the Executive Order authorizing sales and distribution of the noncompliant engines in the State of California, or enjoined from any further sales or distribution, of the noncompliant engines in the State of California pursuant to Section 43017 of the Health and Safety Code. Prior to revoking or suspending the Executive Order, or seeking to enjoin an engine manufacturer, the Executive Officer will consider production line test results, if any, and any additional test data or other information provided by the engine manufacturers and other interested parties, including the availability of emission reductions credits to remedy the failure.

(B) Notify the equipment manufacturer that the equipment manufacturer may be subject to being enjoined from any further sales, or distribution, of the equipment manufacturer's equipment product line(s) that are, or utilize engines that are, noncompliant with the applicable emission regulations pursuant to Section 43017 of the Health and Safety Code. Prior to revoking or suspending the Executive Order, or seeking to enjoin an equipment manufacturer, the Executive Officer will consider production line test results, if any, and any additional test data or other information provided by the equipment manufacturer and other interested parties,

including the availability of emissions reduction credits to remedy the failure.

(12) Engines selected for inspection must be checked to verify the presence of those emissions-related components specified in the engine manufacturer's application for certification, and for the accuracy of any adjustments, part numbers and labels specified in that application. If any engine selected for inspection fails to conform to any applicable law in Part 5 (commencing with Section 43000) of Division 26 of the Health and Safety Code, or any regulation adopted by the state board pursuant thereto, other than an emissions standard applied to new engines to determine "certification" as specified in Chapter 9, the Executive Officer will:

(A) Notify the engine manufacturer and may seek to revoke or suspend the Executive Order authorizing sales and distribution or enjoin the engine manufacturer from any further sales, or distribution, of the applicable noncompliant engine families or subgroups within the engine families in the State of California pursuant to Section 43017 of the Health and Safety Code. Before revoking or suspending the Executive Order authorizing sales and distribution of the applicable noncompliant engine families or subgroups within the State of California, or seeking to enjoin an engine manufacturer, the Executive Officer will consider any information provided by the engine manufacturer and other interested parties, including the availability of emissions reductions credits to remedy the failure.

(B) Notify the equipment manufacturer and may seek to revoke or suspend the Executive Order authorizing sales and distribution or enjoin the equipment manufacturer from any further sales, or distribution, in the State of California of the equipment manufacturer's equipment product line(s) that are, or utilize engines that are, noncompliant with the applicable emission regulations pursuant to Section 43017 of the Health and Safety Code. Before revoking or suspending the Executive Order authorizing sales and distribution of the applicable noncompliant equipment, or seeking to enjoin an equipment manufacturer, the Executive Officer will consider any information provided by the equipment manufacturer and other interested parties, including the availability of emissions reductions credits to remedy the failure.

(b) 1996 and Subsequent Calendar (Model) Year Quality-Audit Production Line Test Procedures

(1) Small off-road engines produced in the 1996 and subsequent calendar (or model) years, that have been certified for sale in California, are subject to the quality-audit requirements specified in (b) and (d). Each engine manufacturer must use the quality-audit test procedures as specified in (b) and (d) unless it can satisfactorily provide an alternate method that shows an equivalent assurance of compliance. The purpose of providing alternate sampling, testing methods, and procedures is to help reduce sample size and testing costs, while providing a reasonable assurance that production engines comply with the applicable emission standards. The engine manufacturer must submit the method of quality-audit to the Executive Officer for approval no later than 90 days prior to 1996 calendar year production, or any subsequent calendar or model year production, as applicable, if a change is proposed.

(2) Engine Sample Selection

(A) Except as provided in subsection (b)(3), the engine manufacturer must randomly select one percent of the California sales volume of engines from each engine family for quality-audit testing. Additional engine sample criteria appear in subsection (d)(3).

(B) The Executive Officer may, upon notice to the engine manufacturer, require the sample rate to be increased to a maximum of ten percent of production (not to exceed 30 additional engines or units of equipment) of the calendar quarterly production of any engine family.

(3) Alternate Quality-Audit Engine Selection Criteria For The 1996 Through 1999 Calendar Years

(A) An engine manufacturer may use the alternate engine selection method outlined in this Subsection.

(B) Engines or equipment must be randomly selected at a rate of 1.0 percent of engine family production at the beginning of production.

When test results of the first 10 engines or units of equipment have been accumulated, an evaluation as indicated below must be made.

(C) Calculate the family mean and standard deviation of each pollutant (HC, CO, NO_x and PM, if applicable). Identify engines or units of equipment that have emission levels greater than three standard deviations above the mean. Eliminate these emission data points and recalculate the mean and standard deviation. Continue the calculation until there are no values greater than three standard deviations above the mean. Count the number of these data points greater than the emission standard (outliers). If the number of outliers is equal to or less than the allowable number in Table 1 for each pollutant, the engine family is eligible to continue to a second evaluation, shown in paragraph (D) below. Otherwise, sampling must continue at a rate of 1.0 percent of production for the rest of the month.

(D) If the allowable outlier criterion is met, the family mean standard deviation, and sample size determined for each contaminant before excluding any outliers, are substituted in the following expression:

$$\frac{(\text{emission standard} - \text{mean}) \sqrt{N}}{(\text{standard deviation})}$$

(E) If the expression is greater than C in Table 2 below, and the engine manufacturer reasonably estimates that the quarterly engine family production will exceed 5,000 engines or units of equipment, the sampling rate for the remaining portion of the calendar month following the date of selection of the last of the 10 engines or equipment is 10 per month, applied on a prorated basis. If the expression is greater than C in Table 2 below, and the engine manufacturer reasonably estimates that the quarterly engine family production will be 5,000 engines or units of equipment or less, the sampling rate for the remaining portion of the calendar month following the date of selection of the last of the 10 engines or equipment is 5 per month, applied on a prorated basis. If the expression is equal to or less than C in Table 2, the sampling rate continues to be 1.0 percent of production for the remaining portion of the month in which selection of the 10 engines or equipment is completed. The value of C is a function of the coefficient of variation (standard deviation/mean). The coefficient of variation and "C" must be rounded to the number of decimal places shown in Table 2.

Table 1

Sample Size	Allowable Outliers	Sample Size	Allowable Outliers
1-32	1	430-478	11
33-68	2	479-528	12
69-107	3	529-578	13
108-149	4	579-629	14
150-193	5	630-680	15
194-238	6	681-731	16
239-285	7	732-783	17
286-332	8	784-835	18
333-380	9	836-887	19
381-429	10	888-939	20

Table 2

Coefficient of Variation	C
0.1	0.5
0.2	1.2
0.3	1.8
0.4	2.5
0.5	3.1
0.6	3.8
0.7	4.4
0.8	5.1
0.9	5.7

(F) At the conclusion of each month of quarterly engine family production, the emission test data must be evaluated in order to determine the sampling rate as set forth in Paragraphs C and D above. This evaluation must utilize all test data accumulated in the applicable quarter. The sample rate for the next month of production must be determined as follows: ten (10) engines per month when the engine manufacturer's esti-

mated quantity of quarterly engine family production is greater than 5,000; five (5) engines per month when the engine manufacturer's estimated quantity of quarterly engine family production is equal to or less than 5,000; or, one (1) percent of the quarterly engine family production as determined by the sampling evaluation method set forth in Paragraphs D and E.

(G) For each subsequent quarter, the preceding sample selection method must be followed. The sample rate determination for the first month of each subsequent quarter must be based on the accumulated data from the previous quarter. The sample rate for the succeeding months of the quarter must be determined as previously set forth.

(H) If the start of production does not coincide with the first of a quarter, the sequence for sample rate determination must be followed, but references to remaining calendar months may not be appropriate.

(I) Where an engine manufacturer has sampled engines or equipment at a rate of 5 per month following a reasonable estimate that the quarterly engine family production will be 5,000 engines or units of equipment or less, and subsequently determines, or reasonably should determine based on information available to the engine manufacturer, that the quarterly engine family production will exceed 5,000 engines or units of equipment, the engine manufacturer must increase the sampling rate for the quarter such that the requirements of Paragraph D applicable to families reasonably estimated to exceed a quarterly production of 5,000 engines or units of equipment are satisfied.

(4) Compliance Evaluation

(A) Each engine manufacturer must review the test results of the first 10 test engines or equipment of each engine family, from each calendar quarter of production or from the start of calendar year production. It must also review the quarter's cumulative test results of each engine family at the end of each month. If 10 or more engines or units of equipment have been tested, the engine manufacturer must notify the Chief of the Mobile Source Operations Division, in writing within ten working days whenever an engine family exceeds an emission standard.

(B) At the end of the quarter, all of the data accumulated during the quarter are evaluated, and the compliance of the engine family with the family emission levels or emission standards, whichever is applicable, is determined. If a sample size for a particular production quarter is less than ten engines, the data from that quarter must be combined with all of the data from each successive quarter of the calendar year until data from at least ten engines that have been quality-audit tested are included in the quarterly evaluation. If the sample size for the first quarter's production for a calendar year does not contain at least ten engines, the data available for that quarter are evaluated. However, compliance of the engine family with the family emission levels or emission standards, whichever is applicable, is not determined until subsequent quarterly production data is available that includes evaluations of at least ten engines. If the sample size for the last final quarter's production for a calendar year does not contain at least ten engines, the data from the last final quarter must be combined with all the data from each preceding quarter of the calendar year until the sample size contains at least ten engines.

(C) When the average value of any pollutant that is rounded off to the same number of significant digits as is the standard, in accordance with ASTM E 29-93a (May 1993), exceeds the applicable family emission level or emission standard, whichever is applicable; or, when the engine manufacturer's submitted data reveal that the production line tests were performed improperly, the engine family may be determined to be in noncompliance. The Executive Officer will follow the manufacturer notification procedures in section (d)(5).

(D) A failed engine is one whose emission test results for a regulated pollutant exceeds the emission standard or FEL, as applicable.

(5) Reports

(A) Each engine manufacturer shall submit a written report to the ARB within 45 calendar days of the end of each calendar quarter.

(B) The quarterly report shall include the following:

1. The total production and sample size for each engine family.

2. engine identification numbers and explanation of the identification code.

3. The applicable emissions standards or Family Emission Levels for each engine family.

4. A description of each test engine or equipment (i.e., date of test, engine family, engine size, engine or equipment identification number, fuel system, dynamometer power absorber setting in horsepower or kilowatts, engine code or calibration number, and test location).

5. The exhaust emission data for PM, CO, NO_x and HC for each test engine or equipment. The data reported shall provide two significant figures beyond the number of significant figures in the applicable emission standard.

6. The retest emissions data, as described in paragraph (v) above for any engine or unit of equipment failing the initial test, and description of the corrective measures taken, including specific components replaced or adjusted.

7. A statistical analysis of the quality-audit test results for each engine family stating:

a. Number of engines or units of equipment tested.

b. Average emissions and standard deviations of the sample for HC, CO, NO_x and PM.

8. Every aborted test data and reason for the aborted test.

9. The applicable quarterly report shall include the date of the end of the engine manufacturer's calendar year (for 1995–1999) or model year (for 2000 and subsequent years) production for an engine family.

10. The required information for all engine families in production during the quarter regardless of sample size.

11. The start and stop dates of batch-produced engine family production.

(C) Each engine manufacturer shall submit a copy of the report that has been stored (e.g., computer discs), or may be transmitted, in an electronically digitized manner, and in a format that is specified by the Executive Officer. This electronically based submission is in addition to the written submission of the report.

(c) 2000 and Subsequent Model Cumulative Sum Production Line Test Procedures.

(1) The 2000 and subsequent model year small off-road engines, that have been certified for sale in California, are subject to production line testing performed according to either the Cumulative Sum requirements specified in (c) and (d), or to the Quality-Audit requirements specified in paragraph (b) and (d). At the time of certification, the engine manufacturer must designate which production line testing procedure, either Quality-Audit or Cumulative Sum, it will use for the model year. If an engine manufacturer uses the Cumulative Sum procedures, it must use the Cumulative Sum test procedures as specified herein.

(2) Engine Sample Selection

(A) At the start of each model year, the small off-road engine manufacturer will begin to randomly select engines from each engine family for production line testing, according to the criteria specified herein. Additional engine sample criteria appear in subsection (d)(3).

1. For newly certified engine families: After two engines are tested, the manufacturer will calculate the required sample size for the model year according to the Sample Size Equation in paragraph (B) of this section.

2. For carry-over engine families: After one engine is tested, the manufacturer will combine the test with the last test result from the previous model year and then calculate the required sample size for the model year according to the Sample Size Equation in paragraph (B) of this section.

(B)1. Manufacturers will calculate the required sample size for the model year for each engine family using the Sample Size Equation below. N is calculated from each test result. The number N indicates the number of tests required for the model year for an engine family. N, is recalculated after each test. Test results used to calculate the variables in the Sample Size Equation must be final deteriorated test results as specified in paragraph (c)(4)(C).

$$N = \left[\frac{(t_{95} \times \sigma)}{(x - FEL)} \right]^2 + 1$$

where:

N = required sample size for the model year.

t₉₅ = 95% confidence coefficient. It is dependent on the actual number of tests completed, n, as specified in the table in paragraph (B)2 of this section. It defines one-tail, 95% confidence intervals.

σ = actual test sample standard deviation calculated from the following equation:

$$\sigma = \sqrt{\frac{\sum (X_i - x)^2}{n - 1}}$$

X_i = emission test result for an individual engine

x = mean of emission test results of the actual sample

FEL = Family Emission Level, or emission standard if no Family Emission level is established

n = The actual number of tests completed in an engine family

2. Actual Number of Tests (n) & 1-tail Confidence Coefficients (t₉₅)

n	t ₉₅	n	t ₉₅	n	t ₉₅
2	6.31	12	1.80	22	1.72
3	2.92	13	1.78	23	1.72
4	2.35	14	1.77	24	1.71
5	2.13	15	1.76	25	1.71
6	2.02	16	1.75	26	1.71
7	1.94	17	1.75	27	1.71
8	1.90	18	1.74	28	1.70
9	1.86	19	1.73	29	1.70
10	1.83	20	1.73	30	1.70
11	1.81	21	1.72	∞	1.645

3. A manufacturer must distribute the testing of the remaining number of engines needed to meet the required sample size N, evenly throughout the remainder of the model year.

4. After each new test, the required sample size, N, is recalculated using updated sample means, sample standard deviations and the appropriate 95% confidence coefficient.

5. A manufacturer must continue testing and updating each engine family's sample size calculations according to paragraphs (B)1 through (B)4 of this section until a decision is made to stop testing as described in paragraph (B)6 of this section or a noncompliance decision is made pursuant to paragraph (c)(3)(A)5 of this section.

6. If, at any time throughout the model year, the calculated required sample size, N, for an engine family is less than or equal to the actual sample size, n, and the sample mean, x, for each regulated pollutant is less than or equal to the emission standard (or FEL, as applicable) for that pollutant, the manufacturer may stop testing that engine family except as required by paragraph (c)(3)(A)6.

7. If, at any time throughout the model year, the sample mean, x, for any regulated pollutant is greater than the emission standard (or FEL, as applicable), the manufacturer must continue testing that engine family at the appropriate maximum sampling rate.

8. The maximum required sample size for an engine family (regardless of the required sample size, N, as calculated in paragraph (B)1 of this section) is thirty tests per model year.

9. Manufacturers may elect to test additional randomly chosen engines. All additional randomly chosen engines tested in accordance with the testing procedures specified in the Emission Standards and Test Procedures must be included in the Sample Size and Cumulative Sum equation calculations as defined in paragraphs (B)1 and (c)(3)(A)1 of this section, respectively.

(C) The manufacturer must produce and assemble the test engines using its normal production and assembly process for engines to be distributed into commerce.

(D) No quality control, testing, or assembly procedures will be used on any test engine or any portion thereof, including parts and subassemblies, that have not been or will not be used during the production and assembly of all other engines of that family, unless the Executive Officer approves the modification.

(3) Calculation of the Cumulative Sum Statistic

(A) Each engine manufacturer must review the test results using the following procedure:

1. Manufacturers must construct the following Cumulative Sum Equation for each regulated pollutant for each engine family. Test results used to calculate the variables in the Cumulative Sum Equation must be final deteriorated test results as defined in paragraph (c)(4)(C).

$$C_i = \max [0 \text{ or } (C_{i-1} + X_i - (\text{FEL} + F))]$$

where:

C_i = The current Cumulative Sum statistic

C_{i-1} = The previous Cumulative Sum statistic. Prior to any testing, the Cumulative Sum statistic = 0 (i.e. $C_0 = 0$)

X_i = The current emission test result for an individual engine

FEL = Family Emission Level, or emission standard if no Family Emission level is established

F = $0.25 \times \Phi$

After each test, C_i is compared to the action limit, H, the quantity that the Cumulative Sum statistic must exceed, in two consecutive tests, before the engine family may be determined to be in noncompliance for purposes of paragraphs (c)(3)(A)4 and (c)(3)(A)5.

H = The Action Limit. It is $5.0 \times \Phi$, and is a function of the standard deviation, Φ .

Φ = is the sample standard deviation and is recalculated after each test.

2. After each engine is tested, the Cumulative Sum statistic must be promptly updated according to the Cumulative Sum Equation in paragraph 1 of this section.

3. If, at any time during the model year, a manufacturer amends the application for certification for an engine family as specified in Part I, Sections 28 and 29 of the 1995–2004 Emission Standards and Test Procedures, or Subpart B, §90.120 and §90.122 of the 2005 and Later Emission Standards and Test Procedures, as applicable, by performing an engine family modification (i.e., a change such as a running change involving a physical modification to an engine, a change in specification or setting, the addition of a new configuration, or the use of a different deterioration factor), all previous sample size and Cumulative Sum statistic calculations for the model year will remain unchanged.

4. A failed engine is one whose final deteriorated test results pursuant to paragraph (c)(4)(C), for a regulated pollutant exceeds the emission standard or the FEL, as applicable, for that pollutant.

5. An engine family may be determined to be in noncompliance, if at any time throughout the model year, the Cumulative Sum statistic, C_i , for a regulated pollutant is greater than the action limit, H, for two consecutive tests.

6. The engine manufacturer must perform a minimum of two tests per engine family per quarter, regardless of whether the conditions of paragraph (c)(2)(B)4 have been met.

7. All results from previous quarters of the same model year must be included in the on-going Cumulative Sum analysis, provided that the engine family has not failed (e.g., if three engines of a family were tested in the first quarter, the first test of the second quarter would be considered as the fourth test).

8. If the Cumulative Sum analysis indicates that an engine family has failed, the engine manufacturer must notify the Chief of the Mobile Source Operations Division, in writing and by telephone, within ten working days. Corrective action will be taken as noted in paragraph (d)(5), below.

9. If a manufacturer performs corrective action on a failed engine family and then resumes production, all previous tests will be void, and Cumulative Sum analysis will begin again with the next test.

(B) At the end of the quarter, or when the Cumulative Sum analysis indicates that a decision has been made, the manufacturer must provide all the data accumulated during the quarter.

(4) Calculation and Reporting of Test Results.

(A) Initial test results are calculated following the applicable test procedure specified in "California Exhaust Emission Standards and Test Procedures for 1995–2004 Small Off-Road Engines" or "California Exhaust Emission Standards and Test Procedures for 2005 and Later Small Off-Road Engines," as applicable. The manufacturer rounds these results, in accordance with ASTM E29–93a, to the number of decimal places contained in the applicable emission standard expressed to one additional significant figure. (ASTM E29–93a has been incorporated by reference.)

(B) Final test results are calculated by summing the initial test results derived in paragraph (A) of this section for each test engine, dividing by the number of tests conducted on the engine, and rounding in accordance with ASTM E29–93a to the same number of decimal places contained in the applicable standard expressed to one additional significant figure.

(C) The final deteriorated test results for each test engine are calculated by applying the appropriate deterioration factors, derived in the certification process for the engine family, to the final test results, and rounding in accordance with ASTM E29–93a to the same number of decimal places contained in the applicable standard expressed to one additional significant figure.

(D) If, at any time during the model year, the Cumulative Sum statistic exceeds the applicable action limit, H, in two consecutive tests, the engine family may be determined to be in noncompliance and the manufacturer must notify the Chief of the Mobile Source Operations Division and the Manager of the Off-Road Certification/Audit Section, 9528 Telstar Avenue, El Monte, CA, 91731, within ten working days of such exceedance by the Cumulative Sum statistic.

(E) Within 45 calendar days of the end of each quarter, each engine manufacturer must submit to the Executive Officer a report that includes the following information unless the Executive Officer has approved the omission of some of the information:

1. The location and description of the manufacturer's or other's exhaust emission test facilities that were utilized to conduct testing reported pursuant to this section;

2. Total production and sample sizes, N and n, for each engine family;

3. The applicable emissions standards or Family Emissions Levels for each engine family;

4. A description of the process to obtain engines on a random basis;

5. A description of the test engines or equipment (i.e., date of test, engine family, engine size, engine or equipment identification number, fuel system, dynamometer power absorber setting in horsepower or kilowatts, engine code or calibration number, and test location);

6. The date of the end of the engine manufacturer's model year production for each engine family;

7. For each test conducted,

a. A description of the test engine, including:

i. Configuration and engine family identification,

ii. Year, make, and build date,

iii. Engine identification number and explanation of the identification code, and

iv. Number of hours of service accumulated on engine prior to testing;

b. Location where service accumulation was conducted and description of accumulation procedure and schedule;

c. Test number, date, test procedure used, initial test results before and after rounding, and final test results for all exhaust emission tests, whether valid or invalid, and the reason for invalidation, if applicable;

d. The exhaust emission data for PM, CO, NO_x and HC (or NMHC, as applicable) for each test engine or equipment. The data reported must provide two significant figures beyond the number of significant figures in the applicable emission standard;

e. The retest emissions data, as described in Paragraph 4. above for any engine or unit of equipment failing the initial test, and description of the corrective measures taken, including specific components replaced or adjusted;

f. A complete description of any adjustment, modification, repair, preparation, maintenance, and/or testing that was performed on the test engine, was not reported pursuant to any other part of this article, and will not be performed on all other production engines;

g. A Cumulative Sum analysis, as required in paragraph (c)(3), of the production line test results for each engine family;

h. Any other information the Executive Officer may request relevant to the determination whether the new engines being manufactured by the manufacturer do in fact conform with the regulations with respect to which the Executive Order was issued;

8. For each failed engine as defined in paragraph (c)(3)(A)4, a description of the remedy and test results for all retests;

9. Every aborted test data and reason for the aborted test;

10. The start and stop dates of batch-produced engine family production;

11. The required information for all engine families in production during the quarter regardless of sample size; and

(F) Each manufacturer must submit a copy of the report that has been stored (e.g., computer disc), or may be transmitted, in an electronically digitized manner, and in a format that is specified by the Executive Officer. This electronically based submission is in addition to the written submission of the report.

(d) Procedures Applicable to All Production Line Testing

(1) Standards and Test Procedures. The emission standards, exhaust sampling and analytical procedures are those described in the Emission Standards and Test Procedures, and are applicable to engines tested only for exhaust emissions. The production line test procedures are specified in conjunction with the Emission Standards and Test Procedures. An engine is in compliance with these production line standards and test procedures only when all portions of these production line test procedures and specified requirements from the Emission Standards and Test Procedures are fulfilled, except for the provisions as follows:

(A) A handheld equipment engine manufacturer, (or a manufacturer of 2000 through 2004 model year engines 65 cc or below, or a manufacturer of 2005 and subsequent model years engines 80 cc or below,) may request that the Executive Officer allow the values of rated engine power and speed determined in the engine family certification be used in lieu of the determination of the engine power and speed of a production line engine. This request must include a specification of the particular power absorption device (e.g., dynamometer, water brake, etc.) used to apply the test load to the production engines. An engine manufacturer must request and must receive approval from the Executive Officer for this allowance before the production line tests are conducted. The engine manufacturer should establish equivalent assurance of compliance by providing emission data from a statistically valid sample of engines for comparison between the proposed procedures and the required procedures.

(B) Any adjustable engine parameters must be set to any value or position that is within the range available to the ultimate purchaser.

(2) Air Resources Board (ARB) personnel and mobile laboratories must have access to engine or equipment assembly plants, distribution facilities, and test facilities for the purpose of engine selection, testing, and observation. Scheduling of access must be arranged with the designated engine manufacturer's representative and must not unreasonably disturb normal operations (See Section 31 of the 1995–2004 Emission Standards and Test Procedures or Section 90.126 of the 2005 and Later Emission Standards and Test Procedures, as applicable).

(3) Engine Sample Selection

(A) The engine manufacturer must randomly select engines according to (b)(2) or (c)(2), as applicable, from each engine family for production line testing. The engines must be representative of the engine manufacturer's California sales. Each engine will be selected from the end of the assembly line. All engine models within the engine family must be included in the sample pool. Each selected engine for quality-audit testing must pass the inspection test, by being equipped with the appropriate emission control systems certified by the ARB. The procedure for randomly selecting engines or units of equipment must be submitted to the Chief, Mobile Source Operations Division, 9528 Telstar Avenue, El Monte, CA, 91731, prior to the start of production for the first year of production.

(B)1. Prior to the beginning of the 2000 model year, if an engine manufacturer cannot provide actual California sales data, it must provide its total production and an estimate of California sales at the end of the model year. The engine manufacturer must also provide supporting material for its estimate.

2. For the 2000 and later model years, engine manufacturers must provide actual California sales, or other information acceptable to the Executive Officer, including, but not limited to, an estimate based on market analysis and federal production or sales.

(4) Engine Preparation and Preconditioning

(A) No emissions tests may be performed on an engine prior to the first production line test.

(B) The engine or unit of equipment must be tested after the engine manufacturer's recommended break-in period. The engine manufacturer must submit to the Executive Officer the schedule for engine break-in and any changes to the schedule with each quarterly report. This schedule must be adhered to for all production line testing within an engine family and subgroup or engine family and assembly plant as appropriate.

(C) If an engine or unit of equipment is shipped to a remote facility for production line testing, and adjustment or repair is necessary because of such shipment, the engine manufacturer must perform the necessary adjustments or repairs only after the initial test of the engine or equipment. Engine manufacturers must report to the Executive Officer in the quarterly report, all adjustments or repairs performed on engines or equipment prior to each test. In the event a retest is performed, a request may be made to the Executive Officer, within ten days of the production quarter, for permission to substitute the after-repair test results for the original test results. The Executive Officer will either affirm or deny the request by the engine manufacturer within ten working days from receipt of the request.

(D) If an engine manufacturer determines that the emission test results of an engine or unit of equipment are invalid, the engine or equipment must be retested. Emission results from all tests must be reported. The engine manufacturer must include a detailed report on the reasons for each invalidated test in the quarterly report.

(5) Manufacturer Notification of Failure

(A) The Executive Officer will notify the engine manufacturer that the engine manufacturer may be subject to revocation or suspension of the Executive Order authorizing sales and distribution of the noncompliant engines in the State of California, or being enjoined from any further sales, or distribution, of the noncompliant engines in the State of California pursuant to Section 43017 of the Health and Safety Code. Prior to revoking or suspending the Executive Order, or seeking to enjoin an engine manufacturer, the Executive Officer will consider all information provided by the engine manufacturer, and other interested parties, including, but not limited to corrective actions applied to the noncompliant engine family, and for 2000 and subsequent model year engines, the availability of emissions reduction credits to remedy the failure.

(B) The Executive Officer will notify the equipment manufacturer that the equipment manufacturer may be subject to revocation or suspension of the Executive Order authorizing sales and distribution, or being enjoined from any further sales, or distribution, of the equipment manufacturer's equipment product line(s) that are, or utilize engines that are, non-

compliant with the applicable emission regulations pursuant to Section 43017 of the Health and Safety Code. Prior to revoking or suspending the Executive Order, or seeking to enjoin an equipment manufacturer, the Executive Officer will consider all information provided by interested parties, including, but not limited to corrective actions applied to the non-compliant engine family, and for 2000 and subsequent model year engines, the availability of emissions reduction credits to remedy the failure.

(6) Suspension and Revocation of Executive Orders.

(A) The Executive Order is automatically suspended with respect to any engine failing pursuant to paragraph (c)(3)(A)4 or (b)(4)(D) effective from the time that testing of that engine is completed.

(B) The Executive Officer may suspend the Executive Order for an engine family that is determined to be in noncompliance pursuant to paragraph (c)(3)(A)5 or (b)(4)(C). This suspension will not occur before fifteen days after the engine family is determined to be in noncompliance. Before revoking or suspending the Executive Order authorizing sales and distribution of the applicable noncompliant engine families or subgroups within the State of California, or seeking to enjoin an engine manufacturer, the Executive Officer will consider any information provided by the engine manufacturer and other interested parties, including the availability of emissions reductions credits to remedy the failure.

(C) If the results of testing pursuant to these regulations indicate that engines of a particular family produced at one plant of a manufacturer do not conform to the regulations with respect to which the Executive Order was issued, the Executive Officer may suspend the Executive Order with respect to that family for engines manufactured by the manufacturer at all other plants.

(D) Notwithstanding the fact that engines described in the application for certification may be covered by an Executive Order, the Executive Officer may suspend such Executive Order immediately in whole or in part if the Executive Officer finds any one of the following infractions to be substantial:

1. The manufacturer refuses to comply with any of the requirements of this section;
2. The manufacturer submits false or incomplete information in any report or information provided to the Executive Officer under this section;
3. The manufacturer renders inaccurate any test data submitted under this section;
4. An ARB enforcement officer is denied the opportunity to conduct activities authorized in this section and a warrant or court order is presented to the manufacturer or the party in charge of the facility in question;
5. An ARB enforcement officer is unable to conduct activities authorized in paragraph (d)(2) of this section because a manufacturer has located its facility in a foreign jurisdiction where local law prohibits those activities.

(E) The Executive Officer will notify the manufacturer in writing of any suspension or revocation of an Executive Order in whole or in part. A suspension or revocation is effective upon receipt of the notification or fifteen days from the time an engine family is determined to be in non-compliance pursuant to paragraph (c)(3)(A)5 or (b)(4)(C), whichever is later, except that the Executive Order is immediately suspended with respect to any failed engines as provided for in paragraph (A) of this section.

(F) The Executive Officer may revoke an Executive Order for an engine family after the Executive Order has been suspended pursuant to paragraph (B) or (C) of this section if the proposed remedy for the nonconformity, as reported by the manufacturer to the Executive Officer, is *one requiring a design change or changes to the engine and/or emission control system as described in the application for certification of the affected engine family.*

(G) Once an Executive Order has been suspended for a failed engine, as provided for in paragraph (A) of this section, the manufacturer must

take the following actions before the Executive Order is reinstated for that failed engine:

1. Remedy the nonconformity;
2. Demonstrate that the engine conforms to the emission standards by retesting the engine in accordance with these regulations; and
3. Submit a written report to the Executive Officer, after successful completion of testing on the failed engine, that contains a description of the remedy and test results for each engine in addition to other information that may be required by this part.

(H) Once an Executive Order for a failed engine family has been suspended pursuant to paragraph (B), (C) or (D) of this section, the manufacturer must take the following actions before the Executive Officer will consider reinstating the Executive Order:

1. Submit a written report to the Executive Officer that identifies the reason for the noncompliance of the engines, describes the proposed remedy, including a description of any proposed quality control and/or quality assurance measures to be taken by the manufacturer to prevent future occurrences of the problem, and states the date on which the remedies will be implemented; and

2. Demonstrate that the engine family for which the Executive Order has been suspended does in fact comply with the regulations of this part by testing as many engines as needed so that the Cumulative Sum statistic, as calculated in paragraph (c)(3)(A)1, falls below the action limit, or the average emissions from the Quality–Audit testing as calculated in paragraph (b)(4)(C) remains below the emission standard or FEL, as applicable. Such testing must comply with the provisions of this section. If the manufacturer elects to continue testing individual engines after suspension of an Executive Order, the Executive Order is reinstated for any engine actually determined to be in conformance with the emission standards through testing in accordance with the applicable test procedures, provided that the Executive Officer has not revoked the Executive Order pursuant to paragraph (F) of this section.

(I) Once the Executive Order has been revoked for an engine family, if the manufacturer desires to continue introduction into commerce of a modified version of that family, the following actions must be taken before the Executive Officer may issue an Executive Order for that modified family:

1. If the Executive Officer determines that the proposed change(s) in engine design may have an effect on emission performance deterioration, the Executive Officer will notify the manufacturer, within five working days after receipt of the report in paragraph (H)1 of this section, whether subsequent testing under this section will be sufficient to evaluate the proposed change or changes or whether additional testing will be required; and

2. After implementing the change or changes intended to remedy the nonconformity, the manufacturer must demonstrate that the modified engine family does in fact conform with the regulations of this section by testing as many engines as needed from the modified engine family so that the Cumulative Sum statistic, as calculated in paragraph (c)(3)(A)1 falls below the action limit, or the average emissions from the Quality–Audit testing as calculated in paragraph (b)(4) remains below the emission standard or FEL, as applicable. When both of these requirements are met, the Executive Officer will reissue the Executive Order or issue a new Executive Order, as the case may be, to include that family. As long as the Cumulative Sum statistic remains above the action limit, or the average emissions from the Quality–Audit testing exceeds the emission standard or FEL, as applicable, the revocation remains in effect.

(J) At any time subsequent to a suspension of an Executive Order for a test engine pursuant to paragraph (A) of this section, but not later than 15 days (or such other period as may be allowed by the Executive Officer) after notification of the Executive Officer's decision to suspend or revoke an Executive Order in whole or in part pursuant to paragraphs (B), (C), or (F) of this section, a manufacturer may request a hearing as to

whether the tests have been properly conducted or any sampling methods have been properly applied.

(K) Any suspension of an Executive Order under paragraph (D) of this section:

1. must be made only after the manufacturer concerned has been offered an opportunity for a hearing conducted in accordance with all applicable requirements and;
2. need not apply to engines no longer in the possession of the manufacturer.

(L) After the Executive Officer suspends or revokes an Executive Order pursuant to this section and prior to the commencement of a hearing, if the manufacturer demonstrates to the Executive Officer's satisfaction that the decision to suspend or revoke the Executive Order was based on erroneous information, the Executive Officer will reinstate the Executive Order.

(M) To permit a manufacturer to avoid storing non-test engines while conducting subsequent testing of the noncomplying family, a manufacturer may request that the Executive Officer conditionally reinstate the Executive Order for that family. The Executive Officer may reinstate the Executive Order subject to the following condition: the manufacturer must commit to recall all engines of that family produced from the time the Executive Order is conditionally reinstated if the Cumulative Sum statistic does not fall below the action limit, or the average emissions from the Quality-Audit testing remains above the emission standard or FEL, as applicable, and must commit to remedy any nonconformity at no expense to the owner.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43150-43154, 43205.5 and 43210-43212, Health and Safety Code.

HISTORY

1. New section filed 5-1-92; operative 6-1-92 (Register 92, No. 19).
2. Amendment of subsections (a)(2)-(3), (a)(7), (b)(2), (b)(4)(A) and NOTE filed 10-4-93; operative 11-3-93 (Register 93, No. 41).
3. Change without regulatory effect repealing article heading and amending NOTE filed 12-22-93 pursuant to title 1, section 100, California Code of Regulations (Register 93, No. 52).
4. Amendment filed 7-24-95; operative 7-24-95 pursuant to Government Code section 11343.4(d) (Register 95, No. 30).
5. Amendment of section heading, section and NOTE filed 3-23-99; operative 3-23-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 13).
6. Amendment filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2408. Emission Reduction Credits — Certification Averaging, Banking, and Trading Provisions.

(a) Applicability. The requirements of this section are applicable to all small off-road engines produced in the 2000 and later model years. Engines certified to the voluntary standards in subsection 2403(b)(2) are not eligible for participation in this program. Participation in the averaging, banking and trading program is voluntary, but if a manufacturer elects to participate, it must do so in compliance with the regulations set forth in this section. The provisions of this section are limited to HC+NO_x (or NMHC+NO_x, as applicable) and Particulate Matter emissions.

(b) General provisions.

(1) The certification averaging, banking, and trading provisions for HC+NO_x and Particulate Matter emissions from eligible engines are described in this section.

(2) An engine family may use the averaging, banking and trading provisions for HC+NO_x and NMHC+NO_x and Particulate Matter emissions if it is subject to regulation under this article with certain exceptions specified in paragraph (3) of this section. HC+NO_x and Particulate Matter credits are interchangeable subject to the limitations on credit generation, credit usage, cross-class averaging and other provisions described in this section.

(3) A manufacturer must not include in its calculation of credit generation and may exclude from its calculation of credit usage, any new engines that are exported from California, or that are not destined for California, unless the manufacturer has reason or should have reason to

believe that such engines have been or will be imported in a piece of equipment.

(4) For an engine family using credits, a manufacturer may, at its option, include its entire production of that engine family in its calculation of credit usage for a given model year.

(5) A manufacturer may certify engine families at Family Emission Limits (FELs) above or below the applicable emission standard subject to the limitation in paragraph (6) of this section, provided the summation of the manufacturer's projected balance of credits from all credit transactions for each engine class in a given model year is greater than or equal to zero, as determined under paragraph (f).

(A) A manufacturer of an engine family with an FEL exceeding the applicable emission standard must obtain positive emission credits sufficient to address the associated credit shortfall via averaging, banking, or trading.

(B) An engine family with an FEL below the applicable emission standard may generate positive emission credits for averaging, banking, or trading, or a combination thereof.

(C) In the case of a production line test failure, credits may be used to cover subsequent production of engines for the family in question if the manufacturer elects to recertify to a higher FEL. Credits may be used to remedy a nonconformity determined by production line testing or new engine compliance testing, at the discretion of the Executive Officer.

(D) In the case of a production line testing failure pursuant to section 2407, a manufacturer may revise the FEL based upon production line testing results obtained under section 2407 and upon Executive Officer approval. The manufacturer may use certification credits to cover both past production and subsequent production as needed.

(6) No engine family may have an FEL that is greater than the emission levels in the table below.

Model Year	Displacement Category	HC+NO _x level g/kW-hr g/bhp-hr
2000-2004	0-65 cc, inclusive	180
	> 65 cc - < 225 cc	24.1
	≥ 225 cc	20
2005 and subsequent	< 50 cc	241.4
	50-80 cc, inclusive	186
2005-2006	> 80 cc - < 225 cc	32.3
	≥ 225 cc	26.8
2007	> 80 cc - < 225 cc	16.1
	≥ 225 cc	26.8
2008 and subsequent	> 80 cc - < 225 cc	16.1
	≥ 225 cc	12.1

(7) Manufacturers must demonstrate compliance under the averaging, banking, and trading provisions for a particular model year by 270 days after the end of the model year. An engine family generating negative credits for which the manufacturer does not obtain or generate an adequate number of positive credits by that date from the same or previous model year engines will violate the conditions of the Executive Order. The Executive Order may be voided *ab initio* for this engine family.

(c) Averaging.

(1) Negative credits from engine families with FELs above the applicable emission standard must be offset by positive credits from engine families having FELs below the applicable emission standard, as allowed under the provisions of this section. Averaging of credits in this manner is used to determine compliance under paragraph (f)(2).

(2) Subject to the limitations above, credits used in averaging for a given model year may be obtained from credits generated in the same model year by another engine family, credits banked in previous model years, or credits of the same or previous model year obtained through trading. The restrictions of this paragraph notwithstanding, credits from a given model year may be used to address credit needs of previous model year engines as allowed under paragraph (f)(3).

(d) Banking.

(1) Beginning with the 1999 model year, a manufacturer of an engine family with an FEL below the applicable emission standard for 2006 and subsequent years may bank credits in that model year for use in averaging and trading. Negative credits may be banked only according to the requirements of paragraph (f)(3) of this section.

(2) A manufacturer may bank emission credits only after the end of the model year and after ARB has reviewed the manufacturer's end-of-year reports. During the model year and before submittal of the end-of-year report, credits originally designated in the certification process for banking will be considered reserved and may be redesignated for trading or averaging in the end-of-year report and final report.

(3) Credits declared for banking from the previous model year that have not been reviewed by ARB may be used in averaging or trading transactions. However, such credits may be revoked at a later time following ARB review of the end-of-year report or any subsequent audit actions.

(e) Trading.

(1) An engine manufacturer may exchange emission credits with other engine manufacturers in trading.

(2) Credits for trading can be obtained from credits banked in previous model years or credits generated during the model year of the trading transaction.

(3) Traded credits can be used for averaging or banking.

(4) Traded credits are subject to the limitations on use for past model years, and the use of credits from early banking as set forth in paragraph (c)(2).

(5) In the event of a negative credit balance resulting from a transaction, both the buyer and the seller are liable, except in cases involving fraud. The Executive Officer may void Executive Orders of all engine families participating in a negative trade *ab initio*.

(f) Credit calculation and manufacturer compliance with emission standards.

(1) For each engine family, HC+NO_x and Particulate Matter certification emission credits (positive or negative) are to be calculated according to the following equation and rounded to the nearest gram. Consistent units are to be used throughout the equation.

$$\text{Credits} = (\text{Standard} - \text{FEL}) \times \text{Sales} \times \text{Power} \times \text{EDP} \times \text{Load Factor}$$

Where:

Standard = the current and applicable small off-road engine HC+NO_x (NMHC+NO_x) or Particulate Matter emission standard as determined in Section 2403.

FEL = the family emission limit for the engine family in grams per brake-horsepower hour or g/kW-hr as applicable.

Sales = eligible sales as defined in section 2401. Annual sales projections are used to project credit availability for initial certification. Actual sales volume is used in determining actual credits for end-of-year compliance determination.

Power = the sales weighted maximum modal power, in horsepower or kilowatts as applicable. This is determined by multiplying the maximum modal power of each configuration within the family by its eligible sales, summing across all configurations and dividing by the eligible sales of the entire family. Manufacturers may use an alternative if approved by the Executive Officer (for example, maximum modal power of the test engine).

EDP = the Emissions Durability Period for which the engine family was certified.

Load Factor = For Test Cycle A and Test Cycle B, the Load Factor = 47% (i.e., 0.47). For Test Cycle C, the Load Factor = 85% (i.e., 0.85). For approved alternate test procedures, the load factor must be calculated according to the following formula:

$$\sum_{i=1}^n (\% \text{MTT mode}_i) \times (\% \text{MTS mode}_i) \times (\text{WF mode}_i)$$

Where:

%MTT mode_i = percent of the maximum torque for mode i

%MTS mode_i = percent of the maximum engine rotational speed for mode i

WF mode_i = the weighting factor for mode i

(2) Manufacturer compliance with the emission standard is determined on a corporate average basis at the end of each model year. A manufacturer is in compliance when the sum of positive and negative emission credits it holds is greater than or equal to zero, except that the sum of positive and negative credits for a given class may be less than zero as allowed under paragraph (3) of this section.

(3) If, as a result of production line testing as required in section 2407, an engine family is determined to be in noncompliance, the manufacturer may raise its FEL for past and future production as necessary. Further, a manufacturer may carry a negative credit balance (known also as a credit deficit) for the subject class and model year forward to the next model year. The credit deficit may be no larger than that created by the nonconforming family. If the credit deficit still exists after the model year following the model year in which the nonconformity occurred, the manufacturer must obtain and apply credits to offset the remaining credit deficit at a rate of 1.2 grams for each gram of deficit within the next model year. The provisions of this paragraph are subject to the limitations in paragraph (4) of this section.

(4) Regulations elsewhere in this section notwithstanding, if an engine manufacturer experiences two or more production line testing failures pursuant to the regulations in section 2407 of this article in a given model year, the manufacturer may raise the FEL of previously produced engines only to the extent that such engines represent no more than 10% of the manufacturer's total eligible sales for that model year. For any additional engines determined to be in noncompliance, the manufacturer must conduct offsetting projects approved in advance by the Executive Officer.

(5) If, as a result of production line testing under section 2407, a manufacturer desires to lower its FEL, it may do so subject to Executive Officer approval and demonstration that the family would meet the new FEL in the production line testing using the existing data.

(6) Except as allowed at paragraph (c) of this section, when a manufacturer is not in compliance with the applicable emission standard by the date 270 days after the end of the model year, considering all credit calculations and transactions completed by then, the manufacturer will be in violation of these regulations and the Executive Officer may, void *ab initio* the Executive Orders of engine families for which the manufacturer has not obtained sufficient positive emission credits.

(g) Certification Using Credits.

(1) In the application for certification a manufacturer must:

(A) Submit a statement that the engines for which certification is requested will not, to the best of the manufacturer's belief, cause the manufacturer to be in noncompliance under paragraph (f)(2) when all credits are calculated for all the manufacturer's engine families.

(B) Declare an FEL for each engine family for HC+NO_x (NMHC+NO_x) and Particulate Matter, if applicable. The FEL must have the same number of significant digits as the emission standard.

(C) Indicate the projected number of credits generated/needed for this family; the projected applicable eligible sales volume and the values required to calculate credits as given in paragraph (f).

(D) Submit calculations in accordance with paragraph (f) of projected emission credits (positive or negative) based on production projections for each family.

(E)1. If the engine family is projected to generate negative emission credits, state specifically the source (manufacturer/engine family or reserved) and quantity of the credits necessary to offset the credit deficit according to projected production.

2. If the engine family is projected to generate credits, state specifically the recipient (manufacturer/engine family or reserved) and quantity of the credits used to offset a deficit, banked, or traded, according to where the projected credits will be applied.

(2) The manufacturer may supply the information required above in subparagraphs (C), (D), and (E) by use of a spreadsheet detailing the manufacturer's annual production plans and the credits generated or consumed by each engine family.

(3) All Executive Orders issued are conditional upon manufacturer compliance with the provisions of this section both during and after the model year of production.

(4) Failure to comply with all provisions of this section will be considered to be a failure to satisfy the conditions upon which the Executive Order was issued, and the Executive Order may be determined to be void *ab initio*.

(5) The manufacturer bears the burden of establishing to the satisfaction of the Executive Officer that the conditions upon which the Executive Order was issued were satisfied or waived.

(6) Projected credits based on information supplied in the certification application may be used to obtain an Executive Order. However, any such credits may be revoked based on review of end-of-year reports, follow-up audits, and any other verification steps considered appropriate by the Executive Officer.

(h) Maintenance of records.

(1) The manufacturer must establish, maintain, and retain the following adequately organized and indexed records for each engine family:

(A) ARB engine family identification code,

(B) Family Emission Limit (FEL) or FELs where FEL changes have been implemented during the model year,

(C) Maximum modal power for each configuration sold or an alternative approved by the Executive Officer.

(D) Projected sales volume for the model year, and

(E) Records appropriate to establish the quantities of engines that constitute eligible sales for each power rating for each FEL.

(2) Any manufacturer producing an engine family participating in trading reserved credits must maintain the following records on a quarterly basis for each such engine family:

(A) The engine family,

(B) The actual quarterly and cumulative applicable production/sales volume,

(C) The values required to calculate credits as given in paragraph (f),

(D) The resulting type and number of credits generated/required,

(E) How and where credit surpluses are dispersed, and

(F) How and through what means credit deficits are met.

(3) The manufacturer must retain all records required to be maintained under this section for a period of eight years from the due date for the end-of-model year report. Records may be retained as hard copy or reduced to microfilm, diskettes, and so forth, depending on the manufacturer's record retention procedure; provided, that in every case all information contained in the hard copy is retained.

(4) Nothing in this section limits the Executive Officer's discretion in requiring the manufacturer to retain additional records or submit information not specifically required by this section.

(5) Pursuant to a request made by the Executive Officer, the manufacturer must submit to the Executive Officer the information that the manufacturer is required to retain.

(6) ARB may void *ab initio* the Executive Order for an engine family for which the manufacturer fails to retain the records required in this section or to provide such information to the Executive Officer upon request.

(i) End-of-year and final reports.

(1) End-of-year and final reports must indicate the engine family, the actual sales volume, the values required to calculate credits as given in paragraph (f), and the number of credits generated/required. Manufacturers must also submit how and where credit surpluses were dispersed (or are to be banked) and/or how and through what means credit deficits were met. Copies of contracts related to credit trading must be included or supplied by the broker, if applicable. The report must include a calculation of credit balances to show that the credit summation for each class of engines is equal to or greater than zero (or less than zero in cases of negative credit balances as permitted in paragraph (f)(3)).

(2) The calculation of eligible sales (as defined in section 2401) for end-of-year and final reports must be based on the location of the point of first retail sale (for example, retail customer or dealer) also called the final product purchase location. Upon advance written request, the Executive Officer will consider other methods to track engines for credit calculation purposes, such as shipments to distributors of products intended for sale in California, that provide high levels of confidence that eligible sales are accurately counted.

(3)(A) End-of-year reports must be submitted within 90 days of the end of the model year to: Chief, Mobile Source Operations Division, Air Resources Board, 9528 Telstar, El Monte, CA 91731.

(B) Unless otherwise approved by the Executive Officer, final reports must be submitted within 270 days of the end of the model year to: Chief, Mobile Source Operations Division, Air Resources Board, 9528 Telstar, El Monte, CA 91731.

(4) Failure by a manufacturer to submit any end-of-year or final reports in the specified time for any engines subject to regulation under this section is a violation of Section 2403 for each engine.

(5) A manufacturer generating credits for banking only who fails to submit end-of-year reports in the applicable specified time period (90 days after the end of the model year) may not use the credits until such reports are received and reviewed by ARB. Use of projected credits pending ARB review is not permitted in these circumstances.

(6) Errors discovered by ARB or the manufacturer in the end-of-year report, including errors in credit calculation, may be corrected in the final report.

(7) If ARB or the manufacturer determines that a reporting error occurred on an end-of-year or final report previously submitted to ARB under this section, the manufacturer's credits and credit calculations must be recalculated. Erroneous positive credits will be void except as provided in paragraph (h) of this section. Erroneous negative credit balances may be adjusted by ARB.

(8) If within 270 days of the end of the model year, ARB review determines a reporting error in the manufacturer's favor (that is, resulting in an increased credit balance) or if the manufacturer discovers such an error within 270 days of the end of the model year, ARB must restore the credits for use by the manufacturer.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43150-43154, 43205.5 and 43210-43212, Health and Safety Code.

HISTORY

1. New section filed 3-23-99; operative 3-23-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 13).

2. Amendment of subsections (a) and (a)(6), repealer of subsections (a)(6)(A)-(C), amendment of subsection (f)(1) and redesignation of subsections (g)(1)(E)(i)-(ii) as (g)(1)(E)1.-2. filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2409. Emission Reduction Credits — Production Credit Program for New Engines.

(a) Applicability. The 1998 model year and later small off-road engines subject to the provisions of this article are eligible to participate in the production emission credit program described in this section for HC + NO_x (or NMHC + NO_x, as applicable) and Particulate Matter emissions.

(b) General provisions.

(1) The production credit program for eligible small off-road engines is described in this section. Participation in this program is voluntary.

(2) Any 2000 model year or later engine family subject to the provisions of this article is eligible to participate in the production emissions credit program described in this section provided it conforms with the requirements of section 2403.

(3) Credits generated and used in the certification averaging, banking, and trading program pursuant to the provisions of section 2408 may not be used in the production credit program.

(4) An engine family with a compliance level, as determined by production line testing pursuant to section 2407, below the applicable FEL to which the engine family is certified may generate emission credits for averaging, banking, or trading in the production credit program.

(5) Positive credits generated in a given model year may be used in that model year and/or in any subsequent model year.

(c) Averaging.

(1) A manufacturer may use averaging across engine families to demonstrate a zero or positive credit balance for a model year. Positive credits to be used in averaging may be obtained from credits generated by another engine family of the same model year, credits banked in previous model years, or credits obtained through trading.

(2) Production emission credits used for the certification emission credit program must be discounted 1.1 grams to 1 gram.

(d) Banking.

(1) A manufacturer of an engine family with a production compliance level below the FEL to which the engine family is certified for a given model year may bank positive production credits for that model year for use in certification averaging, trading, or, at the Executive Officer's discretion, to remedy noncompliance of another engine family.

(2) Unless otherwise approved by the Executive Officer, a manufacturer that generates positive production credits must wait 30 days after it has both completed production testing for the model year for which the credits were generated and submitted the report required by paragraph (g)(1) before it may bank credits for use in future averaging or trading. During the 30 day period, the Executive Officer will work with the manufacturer to correct any error in calculating banked credits, if necessary.

(e) Trading.

(1) An engine manufacturer may exchange positive production emission credits with other engine manufacturers through trading.

(2) Production credits for trading can be obtained from credits banked for model years prior to the model year of the engine family requiring production credits.

(3) Traded production credits can be used for certification averaging or banking.

(4) Unless otherwise approved by the Executive Officer, a manufacturer that generates positive production credits must wait 30 days after it has both completed production testing for the model year for which the credits were generated and submitted the report required by paragraph (g)(1) before it may transfer credits to another manufacturer or broker.

(5) In the event of a negative credit balance resulting from a transaction, both the buyer and the seller are liable, except in cases involving fraud. Engine families participating in a trade that leads to a negative credit balance may be subject to suspension or revocation of the Executive Order if the engine manufacturer having the negative credit balance is unable or unwilling to obtain sufficient credits in the time allowed.

(f) Credit calculation. For each participating engine family, and for each regulated pollutant ($\text{HC}+\text{NO}_x$ ($\text{NMHC}+\text{NO}_x$) and Particulate Matter) emission credits (positive or negative) are to be calculated according to the following equation and rounded to the nearest gram. Consistent units are to be used throughout the equation:

$$\text{Credits} = (\text{FEL} - \text{CL}) \times \text{Sales} \times \text{Power} \times \text{EDP} \times \text{Load Factor}$$

Where:

FEL = The applicable Family Emission level to which the engine family was certified.

CL = compliance level of the deteriorated production line testing results for the subject pollutant in g/bhp-hr or g/kW-hr as applicable.

Sales = sales or eligible sales as defined in section 2401.

Power = the sales weighted maximum modal power, in horsepower or kilowatts as applicable, as calculated from the applicable test procedure as described in Section 2403. This is determined by multiplying the maximum modal power of each configuration within the family by its eligible

sales, summing across all configurations and dividing by the eligible sales of the entire family. Where testing is limited to certain configurations designated by the Executive Officer, the maximum modal power for the individual configuration(s) must be used. Manufacturers may use an alternative if approved by the Executive Officer.

EDP = the Emissions Durability Period for which the engine family was certified.

Load Factor = For Test Cycle A and Test Cycle B, the Load Factor = 47% (i.e., 0.47). For Test Cycle C, the Load Factor = 85% (i.e., 0.85). For approved alternate test procedures, the load factor must be calculated according to the Load Factor formula found in paragraph (f)(1) of Section 2408.

(g) Maintenance of records.

(1) Any manufacturer that is participating in the production credit program set forth in this section must establish, maintain, and retain the records required by paragraph (h) of Section 2408 with respect to its participation in the production credit program.

(2) The Executive Officer may void *ab initio* an Executive Order for an engine family for which the manufacturer fails to retain the records required under this section or to provide such information to the Executive Officer upon request.

(h) Reporting requirements.

(1) Any manufacturer who participates in the production credit program is required to submit a production credit report with the end of the model year production testing report required under Section 2407 within 90 days of the end of the production testing of a given model year's engine families. This report must show the calculation of credits from all the production testing conducted by the manufacturer for a given model year's engines. Such report must show the applications of credits, the trading of credits, the discounting of credits that are used and the final credit balance. The manufacturer may submit corrections to such end of model year reports in a final report for a period of up to 270 days after the end of the production testing of a given model year's engine families.

(2) The calculation of eligible sales (as defined in section 2401) for end-of-year and final reports must be based on the location of the point of first retail sale (for example, retail customer or dealer) also called the final product purchase location. Upon advance written request, the Executive Officer will consider other methods to track engines for credit calculation purposes, such as shipments to distributors of products intended for sale in California, that provide high levels of confidence that eligible sales are accurately counted.

(3) Reports must be submitted to: Chief, Mobile Source Operations Division, Air Resources Board, 9528 Telstar, El Monte, CA 91731.

(4) A manufacturer that fails to submit a timely end of year report as required in paragraph (h)(1) of this section will be considered ineligible to have participated in the production credit program.

(5) If the Executive Officer or the manufacturer determines that a reporting error occurred on an end of model year report previously submitted under this section, or an engine family production testing report submitted under section 2407, the manufacturer's credits and credit calculations will be recalculated. Erroneous positive credits will be void. Erroneous negative credits may be adjusted by the Executive Officer. An update of previously submitted "point of first retail sale" information is not considered an error and no increase in the number of credits will be allowed unless an actual error occurred in the calculation of credits due to an error in the "point of first retail sale" information from the time of the original end of model year report.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43150-43154, 43205.5 and 43210-43212, Health and Safety Code.

HISTORY

1. New section filed 3-23-99; operative 3-23-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 13).

2. Amendment of subsections (c)(2) and (f) filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

Article 3. Off-Highway Recreational Vehicles and Engines

§ 2410. Applicability.

(a)(1) This article applies to all new off-highway recreational vehicles and engines manufactured for use in such vehicles produced on or after January 1, 1997, for sale, lease, use, and introduction into commerce in California. (See Note below.)

(2) New off-highway recreational vehicles and engines used in such vehicles, subject to any of the standards set forth in Article 3, shall be certified for use and sale by the Air Resources Board and covered by an Executive Order, pursuant to Section 2412 of this Article.

(b) Each part of this article is severable, and in the event that any part of this chapter or article is held to be invalid, the remainder of this article continues in full force and effect.

(c) This article includes provisions for certification, labeling requirements, emission standard enforcement, recall, and use restrictions.

NOTE: Under section 209(e)(2) of the Federal Clean Air Act (42 U.S.C. § 7543(e)(2)), California is required to receive authorization from the Administrator of the U.S. Environmental Protection Agency (U.S. EPA) prior to enforcing its regulations regarding new off-road vehicles and engines. Accordingly, the Air Resources Board will not seek to enforce the off-highway recreational vehicle regulations until such time as it receives authorization from the U.S. EPA.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43104, 43105, 43107 and 43205.5, Health and Safety Code. Reference: Sections 43013, 43018, 43101, 43104, 43105, 43107 and 43205.5, Health and Safety Code.

HISTORY

1. New article 3 (sections 2410-2414) and section filed 1-26-95; operative 1-26-95 pursuant to Government Code section 11343.4(d) (Register 95, No. 4). Note: Under section 209(e)(2) of the Federal Clean Air Act (42 U.S.C. § 7543(e)(2)), California is required to receive authorization from the Administrator of the U.S. Environmental Protection Agency (U.S. EPA) prior to enforcing its regulations regarding new off-road vehicles and engines. Accordingly, the Air Resources Board will not seek to enforce the off-highway recreational vehicle regulations until such time as it receives authorization from the U.S. EPA.
2. U.S. EPA granted California authorization on December 23, 1996 (61 Fed. Reg. 69093, December 31, 1996).
3. Amendment of subsection (a)(1) filed 3-23-99; operative 3-23-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 13).
4. Amendment filed 12-8-99; operative 1-7-2000 (Register 99, No. 50).

§ 2411. Definitions.

(a) The definitions in Section 1900(b), Chapter 1, Division 3, Title 13 of the California Code of Regulations, apply with the following additions:

(1) "All-Terrain Vehicle (ATV)" means any off-highway motor vehicle 50 inches (1270 mm) or less in overall width that has all of the following features and characteristics: designed to travel on four or more low pressure tires, having a single seat designed to be straddled by the operator or a single seat designed to be straddled by the operator and a seat for no more than one passenger, having handlebars for steering control, and is powered by an internal combustion engine. Width shall be exclusive of accessories and optional equipment. A golf cart, off-road sport vehicle, off-road utility vehicle, or sand car is not, for purposes of this regulation, to be classified as an all-terrain vehicle.

(2) "ARB Enforcement Officer" means any employee of the Air Resources Board so designated in writing by the Executive Officer of the Air Resources Board or by the Executive Officer's designee.

(3) "Assembly-Line Tests" are those tests or inspections which are performed on or at the end of the assembly-line.

(4) "Confirmatory testing" means an ARB directed follow-up emissions test and inspection of the test engine or test vehicle that had been used by the manufacturer to obtain test data for submittal with the certification application. The emissions tests can be conducted at ARB or contracted-out facilities or at the manufacturer's facility.

(5) "Crankcase Emissions" means airborne substances emitted into the atmosphere from any portion of the engine crankcase ventilation or lubrication system.

(6) "Emission Control System" includes any component, group of components, or engine modification which controls or causes the reduction of substances emitted from an engine.

(7) "End of Assembly-Line" is defined as that place where the final inspection test or quality-audit test is performed by the manufacturer.

(8) "Exhaust Emissions" means substances emitted into the atmosphere from any opening downstream from the exhaust port of an engine.

(9) "Final Calendar Quarter Production" is defined as the calendar quarter in which the production of an engine family ends.

(10) "Fuel System" means the combination of any of the following components: fuel tank, fuel pump, fuel lines, oil injection metering system, carburetor or fuel injection components, evaporative controls and all fuel system vents.

(11) "Golf Cart" means a vehicle used to convey equipment and no more than two persons, including the driver, to play the game of golf in an area designated as a golf course. Golf carts are designed to have an unladen weight of less than 1,300 pounds and carry not more than 100 pounds, excluding passengers, accessories and optional equipment. A golf cart is not used for grounds keeping or maintenance purposes.

(12) "Manufacturer" means the engine or vehicle manufacturer that applies to have the vehicle or engine certified.

(13) "Off-Highway Recreational Vehicle Engines" or "Engines" are identified as: two-stroke or four-stroke, air-cooled, liquid-cooled, gasoline, diesel, or alternate fuel powered engines or electric motors that are designed for powering off-road recreational vehicles and engines included in the following: off-road motorcycles, all-terrain vehicles, off-road sport vehicles, off-road utility vehicles, sand cars, and golf carts. All engines and equipment that fall within the scope of the preemption of Section 209(e)(1)(A) of the Federal Clean Air Act, as amended, and as defined by regulation of the Environmental Protection Agency, are specifically not included within this category.

(14) "Off-Highway Vehicle (OHV) Area" is defined as a public land area in which the riding of off-highway recreational vehicles is allowed. These areas are managed by public land agencies, such as the California Department of Parks and Recreation, the Bureau of Land Management, the United States Forest Service, cities, counties, and other jurisdictions.

(15) "Off-Road Equipment and Vehicle" means any non-stationary device, powered by an internal combustion engine or electric motor, used primarily off the highways, to propel, move, or draw persons or property including any device propelled, moved, or drawn exclusively by human power, and used in, but not limited to the following applications: Marine Vessels, Construction/Farm Equipment, Locomotives, Utility engines and Lawn and Garden Equipment, Off-Road Motorcycles, and Off-Highway Vehicles.

(16) "Off-Road Motorcycle" means any two- or three-wheeled vehicle equipped with an internal combustion engine and weighing less than 1,499 pounds. An off-road motorcycle is primarily designed for use off highways. These vehicles are mainly used for recreational riding on dirt trails but are not limited to this purpose.

(17) "Off-Road Sport Vehicle" means any off-highway motor vehicle that has all of the following features and characteristics: designed to travel on four wheels, having bench or bucket seating for one or more persons, having a steering wheel for steering control, designed for operation over rough terrain, having a rear payload not exceeding 600 pounds, having an internal combustion engine with a displacement less than or equal to one liter, and is capable of speeds 25 miles per hour or more. Vehicles otherwise meeting the definition for sand cars but powered by an engine with a displacement less than or equal to one liter are considered off-road sport vehicles.

(18) "Off-Road Utility Vehicle" means any off-highway motor vehicle that has all of the following features and characteristics: designed

to travel on four or more wheels, having bench or bucket seating for two or more persons, having a steering wheel for steering control, designed for operation over rough terrain, having an internal combustion engine with a displacement less than or equal to one liter, having a maximum brake power less than or equal to 30 kilowatts, capable of speeds 25 miles per hour or more, and having either 1) a rear payload of 350 pounds or more, or 2) seating for six or more passengers.

(19) "Sand Car" means any off-highway motor vehicle that has all of the following features and characteristics: designed to travel on four wheels, having bench or bucket seating for one or more persons, having a steering wheel for steering control, designed primarily for operation over sand dunes, and is powered by an internal combustion engine with a displacement greater than one liter. Vehicles otherwise meeting the criteria in the previous sentence that are powered by an engine with a displacement less than or equal to one liter are considered off-road sport vehicles.

(20) "Scheduled Maintenance" means any adjustment, repair, removal, disassembly, cleaning, or replacement of components or systems required by the manufacturer which is performed on a periodic basis to prevent part failure or equipment or engine malfunction, or anticipated as necessary to correct an overt indication of malfunction or failure for which periodic maintenance is not appropriate.

(21) "Ultimate Purchaser" means the first person who in good faith purchases or leases a new engine, vehicle, or piece of equipment for purposes other than resale.

(22) "Unscheduled Maintenance" means any inspection, adjustment, repair, removal, disassembly, cleaning, or replacement of components or systems which is performed to correct or diagnose a part failure which was not anticipated.

(23) "Vehicle Identification Number (VIN)" means an alpha numeric code which has been permanently assigned by the manufacturer to a vehicle. The VIN is unique to each vehicle and may contain information deemed necessary by governing agencies. If a manufacturer cannot obtain a federal VIN from the National Highway Traffic Safety Administration for their vehicles, an alternative VIN approved by the Executive Officer of the Air Resources Board may be used. Unless otherwise noted, the VIN and alternate VIN will follow formats specified in the Code of Federal Regulations 49, Chapter V, Parts 565, 566, and 571, which are incorporated herein by reference.

(24) "Zero Emission Vehicle" means any vehicle which produces zero exhaust emissions of any criteria pollutant under any and all possible operational modes.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101 and 43107, Health and Safety Code. Reference: Sections 43013, 43018, 43101 and 43107, Health and Safety Code.

HISTORY

1. New section filed 1-26-95; operative 1-26-95 pursuant to Government Code section 11343.4(d) (Register 95, No. 4). Note: Under section 209(c)(2) of the Federal Clean Air Act (42 U.S.C. § 7543(e)(2)), California is required to receive authorization from the Administrator of the U.S. Environmental Protection Agency (U.S. EPA) prior to enforcing its regulations regarding new off-road vehicles and engines. Accordingly, the Air Resources Board will not seek to enforce the off-highway recreational vehicle regulations until such time as it receives authorization from the U.S. EPA.
2. U.S. EPA granted California authorization on December 23, 1996 (61 Fed.Reg. 69093, December 31, 1996).
3. Repealer of subsection (a)(19) and subsection renumbering filed 10-19-99; operative 11-18-99 (Register 99, No. 43).
4. Amendment filed 12-8-99; operative 1-7-2000 (Register 99, No. 50).
5. Amendment of subsections (a)(1) and (a)(13), new subsections (a)(17)-(19) and subsection renumbering filed 7-16-2007; operative 8-15-2007 (Register 2007, No. 29).

§ 2412. Emission Standards and Test Procedures — New Off-Highway Recreational Vehicles and Engines.

(a) This section applies to all off-highway recreational vehicles and engines used in such vehicles produced on or after January 1, 1997.

(b) For purposes of certification in California, manufacturers must comply with the following exhaust and evaporative emissions from new off-highway recreational vehicles and engines that are sold, leased, used, or introduced into commerce in California.

(1) Exhaust emissions must not exceed:

Exhaust Emission Standards Based on Chassis-Based Testing

<i>Vehicle & Model Year</i>	<i>Hydrocarbon (HC)</i>	<i>Oxides of Nitrogen (NO_x)</i>	<i>Carbon Monoxide (CO)</i>	<i>Particulate Matter⁽⁴⁾</i>
Off-Road Motorcycles and All-Terrain Vehicles with Engines Greater Than 90 cc ⁽¹⁾ 1997 and Later (g/km) ⁽²⁾	1.2 ⁽³⁾	—	15.0	—
Off-Road motorcycles and All-Terrain Vehicles with Engines 90 cc or Less 1999 and Later (g/km)	1.2 ⁽³⁾	—	15.0	—
Off-Road Motorcycle and All-Terrain Vehicle Option: 1997 and Later Vehicles with Engines Greater Than 90 cc, and 1999 and Later Vehicles with Engines 90 cc or Less	Vehicles and engines that do not meet the emissions standards noted above may be certified subject to the use restrictions described in subsection (f) below.			
Off-Road Sport Vehicles and Off-Road Utility Vehicles 2007 and Later (g/km)	1.2 ⁽³⁾	—	15.0	—
Sand Cars 2007 and Later (g/km)	1.2 ⁽³⁾	—	15.0	—
Golf Carts in Federal Ozone Non-Attainment Areas 1997 and Later	ZERO	ZERO	ZERO	ZERO

1. Cubic centimeters.

2. Grams per kilometer.

3. Compliance with the 1.2 grams per kilometer HC standard to be applied as a "corporate average" shall be determined as provided in subsection (d). Each engine family shall have only one applicable standard.

4. Applicable to diesel and two-stroke spark ignited engines only.

Emission Standards Based on Optional Engine-Based Testing⁽¹⁾

<i>Vehicle & Model Year</i>	<i>Hydrocarbon plus Oxides of Nitrogen (HC + NO_x)</i>	<i>Carbon Monoxide (CO)</i>	<i>Particulate Matter⁽³⁾</i>
All-Terrain Vehicles with engines less than 225 cc ⁽²⁾ 1997 and Later (g/kW-hr) ⁽³⁾	16.1 ⁽⁴⁾	400	—
All Terrain Vehicles with engines greater than or equal to 225 cc 1997 and Later (g/kW-hr)	13.4 ⁽⁴⁾	400	—
Off-Road Sport Vehicles and Off-Road Utility Vehicles 2007 and Later (g/kW-hr)	12.0 ⁽⁴⁾	400	—
Sand Cars 2007 and Later (g/kW-hr)	13.4 ⁽⁴⁾	400	—

1. All-Terrain Vehicles, Off-Road Sport Vehicles, Off-Road Utility Vehicles, and Sand Cars may use the utility test procedures set forth in the "California Exhaust Emission Standards and Test Procedures for 1995-2004 Small Off-Road

Engines," as incorporated by reference in CCR, title 13, section 2403(d). The test cycle is limited to the 6-mode Test Cycle A only.

2. Cubic centimeters.

3. Grams per kilowatt-hour.

4. Compliance with the optional HC+NO_x standard to be applied as a "corporate average" shall be determined as provided in subsection (d). Each engine family shall have only one applicable standard.

5. Applicable to diesel and two-stroke spark ignited engines only.

(2) Evaporative emissions. With the exception of vehicles certified solely with compression-ignition engines, evaporative emissions must not exceed:

Evaporative Emissions			
Vehicle & Model Year	Emission Component	Permeation Standard	Test Temperature
ALL Off-Highway Recreational Vehicles 2008 and Later g/m ² /day ⁽¹⁾	Fuel Tank Permeation	1.5	28 °C (82 °F)
	Hose Permeation	15.0	23 °C (73 °F)

1. Grams per square meter per day.

(c)(1) The test procedures for determining certification and compliance with the standards for exhaust and evaporative emissions from new off-highway recreational vehicles are set forth in "California Exhaust Emission Standards and Test Procedures for 1997 and Later Off-Highway Recreational Vehicles and Engines," adopted November 23, 1994, and last amended August 15, 2007, which are hereby incorporated by reference herein and which in turn incorporate by reference Subparts E and F of Part 86, and Subparts A, B, C, F and I of Part 1051, Title 40, Code of Federal Regulations. Manufacturers of the following are not required to perform emissions testing, but must file an application of certification and comply with the administrative requirements outlined in the procedures to certify their vehicles for sale in California:

(A) Golf carts,

(B) Off-road motorcycles and all-terrain vehicles, and engines used in such vehicles, as described in subsection (f) below.

(2) The test procedures for determining certification and compliance with the standards for exhaust emissions from all-terrain vehicle, off-road sport vehicle, off-road utility vehicle, and sand car engines (those engines utilizing the engine-based optional standards noted in (b) above) are set forth in "California Exhaust Emission Standards and Tests Procedures for 1995-2004 Small Off-Road Engines," adopted March 20, 1992, and last amended July 26, 2004.

(d)(1) For chassis-based testing, compliance with a standard to be applied as a "corporate average" shall be determined as follows:

$$\frac{\sum_{j=1}^n (\text{PROD})_{jx} (\text{STD})_{jx}}{\sum_{j=1}^n (\text{PROD})_{jx}} = \text{STD}_{ca}$$

n = Off-highway recreational vehicle engine families.

PROD_{jx} = Number of units in engine family j produced for sale in California in model year x

STD_{jx} = The manufacturer designated HC exhaust emission standard for engine family j in model year x , which shall be determined by the manufacturer subject to the following conditions: (1) no individual engine family exhaust emission standard shall exceed 2.5 g/km, and (2) no engine family designation or engine family exhaust emission standard shall be amended in a model year after the engine family is certified for the model year, and (3) prior to sale or offering for sale in California, each engine family shall be certified in accordance with "California Exhaust Emissions Standards and Test Procedures for 1997 and Later Off-Highway Recreational Vehicles and Engines" adopted November 23, 1994, and shall be required to meet the manufacturer's designated HC exhaust emission standard as a condition of the certification Executive Order. Prior to certification the manufacturer shall also submit estimated

production volumes for each engine family to be offered for sale in California.

STD_{ca} = A manufacturer's corporate average HC exhaust emissions from those California off-highway recreational vehicles subject to the California corporate average HC exhaust emissions standard, as established by an Executive Order certifying the California production for the model year. This order must be obtained prior to the issuance of certification Executive Orders for individual engine families for the model year and shall include but not be limited to the following requirements in subsection (e) below:

(2) For the optional engine-based testing, compliance with a standard to be applied as a "corporate average" shall be determined as follows:

$$\sum_{j=1}^n \frac{(\text{FEL}_j)(\text{Sales}_j)(\text{Power}_j)(\text{Load Factor})(\text{EDP}_j)}{(\text{Sales}_j)(\text{Power}_j)(\text{Load Factor})(\text{EDP}_j)} = \text{STD}_{ca}$$

where

n = the number of small off-road engine families.
 FEL = the Family Emission Level for an engine family.
 Sales_j = the eligible sales of engine family j .
 Power_j = the sales-weighted maximum modal power (in kilowatts) of engine family j , or an alternative approved by the Executive Officer.
 EDP_j = the Emissions Durability Period of engine family j .
 Load Factor = the Load Factor is 47% (i.e., 0.47).
 STD_{ca} = A manufacturer's corporate average HC+NO_x exhaust emissions from those California off-highway recreational vehicles subject to the California corporate average HC+NO_x exhaust emissions standard, as established by an Executive Order certifying the California production for the model year. This order must be obtained prior to the issuance of certification Executive Orders for individual engine families for the model year and shall include but not be limited to the following requirements in subsection (e) below:

(e)(1) During the manufacturer's production year, for each vehicle produced for sale in California, the manufacturer must provide the following information to the Executive Officer within 30 days after the last day in each calendar quarter:

(A) vehicle identification numbers and an explanation of the identification code if applicable;

(B) model number and engine size of vehicle;

(C) the total number of vehicles marketed and produced for sale in California and their applicable designated emissions standards.

(2) The manufacturer's average HC or HC+NO_x exhaust emissions, as applicable, shall meet the corporate average standard at the end of the manufacturer's production for the model year.

(3) Production and sale of vehicles which result in non-compliance with the California standard for the model year shall cause a manufacturer to be subject to civil penalties, according to applicable provisions of the Health and Safety Code. All excess emissions resulting from non-compliance with the California standard shall be made up in the following model year.

(4) For a period of up to one year following the end of the model year, for each model the manufacturer shall submit California sales and registration data as it becomes available.

(f) Off-road motorcycles and ATVs, and engines used in such vehicles, that do not meet the emissions standards in subsection (b) above may operate only during certain periods of time at certain off-highway vehicle (OHV) riding areas. Section 2415 of this Article lists these California OHV riding areas and their associated riding seasons for off-highway recreational vehicles that are subject to use restrictions.

(g)(1) On or after January 1, 1997, no new engines greater than 90 cc may be produced for sale to replace off-road motorcycles, all-terrain vehicles and engines used in such vehicles, unless those engines comply with the emission control standards in effect at the time of replacement.

(2) On or after January 1, 1997, manufacturers may not produce for sale in federal ozone non-attainment areas of California new, non-zero emission engines for golf carts.

(3) On or after January 1, 1999, no new engines 90 cc or less may be produced for sale to replace off-road motorcycle and all-terrain vehicle engines, unless those engines comply with the emission control standards in effect at the time of replacement.

(4) On or after January 1, 2007, no new engines may be produced for sale to replace engines in off-road sport vehicles, off-road utility vehicles, or sand cars, unless those engines comply with the emission control standards in effect at the time of replacement.

(h) The Executive Officer may find that any off-highway recreational vehicles or engines used in such vehicles certified to comply with California emission standards and test procedures for on-road or other off-road applications are in compliance with these regulations.

(i) No crankcase emissions shall be discharged into the ambient atmosphere from the following vehicles, or from engines used in such vehicles:

(1) 1997 and later off-road motorcycles, all-terrain vehicles, golf carts;

(2) 2007 and later off-road sport vehicles, off-road utility vehicles, and sand cars.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43107, Health and Safety Code. Reference: Sections 43013, 43018, 43102, 43104 and 43107, Health and Safety Code.

HISTORY

1. New section filed 1-26-95; operative 1-26-95 pursuant to Government Code section 11343.4(d) (Register 95, No. 4). Note: Under section 209(e)(2) of the Federal Clean Air Act (42 U.S.C. § 7543(e)(2)), California is required to receive authorization from the Administrator of the U.S. Environmental Protection Agency (U.S. EPA) prior to enforcing its regulations regarding new off-road vehicles and engines. Accordingly, the Air Resources Board will not seek to enforce the off-highway recreational vehicle regulations until such time as it receives authorization from the U.S. EPA.
2. U.S. EPA granted California authorization on December 23, 1996 (61 Fed. Reg. 69093, December 31, 1996).
3. Editorial correction of subsections (d) and (e) (Register 97, No. 8).
4. Amendment of Table in subsection (b) and footnote 6 filed 2-20-97; operative 2-20-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 8).
5. Change without regulatory effect amending subsection (b) table filed 5-14-97 pursuant to section 100, title 1, California Code of Regulations (Register 97, No. 20).
6. Amendment filed 3-23-99; operative 3-23-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 13).
7. Amendment of subsection (b) — Emissions Standards table and amendment of subsection (c)(1) filed 10-19-99; operative 11-18-99 (Register 99, No. 43).
8. Amendment filed 12-8-99; operative 1-7-2000 (Register 99, No. 50).
9. Change without regulatory effect amending subsection (b) filed 4-14-2003 pursuant to section 100, title 1, California Code of Regulations (Register 2003, No. 16).
10. Amendment of section and NOTE filed 7-16-2007; operative 8-15-2007 (Register 2007, No. 29).

§ 2413. Emission Control Labels — New Off-Highway Recreational Vehicles.

(a) Purpose. The Air Resources Board recognizes that certain emissions—critical or emissions—related parts must be properly identified and maintained in order for off-highway recreational vehicles, and engines used in such vehicles, to comply with the applicable emission standards. The purpose of this section is to require off-highway recreational vehicle engine manufacturers to attach a label (or labels) on each production vehicle (or engine) in order to provide vehicle owners and service mechanics with information necessary for the proper maintenance of these vehicles and engines in customer use.

(b) Applicability

(1) All off-highway recreational vehicles, and engines used in such vehicles, except those certified according to section 2412(f), produced on or after January 1, 1997, for sale, lease, use or introduction into commerce in California, shall comply with these labeling requirements.

(2) Any off-road motorcycle, all-terrain vehicle, and engines used in such vehicles, that are exempt from exhaust emission standards pursuant to title 13 of the California Code of Regulations shall also be exempt from the requirements of this section.

(3) The responsibility for compliance with this section rests with the manufacturer who has been granted certification in order to offer these vehicles and engines for sale in California.

(c) Label Content and Location

(1) A tune-up label made of a permanent material shall be welded, riveted or otherwise permanently attached to an area on the off-highway recreational vehicle or engine in such a manner that the label will be readily visible to the average person after the engine installation.

(2) In selecting an acceptable location, the manufacturer shall consider the possibility of accidental damage (e.g., possibility of tools or sharp instruments coming in contact with the label). Each label shall be affixed in such a manner that it cannot be removed without destroying or defacing the label, and shall not be affixed to any part that is likely to be replaced during the vehicle's useful life.

(3) The tune-up label shall be in the English language, and use block letters and numerals, which shall be of a color that contrasts with the background color of the label.

(4) The tune-up label shall contain the following information:

(A) A label heading that shall read: "Vehicle Emission Control Information."

(B) The complete corporate name and trademark of the manufacturer.

(C) Engine family name and engine displacement (in cubic centimeters).

(D) Identification of the Exhaust Emission Control System Abbreviations may be used and shall conform to the nomenclature and abbreviations found in the Society of Automotive Engineers' document J1930, which is incorporated by reference in section 1977, title 13, CCR, entitled "Electrical/Electronic Systems Diagnostic Terms, Definitions, Abbreviations, and Acronyms."

(E) The tune-up specifications and adjustments recommended by the manufacturer, including, if applicable: valve lash, ignition timing, idle air fuel mixture setting procedure and value (e.g., CO, idle speed drop), and high idle speed. These specifications shall indicate the proper transmission position during tune-up and what accessories, if any, should be in operation, and what systems, if any (e.g., vacuum advance, air pump), should be disconnected during the tune-up. Any tune-up specifications or adjustment instructions that appear on labels shall be sufficiently clear and complete so as to preclude the need for a mechanic or vehicle owner to consult other references in order to correctly perform the adjustments. The manufacturer shall include the single statement: "No other adjustments needed," in lieu of any tune-up adjustment instruction, when the manufacturer does not recommend a tune-up specification or an adjustment.

(F) Any specific fuel or engine lubricant requirements (e.g., research octane number, engine lubricant type, etc.).

(G) An unconditional statement of compliance with the appropriate model-year California regulations. For example, "This (specify off-road motorcycle, all-terrain vehicle, off-road sport vehicle, off-road utility vehicle, sand car, or engine, as applicable) conforms to California regulations applicable to (specify applicable model year) model-year new (specify off-road motorcycles, all-terrain vehicles, off-road sport vehicles, off-road utility vehicles, sand cars, or engines, as applicable). The statement shall also include the phrase, "is certified to (specify applicable HC standard in grams per kilometer) HC engine family exhaust emission standard in California" or the phrase "is certified to (specify applicable HC+NO_x standard in grams per kilowatt-hour) HC+NO_x engine family exhaust emission standard in California."

(H) Statements such as those in (G) shall not appear on labels placed on off-highway recreational vehicles or engines that do not comply with all applicable California regulations.

(5) A manufacturer may elect to use a supplemental label when the original label lacks sufficient space to include all the required information. A supplemental label shall conform to all of the specifications as the original label. The original label shall be indicated as "1 of 2" and the supplemental label shall be indicated as "2 of 2" whenever a supplemental label is utilized.

(6) The provisions of this section shall not prevent a manufacturer from also reciting on the label that such off-highway recreational vehicle or engine conforms to any applicable federal emission standards for new off-road motorcycles, all-terrain vehicles, off-road utility vehicles or engines used in such vehicles, or any other information that such manufacturer deems necessary for, or useful to, the proper operation and satisfactory maintenance of such off-highway vehicles or engines.

(7) As used in this Section 2413(c), readily visible to the average person means that the label shall be readable from a distance of 18 inches (46 centimeters) without any obstructions from vehicle or engine parts (including all manufacturer available optional equipment) except for flexible parts (e.g., vacuum hoses, ignition wires) that can be moved out of the way without disconnection. Alternatively, information required by these specifications to be printed on the label shall be no smaller than 8 point type size (2 millimeters in height) provided that no vehicle or engine parts (including all manufacturer available optional equipment), except for flexible parts, obstruct the label.

(8) The labels and any adhesives used shall be designed to withstand, for the off-highway recreational vehicle's total expected life, typical off-highway recreational vehicle environmental conditions at the location where a label has been attached. Typical off-highway recreational vehicle environmental conditions include, but are not limited to, exposure to engine fuels, lubricants and coolants (e.g., gasoline, motor oil, brake fluids, ethylene glycol), engine operating temperatures, steam cleaning, and paints or paint solvents. The manufacturer must submit, with its certification application, a statement attesting that its labels comply with this requirement.

(9) The manufacturer must obtain approval from the Executive Officer for all emission control label formats and locations prior to certification. Approval of the specific tune-up specifications and adjustments is not required; however, the format for all such specifications and adjustments, if any, is subject to review. If the Executive Officer finds that the information on the label is vague or subject to misinterpretation, or that the location does not comply with these specifications, the Executive Officer may require that the label or its location be modified accordingly.

(10) Samples of all actual production emission control labels used within an engine family shall be submitted to the Executive Officer of the state Air Resources Board within thirty days after the start of production.

(11) The Executive Officer may approve alternate label locations or may, upon request and when the Executive Officer determines warranted, waive or modify one or more of the label content requirements, provided that the intent of this section is satisfied.

(12) If the Executive Officer finds any off-highway recreational vehicle or engine manufacturer using emission control labels that are different from those approved or that do not substantially comply with the readability or durability requirements set forth in this section, the Executive Officer may invoke section 2109, title 13, California Code of Regulations.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43105 and 43107, Health and Safety Code. Reference: Sections 43013, 43018, 43102, 43105 and 43107, Health and Safety Code.

HISTORY

1. New section filed 1-26-95; operative 1-26-95 pursuant to Government Code section 11343.4(d) (Register 95, No. 4). Note: Under section 209(e)(2) of the Federal Clean Air Act (42 U.S.C. § 7543(e)(2)), California is required to receive authorization from the Administrator of the U.S. Environmental Protection Agency (U.S. EPA) prior to enforcing its regulations regarding new off-road vehicles and engines. Accordingly, the Air Resources Board will not seek to enforce the off-highway recreational vehicle regulations until such time as it receives authorization from the U.S. EPA.

2. U.S. EPA granted California authorization on December 23, 1996 (61 Fed. Reg. 69093, December 31, 1996).
3. Amendment of subsection (b) filed 3-23-99; operative 3-23-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 13).
4. Repealer of subsection (a) designator and repealer of subsection (b) filed 10-19-99; operative 11-18-99 (Register 99, No. 43).
5. Amendment filed 12-8-99; operative 1-7-2000 (Register 99, No. 50).
6. Amendment of section and NOTE filed 7-16-2007; operative 8-15-2007 (Register 2007, No. 29).

§ 2414. New Off-Highway Recreational Vehicle Engine Emission Standards, Enforcement and Recall Provisions, Warranty, Quality Audit, and New Engine Testing.

This section applies to off-road motorcycles, all-terrain vehicles, and engines used in such vehicles, except those certified according to section 2412(f), produced on or after January 1, 1997, for sale, lease, use or introduction into commerce in California. Off-road motorcycles, all-terrain vehicles, and engines used in such vehicles are subject to Title 13, California Code of Regulations, Chapter 2, Articles 2.1 through 2.3, and the incorporated Appendix A, "California In-Use Vehicle Emission-Related Recall Procedures, Enforcement Test Procedures, and Failure Reporting Procedures for 1982 and Subsequent Model-Year Passenger Cars, Light-Duty Trucks, Medium-Duty Vehicles, Heavy-Duty Vehicles and Engines, and Motorcycles", which are incorporated by reference herein.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43105, 43107, 43205.5 and 43210, Health and Safety Code. Reference: Sections 43013, 43018, 43105, 43107, 43205.5 and 43210, Health and Safety Code.

HISTORY

1. New section filed 1-26-95; operative 1-26-95 pursuant to Government Code section 11343.4(d) (Register 95, No. 4). Note: Under section 209(e)(2) of the Federal Clean Air Act (42 U.S.C. § 7543(e)(2)), California is required to receive authorization from the Administrator of the U.S. Environmental Protection Agency (U.S. EPA) prior to enforcing its regulations regarding new off-road vehicles and engines. Accordingly, the Air Resources Board will not seek to enforce the off-highway recreational vehicle regulations until such time as it receives authorization from the U.S. EPA.
2. U.S. EPA granted California authorization on December 23, 1996 (61 Fed. Reg. 69093, December 31, 1996).
3. Amendment of subsection (b) filed 3-23-99; operative 3-23-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 13).
4. Repealer of subsection (a) designator and repealer of subsection (b) filed 10-19-99; operative 11-18-99 (Register 99, No. 43).
5. Amendment filed 12-8-99; operative 1-7-2000 (Register 99, No. 50).

§ 2415. California Off-Highway Vehicle Areas and Riding Seasons for Off-Highway Recreational Vehicles with Use Restrictions.

(a) The following table lists public off-highway vehicle (OHV) areas in California that are designated for off-highway recreational vehicle operation. Although not every type of off-highway recreational vehicle may be eligible to operate at every OHV area due to restrictions by the designated Public Land Management Agency other than this section, vehicles that meet the emission standards in section 2412(b) are not subject to the riding season restrictions noted below. Model year 2003 and later off-road motorcycles and ATVs that are certified pursuant to section 2412(f) are permitted to operate in the public areas designated for OHV use noted below, only during the applicable riding seasons noted. This table contains the following information: Public Land Management entities, OHV riding area names, and the applicable riding seasons. The OHV areas are listed in order of location, from north to south.

(b) The Executive Officer shall publish in the California Regulatory Notice Register and notify potentially affected OHV Area Managing Entities regarding revisions to Table 1 in subsection (a) at least 30 days before the revisions take effect, in the following situations:

(1) The Executive Officer may revise Table 1 in subsection (a) where there is a change in the designation (with respect to California Ambient Air Quality Standards), from zone nonattainment to attainment, of an area in which an OHV area is located, provided that the attainment area is not identified as an upwind contributor to significant impacts to transport of ozone or ozone precursors as identified and defined in Section 70500, Title 17, California Code of Regulations.

(2) The Executive Officer may revise Table 1 in subsection (a) to reflect changes in the physical characteristics or identity of OHV Areas, including but not limited to changes in ownership or control of listed areas, addition or deletion of areas, or changes in the geographic domain of listed areas.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43107, Health and Safety Code; and Sections 38020 and 38390, Vehicle Code. Reference: Sections 43013, 43018 and 43107, Health and Safety Code.

HISTORY

1. New section filed 12-8-99; operative 1-7-2000 (Register 99, No. 50).

2. Amendment of subsection (a) filed 4-27-2004; operative 5-27-2004 (Register 2004, No. 18).
3. Amendment of section and NOTE filed 7-16-2007; operative 8-15-2007 (Register 2007, No. 29).

Article 4. Off-Road Compression-Ignition Engines and Equipment

§ 2420. Applicability.

(a)(1) This article shall be applicable to new heavy-duty off-road compression-ignition engines, including all heavy-duty off-road alternate-fueled compression-ignition engines, including those engines derived from existing diesel cycle engines (hereinafter all such engines shall be referred to as compression-ignition engines), produced on or after January 1, 1996, and all other new 2000 model year and later off-road compression-ignition engines, with the exception of all engines and equipment that fall within the scope of the preemption of Section 209(e)(1) of the Federal Clean Air Act (42 U.S.C. 7543(e)(1) and as defined by regulation of the U.S. Environmental Protection Agency.

(2) For any engine that is not a distinctly compression-ignition engine nor derived from such, the Executive Officer shall determine whether the engine shall be subject to these regulations, taking into consideration the relative similarity of the engine's torque-speed characteristics with those of compression-ignition engines.

(3) Every new off-road compression-ignition engine that is manufactured for sale, sold, offered for sale, introduced or delivered for introduction into commerce, or imported into California and that is subject to any of the standards prescribed in this article and documents incorporated by reference therein, is required to be certified for use and sale by the manufacturer through the Air Resources Board and covered by an Executive Order, issued pursuant to Chapter 9, Article 4, Section 2423.

(b) Each part of this article shall be deemed severable, and in the event that any part of this chapter or article is held to be invalid, the remainder shall continue in full force and effect.

(c) This article and documents incorporated by reference herein, include provisions for certification, labeling requirements, warranty, in-use compliance testing, quality-audit testing, and certification testing.

(d)(1) For purposes of this article, military tactical vehicles or equipment means vehicles or equipment owned by the U.S. Department of Defense and/or the U.S. military services and used in combat, combat support, combat service support, tactical or relief operations, or training for such operations.

(2) This article shall not apply to engines used in off-road military tactical vehicles or equipment which have been exempted from regulations under the federal national security exemption, 40 CFR, subpart J, section 89.908. It shall also not apply to those vehicles and equipment covered by the definition of military tactical vehicle that are commercially available and for which a federal certificate of conformity has been issued under 40 CFR Part 89, subpart B.

(3) On January 1, 1997, the U.S. Department of Defense shall submit to the ARB a list of all vehicle and equipment types that are exempted under the above provisions and which are located in the State of California. If any additional vehicle and equipment types are added to the list during the previous 12 months, the U.S. Department of Defense shall update the list and submit it to the ARB by January 1 of the following year.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102, 43104 and 43105, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43105, 43150-43154, 43205.5 and 43210-43212, Health and Safety Code.

HISTORY

1. New chapter 11 (sections 2420-2427) filed 6-9-93; operative 7-9-93 (Register 93, No. 24).
2. Editorial correction restoring inadvertently omitted chapter heading (Register 93, No. 48).
3. Change without regulatory effect deleting chapter heading and amending article heading, section and NOTE filed 12-22-93 pursuant to title 1, section 100, California Code of Regulations (Register 93, No. 52).

[The next page is 291.]

4. New subsections (d)(1)–(d)(3) filed 7–3–96; operative 7–3–96 pursuant to Government Code section 11343.4(d) (Register 96, No. 27).
5. Amendment of subsections (a)(1)–(a)(3) and (c) and amendment of NOTE filed 12–28–2000; operative 12–28–2000 pursuant to Government Code section 11343.4(d) (Register 2000, No. 52).
6. Amendment of article heading and amendment of subsection (a)(1) filed 12–7–2005; operative 1–6–2006 (Register 2005, No. 49).

§ 2421. Definitions.

(a) The definitions in Section 1900 (b), Chapter 3, Title 13 of the California Code of Regulations, shall apply with the following additions:

(1) “1996–1999 Heavy-Duty Test Procedures” means the document entitled “California Exhaust Emission Standards and Test Procedures for New 1996–1999 Heavy-Duty Off-Road Compression-Ignition Engines, Part I–A,” which includes the standards and test procedures applicable to 1996–1999 heavy-duty off-road compression-ignition engines, as adopted May 12, 1993, and as amended January 28, 2000. This document is incorporated by reference herein.

(2) “1996–1999 Smoke Test Procedures” means the document entitled “California Smoke Test Procedures for New 1996–1999 Off-Road Compression-Ignition Engines, Part III,” which includes the standards and test procedures applicable to 1996–1999 heavy-duty off-road compression-ignition engines, as adopted May 12, 1993, and as amended January 28, 2000. This document is incorporated by reference herein.

(3) “2000 Plus Limited Test Procedures” means the document titled “California Exhaust Emission Standards and Test Procedures for New 2000 and Later Tier 1, Tier 2, and Tier 3 Off-Road Compression-Ignition Engines, Part I–B,” which includes the standards and test procedures applicable to 2000 and later off-road compression-ignition engines, as adopted January 28, 2000, and as amended October 20, 2005. This document is incorporated by reference herein.

(4) “2008 and Later Test Procedures” means the document titled “California Exhaust Emission Standards and Test Procedures for New 2008 and Later Tier 4 Off-Road Compression-Ignition Engines,” which includes the standards and test procedures applicable to 2008 and later off-road compression-ignition engines, as adopted October 20, 2005. This document is incorporated by reference herein.

(5) “Adjustable parameter” means any device, system, or element of design that is capable of being adjusted manually (even if difficult to access), and which may affect emissions or engine performance during emission testing or normal in-use operation. This includes, but is not limited to, parameters related to injection timing and fueling rate. A parameter that is difficult to access may be excluded upon request to the Executive Officer if the parameter cannot be adjusted to a degree that affects emissions without significantly degrading engine performance, or if demonstrated that it will not be adjusted in a way that affects emissions during in-use operation.

(6) “Alternate fuel” means any fuel that will reduce non-methane hydrocarbons (on a reactivity-adjusted basis), NO_x, CO, and the potential risk associated with toxic air contaminants as compared to gasoline or diesel fuel and would not result in increased deterioration of the engine. Alternate fuels include, but are not limited to, methanol, ethanol, liquefied petroleum gas, compressed natural gas, and electricity.

(7) “ARB Enforcement Officer” means any officer or employee of the Air Resources Board so designated in writing by the Executive Officer (or by his designee).

(8) “Assembly-line tests” are those tests or inspections that are performed on or at the end of the assembly-line.

(9) “Auxiliary emission-control device” means any element of design that senses temperature, motive speed, engine speed, transmission gear, or any other parameter for the purpose of activating, modulating, delaying, or deactivating the operation of any part of the emission-control system.

(10) “Blue Sky Series engine” means an off-road compression-ignition engine meeting the requirements of Section 2423(b)(4).

(11) “Calendar year” is defined as the twelve-month period commencing on January 1 through December 31.

(12) “Certification” means, with respect to new off-road compression-ignition engines, the obtaining of an Executive Order for an engine family complying with the off-road compression-ignition engine emission standards and requirements specified in this article.

(13) “Certified configuration” or “certified emissions configuration” means the assembled state of an engine that is equipped with a complete set of emission-related components and systems that are equivalent from an emissions standpoint (i.e., tolerances, calibrations, and specifications) to those components and systems that (A) were originally installed on the engine when it was issued an Executive Order, (B) have been approved by the engine manufacturer to supersede any of the original emission-related components and systems for that engine, or (C) are direct replacement parts equaling or exceeding the emissions-related performance of the original or superseded components and systems.

(14) “Compression-ignition engine” means a type of engine with operating characteristics significantly similar to the theoretical Diesel combustion cycle. The non-use of a throttle to regulate intake flow for controlling power during normal operation is indicative of a compression-ignition engine. A compression-ignition engine may be petroleum-fueled (i.e., diesel-fueled) or alternate-fueled. All engines and equipment that fall within the scope of the preemption of Section 209(e)(1) of the Federal Clean Air Act (42 U.S.C. 7543(e)(1)) and as defined by regulation of the Environmental Protection Agency, are specifically not included within this category.

(15) “Constant-speed engine” means (A) for engines subject to the 2000 and Later Plus Limited Test Procedures, an off-road compression-ignition engine that is governed to operate only at rated speed, or (B) for engines subject to the 2008 and Later Test Procedures, an off-road compression-ignition engine certified to operate only at constant speed. Constant-speed operation means engine operation with a governor that controls the operator input to maintain an engine at a reference speed, even under changing load. For example, an isochronous governor changes reference speed temporarily during a load change, then returns the engine to its original reference speed after the engine stabilizes. Isochronous governors typically allow speed changes up to 1.0 %. Another example is a speed-droop governor, which has a fixed reference speed at zero load and allows the reference speed to decrease as load increases. With speed-droop governors, speed typically decreases (3 to 10) % below the reference speed at zero load, such that the minimum reference speed occurs near the engine’s point of maximum power.

(16) “Crankcase emissions” means airborne substances emitted into the atmosphere from any portion of the engine crankcase ventilation or lubrication system.

(17) “Compliance testing” means ARB directed emissions tests and inspections of a reasonable number of production engines and/or vehicles that are offered for sale, or manufactured for sale, in California in order to verify compliance with the applicable certification emission standards. The emissions tests may be conducted at ARB or contracted out facilities or at the manufacturer’s facility. The testing will be done at the expense of the manufacturer.

(18) “Confirmatory testing” means ARB directed emissions tests and inspections of the test engines and/or test vehicles used by the manufacturer to obtain test data for submittal with the certification application. The emissions tests may be conducted at ARB or contracted out facilities or at the manufacturer’s facility. The testing will be done at the expense of the manufacturer.

(19) “Dealer” means that person or entity engaged in the selling of new off-road compression-ignition engines, vehicles or equipment to ultimate purchasers.

(20) “Deterioration factor” means the relationship between emissions at the end of useful life and emissions at the low-hour test point, expressed in one of the following ways, whichever is applicable: (A) For multiplicative deterioration factors, the ratio of emissions at the end of useful life to emissions at the low-hour test point; (B) For additive deterioration factors, the difference between emissions at the end of useful life and emissions at the low-hour test point.

(21) "Diesel cycle engine" means a type of engine with operating characteristics significantly similar to the theoretical diesel combustion cycle. The primary means of controlling power output in a diesel cycle engine is by limiting the amount of fuel that is injected into the combustion chambers of the engine. A diesel cycle engine may be petroleum-fueled (i.e., diesel-fueled) or alternate-fueled.

(22) "Emission control system" includes any component, group of components, or engine modification that controls or causes the reduction of substances emitted from an engine.

(23) "End of assembly line" is defined as that place where the final inspection test or quality-audit test is performed.

(24) "Engine manufacturer" or "manufacturer" means any person who is engaged in the manufacturing or assembling of new off-road engines or the importing of new off-road engines for resale and who has been granted certification, or any person who acts for and is under the control of a manufacturer in connection with the distribution of new off-road engines. "Engine manufacturer" or "manufacturer" does not include a dealer who receives new off-road engines for sale in commerce.

(25) "Exhaust emissions" means substances emitted into the atmosphere from any opening downstream from the exhaust port of an off-highway engine.

(26) "Family emission limit" (FEL) means an emission level that is declared by the manufacturer to serve in lieu of an emission standard for certification purposes and for the averaging, banking, and trading program, as defined in Title 13, California Code of Regulations, Section 2423. A FEL must be expressed to the same number of decimal places as the applicable emission standard.

(27) "Final calendar quarter production" is defined as the calendar quarter in which the production of an engine family ends.

(28) "First calendar quarter production" is defined as the calendar quarter in which the production of an engine family begins.

(29) "Fuel system" means the combination of any of the following components: fuel tank, fuel pump, fuel lines, oil injection metering system, carburetor or fuel injection components, or all fuel system vents.

(30) "Gross engine malfunction" is defined as one yielding an emission value greater than the sum of the mean plus three (3) times the standard deviation. This definition shall apply only for determination of control limits.

(31) "Heavy-duty off-road compression-ignition engines" or "engines" are identified as: 1996 through 1999 model year diesel or alternate fuel powered diesel cycle internal combustion engines 175 horsepower and greater, operated on or in any device by which any person or property may be propelled, moved or drawn upon a highway, but are primarily used off a highway. The engines are designed for powering construction, farm, mining, forestry and industrial implements and equipment. They are designed to be used in, but are not limited to use in, the following applications: agricultural tractors, backhoes, excavators, dozers, log skidders, trenchers, motor graders, portable generators and compressors and other miscellaneous applications.

Specifically excluded from this category are: (A) engines operated on or in any device used exclusively upon stationary rails or tracks; (B) marine diesel engines; (C) internal combustion engines attached to a foundation at a location; (D) transportable engines subject to District permitting rules which have been operated at a location for a period of one year or more on January 1, 1997; and (E) stationary or transportable gas turbines for power generation.

(32) "Identification number" means a specification (for example, model, number/serial number combination) that allows a particular off-road compression-ignition to be distinguished from other similar engines.

(33) "Marine diesel engine" means a compression-ignition engine that is installed or intended to be installed on a vessel. There are two types of Marine Diesel Engines: (A) Propulsion marine compression-ignition engines, which are those that move or are intended to move a vessel through water or direct the movement of a vessel, and (B) Auxiliary marine diesel engines, which are integral to the vessel, but which do not propel

the vessel. This definition includes portable auxiliary marine engines or generators only if their fueling, cooling, or exhaust systems are an integral part of the vessel.

(34) "Maximum Engine Power" means the maximum brake power point on the nominal power curve for a specific engine configuration, rounded to the nearest whole kilowatt. The "nominal power curve" of an engine configuration means the relationship between maximum available engine brake power and engine speed for a specific engine configuration, as determined using the mapping procedures specified in Part 1065 of the 2008 and Later Test Procedures, based on the manufacturer's design and production specifications for that engine. This relationship may also be expressed by a torque curve that relates maximum available engine torque with engine speed. The nominal power curve shall be within the normal production variability of actual power curves for production engines of the same engine configuration. This definition of Maximum Engine Power shall be applicable for all references to a specific power value or range of power values with respect to engines subject to the 2008 and Later Test Procedures, except as otherwise noted or permitted by the Executive Officer. Maximum Engine Power shall be used as the basis for categorizing engine families into appropriate Tier 4 power categories.

(35) "Maximum Rated Power" means the maximum brake kilowatt output of an engine at rated speed as stated by the manufacturer in the manufacturer's sales and service literature and in the application for certification. Maximum Rated Power shall be used as the basis for categorizing engine families into appropriate Tier 1, Tier 2, and Tier 3 power categories, except as otherwise noted or permitted by the Executive Officer.

(36) "Maximum Test Speed" has the same meaning as defined in Part 1065.1001 of the 2008 and Later Test Procedures.

(37) "Model year" means the manufacturer's annual production period which includes January 1 of a calendar year or, if the manufacturer has no annual production period, the calendar year.

(38) "Off-road compression-ignition engine":

(A) Except as specified in paragraph (B) of this definition, an off-road compression-ignition engine is any internal combustion engine:

1. in or on a piece of equipment that is self-propelled or serves as a dual purpose by both propelling itself and performing another function and is primarily used off the highways (such as garden tractors, off-highway mobile cranes and bulldozers); or

2. in or on a piece of equipment that is intended to be propelled while performing its function (such as lawnmowers and string trimmers); or

3. that, by itself or in or on a piece of equipment, is portable or transportable, meaning designed to be and capable of being carried or moved from one location to another. Indicia of transportability include, but are not limited to wheels, skids, carrying handles, dolly, trailer, or platform.

(B) An internal combustion engine is not an off-road compression-ignition engine if:

1. the engine is used to propel a vehicle subject to the emission standards contained in Title 13, California Code of Regulations, Sections 1950-1978, or a vehicle used solely for competition, or is subject to standards promulgated under Section 202 of the federal Clean Air Act (42 U.S.C. 7521); or

2. the engine is regulated by a federal New Source Performance Standard promulgated under Section 111 of the federal Clean Air Act (42 U.S.C. 7511); or

3. the engine otherwise included in paragraph (A)3. of this definition remains or will remain at a location for more than 12 consecutive months or a shorter time for an engine located at a seasonal source. A location is any single site at a building, structure, facility, or installation. Any engine (or engines) that replaces an engine at a location and that is intended to perform the same or similar function as the engine replaced will be included in calculating the consecutive period. An engine located at a seasonal source is an engine that remains at a seasonal source during the full operating period of the seasonal source. A seasonal source is a stationary source that remains in a single location on a permanent basis (i.e., at least two years) and that operates at a single location approximately three

months (or more) each year. This paragraph does not apply to an engine after the engine is removed from the location.

(39) "Off-road vehicle" or "Off-road equipment" means a vehicle or equipment that is powered by an off-road compression-ignition engine.

(40) "Off-road vehicle manufacturer" or "Off-road equipment manufacturer" means any person engaging in the manufacturing or assembling of new off-road vehicles or equipment, or importing of new off-road vehicles or equipment for resale, or acting for and under the control of any person in connection with distributing new off-road vehicles and equipment. An off-road vehicle manufacturer or off-road equipment manufacturer does not include a dealer, nor any person engaging in the manufacturing or assembling of new off-road engines or equipment who does not install an engine as part of that manufacturing or assembling process. All off-road vehicle or equipment manufacturing entities that are under the control of the same person are considered to be a single off-road vehicle manufacturer or off-road equipment manufacturer.

(41) "Opacity" means the fraction of a beam of light, expressed in percent, which fails to penetrate a plume of smoke.

(42) "Otto cycle engine" means a type of engine with operating characteristics significantly similar to the theoretical Otto combustion cycle. The primary means of controlling power output in an Otto cycle engine is by limiting the amount of air and fuel that can enter the combustion chambers of the engine. Gasoline-fueled engines are Otto cycle engines.

(43) "PM and Test Cycle Limited Procedures" means the document titled "California Exhaust Emission Standards and Test Procedures for New 1996 and Later Tier 1, Tier 2, and Tier 3 Off-Road Compression-Ignition Engines, Part II," which includes the standards and test procedures applicable for 1996 and later heavy-duty off-road compression-ignition engines, as adopted May 12, 1993, and as amended October 20, 2005. This document is incorporated by reference herein.

(44) "Post-manufacture marinizer" means a person who produces a marine compression-ignition engine by substantially modifying a certified or uncertified complete or partially complete engine, and is not controlled by the manufacturer of the base engine or by an entity that also controls the manufacturer of the base engine. For the purpose of this definition, "substantially modify" means changing an engine in a way that could change engine emission characteristics.

(45) "Power category" means a specific range of maximum power that defines the applicability of standards. For example, references to the 56–130 kW power category and $56 \leq \text{kW} < 130$ include all engines with maximum power at or above 56 kW but below 130 kW. Also references to 56–560 kW power categories or $56 \leq \text{kW} \leq 560$ include all engines with maximum power at or above 56 kW, but at or below 560 kW, even though these engines span multiple power categories. Note that in some cases, FEL caps are based on a subset of a power category. The Tier 4 applicable power categories are defined as follows:

(A) Engines with maximum engine power below 19 kW.

(B) Engines with maximum engine power at or above 19 kW but below 56 kW.

(C) Engines with maximum engine power at or above 56 kW but below 130 kW.

(D) Engines with maximum engine power at or above 130 kW but at or below 560 kW.

(E) Engines with maximum engine power above 560 kW.

(46) "Propulsion marine compression-ignition engine" means a marine compression-ignition engine that is intended to move a vessel through water or direct the movement of a vessel.

(47) "Quality-audit test" is defined as the test performed on a sample of production engines produced for sale in California.

(48) "Rated speed" is the maximum full load governed speed for governed engines and the speed of maximum horsepower for ungoverned engines.

(49) "Representative engine sample" means that the sample is typical of the engine family or engine family group as a whole (as defined in applicable test procedures). Except as provided in Section 2427, a represen-

tative sample would not include a low-volume subgroup of the engine family or engine family group.

(50) "Scheduled maintenance" means any adjustment, repair, removal, disassembly, cleaning, or replacement of components or systems required by the manufacturer that is performed on a periodic basis to prevent part failure or equipment or engine malfunction, or anticipated as necessary to correct an overt indication of malfunction or failure for which periodic maintenance is not appropriate.

(51) "Small off-road engine" has the meaning specified in Title 13, California Code of Regulations, Section 2401.

(52) "Small-volume engine manufacturer" means a small business engine manufacturer that had engine families certified to meet the requirements of 40 CFR part 89 before 2003, had annual U.S.-directed production of no more than 2,500 units in 2002 and all earlier calendar years, and has 1000 or fewer employees. For manufacturers owned by a parent company, the production limit applies to the production of the parent company and all its subsidiaries and the employee limit applies to the total number of employees of the parent company and all its subsidiaries.

(53) "Tier 1 engine" means an engine subject to the Tier 1 emission standards listed in Section 2423(b)(1)(A) of this article.

(54) "Tier 2 engine" means an engine subject to the Tier 2 emission standards listed in Section 2423(b)(1)(A) of this article.

(55) "Tier 3 engine" means an engine subject to the Tier 3 emission standards listed in Section 2423(b)(1)(A) of this article.

(56) "Tier 4 engine" means an engine subject to the Tier 4 emission standards listed in Section 2423(b)(1)(B) of this article.

(57) "Ultimate purchaser" means the first person who in good faith purchases a new engine or equipment for purposes other than resale.

(58) "Unscheduled maintenance" means any inspection, adjustment, repair, removal, disassembly, cleaning, or replacement of components or systems that is performed to correct or diagnose a part failure which was not anticipated.

(59) "Useful life" means:

(A) For all engines rated under 19 kilowatts, and for constant-speed engines rated under 37 kilowatts with rated speeds greater than or equal to 3,000 revolutions per minute, a period of use of five years or 3,000 hours of operation, whichever first occurs.

(B) For all other engines rated at or above 19 kilowatts and under 37 kilowatts, a period of use of seven years or 5,000 hours of operation, whichever first occurs.

(C) For all engines rated at or above 37 kilowatts, a period of use of ten years or 8,000 hours, whichever first occurs.

(60) "Vessel" has the meaning specified in Section 9840 of the California Vehicle Code.

(61) "Warrantable condition" means any condition of an engine that triggers the responsibility of the manufacturer to take corrective action pursuant to Section 2425.

(62) "Warranted part" means any emissions-related part installed on an engine by the equipment or engine manufacturer, or installed in a warranty repair, which is listed on the warranty parts list.

(63) "Warranty period" means the period of time, either in years or hours of operation, that the engine or part is covered by the warranty provisions.

(64) "Warranty station" means a service facility authorized by the equipment or engine manufacturer to perform warranty repairs. This shall include all manufacturer distribution centers that are franchised to service the subject equipment or engines.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43018, 43101, 43102, 43104, 43105, 43150–43154, 43205.5 and 43210–43212, Health and Safety Code.

HISTORY

1. New section filed 6–9–93; operative 7–9–93 (Register 93, No. 24).

2. Change without regulatory effect amending NOTE filed 12–22–93 pursuant to title 1, section 100, California Code of Regulations (Register 93, No. 52).

3. Amendment filed 12–28–2000; operative 12–28–2000 pursuant to Government Code section 11343.4(d) (Register 2000, No. 52).

4. Amendment of subsection (a)(3), new subsections (a)(4)–(5), (a)(9), (a)(13), (a)(20), (a)(34), (a)(36), (a)(45)–(a)(45)(E), (a)(52) and (a)(56), subsection renumbering and amendment of newly designated subsections (a)(14)–(15), (a)(31), (a)(33), (a)(35), (a)(43) and (a)(53)–(55) filed 12–7–2005; operative 1–6–2006 (Register 2005, No. 49).

§ 2422. [Reserved].

HISTORY

1. Change without regulatory effect adopting new section number 2422 filed 12–22–93 pursuant to title I, section 100, California Code of Regulations (Register 93, No. 52).

§ 2423. Exhaust Emission Standards and Test Procedures—Off-Road Compression-Ignition Engines.

(a) This section shall be applicable to new heavy-duty off-road com-

pression-ignition engines, produced on or after January 1, 1996, and all other new 2000 and later model year off-road compression-ignition engines. For the purposes of this section, these engines shall be called “compression-ignition engines.”

(b)(1)(A) Exhaust emissions from new off-road compression-ignition engines, as sold in this state and as appropriate based on model year and maximum rated power, shall not exceed the levels contained in Table 1a with respect to steady-state testing. Table 1a follows:

Table 1a. – Tier 1, Tier 2, and Tier 3 Exhaust Emission Standards
(grams per kilowatt-hour)

Maximum Rated Power (kW) ¹	Tier	Model Year	NO _x ²	HC ³	NMHC+NO _x ⁴	CO ⁵	PM ⁶
kW<8	Tier 1	2000–2004	—	—	10.5	8.0	1.0
	Tier 2	2005–2007 ⁷	—	—	7.5	8.0	0.80
8≤kW<19	Tier 1	2000–2004	—	—	9.5	6.6	0.80
	Tier 2	2005–2007 ⁷	—	—	7.5	6.6	0.80

1. kW means kilowatts.

2. NO_x means Oxides of Nitrogen.

3. HC means Hydrocarbons.

4. NMHC+NO_x means Non-Methane Hydrocarbons plus Oxides of Nitrogen.

5. CO means Carbon Monoxide.

6. PM means Particulate Matter.

7. Tier 2 standards for propulsion marine compression-ignition engines below 37 kW remain in effect beyond the 2007 end date.

8. Manufacturers may optionally certify engine families to the interim Tier 4 standards in Table 1b for this power category through 2012.

(B) Exhaust emissions from new off-road compression-ignition engines, as sold in this state and as appropriate based on model year and maximum engine power, shall not exceed the levels contained in Table 1b, with respect to steady-state testing, transient testing, and, after ap-

plication of the criteria in Table 1c, not-to-exceed testing, as applicable. Other compliance options are permissible as provided in the 2008 and Later Test Procedures.

Notes:

¹ Propulsion marine compression-ignition engines below 37 kW are not subject to Tier 4 standards or requirements. All previously adopted requirements remain applicable for these engines.

² The Tier 4 PM standard for hand-start, air cooled, direct injection engines below 8 kW is 0.60 g/kW-hr, but is not required until 2010.

³ Engine families in this power category may alternately meet Tier 3 PM standards from 2008–2011 in exchange for introducing final PM standards in 2012.

⁴ Manufacturers have the option of complying with the Tier 4 standards over a two year period at 50% per year using banked Tier 2 credits or over a three year period at 25% per year without the use of Tier 2 credits. The three year phase-in period is shown. The 2014 model year cannot extend beyond December 30, 2014, when the 3 year phase-in option is used.

⁵ Manufacturers may comply with the standards during the transitional implementation years using either a phase-in / phase-out approach or by using the Alternate NOx approach. The three year 25% alternate NOx standard is shown in the table. The two year 50% phase-in NOx standard would be 2.3 g/kW-hr.

⁶ “GEN” refers to generator engines only.

⁷ “ELSE” refers to all mobile machinery excluding generator engines.

Table 1c. – Criteria for Determining NTE Limits¹

<i>Pollutant</i>	<i>Apply NTE Multiplier of 1.25 when ...</i>	<i>Apply NTE Multiplier of 1.50 when ...</i>
NOx	NOx Standard or FEL ≥ 2.5 g/kW–hr	NOx Standard ² or FEL < 2.5 g/kW–hr
NMHC	NOx Standard or FEL ≥ 2.5 g/kW–hr	NOx Standard ² or FEL < 2.5 g/kW–hr
NMHC+NOx	NOx Standard or FEL ≥ 2.7 g/kW–hr	NMHC+NOx Standard ² or FEL < 2.7 g/kW–hr
PM	PM Standard or FEL ≥ 0.07 g/kW–hr	PM ² Standard or FEL ³ < 0.07 g/kW–hr
CO	Always	Never

Notes:

¹ Other provisions described in the 2008 and Later Test Procedures may affect the calculation of NTE limits.

² Engines must be certified to these standards without the use of ABT credits.

³ For engines certified to a PM FEL less than or equal to 0.01 g/kW–hr, the PM NTE limit shall be 0.02 g/kW–hr.

(2) Manufacturers may elect to include engine families in one of two averaging, banking, and trading (ABT) programs, corresponding to the engine family's model year and emissions categorization. The provisions

of these separate ABT programs are specified in Part 89, Subpart C of the 2000 Plus Limited Test Procedures and Part 1039, Subpart H of the 2008 and Later Test Procedures.

(A) For engine families subject to the 2000 Plus Limited Test Procedures, the manufacturer must set a family emission limit (FEL) not to exceed the levels contained in Table 2a. The FEL established by the manufacturer serves as the emission standard for that engine family. Table 2a follows:

Table 2a – Upper Limit for Tier 1, Tier 2, and Tier 3 Family Emission Limits (FEL)
(grams per kilowatt–hour)

<i>Maximum Rated Power (kW)</i>	<i>Tier</i>	<i>Model Year</i>	<i>NO_x</i>	<i>NMHC+NO_x</i>	<i>PM FEL</i>
kW < 8	Tier 1	2000–2004		16.0	1.2
	Tier 2	2005–2007		10.5	1.0
8 ≤ kW < 19	Tier 1	2000–2004		16.0	1.2
	Tier 2	2005–2007		9.5	0.80
19 ≤ kW < 37	Tier 1	2000–2003		16.0	1.2
	Tier 2	2004–2007		9.5	0.80
37 ≤ kW < 56	Tier 1	2000–2003	14.6		
	Tier 2	2004–2007		11.5	1.2
	Tier 3 ¹	2008–2011		7.5	1.2
56 ≤ kW < 75	Tier 1	2000–2003	14.6		
	Tier 2	2004–2007		11.5	1.2
	Tier 3	2008–2011		7.5	1.2
75 ≤ kW < 130	Tier 1	2000–2002	14.6		
	Tier 2	2003–2006		11.5	1.2
	Tier 3	2007–2011		6.6	1.2
130 ≤ kW < 225	Tier 1	2000–2002	14.6		
	Tier 2	2003–2005		10.5	0.54
	Tier 3	2006–2010		6.6	0.54
225 ≤ kW < 450	Tier 1	2000	14.6		
	Tier 2	2001–2005		10.5	0.54
	Tier 3	2006–2010		6.4	0.54
450 ≤ kW ≤ 560	Tier 1	2000–2001	14.6		
	Tier 2	2002–2005		10.5	0.54
	Tier 3	2006–2010		6.4	0.54
kW > 560	Tier 1	2000–2005	14.6		
	Tier 2	2006–2010		10.5	0.54

¹ Manufacturers may optionally certify engine families to the interim Tier 4 FEL caps in Table 2b for this power category through 2012.

(B) For engine families subject to the 2008 and Later Test Procedures, the manufacturer must set a family emission limit (FEL) not to exceed, as applicable, the levels contained in Table 2b. Three distinct FEL types (primary, interim, and alternate) are available conditionally. Primary FEL types are applicable to all power categories indefinitely, whereas interim and alternate FEL types are of variable duration and may be selectively applied to total or partial engine family production volumes as de-

scribed in the 2008 and Later Test Procedures. The FEL established by the manufacturer serves as the emission standard for that engine family, and is used for determining NTE limits in conjunction with the criteria in Table 1c. Temporary compliance adjustment factors, as explained in the 2008 and Later Test Procedures, shall be applied by the manufacturer to compensate for the use of transitional alternate FELs (Type ALT 20% in Table 2b) when calculating emission credits. Table 2b follows:

Table 2b – Upper Limit for Tier 4 Family Emission Limits (FELs) and Alternate Allowances
Part 1

<i>Maximum Engine Power</i>	<i>FEL Type</i>	<i>Model Year</i>	<i>PM</i>	<i>NOX grams per kilowatt-hour</i>	<i>NMHC+ NOX</i>
kW<8	Primary	2008 and later	0.80	—	10.5
8kW<19	Primary	2008 and later	0.80	—	9.5
19<kW<37	Interim	2008–2012	0.60	—	9.5
	Primary	2013 and later	0.05	—	7.5
	ALT 20% ¹	2013–2016	0.30	—	7.5
	ALT 5% ²	2017 and later			
37≤kW<56	Interim	2008–2012 ³	0.40	—	7.5
	Primary	2013 and later ³	0.05	—	7.5
	ALT 20%	2013–2016 ³	0.30	—	7.5
	ALT 5%	2017 and later ³			
56≤kW<75	Phase-in	2012–2013	0.04	0.80	—
	Phase-out			—	7.5
	Alternate NOx Std ⁴	2012–2013	0.04	3.0 ⁷	—
		2012–2014		4.4	
	Primary	2014/2015 ⁵ and later	0.04	0.80	—
	ALT 20% PM	2012–2015	0.40		—
	ALT 20% NOX	2014–2015 ⁶		4.4	—
	ALT 5%	2016 and later	0.40	4.4	—

Notes:

¹ This alternate FEL option is transitional for the four years specified and applies to at most 20% of a manufacturer's U.S. directed population of engine families per year.

² This alternate FEL option is available indefinitely, but only applies to 5% of a manufacturer's U.S. directed population of engine families per year.

³ These dates correspond to the compliance option of meeting interim standards in 2008; else the primary and alternate FEL caps would begin and end one year earlier, and 2008–2011 engines would not be eligible for participation in the Tier 4 ABT program.

⁴ Two alternate NOx standards and corresponding FEL caps are available for this category with corresponding alternate phase-in options.

⁵ The effective date of the primary FEL cap follows the phase-in period of the selected NOx FEL cap.

⁶ If interim Tier 4 standards are not met in 2008, the alternate NOx FEL would only be available for 2015.

⁷ If neither the alternate phase-in option nor banked Tier 2 credits are used, either NOx standard and corresponding FEL may be applied for this category.

Table 2b – Upper Limit for Tier 4 Family Emission Limits (FELs) and Alternate Allowances
Part 2

Maximum Engine Power	FEL Type	Model Year	PM	NOx grams per kilowatt-hour	NMHC+ NOx
75≤kW<130	Phase-in	2012–2013		0.80	—

		2012–2014		3.8	—
	Primary	2014/2015 ⁵ and later		0.80	—
	ALT 20% PM	2012–2015	0.30	—	—
	ALT 20% NOx	2014–2015 ⁶		3.8	—
130≤kW≤560	ALT 5%	2016 and later	0.30	3.8	—
	Phase-in	2011–2013		0.80	—
	Phase-out			—	6.6/6.4 ⁸
	Alternate NOx Std	2011–2013	0.04	2.7	—
	Primary	2014 and later		0.80	—
	ALT 20% PM	2011–2014	0.20	—	—
	ALT 20% NOx	2014		3.8	—
GEN>560kW	ALT 5%	2015 and later	0.20	3.8	—
	Interim	2011–2014	0.20	6.2	—
	Primary	2015 and later	0.05	1.07	—
	ALT 20%	2015–2018	0.10	3.5	—
ELSE>560kW	ALT 5%	2019 and later		—	—
	Interim	2011–2014	0.20	—	—
	Primary	2015 and later	0.07	6.2	—
	ALT 20%	2015–2018	0.10	—	—
	ALT 5%	2019 and later		—	—

Notes:

⁴ Two alternate NOx standards and corresponding FEL caps are available for this category with corresponding alternate phase-in options.

⁵ The effective date of the primary FEL cap follows the phase-in period of the selected NOx FEL cap.

⁶ If interim Tier 4 standards are not met in 2008, the alternate NOx FEL would only be available for 2015.

⁷ If neither the alternate phase-in option nor banked Tier 2 credits are used, either NOx standard and corresponding FEL may be applied for this category.

⁸ The phase-out NMHC+NOx FEL cap is 6.6 g/kW-hr for engines <225 kW, and 6.4g/kW-hr for engines ≥ 225kW in this category.

(C) Split family provision. For generating or using credits in the 56 ≤ kW ≤ 560 power categories during the phase-in of Tier 4 standards, engine manufacturers may elect to split an engine family into two subfamilies (e.g., one which uses credits and one which generates credits for the same pollutant). The engine manufacturer must indicate in the application for certification that the engine family is to be split, and may calculate emission credits relative to different emissions standards (i.e., phase-in and phase-out standards) for different sets of engines within the engine family, but must certify the engine family to a single set of standards and FELs. The engine manufacturer shall calculate NMHC+NOx emission credits by adding the NOx FEL to the NMHC phase-in standard for comparison with the applicable NMHC+NOx phase-out standard. Any engine family certified under the provisions of this paragraph (C) must meet the applicable phase-in standard for NMHC. The engine manufacturer shall be responsible for assigning the number and configurations of engines within the respective subfamilies before the due date of the final report required in Part 1039, Subpart H of the 2008 and Later Test Procedures. The same label must be applied to each engine in the family, and must include the NOx FEL to which the engine is certified.

(3)(A) The opacity of smoke emissions from new 1996 through 1999 model year heavy-duty off-road compression-ignition engines 175 to 750 horsepower, inclusive, or from all new 2000 and later model year compression-ignition engines sold in this state, shall not exceed, based on the applicable measurement techniques specified in Part 89, Subpart B of the 2000 Plus Limited Test Procedures and Part 1039, Subpart B of the 2008 and Later Test Procedures, the following:

1. 20 percent during the engine acceleration mode.
2. 15 percent during the engine lugging mode.
3. 50 percent during the peaks in either mode.

(B) The following engines are exempt from the requirements of this paragraph (3):

1. Single-cylinder engines.

2. Propulsion marine compression-ignition engines.

3. Constant-speed engines.

4. Engines certified to a PM emission standard or FEL of 0.07 grams per kilowatt-hour or lower

(4) Low-emitting Blue Sky Series engines requirements.

(A) Voluntary standards. Engines subject to the standards in (b)(1)(A) may be designated “Blue Sky Series” engines by meeting the voluntary standards contained in Table 3, which apply to all certification and in-use testing. Blue Sky Series engines shall not be included in the Averaging, Banking, and Trading program. Table 3 follows:

Table 3. – Voluntary Emission Standards
(grams per kilowatt-hour)

Maximum Rated Power (kW)	NMHC+NO _x	PM
kW<8	4.6	0.48
8≤kW<19	4.5	0.48
19≤kW<37	4.5	0.36
37≤kW<75	4.7	0.24
75≤kW<130	4.0	0.18
130≤kW≤560	4.0	0.12
kW>560	3.8	0.12

(B) Additional standards. Blue Sky Series engines are subject to all provisions that would otherwise apply under this part, except as specified in (C) of this section.

(C) Test Procedures. NOx, NMHC, and PM emissions are measured using the procedures set forth in 40 CFR part 86, subpart N (July 1, 1999), which is incorporated by reference, in lieu of the procedures set forth in subpart E of the 2000 Plus Limited Test Procedures. CO emissions may be measured using procedures set forth in 40 CFR part 86, subpart N (July 1, 1999), or in subpart E of the 2000 Plus Limited Test Procedures. Manufacturers may use an alternate procedure to demonstrate the desired level of control if approved in advance by the Executive Officer. Engines meeting the requirements to qualify as Blue Sky Series engines must be

capable of maintaining a comparable level of emission control when tested using the procedures set forth in both Section 89.112(c) and subpart E of the 2000 Plus Limited Test Procedures. The numerical emission levels measured using the procedures from subpart E of the 2000 Plus Limited Procedures may be up to 20 percent higher than those measured using procedures from 40 CFR part 86, subpart N (July 1, 1999), and still be considered comparable.

(5)(A) No crankcase emissions shall be discharged into the ambient atmosphere from any new 1996–1999 model year heavy-duty off-road compression-ignition engine or any Tier 2 or later off-road compression-ignition engine subject to the 2000 Plus Limited Test Procedures. This provision does not apply to petroleum-fueled diesel cycle engines using turbochargers, pumps, blowers, or superchargers for air induction.

(B) For off-road compression-ignition engines subject to the 2008 and Later Test Procedures, no crankcase emissions shall be discharged directly into the ambient atmosphere from any engine, unless the sum of those discharged emissions are added to the exhaust emissions (either physically or mathematically) during all emission testing. To be eligible for this option, a manufacturer must design its engines so that all crankcase emissions can be routed into the applicable sampling systems specified in the 2008 and Later Test Procedures, and must account for deterioration in crankcase emissions when determining exhaust deterioration factors. Crankcase emissions that are routed to the exhaust upstream of exhaust aftertreatment during all operation are not considered to be discharged directly into the ambient atmosphere. Furthermore, engines using charge-air compression that are certified to a transitional alternate FEL (Type ALT 20% in Table 2b) during the first four years of the Tier 4 standards for the applicable power category are exempt from this subsection, but must instead comply with the requirements in Section 2423(b)(5)(A).

(6) Engine manufacturers that voluntarily certify engines to the Tier 4 standards in Table 1b earlier than required under this article may, according to the provisions in the 2008 and Later Test Procedures, generate additional ABT credits, or as an alternative, offset future Tier 4 compliance requirements should the equipment manufacturer that was provided the engine decline to use its early introduction incentives according to the provisions in Section 2423(d)(9). Table 4, as follows, summarizes the incentives for the early introduction of Tier 4 engines and some of the conditions that determine eligibility.

Table 4. – Early Introduction Incentives for Engine Manufacturers

Early Introduction	Power Category	Qualifying Standards ¹ grams per kilowatt-hour	Per-Engine Incentive
Final Tier 4 PM-Only ²	19 ≤ kW < 56 56 ≤ kW < 560	0.03 PM 0.02 PM	3 for 2 PM-Only
Final Tier 4 All	19 ≤ kW < 56 56 ≤ kW ≤ 560 GEN > 560 ELSE ≥ 560	0.03 PM / 4.7 NMHC+NOx 0.02 PM / 0.40 NOx / 0.19 NMHC 0.03 PM / 0.67 NOx / 0.19 NMHC 0.04 PM / 3.5 NOx / 0.19 NMHC	3 for 2
Ultra Low NOx	kW ≥ 19	Final Tier 4 PM & NMHC / 0.20 NOx	2 for 1

Notes:

¹ All engines must meet the Tier 4 crankcase emissions requirements. Engines must certify using all test and other requirements otherwise required for final Tier 4 standards such as for transient and not-to-exceed limits.

² Offsets must be earned prior to the start of phase-in requirements (prior to 2013 for 19 ≤ kW < 56 engines, prior to 2012 for 56 ≤ kW < 130 engines, prior to 2011 for 130 ≤ kW ≤ 560 engines, prior to 2015 for > 560 kW engines)

(7) Provisions for small-volume manufacturers. Small-volume engine manufacturers are entitled to special compliance provisions under this paragraph, but must notify the Executive Officer in writing before January 1, 2008, of the intent to use the provisions.

(A) Small-volume engine manufacturers may delay complying with certain otherwise applicable Tier 4 emission standards and requirements as described in the following table:

Table 5. – Small-Volume Engine Manufacturer Provisions

Maximum Engine Power	Temporary Relief Replacement Standards	Delay End Date (Model Year)
kW < 19	Tier 2	2011
19 ≤ kW < 37	Interim Tier 4	2016
37 ≤ kW < 56	See paragraph (7)(B) of this section for special provisions that apply for engines in this power range.	
56 ≤ kW < 130	Tier 3	2015

(B) The provisions of this paragraph (7) for engines 37 ≤ kW < 56 are applicable per one of the following options:

1. Manufacturers that comply with the 0.30 g/kW-hr PM standard in all model years from 2008 through 2012 without using PM credits may continue meeting that standard through 2015.

2. Manufacturers that choose not to comply with paragraph (7)(B)1. of this section may continue to comply with the standards and requirements in the 2000 Plus Limited Test Procedures for model years through 2012, but must begin complying in 2013 with the Tier 4 standards and requirements specified in Table 1b for model years 2013 and later.

(C) After the period of relief indicated in paragraphs (7)(A) and (B) of this section has expired, small-volume engine manufacturers must comply with the same Tier 4 standards and requirements as all other manufacturers.

(D) For engines not in the 19 ≤ kW < 56 power range, small volume engine manufacturers must meet the following conditions for the model years in which compliance with the otherwise applicable standards under this paragraph (7) is delayed:

1. Produce engines that meet all the emission standards and other requirements under the 2000 Plus Limited Test Procedures applicable for that model year, except as noted in this paragraph (7).

2. Meet the labeling requirements in the 2000 Plus Limited Test Procedures, but must use the following in place of the otherwise required statement of compliance in Section 2424(c)(2): “THIS ENGINE COMPLIES WITH CALIFORNIA REGULATIONS FOR [CURRENT MODEL YEAR] OFF-ROAD COMPRESSION-IGNITION ENGINES UNDER 13 CCR 2423(b)(7).” The referencing of similar federal requirements under this provision is permitted.

3. Small-volume engine manufacturers must notify the equipment manufacturer that the engines produced under this section are excluded from the production volumes associated with the equipment manufacturer flexibility program in Section 2423(d).

(E) For engines in the 19 ≤ kW < 56 power range, small-volume engine manufacturers must meet the following conditions for the model years in which compliance with the otherwise applicable standards under this paragraph (7) is delayed:

1. Produce engines in those model years that meet all the emission standards and other requirements that applied for model year 2008 engines in the same power category.

2. Meet the labeling requirements in Section 2424(c)(3), but use the following compliance statement instead of the compliance statement in Section 2423(c)(3): “THIS ENGINE COMPLIES WITH CALIFORNIA REGULATIONS FOR [CURRENT MODEL YEAR] OFF-ROAD COMPRESSION-IGNITION ENGINES UNDER 13 CCR 2423(b)(7).” The referencing of similar federal requirements under this provision is permitted.

3. Notify the equipment manufacturer that engines produced under this section are excluded from the production volumes associated with the equipment-manufacturer allowance program in Section 2423(d).

(F) The provisions of this paragraph (7) may not be used to circumvent the requirements of this article.

(8) Useful life. For purposes of certification, a manufacturer must demonstrate compliance with the standards set forth in this paragraph (b) over the full useful life of the engine, as defined in the applicable test procedures.

(9) NTE deficiencies. A manufacturer may petition the Executive Officer to accept an off-road compression-ignition engine as compliant

with the NTE requirements specified in the 2008 and Later Test Procedures even though specific elements of those requirements may not be fully met. Such grants of compliance, otherwise known as deficiencies, shall be limited to engines that have functioning emission-control hardware capable of allowing the engine to comply with the NTE limits. Deficiencies shall be granted by the Executive Officer according to the following stipulations:

(A) A manufacturer must apply for specific deficiencies at the time of, or prior to, submitting its application for certification. Deficiencies shall be assigned for an engine model within an engine family. The Executive Officer shall not approve deficiencies that are requested retroactively to cover engines already certified. The scope of each deficiency must be clearly identified in the certification application, and any auxiliary emission control device(s) used to control emissions to the lowest practical level must be identified with respect to each deficiency that is being requested.

(B) Deficiencies shall only be approved if compliance would be infeasible or unreasonable considering factors such as the technical feasibility of the given hardware, the availability of lead time, production cycles including the phase-in or phase-out of engines or vehicle designs, and planned computers upgrades. Other relevant factors may be considered.

(C) Deficiencies shall expire after a single model year and may be limited to specific engine configurations. The Executive Officer may approve a manufacturer's request for the same deficiency in the following model year if correcting the deficiency would require extreme hardware or software modifications and the manufacturer has demonstrated an acceptable level of effort toward complying.

(D) The number of deficiencies available to a manufacturer shall not be limited during the first three model years in which NTE limits apply to the manufacturer's engines. For the next four model years, up to three deficiencies per engine family shall be available to a manufacturer. Deficiencies of the same type that apply similarly to different power ratings within a family shall count as one deficiency per family. The Executive Officer may conditionally approve additional deficiencies during these four years, but may impose stipulations on their applicability as appropriate. Deficiencies shall not be approved beyond the seven-year period specified in this paragraph (8).

(10) Adjustable parameters. Manufacturers that design engines with adjustable parameters must meet all the requirements of this paragraph (b) for any adjustment in the physically adjustable range. An operating parameter is not considered adjustable if it is permanently sealed or if it is not normally accessible using ordinary tools. The Executive Officer may require that the adjustable parameters be set to any specification within the adjustable range during any testing, including certification testing, selective enforcement auditing, or in-use testing.

(11) Prohibited controls. A manufacturer shall not design engines with emission control devices, systems, or elements of design that cause or contribute to an unreasonable risk to public health, welfare, or safety while operating.

(12) Defeat devices. Engines equipped with a defeat device shall not be certified for sale in California. A defeat device is a component or system that reduces the effectiveness of emission controls under conditions that the engine may reasonably be expected to encounter during normal operation and use. This prohibition does not apply to auxiliary-emission control devices identified in the certification application if one of more of the following is true:

(A) The operating conditions where the auxiliary-emission control device is active were substantially encountered during all testing requirements as described in Part 1039, Subpart F of the 2008 and Later Test Procedures.

(B) The design of the auxiliary-emission control device is shown to be necessary for preventing engine (or equipment) damage or accidents.

(C) The auxiliary-emission control device only reduces the effectiveness of emissions control during engine starting.

(c)(1) The test procedures for determining certification and compliance with the standards for gaseous exhaust emissions from new

1996–1999 heavy-duty off-road compression-ignition engines sold in the state are set forth in the 1996–1999 Heavy-Duty Test Procedures.

(2)(A) The test procedures for determining certification and compliance with the standards for gaseous exhaust emissions and the standards for opacity of smoke emissions from new 2000 model year and later off-road compression-ignition engines for which the standards in paragraph (b)(1)(A) are applicable, and sold in the state, are set forth in the 2000 Plus Limited Test Procedures.

(B) The test procedures for determining certification and compliance with the standards for gaseous exhaust emissions, particulate exhaust emissions, opacity of smoke emissions, and not-to-exceed emissions from new 2008 model year and later off-road compression-ignition engines for which the limits in paragraph (b)(1)(B) are applicable, and sold in the state, are set forth in the 2008 and Later Test Procedures.

(3) The test procedures for determining certification and compliance with the standards for particulate exhaust emissions from new 1996 and later off-road compression-ignition engines for which the standards in paragraph (b)(1)(A) are applicable, and sold in the state, are set forth in the PM and Test Cycle Limited Test Procedures.

(4) The test procedures for determining certification and compliance with the standards for the opacity of smoke emissions from new 1996–1999 off-road compression-ignition engines sold in the state are set forth in the 1996–1999 Smoke Test Procedures.

(d) Implementation flexibility for equipment and vehicle manufacturers and post-manufacture marinizers. For a limited time, off-road equipment and vehicle manufacturers and post-manufacture marinizers may produce equipment with engines that are subject to less stringent emission standards than required by Tables 1a and 1b for new 2000 model year and later off-road equipment and vehicles and marine compression-ignition engines, subject to the requirements of paragraph (e) of this section. Separate provisions are provided for equipment with engines subject to the 2000 Plus Limited Test Procedures versus equipment with engines subject to the 2008 and Later Test Procedures, and are identified accordingly in the following subsections. Only manufacturers that have primary responsibility for designing and manufacturing equipment, and have manufacturing procedures for installing engines in equipment, are eligible to participate in the equipment manufacturer flexibility program provided by the 2008 and Later Test Procedures. Equipment manufacturers participating in this flexibility program must comply with the notification and reporting requirements specified in Section 2423(d)(7). Engines produced for this flexibility program using FELs greater than the applicable standards must be offset with sufficient ABT credits. The following allowances apply separately to each engine power category subject to standards under Section 2423(b)(1):

(1) Percent-of-production allowances.

(A) Equipment rated at or above 37kW and subject to the 2000 Plus Limited Test Procedures. A manufacturer may produce equipment and vehicles with engines rated at, or above, 37kW that are exempted from meeting current model year emission standards for a portion of its California-directed production volume. These percent-of-production flexibility allowances must be used within the seven years immediately following the date on which Tier 2 engine standards first apply to engines used in such equipment and vehicles, provided that the seven-year sum of the U.S.-directed portion of the manufacturer's percent-of-production flexibility allowances does not exceed 80 percent, expressed in cumulative yearly percentage increments, and provided that all such equipment and vehicles contain only engines that have been certified to the Tier 1 or Tier 2 standards;

(B) Equipment rated under 37kW and subject to the 2000 Plus Limited Test Procedures. A manufacturer or post-manufacture marinizer may produce equipment and vehicles and marine engines with engines rated under 37kW that are exempt from meeting current model year emission standards for a portion of its California-directed production volume. These percent-of-production flexibility allowances must be used within the seven years immediately following the date on which Tier 1 engine standards first apply to engines used in such equipment and vehicles and

marine engines, provided that the seven-year sum of the U.S.-directed portions of the manufacturer's percent-of-production flexibility allowances, does not exceed 80 percent, expressed in cumulative yearly percentage increments;

(C) Equipment subject to the 2008 and Later Test procedures. A manufacturer may produce equipment and vehicles with engines that are exempt from meeting current model year emission standards for a portion of its California-directed production volume. These percent-of-production flexibility allowances must be used within one of the seven-year flexibility usage periods specified in Table 6 for each applicable power category, provided that the seven-year sum of the U.S.-directed portion of the manufacturer's percent-of-production flexibility allowances does not exceed 80 percent, expressed in cumulative yearly percentage increments, except as provided for in paragraph (d)(6) or (f). Equipment used as percent-of-production flexibility allowances must contain only engines that have been certified to, at least, the standards listed in Table 6, corresponding to the flexibility usage period selected by the manufacturer. All flexibility allowances for a power category must be used within the same flexibility usage period.

Table 6. — Tier 4 Flexibility Allowance Options

<i>Power Category</i>	<i>7 Year Usage Period</i>	<i>Flexibility Standard</i>
< 19 kW	2008–2014	Tier 2
19 ≤ kW < 56	2008–2014 ¹	Tier 3 ²
	2012–2018	2008 Interim Tier 4
56 ≤ kW < 130	2012–2018	Tier 3
	2014–2020	2012 Interim Tier 4
130 ≤ kW ≤ 560	2011–2017	Tier 3
	2014–2020	2011 Interim Tier 4
> 560 kW	2011–2017	Tier 2
	2015–2021	2011 Interim Tier 4

Notes:

¹ This usage period is not available for allowances greater than or equal to 37 kW unless interim Tier 4 standards have been met starting in 2008.

² Flexibility allowances under 37kW may contain engines certified to the Tier 2 standards.

(2)(A) Small volume allowances subject to the 2000 Plus Limited Test Procedures. An off-road equipment or vehicle manufacturer or post-manufacture marinizer may exceed the production percentages in paragraphs (d)(1)(A) and (B) of this section for a portion of its California-directed production, provided that in each regulated power category the manufacturer's total number of U.S.-directed off-road equipment and vehicles and marine diesel applications that contain engines which are exempt from meeting current model year emission standards over the years in which the percent-of-production allowance applies:

1. does not exceed 100 units times the number of years in which the percent-of-production allowance applies, and
2. does not exceed 200 units in any year, and
3. does not use engines from more than one engine family.

(B) Small volume allowances subject to the 2008 and Later Test Procedures. As an alternative to the percent-of-production allowance in Section 2423(d)(1)(C), an off-road equipment or vehicle manufacturer may produce equipment with engines that are exempt from meeting current model year emission standards for a portion of its California-directed production volume, provided that the exempt equipment is a subset of the manufacturer's U.S.-directed volume of exempt equipment and the manufacturer is in compliance with the following provisions:

1. Single engine family provision. A manufacturer may claim up to 700 U.S.-directed flexibility allowances within a power category during one of the seven-year flexibility usage periods specified in Table 6, but no more than 200 allowances in a single year within a power category, except as provided for in paragraph(d)(6) or (f). Engines within a power category that are used in these flexibility allowances must be from a single engine family within a given year.

2.a. Multiple engine family provision for flexibility allowances below 130 kW. A manufacturer may claim up to 525 U.S.-directed flexibility allowances within a power category during one of the seven-year flexi-

bility usage periods specified in Table 6, but no more than 150 allowances in a single year within a power category, except as provided for in paragraph (d)(6) or (f). Engines within a power category that are used in these flexibility allowances may be from multiple engine families within a given year.

b. Multiple engine family provision for flexibility allowances at or above 130 kW. A manufacturer may produce up to 350 U.S.-directed flexibility allowances within a power category during one of the seven-year flexibility usage periods specified in Table 6, but no more than 100 allowances in a single year within a power category, except as provided for in paragraph (d)(6) or (f). Engines within a power category that are used in these flexibility allowances may be from multiple engine families within a given year.

(3)(A) Inclusion of previous-tier engines. Off-road equipment and vehicles and marine diesel engines built with previous tier or noncertified engines under the existing inventory provisions of the 2000 Plus Limited Test Procedures (40 CFR Section 89.1003(b)(4)) need not be included in determining compliance with paragraphs (d)(1)(A) and (B) and (d)(2)(A) of this section.

(B) Inclusion of engines not subject to Tier 4 requirements. Off-road equipment and vehicles built with engines otherwise exempt from the requirements of the 2008 and Later Test Procedures are not required to be counted toward the percentage, or number, of claimed flexibility allowances under the provisions in Subsections (d)(1)(C) and (d)(2)(B). Such exempted engines include unused inventories produced prior to the effective date of the Tier 4 standards, excluding stockpiled engines, and hand-startable, air cooled, direct-injection engines below 8 kW in 2008 and 2009 that do not meet the Tier 4 PM standard. Nonetheless, manufacturers may choose to include these engines in the count of total equipment produced from which the percentage of flexibility allowances in Subsection (d)(1)(C) is derived.

(4) Early-use of flexibility allowances. Manufacturers may start using a portion of the flexibility allowances in Subsections (d)(1)(C) and (d)(2)(B) for equipment and vehicles containing engines not yet subject to the Tier 4 standards, provided that the seven-year period for using flexibility allowances under the 2000 Plus Limited Test Procedures flexibility program has expired. All equipment and vehicles claimed as flexibility allowances under this early-use provision must contain engines that have been certified to, at least, the Tier 1 standards. Manufacturers must count these Tier 2 or Tier 3 equipment and vehicles toward the total percentage, or number, of flexibility allowances permitted under the provisions of Sections (d)(1)(C) and (d)(2)(B). The maximum cumulative early-use allowance is 10 percent under the percent-of-production provision in Section (d)(1)(C), or 100 units under the small volume provision in Section (d)(2)(B). Table 7 shows the applicable years for using early-use flexibility allowances. Table 7 follows:

Table 7. — Years for Early-Use Flexibility Allowances

<i>Maximum Engine Power</i>	<i>Calendar Years</i>
kW < 19	2007
19 ≤ kW < 37	2006–2011
37 ≤ kW < 56	2011
56 ≤ kW < 75	2011
75 ≤ kW < 130	2010–2011
130 ≤ kW < 225	2010
225 ≤ kW < 450	2008–2010
450 ≤ kW ≤ 560	2009–2010
> 560 kW	—

(5) Labeling requirements. Allowances claimed under the Tier 2/3 or Tier 4 equipment flexibility programs must be labeled, as appropriate, per the following:

(A) Engine labeling. Except for engines used in flexibility allowances prior to January 1, 2007, engine manufacturers shall meet the labeling requirements provided in Section 2424 with the following substitutions:

For flexibility engines meeting previous year emission requirements, the engine manufacturer shall substitute the following for the statement of compliance required in Sections 2424(c)(1)(E)6 and 2424(c)(2):

"THIS ENGINE COMPLIES WITH CALIFORNIA EMISSION REQUIREMENTS UNDER 13 CCR 2423(d). SELLING OR INSTALLING THIS ENGINE FOR ANY PURPOSE OTHER THAN FOR THE EQUIPMENT FLEXIBILITY PROVISIONS CITED MAY BE A VIOLATION OF STATE LAW SUBJECT TO CIVIL PENALTY." [Insert Engine Family Name]

For flexibility engines less than 37 kW and not subject to emission requirements under the Tier 2/3 program, the engine manufacturer shall substitute the following for the statement of compliance required in Section 2424(c)(1)(E)6:

"THIS ENGINE QUALIFIES FOR USE IN EQUIPMENT RATED BELOW 37 KW BY PROVISION OF 13 CCR 2423(d). SELLING OR INSTALLING THIS ENGINE FOR ANY PURPOSE OTHER THAN FOR THE EQUIPMENT FLEXIBILITY PROVISIONS CITED MAY BE A VIOLATION OF CALIFORNIA LAW SUBJECT TO CIVIL PENALTY."

As an alternative for flexibility engines produced under the Tier 2/3 program, and for which the engine manufacturer offers proof to the Executive Officer that the otherwise required statements of compliance in this subsection would be unduly burdensome or costly to implement, engine manufacturers may instead use the following:

"THIS ENGINE CONFORMS TO CALIFORNIA OFF-ROAD COMPRESSION-IGNITION ENGINE REGULATIONS UNDER 13 CCR 2423(d)." [Insert Engine Family Name if Certified]

These revised statements of compliance do not preclude the referencing of similar federal requirements that would be satisfied simultaneously by meeting the provisions of Section 2423(d). Furthermore, the Executive Officer may, upon request, approve alternate labeling specifications that are equivalent to the specifications in this subsection.

(B) Equipment Labeling. For all allowances claimed under the Tier 4 flexibility program, equipment manufacturers shall affix a permanent label to the engine, or to a readily visible section of the equipment that cannot be easily removed. The label shall be in the English language, shall supplement the manufacturer's emission control information label, and shall include the following information:

1. The label heading "EMISSION CONTROL INFORMATION".
2. The equipment manufacturer's corporate name and trademark.
3. The calendar year in which the equipment is manufactured.
4. The name, e-mail address, and phone number of a person to contact for further information.
5. The following statement:

"THIS EQUIPMENT [or identify the type of equipment] HAS AN ENGINE THAT MEETS CALIFORNIA EMISSION STANDARDS UNDER 13 CCR 2423(d)."

This label content does not preclude the referencing of similar federal requirements that would be satisfied simultaneously by meeting the provisions of Section 2423(d).

(6) Technical hardship allowances. Equipment manufacturers may apply for additional flexibility allowances should extreme and unusual circumstances occur leading to technical obstacles in complying with the Tier 4 requirements. A manufacturer may request additional allowances for power categories $19 \leq \text{kW} \leq 560$ if it claims allowances under the provisions of Section 2423(d)(1)(C), but may only request additional allowances for power categories $19 \leq \text{kW} < 56$ if it claims allowances under the provisions of Section 2423(d)(2)(B). Additional flexibility allowances shall not be provided when the engine and equipment are produced by the same manufacturer, or affiliate. The Executive Officer shall review requests for additional flexibility allowances according to the following stipulations:

(A) The manufacturer requesting additional allowances must demonstrate that the circumstances necessitating them were outside the control of the manufacturer and could not have been avoided with reasonable discretion. The manufacturer must also demonstrate that it has exercised prudent planning and has taken reasonable steps to minimize the scope of the request.

(B) Manufacturers applying for additional flexibility allowances must do so in writing to the Chief of the Mobile Source Operations Division, or designee, prior to the earliest date in which the applying manufacturer would be in violation of Section 2423(b)(1). All applications shall provide, at a minimum, the following information:

1. A description of the manufacturer's equipment design process.
2. A description of the relationship with the engine supplier regarding product design.
3. An explanation of the technical hardship leading to this request, why it cannot be addressed without additional flexibility allowances, and an explanation of the circumstances behind the technical hardship and why it was unavoidable.
4. A description of the information and products provided by the engine supplier related to equipment design, including specifications, performance data, prototypes, and the dates of delivery.
5. A comparison of the design processes of the equipment model(s) for which additional allowances are needed versus those of other models that do not need additional allowances, and an explanation of how the technical differences between the models justify the request for additional allowances.
6. A description of all efforts to find and use other compliant engines, or otherwise an explanation why none are available.
7. A description of the steps taken to minimize the scope of the manufacturer's request, and any other relevant information.
8. An estimation of the number of additional allowances needed for each equipment model covered by the request, subject to Sections 2423(d)(6)(C) and (d)(6)(D) below.

Notwithstanding, the Executive Officer may require additional information as deemed necessary before making a determination for relief.

(C) The following limits shall apply for additional flexibility allowances granted in connection to the percent-of-production provisions in Section 2423(d)(1)(C):

1. A manufacturer's California-directed share of additional flexibility allowances for each power category shall be a subset of its U.S.-directed allowances for the same power category, provided that the additional U.S.-directed allowances do not exceed 70 percent of the U.S.-directed volume of production for the power category for one year.

2. All primary percent-of-production allowances must be completely used up prior to the use of any additional flexibility allowances.

3. All additional allowances shall expire 24 months after the start of the applicable flexibility usage period for each power category, as specified in Table 6. These allowances shall only be used for the specific equipment models covered in the manufacturer's written application for relief.

(D) The following limits shall apply for additional flexibility allowances granted in connection to the small volume provisions in Section 2423(d)(2)(B):

1. Only small equipment manufacturers, as defined below, that have not been granted additional flexibility allowances for the $19 \leq \text{kW} < 56$ power category under Section 2423(d)(6)(C), are eligible to request additional flexibility allowance under this provision.

"Small equipment manufacturer," for the purpose of this provision, means a federally defined small-business equipment manufacturer that had an annual U.S.-directed production volume of equipment using off-road diesel engines $19 \leq \text{kW} < 56$ of no more than 3,000 units in 2002 and all earlier calendar years, and has 750 or fewer employees (500 or fewer employees for nonroad equipment manufacturers that produce no construction equipment or industrial trucks). For manufacturers owned by a parent company, the production limit applies to the production of the parent company and all its subsidiaries and the employee limit applies to the total number of employees of the parent company and all its subsidiaries.

2. All primary small volume allowances for the $19 \leq \text{kW} < 56$ power category must be completely used up for a given year prior to the use of additional flexibility allowances.

3. Additional allowances shall only be used for equipment with engines rated $19 \leq \text{kW} < 37$.

4. A manufacturer's California-directed share of additional flexibility allowances under this provision shall be a subset of its U.S.-directed allowances, which shall not exceed 1,100.

5. All additional allowances shall expire 36 months after the start of the applicable flexibility usage period for each power category, as specified in Table 6. The allowances shall only be used for the specific equipment models covered in the manufacturer's written application for relief. The additional allowances are not subject to small volume annual limits.

(7) Notification and reporting requirements for using Tier 4 flexibility allowances. As a prerequisite to using any Tier 4 flexibility allowances, the equipment manufacturer shall notify the ARB of its intent to use such allowances. The manufacturer shall also send an annual report after each year that flexibility allowances have been used to verify that the allowances claimed do not exceed the number of allowances permitted.

(A) Before January 1 of the first year that flexibility provisions will be used, a written notice informing ARB of the manufacturer's intent to use flexibility allowances must be sent to the Chief of the Mobile Source Operations Division, or designee, containing the following information:

1. The equipment manufacturer's name and address, and the name and address of the parent company, if applicable.

2. The name and telephone number of a person to contact for more information.

3. The calendar years for which the Tier 4 flexibility provisions shall apply.

4. The engine manufacturer's name and address that produces the engines which will be used in the equipment claimed as flexibility allowances.

5. An accurate estimate of the number of flexibility allowances in each power category that will be produced under the percent-of-production provisions in Section 2423(d)(1)(C), or the small volume provisions in Section 2423(d)(2)(B).

6. A tabulation of U.S.-directed flexibility allowances in each power category that have been sold in previous calendar years under the provisions of Section 2423(d) and 40 CFR 89.102(d).

(B) For each year that Tier 4 flexibility allowances are used, the equipment manufacturer shall submit, by March 31 of the following year, a written report to the Chief of the Mobile Source Operations Division, or designee, documenting the utilization of those allowances. This report shall include the total number of equipment sold by the manufacturer during the preceding year for each power category, based on actual U.S.-directed production information, and shall identify the flexibility allowances in each power category by reporting the percentages of U.S.-directed flexibility production corresponding to the number of equipment in each power category. The report shall also identify the cumulative yearly totals and percentages for all flexibility allowances sold for each power category. Alternatively, the percentage figures may be omitted from the report if the report states that percent-of-production allowances were not used. If available, end of year percentage figures for California-directed sales shall also be included in this report.

(8) Import restrictions on the use of Tier 4 flexibility allowances. Foreign equipment manufacturers may only import equipment with exempted flexibility engines into California according to the stipulations in Section 1039.626 of the 2008 and Later Test Procedures. These stipulations address the potential for abuse whereby individual importers could collectively import more flexibility allowances than permitted based on the foreign equipment manufacturer's total production for the United States market. The stipulations include acceptance by the foreign equipment manufacturer of random audits by the ARB or its representatives, and the posting of a monetary bond for each imported engine to cover the cost of any potential enforcement actions. Foreign equipment manufacturers who comply with the stipulations will be eligible to receive the same flexibility allowances as domestic manufacturers.

(9) Early introduction incentives for equipment manufacturers. In addition to the equipment flexibility allowances provided in Subsections

(d)(1)(C) and (d)(2)(B), equipment manufacturers, as provided in the 2008 and Later Test Procedures, may earn additional allowances for the early introduction of equipment with engines meeting the Tier 4 standards in Table 1b. Equipment manufacturers installing engines at or above 19 kW that comply with the final Tier 4 PM and NOx standards could earn one flexibility allowance for each early Tier 4 compliant engine used in its equipment. Equipment manufacturers installing engines $56 \leq \text{kW} \leq 560$ that comply with the final Tier 4 PM standard and the alternative NOx standard could earn one-half of a flexibility allowance for each early Tier 4 engine used in its equipment. Table 8, below, summarizes the incentives for the early introduction of Tier 4 compliant equipment and some of the conditions that determine eligibility. Should an equipment manufacturer decline flexibility allowances earned with this provision, the allowances would then be available to the engine manufacturer that had supplied the early introduction engine, subject to the provisions in Section 2423(b)(6).

Table 8. – Early Introduction Incentives for Equipment Manufacturers

<i>Power Category</i>	<i>Qualifying Standards (g.kW-hr)</i>	<i>Installation Deadline</i>	<i>Flexibility Allowance</i>
$19 \leq \text{kW} < 56$	0.03 PM / 4.7 NMHC+NOx	December 31, 2012 ¹	1 for 1
$56 \leq \text{kW} \leq 130$	0.02 PM / 0.40 NOx / 0.19 NMHC	December 31, 2011	1 for 1
	0.02 PM / 3.4 NOx / 0.19 NMHC ²		1 for 2
$130 \leq \text{kW} \leq 560$	0.02 PM / 0.40 NOx / 0.19 NMHC	December 31, 2010	1 for 1
	0.02 PM / 2.0 NOx / 0.19 NMHC ²		1 for 2
GEN > 560	0.03 PM / 0.67 NOx / 0.19 NMHC		
ELSE > 560	0.04 PM / 3.5 NOx / 0.19 NMHC	December 31, 2014	1 for 1

Notes:

¹ The installation date for $37 \leq \text{kW} \leq 56$ engines purchased from manufacturers choosing to opt out of the 2008 model year Tier 4 standards and instead comply with the Tier 4 standards beginning in 2012 would be December 31, 2011.

² To be eligible, engines must meet the 0.02 g/kW-hr PM standard and the alternate NOx standards.

(e) Recordkeeping and calculation to verify compliance. The following shall apply to off-road equipment or vehicle manufacturers and post-manufacture marinizers who produce flexibility equipment or vehicles or marine diesel engines under both the Tier 2/3 and Tier 4 flexibility provisions of paragraph (d) of this section, except as otherwise noted:

(1) For each power category in which excepted off-road equipment or vehicles or marine diesel engines are produced, a calculation to verify compliance with the requirements of paragraph (d) of this section shall be made by the off-road equipment or vehicle manufacturer or post-manufacture marinizer. This calculation shall be made for flexibility allowances under the Tier 2/3 program no later than December 31 of the year following the last year in which allowances are used, and as indicated in Subsection (d)(7)(B) for flexibility allowances under the Tier 4 program. The calculation shall be based on actual national production information from the subject years. If both the percent-of-production and small volume allowances have been exceeded, then the manufacturer is in violation of Section 2420(a)(3), except as provided under Subsection (d)(6) and paragraph (f) of this section.

(2) An off-road equipment or vehicle manufacturer or post-manufacture marinizer shall keep records of all off-road equipment and vehicles and marine diesel engines sold in California under the provisions of paragraph (d) of this section, for each power category in which flexibility allowances are claimed. These records shall include equipment and engine model numbers, serial numbers, and dates of manufacture, engine rated power for Tier 2/3 flexibility engines, and maximum engine power for Tier 4 flexibility engines. In addition, the manufacturer shall keep records sufficient to demonstrate the verifications of compliance required in paragraph (e)(1) of this section and the notifications and reports specified in Section 2423(d)(7), as applicable. All records shall be kept until at least two full years for flexibility allowances under the Tier 2/3 program and five full years for flexibility allowances under the Tier 4 pro-

gram after the final year in which allowances are available for each power category, and shall be made available to the Executive Officer upon request.

(f) Economic hardship relief. Off-road equipment and vehicle manufacturers and post-manufacture marinizers may request relief from the Executive Officer, or designee, subject to the following requirements:

(1) The application for relief must be submitted for approval to the Chief of the Mobile Source Operations Division, or designee, in writing prior to the earliest date in which the applying manufacturer would be in violation of Section 2423(b)(1). The off-road equipment or vehicle manufacturer applying for hardship relief must submit evidence for approval, showing that the following requirements have been met:

(A) The off-road equipment or vehicle manufacturer applying for hardship relief must not be the manufacturer of the engines used in the equipment for which relief is sought. This requirement does not apply to post-manufacture marinizers.

(B) The conditions causing the impending violation must not be substantially the fault of the applying manufacturer.

(C) The conditions causing the impending violation must be such that the off-road equipment or vehicle manufacturer applying for hardship relief will experience serious economic hardship if relief is not granted.

(D) The off-road equipment or vehicle manufacturer applying for hardship relief must demonstrate that no allowances under paragraph (d) of this section will be available to avoid the impending violation.

(2) Any relief granted must begin within one year after the implementation date of the standard applying to the engines being used in the equipment, or to the marine diesel engines, for which relief is requested, and may not exceed 12 months (24 months for small volume manufacturers) in duration.

(3) The Executive Officer may impose other conditions on the granting of relief, including provisions to recover the lost environmental benefit. The labeling requirements in the 2008 and Later Test Procedures apply.

(g) Alternative Flexibility for Post-Manufacture Marinizers. Post-manufacture marinizers may elect to delay the effective date of the Tier 1 standards for marine propulsion diesel engines rated under 37kW by one year, instead of using the provisions of paragraphs (d) and (f) of this section. Post-manufacture marinizers wishing to take advantage of this provision must inform the Executive Officer of their intent to do so in writing before the date that the standards would otherwise take effect.

(h) Allowance for the production of engines. To meet the demand for engines created under paragraph (d), (f), or (g) of this section, engine manufacturers may produce engines that do not meet current year emission requirements. However, engine manufacturers must receive written assurance from each equipment manufacturer, prior to production, that a certain number of these engines are needed for the equipment manufacturer's Tier 4 equipment flexibility allowances. Engine manufacturers shall provide to the Executive Officer annually, as part of the certification application, a list of the equipment manufacturers requesting such engines for their Tier 2/3 and Tier 4 equipment flexibility allowances. The list shall include the equipment manufacturers' names, engine models, and estimated national production volumes. A copy of the original correspondence from the equipment manufacturer requesting the production of flexibility engines shall be kept on file by the engine manufacturer in addition to, and in accordance with, the provisions of § 1039.250 of the 2008 and Later Test Procedures, and shall be made available without delay to the Executive Officer upon request. Furthermore, all engines produced for sale in California under either of the transitional flexibility provisions for equipment manufacturers, must be covered by an Executive Order starting January 1, 2007. To obtain an Executive Order for these engines, the engine manufacturer shall comply with the following:

(1) Prior to the start of production, submit a letter to the Chief of the Mobile Source Operations Division, or designee, requesting certification for flexibility engines intended for sale in California, and

(2) Provide written assurance that the flexibility engines to be produced will be identical in all material respects to those for which a valid Executive Order has been issued in a previous model year. The engine family name of the previously certified engine family must be included in the manufacturer's request for certification.

Upon determination that the conditions in paragraphs (1) and (2) have been satisfied, the Executive Officer shall provide the engine manufacturer with an Executive Order covering the requested flexibility engine families for the current model year. The engine family names included in the Executive Order shall either be the same as, or a subset of the previously certified engine family names, and shall remain the same for as long as the engines continue to qualify as flexibility allowances regardless of model year. These engine family names shall be used by the engine manufacturer to comply with the labeling requirements of 2423(d)(5)(A).

(i) [Reserved]

(j)(1) A new compression-ignition off-road engine intended solely to replace an engine in a piece of off-road equipment that was originally produced with an engine manufactured prior to the applicable implementation date as specified in Section 2423, shall not be subject to the emission requirements of Section 2423 provided that:

(A) the engine manufacturer has ascertained that no engine produced by itself or the manufacturer of the engine that is being replaced, if different, and certified to the requirements of this article, is available with the appropriate physical or performance characteristics to repower the equipment; and

(B) unless an alternative control mechanism is approved in advanced by the Executive Officer, the engine manufacturer or its agent takes ownership and possession of the engine being replaced; and

(C) the engine manufacturer does not use the replacement-engine exemption to circumvent the regulations; and

(D) the replacement engine is clearly labeled with the following language, or similar alternate language approved in advance by the Executive Officer:

"THIS ENGINE DOES NOT COMPLY WITH CALIFORNIA AND FEDERAL OFF-ROAD OR ON-HIGHWAY EMISSION REQUIREMENTS. SALE OR INSTALLATION OF THIS ENGINE FOR ANY PURPOSE OTHER THAN AS A REPLACEMENT ENGINE FOR AN ENGINE MANUFACTURED PRIOR TO JANUARY 1 [INSERT APPROPRIATE YEAR] IS A VIOLATION OF CALIFORNIA AND FEDERAL LAW SUBJECT TO CIVIL PENALTY."

(2) At the conclusion of each of the 2000 and later model years, the manufacturer must provide, by engine model, the actual number of replacement engines produced for California during the model year, and a description of the physical or performance characteristics of those models that indicate certified replacement engine(s) were not available as per paragraph (1).

(k) Any new engine certified to comply with California emission standards and test procedures for on-road applications may, upon approval by the Executive Officer, be considered to be in compliance with these regulations.

(l) Practices and labeling requirements for rebuilt engines. This subsection shall apply as provided in paragraph (1) below to all off-road compression-ignition engines subject to the requirements of Section 2423 that are rebuilt after December 31, 2006, including those engines that were originally manufactured on, or prior to, December 31, 2006.

(1) Practices. The rebuilding practices described in Part 89.130 of the incorporated 2000 Plus Limited Test Procedures, including the exemption for engines equal to or greater than 37 kW that meet the Tier 1 standard, and Part 1068.120 of the 2008 and Later Test Procedures shall apply. These practices are summarized in paragraphs (1)(A) and (1)(B) below, which are provided as respective references for the labeling requirements in paragraphs (2)(A) and (2)(B) of this subsection.

(A) Any person who rebuilds an engine that either remains installed in a piece of equipment during the rebuilding process or will be rein-

stalled after the rebuilding process has been completed shall rebuild the engine to the same certified configuration or the certified configuration of a later model year engine. For the purposes of this section, these engines shall be referred to as "rebuilt original engines."

(B) Any person who replaces the engine in a piece of equipment with a rebuilt engine (this includes engines that have been substantially assembled from parts originally belonging to one or more other engines) shall use a replacement engine with a certified configuration that is at least equivalent, from an emissions standpoint, to that of the engine being replaced. For the purposes of this section, these engines shall be referred to as "rebuilt replacement engines."

(2) Labeling Requirements.

(A) Rebuilt Original Engines. Any person who rebuilds engines for which the practices in paragraph (1)(A) of this subsection apply shall ensure that the rebuilt engines are labeled as follows:

1. An original engine that is rebuilt to the same emissions configuration employed by the engine at the time it was issued an Executive Order shall retain the emissions control label described in Section 2424. The rebuilder shall not remove or deface in any manner the original label and must take care to protect it from the effects of sandblasting, acid dipping, or any other restorative processes. Notwithstanding the preceding requirements and prohibitions of this paragraph (2)(A)1., the rebuilder shall substitute a new permanent label containing the text in paragraph (2)(A)2. below for the original emission control label if the rebuilder determines that the label has been irreparably corrupted due to extreme and unintentional circumstances (e.g., fire or collision). The rebuilder shall provide to the Executive Officer annually a list of all rebuilt engines for which original labels have been removed under this provision no later than two months after the end of each calendar year. The rebuilder shall retain all removed labels, or otherwise document the degree to which the labels were damaged or missing (e.g., photographic proof of the corruption), for a period of no less than eight years following the date of renovation, and shall make these available to the Executive Officer upon request. The rebuilder shall be subject to civil penalty under State law should the Executive Officer determine that the original emission control label did not warrant replacement or that the rebuilder is abusing this provision;

2. An original engine that is rebuilt to a more stringent emissions configuration shall be permanently re-labeled using the following text:

"THIS ENGINE HAS BEEN REBUILT UNDER 13 CCR 2423(I) USING MATCHED COMPONENTS OF THE SAME SPECIFICATIONS AND CALIBRATIONS AS THOSE OF A CERTIFIED TIER [*insert the numerical tier designation of the rebuilt engine*] OFF-ROAD COMPRESSION-IGNITION ENGINE. IF PLACED INTO SERVICE IN AN OFF-ROAD APPLICATION, THIS ENGINE MUST BE INSTALLED IN EQUIPMENT ORIGINALLY SOLD WITH A TIER [*insert the numerical tier designation of the rebuilt engine*] OR EARLIER ENGINE. [*insert the engine family name of the reference engine*]."

For the purpose of this label, "MATCHED" means a complete set of components corresponding to the certified emissions configuration being referenced (see the definition of "certified emissions configuration" in Section 2421(a)(13)). The reference engine is the engine family name corresponding to the certified emissions configuration to which the engine has been rebuilt. The label shall conform to the provisions of Section 2424 regarding location and visibility.

(B) Rebuilt Replacement Engines. Any person who rebuilds engines for which the practices in paragraph (1)(B) of this subsection apply shall ensure that the rebuilt engines are labeled as follows:

1. A replacement engine that is rebuilt to the same California emissions configuration employed by the engine at the time it was issued an Executive Order shall either retain the emission control label described in Section 2424 or be permanently re-labeled using the text in paragraph (2)(A)2 of this subsection. A replacement engine that is rebuilt to the same emissions configuration employed by the engine at the time it was issued a federal Certificate of Conformity, and for which no Executive

Order exists, shall be permanently re-labeled using the text in paragraph (2)(A)2 of this subsection, prior to being installed in equipment that was originally sold with a California certified engine;

2. A replacement engine that is rebuilt to a more stringent emissions configuration shall be permanently re-labeled using the text in paragraph (2)(A)2. above;

3. An incomplete rebuilt replacement engine shall be permanently re-labeled using the text specified below. For the purposes of this subsection, "incomplete rebuilt replacement engine" means a rebuilt replacement engine that is sold or offered for sale in California without all the necessary components to enable engine operation including, but not necessarily limited to, the fuel system and the air system:

"THIS ENGINE HAS BEEN REBUILT UNDER 13 CCR 2423(I) AS AN INCOMPLETE ENGINE USING ONLY MATCHED COMPONENTS OF THE SAME SPECIFICATIONS AND CALIBRATIONS AS THOSE FOUND IN OFF-ROAD COMPRESSION-IGNITION ENGINES CERTIFIED TO THE [*insert the numerical tier or multiple tiers designation of the rebuilt engine*]."

Any person who completes an incomplete rebuilt replacement engine with components that are not matched components, and the resulting engine is placed into service in California, is in violation of the rebuilding practices referenced under paragraph (1) of this subsection and subject to civil penalty under State law.

(C) Supplemental Labeling Requirements. Except as noted below, any person who sells or offers for sale any rebuilt engine subject to the provisions of subsection (I) shall affix a supplemental label to the rebuilt engine that:

1. states the name of the rebuilder, year of rebuild, and other pertinent information as determined by the rebuilder or specified by the Executive Officer; and
2. is clearly visible without the need to remove any engine components; and
3. does not obscure in any way the visibility of the original emission control label or the labels required under paragraphs (2)(A)2. or (2)(B)3. of this subsection; and
4. does not state or imply that the rebuilt engine is "new" or that it belongs to an engine family other than the one to which it was originally certified; and
5. has sufficient durability to remain intact and legible throughout all mandatory record keeping periods for rebuilt engines.

The requirement for a supplemental label shall be waived in cases where the rebuilder alternately chooses to incorporate the information in (C)1. above into the new permanent label specified in subsection (2)(A)2. or (2)(B)3.

(D) Rebuilt New Engines. Notwithstanding any other requirement of this subsection (I), any person who rebuilds an engine to comply with current-year emission requirements (including, but not limited to, durability and warranty), with the intent to sell or offer for sale the rebuilt engine as "new" under the coverage of a new and unique Executive Order, shall replace the original emission control label on that engine with one identifying the engine as belonging to a family meeting current-year emission requirements in accordance with the provisions of Section 2424. If desired, the rebuilder of a such an engine may optionally affix to it a supplemental label, but such a label would be required to comply with the same requirements specified in paragraph (C) of this subsection for any other rebuilt engine.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43104 and 43211–43212, Health and Safety Code.

HISTORY

1. New article 2 and section filed 6–9–93; operative 7–9–93 (Register 93, No. 24).
2. Change without regulatory effect repealing article heading and amending NOTE filed 12–22–93 pursuant to title 1, section 100, California Code of Regulations (Register 93, No. 52).
3. Amendment of section heading and section filed 12–28–2000; operative 12–28–2000 pursuant to Government Code section 11343.4(d) (Register 2000, No. 52).

4. Amendment filed 12–7–2005; operative 1–6–2006 (Register 2005, No. 49).

§ 2424. Emission Control Labels—1996 and Later Off-Road Compression-Ignition Engines.

(a) Purpose. The Air Resources Board recognizes that certain emissions—critical or emissions—related parts must be properly identified and maintained in order for engines to meet the applicable emission standards. The purpose of these specifications is to require engine manufacturers to affix a label (or labels) on each production engine (or equipment) to provide the engine or equipment owner and service mechanic with information necessary for the proper maintenance of these parts in customer use. For engines used in auxiliary power systems which, in turn, are used to comply with the diesel-fueled commercial vehicle idling requirements of title 13, CCR, section 2485(c)(3)(A), additional labeling requirements for the engine or equipment manufacturers apply, as set forth in section 35.B.4 of the “California Exhaust Emission Standards and Test Procedures for 2004 and Subsequent Model Heavy-Duty Diesel Engines and Vehicles,” as incorporated by reference in title 13, CCR, section 1956.8(b).

(b) Applicability.

(1) These specifications shall apply to 1996–1999 model year heavy-duty off-road compression-ignition engines, which have been certified to the applicable emission standards pursuant to Health and Safety Code Section 43013.

(2) These specifications shall apply to 2000 and later model year compression-ignition engines, which have been certified to the applicable emission standards pursuant to Health and Safety Code Section 43013.

(3) Engine manufacturers who have certified such engines shall be responsible for complying with these specifications.

(c) Label Content and Location.

(1) For 1996–1999 heavy-duty off-road compression-ignition engines:

(A) A tune-up label shall be permanently attached to the engine block or other major component in such a way that it will be readily visible after installation of the engine in the equipment. If the equipment obscures the label on the engine, the equipment manufacturer shall attach a supplemental label such that it is readily visible.

(B) In selecting an acceptable location, the manufacturer shall consider the possibility of accidental damage (e.g., possibility of tools or sharp instruments coming in contact with the label). Each label shall be affixed in such a manner that it cannot be removed without destroying or defacing the label, and shall not be affixed to any part which is likely to be replaced during the equipment’s useful life. The label(s) shall not be affixed to any component which is easily detached from the engine.

(C) In addition, an engine serial number shall be stamped on the engine block or stamped on a metal label riveted to the engine block. Engine manufacturers shall keep records such that the engine serial number can easily be used to determine if an engine was certified for the applicable model year.

(D) The label shall be in the English language and use block letters and numerals which shall be of a color that contrasts with the background of the label.

(E) The label shall contain the following information:

1. The label heading shall read:

“Important Engine Information.”

2. Full corporate name and trademark of the manufacturer.

3. “This (specify equipment or engine, as applicable) is certified to operate on (specify operating fuel(s)).”

4. Identification of the Exhaust Emission Control System. Abbreviations may be used and shall conform to the nomenclature and abbreviations found in the Society of Automotive Engineers document J1930 which is incorporated by reference herein [in Section 1977, Title 13, CCR], titled “Diagnostic Acronyms, Terms, and Definitions for Electrical/Electronic Systems.”

5. The specifications and adjustments recommended by the manufacturer, including, if applicable: initial injection timing, and fuel rate (in

mm³/stroke) at advertised horsepower. These specifications shall indicate the proper transmission position, (if applicable), during tune-up and what accessories, if any, should be in operation, and what systems, if any (e.g., vacuum advance, air pump), should be disconnected during the tune-up. If the manufacturer does not recommend adjustment of the foregoing specifications, the manufacturer shall include in lieu of the “specifications” the single statement “No other adjustments needed.” For all engines, the instructions for tune-up adjustments shall be sufficiently clear on the label to preclude the need for a mechanic or equipment owner to refer to another document in order to correctly perform the adjustments.

6. An unconditional statement of compliance with the appropriate model year California regulations; for example, “This engine conforms to 1996 California regulations for heavy-duty off-road diesel cycle engines as applicable.”

7. Total engine displacement (in cubic centimeters, liters, or cubic inches) and engine family identification.

(F)1. The manufacturer of any engine certified with a clean fuel (i.e., low-sulfur diesel fuel) shall at the time of engine manufacture, affix a permanent legible label specifying the appropriate operating fuel(s).

2. The label shall be located immediately adjacent to each fuel tank filler inlet and outside of any filler inlet compartment. It shall be located so that it is readily visible to any person introducing fuel to such filler inlet; Provided, however, that the Executive Officer shall upon application from an engine manufacturer, approve other label locations that achieve the purpose of this paragraph. If the engine is manufactured separately from the equipment, the label shall be affixed to the engine and located so that it is readily visible. Such labels shall be in English and in block letters which shall be of a color that contrasts with their background.

(2) For 2000 and later Tier 1, Tier 2, and Tier 3 off-road compression-ignition engines, the label content and location must comply with the requirements in Section 89.110 of the 2000 and Later Test Procedures.

(3) For 2008 and Later Tier 4 off-road compression-ignition engines, the label content and location must comply with the requirements in Section 1039.135 of the 2008 and Later test Procedures.

(d) The provisions of these specifications shall not prevent a manufacturer from also stating on the label that such engine or equipment conforms to any applicable federal emission standards for new engines, or any other information that such manufacturer deems necessary for, or useful to, the proper operation and satisfactory maintenance of the equipment or engine.

(e) As used in these specifications, readily visible to the average person shall mean that the label shall be readable from a distance of eighteen inches (46 centimeters) without any obstructions from equipment or engine parts (including all manufacturer available optional equipment) except for flexible parts (e.g., vacuum hoses, ignition wires) that can be moved out of the way without disconnection. Alternatively, information required by these specifications to be printed on the label shall be no smaller than 8 point type size provided that no equipment or engine parts (including all manufacturer available optional equipment), except for flexible parts, obstruct the label.

(f) The labels and any adhesives used shall be designed to withstand, for the engine’s or equipment’s total expected life, typical equipment environmental conditions in the area where the label is attached. Typical equipment environmental conditions shall include, but are not limited to, exposure to engine fuels, lubricants and coolants (e.g., diesel fuel, motor oil, water, ethylene glycol). The manufacturer shall submit, with its certification application, a statement attesting that its labels comply with these requirements.

(g) The manufacturer shall obtain approval from the Executive Officer for all label formats and locations prior to use. Approval of the specific maintenance settings is not required; however, the format for all such settings and tolerances, if any, is subject to review. If the Executive Officer finds that the information on the label is vague or subject to misinterpretation,

tation, or that the location does not comply with these specifications, he or she may require that the label or its location be modified accordingly.

(h) Samples of all actual production labels used within an engine family shall be submitted to the Executive Officer within thirty days after the start of production.

(i) The Executive Officer may approve alternate label locations or may, upon request, waive or modify the label content requirements provided that the intent of these specifications is met.

(j) The manufacturer of any engine shall furnish to the Executive Officer, at the beginning of the model year, any engine identification number coding system which identifies whether such engine(s) are covered by an Executive Order.

(k) If the Executive Officer finds any engine (or equipment) manufacturer using labels which are different from those approved or which do not substantially comply with the readability or durability requirements set forth in these specifications, the manufacturer shall be subject to being enjoined from any further sales of such products in the State of California pursuant to Section 43017 of the Health and Safety Code. Prior to seeking to enjoin a manufacturer, the Executive Officer shall consider any information provided by the manufacturer.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104 and 43105, Health and Safety Code.

HISTORY

1. New section filed 6-9-93; operative 7-9-93 (Register 93, No. 24).
2. Change without regulatory effect amending NOTE filed 12-22-93 pursuant to title 1, section 100, California Code of Regulations (Register 93, No. 52).
3. Amendment of section heading and section filed 12-28-2000; operative 12-28-2000 pursuant to Government Code section 11343.4(d) (Register 2000, No. 52).
4. Amendment of subsections (c)(1)(E)4. and (c)(2) and new subsection (c)(3) filed 12-7-2005; operative 1-6-2006 (Register 2005, No. 49).
5. Amendment of subsection (a) filed 10-16-2006; operative 11-15-2006 (Register 2006, No. 42).

§ 2425. Defects Warranty Requirements for 1996 and Later Off-Road Compression-Ignition Engines.

(a) Applicability. This section shall apply to new 1996-1999 model year heavy-duty off-road compression-ignition engines and new 2000 and later model year compression-ignition engines. The warranty period shall begin on the date the engine or equipment is delivered to an ultimate purchaser. The use of alternate fuels shall not void the warranties on any engine certified to use such fuel.

(b) General Emissions Warranty Coverage. The manufacturer of each off-road compression-ignition engine shall warrant to the ultimate purchaser and each subsequent purchaser that the engine is:

(1) Designed, built, and equipped so as to conform with all applicable regulations adopted by the Air Resources Board pursuant to its authority in Chapters 1 and 2, Part 5, Division 26 of the Health and Safety Code; and

(2) Free from defects in materials and workmanship which cause the failure of a warranted part to be identical in all material respects to the part as described in the engine manufacturer's application for certification for a period of five years or 3,000 hours of operation, whichever occurs first, for all engines rated at 19kW and greater, except as noted below. In the absence of a device to measure hours of use, the engine shall be warranted for a period of five years. For all engines rated less than 19kW, and for constant-speed engines rated under 37kW with rated speeds higher than or equal to 3,000 rpm, the period of two years or 1,500 hours of operation, whichever occurs first, shall apply. In the absence of a device to measure hours of use, the engine shall be warranted for a period of two years.

(c) The warranty on emissions-related parts shall be interpreted as follows:

(1) Any warranted part which is not scheduled for replacement as required maintenance in the written instructions required by Subsection (e) shall be warranted for the warranty period defined in Subsection (b)(2). If any such part fails during the period of warranty coverage, it shall be repaired or replaced by the engine manufacturer according to Subsection

(4) below. Any such part repaired or replaced under the warranty shall be warranted for the remaining warranty period.

(2) Any warranted part which is scheduled only for regular inspection in the written instructions required by Subsection (e) shall be warranted for the warranty period defined in Subsection (b)(2). A statement in such written instructions to the effect of "repair or replace as necessary" shall not reduce the period of warranty coverage. Any such part repaired or replaced under warranty shall be warranted for the remaining warranty period.

(3) Any warranted part which is scheduled for replacement as required maintenance in the written instructions required in Subsection (e) shall be warranted for the period of time prior to the first scheduled replacement point for that part. If the part fails prior to the first scheduled replacement, the part shall be repaired or replaced by the engine manufacturer according to Subsection (4) below. Any such part repaired or replaced under warranty shall be warranted for the remainder of the period prior to the first scheduled replacement point for the part.

(4) Repair or replacement of any warranted part under the warranty provisions of this article shall be performed at no charge to the owner at a warranty station.

(5) Notwithstanding the provisions of Subsection (4) above, warranty services or repairs shall be provided at all manufacturer distribution centers that are franchised to service the subject engines.

(6) The owner shall not be charged for diagnostic labor that leads to the determination that a warranted part is in fact defective, provided that such diagnostic work is performed at a warranty station.

(7) The engine manufacturer shall be liable for damages to other engine components proximately caused by a failure under warranty of any warranted part.

(8) Throughout the engine's warranty period defined in Subsection (b)(2), the engine manufacturer shall maintain a supply of warranted parts sufficient to meet the expected demand for such parts.

(9) Any replacement part, as defined in Section 1900(b)(13), Title 13, may be used in the performance of any maintenance or repairs and must be provided without charge to the owner. It is not necessary for replacement parts to be the same brand or by the same manufacturer as the original part sold with the engine. Such use shall not reduce the warranty obligations of the engine manufacturer.

(10) Add-on or modified parts, as defined in Section 1900(b)(1) and (b)(10), Title 13, that are not exempted by the Air Resources Board may not be used. The use of any non-exempted add-on or modified parts shall be grounds for disallowing a warranty claim made in accordance with this article. The engine manufacturer shall not be liable under this article to warrant failures of warranted parts caused by the use of a non-exempted add-on or modified part.

(11) The Executive Officer may request and, in such case, the engine manufacturer shall provide, any documents which describe that manufacturer's warranty procedures or policies.

(d) Each manufacturer shall include a copy of the following emission warranty parts list with each new engine, using those portions of the list applicable to the engine.

- (1) Fuel Metering System
 - (A) Fuel injection system.
 - (B) Air/fuel ratio feedback and control system.
 - (C) Cold start enrichment system.
- (2) Air Induction System
 - (A) Controlled hot air intake system.
 - (B) Intake manifold.
 - (C) Heat Riser Valve and Assembly.
 - (D) Turbocharger/Supercharger Systems.
 - (E) Charge Air Cooling Systems.
- (3) Exhaust Gas Recirculation (EGR) System
 - (A) EGR valve body, and carburetor spacer if applicable.
 - (B) EGR rate feedback and control system.
- (4) Air Injection System
 - (A) Air pump or pulse valve.
 - (B) Valves affecting distribution of flow.

- (C) Distribution manifold.
- (5) Catalyst or Thermal Reactor System
- (A) Catalytic converter.
- (B) Thermal reactor.
- (C) Exhaust manifold.
- (6) Particulate Controls

(A) Traps, filters, precipitators, and any other device used to capture particulate emissions.

(B) Regenerators, oxidizers, fuel additive devices, and any other device used to regenerate or aid in the regeneration of the particulate control device.

(C) Control Device Enclosures and Manifolding.

(D) Smoke Puff Limiters.

(7) Advanced Oxides of Nitrogen (NO_x) Controls

(A) NO_x Adsorbers

(B) Lean NO_x Catalysts

(C) Selective Catalyst Reduction

(D) Reductant (urea/fuel) containers/dispensing systems

(8) Positive Crankcase Ventilation (PCV) System.

(A) PCV Valve.

(B) Oil Filler Cap.

(9) Miscellaneous items Used in Above Systems

(A) Vacuum, temperature, and time sensitive valves and switches.

(B) Electronic control units, sensors, solenoids, and wiring harnesses.

(C) Hoses, belts, connectors, assemblies, clamps, fittings, tubing, seal gaskets or devices, and mounting hardware.

(D) Pulleys, belts and idlers.

(E) Emission Control Information Labels.

(F) Any other part with the primary purpose of reducing emissions or that can increase emissions during failure without significantly degrading engine performance.

(e) Each manufacturer shall furnish with each new engine written instructions for the maintenance and use of the engine by the owner. The instructions shall be consistent with this article and applicable regulations contained herein. In addition, for engines less than 19 kilowatts, each manufacturer shall furnish with each new engine a written statement as follows: "In order to operate in California, a diesel-fueled engine in an auxiliary power system used to comply with the Airborne Toxic Control Measure to Limit Diesel-Fueled Commercial Motor Vehicle Idling requirements of the California Code of Regulations, must have one of the following apply: (1) be equipped with a verified Level 3 in-use strategy for particulate matter control, (2) have its exhaust routed directly into the vehicle's exhaust pipe, upstream of the diesel particulate matter after-treatment device, or (3) use an alternate particulate matter control strategy with prior Executive Officer approval. (For more details, please see the California Code of Regulations, title 13, section 2485(c)(3)(A).)"

(f) Each manufacturer shall submit the documents required by Subsections (d) and (e) with the manufacturer's preliminary application for engine certification for approval by the Executive Officer. Approval by the Executive Officer of the documents required by Subsections (d) and (e) shall be a condition of certification. The Executive Officer shall approve or disapprove the documents required by Subsections (d) and (e) within 90 days of the date such documents are received from the manufacturer. (Title 17, California Code of Regulations (CCR), Section 60030.) Any disapproval shall be accompanied by a statement of the reasons therefore. In the event of disapproval, the manufacturer may file for an adjudicative hearing pursuant to Title 17, California Code of Regulations Division 3, Chapter 1, Subchapter 1.25, Articles 1 and 2, to review the decision of the Executive Officer.

(g) In the application, each manufacturer shall include a statement concerning proper maintenance of the engine to maximize emissions performance. The statement shall include, but not be limited to, information on air filter care and replacement schedule, proper fueling and fuel mixing, engine maintenance, and a maintenance schedule to ensure that the

owner returns to a servicing center to check for deposits, debris build-up, etc.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102, 43104 and 43105, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102 and 43205.5, Health and Safety Code.

HISTORY

1. New article 3 and section filed 6-9-93; operative 7-9-93 (Register 93, No. 24).
2. Change without regulatory effect repealing article heading and amending subsection (e) and NOTE filed 12-22-93 pursuant to title 1, section 100, California Code of Regulations (Register 93, No. 52).
3. Amendment of subsection (c)(10) filed 8-29-2000; operative 9-28-2000 (Register 2000, No. 35).
4. Amendment of section heading, section and NOTE filed 12-28-2000; operative 12-28-2000 pursuant to Government Code section 11343.4(d) (Register 2000, No. 52).
5. Amendment of subsection (d)(2)(D), new subsections (d)(7)-(d)(7)(D), subsection renumbering, amendment of newly designated subsection (d)(9)(B), new subsections (d)(9)(E)-(F) and amendment of subsection (f) filed 12-7-2005; operative 1-6-2006 (Register 2005, No. 49).
6. Amendment of subsection (e) filed 10-16-2006; operative 11-15-2006 (Register 2006, No. 42).

§ 2425.1. Defect Investigation and Reporting Requirements.

(a) Applicability. This section shall apply to new off-road compression-ignition engines subject to the standards in Section 2423 (b)(1)(B) and the incorporated 2008 and Later Test Procedures, and shall address defects for any of the emission-related components, or systems containing the components listed in Section 2425(d)(1).

(b) General requirements. Engine manufacturers shall investigate their engines that have been introduced into commerce in California for incorrect, improperly installed, or otherwise defective emission-related components or systems, and shall submit a report to the ARB based on federal triggering thresholds documenting these activities, as required, and their findings. If available, California-specific incidence rates shall also be included in this report.

(c) Investigation and reporting procedures. Engine manufacturers shall perform the investigation and reporting procedures specified in Part 1068, Subpart F of the 2008 and Later Test Procedures.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102, 43104 and 43105, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102 and 43205.5, Health and Safety Code.

HISTORY

1. New section filed 12-7-2005; operative 1-6-2006 (Register 2005, No. 49).

§ 2426. Emission Control System Warranty Statement.

(a) Each manufacturer shall furnish a copy of the following statement with each new 1996-1999 heavy-duty off-road compression-ignition engines, using those portions of the statement applicable to the engine.

CALIFORNIA EMISSION CONTROL WARRANTY STATEMENT

YOUR WARRANTY RIGHTS AND OBLIGATIONS

The **California Air Resources Board** (and manufacturer's name, optional) is pleased to explain the **emission control system warranty** on your (**year**) engine. In California, new heavy-duty off-road engines must be designed, built and equipped to meet the State's stringent anti-smog standards. (Manufacturer's name) must warrant the emission control system on your engine for the periods of time listed below provided there has been no abuse, neglect or improper maintenance of your engine. Your emission control system may include parts such as the fuel injection system and the air induction system. Also included may be hoses, belts, connectors and other emission-related assemblies.

Where a warrantable condition exists, (manufacturer's name) will repair your heavy-duty off-road engine at no cost to you including diagnosis, parts and labor.

MANUFACTURER'S WARRANTY COVERAGE:

The (**year**) and later heavy-duty off-road engines are warranted for (**warranty period**). If any emission-related part on your engine is defective, the part will be repaired or replaced by (manufacturer's name).

OWNER'S WARRANTY RESPONSIBILITIES:

- As the heavy-duty off-road engine owner, you are responsible for the performance of the **required maintenance listed in your owner's manual**. (Manufacturer's name) recommends that you retain all receipts covering maintenance on your heavy-duty off-road engine, but (manufacturer's name) cannot deny warranty solely for the lack of receipts or for your failure to ensure the performance of all scheduled maintenance.
- As the heavy-duty off-road engine owner, you should however be aware that (manufacturer's name) may deny you warranty coverage if your heavy-duty off-road engine or a part has failed due to abuse, neglect, improper maintenance or unapproved modifications.
- Your engine is designed to operate on (fuel) only. Use of any other fuel may result in your engine no longer operating in compliance with California's emissions requirements.
- You are responsible for initiating the warranty process. The ARB suggests that you present your heavy-duty off-road engine to a (manufacturer's name) dealer as soon as a problem exists. The warranty repairs should be completed by the dealer as expeditiously as possible.

[The next page is 298.2(i).]

If you have any questions regarding your warranty rights and responsibilities, you should contact (Insert chosen manufacturer's contact) at 1-XXX-XXX-XXXX.

(b) For 1996–1999 model year heavy-duty off-road compression-ignition engines, each manufacturer shall furnish with each new engine a warranty statement which generally describes the obligations and rights of the engine manufacturer and owner under this article. Engine manufacturers shall also include in the warranty statement a phone number the customer may use to obtain their nearest franchised service center.

(c) Each manufacturer shall submit the documents required by Subsections (a) and (b) with the manufacturer's preliminary application for new engine certification for approval by the Executive Officer. The Executive Officer may reject or require modification of the documents to the extent the submitted documents do not satisfy the requirements of Subsections (a) and (b). Approval by the Executive Officer of the documents required by Subsections (a) and (b) shall be a condition of certification. The Executive Officer shall approve or disapprove the documents required by Subsections (a) and (b) within 90 days of the date such documents are received from the manufacturer. Any disapproval shall be accompanied by a statement of the reasons therefore. In the event of disapproval, the manufacturer may petition the Board to review the decision of the Executive Officer.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102 and 43205.5, Health and Safety Code.

HISTORY

1. New section filed 6–9–93; operative 7–9–93 (Register 93, No. 24).
2. Change without regulatory effect amending NOTE filed 12–22–93 pursuant to title 1, section 100, California Code of Regulations (Register 93, No. 52).
3. Amendment filed 12–28–2000; operative 12–28–2000 pursuant to Government Code section 11343.4(d) (Register 2000, No. 52).
4. Amendment of subsection (c) filed 12–7–2005; operative 1–6–2006 (Register 2005, No. 49).

§ 2427. Production Engine Testing, Selection, Evaluation, and Enforcement Action.

(a) Compliance Test Procedures.

(1) These procedures are applicable to, the 1996–1999 model year heavy-duty off-road compression-ignition engine family groups (as defined in Sections 3 and 11 of the 1996–1999 Heavy-Duty Test Procedures) or any subgroups within an engine family group selected for compliance testing pursuant to this section.

(2) The Executive Officer may, with respect to any new engine family group or subgroup being sold, offered for sale, or manufactured for sale in California, order an engine manufacturer to make available for compliance testing and/or inspection a reasonable number of engines, and may direct that the engines be delivered to the state board at the Haagen-Smit Laboratory, 9528 Telstar Avenue, El Monte, California or where specified by the Executive Officer. The Executive Officer may also, with respect to any new engine family group or subgroup being sold, offered for sale, or manufactured for sale in California, have a manufacturer compliance test and/or inspect a reasonable number of engines at the manufacturer's facility under the supervision of an ARB Enforcement Officer. Engines shall be representatively selected from sources specified by the Executive Officer according to a method approved by him/her, which insofar as practical shall exclude engines which would result in an unreasonable disruption of the manufacturer's distribution system. To the extent practical, the Executive Officer shall test a representative configuration (as defined in the 1996–1999 Heavy-Duty Test Procedures) from the engine family group in order to minimize manufacturers' expense and inconvenience in testing different engine configurations.

A subgroup of an engine family group may be selected for compliance testing only if the Executive Officer has reason to believe that the emissions characteristics of that subgroup are substantially in excess of the emissions of the engine family group as a whole.

(3) For all 1996–1999 heavy-duty off-road compression-ignition engines selected for compliance testing, the selection and testing of engines

and the evaluation of data shall be made in accordance with the procedures set forth herein.

(4) For manufacturers that have more than one engine family group, the Air Resources Board or its designated laboratory shall procure and test at the manufacturer's expense no more than one engine family group per year, if compliance testing is required.

Notwithstanding the above, if a manufacturer fails to demonstrate compliance with the emission standards after one engine family group has been tested, the ARB or its designated laboratory may test additional engine family groups at the manufacturer's expense, until compliance is demonstrated on one engine family group or all of a manufacturer's engine family groups have been tested. However, the ARB may conduct engine enforcement testing pursuant to the engine test procedures specified in Section 2423, at its own expense. In such an instance, the Executive Officer shall order testing only in those cases where evidence such as quality audit test data or in-use test data indicate that engines may not be in compliance.

(5) All testing shall be conducted in accordance with the applicable model year certification emission test procedures. Break-in before testing may be performed on test engines to the same extent it is performed on assembly-line quality audit testing engines (See Subsection (b)). No break-in or modifications, adjustments, or special preparation or maintenance will be allowed on engines chosen for compliance testing without the written consent of the Executive Officer. Such consent shall not be unreasonably withheld where such adjustment or alteration is required to render the engine testable and reasonably operative.

(6) If the manufacturer elects to specify a different break-in or adjustments, they will be performed by the manufacturer under the supervision of ARB personnel.

(7) Correction of damage or maladjustment which may reasonably be found to have resulted from shipment of the engine is permitted only after testing the engine, except where 100 percent of the manufacturer's production is given that inspection or maintenance by the manufacturer's own personnel. Exceptions are allowed in the cases where the damage results in the engine being unsafe to operate, inoperable, or unable to complete the emission test. Additionally, an exception is allowed if the damage results in engine performance deficiencies which would be obvious in customer service and which would cause the customer to seek repair of the engine. The manufacturer may request that the engine be repaired from shipping damage, and be retested. If the Executive Officer concurs, the engine may be retested, and the original test results may be replaced by the after-repair test results.

(8) Engines shall be representatively chosen from the selected engine family group or subgroup. Manufacturers shall indicate which sampling plan (as described in paragraphs (9) and (10), below) they prefer to use prior to the start of testing. Once testing has begun, manufacturers may not switch to the other sampling plan; the generated test results will be final. Each chosen engine shall be tested according to the 1996–1999 Heavy-Duty Test Procedures to determine its emissions. Unique specialty hardware and personnel normally necessary to prepare the engine for the performance of the test as set forth in the applicable test procedures shall be supplied by the manufacturer within seven days after request. Failure to supply this unique specialty hardware or personnel may not be used by the manufacturer as a cause for invalidation of the subsequent tests.

(9) Primary Sampling Plan.

(A) Engines shall be tested in groups of five until a "Pass" or "Fail" decision is reached for each pollutant independently for the engine family group or subgroup in accordance with the following table:

<i>Number of Engines Tested</i>	<i>Decide "Fail" If "U" is greater than or equal to</i>	<i>Decide "Pass" If "U" is less than or equal to</i>
5	2.18	–0.13
10	2.11	0.51
15	2.18	0.88
20	2.29	1.16

where:

$$U = \frac{\sum_{i=1}^n (x_i - \mu_0)}{(\sum_{i=1}^n (x_i - \mu_0))^2}^{0.5}$$

x_i = the projected emissions of one pollutant for the i th engine tested.

μ_0 = the applicable model year emission standard for that pollutant.

n = the number of engines tested.

(B) The Executive Officer shall find that a group of engines has failed the compliance testing pursuant to the above table if he or she finds that the average emissions of the engines within the selected engine family group or subgroup exceed the applicable model year new engine emission standard for at least one pollutant.

(C) If no decision can be reached after 20 engines have been tested, the Executive Officer shall not make a "Fail" decision for the selected engine family group or subgroup on the basis of these 20 tests alone. Under these circumstances the Executive Officer shall elect to test 10 additional engines. If the average emissions from the 30 engines tested exceed any one of the exhaust emission standards for which a "Pass" decision has not been previously made, the Executive Officer shall render a "Fail" decision.

(10) Alternate Sampling Plan for Low Volume Engine Family Groups.

Any manufacturer subject to new engine compliance testing on an engine family group with a sales volume of less than 2000 engines per year may use the alternative sampling and testing schedule below.

<i>Number of Engines Tested</i>	<i>Decide "Fail" If number of failed engines is greater than or equal to</i>	<i>Decide "Pass" If number of failed engines is less than or equal to</i>
1	No Failure Decision	No Passing Decision
2	No Failure Decision	0
3	3	0
4	4	1
5	4	1
6	5	2
7	5	2
8	6	3
9	6	4
10	6	5

(11) If the Executive Officer determines, in accordance with the procedures set forth herein, that an engine family group, engine family, or any subgroup within an engine family exceeds the emission standards for one or more pollutants, the manufacturer may be subject to being enjoined from any further sales of such products in the State of California pursuant to Section 43017 of the Health and Safety Code. Prior to seeking to enjoin a manufacturer, the Executive Officer shall consider quality audit test results, if any, and any additional test data or any other information provided by the manufacturers.

(12) Engines selected for inspection shall be checked to verify the presence of those emissions-related components specified in the manufacturer's application for certification, and for the accuracy of any adjustments, part numbers and labels specified in that application. If any engine selected for inspection fails to conform to any applicable law in Part 5 (commencing with Section 43000) of Division 26 of the Health and Safety Code, or any regulation adopted by the state board pursuant thereto, other than an emissions standard applied to new engines to determine "certification" as specified in Chapter 9, the Executive Officer shall notify the manufacturer and may seek to enjoin the manufacturer from any further sales of such products in the State of California pursuant to Section 43017 of the Health and Safety Code. Prior to seeking to enjoin a manufacturer, the Executive Officer shall consider any information provided by the manufacturer.

(b) Quality-Audit Test Procedures.

(1) The 1996-1999 model year heavy-duty off-road compression-ignition engines certified for sale in California shall be subject to the Qu-

ality-Audit requirements specified herein. Each manufacturer shall use the quality-audit test procedures specified herein.

(2) These procedures specify the quality-audit test procedures in conjunction with the 1996-1999 Heavy-Duty Test Procedures. An engine is in compliance with these quality-audit standards and test procedures only when all portions of these quality-audit test procedures are fulfilled.

(3) Air Resources Board (ARB) personnel and mobile laboratories shall have access to engine or equipment assembly plants, distribution facilities, and test facilities for the purpose of engine selection, testing, and observation. Scheduling of access shall be arranged with the designated manufacturer's representative and shall not unreasonably disturb normal operations (See Section 6 of the 1996-1999 Heavy-Duty Test Procedures).

(4) Applicability.

These procedures shall apply to all certified 1996-1999 model year heavy-duty off-road compression-ignition engine family groups.

If a manufacturer cannot provide actual California sales data, it shall provide its total production and an estimate of California sales. The manufacturer shall also provide supporting material for its estimate.

(5) Engine Sample Selection.

For each engine family group with California sales volumes of 150 units or more per year, the manufacturer shall select for quality audit testing a representative sample of three engines or one percent of production, whichever is greater, from the highest sales volume engine family within the entire engine family group. For engine family groups with California sales volumes of less than 150 units per year, no testing shall be required unless requested by the Executive Officer based upon information and belief that such engine family groups are in noncompliance with applicable regulations. Each selected engine for quality-audit testing must pass the inspection test, by being equipped with the appropriate emission control systems certified by the ARB. The procedure for selecting engines must be submitted to the Chief, Mobile Source Division, 9528 Telstar Avenue, El Monte, CA 91731, prior to the start of production for the 1996 model year.

(6) Engine Preparation and Preconditioning.

(A) The engine shall be tested after the manufacturer has determined that the emissions have stabilized. Engine manufacturers shall report the break-in schedule used on each test engine.

The manufacturer shall submit to the Executive Officer the schedule for hours of use accumulation or engine run-in and any changes to the schedule with each quarterly report.

(B) If an engine is shipped to a remote facility for quality-audit testing, and adjustment or repair is necessary because of such shipment, the manufacturer shall perform the necessary adjustments or repairs only after the initial test of the engine. Exceptions are allowed in the cases where the damage results in the engine being unsafe to operate, inoperable, or unable to complete the emission test. Additionally, an exception is allowed if the damage results in engine performance deficiencies which would be obvious in customer service and which would cause the customer to seek repair of the engine.

Manufacturers shall report to the Executive Officer in the quarterly report, all adjustments or repairs performed on engines prior to each test. In the event a retest is performed, an application may be made to the Executive Officer, within ten days of the emission test, for permission to substitute the after-repair test results for the original test results. When requested by the manufacturer, the Executive Officer will either affirm or deny the application within ten working days from receipt of the request.

(C) If a manufacturer determines that the emission test results of an engine are invalid, the engine must be retested. Emission results from all tests shall be reported. The manufacturer shall include a detailed report on the reasons for each invalidated test in the quarterly report.

(7) Quality-Audit Engine Selection Criteria.

(A) Engines shall be representatively selected.

(B) At the end of each calendar quarter, all of the data accumulated during the quarter shall be reported to the Executive Officer. Upon accumulation of sufficient data, the compliance of the engine family group with the emission standards is determined.

(8) Standards and Test Procedures; Evaluation.

The exhaust sampling and analytical procedures shall be those described in the 1996–1999 Heavy-Duty Test Procedures. An engine family group is considered to have failed the quality audit test if the average emissions do not comply with the applicable certification standards. Any corrective action to bring the engines into compliance with the standards must be applied to all engines in the engine family group reasonably expected to be in noncompliance based on the audit data and other relevant information.

(9) Reports.

Each engine manufacturer shall submit a report to the ARB within 45 calendar days of the end of each calendar quarter and of the model year. More frequent reports may be required if the Executive Officer invokes this section at the end of each month. Each engine manufacturer shall review the test results of each engine family group at the end of each month.

The quarterly report shall include the following:

(A) The total production and sample size for each engine family group.

(B) A description of each test engine (i.e., date of test, engine family group, engine size, engine identification number, fuel system, engine code or calibration number, and test location).

(C) The break-in schedule used on each test engine.

(D) The exhaust emission data for HC, CO, NO_x, and PM for each test engine.

The data reported shall be rounded to one significant figure beyond the number of significant figures in the applicable standard as follows for all engines:

HC	CO	NO _x	PM
.XX	.XX	.XX	.XXX

(E) The retest emissions data, as described in paragraph (b)(6)(C) above for any engine failing the initial test, and description of the corrective measures taken, including specific components replaced or adjusted.

(F) A statistical analysis of the quality-audit test results stating:

1. Number of engines tested.

2. Average emissions and standard deviations of the sample for HC, CO, NO_x, and PM.

(G) All aborted test data and reasons for any aborted tests.

(10) When assembly-line engines exceed an emission standard, as set forth herein, or when data submitted by the manufacturer indicates that assembly-line quality-audit testing is being improperly performed, the manufacturer may be subject to being enjoined from any further sales of such products in the State of California pursuant to Section 43017 of the Health and Safety Code. Prior to seeking to enjoin a manufacturer, the Executive Officer shall consider any information provided by the manufacturer, including any corrective action to the noncomplying engine family group. Enforcement penalties shall be imposed only for egregious violations (e.g., those situations where emissions from a few engines significantly exceed emission standards, or where the number of engines exceeding the emissions standards are significant).

(c) Selective Enforcement Audit.

(1)(A) The 2000 and later model year Tier 1, Tier 2, and Tier 3 off-road compression-ignition engines certified for sale in California shall be subject to the Selective Enforcement Audit requirements specified in Subpart F of the 2000 Plus Limited Test Procedures.

(B) The 2008 and later model year Tier 4 off-road compression-ignition engines certified for sale in California shall be subject to the Selective Enforcement Audit requirements specified in Subpart E of Part 1068 of the 2008 and Later Test Procedures.

(2) These procedures specify the Selective Enforcement Audit test procedures in conjunction with the 2000 Plus Limited Test Procedures and the 2000 and Later Test Procedures. An engine is in compliance with these Selective Enforcement Audit standards and test procedures only

when all portions of these Selective Enforcement Audit test procedures are fulfilled.

(3) Air Resources Board (ARB) personnel and mobile laboratories shall have access to engine or equipment assembly plants, distribution facilities, and test facilities for the purpose of engine selection, testing, and observation. Scheduling of access shall be arranged with the designated manufacturer's representative and shall not unreasonably disturb normal operations.

(d) Any manufacturer obtaining certification under this part shall supply to the Executive Officer, upon request, a reasonable number of production engines selected by the Executive Officer which are representative of the engines, emission control systems, fuel systems, and transmissions offered and typical of production models available for sale under the certificate. These engines shall be supplied for testing at such time and place and for such reasonable periods as the Executive Officer may require. Heavy-duty engines supplied under this paragraph may be required to be mounted in chassis and appropriately equipped for operation on a chassis dynamometer.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102, 43104 and 43105, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104 and 43210–43212, Health and Safety Code.

HISTORY

1. New article 4 and section filed 6–9–93; operative 7–9–93 (Register 93, No. 24).
2. Change without regulatory effect repealing article heading and amending NOTE filed 12–22–93 pursuant to title 1, section 100, California Code of Regulations (Register 93, No. 52).
3. Amendment of section heading, section and NOTE filed 12–28–2000; operative 12–28–2000 pursuant to Government Code section 11343.4(d) (Register 2000, No. 52).
4. Redesignation and amendment of former subsection (c)(1) as subsection (c)(1)(A), new subsection (c)(1)(B) and amendment of subsection (c)(2) filed 12–7–2005; operative 1–6–2006 (Register 2005, No. 49).

Article 4.5. Off-Road Large Spark-Ignition Engines

§ 2430. Applicability.

(a)(1) This article applies to large off-road spark-ignition engines 25 horsepower and greater produced on or after January 1, 2001 and all equipment and vehicles produced on or after January 1, 2001 that use such engines. Beginning January 1, 2007, this article applies to large off-road spark-ignition engines above 19 kilowatt (kW) and all equipment and vehicles that use such engines.

(2) Every new off-road large spark-ignition (LSI) engine that is manufactured for sale, sold, or offered for sale in California, or that is introduced, delivered or imported into California for introduction into commerce and that is subject to any of the standards prescribed in this article and documents incorporated by reference therein, must be certified for use and sale by the manufacturer through the Air Resources Board and covered by an Executive Order, issued pursuant to Chapter 9, Article 4.5, Section 2433.

(3) This article does not apply to engines in vehicles that are subject to requirements of Title 13, California Code of Regulations, Chapter 9, Article 3, Off-Highway Recreational Vehicles and Engines, including any related provisions and guidelines that are applicable to Off-Highway Recreational Vehicles and Engines.

(b) Each part of this article is severable, and in the event that any part of this chapter or article is held to be invalid, the remainder of the article remains in full force and effect.

(c) This article and documents incorporated by reference herein include provisions for emissions certification, labeling requirements, warranty, in-use compliance testing, and production line testing.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43105, 43150, 43151, 43152, 43153, 43154, 43205.5, 43210, 43210.5, 43211 and 43212, Health and Safety Code.

HISTORY

1. New article 4.5 (sections 2430–2439) and section filed 10–19–99; operative 11–18–99 (Register 99, No. 43).

2. Amendment of subsection (a)(1), new subsection (a)(3) and amendment of NOTE filed 4-12-2007; operative 5-12-2007 (Register 2007, No. 15).

§ 2431. Definitions.

DEFINITIONS

(a) The definitions in Section 1900(b), Chapter 1, Title 13 of the California Code of Regulations apply to this Article with the following additions:

(1) "Alternate Fuel" means any fuel that will reduce non-methane hydrocarbons (on a reactivity-adjusted basis), NO_x, CO, and the potential risk associated with toxic air contaminants as compared to gasoline or diesel fuel and would not result in increased deterioration of the engine. Alternate fuels include, but are not limited to, methanol, ethanol, liquefied petroleum gas, compressed natural gas, and electricity.

(2) "ARB Enforcement Officer" means any officer or employee of the Air Resources Board so designated in writing by the Executive Officer or by the Executive Officer's designee.

(3) "Assembly-Line Tests" are those tests or inspections that are performed on or at the end of the assembly-line.

(4) "Basic Engine" means an engine manufacturer's description of their unique combination of engine displacement, number of cylinders, fuel system, emission control system, and other engine and emission control system characteristics as determined or specified by the Executive Officer.

(5) "Calendar Year" is the twelve month period commencing on January 1 through December 31.

(6) "Certification Value" means the product of the measured emissions of the prototype engine at zero hours and the (calculated or assigned) deterioration factor.

(7) "Complete Engine Assembly" or "Engine Configuration" means an assembly of a basic engine and all of the specific applicable components (e.g., air intake, fuel and exhaust systems, etc.) and calibrations (e.g., carburetor jet size, valve timing, electronic software/firmware, etc.) required for the assembly to be installed in new equipment.

(8) "Confirmatory testing" means ARB directed emissions tests and inspections of the test engines and/or test equipment used by the manufacturer to obtain test data for submittal with the certification application. The emissions tests may be conducted at ARB, contracted out facilities or at the manufacturer's facility. The testing will be done at the expense of the manufacturer.

(9) "Crankcase Emissions" means airborne substances emitted into the atmosphere from any portion of the engine crankcase ventilation or lubrication system.

(10) "Deterioration Factor" means the calculated or assigned number that represents the certification engine's emissions change over the durability period. It is multiplied by zero hour (new) engine test results to determine the engine family compliance level. The deterioration factor is determined as per the Test Procedures. See "Emission Durability Period" below.

(11) "Emission Control System" includes any component, group of components, or engine modification that controls or causes the reduction of substances emitted from an engine.

(12) "Emissions Durability Period" is the period over which, for purposes of certification, a manufacturer must demonstrate compliance with the standards set forth in Section 2433(b). The durability periods are also noted in the table in Section 2433(b). The emissions durability period is used to determine an engine family's deterioration factors.

(13) "Emissions Durability Values" means emissions from an engine that has accumulated service equivalent to the engine's emission durability period, or the result of the product of the zero hour (new) engine test results and the appropriate deterioration factor (e.g., the certification values). The Executive Officer must approve the methods of service accumulation before the manufacturer begins service accumulation.

(14) "End of Assembly-Line" is defined as that place where the final inspection test or production line test is performed.

(15) "Engine Family" is a subclass of a basic engine based on similar emission characteristics. The engine family is the grouping of engines that is used for the purposes of certification.

(16) "Engine Manufacturer" means the manufacturer granted certification.

(17) "Equipment Manufacturer" means the manufacturer using the engine provided by the engine manufacturer to power equipment or vehicle.

(18) "Exhaust Emissions" means substances emitted into the atmosphere from any opening downstream from the exhaust port of an engine.

(19) "Family Emission Level or FEL" means an emission level that is declared by the manufacturer to serve for the averaging, banking, and trading program and in lieu of an emission standard for certification. The FEL serves as the engine family's emission standard for emissions compliance efforts. If the manufacturer does not declare an FEL for an engine family, the applicable emissions standard must be treated as that engine family's FEL for the purposes of any provision of this Article. The FEL must be expressed to the same number of decimal places as the applicable emission standard.

(20) "Final Calendar Quarter Production" is defined as the calendar quarter in which the production of an engine family ends.

(21) "First Calendar Quarter Production" is defined as the calendar quarter in which the production of an engine family begins.

(22) "Fuel System" means the combination of any of the following components: fuel tank, fuel pump, fuel lines, carburetor or fuel injection components, or all fuel system vents.

(23) "Gross Engine Malfuction" is defined as one yielding an emission value greater than the sum of the mean plus three (3) times the standard deviation. This definition applies only for determination of control limits.

(24) "Model year" means the manufacturer's annual production period which includes January 1 of a calendar year or, if the manufacturer has no annual production period, the calendar year.

(25) "New Engine" is defined as an engine's ownership has not been transferred to the ultimate consumer.

(26) "New Engine Compliance testing" means ARB directed emissions tests and inspections of a reasonable number of production engines and/or equipment that are offered for sale, or manufactured for sale, in California in order to verify compliance with the applicable emission standards. The emissions tests must be conducted at a qualified testing facility. The testing facility is chosen by the manufacturer and approved by the Executive Officer. This may include ARB facilities, contracted out facilities, or the manufacturer's facility. The testing will be done at the expense of the manufacturer.

(27) "New Equipment" means an equipment's ownership has not been transferred to the ultimate consumer.

(28) "Off-Road Large Spark-ignition Engines" or "LSI Engines" means any engine that produces a gross horsepower 25 and greater horsepower or is designed (e.g., through fueling, engine calibrations, valve timing, engine speed modifications, etc.) to produce 25 and greater horsepower (greater than 19 kilowatts on or after January 1, 2007). If an engine family has models at or above 25 horsepower and models below 25 horsepower, only the models at or above 25 horsepower (greater than 19 kilowatts on or after January 1, 2007) would be considered LSI engines. The engine's operating characteristics are significantly similar to the theoretical Otto combustion cycle with the engine's primary means of controlling power output being to limit the amount of air that is throttled into the combustion chamber of the engine. LSI engines or alternate fuel powered LSI internal combustion engines are designed for powering, but not limited to powering, forklift trucks, sweepers, generators, and industrial equipment and other miscellaneous applications. All engines and equipment that fall within the scope of the preemption of Section 209(e)(1)(A) of the Federal Clean Air Act, as amended, and as defined by regulation of the Environmental Protection Agency, are specifically excluded from this category.

[The next page is 298.3.]

Specifically excluded from this category are: 1) engines operated on or in any device used exclusively upon stationary rails or tracks; 2) engines used to propel marine vessels; 3) internal combustion engines attached to a foundation at a location for at least 12 months; 4) off-road recreational vehicles and snowmobiles; and 5) stationary or transportable gas turbines for power generation.

(29) "Off-Road Vehicle" or "Off-Road Equipment" means any non-stationary device, powered by an internal combustion engine or motor, used primarily off the highways to propel, move, or draw persons or property including any device propelled, moved, or drawn exclusively by human power, and used in, but not limited to, any of the following applications: Marine Vessels, Construction/Farm Equipment, Locomotives, Small Off-Road Engines, Off-Road Motorcycles, and Off-Highway Recreational Vehicles.

(30) "Otto Cycle Engine" means a type of engine with operating characteristics significantly similar to the theoretical Otto combustion cycle. The primary means of controlling power output in an Otto cycle engine is by limiting the amount of air and fuel which can enter the combustion chambers of the engine. As an example, gasoline-fueled engines are Otto cycle engines.

(31) "Production Line Test" is defined as the emissions test performed on a sample of production engines produced for sale in California and conducted according to the Test Procedures.

(32) "Representative Engine Sample" means that the sample is typical of the engine family or engine family group as a whole (as defined in the Test Procedures). Except as provided in Section 2437, a representative sample would not include a low volume subgroup of the engine family or engine family group.

(33) "Scheduled Maintenance" means any adjustment, repair, removal, disassembly, cleaning, or replacement of equipment or engine components or systems required by the manufacturer that is performed on a periodic basis to prevent part failure or equipment or engine malfunction, or anticipated as necessary to correct an overt indication of equipment or engine malfunction or failure for which periodic maintenance is not appropriate.

(34) "Small Volume Manufacturer" means an engine manufacturer that produces a total of less than 2000 large spark-ignition engines annually for sale in the United States.

(35) "Test Procedures" means the procedures specified in both Part I and Part II of the "California Exhaust Emission Standards and Test Procedures for New 2001 and Later Off-Road Large Spark-ignition Engines", and as specified in Section 2433(c).

(36) "Test Sample" means the collection of engines selected from the population of an engine family for emission testing.

(37) "Ultimate Purchaser" means the first person who in good faith purchases a new LSI engine or equipment using such engine for purposes other than resale.

(38) "Unscheduled Maintenance" means any inspection, adjustment, repair, removal, disassembly, cleaning, or replacement of engine, equipment or vehicle components or systems that is performed to correct or diagnose a part failure or equipment or vehicle (if the engine were installed in a vehicle) malfunction that was not anticipated.

(39) "Useful life" means a period of 7 years or 5000 hours of operation, whichever first occurs for engines having engine displacement greater than 1.0-liter, and 2 years or 1,000 hours of operations, whichever occurs first, for engines having engine displacement equal to or less than 1.0-liter. However, in no case may this period be less than the manufacturer's basic mechanical warranty period for the engine family.

(40) "Warrantable Condition" means any condition of an engine that requires the manufacturer to take corrective action pursuant to Section 2435.

(41) "Warranted Part" means any emissions-related part installed on a engine by the equipment or engine manufacturer, or installed in a warranty repair, which is listed on the warranty parts list.

(42) "Warranty Period" means the period of time, either in years or hours of operation, that the engine or part is covered by the warranty provisions.

(43) "Warranty Station" means a service facility authorized by the equipment or engine manufacturer to perform warranty repairs. This includes all manufacturer distribution centers that are franchised to service the subject equipment or engines.

2. New subsection (a)(19), subsection renumbering, amendment of newly designated subsection (a)(28) and amendment of NOTE filed 4-12-2007; operative 5-12-2007 (Register 2007, No. 15).

§ 2432. Test Procedures.

Test procedures referred to in this chapter may be obtained from the State Air Resources Board at 9528 Telstar Avenue, El Monte, California 91731.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43105, 43150-43154, 43205.5 and 43210-43212, Health and Safety Code.

HISTORY

1. New section filed 10-19-99; operative 11-18-99 (Register 99, No. 43).

§ 2433. Emission Standards and Test Procedures — Off-Road Large Spark-Ignition Engines.

(a) This section applies to new off-road large spark-ignition engines produced on or after January 1, 2001. For the purpose of this section, these engines are also referred to as "new off-road LSI engines."

(b) *Standards.*

(1)(A) *Exhaust Emission Standards.* Exhaust emissions from off-road large spark-ignition engines manufactured for sale, sold, or offered for sale in California, or that are introduced, delivered or imported into California for introduction into commerce, must not exceed:

Exhaust Emission Standards
(grams per brake horsepower-hour)
[grams per kilowatt-hour]⁽¹⁾

Model Year	Engine Displacement	Durability Period	Hydrocarbon plus Oxides of Nitrogen	Carbon Monoxide
2002 and subsequent	≤ 1.0 liter	1,000 hours or 2 years	9.0 [12.0]	410 [549]
2001-2003 ^{(2),(3)}	> 1.0 liter	N/A	3.0 [4.0]	37.0 [49.6]
2004-2006 ⁽⁴⁾	> 1.0 liter	3500 hours or 5 years	3.0 [4.0]	37.0 [49.6]
2007-2009	> 1.0 liter	5000 hours or 7 years	2.0 [2.7]	3.3 [4.4]
2010 and subsequent ⁽⁵⁾	> 1.0 liter	5000 hours or 7 years	0.6 [0.8]	15.4 [20.6]

Note: ⁽¹⁾ For 2006 and previous model years, standards in grams per kilowatt-hour are given only as a reference. For 2007 and subsequent model years, pollutant emissions reported to ARB by manufacturers must be in grams per kilowatt-hour.

⁽²⁾ Small volume manufacturers are not required to comply with these emission standards.

⁽³⁾ Manufacturers must show that at least 25 percent of its California engine sales comply with the standards in 2001, 50 percent in 2002, and 75 percent in 2003.

⁽⁴⁾ The standards for in-use compliance for engine families certified to the standards in the row noted are 4.0 g/bhp-hr (5.4 g/kW-hr) hydrocarbon plus oxides of nitrogen and 50.0 g/bhp-hr (67.0 g/kW-hr) carbon monoxide, with a useful life of 5000 hours or 7 years. In-use averaging, banking, and trading credits may be generated for engines tested in compliance with these in-use compliance stan-

dards. If the in-use compliance level is above 3.0 but does not exceed 4.0 g/bhp-hr hydrocarbon plus oxides of nitrogen or is above 37.0 but does not exceed 50.0 g/bhp-hr carbon monoxide, and based on a review of information derived from a statistically valid and representative sample of engines, the Executive Officer determines that a substantial percentage of any class or category of such engines exhibits within the warranty periods noted in Section 2435, an identifiable, systematic defect in a component listed in that section, which causes a significant increase in emissions above those exhibited by engines free of such defects and of the same class or category and having the same period of use and hours, then the Executive Officer may invoke the enforcement authority under Section 2439, Title 13, California Code of regulations to require remedial action by the engine manufacturer. Such remedial action is limited to owner notification and repair or replacement of defective components, without regard to the requirements set forth in Section 2439(b)(5) or Section 2439(c)(5)(B)(vi). As used in the section, the term "defect" does not include failures that are the result of abuse, neglect, or improper maintenance.

(5) For severe-duty engines, the HC+NOx standard is 2.7 g/kW-hr and the CO standard is 130.0 g/kW-hr.

(6) Small volume manufacturers are required to comply with these emission standards in 2013.

(B) For the 2007 through 2009 model years, you may alternatively certify your engines according to the following formula instead of the standards in paragraph (b)(1)(A) of this section:

$$(\text{HC}+\text{NOx}) \times \text{CO}^{0.784} \leq 8.57.$$

Where: HC + NOx = hydrocarbon plus oxides of nitrogen family emissions level (FEL) in g/kW-hr

CO = carbon monoxide FEL in g/kW-hr

The HC+NOx and CO emission levels selected to satisfy this formula, rounded to the nearest 0.1 g/kW-hr, become the emission standards that apply for those engines. You may not select an HC+NOx FEL higher than 2.7 g/kW-hr or a CO FEL higher than 20.6 g/kW-hr.

(C) *Field Testing Standards.* The field testing standards for model year 2007 and subsequent off-road large spark-ignition engines are described in subpart F, Title 40 CFR Sections 1048.101(c), as adopted July 13, 2005.

(2)(A) *Optional Exhaust Emission Standards.* Manufacturers may certify off-road large spark-ignition engines manufactured for sale, sold, or offered for sale in California, or that are introduced, delivered or imported into California for introduction into commerce to the following optional low emission standards.

Optional Exhaust Emission Standards
(grams per brake horsepower-hour)
[grams per kilowatt-hour]⁽¹⁾

Model Year	Engine Displacement	Durability Period	HC+NOx	Carbon Monoxide
2007-2009	> 1.0 liter	5000 hours or 7 years	1.5 [2.0]	4.8 [6.4]
2007-2009	> 1.0 liter	5000 hours or 7 years	1.0 [1.3]	8.3 [11.1]
2007-2009	> 1.0 liter	5000 hours or 7 years	0.6 [0.8]	15.4 [20.6]
2007-2009	> 1.0 liter	5000 hours or 7 years	0.4 [0.5]	15.4 [20.6]
2007-2009	> 1.0 liter	5000 hours or 7 years	0.2 [0.3]	15.4 [20.6]
2007-2009	> 1.0 liter	5000 hours or 7 years	0.1 [0.1]	15.4 [20.6]
2010 and subsequent	> 1.0 liter	5000 hours or 7 years	0.4 [0.5]	15.4 [20.6]
2010 and subsequent	> 1.0 liter	5000 hours or 7 years	0.2 [0.3]	15.4 [20.6]
2010 and subsequent	> 1.0 liter	5000 hours or 7 years	0.1 [0.1]	15.4 [20.6]

Note: (1) Pollutant emissions reported to ARB by manufacturers must be in grams per kilowatt-hour.

(B) *Field Testing Standards.* The field testing standards for optional emission standard off-road large spark-ignition engines shall be 140 percent of the corresponding OLES HC+NOx standard and 150 percent of the corresponding OLES CO standard, rounded to the nearest tenth of one gram, using the field testing procedures described in subpart F, Title 40 CFR Section 1048.101(c), as adopted July 13, 2005.

(3) *Crankcase Emissions.* No crankcase emissions shall be discharged into the ambient atmosphere from any new 2001 or later model year off-road LSI engines.

(4) *Evaporative Emission Standards.* Starting in the 2007 model year, engines over one liter that run on a volatile liquid fuel (such as gasoline), must meet the following evaporative emissions standards and requirements:

(A) Evaporative hydrocarbon emissions may not exceed 0.2 grams per gallon of fuel tank capacity when measured with the test procedures for evaporative emissions as described in subpart F, Title 40 Code of Federal Regulations (CFR) Sec.1048, as adopted July 13, 2005.

(B) For nonmetallic fuel lines, you must specify and use products that meet the Category 1 specifications in SAE J2260 (issued November 1996).

(C) Liquid fuel in the fuel tank may not reach boiling during continuous engine operation in the final installation at an ambient temperature of 30° C. Note that gasoline with a Reid vapor pressure of 62 kPa (9 psi) begins to boil at about 53° C.

(D) Design-based certification as described in subpart F, Title 40 CFR Sections 1048.105 and 1048.245, as adopted July 13, 2005, may be used instead of generating new emission data.

(e) *Test Procedures.* The test procedures for determining certification and compliance with the standards for exhaust emissions from new model year 2001 through 2006 off-road LSI engines with engine displacement greater than 1.0 liter sold in the state are set forth in "California Exhaust Emission Standards and Test Procedures for New 2001 through 2006 Off-Road Large Spark-ignition Engines, Parts I and II," adopted September 1, 1999, and as last amended March 2, 2007. The test procedures for determining certification and compliance with the standards for exhaust and evaporative emissions from new model year 2007 through 2009 off-road LSI engines with engine displacement greater than 1.0 liter sold in the state are set forth in "California Exhaust and Evaporative Emission Standards and Test Procedures for New 2007 through 2009 Off-Road Large Spark-ignition Engines (2007-2009 Test Procedure 1048)," adopted March 2, 2007. The test procedures for determining certification and compliance with the standards for exhaust and evaporative emissions from new model year 2010 and subsequent off-road LSI engines with engine displacement greater than 1.0 liter sold in the state are set forth in "California Exhaust and Evaporative Emission Standards and Test Procedures for New 2010 and Later Off-Road Large Spark-ignition Engines (2010 and Later Test Procedure 1048)," adopted March 2, 2007. The test procedures for determining compliance with the standards for exhaust and evaporative emissions for new model year 2007 and subsequent off-road LSI engines with engine displacement greater than 1.0 liter sold in the state are set forth in the "California Exhaust and Evaporative Emission Standards and Test Procedures for New 2007 and Later Off-Road Large Spark-Ignition Engines (Test Procedures 1065 and 1068)," adopted March 2, 2007.

(d) The test procedures for determining certification and compliance with the standards for exhaust emissions from new off-road LSI engines with engine displacement equal to or less than 1.0 liter sold in the state are set forth in "California Exhaust Emission Standards and Test Procedures for 1995-2004 Small Off-Road Engines," as last amended July 26, 2004 or "California Exhaust Emission Standards and Test Procedures for 2005 and Later Small Off-Road Engines," adopted July 26, 2004.

(e) *Replacement Engines.*

(1) [Reserved]

(2)(A) Beginning in 2004, a new off-road large spark-ignition engine intended solely to replace an engine in a piece of off-road equipment that was originally produced with an engine manufactured prior to the appli-

cable implementation date as described in paragraph (b), shall not be subject to the emissions requirements of paragraph (b) provided that:

(i) The engine manufacturer has ascertained that no engine produced by itself or the manufacturer of the engine that is being replaced, if different, and certified to the requirements of this article, is available with the appropriate physical or performance characteristics to repower the equipment; and

(ii) Unless an alternative control mechanism is approved in advance by the Executive Officer, the engine manufacturer or its agent takes ownership and possession of the engine being replaced; and

(iii) The replacement engine is clearly labeled with the following language, or similar alternate language approved in advance by the Executive Officer:

THIS ENGINE DOES NOT COMPLY WITH CALIFORNIA OFF-ROAD OR ON-HIGHWAY EMISSION REQUIREMENTS. SALE OR INSTALLATION OF THIS ENGINE FOR ANY PURPOSE OTHER THAN AS A REPLACEMENT ENGINE IN AN OFF-ROAD VEHICLE OR PIECE OF OFF-ROAD EQUIPMENT WHOSE ORIGINAL ENGINE WAS NOT CERTIFIED IS A VIOLATION OF CALIFORNIA LAW SUBJECT TO CIVIL PENALTY.

(B) At the beginning of each model year, the manufacturer of replacement engines must provide, by engine model, an estimate of the number of replacement engines it expects to produce for California for that model year.

(C) At the conclusion of the model year, the manufacturer must provide, by engine model, the actual number of replacement engines produced for California during the model year, and a description of the physical or performance characteristics of those models that indicate that certified replacement engine(s) were not available as per paragraph (A).

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43105, 43150, 43151, 43152, 43153, 43154, 43205.5, 43210, 43210.5, 43211 and 43212, Health and Safety Code.

HISTORY

1. New section filed 10-19-99; operative 11-18-99 (Register 99, No. 43).
2. Amendment of section heading, section and NOTE filed 4-12-2007; operative 5-12-2007 (Register 2007, No. 15).

§ 2434. Emission Control Labels — 2001 and Later Off-Road Large Spark-Ignition Engines.

(a) Purpose.

The Air Resources Board recognizes that certain emissions-critical or emissions-related parts must be properly identified and maintained in order for engines to meet the applicable emission standards. The purpose of these specifications is to require engine manufacturers to affix a label (or labels) on each production engine (or equipment) to provide the engine or equipment owner and service mechanic with information necessary for the proper maintenance of these parts in customer use.

(b) Applicability. This section applies to:

(1) 2001 and later model year off-road LSI engines with engine displacement greater than 1.0 liter, that have been certified to the applicable emission standards pursuant to Section 2433(b).

(2) Engine manufacturers and original equipment manufacturers, as applicable, that have certified such engines.

(3) Original equipment manufacturers, regardless of whether they have certified the engine, if their equipment obscures the emission control labels of such certified engines.

(4) 2002 and later model year off-road LSI engines with engine displacement less than or equal to 1.0 liter must comply with the applicable labeling specifications set forth in the California Code of Regulations, Title 13, Section 2404.

(c) Label Content and Location.

(1) A tune-up label made of a permanent material must be welded, riveted or otherwise permanently attached to the engine block or other major component in such a way that it will be readily visible after installation of the engine in the equipment. If the equipment obscures the label on the

engine, the equipment manufacturer must attach a supplemental label such that it is readily visible.

(2) In selecting an acceptable location, the manufacturer must consider the possibility of accidental damage (e.g., possibility of tools or sharp instruments coming in contact with the label). Each label must be affixed in such a manner that it cannot be removed without destroying or defacing the label, and must not be affixed to any part which is likely to be replaced during the equipment's useful life. The label(s) must not be affixed to any component which is easily detached from the engine.

(3) In addition, an engine serial number and date of engine manufacture (month and year) must be stamped on the engine block or stamped on a metal label riveted or permanently attached to the engine block. Engine manufacturers must keep records such that the engine serial number can easily be used to determine if an engine was certified for the applicable model year. Alternative engine serial number identification methods or tracking number may be allowed with prior approval from the Executive Officer.

(4) The label must be in the English language and use block letters and numerals which must be of a color that contrasts with the background of the label.

(5) The label must contain the following information:

(A) The label heading must read:

"Important Engine Information."

(B) Full corporate name and trademark of the manufacturer.

(C) "THIS ENGINE IS CERTIFIED TO OPERATE ON (specify operating fuel(s))."

(D) Identification of the Exhaust Emission Control System. Abbreviations may be used and must conform to the nomenclature and abbreviations found in the Society of Automotive Engineers document J1930 which is incorporated by reference in Section 1977, Title 13, CCR, entitled "Electrical/Electronic Systems Diagnostic Terms, Definitions, Abbreviations, and Acronyms".

(E) The maintenance specifications and adjustments recommended by the engine manufacturer, including, as applicable: spark plug gap width, valve lash, ignition timing, idle air/fuel mixture setting procedure and value (e.g., idle CO, idle speed drop), and high idle speed. These specifications must indicate the proper transmission position, (if applicable), during tune-up and what accessories, if any, should be in operation, and what systems, if any (e.g., vacuum advance, air pump), should be disconnected during the tune-up. If the manufacturer does not recommend adjustment of the foregoing specifications, the manufacturer must include in lieu of the "specifications" the single statement "No other adjustments needed." For all engines, the instructions for tune-up adjustments must be sufficiently clear on the label to preclude the need for a mechanic or equipment owner to refer to another document in order to correctly perform the adjustments.

(F) Any specific fuel or engine lubricant requirement (e.g., research octane number, engine lubricant type).

(G) An unconditional statement of compliance with the appropriate model year (for 2001-2003) or (2004 and subsequent) California regulations; for example, "This engine conforms to 2002 California regulations for off-road large spark-ignition engines and is certified to 3.0 g/bhp-hr HC+NOx and 37 g/bhp-hr CO." or "This engine conforms to 2007 California regulations for off-road large spark-ignition engines and is certified to 0.8 g/kW-hr [0.6 g/bhp-hr] HC+NOx and 20.6 g/kW-hr [15.4 g/bhp-hr] CO."

(H) Total engine displacement (in cubic inches and/or liters) of the engine upon which the engine label is attached.

(I) The engine family identification (i.e., engine family name and manufacturer's own engine group/code).

(6)(A) The manufacturer of any engine certified with a clean fuel (i.e. natural gas) must at the time of engine manufacture, affix a permanent legible label specifying the appropriate operating fuel(s).

(B) The label must be located immediately adjacent to each fuel tank filler inlet and outside of any filler inlet compartment. It must be located so that it is readily visible to any person introducing fuel to such filler in-

let; provided, however, that the Executive Officer must upon application from an engine manufacturer, approve other label locations that achieve the purpose of this paragraph. If the engine is manufactured separately from the equipment, the label must be affixed to the engine and located so that it is readily visible. Such labels must be in English and in block letters which must be of a color that contrasts with their background.

(d) An engine label may state that the engine or equipment conforms to any applicable federal emission standards for new engines, or any other information that such manufacturer deems necessary for, or useful to, the proper operation and satisfactory maintenance of the equipment or engine.

(e) Supplemental Engine Label Content and Location.

(1) When a final equipment assembly that is marketed to any ultimate purchaser is manufactured and the engine label attached by the engine manufacturer is obscured (i.e., not readily visible), the manufacturer of the final equipment assembly (i.e., original equipment manufacturer) must attach a supplemental engine label upon the engine or equipment. The supplemental engine label must be plastic or metal, and must be welded, riveted or otherwise attached permanently to an area of the engine or equipment assembly so as to be readily visible to the average person.

(2) The manufacturer required to attach a supplemental engine label must consider the possibility of accidental damage to the supplemental engine label in the determination of the label location. Such a label must not be attached to any engine or equipment component that is likely to be replaced during the useful life of the engine or equipment (as applicable). Such a label must not be attached to any engine or equipment component that is detached easily from the engine or equipment (as applicable).

(3) The supplemental engine label information must be written in the English language and use block letters and numerals (i.e., sans serif, upper-case characters) that must be of a color that contrasts with the background of the label.

(4) A supplemental engine label must contain the information as specified in Subsection (c)(4), except that the date of engine manufacture specified in (c)(3) may be deleted from the supplemental engine label. When the date of engine manufacture does not appear on the supplemental engine label, the responsible original equipment manufacturer must display (e.g., label, stamp, etc.) the date elsewhere on the engine or equipment so as to be readily visible.

(f) As used in these specifications, readily visible to the average person means that the label must be readable from a distance of eighteen inches (46 centimeters) without any obstructions from equipment or engine parts (including all manufacturer available optional equipment) except for flexible parts (e.g., vacuum hoses, ignition wires) that can be moved out of the way without disconnection. Alternatively, information required by these specifications to be printed on the label must be no smaller than 8 point type size (2 millimeter in height) provided that no equipment or engine parts (including all manufacturer available optional equipment), except for flexible parts, obstruct the label.

(g) The labels and any adhesives used must be designed to withstand, for the engine's or equipment's total expected life, typical equipment environmental conditions in the area where the label is attached. Typical equipment environmental conditions must include, but are not limited to, exposure to engine fuels, lubricants and coolants (e.g., gasoline, motor oil, water, ethylene glycol). The manufacturer must submit, with its certification application, a statement attesting that its labels comply with these requirements.

(h) The manufacturer must obtain approval from the Executive6B Officer for all label formats and locations prior to use. Approval of the specific maintenance settings is not required; however, the format for all such settings and tolerances, if any, is subject to review. If the Executive Officer finds that the information on the label is vague or subject to misinterpretation, or that the location does not comply with these specifications, he or she may require that the label or its location be modified accordingly.

(i) Samples of all actual production labels used within an engine family must be submitted to the Executive Officer within thirty days after the start of production. Engine manufacturers must provide samples of their own applicable production labels, and samples of applicable production original equipment manufacturer labels that are accessible to the engine manufacturer due to the direct market arrangement between such manufacturers.

(j) The Executive Officer may approve alternate label locations or may, upon request, waive or modify the label content requirements provided that the intent of these specifications is met.

(k) The manufacturer of any engine must furnish to the Executive Officer, at the beginning of the model year, any engine identification number coding system which identifies whether such engine(s) are covered by an Executive Order.

(l)(1) If the Executive Officer finds any engine manufacturer using labels that are different from those approved or that do not substantially comply with the readability or durability requirements set forth in these specifications, the engine manufacturer will be subject to revocation or suspension of Executive Orders for the applicable engine families, or enjoined from any further sales, or distribution, of such noncompliant engine families, or subgroups within the engine families, in the State of California pursuant to Section 43017 of the Health and Safety Code. Before seeking to enjoin an engine manufacturer, the Executive Officer will consider any information provided by the engine manufacturer. In addition, the engine manufacturer may be subject to, on a per engine basis, any and all remedies available under Part 5, Division 26 of the Health and Safety Code, sections 43000 et seq.

(2) If the Executive Officer finds any original equipment manufacturer using labels for which it has responsibility for attaching that are different from those approved or that do not substantially comply with the readability or durability requirements set forth in these specifications, the equipment manufacturer will be subject to being enjoined from any further sales, or distribution, of the applicable equipment product line that uses such noncompliant labels in the State of California pursuant to Section 43017 of the Health and Safety Code. Before seeking to enjoin an equipment manufacturer, the Executive Officer will consider any information provided by the equipment manufacturer. In addition, the equipment manufacturer may be subject to, on a per engine basis, any and all remedies available under Part 5, Division 26 of the Health and Safety Code, sections 43000 et seq.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43017, 43018, 43101, 43102, and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43105, 43150, 43151, 43152, 43153, 43154, 43205.5, 43210, 43210.5, 43211 and 43212, Health and Safety Code.

HISTORY

1. New section filed 10-19-99; operative 11-18-99 (Register 99, No. 43).
2. Amendment of subsection (c)(5)(G) and NOTE filed 4-12-2007; operative 5-12-2007 (Register 2007, No. 15).

§ 2435. Defects Warranty Requirements for 2001 and Later Off-Road Large Spark-Ignition Engines.

(a) Applicability. This section applies to new 2001 and later model year off-road large spark-ignition engines with engine displacement greater than 1.0 liter that are certified to the applicable emission standards pursuant to Section 2433(b). The warranty period begins on the date the engine or equipment is delivered to an ultimate purchaser. The use of alternative fuels must not void the warranties on any engine certified to use such fuel. 2002 and later model year off-road LSI engines with engine displacement less than or equal to 1.0 liter must comply with the applicable warranty requirements set forth in the California Code of Regulations, Title 13, Section 2405.

(b) General Emissions Warranty Coverage. The manufacturer of each off-road large spark-ignition engine must warrant to the ultimate purchaser and each subsequent purchaser that the engine is:

(1) Designed, built, and equipped so as to conform with all applicable regulations adopted by the Air Resources Board pursuant to its authority in Chapters 1 and 2, Part 5, Division 26 of the Health and Safety Code; and

(2) Free from defects in materials and workmanship which cause the failure of a warranted part to be identical in all material respects to the part as described in the engine manufacturer's application for certification for a period of:

(A) 2 years or 1,500 hours, whichever occurs first, for 2001–2003 model year certified engines having engine displacement greater than 1.0 liter.

(B) 3 years or 2,500 hours, whichever occurs first, for 2004 and later model year engines having engine displacement greater than 1.0 liter.

(3) Free from defects in materials and workmanship which cause the failure of a high-cost warranted part to be identical in all material respects to the part as described in the engine manufacturer's application for certification for 2004 and later model year engines having engine displacements greater than 1.0 liter, for a period of five years or 3,500 hours of operation, whichever occurs first.

(A) Each manufacturer shall identify in its application for certification the "high-priced" warranted parts which (i) are included on the Board's "Emission Warranty Parts List" as last amended February 22, 1985, incorporated herein by reference, and (ii) have an individual replacement cost, at the time of certification, exceeding the cost limit defined in subsection (B). The replacement cost shall include the cost of the part, labor and standard diagnosis. The costs shall be those of the highest-cost metropolitan area of California.

(B) The dollar value of a high cost part shall be based on the following formula:

$$\text{Cost Limit}_n = \$300 * (\text{CPI}_{n-2} / 118.3)$$

where,

Cost Limit_n is the cost limit for the applicable model year of the engine rounded to the nearest ten dollars.

n is the model year of the new engines.

n–2 is the calendar year two years prior to the model year of the new engines.

CPI= is the annual average nationwide urban consumer price index published by the United States Bureau of Labor Statistics.

(C) The cost limit shall be reviewed annually by the Executive Officer. The highest-cost metropolitan area in California shall be identified by the Executive Officer for use in this subsection. If a manufacturer seeks certification of an engine before the applicable annual average CPI is available, the cost limit shall be calculated using the average of the monthly nationwide urban CPI figures for the most recent twelve month period for which figures have been published by the United States Bureau of Labor Statistics.

(D) Each manufacturer shall submit to the Executive Officer the documentation used to identify the "high-priced" warranted parts required in this subsection. The documentation shall include the estimated retail parts costs, labor rates in dollars per hour, and the labor hours necessary to diagnosis and replace the parts.

(4) In the absence of a device to measure hours of use, the engine must be warranted for a period of the years noted above in subsections (2) and (3). If a device to measure hours is used, the engine must be warranted for the number of hours or the number of years noted above in subsections (2) and (3), whichever occurs first.

(c) The warranty on emissions-related parts must be interpreted as follows:

(1) Any warranted part that is not scheduled for replacement as required maintenance in the written instructions required by Subsection (e) must be warranted for the warranty period defined in Subsection (b)(2) and (b)(3). If any such part fails during the period of warranty coverage, it must be repaired or replaced by the engine manufacturer according to Subsection (4) below. Any such part repaired or replaced under the warranty must be warranted for the remaining warranty period.

(2) Any warranted part that is scheduled only for regular inspection in the written instructions required by Subsection (e) must be warranted for the warranty period defined in Subsection (b)(2) and (b)(3). A statement in such written instructions to the effect of "repair or replace as necessary" must not reduce the period of warranty coverage. Any such part re-

paired or replaced under warranty must be warranted for the remaining warranty period.

(3) Any warranted part that is scheduled for replacement as required maintenance in the written instructions required by Subsection (e) must be warranted for the period of time prior to the first scheduled replacement point for that part. If the part fails prior to the first scheduled replacement, the part must be repaired or replaced by the engine manufacturer according to Subsection (4) below. Any such part repaired or replaced under warranty must be warranted for the remainder of the period prior to the first scheduled replacement point for the part.

(4) Repair or replacement of any warranted part under the warranty provisions of this article must be performed at no charge to the owner at a warranty station.

(5) Notwithstanding the provisions of Subsection (4) above, warranty services or repairs must be provided at all manufacturer distribution centers that are franchised to service the subject engines.

(6) The owner must not be charged for diagnostic labor that leads to the determination that a warranted part is in fact defective, provided that such diagnostic work is performed at a warranty station.

(7) The engine manufacturer must be liable for damages to other engine components proximately caused by a failure under warranty of any warranted part.

(8) Throughout the engine's warranty period defined in Subsection (b)(2) and (b)(3), the engine manufacturer must maintain a supply of warranted parts sufficient to meet the expected demand for such parts.

(9) Any replacement part, as defined in Section 1900(b)(13), Title 13, may be used in the performance of any maintenance or repairs and must be provided without charge to the owner. It is not necessary for replacement parts to be the same brand or by the same manufacturer as the original part sold with the engine. Such use must not reduce the warranty obligations of the engine manufacturer.

(10) Add-on or modified parts, as defined in Section 1900(b)(1) and (b)(10), Title 13, that are not exempted by the Air Resources Board may not be used. The use of any non-exempted add-on or modified parts will, at the discretion of the engine manufacturer, be grounds for disallowing a warranty claim made in accordance with this article. The engine manufacturer must not be liable under this article to warrant failures of warranted parts caused by the use of a non-exempted add-on or modified part.

(11) The Executive Officer may request and, in such case, the engine manufacturer must provide, any documents that describe that manufacturer's warranty procedures or policies.

(d) Each manufacturer must include a copy of the following emission warranty parts list with each new engine, using those portions of the list applicable to the engine.

(1) Fuel Metering System

(A) Fuel injection system.

(B) Air/fuel ratio feedback and control system.

(C) Carburetor system (internal parts and/or pressure regulator or fuel mixer or injection system).

(D) Cold start enrichment system.

(2) Air Induction System

(A) Intake manifold or air intake system.

(B) Air mass sensor assembly.

(C) Turbocharger/supercharger systems.

(3) Exhaust Gas Recirculation (EGR) System

(A) EGR valve body, and carburetor spacer if applicable.

(B) EGR rate feedback and control system.

(4) Air injection System

(A) Air pump or pulse valve.

(B) Valves affecting distribution of flow.

(C) Distribution manifold.

(5) Catalyst or Thermal Reactor System

(A) Catalytic converter.

(B) Thermal reactor.

(C) Exhaust manifold.

- (6) Positive Crankcase Ventilation (PCV) System.
 - (A) PCV Valve.
 - (B) Oil Filler Cap.
- (7) Ignition Control System
 - (A) Engine Control Module (ECM).
 - (B) Ignition module(s).
- (8) Miscellaneous items Used in Above Systems
 - (A) Vacuum, temperature, and time sensitive valves and switches.
 - (B) Sensors used for electronic controls.
 - (C) Hoses, belts, connectors, assemblies, clamps, fittings, tubing, seal-gaskets or devices, and mounting hardware.
 - (D) Pulleys, belts and idlers.
- (e) Each manufacturer must furnish with each new engine written instructions for the maintenance and use of the engine by the owner. The instructions must be consistent with this article and applicable regulations contained herein.
- (f) Each manufacturer must submit the documents required by Subsections (d) and (e) with the manufacturer's preliminary application for engine certification for approval by the Executive Officer. Approval by the Executive Officer of the documents required by Subsections (d) and (e) must be a condition of certification. The Executive Officer must approve or disapprove the documents required by Subsections (d) and (e) within 90 days of the date such documents are received from the manufacturer. Any disapproval must be accompanied by a statement of the reasons therefor. In the event of disapproval, the manufacturer may file for an adjudicative hearing under Title 17, California Code of Regulation, Division 3, Chapter 1, Subchapter 1.25 to review the decision of the Executive Officer.
- (g) In the application, each manufacturer must include a statement concerning proper maintenance of the engine to maximize emissions performance. The statement must include, but not be limited to, information on air filter care and replacement schedule, proper fueling and fuel mixing, engine maintenance, and a maintenance schedule to ensure that the owner returns to a servicing center to check for deposits, debris build-up, etc.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43105, 43150-43154, 43205.5 and 43210-43212, Health and Safety Code.

HISTORY

1. New section filed 10-19-99; operative 11-18-99 (Register 99, No. 43).
2. Amendment of subsection (c)(10) filed 8-29-2000; operative 9-28-2000 (Register 2000, No. 35).

§ 2436. Emission Control System Warranty Statement.

(a) Each manufacturer must furnish a copy of the following statement with each new off-road large spark-ignition engine with engine displacement greater than 1.0 liter, that have been certified to the applicable emission standards pursuant to Section 2433(b), using those portions of the statement applicable to the engine. Each manufacturer must furnish a copy of the warranty statement as set forth in the California Code of Regulations, Title 13, Section 2406(a) with each new off-road large spark-ignition engine with engine displacement less than or equal to 1.0 liter, using those portions of the statement applicable to the engine.

CALIFORNIA EMISSION CONTROL WARRANTY STATEMENT

YOUR WARRANTY RIGHTS AND OBLIGATIONS

The **California Air Resources Board** (and manufacturer's name, optional) is pleased to explain the **emission control system warranty** on your **(model year(s))** (equipment type or off-road large spark-ignition) engine. In California, new off-road large spark-ignition (LSI) engines must be designed, built and equipped to meet the State's stringent anti-smog standards. (Manufacturer's name) must warrant the emission control system on your engine for the periods of time listed below provided there has been no abuse, neglect or improper maintenance of your engine. Your emission control system may include parts such as the carburetor, regulator or fuel-injection system, ignition system, engine computer unit

(ECM), catalytic converter and air induction system. Also included may be sensors, hoses, belts, connectors and other emission-related assemblies.

Where a warrantable condition exists, (manufacturer's name) will repair your LSI engine at no cost to you including diagnosis, parts and labor.

MANUFACTURER'S WARRANTY COVERAGE:

The **(model year(s))** off-road large spark-ignition engines are warranted for **(warranty period)**. If any emission-related part on your engine is defective, the part will be repaired or replaced by (manufacturer's name).

OWNER'S WARRANTY RESPONSIBILITIES:

- As the off-road LSI engine owner, you are responsible for the performance of the **required maintenance listed in your owner's manual**. (Manufacturer's name) recommends that you retain all receipts covering maintenance on your off-road engine, but (manufacturer's name) cannot deny warranty solely for the lack of receipts or for your failure to ensure the performance of all scheduled maintenance.
- As the off-road large spark-ignition engine owner, you should however be aware that (manufacturer's name) may deny you warranty coverage if your off-road large spark-ignition engine or a part has failed due to abuse, neglect, improper maintenance or unapproved modifications.
- Your engine is designed to operate on **(specific fuel(s))**. Use of any other fuel may result in your engine no longer operating in compliance with California's emissions requirements.
- You are responsible for initiating the warranty process. The ARB suggests that you present your off-road large spark-ignition engine to a (manufacturer's name) dealer as soon as a problem exists. The warranty repairs should be completed by the dealer as expeditiously as possible.

If you have any questions regarding your warranty rights and responsibilities, you should contact (Insert chosen manufacturer's contact) at **1-XXX-XXX-XXXX**.

(b) Warranty statement furnishing requirements.

(1) Commencing with the 2001 model year for large off-road large spark-ignition engines with engine displacement greater than 1.0 liter, each manufacturer must furnish with each new engine a warranty statement that generally describes the obligations and rights of the engine manufacturer and owner under this article. Engine manufacturers must also include in the warranty statement a phone number the customer may use to obtain their nearest franchised service center.

(2) Commencing with the 2002 model year for large off-road large spark-ignition engines with engine displacement less than or equal to 1.0 liter, each manufacturer must furnish with each new engine a warranty statement as set forth in the California Code of Regulations, Title 13, Section 2406(b).

(c) Each manufacturer must submit the documents required by Subsections (a) and (b) with the manufacturer's preliminary application for new engine certification for approval by the Executive Officer. The Executive Officer may reject or require modification of the documents to the extent the submitted documents do not satisfy the requirements of Subsections (a) and (b). Approval by the Executive Officer of the documents required by Subsections (a) and (b) must be a condition of certification. The Executive Officer must approve or disapprove the documents required by Subsections (a) and (b) within 90 days of the date such documents are received from the manufacturer. Any disapproval must be accompanied by a statement of the reasons therefor. In the event of disapproval, the manufacturer may petition the Board to review the decision of the Executive Officer.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43105, 43150-43154, 43205.5 and 43210-43212, Health and Safety Code.

HISTORY

1. New section filed 10-19-99; operative 11-18-99 (Register 99, No. 43).

§ 2437. New Engine Compliance and Production Line Testing — New Off-Road Large Spark-Ignition Engines Selection, Evaluation, and Enforcement Action.

(a) Compliance Test Procedures

(1) These procedures apply, commencing with the 2001 model year, to any large off-road spark-ignition engine family group (as defined in Sections 2 and 11 of the "California Exhaust Emission Standards and Test Procedures for New 2001 and Later Off-Road Large Spark-ignition Engines") or any subgroup within an engine family group selected for compliance testing pursuant to this section, with an engine displacement greater than 1.0 liter, that have been certified to the applicable emission standards pursuant to Section 2433(b). 2002 and later model year large off-road spark-ignition engines with engine displacement less than or equal to 1.0 liter must comply with the new engine compliance test procedures set forth in the California Code of Regulations, Title 13, Section 2407.

(2) The Executive Officer may, with respect to any new engine family group or subgroup being sold, offered for sale, or manufactured for sale in California, order an engine manufacturer to make available for compliance testing and/or inspection a reasonable number of engines, and may direct that the engines be delivered to the state board at the Haagen-Smit Laboratory, 9528 Telstar Avenue, El Monte, California or where specified by the Executive Officer. The Executive Officer may also, with respect to any new engine family group or subgroup being sold, offered for sale, or manufactured for sale in California, have a manufacturer compliance test and/or inspect a reasonable number of engines at the manufacturer's facility under the supervision of an ARB Enforcement Officer. Engines must be representatively selected from sources specified by the Executive Officer according to a method approved by him/her, that insofar as practical must exclude engines that would result in an unreasonable disruption of the manufacturer's distribution system. To the extent practical, the Executive Officer must test a representative configuration (as defined in Section 3 of the "California Exhaust Emission Standards and Test Procedures for New 2001 and Later Off-Road Large Spark-ignition Engines") from the engine family group in order to minimize manufacturers' expense and inconvenience in testing different engine configurations.

A subgroup of an engine family group may be selected for compliance testing only if the Executive Officer has reason to believe that the emissions characteristics of that subgroup are substantially in excess of the emissions of the engine family group as a whole.

(3) For all 2001 and subsequent model year off-road large spark-ignition engines selected for compliance testing, the selection and testing of engines and the evaluation of data must be made in accordance with the procedures set forth herein.

(4) For manufacturers that have more than one engine family group, the Air Resources Board or its designated laboratory may procure and test at the manufacturer's expense no more than one engine family group per year, if compliance testing is required.

Notwithstanding the above, if a manufacturer fails to demonstrate compliance with the emission standards after one engine family group has been tested, the ARB or its designated laboratory may test additional engine family groups at the manufacturer's expense, until compliance is demonstrated on one engine family group or all of a manufacturer's engine family groups have been tested. However, the ARB may conduct engine enforcement testing pursuant to the engine test procedures specified in Section 2433, at its own expense. In such an instance, the Executive Officer must order testing only in those cases where evidence such as production line test data or in-use test data indicate that engines may not be in compliance.

(5) All testing must be conducted in accordance with the applicable model year certification emission test procedures. Break-in before test-

ing may be performed on test engines to the same extent it is performed on production-line testing engines (See subsection (b)). No break-in or modifications, adjustments, or special preparation or maintenance will be allowed on engines chosen for compliance testing without the written consent of the Executive Officer. Such consent must not be unreasonably withheld where such adjustment or alteration is required to render the engine testable and reasonably operative.

(6) If the manufacturer elects to specify a different break-in or adjustments, they will be performed by the manufacturer under the supervision of ARB personnel.

(7) Correction of damage or maladjustment that may reasonably be found to have resulted from shipment of the engine is permitted only after testing the engine, except where 100 percent of the manufacturer's production is given that inspection or maintenance by the manufacturer's own personnel. Exceptions are allowed in the cases where the damage results in the engine being unsafe to operate, inoperable, or unable to complete the emission test. Additionally, an exception is allowed if the damage results in engine performance deficiencies that would be obvious in customer service and that would cause the customer to seek repair of the engine. The manufacturer may request that the engine be repaired from shipping damage, and be retested. If the Executive Officer concurs, the engine may be retested, and the original test results may be replaced by the after-repair test results.

(8) Engines must be randomly chosen from the selected engine family group or subgroup. Prior to the start of testing, manufacturers must indicate that sampling plan (as described in paragraphs (9) and (10), below) they will use. Once testing has begun, manufacturers may not switch to the other sampling plan; the generated test results will be final. Each chosen engine must be tested according to the "California Exhaust Emission Standards and Test Procedures for New 2001 and Later Off-Road Large Spark-ignition Engines" ("Test Procedures") to determine its emissions. Unique specialty hardware and personnel normally necessary to prepare the engine for the performance of the test as set forth in the Test Procedures must be supplied by the manufacturer within seven days after request. Failure to supply this unique specialty hardware or personnel may not be used by the manufacturer as a cause for invalidation of the subsequent tests.

(9) Engines must be tested in groups of five until a "Pass" or "Fail" decision is reached for each pollutant independently for the engine family or subgroup in accordance with the following table:

<i>Number of Engines Tested</i>	<i>Decide "Fail" If "U" is greater than or equal to</i>	<i>Decide "Pass" If "U" is less than or equal to</i>
5	2.18	-0.13
10	2.11	0.51
15	2.18	0.88
20	2.29	1.16

where:

$$U = \frac{\sum_{i=1}^n (x_i - \mu_o)}{\left(\sum_{i=1}^n (x_i - \mu_o)^2 \right)^{0.5}}$$

x_i = the projected emissions of one pollutant for the i th engine tested.
 μ_o = the applicable calendar year emission standard for that pollutant.
 n = the number of engines tested.

(10) The Executive Officer will find that a group of engines has failed the compliance testing pursuant to the above table if the Executive Officer finds that the average emissions of the engines within the selected engine family or subgroup exceed the applicable calendar year new engine emission standard for at least one pollutant.

(11) If no decision for a pollutant or pollutants can be reached after 20 engines have been tested, the Executive Officer will not make a "Fail" decision for the selected engine family or subgroup on the basis of these

20 tests alone. Under these circumstances the Executive Officer will elect to test 10 additional engines. If the average emissions from the 30 engines tested exceed any one of the exhaust emission standards for which a "Pass" decision has not been previously made, the Executive Officer will render a "Fail" decision.

(12) If the Executive Officer determines, in accordance with the procedures set forth in Subsection (a) that an engine family, or any subgroup within an engine family, exceeds the emission standards for one or more pollutants, the Executive Officer will:

(A) Notify the engine manufacturer that the engine manufacturer may be subject to revocation or suspension of the Executive Order authorizing sales and distribution of the noncompliant engines in the State of California, or enjoined from any further sales or distribution, of the noncompliant engines in the State of California pursuant to Section 43017 of the Health and Safety Code. Prior to revoking or suspending the Executive Order, or seeking to enjoin an engine manufacturer, the Executive Officer will consider production line test results, if any, and any additional test data or other information provided by the engine manufacturer and other interested parties. In addition, the engine manufacturer may be subject to, on a per engine basis, any and all remedies available under Part 5, Division 26 of the Health and Safety Code, sections 43000 et seq.

(B) Notify the equipment manufacturer that the equipment manufacturer may be subject to revocation or suspension of the Executive Order authorizing sales and distribution of the noncompliant engines in the State of California, or being enjoined from any further sales, or distribution, of the equipment manufacturer's equipment product line(s) that are, or utilize engines that are, noncompliant with the applicable emission regulations pursuant to Section 43017 of the Health and Safety Code. Prior to revoking or suspending the Executive Order, or seeking to enjoin an equipment manufacturer, the Executive Officer will consider production line test results, if any, and any additional test data or other information provided by the equipment manufacturer and other interested parties. In addition, the equipment manufacturer may be subject to, on a per engine basis, any and all remedies available under Part 5, Division 26 of the Health and Safety Code, sections 43000 et seq.

(13) Engines selected for inspection must be checked to verify the presence of those emissions-related components specified in the engine manufacturer's application for certification, and for the accuracy of any adjustments, part numbers and labels specified in that application. If any engine selected for inspection fails to conform to any applicable law in Part 5 (commencing with Section 43000) of Division 26 of the Health and Safety Code, or any regulation adopted by the state board pursuant thereto, other than an emissions standard applied to new engines to determine "certification" as specified in Chapter 9, the Executive Officer will:

(A) Notify the engine manufacturer and may seek to revoke or suspend the Executive Order authorizing sales and distribution or enjoin the engine manufacturer from any further sales, or distribution, of the applicable noncompliant engine families or subgroups within the engine families in the State of California pursuant to Section 43017 of the Health and Safety Code. Before revoking or suspending the Executive Order authorizing sales and distribution of the applicable noncompliant engine families or subgroups within the State of California, or seeking to enjoin an engine manufacturer, the Executive Officer will consider any information provided by the engine manufacturer and other interested parties. In addition, the engine manufacturer may be subject to, on a per engine basis, any and all remedies available under Part 5, Division 26 of the Health and Safety Code, sections 43000 et seq.

(B) Notify the equipment manufacturer and may seek to revoke or suspend the Executive Order authorizing sales and distribution or enjoin the equipment manufacturer from any further sales, or distribution, in the State of California of the equipment manufacturer's equipment product line(s) that are, or utilize engines that are, noncompliant with the applicable emission regulations pursuant to Section 43017 of the Health and Safety Code. Prior to revoking or suspending the Executive Order authorizing sales and distribution of the applicable noncompliant equipment, or seeking to enjoin an equipment manufacturer, the Executive Officer

will consider any information provided by the equipment manufacturer and other interested parties. In addition, the equipment manufacturer may be subject to, on a per engine basis, any and all remedies available under Part 5, Division 26 of the Health and Safety Code, sections 43000 et seq.

(b) 2001 and Subsequent Model Cumulative Sum Production Line Test Procedures

(1) The 2001 and subsequent model year off-road large spark-ignition engines with an engine displacement of greater than 1.0 liter, that have been certified to the applicable emission standards pursuant to Section 2433(b), are subject to production line testing performed according to the requirements specified in this section. The 2002 and subsequent model year off-road large spark-ignition engines with an engine displacement of less than or equal to 1.0 liter, that have been certified for sale in California, must comply with production line testing performed according to the requirements set forth in the California Code of Regulations, Title 13, Section 2407.

(A) Standards and Test Procedures. The emission standards, exhaust sampling and analytical procedures are those described in the Test Procedures, and are applicable to engines tested only for exhaust emissions. The production line test procedures are specified in conjunction with the Test Procedures. An engine is in compliance with these production line standards and test procedures only when all portions of these production line test procedures and specified requirements from the Test Procedures are fulfilled, except any adjustable engine parameters may be set to any value or position that is within the range available to the ultimate purchaser.

(B) Air Resources Board (ARB) personnel and mobile laboratories must have access to engine or equipment assembly plants, distribution facilities, and test facilities for the purpose of engine selection, testing, and observation. Scheduling of access must be arranged with the designated engine manufacturer's representative and must not unreasonably disturb normal operations (See Test Procedures).

(2) Engine Sample Selection.

(A) At the start of each quarter for the model year, the engine manufacturer will begin to randomly select engines from each engine family for production line testing, according to the criteria specified herein. The engines must be representative of the engine manufacturer's California sales. Each engine will be selected from the end of the assembly line. All engine models within the engine family must be included in the sample pool. Each selected engine for production line testing must pass the inspection test, by being equipped with the appropriate emission control systems certified by the ARB. The procedure for randomly selecting engines or units of equipment must be submitted to the Chief, Mobile Source Operations Division, 9528 Telstar Avenue, El Monte, CA, 91731, prior to the start of production for the first year of production.

(i) For newly certified engine families: After two engines are tested, the manufacturer will calculate the required sample size for the model year according to the Sample Size Equation in paragraph (4) of this subsection.

(ii) For carry-over engine families: After one engine is tested, the manufacturer will combine the test with the last test result from the previous model year and then calculate the required sample size for the model year according to the Sample Size Equation in paragraph (4) of this subsection.

(iii) Beginning with the 2006 model year, a manufacturer may annually request of the Executive Officer a reduction in production line testing for an engine family. In making such request, the manufacturer must demonstrate that the engine family's production line test data is consistent and in-use compliance data is consistent for the previous year(s) and in compliance with the emission standards in Section 2433. If the Executive Officer determines that a reduction is warranted, the manufacturer may test as few as one production engine during the subject model year.

(B) Engine manufacturers must provide actual California sales, or other information acceptable to the Executive Officer, including, but not

limited to, an estimate based on market analysis and federal production or sales.

(3) Engine Preparation and Preconditioning

(A) No emissions tests may be performed on an engine prior to the first production line test.

(B) The engine or unit of equipment must be tested after the engine manufacturer's recommended break-in period. The engine manufacturer must submit to the Executive Officer the schedule for engine break-in and any changes to the schedule with each quarterly report. This schedule must be adhered to for all production line testing within an engine family and subgroup or engine family and assembly plant as appropriate.

(C) If an engine or unit of equipment is shipped to a remote facility for production line testing, and adjustment or repair is necessary because of such shipment, the engine manufacturer must perform the necessary adjustments or repairs only after the initial test of the engine or equipment. Engine manufacturers must report to the Executive Officer in the quarterly report, all adjustments or repairs performed on engines or equipment prior to each test. In the event a retest is performed, a request may be made to the Executive Officer, within ten days of the production quarter, for permission to substitute the after-repair test results for the original test results. The Executive Officer will either affirm or deny the request by the engine manufacturer within ten working days from receipt of the request.

(D) If an engine manufacturer determines that the emission test results of an engine or unit of equipment are invalid, the engine or equipment must be retested. Emission results from all tests must be reported. The engine manufacturer must include a detailed report on the reasons for each invalidated test in the quarterly report.

(4)(A) Manufacturers will calculate the required sample size for the model year for each engine family using the Sample Size Equation below. N is calculated from each test result. The number N indicates the number of tests required for the model year for an engine family. N , is recalculated after each test. Test results used to calculate the variables in the Sample Size Equation must be final deteriorated test results as specified in (d)(3).

$$N = \left[\frac{(t_{95} \times \sigma)}{(x - STD)} \right]^2 + 1$$

Where:

- N = required sample size for the model year.
 t_{95} = 95% confidence coefficient. It is dependent on the number of tests completed, n , as specified in the table in paragraph (C) of this section. It defines one-tail, 95% confidence intervals.
 σ = test sample standard deviation calculated from the following equation:

$$\sigma = \sqrt{\frac{\sum (X_i - x)^2}{n - 1}}$$

Where:

- X_i = emission test result for an individual engine
 x = mean of emission test results of the sample
 STD = emission standard
 n = The number of tests completed in an engine family

(B) Reserved

(C) Number of Tests (n) & 1-tail Confidence Coefficients (t_{95})

n	t_{95}	n	t_{95}	n	t_{95}
2	6.31	12	1.80	22	1.72
3	2.92	13	1.78	23	1.72
4	2.35	14	1.77	24	1.71
5	2.13	15	1.76	25	1.71
6	2.02	16	1.75	26	1.71
7	1.94	17	1.75	27	1.71
8	1.90	18	1.74	28	1.70
9	1.86	19	1.73	29	1.70
10	1.83	20	1.73	30	1.70
11	1.81	21	1.72	∞	1.645

(D) A manufacturer must distribute the testing of the remaining number of engines needed to meet the required sample size N , evenly throughout the remainder of the model year.

(E) After each new test, the required sample size, N , is recalculated using updated sample means, sample standard deviations and the appropriate 95% confidence coefficient.

(F) A manufacturer must continue testing and updating each engine family's sample size calculations according to paragraphs (4)(A) through (4)(F) of this section until a decision is made to stop testing as described in paragraph (4)(G) of this section or a noncompliance decision is made pursuant to (c)(6).

(G) If, at any time throughout the model year, the calculated required sample size, N , for an engine family is less than or equal to the sample size, n , and the sample mean, x , for HC + NOx is less than or equal to the emission standard, the manufacturer may stop testing that engine family.

(H) If, at any time throughout the model year, the sample mean, x , for HC + NOx is greater than the emission standard, the manufacturer must continue testing that engine family at the appropriate maximum sampling rate.

(I) The maximum required sample size for an engine family (regardless of the required sample size, N , as calculated in paragraph (4)(A) of this section) is thirty tests per model year.

(J) Manufacturers may elect to test additional randomly chosen engines. All additional randomly chosen engines tested in accordance with the testing procedures specified in Emission Standards and Test Procedures must be included in the Sample Size and Cumulative Sum equation calculations as defined in section (b), respectively.

(K) Small volume manufacturers may limit the number of engines tested to one percent of their California production. Compliance would be determined based on the available test data.

(5) The manufacturer must produce and assemble the test engines using its normal production and assembly process for engines to be distributed into commerce.

(6) No quality control, testing, or assembly procedures will be used on any test engine or any portion thereof, including parts and subassemblies, that have not been or will not be used during the production and assembly of all other engines of that family, unless the Executive Officer approves the modification in production or assembly procedures.

(c) Calculation of Cumulative Sum (CumSum) Statistic. Each engine manufacturer must review the test results using the following procedure:

(1) Manufacturers must construct the following CumSum equation for each regulated pollutant for each engine family. Test results used to calculate the variables in the CumSum Equation must be final deteriorated test results as defined in (d)(3).

$$C_i = \max[0 \text{ OR } (C_{i-1} + X_i - (STD + F))]$$

Where:

- C_i = The current CumSum statistic
 C_{i-1} = The previous CumSum statistic. Prior to any testing, the CumSum statistic = 0 (i.e. $C_0 = 0$)
 X_i = The current emission test result for an individual engine
 STD = Emission standard
 F = $0.25 \times \sigma$

(2) After each test, C_i is compared to the action limit, H , the quantity which the CumSum statistic must exceed, in two consecutive tests, before the engine family may be determined to be in noncompliance for purposes of paragraph (c).

H = The Action Limit. It is $5.0 \times \sigma$, and is a function of the standard deviation, σ .

σ = is the sample standard deviation and is recalculated after each test.

(3) After each engine is tested, the CumSum statistic shall be promptly updated according to the CumSum Equation in paragraph (1) of this subsection.

(4) If, at any time during the model year, a manufacturer amends the application for certification for an engine family as specified in Sections 17 and 18 of the Test Procedures by performing an engine family modification (i.e. a change such as a running change involving a physical modi-

fication to an engine, a change in specification or setting, the addition of a new configuration, changes in calibration, or the use of a different deterioration factor), all previous sample size and CumSum statistic calculations for the model year will remain unchanged.

(5) A failed engine is one whose final deteriorated test result for a regulated pollutant exceeds the emission standard for that pollutant.

(6) An engine family may be determined to be in noncompliance, if at any time throughout the model year, the CUMSUM statistic, C_i , for a regulated pollutant is greater than the action limit, H , for two consecutive tests.

(7) The engine manufacturer must perform a minimum of two (2) tests per engine family per quarter of production, regardless of whether the conditions of sample size have been met.

(8) All results from the previous quarters of the same model year must be included in the on-going Cumulative Sum analysis, provided that the engine family has not failed (e.g., if three engines of a family were tested in the first quarter, the first test of the second quarter would be considered as the fourth test).

(9) If the Cumulative Sum analysis indicates that an engine family has failed, the engine manufacturer must notify the Chief of the Mobile Source Operations Division in writing and by telephone, within ten (10) working days. Corrective action will be taken as noted in paragraphs (e) and (f) below.

(10) If a manufacturer performs corrective action on a failed engine family and then resumes production, all previous tests will be void, and Cumulative Sum analysis will begin again with the next test.

(11) At the end of the quarter, or when the Cumulative Sum analysis indicates that a decision has been made, the manufacturer must provide all the data accumulated during the quarter.

(d) Calculation and reporting of test results.

(1) Initial test results are calculated following the applicable test procedure. The manufacturer rounds these results, in accordance with ASTM E29–93a, to the number of decimal places contained in the applicable emission standard expressed to one additional significant figure. (ASTM E29–93a has been incorporated by reference.)

(2) Final test results are calculated by summing the initial test results derived in paragraph (a) of this section for each test engine, dividing by the number of tests conducted on the engine, and rounding in accordance with ASTM E29–93a to the same number of decimal places contained in the applicable standard expressed to one additional significant figure.

(3) The final deteriorated test results for each test engine are calculated by applying the appropriate deterioration factors, derived in the certification process for the engine family, to the final test results, and rounding in accordance with ASTM E29–93a to the same number of decimal places contained in the applicable standard expressed to one additional significant figure.

(4) If, at any time during the model year, the CumSum statistic exceeds the applicable action limit, H , in two consecutive tests, the engine family may be determined to be in noncompliance and the manufacturer must notify the Chief of Mobile Sources Operations Division and the Manager of the New Vehicle Audit Section, 9528 Telstar Ave., El Monte, CA 91731, within ten (10) working days of such exceedance by the Cum Sum statistic.

(5) Within 30 calendar days of the end of each quarter, each engine manufacturer must submit to the Executive Officer a report which includes the following information:

(A) The location and description of the manufacturer's or other's exhaust emission test facilities which were utilized to conduct testing reported pursuant to this section;

(B) Total production and sample sizes, N and n , for each engine family;

(C) The applicable emissions standards for each engine family.

(D) A description of the process to obtain engines on a random basis;

(E) A description of the test engines. (i.e., date of test, engine family, engine size, engine or equipment identification number, fuel system, dy-

namometer power absorber setting in horsepower, engine code or calibration number, and test location).

(F) The date of the end of the engine manufacturer's model year production for each engine family.

(G) For each test conducted,

(i) A description of the test engine, including:

(a) Configuration and engine family identification,

(b) Year, make, and build date,

(c) Engine identification number, and

(d) Number of hours of service accumulated on engine prior to testing;

(ii) Location where service accumulation was conducted and description of accumulation procedure and schedule;

(iii) Test number, date, test procedure used, initial test results before and after rounding, and final test results for all exhaust emission tests, whether valid or invalid, and the reason for invalidation, if applicable;

(iv) A complete description of any adjustment, modification, repair, preparation, maintenance, and/or testing which was performed on the test engine, was not reported pursuant to any other part of this article, and will not be performed on all other production engines;

(v) The exhaust emission data for HC+NO_x (or NMHC+NO_x, as applicable) and CO for each test engine or equipment. The data reported must provide two significant figures beyond the number of significant figures in applicable emission standards.

(vi) The retest emission data, as described in paragraph (d) above for any engine or unit of equipment failing the initial test, and description of the corrective actions and measures taken, including specific component replaced or adjusted.

(vii) A CumSum analysis, as required in paragraph (c), of the production line test results for each engine family;

(viii) Any other information the Executive Officer may request relevant to the determination whether the new engines being manufactured by the manufacturer do in fact conform with the regulations with respect to which the Executive Order was issued;

(ix) For each failed engine as defined in paragraph (c), a description of the remedy and test results for all retests.

(x) Every aborted test data and reason for the aborted test.

(xi) The start and stop dates of batch-produced engine family production.

(xii) The required information for all engine families in production during the quarter regardless of sample size; and

(xiii) The following signed statement and endorsement by an authorized representative of the manufacturer:

This report is submitted pursuant to this article. This production line testing program was conducted in complete conformance with all applicable regulations under the Test Procedures. No emission-related changes to production processes or quality control procedures for the engine family tested have been made during this production line testing program that affect engines from the production line. All data and information reported herein is, to the best of (Company Name) knowledge, true and accurate. I am aware of the penalties associated with violations of the California Code of Regulations and the regulations thereunder. (Authorized Company Representative.)

(H) Each manufacturer must submit a copy of the report that has been stored (e.g., computer disc), or may be transmitted, in an electronically digitized manner, and in a format that is specified by the Executive Officer. This electronically based submission is in addition to the written submission of the report.

(e) Manufacturer Notification of Failure.

(1) The Executive Officer will notify the engine manufacturer that the engine manufacturer may be subject to revocation or suspension of the Executive Order authorizing sales and distribution of the noncompliant engines in the State of California, or being enjoined from any further sales, or distribution, of the noncompliant engines in the State of California pursuant to Section 43017 of the Health and Safety Code. Prior to revoking or suspending, or seeking to enjoin an engine manufacturer, and

other interested parties, including, but not limited to corrective actions applied to the noncompliant engine family. In addition, the engine manufacturer may be subject to, on a per engine basis, any and all remedies available under Part 5, Division 26 of the Health and Safety Code, sections 43000 et seq.

(2) The Executive Officer will notify the equipment manufacturer that the equipment manufacturer may be subject to revocation or suspension of the Executive Order authorizing sales and distribution of the noncompliant equipment in the State of California, or being enjoined from any further sales, or distribution, of the noncompliant equipment product line(s) that are, or utilize engines that are, noncompliant with the applicable emission regulations in the State of California pursuant to Section 43017 of the Health and Safety Code. Prior to revoking or suspending, or seeking to enjoin an equipment manufacturer, and other interested parties, including, but not limited to corrective actions applied to the noncompliant engine family. In addition, the equipment manufacturer may be subject to, on a per engine basis, any and all remedies available under Part 5, Division 26 of the Health and Safety Code, sections 43000 et seq.

(f) Suspension and revocation of Executive Order.

(1) The Executive Order is automatically suspended with respect to any engine failing pursuant to paragraph (c)(5) effective from the time that testing of that engine family is completed.

(2) The Executive Officer may suspend the Executive Order for an engine family which is determined to be in noncompliance pursuant to paragraph (c)(6). This suspension will not occur before fifteen days after the engine family is determined to be in noncompliance.

(3) If the results of testing pursuant to these regulations indicate that engines of a particular family produced at one plant of a manufacturer do not conform to the regulations with respect to which the Executive Order was issued, the Executive Officer may suspend the Executive Order with respect to that family for engines manufactured by the manufacturer at this and all other plants.

(4) Notwithstanding the fact that engines described in the application for certification may be covered by an Executive Order, the Executive Officer may suspend such certificate immediately in whole or in part if the Executive Officer finds any one of the following infractions to be substantial:

(A) The manufacturer refuses to comply with any of the requirements of this subpart.

(B) The manufacturer submits false or incomplete information in any report or information provided to the Executive Officer under this subpart.

(C) The manufacturer renders inaccurate any test data submitted under this subpart.

(D) An ARB enforcement officer is denied the opportunity to conduct activities authorized in this subpart and a warrant or court order is presented to the manufacturer or the party in charge of the facility in question.

(5) The Executive Officer may suspend such certificate immediately in whole or in part if the Executive Officer finds that an ARB enforcement officer is unable to conduct activities authorized in this Section and the Test Procedures because a manufacturer has located its facility in a foreign jurisdiction where local law prohibits those activities.

(6) The Executive Officer shall notify the manufacturer in writing of any suspension or revocation of an Executive Order in whole or in part. A suspension or revocation is effective upon receipt of the notification or fifteen days from the time an engine family is determined to be in noncompliance pursuant to paragraph (c)(5) or (c)(6), whichever is later, except that the certificate is immediately suspended with respect to any failed engines as provided for in paragraph (a) of this section.

(7) The Executive Officer may revoke an Executive Order for an engine family after the certificate has been suspended pursuant to paragraph (b) or (c) of this section if the proposed remedy for the nonconformity, as reported by the manufacturer to the Executive Officer, is one requiring a design change or changes to the engine or emission control system as described in the application for certification of the affected engine family.

(8) Once an Executive Order has been suspended for a failed engine, as provided for in paragraph (a) of this section, the manufacturer must take the following actions before the certificate is reinstated for that failed engine:

(A) Remedy the nonconformity;

(B) Demonstrate that the engine conforms to the emission standards by retesting the engine in accordance with these regulations; and

(C) Submit a written report to the Executive Officer, after successful completion of testing on the failed engine, which contains a description of the remedy and test results for each engine in addition to other information that may be required by this part.

(9) Once an Executive Order for a failed engine family has been suspended pursuant to paragraph (b), (c) or (d) of this section, the manufacturer must take the following actions before the Executive Officer will consider reinstating the certificate:

(A) Submit a written report to the Executive Officer which identifies the reason for the noncompliance of the engines, describes the proposed remedy, including a description of any proposed quality control or quality assurance measures to be taken by the manufacturer to prevent future occurrences of the problem, and states the date on which the remedies will be implemented.

(B) Demonstrate that the engine family for which the Executive Order has been suspended does in fact comply with the regulations of this part by testing as many engines as needed so that the CumSum statistic falls below the action limit. Such testing must comply with the provisions of this Part. If the manufacturer elects to continue testing individual engines after suspension of a certificate, the certificate is reinstated for any engine actually determined to be in conformance with the emission standards through testing in accordance with the applicable test procedures, provided that the Executive Officer has not revoked the certificate pursuant to paragraph (f) of this section.

(10) Once the Executive Order has been revoked for an engine family, if the manufacturer desires to continue introduction into commerce of a modified version of that family, the following actions must be taken before the Executive Officer may issue a certificate for that modified family:

(A) If the Executive Officer determines that the proposed change(s) in engine design may have an effect on emission performance deterioration, the Executive Officer shall notify the manufacturer, within five working days after receipt of the report in paragraph (9)(A) of this section, whether subsequent testing under this subpart will be sufficient to evaluate the proposed change or changes or whether additional testing will be required; and

(B) After implementing the change or changes intended to remedy the nonconformity, the manufacturer must demonstrate that the modified engine family does in fact conform with the regulations of this part by testing as many engines as needed from the modified engine family so that the CumSum statistic, as calculated per aforementioned method, falls below the action limit. When both of these requirements are met, the Executive Officer shall reissue the certificate or issue a new certificate, as the case may be, to include that family. As long as the CumSum statistic remains above the action limit, the revocation remains in effect.

(11) At any time subsequent to a suspension of an Executive Order for a test engine pursuant to paragraph (a) of this section, but not later than 15 days (or such other period as may be allowed by the Executive Officer) after notification of the Executive Officer's decision to suspend or revoke an Executive Order in whole or in part pursuant to paragraphs (b), (c), or (f) of this section, a manufacturer may request a hearing as to whether the tests have been properly conducted or any sampling methods have been properly applied.

(12) Any suspension of an Executive Order under paragraph (f)(4) of this section:

(A) must be made only after the manufacturer concerned has been offered an opportunity for a hearing conducted in accordance with all applicable requirements and;

(B) need not apply to engines no longer in the possession of the manufacturer.

(13) After the Executive Officer suspends or revokes an Executive Order pursuant to this section and prior to the commencement of a hearing, if the manufacturer demonstrates to the Executive Officer's satisfaction that the decision to suspend or revoke the Executive Order was based on erroneous information, the Executive Officer shall reinstate the Executive Order.

(14) To permit a manufacturer to avoid storing non-test engines while conducting subsequent testing of the noncomplying family, a manufacturer may request that the Executive Officer conditionally reinstate the Executive Order for that family. The Executive Officer may reinstate the Executive Order subject to the following condition: the manufacturer must commit to recall all engines of that family produced from the time the Executive Order is conditionally reinstated if the CumSum statistic does not fall below the action limit and must commit to remedy any nonconformity at no expense to the owner.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43017, 43018, 43101, 43102, and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43105, 43150-43154, 43205.5 and 43210-43212, Health and Safety Code.

HISTORY

1. New section filed 10-19-99; operative 11-18-99 (Register 99, No. 43).

§ 2438. In-Use Compliance Program.

(a) This section applies to new 2004 and later model year off-road large spark-ignition engines with engine displacement greater than 1.0 liter.

(b) Manufacturer In-Use Testing Program.

Standards and Test Procedures. The emission standards, exhaust sampling and analytical procedures are those described in the Test Procedures, and are applicable to engines tested only for exhaust emissions. An engine is in compliance with these standards and test procedures only when all portions of these in-use test procedures and specified requirements from the Test Procedures are fulfilled, except that any adjustable engine parameters must be set to the nominal value or position as indicated on the engine label.

(1) Within a manufacturer's model-year engine production period, the ARB will identify those engine families, and the specific configurations within an engine family, that the manufacturer must subject to in-use testing as described below. For each model year, ARB may identify a number of engine families that is no greater than 25 percent of the number of engine families to which this article is applicable. For those manufacturers producing three or less engine families in a model year, ARB may designate a maximum of one engine family per model year for in-use testing.

(2) For each engine family identified by ARB, engine manufacturers must perform emission testing of an appropriate sample of in-use engines from each engine family. Manufacturers must submit data from this in-use testing to ARB.

(3) An engine manufacturer must test in-use engines from each engine family identified by ARB. All engines selected by the manufacturer for testing must be identified by the manufacturer, and a list of the selected engines must be submitted to the Executive Officer, prior to the onset of testing. Engines to be tested must have accumulated a minimum of 0.50 (50 percent) of the family's certified useful life period. The number of engines to be tested by a manufacturer will be determined by the following method:

(A) a minimum of four engines per family, provided that no engine fails any emission standard. For each exceedance, two additional engines must be tested until the total number of engines equals ten.

(B) For engine families of less than 500 engines (national production) for the identified model year or for engine manufacturers who make less than or equal to 2,000 engines nationally for that model year, a minimum of two (2) engines per family provided that no engine fails any emission standard. For each failing engine, two more engines shall be tested until the total number of engines equals ten (10).

(C) If an engine family was certified using carryover emission data and has been previously tested under paragraphs (b)(3)(A) or (b)(3)(B) of this section (and a recall for that family has not occurred), then only one engine for that family must be tested. If that one engine fails any emission standard, testing must be conducted as outlined in subsections (b)(3)(A) or (b)(3)(B), whichever is appropriate.

(4) The Executive Officer may approve an alternative to manufacturer in-use testing, where:

(A) Engine family production is less than or equal to 200 per year, nationally;

(B) Engines cannot be obtained for testing because they are used substantially in vehicles or equipment that are not conducive to engine removal such as large vehicles or equipment from which the engine cannot be removed without dismantling either the engine, vehicle, or equipment; or

(C) Other compelling circumstances associated with the structure of the industry and uniqueness of engine applications. Such alternatives shall be designed to determine whether the engine family is in compliance.

(5) The engine manufacturer shall procure in-use engines which have been operated between 0.50 and 1.0 times the certified engine's useful life period. The engine manufacturer may test engines from more than one model year in a given year. The manufacturer shall submit a plan for testing within twelve calendar months after receiving notice that ARB has identified a particular engine family for testing and shall complete testing of such engine family within 24 calendar months from the date of approval of the plan by ARB. Test engines may be procured from sources associated with the engine manufacturer (i.e., manufacturer-established fleet engines, etc.) or from sources not associated with the manufacturer (i.e., consumer-owned engines, independently owned fleet engines, etc.).

(c) Maintenance, procurement and testing of in-use engines.

(1) A test engine must have a maintenance and use history representative of in-use conditions.

(A) To comply with this requirement a manufacturer must obtain information from the end users regarding the accumulated usage, maintenance, repairs, operating conditions, and storage of the test engines.

(B) Documents used in the procurement process must be maintained as required.

(2) The manufacturer may perform minimal restorative maintenance on components of a test engine that are not subject to parameter adjustment. Maintenance may include only that which is listed in the owner's instructions for engines with the amount of service and age of the acquired test engine. Repairs may be performed on a test engine with prior Executive Officer approval. Documentation of all maintenance, repairs, defects, and adjustments shall be maintained and retained as required.

(3) At least one valid emission test, according to the Test Procedure, is required for each in-use engine.

(4) The Executive Officer may waive portions or requirements of the test procedure, if any, that are not necessary to determine in-use compliance.

(5) If a selected in-use engine fails to comply with any applicable emission standards, the manufacturer shall determine the reason for noncompliance. The manufacturer must report within 72 hours after the completion of the test specifying the emission results and identifying the pollutant which failed to comply with the emission standard. The manufacturer must report all such reasons of noncompliance within fifteen business days of completion of testing. Additional time beyond the initial fifteen days may be granted providing that the manufacturer receives prior approval from the Executive Officer. The reports may be filed electronically or mailed to the following address: Chief of Mobile Source Operations Division, 9528 Telstar Avenue, El Monte, CA 91731.

(6) At the discretion of the Executive Officer, an engine manufacturer may test more engines than the minima described in paragraph (b)(3) of this section or may concede failure before testing a total of ten engines.

Upon conceding failure the manufacturer shall proceed with a voluntary recall program as specified in Section 2439.

(7) The Executive Officer will consider failure rates, average emission levels and the existence of any defects, among other factors, in determining whether to pursue remedial action under this subpart. The Executive Officer may order a recall pursuant to Section 2439 before testing reaches the tenth engine whenever the Executive Officer has determined, based on production-line test results or in-use test results, enforcement testing results, or any other information, that a substantial number of a class or category of equipment or engines produced by that manufacturer, although properly maintained and used, contain a failure in an emission-related component which, if uncorrected, may result in the equipments' or engines' failure to meet applicable standards over their useful lives; or whenever a class or category of equipment or engines within their useful lives, on average, do not conform to the emission standards prescribed pursuant to Part 5 (commencing with Section 43000) of Division 26 of the Health and Safety Code, or any regulation adopted by the state board pursuant thereto, other than an emissions standard applied to new engines to determine "certification" as specified in Chapter 9, as applicable to the model year of such equipment or engines.

(8) Prior to an ARB-ordered recall, the manufacturer may perform a voluntary emissions recall pursuant to Article 4.5, Section 2439(b). Such manufacturer is subject to the reporting requirements in subsection (d) below.

(9) Once ARB determines that a substantial number of engines fail to conform with the requirements, the manufacturer will not have the option of a voluntary emissions recall.

(d) In-use test program reporting requirements.

(1) The manufacturer shall electronically submit to the Executive Officer within three months of completion of testing all emission testing results generated from the in-use testing program. The following information must be reported for each test engine:

- (A) engine family,
- (B) model,
- (C) engine serial number or alternate identification, as applicable,
- (D) date of manufacture,
- (E) estimated hours of use,
- (F) date and time of each test attempt,
- (G) results (if any) of each test attempt,
- (H) results of all emission testing,
- (I) summary of all maintenance, repairs, and adjustments performed,
- (J) summary (if any) of all ARB pre-approved modifications and repairs,
- (K) determinations of noncompliance or compliance.

(2) The manufacturer must electronically submit the results of its in-use testing with a pre-approved information heading. The Executive Officer may exempt manufacturers from this requirement upon written request with supporting justification.

(3) All testing reports and requests for approvals made under this subpart shall be sent to the Executive Officer.

(4) The Executive Officer may require modifications to a manufacturer's in-use testing programs.

(e) In-use emissions credit, averaging, banking, and trading program.

(1) General applicability

(A) The in-use credit program for eligible engines is described in this subsection. Participation in this program is voluntary.

(B) An engine family is eligible to participate in the in-use credit program if it is subject to regulation under Section 2433 of this part with certain exceptions specified in paragraph (C).

(C) Engines may not participate in the in-use averaging, banking, and trading program if they are delivered to a "point of first retail sale" outside of California.

(D) Reserved.

(E) An engine family with a compliance level, as determined by in-use testing below, the applicable emission standards to which the engine

family is certified may generate emission credits for averaging, banking, or trading in the in-use credit program.

(F) Positive credits generated in a given model year may be used in that model year or in any subsequent model year.

(G) A manufacturer of an engine family with a compliance level exceeding the applicable emission standards to which the engine family is certified, may, prior to the date of the report use previously banked credits, purchase credits from another manufacturer, or perform additional testing to address the associated credit deficit (negative credits or a need for credits).

(H) Reserved.

(I) A manufacturer must notify the Executive Officer of plans to test additional engine families beyond the maximum 25% required for the in-use testing program. Such notice must be submitted to the Executive Officer 30 days prior to initiation of testing. If the additional testing discovers an engine family to be in noncompliance with the applicable emission standards, the testing must be treated as if it were a failure of the normal in-use testing requirement of an engine family.

(J) Manufacturers must demonstrate a zero or positive credit balance under the in-use credit program for a particular model year within 90 days of the end of the in-use testing of that model year's engine families.

(2) Engines subject to the 2004 and later model-year emission standards are eligible to participate in the in-use credit program.

(3) The definitions below shall apply to this subsection:

(A) Averaging means the exchange of in-use emission credits among LSI engine families within a given manufacturer's product line.

(B) Banked credits refer to positive emission credits based on applicable actual production or sales volume as contained in the end of model year in-use testing reports submitted to Executive Officer of the ARB. Some or all of these banked credits may be revoked if the Executive Officer's review of the end of model year in-use testing reports or any subsequent audit action(s) uncovers problems or errors.

(C) Banking means the retention of in-use emission credits by the manufacturer generating the emission credits for use in future model year averaging or trading as permitted by these regulations.

(D) Carry-over engine family means an engine family which undergoes certification using carryover test data from previous model years.

(E) Compliance level for an engine family is determined by averaging the in-use test results from each engine.

(F) In-use credits represent the amount of emission reduction or exceedance, for each regulated pollutant, by an engine family below or above, respectively, the applicable emission standards. Emission reductions below the emission standard are considered "positive credits," while emission exceedances above the emission standard are considered "negative or required credits."

(G) Trading means the exchange of in-use emission credits between manufacturers or brokers.

(4) Averaging.

(A) A manufacturer may use averaging across engine families to demonstrate a zero or positive credit balance for a model year. Positive credits to be used in averaging may be obtained from credits generated by another engine family of the same model year, credits banked in previous model years, or credits obtained through trading.

(B) Credits used to demonstrate a zero or positive credit balance must be used at a rate of 1.1 to 1.

(5) Banking.

(A) A manufacturer of an engine family with an in-use compliance level below the applicable emission standards for a given model year may bank positive in-use credits for that model year for in-use averaging and trading.

(B) A manufacturer may consider credits banked 30 days after the submission of the report. During the 30 day period ARB will work with the manufacturer to correct any error in calculating banked credits, if necessary.

(6) Trading.

(A) An engine manufacturer may exchange positive in-use emission credits with other LSI engine manufacturers through trading.

(B) In-use credits for trading can be obtained from credits banked for model years prior to the model year of the engine family requiring in-use credits.

(C) Traded in-use credits can be used for averaging, banking, or further trading transactions.

(D) Unless otherwise approved by the Executive Officer, a manufacturer that generates positive in-use credits must wait 30 days after it has both completed in-use testing for the model year for which the credits were generated and submitted the report before it may transfer credits to another manufacturer or broker.

(E) In the event of a negative credit balance resulting from a transaction, both the buyer and the seller are liable, except in cases involving fraud. Engine families participating in a negative trade may be subject to recall under section 2439 of this article.

(7) Credit Calculation.

(A) For each participating engine family, emission credits (positive or negative) are to be calculated according to the following equation and rounded, in accordance with ASTM E29-93a, to the nearest gram. ASTM E29-93a has been incorporated by reference. Consistent units are to be used throughout the equation. The following equation is used to determine the credit status for an engine family whether generating positive or negative in-use emission credits:

$$\text{Credits (grams)} = \text{SALES} \times (\text{STD} - \text{CL}) \times \text{POWER} \times \text{AF} \times \text{LF} \times \text{UL}$$

Where:

- SALES = the number of eligible sales tracked to the point of first retail sale in the U.S. for the given engine family during the model year.
- STD = the emission standard or family emission level in g/bhp-hr or g/kW-hr, as appropriate and as noted in California Code of Regulations, Title 13, Section 2433.
- CL = compliance level of the in-use testing in g/bhp-hr or g/kW-hr, as appropriate as approved by ARB.
- UL = useful life in hours (5000 hours for engines with displacement greater than 1.0 liter).
- Power = the average power of an engine family in bhp or kW (sales weighted). The power of each configuration is the rated output in horsepower as determined by SAE J1349 (June 1995) or J1995 (June 1995), as applicable. These procedures have been incorporated by reference.
- LF = Load factor; Fraction of rated engine power utilized in-use (0.32 for engines with displacement greater than 1.0 liter).
- AF = adjustment factor for the number of tests conducted, as determined from the following table, except that when a manufacturer concedes failure before completion of testing, the adjustment factor shall be 1.0:

Number of Engines Tested	Adjustment Factor
2*, 4	0.5
6	0.75
8	0.9
10	1.0

*Small volume manufacturer

(B) Any credits used for either averaging, banking, or trading shall be assessed a one-time discount of 10 percent.

(8) Maintenance of records.

(A) Any manufacturer that is participating in the in-use credit program set forth in this subsection shall establish, maintain, and retain the records with respect to its participation in the in-use credit program.

(B) The Executive Officer may void an Executive Order for an engine family for which the manufacturer fails to retain the records required under this section or to provide such information to the Executive Officer or designee upon request.

(9) Reporting requirements.

(A) Any manufacturer who participates in the in-use credit program is required to submit an end of the model year in-use testing report either within 90 days of the end of the model year in-use testing of a given model year's engine families, or at the same time as the final certification averaging, banking, and trading report, whichever is later. The end of the

model year in-use testing report must contain the required information and show the calculated credits from all the in-use testing conducted by the manufacturer for a given model year.

(B) Reports shall be submitted to the Chief of the Mobile Source Operations Division.

(C) A manufacturer that fails to submit a timely report as required will be considered to not have participated in the in-use credit program.

(D) If the Executive Officer or the manufacturer determines that a reporting error occurred on an end of model year report previously submitted to ARB under this subsection, or an engine family in-use testing report submitted to ARB, the manufacturer's credits and credit calculations will be recalculated. Erroneous positive credits will be void. Erroneous negative credits may be adjusted by the Executive Officer. An update of previously submitted "point of first retail sale" information is not considered an error and no increase in the number of credits will be allowed unless an error occurred in the calculation of credits due to an error in the "point of first retail sale" information from the time of the original end of model year report.

(10) Notice of Opportunity for Hearing.

Any voiding of an engine family's Executive Order will occur only after the manufacturer concerned has been offered an opportunity for a hearing. The Executive Officer must approve or disapprove the documents required by this Section within 90 days of the date such documents are received from the manufacturer. Any disapproval must be accompanied by a statement of the reasons therefor. In the event of disapproval, the manufacturer may file for an adjudicative hearing under Title 17, California Code of Regulation, Division 3, Chapter 1, Subchapter 1.25 to review the decision of the Executive Officer.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43105, 43150, 43151, 43152, 43153, 43154, 43205.5, 43210, 43210.5, 43211 and 43212, Health and Safety Code.

HISTORY

1. New section filed 10-19-99; operative 11-18-99 (Register 99, No. 43).
2. Amendment of subsection (e)(7) and NOTE filed 4-12-2007; operative 5-12-2007 (Register 2007, No. 15).

§ 2439. Procedures for In-Use Engine Recalls for Large Off-Road Spark-Ignition Engines with an Engine Displacement Greater Than 1.0 Liter.

(a) The recall procedures in this section apply as set forth in Title 13, California Code of Regulations, Sections 2433 and 2438.

(b) Voluntary Emissions Recall

(1) When any manufacturer initiates a voluntary emission recall, the manufacturer shall notify the Executive Officer of the recall at least 30 days before owner notification is to begin. The manufacturer shall also submit to the Executive Officer a voluntary recall plan for approval, as prescribed in the following:

(A)(i) a description of each class or category of engines to recall, including the number of engines to be recalled, the engine family or a subgroup thereof, the model year, and such other information as may be required to identify the engines:

(ii) a description of the specific modifications, alterations, repairs, corrections, adjustments, or other changes to be made to correct the engines affected by the nonconformity;

(iii) a description of the method by which the manufacturer will notify engine owners including copies of any letters of notification to be sent to engine owners;

(iv) a description of the proper maintenance or use, if any, upon which the manufacturer conditions eligibility for repair under the recall plan, and a description of the proof to be required of an engine owner to demonstrate compliance with any such conditions;

(v) a description of the procedure to be followed by engine owners to obtain correction of the nonconformity. This shall include designation of the date on or after which the owner can have the nonconformity remedied, the time reasonably necessary to perform the labor to remedy the nonconformity, and the designation of facilities at which the nonconformity can be remedied;

(vi) a description of the class of persons other than dealers and authorized warranty agents of the manufacturer who will remedy the nonconformity;

(vii) a description of the system by which the manufacturer will assure that an adequate supply of parts is available to perform the repair under the plan; or

(B)(i) a description of each class or category of engines subject to recall, including the number of engines subject to being recalled, the engine family or a sub-group thereof, the model year, and such other information as may be required to identify the engines;

(ii) a description of the method by which the manufacturer will use the in-use emissions credit, averaging, banking, and trading program, as described in Section 2438(e), to remedy the nonconformity.

(2) Voluntary Recall Progress Report. A manufacturer who initiates a voluntary emission recall campaign pursuant to paragraph (b)(1)(A) of this section must submit at least one report on the progress of the recall campaign. This report shall be submitted to the Executive Officer by the end of the fifth quarter, as defined in Section 2112(j), Chapter 2, Title 13 of the California Code of Regulations, following the quarter in which the notification of equipment or engine owners was initiated, and include the following information:

(A) Engine family involved and recall campaign number as designated by the manufacturer.

(B) Date owner notification was begun, and date completed.

(C) Number of equipment or engines involved in the recall campaign.

(D) Number of equipment or engines known or estimated to be affected by the nonconformity.

(E) Number of equipment or engines inspected pursuant to the recall plan and found to be affected by the nonconformity.

(F) Number of inspected equipment or engines.

(G) Number of equipment or engines receiving repair under the recall plan.

(H) Number of equipment or engines determined to be unavailable for inspection or repair under the recall plan due to exportation, theft, scrapping, or for other reasons (specify).

(I) Number of equipment or engines determined to be ineligible for recall action due to removed or altered components.

(J) A listing of the identification numbers of equipment or engines subject to recall but for whose repair the manufacturer has not been invoiced. This listing shall be supplied in a standardized computer data storage device to be specified by the Executive Officer.

(K) Any service bulletins transmitted to dealers which relate to the nonconformity and which have not previously been submitted.

(L) All communications transmitted to equipment or engine owners which relate to the nonconformity and which have not previously been submitted.

(3) The information gathered by the manufacturer to compile the reports must be retained for not less than seven years from the date of the manufacture of the engines and must be made available to the Executive Officer or designee of the Executive Officer upon request.

(4) A voluntary recall plan shall be deemed approved unless disapproved by the Executive Officer within 20 business days after receipt of the recall plan.

(5) Under a voluntary recall program, initiated and conducted by a manufacturer or its agent or representative as a result of in-use enforcement testing or other evidence of noncompliance provided or required by the Board to remedy any nonconformity, the capture rate shall be at a minimum 55 percent of the equipment or engine within the subject engine family or a sub-group thereof. The manufacturer shall comply with the capture rate by the end of the fifth quarter, as defined in Section 2112(j), Chapter 2, Title 13 of the California Code of Regulations, following the quarter in which the notification of equipment or engine owners was initiated. If the manufacturer cannot correct the percentage of equipment specified in the plan by the applicable deadlines, the manufacturer must use good faith efforts through other measures, subject to approval by the Executive Officer, to bring the engine family into com-

pliance with the standards. If the Executive Officer does not approve the manufacturer's efforts, the manufacturer shall propose mitigation measures to offset the emissions of the unrepaired equipment within 45 days from the last report filed pursuant to paragraph (b)(2), above. The Executive Officer shall approve such measures provided that:

(A) The emission reductions from the recalled and repaired equipment or engines and the mitigation measures are equivalent to achieving the capture rate; and

(B) The emission reductions from the mitigation measures are real and verifiable; and

(C) The mitigation measures are implemented in a timely manner.

(c) Initiation and Notification of Ordered Emission-Related Recalls.

(1) A manufacturer shall be notified whenever the Executive Officer has determined, based on production-line test results or in-use test results, enforcement testing results, or any other information, that a substantial number of a class or category of equipment or engines produced by that manufacturer, although properly maintained and used, contain a failure in an emission-related component which, if uncorrected, may result in the equipments' or engines' failure to meet applicable standards over their useful lives; or whenever a class or category of equipment or engines within their useful lives, on average, do not conform to the emission standards prescribed pursuant to Part 5 (commencing with Section 43000) of Division 26 of the Health and Safety Code, or any regulation adopted by the state board pursuant thereto, other than an emissions standard applied to new engines to determine "certification" as specified in Chapter 9, as applicable to the model year of such equipment or engines.

(2) It shall be presumed for purposes of this section that an emission-related failure will result in the exceedance of emission standards unless the manufacturer presents evidence in accordance with the procedures set forth in subsections (A), (B), and (C) which demonstrates to the satisfaction of the Executive Officer that the failure will not result in exceedance of emission standards within the useful life of the equipment or engine.

(A) In order to overcome the presumption of noncompliance set forth in paragraph (c)(2) above, the average emissions of the equipment and engines with the failed emission-related component must comply with applicable emission standards. A manufacturer may demonstrate compliance with the emission standards by following the procedures set forth in either paragraphs (c)(2)(B) or (c)(2)(C) of this section.

(B) A manufacturer may test properly maintained in-use equipment with the failed emission-related component pursuant to the applicable certification emission tests specified in Section 2433, Title 13 of the California Code of Regulations. The emissions shall be projected to the end of the equipment's or engine's useful life using in-use deterioration factors. The in-use deterioration factors shall be chosen by the manufacturer from among the following:

(i) "Assigned" in-use deterioration factors provided by the ARB on a manufacturer's conditions; request and based on ARB in-use testing; or,

(ii) deterioration factors generated during certification, provided adjustments are made to account for equipment aging, customer hour usage-accumulation practices, type of failed component, component failure mode, effect of the failure on other emission-control components, commercial fuel and lubricant quality, and any other factor which may affect the equipment's or engine's operating or,

(iii) subject to approval by the Executive Officer, a manufacturer-generated deterioration factor. Such deterioration factor must be based on in-use data generated from certification emission tests performed on properly maintained and used equipment in accordance with the procedures set forth in Section 2433 of Title 13 of the California Code of Regulations, and the equipment from which it was derived must be representative of the in-use fleet with regard to emissions performance and equipped with similar emission control technology as equipment with the failed component.

(C) In lieu of the equipment or engine emission testing described in subsection (B) above and subject to approval by the Executive Officer, a manufacturer may perform an engineering analysis, laboratory testing

or bench testing, when appropriate, to demonstrate the effect of the failure.

(3) The notification shall include a description of each class or category of equipment or engines encompassed by the determination of nonconformity, shall set forth the factual basis for the determination and shall designate a date at least 45 business days from the date of receipt of such notification by which the manufacturer shall submit a plan to remedy the nonconformity.

(4) Availability of Public Hearing.

(A) The manufacturer may request a public hearing pursuant to the procedures set forth in Subchapter 1.25, Division 3, Chapter 1, Title 17, California Code of Regulations to contest the finding of nonconformity and the necessity for or the scope of any ordered corrective action.

(B) If a manufacturer requests a public hearing pursuant to subsection (A) above, and if the Executive Officer's determination of nonconformity is confirmed at the hearing, the manufacturer shall submit the recall

[The next page is 298.15.]

plan required by Section 2439 within 30 days after receipt of the Board's decision.

(5) Ordered Recall Plan.

(A) Unless a public hearing is requested by the manufacturer, a recall plan shall be submitted to the Chief, Mobile Source Operations Division, 9528 Telstar Avenue, El Monte, CA 91731, within the time limit specified in the notification. The Executive Officer may grant the manufacturer an extension upon good cause shown.

(B) The recall plan shall contain the following:

(i) A description of each class or category of equipment or engine to be recalled, including the engine family or sub-group thereof, the model-year, the make, the model, and such other information as may be required to identify the equipment or engines to be recalled.

(ii) A description of the nonconformity and the specific modifications, alterations, repairs, corrections, adjustments or other changes to be made to bring the equipment or engines into conformity including a brief summary of the data and technical studies which support the manufacturer's decision regarding the specific corrections to be made.

(iii) A description of the method by which the manufacturer will determine the names and addresses of equipment or engine owners and the method by which they will be notified.

(iv) A description of the procedure to be followed by equipment or engine owners to obtain correction of the nonconformity including the date on or after which the owner can have the nonconformity remedied, the time reasonably necessary to perform the labor required to correct the nonconformity, and the designation of facilities at which the nonconformity can be remedied. The repair shall be completed within a reasonable time designated by the Executive Officer from the date the owner delivers the equipment or engine for repair. This requirement becomes applicable on the date designated by the manufacturer as the date on or after which the owner can have the nonconformity remedied.

(v) If some or all of the nonconforming equipment or engines are to be remedied by persons other than dealers or authorized warranty agents of the manufacturer, a description of such class of persons and a statement indicating that the participating members of the class will be properly equipped to perform such remedial action.

(vi) The capture rate required for each class or category of equipment or engine to be recalled. Under recalls based on exceedance of emission standards, the capture rate shall be at a minimum 80 percent of the equipment or engine within the subject engine family.

(vii) The plan may specify the maximum incentives (such as a free tune-up or specified quantity of free fuel), if any, the manufacturer will offer to induce equipment or engine owners to present their equipment for repair, as evidence that the manufacturer has made a good faith effort to repair the percentage of equipment or engines specified in the plan. The plan shall include a schedule for implementing actions to be taken including identified increments of progress towards implementation and deadlines for completing each such increment.

(viii) A copy of the letter of notification to be sent to equipment or engine owners.

(ix) A description of the system by which the manufacturer will assure that an adequate supply of parts will be available to perform the repair under the recall plan including the date by which an adequate supply of parts will be available to initiate the repair campaign, and the method to be used to assure the supply remains both adequate and responsive to owner demand.

(x) A copy of all necessary instructions to be sent to those persons who are to perform the repair under the recall plan.

(xi) A description of the impact of the proposed changes on fuel economy, operation, performance and safety of each class or category of equipment or engines to be recalled and a brief summary of the data, technical studies, or engineering evaluations which support these descriptions.

(xii) A description of the impact of the proposed changes on the average emissions of the equipment or engines to be recalled based on non-compliance described in subsection (c)(1), above. The description shall contain the following:

(1.) Average noncompliance emission levels.

(2.) Average emission reduction or increase per pollutant resulting from the recall repair. These averages shall be verified by the manufacturer by applying the proposed recall repairs to two or more in-use equipment or engines representing the average noncompliance emission levels. Only those equipment or engines with baseline emission levels within 25 percent of the average emission levels of noncomplying pollutant(s) established under the in-use enforcement test program may be used by manufacturers to verify proposed recall repairs. The Executive Officer may allow the use of equipment or engines exceeding these upper averaging noncompliance limits if none which meet the limits can be reasonably procured.

(3.) An estimate of the average emission level per pollutant for a class or category of equipment or engines after repair as corrected by the required capture rate. The estimated average emission level shall comply with the applicable emission standards. If the average emissions levels achieved by applying the average emission reduction per equipment or engine after repair and the estimated capture rate, do not achieve compliance with the emissions standards, a manufacturer shall propose other measures to achieve average emissions compliance.

(xiii) Any other information, reports, or data which the Executive Officer may reasonably determine to be necessary to evaluate the recall plan.

(6) Approval and Implementation of Recall Plan.

(A) If the Executive Officer finds that the recall plan is designed effectively to correct the nonconformity and complies with the provisions of this Section, he or she will so notify the manufacturer in writing. Upon receipt of the approval notice from the Executive Officer, the manufacturer shall commence implementation of the approved plan. Notification of equipment or engine owners and the implementation of recall repairs shall commence within 45 days of the receipt of notice unless the manufacturer can show good cause for the Executive Officer to extend the deadline.

(B) If the Executive Officer does not approve the recall plan or the mitigation measures provided in this Section as submitted, the Executive Officer shall order modification of the plan or mitigation measures with such changes and additions as he or she determines to be necessary. The Executive Officer shall notify the manufacturer in writing of the disapproval and the reasons for the disapproval.

(C) The manufacturer may contest the Executive Officer's disapproval by requesting a public hearing pursuant to the procedures set forth in Subchapter 1.25, Division 3, Chapter 1, Title 17, California Code of Regulations. As a result of the hearing, the Board may affirm, overturn or modify the Executive Officer's action. In its decision, affirming or modifying, the Board shall specify the date by which the manufacturer shall commence notifying equipment or engine owners and implementing the required recall repairs.

(D) If no public hearing is requested in accordance with (C) above, the manufacturer shall incorporate the changes and additions required by the Executive Officer and shall commence notifying equipment or engine owners and implementing the required recall repairs within 60 days of the manufacturer's receipt of the Executive Officer's disapproval.

(7) Notification of Owners.

(A) Notification to equipment or engine owners shall be made by first class mail or by such other means as approved by the Executive Officer provided, that for good cause, the Executive Officer may require the use of certified mail to ensure an effective notification.

(B) The manufacturer shall use all reasonable means necessary to locate equipment or engine owners provided, that for good cause, the Executive Officer may require the manufacturer to use motor equipment registration lists, as applicable, available from State or commercial sources to obtain the names and addresses of equipment or engine owners to ensure effective notification.

(C) The Executive Officer may require subsequent notification by the manufacturer to equipment or engine owners by first class mail or other reasonable means provided, that for good cause, the Executive Officer may require the use of certified mail to ensure effective notification.

(D) The notification of equipment or engine owners shall contain the following:

(i) The statement: "The California Air Resources Board has determined that your (equipment or engine) (is or may be) releasing air pollutants which exceed (California or California and Federal) standards. These standards were established to protect your health and welfare from the dangers of air pollution."

(ii) A statement that the nonconformity of any such equipment or engines will be remedied at the expense of the manufacturer.

(iii) A statement that eligibility may not be denied solely on the basis that the equipment or engine owner used parts not manufactured by the original equipment manufacturer, or had repairs performed by outlets other than the equipment or engine manufacturer's franchised dealers.

(iv) A clear description of the components which will be affected by the recall action and a general statement of the measures to be taken to correct the nonconformity.

(v) [Reserved]

(vi) A description of the adverse effects, if any, that an uncorrected nonconformity would have on the performance, fuel economy, or driveability of the equipment or engine or to the function of other engine components.

(vii) A description of the procedure which the equipment or engine owner should follow to obtain correction of the nonconformity including the date on or after which the owner can have the nonconformity remedied, the time reasonably necessary to correct the nonconformity, and a designation of the facilities located in California at which the nonconformity can be remedied.

(viii) After the effective date of the recall enforcement program referred to above, a statement that a certificate showing that the equipment has been repaired under the recall program shall be issued by the service facilities and that such a certificate may be required as a condition of equipment registration or operation, as applicable.

(ix) A card to be used by a equipment or engine owner in the event the equipment or engine to be recalled has been sold. Such card should be addressed to the manufacturer, have postage paid, and shall provide a space in which the owner may indicate the name and address of the person to whom the equipment or engine was sold.

(x) The statement: "In order to ensure your full protection under the emission warranty made applicable to your (equipment or engine) by State or Federal law, and your right to participate in future recalls, it is recommended that you have your (equipment or engine) serviced as soon as possible. Failure to do so could be determined to be a lack of proper maintenance of your (equipment or engine)".

(xi) A telephone number provided by the manufacturer, which may be used to report difficulty in obtaining recall repairs.

(xii) The manufacturer shall not condition eligibility for repair on the proper maintenance or use of the equipment except for strong or compelling reasons and with approval of the Executive Officer; however, the manufacturer shall not be obligated to repair a component which has been removed or altered so that the recall action cannot be performed without additional cost.

(xiii) No notice sent pursuant to Section (D), nor any other communication sent to equipment or engine owners or dealers shall contain any statement, express or implied, that the nonconformity does not exist or will not degrade air quality.

(xiv) The manufacturer shall be informed of any other requirements pertaining to the notification under this section which the Executive Officer has determined are reasonable and necessary to ensure the effectiveness of the recall campaign.

(8) Repair Label.

(A) The manufacturer shall require those who perform the repair under the recall plan to affix a label to each equipment or engine repaired or, when required, inspected under the recall plan.

(B) The label shall be placed in a location as approved by the Executive Officer and shall be fabricated of a material suitable for such location and which is not readily removable.

(C) The label shall contain the recall campaign number and a code designating the facility at which the repair, inspection for repair, was performed.

(9) Proof of Correction Certificate. The manufacturer shall require those who perform the recall repair to provide the owner of each equipment or engine repaired with a certificate, through a protocol and in a format prescribed by the Executive Officer, which indicates that the non-complying equipment or engine has been corrected under the recall program. This requirement shall become effective and applicable upon the effective date of the recall enforcement program referred to in this section, above.

(10) Capture Rates and Alternative Measures.

The manufacturer shall comply with the capture rate specified in the recall plan as determined pursuant to this Section, above, by the end of the fifth quarter, as defined in Section 2112(j), Chapter 2, Title 13 of the California Code of Regulations, following the quarter in which the notification of equipment or engine owners was initiated. If, after good faith efforts, the manufacturer cannot correct the percentage of equipment specified in the plan by the applicable deadlines and cannot take other measures to bring the engine family into compliance with the standards, the manufacturer shall propose mitigation measures to offset the emissions of the unrepaired equipment within 45 days from the last report filed pursuant to Section 2439(c)(13), below. The Executive Officer shall approve such measures provided that:

(A) The emission reductions from the recalled and repaired equipment or engines and the mitigation measures are equivalent to achieving the capture rate; and

(B) The emission reductions from the mitigation measures are real and verifiable; and

(C) The mitigation measures are implemented in a timely manner.

(11) Preliminary Tests. The Executive Officer may require the manufacturer to conduct tests on components and equipment or engines incorporating a proposed correction, repair, or modification reasonably designed and necessary to demonstrate the effectiveness of the correction, repair, or modification.

(12) Communication with Repair Personnel. The manufacturer shall provide to the Executive Officer a copy of all communications which relate to the recall plan directed to dealers and other persons who are to perform the repair. Such copies shall be mailed to the Executive Officer contemporaneously with their transmission to dealers and other persons who are to perform the repair under the recall plan.

(13) Recordkeeping and Reporting Requirements.

(A) The manufacturer shall maintain sufficient records to enable the Executive Officer to conduct an analysis of the adequacy of the recall campaign. For each class or category of equipment or engine, the records shall include, but need not be limited to, the following:

(i) Engine family involved and recall campaign number as designated by the manufacturer.

(ii) Date owner notification was begun, and date completed.

(iii) Number of equipment or engines involved in the recall campaign.

(iv) Number of equipment or engines known or estimated to be affected by the nonconformity.

(v) Number of equipment or engines inspected pursuant to the recall plan and found to be affected by the nonconformity.

(vi) Number of inspected equipment or engines.

(vii) Number of equipment or engines receiving repair under the recall plan.

(viii) Number of equipment or engines determined to be unavailable for inspection or repair under the recall plan due to exportation, theft, scrapping, or for other reasons (specify).

(ix) Number of equipment or engines determined to be ineligible for recall action due to removed or altered components.

(x) A listing of the identification numbers of equipment or engines subject to recall but for whose repair the manufacturer has not been invoiced. This listing shall be supplied in a standardized computer data storage device to be specified by the Executive Officer. The frequency of this

submission, as specified in subsection (C) below, may be changed by the Executive Officer depending on the needs of recall enforcement.

(xi) Any service bulletins transmitted to dealers which relate to the nonconformity and which have not previously been submitted.

(xii) All communications transmitted to equipment or engine owners which relate to the nonconformity and which have not previously been submitted.

(B) If the manufacturer determines that the original responses to subsections (A)(iii) and (iv) of these procedures are incorrect, revised figures and an explanatory note shall be submitted. Responses to subsections (A)(v), (vi), (vii), (viii), and (ix) shall be cumulative totals.

(C) Unless otherwise directed by the Executive Officer, the information specified in subsection (A) of these procedures shall be included in six quarterly reports or two annual reports, beginning with the quarter in which the notification of owners was initiated, or until all nonconforming equipment or engines involved in the campaign have been remedied, whichever occurs sooner. Such reports shall be submitted no later than 25 days after the close of each calendar quarter.

(D) The manufacturer shall maintain in a form suitable for inspection, such as computer information storage devices or card files, and shall make available to the Executive Officer or his or her authorized representative upon request, lists of the names and addresses of equipment or engine owners:

- (i) To whom notification was given;
- (ii) Who received remedial repair or inspection under the recall plan; and
- (iii) Who were denied eligibility for repair due to removed or altered components.

(E) The records and reports required by these procedures shall be retained for not less than one year beyond the useful life of the equipment or engines involved, or one year beyond the reporting time frame specified in subsection (C) above, whichever is later.

(14) Penalties.

Failure by a manufacturer to carry out all recall actions ordered by the Executive Officer pursuant to Sections 2439(c) of these procedures is a violation of Health and Safety Code Section 43013 and 43105 and shall subject the manufacturer, on a per engine basis, to any and all remedies available under Part 5, Division 26 of the Health and Safety Code, sections 43000 et seq.

(d) Extension of Time. The Executive Officer may extend any deadline in the plan if he or she finds in writing that a manufacturer has shown good cause for such extension.

(e) The Executive Officer may waive any or all of the requirements of these procedures if he or she determines that the requirement constitutes an unwarranted burden on the manufacturer without a corresponding emission reduction.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102, 43104 and 43105, Health and Safety Code. Reference: Sections 43000, 43009.5, 43013, 43017, 43018, 43101, 43102, 43104, 43105, 43106, 43107, 43150–43154, 43205–43205.5 and 43210–43212, Health and Safety Code.

HISTORY

1. New section filed 10–19–99; operative 11–18–99 (Register 99, No. 43).

Article 4.7. Spark-Ignition Marine Engines

§ 2440. Applicability.

(a)(1) This article applies to model year 2001 and later spark-ignition marine engines, unless otherwise indicated.

(2) Every new spark-ignition marine engine that is manufactured for sale, sold, or offered for sale in California, or that is introduced, delivered or imported into California for introduction into commerce, and which is subject to any of the standards prescribed in this article must be covered by an Executive Order, issued pursuant to this article.

(3) Spark-ignition inboard and sterndrive marine engines produced by the engine manufacturer to be used solely for competition are exempt from the requirements of this article, except section 2443.1, provided that

the marine watercraft in which the engine is installed is designed, built, and used solely for competition. Marine watercraft not registered with a nationally-recognized organization that sanctions professional competitive events or used for amateur or occasional competition do not meet the competition exemption criteria.

(b) Each part of this article is severable, and in the event that any part of this chapter is held to be invalid, the remainder of this article remains in full force and effect.

(c)(1) For purposes of this article, military tactical vehicles or equipment means vehicles or equipment owned by the U.S. Department of Defense and/or the U.S. military services and used in combat, combat support, combat service support, tactical or relief operations, or training for such operations.

(2) This article shall not apply to engines used in off-road military tactical vehicles or equipment which have been exempted from regulations under the federal national security exemption, 40 CFR, subpart J, section 90.908, which is incorporated by reference herein. It shall also not apply to those vehicles and equipment covered by the definition of military tactical vehicle that are commercially available and for which a federal certificate of conformity has been issued under 40 CFR Part 91, subpart B, which is incorporated by reference herein.

(3) The U.S. Department of Defense shall submit to the ARB a list of all vehicles and equipment that are exempted under the above provisions and which are located in the State of California. If any additional vehicle and equipment types are added to the list during any calendar year, the U.S. Department of Defense shall update the list and submit it to the ARB by January 1 of the following year.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43105, 43150–43154, 43205.5 and 43210–43212, Health and Safety Code.

HISTORY

1. New article 4.7 (sections 2440–2448) and section filed 12–8–99; operative 1–7–2000 (Register 99, No. 50).
2. Amendment of subsection (a)(1), repealer of subsection (a)(2), subsection renumbering, new subsection (a)(3) and amendment of subsection (c)(2) filed 7–22–2002; operative 8–21–2002 (Register 2002, No. 30).

§ 2441. Definitions.

(a) Definitions in section 1900(b), Division 3, Chapter 9, Title 13 of the California Code of Regulations, apply with the following additions:

(1) “Abuse” means incorrect or improper operation of an engine or equipment unit that results in the failure of an emission-related part.

(2) “Acceptable quality level” (AQL) means the maximum percentage of failing engines that can be considered a satisfactory process average for sampling inspections.

(3) “ARB Enforcement Officer” means any officer or employee of the Air Resources Board so designated in writing by the Executive Officer or by the Executive Officer’s designee.

(4) “Base Fuel Schedule” refers to the fuel calibration schedule programmed into the Engine Control Module or PROM when manufactured or when updated by some off-board source, prior to any learned on-board correction.

(5) “Boat manufacturer,” as it applies in Section 2442(b), means any person or business entity engaged in the manufacturing, assembling, or importing of new vessels equipped with inboard or sterndrive engines for sale in California, or engaged in the sale, offer for sale, introduction, delivery or importation of such vessels into California for introduction into commerce. Included are those who act for and are under the control of any such person or business entity in connection with the distribution of such vessels. The term boat manufacturer does not include any person or business entity whose sole activities are the direct sale of said vessels to ultimate purchasers or the servicing of said vessels.

(6) “Capture rate” means the percentage of in-use engines subject to recall which must be corrected to bring the class of engines into compliance. The number of engines subject to recall shall be based on the actual number of engines in use as verified by engine registration records

compiled and prepared by industry, or a comparable source as determined by the Executive Officer at the time a recall is initiated.

(7) "Carryover engine family" means an engine family that undergoes certification using carryover test data from previous model years.

(8) "CE10 fuel" is a blend of 45% toluene, 45% iso-octane, and 10% ethanol that has been standardized in the American Society of Testing and Materials publication D471-98 (ASTM D471-98) as a reference fuel for evaluating the evaporative permeability of fuel-containing materials.

(9) "Certification" means, with respect to new spark-ignition marine engines, obtaining an Executive Order for an engine family complying with the spark-ignition marine engine exhaust emission standards and requirements specified in Title 13, California Code of Regulations, sections 2442 and 2447.

(10) "Complete engine assembly" or "complete engine configuration" means an assembly of a basic engine and all of the specific applicable components (e.g., air inlet, fuel and exhaust systems, etc.) and calibrations (e.g., carburetor jet size, valve timing, etc.) required for the assembly to be installed in a new unit of equipment.

(11) "Continuous monitoring" means sampling at a rate no less than two samples per second. If for engine control purposes, a computer input component is sampled less frequently, the value of the component may instead be evaluated each time sampling occurs.

(12) "Direct Emissions Device" means any powertrain component or system that has been designed specifically to control emissions performance, or that is an essential element of engine fueling and/or combustion that can affect emissions performance by design or through calibration (e.g., fuel metering, fuel delivery, etc.).

(13) "ECM hour-meter" means a device that is integrated into the engine control module (ECM) and that is capable of storing and incrementing time intervals based on the clock rate of the ECM.

(14) "Emission control system" means any device, system, or element of design that controls or reduces the emission of substances from an engine.

(15) "Enforcement test results" means data or information gathered through enforcement programs conducted by the Air Resources Board. These programs include, but are not limited to, field inspections, in-use compliance testing, assembly-line testing.

(16) "Engine family" means a subclass of a basic engine based on similar emission characteristics. The engine family is the grouping of engines that is used for the purposes of certification.

(17) "Engine identification number" means a unique specification (for example, model number/serial number combination) that allows each spark-ignition marine engine to be distinguished from other similar engines.

(18) "Engine manufacturer" means the manufacturer granted certification.

(19) "Engine misfire" means lack of combustion in the cylinder due to absence of spark, poor fuel metering, poor compression, or any other cause.

(20) "Engine start" is defined as the point at which normal, synchronized spark and fuel control is obtained or when the engine reaches a speed 150 revolutions per minute (rpm) below the normal, warmed-up idle speed.

(21) "Exhaust emissions" means matter emitted into the environment from any opening downstream from the exhaust port of a spark-ignition marine engine.

(22) "Executive Officer" means the Executive Officer of the Air Resources Board or his or her authorized representative.

(23) "Executive Order" means an order issued by the Executive Officer certifying engines for sale in California.

(24) "Family Emission Limit" means an emission value assigned by a marine engine manufacturer to an engine family for the purpose of complying with a corporate average exhaust emission standard. The Family Emission Limit (FEL) must not exceed the limit specified in this Article.

(25) "Fuel system" means all components involved in the transport, metering, and mixture of the fuel from the fuel tank to the combustion chamber(s) including, but not limited to the following: fuel tank, fuel tank cap, fuel pump, fuel lines, oil injection metering system, carburetor or fuel injection components, and all fuel system vents.

(26) "Fuel trim" refers to feedback adjustments to the base fuel schedule. Short-term fuel trim refers to dynamic or instantaneous adjustments. Long-term fuel trim refers to much more gradual adjustments to the fuel calibration schedule than short-term trim adjustments. These long-term adjustments compensate for engine differences and gradual changes that occur over time.

(27) "Functional check" for an output component means verification of proper response to a computer command. For an input component, functional check means verification of the input signal being in the range of normal operation, including evaluation of the signal's rationality in comparison to all available information.

(28) "Inboard Engine" means a four-stroke spark-ignition marine engine not used in a personal watercraft that is designed such that the propeller shaft penetrates the hull of the marine watercraft while the engine and the remainder of the drive unit is internal to the hull of the marine watercraft.

(29) "Inspection criteria" means the pass and fail numbers associated with a particular sampling plan.

(30) "Low-permeation fuel line (or supply) hose" means a fuel hose that does not exceed a 15.0 grams per square meter per day permeation rate on CE10 fuel at 23° Celsius, as tested per SAE J1527.

(31) "Malfunction" means the inability of an emission-related component or system to remain within design specifications. Further, malfunction refers to the deterioration of any of the above components or systems to a degree that would likely cause the emissions of an aged engine with the deteriorated components or systems present at the beginning of the applicable certification emission test to exceed the HC+NOx emission standard by more than 50 percent, unless otherwise specified, as applicable pursuant to Chapter 1 (commencing with Section 1900), Division 3, title 13, of the California Code of Regulations.

(32) "Marine engine manufacturer" means any person engaged in the manufacturing or assembling of new spark-ignition marine engines or the importing of such engines for resale, or who acts for and is under the control of any such person in connection with the distribution of such engines. A spark-ignition marine engine manufacturer does not include any dealer with respect to new spark-ignition marine engines received by such person in commerce.

(33) "Marine warm-up cycle" means sufficient engine operation such that the coolant temperature has risen by at least 40 degrees Fahrenheit from engine starting and reaches a minimum temperature of at least 140 degrees Fahrenheit.

(34) "Marine watercraft" means every description of boat, ship or other artificial contrivance used, or capable of being operated on water.

(35) "Maximum Rated Power" means the maximum brake kilowatt output of an engine at rated speed, as stated in the manufacturer's application for certification.

(36) "Model year" means the engine manufacturer's annual new model production period which includes January 1 of the calendar year for which the model year is named, ends no later than December 31 of the calendar year, and does not begin earlier than January 2 of the previous calendar year. Where an engine manufacturer has no annual new model production period, model year means the calendar year.

(37) "New", for purposes of this Article, means a spark-ignition marine engine or watercraft the equitable or legal title to which has never been transferred to an ultimate purchaser. Where the equitable or legal title to the engine or watercraft is not transferred to an ultimate purchaser until after the engine or watercraft is placed into service, then the engine or watercraft will no longer be new after it is placed into service. A spark-ignition marine engine or watercraft is placed into service when it is used for its functional purposes. With respect to imported spark-ignition ma-

rine engines or watercraft, the term “new” means an engine or watercraft that is not covered by an Executive Order issued under this Article at the time of importation, and that is manufactured after the effective date of a section in this Article which is applicable to such engine or watercraft, or which would be applicable to such engine or watercraft had it been manufactured for importation into the United States.

(38) “Nonconformity” or “Noncompliance”, for the purposes of Title 13, California Code of Regulations, section 2444.1, means that:

(A) a significant number, determined by the Executive Officer, of a class of engines, although properly maintained and used, experience a failure of the same emission-related component(s) within their useful lives which, if uncorrected, results in the engines’ failure to comply with the emission standards prescribed under section 2442 which are applicable to the model year of such engines; or

(B) a class of engines that at any time within their useful lives, although properly maintained and used, on average does not comply with the emission standards prescribed under section 2442 which are applicable to the model year of such engines.

(39) “Operating cycle” consists of engine startup, engine run, and engine shutoff.

(40) “Original equipment manufacturer” means a manufacturer who purchases engines for installation in its equipment for sale to ultimate purchasers.

(41) “Outboard engine” means a spark-ignition marine engine that, when properly mounted on a marine watercraft in the position to operate, houses the engine and drive unit external to the hull of the marine watercraft.

(42) “Personal watercraft engine” means a spark-ignition marine engine that does not meet the definition of outboard engine, inboard engine or sterndrive engine, except that the Executive Officer may, in his or her discretion, classify a personal watercraft engine as an inboard or sterndrive engine if it is comparable in technology and emissions to an inboard or sterndrive engine.

(43) “Production-line tests” are emission tests performed on a sample of production engines produced for sale in California and conducted in accordance with Title 13, California Code of Regulations, section 2446(a).

(44) “Redline engine speed” means the engine manufacturer recommended maximum engine speed as normally displayed on instrument panel tachometers, or the engine speed at which fuel shutoff occurs.

(45) “Response rate,” with regards to oxygen sensors, refers to the delay (measured in milliseconds) between a switch of the sensor from lean to rich or vice versa in response to a change in fuel/air ratio above and below stoichiometric.

(46) “Sales” or “Eligible sales” means the actual or calculated sales of an engine family in California for the purposes of corporate averaging and production-line testing. Upon Executive Officer approval, an engine manufacturer may calculate its eligible sales through market analysis of actual federal production or sales volumes.

(47) “Scheduled maintenance” means any adjustment, repair, removal, disassembly, cleaning, or replacement of components or systems required by the engine manufacturer to be performed on a periodic basis to prevent part failure or marine watercraft or engine malfunction, or those actions anticipated as necessary to correct an overt indication of malfunction or failure for which periodic maintenance is not appropriate.

(48) “Spark-ignition marine engine” means any engine used to propel a marine watercraft, and which utilizes the spark-ignition combustion cycle; including, but not limited to personal watercraft, outboard, inboard and sterndrive engines.

(49) “Sterndrive engine” means a four-stroke spark-ignition marine engine not used in a personal watercraft that is designed such that the drive unit is external to the hull of the marine watercraft, while the engine is internal to the hull of the marine watercraft.

(50) “Test engine” means the engine or group of engines that an engine manufacturer uses during certification, production line and in-use testing to determine compliance with emission standards.

(51) “Test Procedures” means the document entitled “California Exhaust Emission Standards and Test Procedures for 2001 Model Year and Later Spark-Ignition Marine Engines,” which includes the standards and test procedures applicable to 2001 and later spark-ignition personal watercraft, outboard, inboard and sterndrive marine engines, as adopted October 21, 1999 and as last amended September 22, 2006. This document is incorporated by reference herein.

(52) “Ultimate purchaser” means, with respect to any new spark-ignition marine engine, the first person who in good faith purchases such new spark-ignition marine engine for purposes other than resale.

(53) “U.S.C.” means United States Code.

(54) “Used solely for competition” means exhibiting features that are not easily removed and that would render its use other than in competition unsafe, impractical, or highly unlikely.

(55) “Useful life” for spark-ignition marine engines means nine years for personal watercraft engines and sixteen years for outboard, inboard and sterndrive engines.

(56) “Warranty period” means the period of time the engine or part is covered by the warranty provisions.

(57) “Warranty station” means any dealer, service center or other agent that is authorized by the engine manufacturer to perform diagnostic labor, repairs or replacements of warranted engine components.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43105, 43150–43154, 43205.5 and 43210–43212, Health and Safety Code.

HISTORY

1. New section filed 12–8–99; operative 1–7–2000 (Register 99, No. 50).
2. New subsections (a)(4), (9), (14)–(16), (22)–(23), (26), (28), (33), (38)–(39), (45) and (48), subsection renumbering and amendment of newly designated subsections (a)(31)–(32), (36), (42), (46) and (49) filed 7–22–2002; operative 8–21–2002 (Register 2002, No. 30).
3. New subsections (a)(5), (a)(8), (a)(12)–(13), (a)(30) and (a)(35), subsection renumbering and amendment of newly designated subsection (a)(51) filed 11–13–2006; operative 12–13–2006 (Register 2006, No. 46).

§ 2442. Emission Standards.

(a) Model year 2001 and later model year spark-ignition personal watercraft and outboard marine engines:

(1) Exhaust emissions from new spark-ignition marine engines manufactured for sale, sold, or offered for sale in California, or that are introduced, delivered or imported into California for introduction into commerce must not exceed the hydrocarbon plus oxides of nitrogen (HC+NOx) exhaust emission standards listed in Table 1 during its designated useful life:

Table 1.
Corporate Average Emission Standards by Implementation Date
HC+NOx (g/kW-hr)

Model Year	Max. Family Emission Limit (FEL)	$P_{tx} < 4.3 \text{ kW}$	$P_{tx} \geq 4.3 \text{ kW}$
2001–2003	Not Applicable	81.00	$(0.25 \times (151+557/P_{tx}^{0.9})) + 6.0$
2004–2007	80	64.80	$(0.20 \times (151+557/P_{tx}^{0.9})) + 4.8$
2008 and Later	44	30.00	$(0.09 \times (151+557/P_{tx}^{0.9})) + 2.1$

where:

P_{tx} is the average power in kilowatts (kW) (sales-weighted) of the total number of spark-ignition marine engines produced for sale in

California in model year x. Engine power must be calculated using the Society of Automotive Engineers (SAE) standard J1228, November

1991, incorporated herein by reference. Engine manufacturers must not determine P_{tx} by combining the power outputs of outboard engines with the power outputs of personal watercraft engines.

(2) An engine manufacturer may comply with the standards directly on an individual engine family basis. Consequently in Table 1, FELs are not applicable for any model year and P_{tx} means the average power in kW (sales-weighted) of the subject engine family produced for sale in California in model year x.

Compliance with the standards on a corporate average basis is determined as follows:

$$\frac{\sum_{j=1}^n (PROD_{jx})(FEL_{jx})(P_{jx})}{\sum_{j=1}^n (PROD_{jx})(P_{jx})} = STD_{ca}$$

where:

- n = Total number of engine families (by category)
- $PROD_{jx}$ = Number of units of each engine family j produced for sale in California in model year x.
- FEL_{jx} = The Family Emission Limit (FEL) for engine family j in model year x, which must be determined by the engine manufacturer subject to the following conditions: (1) no individual engine family FEL shall exceed the maximum allowed value as specified in Table 1; (2) no engine family designation or FEL shall be amended in a model year unless the engine family is recertified; and (3) prior to sale or offering for sale in California, each engine family must be certified in accordance with the test procedures referenced in section 2447 and must meet the engine manufacturer's FEL as a condition of the Executive Order. Before certification, the engine manufacturer must also submit estimated production volumes for each engine family to be offered for sale in California.
- P_{jx} = The average power in kW (sales-weighted) of engine family j produced for sale in California in model year x. Engine power must be calculated using SAE standard J1228, November 1991, incorporated herein by reference.
- STD_{ca} = An engine manufacturer's calculated corporate average HC+NOx exhaust emissions from those California spark-ignition marine engines subject to the California

corporate average HC+NOx exhaust emission standard determined from Table 1, as established by an Executive Order certifying the California production for the model year. This Executive Order must be obtained prior to the issuance of certification Executive Orders for individual engine families for the model year.

(A) For purposes of compliance under this paragraph, engine manufacturers must not corporate average outboard engine families in combination with personal watercraft engine families.

(B) During the engine manufacturer's production year, for each engine family, the engine manufacturer shall provide the Executive Officer within 45 days after the last day in each calendar quarter the total number of spark-ignition marine engines produced for sale in California and their applicable FEL(s).

(C) The Executive Order certifying the California production for a model year must be obtained prior to the issuance of certification Executive Orders for individual engine families for the model year.

(D) The engine manufacturer's average HC+NOx exhaust emissions must meet the corporate average standard at the end of the engine manufacturer's production for the model year. At the end of the model year, the manufacturer must calculate a corrected corporate average using sales or eligible sales rather than projected sales.

(E) Production and sale of spark-ignition marine engines that result in noncompliance with the California standard for the model year shall cause an engine manufacturer to be subject to: revocation or suspension of Executive Orders for the applicable engine families; enjoinder from any further sales, or distribution, of such noncompliant engine families, in the State of California pursuant to section 43017 of the Health and Safety Code; and all other remedies available under Part 5, Division 26 of the Health and Safety Code. Before seeking remedial action against the engine manufacturer, the Executive Officer will consider any information provided by the equipment manufacturer.

(F) For each model, the engine manufacturer shall submit California sales data ninety (90) days after the end of the model year.

(b) Model year 2003 and later model year spark-ignition inboard and sterndrive marine engines:

(1) Exhaust emissions from new model year 2003 and later spark-ignition inboard and sterndrive marine engines must not exceed the exhaust emission standards listed in Table 2 for the designated emission durability test period. Prior to Model Year 2007 certification, each engine manufacturer must select either Option 1 (OPT 1) or Option 2 (OPT 2) for its entire production for the 2007 and 2008 model years.

Table 2.
Inboard/Sterndrive Marine Engine Standards

MODEL YEAR	RATED POWER [kilowatts]	COMPLIANCE OPTION ¹	DURABILITY [hours / years]	EXHAUST STANDARD NMHC ² +NOx [grams per kilowatt-hour]	TYPE ³	SUPPLEMENTAL MEASURE ⁴
2003–2006	kW ≤ 373	N/A	N/A	16.0	AVE	None
2007	kW ≤ 373	OPT 1	N/A 480 / 10	16.0 (55%) 5.0 (45%)	AVE FIXED	None
		OPT 2	N/A	14.0	FIXED	Low-Permeation Fuel Line Hoses
2008	kW ≤ 373	OPT 1	N/A 480 / 10	16.0 (25%) 5.0 (75%)	AVE FIXED	None
		OPT 2	480 / 10	5.0	FIXED	Low-Permeation Fuel Line Hoses
2009 and later	kW ≤ 373	N/A	480 / 10	5.0 ⁶	FIXED	Carryover ⁷
	373 < kW ≤ 485		150 ⁵ / 3	5.0 ⁶	AVE	
	kW > 485		50 ⁵ / 1	5.0 ⁶	AVE	

Notes:

- Once a manufacturer has chosen an option, that option must continue to be used exclusively across product lines
- The non-methane component of hydrocarbon
- Corporate averaging (AVE) may be used to demonstrate compliance with the exhaust emission standard, except where a FIXED standard is required
- Supplemental measures may be different than shown, but must provide equal and verifiable emission reductions to those indicated

5. For the purpose of durability testing, engine components that have been approved with an hourly warranty period shorter than the full hourly durability period per § 2445.1 (c)(3)(C)4. may be replaced at the specified warranty interval
6. All engines ≤ 373 kW must meet a 5.0 g/kW-hr NMHC+NO_x capping standard. For engines > 373 kW, the standard may be met by sales-averaging with engines equal to or less than 373 kW
7. The same or better supplemental emission control hardware used to meet the standard in 2007 must be used every model year thereafter

(A) No crankcase emissions shall be discharged into the ambient atmosphere from 2003 and later spark-ignition inboard and sterndrive marine engines.

(B) Production and sale of spark-ignition marine engines that result in noncompliance with the California standard for the model year shall cause an engine manufacturer to be subject to: revocation or suspension of Executive Orders for the applicable engine families; enjoinderment from any further sales, or distribution, of such noncompliant engine families, in the State of California pursuant to section 43017 of the Health and Safety Code; and all other remedies available under Part 5, Division 26 of the Health and Safety Code. Before seeking remedial action against the engine manufacturer, the Executive Officer will consider any information provided by the equipment manufacturer.

(C) For each engine family, the engine manufacturer shall submit the total number of engines produced for sale in California, or the total number of engines produced for sale nationally, ninety (90) days after the end of the model year.

(2) Compliance with the standards on a corporate averaging basis is calculated as follows:

$$\frac{\sum(\text{PROD}_{jx})(\text{EL}_{jx})}{\sum(\text{PROD}_{jx})} = \text{Corporate Average}$$

where:

- n = Total number of engine families available for averaging
- PROD_{jx} = Number of engines in engine family j produced for sale in California in model year x.
- EL_{jx} = The measured NMHC+NO_x emission levels for engine family j in model year x; or for engines > 485 kW, the manufacturer may choose to use 30 g/kW-hr as per paragraph (F) below.

(A) During the engine manufacturer's production year, for each engine family, the engine manufacturer shall provide the Executive Officer within 45 days after the last day in each calendar quarter the total number of spark-ignition marine engines produced for sale in California and their applicable EL(s).

(B) The Executive Order certifying the California production for a model year must be obtained prior to the issuance of certification Executive Orders for individual engine families for the model year.

(C) The engine manufacturer's average NMHC+NO_x exhaust emissions must meet the corporate average standard at the end of the engine manufacturer's production for the model year. At the end of the model year, the manufacturer must calculate a corrected corporate average using sales or eligible sales rather than projected sales.

(D) Production and sale of spark-ignition marine engines that result in noncompliance with the California standard for the model year shall cause an engine manufacturer to be subject to: revocation or suspension of Executive Orders for the applicable engine families; enjoinderment from any further sales, or distribution, of such noncompliant engine families, in the State of California pursuant to section 43017 of the Health and Safety Code; and all other remedies available under Part 5, Division 26 of the Health and Safety Code. Before seeking remedial action against the engine manufacturer, the Executive Officer will consider any information provided by the engine manufacturer.

(E) For each engine family, the engine manufacturer shall submit California sales data within one hundred eighty (180) days after the end of the model year.

(F) Engines exceeding 485 kilowatts maximum rated power: In lieu of exhaust emission testing, manufacturers may certify using a default exhaust emissions level of 30.0 grams per kilowatt-hour of NMHC+NO_x

in their corporate averaging calculation.

(3) Requirements of engine manufacturers and boat manufacturers under Option 2 and using Low Permeation Fuel Line Hose:

(A) Each engine manufacturer that chooses Option 2 must provide written instructions, as part of the installation materials provided to purchasers of the engine, to use Low Permeation Fuel Line Hose for the primary fuel line connecting the fuel tank to the engine of any boat that is manufactured for sale, sold, or offered for sale in California, or that is introduced, delivered or imported into California for introduction into commerce.

(B) Each boat manufacturer must install Low Permeation Fuel Line Hose for the primary fuel line connecting the fuel tank to the engine of any boat that is manufactured for sale, sold, or offered for sale in California that uses an engine from a manufacturer that chooses Option 2.

(4) Supplemental Measures. Prior to Model Year 2007 certification, manufacturers choosing Option 2 may request Executive Officer approval of a supplemental measure as an alternative to meeting the requirements of paragraph (b)(3). In determining whether to approve a request, the Executive Officer will consider the following:

(A) Whether the proposed supplemental measure would achieve reductions in NMHC+NO_x equivalent to using Low-Permeation Fuel Line Hoses,

(B) The engine manufacturer's measures to ensure successful implementation of the proposed supplemental measure,

(C) The durability of the proposed supplemental measure, and

(D) Any additional information the Executive Officer deems relevant.

(c) The test equipment and test procedures for determining compliance with these standards are set forth in Parts III and IV, respectively, of the "Test Procedures."

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43105, 43150-43154, 43205.5 and 43210-43212, Health and Safety Code.

HISTORY

1. New section filed 12-8-99; operative 1-7-2000 (Register 99, No. 50).
2. Amendment filed 7-22-2002; operative 8-21-2002 (Register 2002, No. 30).
3. Amendment filed 11-13-2006; operative 12-13-2006 (Register 2006, No. 46).

§ 2443.1. Emission Control Labels — Model Year 2001 and Later Spark-Ignition Marine Engines.

(a) Purpose. The Air Resources Board recognizes that certain emissions-critical or emissions-related parts must be properly identified and maintained to ensure that engines meet the applicable emission standards. The purpose of this section is to require engine manufacturers to affix a label (or labels) on each production engine (or watercraft, as applicable) to provide the engine owner and service mechanic with information necessary for the proper maintenance of these parts in customer use. These specifications also require the engine manufacturer to permanently identify the engine with a unique identification number that will be used for enforcement purposes, including in-use testing.

(b) Applicability. This section applies to:

(1) Model year 2001 and later spark-ignition personal watercraft and outboard marine engines and model year 2003 and later spark-ignition inboard and sterndrive marine engines, which have been certified to the applicable emission standards pursuant to Health and Safety Code section 43013;

(2) Engine manufacturers and original equipment manufacturers, as applicable, that have certified such engines; and

(3) Original equipment manufacturers, regardless of whether they have certified the engine, if their equipment obscures the emission control labels of such certified engines.

(c) Engine Label and Location.

(1) A legible label must be welded, riveted or otherwise permanently attached by the engine manufacturer to an area of the engine (e.g., block

or crankcase) in such a way that it will be readily visible to the average person after installation of the engine in the watercraft. If such an attachment is not feasible, the Executive Officer may allow the label to be at-

[The next page is 298.21.]

tached on components of the engine or watercraft assembly (as applicable) that satisfy the requirements of Subsection (c)(2)(A) or (c)(2)(B) below, as applicable. Such labels must be attached on all complete engine assemblies that are produced by an engine manufacturer.

(2) (A) Personal Watercraft and Outboard Engines. In selecting an acceptable location, the engine manufacturer must consider the possibility of accidental damage (e.g., possibility of tools or sharp instruments coming in contact with the label). Each engine label must be affixed in such a manner that it cannot be removed without destroying or defacing the label, and must not be affixed to any engine (or watercraft, as applicable) part that is likely to be replaced during the engine's (or watercraft's, as applicable) useful life or that is not integral to the engine's operation. The engine label must not be affixed to any engine (or watercraft, as applicable) component that is easily detached from the engine. If the engine manufacturer claims there is inadequate space to attach the label, the Executive Officer will determine a suitable location.

(B) Inboard and Sterndrive Engines. In selecting an acceptable location, the engine manufacturer must consider visibility and the possibility of accidental damage (e.g., possibility of tools or sharp instruments coming in contact with the label). The engine label must be affixed in such a manner that it cannot be removed without destroying or defacing the label. The engine label must contain the unique identification number that has been assigned to the engine, pursuant to subsection (a) of this section. If the engine manufacturer claims there is inadequate space to attach the label, the Executive Officer will determine a suitable location.

(3) The engine label information must be written in the English language and use block letters (i.e., sans serif, uppercase characters) except for units of measurement, which may be sans serif, lower-case characters. The characters must be of a color that contrasts with the background of the label.

(4) The engine label must contain the following information:

(A) The heading "EMISSION CONTROL INFORMATION."

(B) The full corporate name or trademark of the engine manufacturer.

(i) An engine manufacturer may request the Executive Officer's approval to delete its name and trademark, and substitute the name and trademark of another engine manufacturer, original equipment manufacturer or third-party distributor.

(ii) Approval under paragraph (4)(B)(i) above does not relieve the engine manufacturer granted an engine family Executive Order of any requirements imposed by these provisions on the applicable engines.

(C) The statement, "THIS (WATERCRAFT'S ENGINE or ENGINE, as applicable) IS CERTIFIED TO OPERATE ON (specify operating fuel(s))."

(D) Identification of the Exhaust Emission Control System (Abbreviations may be used and must conform to the nomenclature and abbreviations provided in the latest revision of the Society of Automotive Engineer's (SAE) procedure J1930, "Electrical/Electronic Systems Diagnostic Terms, Definitions, Abbreviations and Acronyms", and as specified in section 1977, Title 13, California Code of Regulations.

(E) Any specific fuel or engine lubricant requirements (e.g., fuel-oil ratio(s), lead content, research octane number, engine lubricant type).

(F) Date of manufacture (day (optional), month and year).

(G) An unconditional statement of compliance with the appropriate model year California regulations. For example, "THIS ENGINE CONFORMS TO (model year) CALIFORNIA EMISSION REGULATIONS FOR SPARK-IGNITION MARINE ENGINES." For an engine family certified in California with an FEL different from the FEL assigned federally for the engine family, the following statement shall be appended to the unconditional statement of compliance: AND IS CERTIFIED TO (specify FEL) g/kW-hr HC+NO_x ENGINE FAMILY EXHAUST EMISSION STANDARD IN CALIFORNIA."

(H) The engine family identification (i.e., engine family name). The engine family identification shall be in accordance with the current format used by the United States Environmental Protection Agency.

(I) Engine displacement (in cubic centimeters, cubic inches, or liters) of the individual engine upon which the engine label is affixed.

(J) The maintenance specifications and adjustments recommended by the engine manufacturer, including, as applicable: valve lash, ignition timing, idle air/fuel setting procedure and value (e.g., idle speed drop), high idle speed and spark plug gap. These specifications must indicate the proper transmission position, if applicable, during tune-up and what accessories, if any, should be in operation, and what systems, if any (e.g., vacuum advance, battery, air pump), should be disconnected during the tune-up. If the engine manufacturer does not recommend adjustment of the foregoing specifications, the engine manufacturer may substitute in lieu of the specifications, the single statement, "NO OTHER ADJUSTMENTS NEEDED." For all engines, the instructions for tune-up adjustments must be sufficiently clear on the engine label to preclude the need for a mechanic or equipment owner to refer to another document in order to correctly perform the adjustments.

(5) If there is insufficient space on the engine to accommodate an engine label that contains all of the information required in Subsection (4) above, the Executive Officer may allow the engine manufacturer to modify the engine label in one or more of the following ways:

(A) Exclude the information required in Subsections (4)(C), (D) and (E) from the engine label. This information must be specified elsewhere on the engine, or in the owner's manual.

(B) Substitute the information required in Subsection (4)(J) with the statement, "REFER TO THE OWNER'S MANUAL FOR MAINTENANCE SPECIFICATIONS AND ADJUSTMENTS." When such a statement is used, the information required by Subsection (4)(J) must be specified in the owner's manual.

(C) Exclude the information required by Subsection (4)(F) on the engine label if the date the engine was manufactured is stamped or labeled permanently on the engine (e.g., within the serial number), and this date is readily visible.

(d) For Inboard and Sterndrive Engines used solely for Competition.

Engines manufactured solely for use in sanctioned competition are not required to comply with the emission standards and other requirements. Manufacturers may incorporate the engine label to identify the engines as produced for competition according to the provisions in this subsection.

(1) A legible label must be welded, riveted or otherwise permanently attached by the engine manufacturer to an area of the engine in such a way that it will be readily visible to the average person after installation of the engine in the watercraft. If such an attachment is not feasible, the Executive Officer may allow the label to be attached on components of the engine that satisfy the requirements of Subsection (d)(2). Such labels must be attached on all complete engine assemblies that are produced by an engine manufacturer.

(2) In selecting an acceptable location, the engine manufacturer must consider visibility and the possibility of accidental damage (e.g., possibility of tools or sharp instruments coming in contact with the label). The engine label must be affixed in such a manner that it cannot be removed without destroying or defacing the label. The engine label must contain the unique identification number that has been assigned to the engine, pursuant to subsection (a) of this section. If the engine manufacturer claims there is inadequate space to attach the label, the Executive Officer will determine a suitable location.

(3) The engine label information must be written in the English language and use block letters (i.e., sans serif, uppercase characters) except for units of measurement, which may be sans serif, lower-case characters. The characters must be of a color that contrasts with the background of the label.

(4) The engine label must contain the following information:

(A) The heading "EMISSION CONTROL INFORMATION."

(B) The full corporate name or trademark of the engine manufacturer.

(i) An engine manufacturer may request the Executive Officer's approval to delete its name and trademark, and substitute the name and trademark of another engine manufacturer, original equipment manufacturer or third-party distributor.

(ii) Approval under paragraph (4)(B)(i) above does not relieve the engine manufacturer granted an engine family Executive Order of any requirements imposed by these provisions on the applicable engines.

(C) Date of manufacture (day (optional), month and year).

(D) An unconditional statement of noncompliance with the appropriate model year California regulations. For example, "THIS ENGINE DOES NOT CONFORM TO (model year) CALIFORNIA EMISSION REGULATIONS FOR SPARK-IGNITION MARINE ENGINES AND MAY NOT BE INSTALLED ON A BOAT FOR ANY PURPOSE OTHER THAN COMPETITION."

(E) Engine displacement (in cubic centimeters, cubic inches, or liters) of the individual engine upon which the engine label is affixed.

(e) An engine label may state that such engine conforms to any other applicable state or federal emission standards for new spark-ignition marine engines, or any other information that the engine manufacturer deems necessary for, or useful to, the proper operation and satisfactory performance of the engine.

(f) Engine identification number. Each engine must have a legible, unique engine identification number permanently affixed to or engraved on the engine.

(g) Supplemental Engine Label Content and Location for Personal Watercraft and Outboard Engines only.

(1) When a final engine, equipment, or watercraft assembly that is marketed to any ultimate purchaser is manufactured and the engine label affixed by the engine manufacturer is not readily visible, the manufacturer of the final engine, equipment or watercraft assembly (i.e., original equipment manufacturer) must affix a supplemental engine label upon the engine, equipment or watercraft. The supplemental label must be made of plastic or metal, and must be welded, riveted or otherwise affixed permanently to an area of the engine, equipment or watercraft so as to be readily visible.

(2) The original equipment manufacturer required to affix a supplemental label must consider the possibility of accidental damage to the supplemental engine label in the determination of the label location. Such a label must not be attached to any engine, equipment or watercraft component that is likely to be replaced during the useful life of the engine, equipment or watercraft (as applicable), and/or is not integral to the engine's operation. Such a label must not be attached to any engine or equipment component that is easily detached from the engine, equipment or watercraft (as applicable).

(3) The supplemental engine label must conform to the engine label requirements in Subsections (c)(3) and (4), except that the date of manufacture specified in Subsection (c)(4)(F) may be deleted from the supplemental engine label. When the date of engine manufacture does not appear on the supplemental engine label, the responsible original equipment manufacturer must display (e.g., label, stamp, etc.) the date elsewhere on the engine, equipment or watercraft so as to be readily visible. The original equipment manufacturer must also display the engine identification number elsewhere on the engine that is readily visible if the original number is obscured by the equipment manufacturer's equipment.

(h) As used in this section, readily visible means that a label is readable by an average person from a distance of 46 centimeters (18 inches) without any obstructions from equipment, watercraft or engine parts (including all engine manufacturer or original equipment manufacturer (as applicable) available optional equipment) except for flexible parts (e.g., vacuum hoses, ignition wires) that can be moved out of the way without disconnection. Alternatively, the label and engine identification information required by these specifications must be no smaller than two (2) millimeters in height (with the exception of units of measurement) provided that no equipment or engine parts (including all engine manufacturer available optional equipment), except for flexible parts, obstruct the label(s).

(i) The label(s), engine identification number(s) and any adhesives used must be designed to withstand, for the engine's or watercraft's use-

ful life, typical environmental conditions in the area where the label(s) required by this section are affixed. Typical equipment environmental conditions include, but are not limited to, exposure to extreme heat or cold, engine fuels, lubricants and coolants (e.g., gasoline, motor oil, salt-water, ethylene glycol). The engine manufacturer must submit, with its certification application, a statement attesting that its labels and engine identification numbers comply with these requirements.

(j) The engine manufacturer must obtain approval from the Executive Officer for all label and engine identification number formats and locations in conjunction with the engine family certification. Approval of specific maintenance settings on labels is not required; however, the format for all such setting and tolerances, if any, is subject to review. If the Executive Officer finds that the information on the label or engine identification number is vague or subject to misinterpretation, or that the location does not comply with these specifications, the Executive Officer may require that the label(s), engine identification number(s) or location(s) be modified accordingly.

(k) Samples of all actual production labels used within an engine family must be submitted to the Executive Officer within thirty days after the start of production. Engine manufacturers must provide samples of their own applicable production labels, and samples of applicable production original equipment manufacturer labels that are accessible to the engine manufacturers due to the direct market arrangement between such manufacturers.

(l) The Executive Officer may approve alternate label and engine identification number locations. The Executive Officer may also, upon request, waive or modify the label content requirements provided that the intent of this section is met.

(m)(1) If the Executive Officer finds any engine manufacturer using labels and engine identification numbers that are different from those approved or do not substantially comply with the readability or durability requirements set forth in these specifications, the engine manufacturer will be subject to revocation or suspension of Executive Orders for the applicable engine families and subject to being enjoined from any further sales or distribution of such noncompliant engine families in the State of California pursuant to section 43017 of the Health and Safety Code. Additional penalties may be assessed to the extent permissible under Part 5, Division 26 of the Health and Safety Code. Before seeking remedial action against the engine manufacturer, the Executive Officer will consider any information provided by the engine manufacturer.

(2) If the Executive Officer finds any original equipment manufacturer using labels for which it has responsibility for attaching that are different from those approved or that do not substantially comply with the readability or durability requirements set forth in these specifications, the equipment manufacturer will be subject to being enjoined from any further sales or distribution, of applicable equipment product line that uses noncompliant labels in the State of California pursuant to section 43017 of the Health and Safety Code. Additional penalties may be assessed to the extent permissible under Part 5, Division 26 of the Health and Safety Code. Before seeking remedial action against the equipment manufacturer, the Executive Officer will consider any information provided by the equipment manufacturer.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43105, 43150-43154, 43205.5 and 43210-43212, Health and Safety Code.

HISTORY

1. New section filed 12-8-99; operative 1-7-2000 (Register 99, No. 50).
2. Amendment filed 7-22-2002; operative 8-21-2002 (Register 2002, No. 30).

§ 2443.2. Consumer/Environmental Label Requirements.

(a) Purpose. The purpose of this section is to require engine manufacturers to affix a single label on each production spark-ignition marine engine (or watercraft, as applicable) that provides potential engine owners, engine owners, and enforcement personnel with information on the relative cleanliness of the engine under the Air Resources Board's standards.

(b) Applicability. This section applies to:

(1) Model year 2001 and later spark-ignition personal watercraft and outboard marine engines and model year 2003 and later spark-ignition inboard and sterndrive marine engines, which have been certified to the applicable emission standards pursuant to Health and Safety Code section 43013;

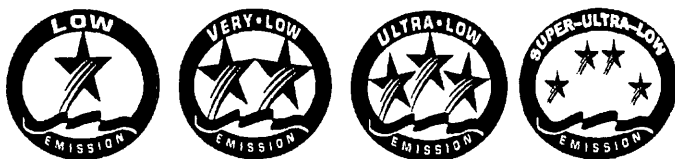

(2) Federally certified spark-ignition marine engines produced prior to model year 2001 that comply with the emission standards pursuant to section 2442; and

(3) Spark-ignition personal watercraft and outboard marine engines produced prior to model year 2001 and shown by the manufacturer to comply with the emission standards pursuant to section 2442.

(c) If an engine manufacturer has certified a spark-ignition marine engine family to an FEL at or below the exhaust emission standard designated in section 2442(a), Table 1, the engine manufacturer (or equipment/watercraft manufacturer who uses such engines) must label each new engine within the engine family as a compliant engine pursuant to this section. If the engine family fails in-use compliance and/or production line testing and corrective action is not taken within thirty (30) days, the engine manufacturer must cease representation of any engines within the family as compliant engines. In this case, corrective action refers only to physical changes made to bring the engine into compliance with its original FEL. Spark-ignition marine engines as described in paragraph (b)(2) may be labeled pursuant to the provisions of this section before the 2001 model year if such engines comply with Title 40, Code of Federal Regulations, Part 91 [October 4, 1996], which is incorporated herein by reference. Spark-ignition marine engines as described in paragraph (b)(3) may be labeled pursuant to the provisions of this section before the 2001 model year if such engines are tested using certification test procedures plus a thirty (30) percent deterioration factor, as applicable. Alternative demonstrations of emissions performance may be used for engines described in paragraphs (b)(2) and (b)(3) if the engine manufacturer demonstrates to the Executive Officer's satisfaction that the emissions performance is representative of actual emissions for the engine family. Any use of the label described below counter to the requirements set forth herein violates this section and may subject the engine manufacturer to penalties as permitted by Part 5, Division 26 of the Health and Safety Code.

(1) Facsimiles of the label format are shown in Figure 1.

Figure 1

(NOTE: Labels are not to scale.)

(A) The engine manufacturer must ensure that the label has the following characteristics:

(i) Oval shape;

(ii) Dimensions of no less than three inches wide by two and a half inches high, except that it may be no less than two inches by one and two thirds inches high for engines that have power outputs of 11.2 kW (15 hp) or less;

(iii) A watermark as shown in Figure 2 that is a clear laminate. The watermark must cover the entire label and be screened at no less than fifteen percent; and

(iv) All written information required by paragraph (c)(4)(B) must be in the English language and the font must be sans serif. The characters must be a minimum of two (2) millimeters in height except as specified in paragraph (b)(1)(B)(i)(d), and of a color that contrasts with the background on which it is displayed.

Figure 2

(B) Multiple levels of cleanliness. Progressively clean engines shall carry the following notations (as applicable):

(i) An engine that has an FEL or that has been certified at or below the hydrocarbon plus oxides of nitrogen standard listed in Table 1 of this section for Tier 1 must include the phrase "LOW EMISSION" and a single star symbol as shown in Figure 1.

(ii) An engine that has an FEL or that has been certified at or below the hydrocarbon plus oxides of nitrogen standard listed in Table 1 of this section for Tier 2 must include the phrase "VERY LOW EMISSION" and two star symbols as shown in Figure 1.

(iii) An engine that has an FEL or that has been certified at or below the hydrocarbon plus oxides of nitrogen standard listed in Table 1 of this section for Tier 3 must include the phrase "ULTRA LOW EMISSION" and three star symbols as shown in Figure 1.

(iv) An engine that has an FEL or that has been certified at or below the hydrocarbon plus oxides of nitrogen standard listed in Table 1 of this section for Tier 4 must include the phrase "SUPER ULTRA LOW EMISSION" and four star symbols as shown in Figure 1.

Table 1.

Hydrocarbon plus Oxides of Nitrogen Standards (in g/kW-hr)

Tier	$P < 4.3$	$P \geq 4.3$
1	81.00	$(0.25 \times (151+557/P^{0.9}))+6.0$
2	64.80	$(0.20 \times (151+557/P^{0.9}))+4.8$
3	30.00	$(0.09 \times (151+557/P^{0.9}))+2.1$
4	5.0	5.0

Where P means the average power in kW (sales-weighted) of the subject engine family.

(iv) All phrases encircling the top portion must have block characters that are a minimum of five (5) millimeters in height except that the characters may be three (3) millimeters for labels sized as allowed pursuant to paragraph (c)(1)(A)(i) for engines that have power outputs of 11.2 kW (15 hp) or less.

(C) Language other than that specified in paragraph (b)(1)(B) must not be used unless permitted by the Executive Officer.

(D) The color of the outer oval and stars on the labels must contrast with the engine cover or watercraft hull. The color of the interior oval (i.e., background for the stars) must contrast with the color of the outer oval and stars.

(2) Label Location. For outboard engines, a single label must be permanently affixed to the back of the engine cover or cowl. For personal watercraft, a single label must be affixed two to three inches to the right of the required location of the California Assigned Vessel Number displayed on the port side of the hull. For inboard and sterndrive engines, labels must be affixed to the engine and to the port side of the hull, either to the right or left and in close proximity to the required location of the California Assigned Vessel Number. Each label must be manufactured and permanently affixed so that it cannot be removed without destroying or defacing the label, must be readily visible and must not be affixed to any location that is likely to be replaced during the engine's useful life. For the purposes of this paragraph, readily visible means that the label's shape and number of stars are discernible from a distance of 100 feet.

(3) The labels and any adhesives used must be designed to withstand, for the engine's or watercraft's useful life, typical environmental conditions in the area where the labels required by this section are affixed. Typical equipment environmental conditions include, but are not limited to, exposure to extreme heat or cold, moisture, engine fuels, lubricants and coolants (e.g., gasoline, motor oil, saltwater, ethylene glycol). The engine manufacturer must submit, with its certification application, a statement attesting that its labels and engine identification numbers comply with these requirements.

(4) For Personal Watercraft and Outboard Marine Engines:

(A) Labels must be affixed to new watercraft or engines by the engine manufacturer or the original equipment manufacturer. If affixed by the original equipment manufacturer, the engine manufacturer remains the ultimate party responsible for ensuring that the labels are correctly administered. Improper labeling or distribution of labels will subject the engine manufacturer to penalties as described in paragraph (h).

(B) Labels on engines or watercraft described in paragraphs (b)(2) and (b)(3) may be applied by either the engine manufacturer, the original equipment manufacturer, distributors or dealers. However, the engine manufacturer remains the ultimate party responsible for ensuring that the labels are correctly administered. Improper labeling or distribution of labels will subject the engine manufacturer to penalties as described in paragraph (h). If the labels are applied by the distributor or dealer, the engine manufacturer must include its name and a serial number on the lower portion of the label as shown in Figure 1. The format of the serial number will be two alpha characters followed by five numeric characters (e.g., AA12345). The serial numbers must be recorded by the distributor or dealer and reported to the manufacturer of the engine when installed on a pre-2001 model year watercraft or engine. These numbers must be made available to the Executive Officer upon request.

(5) For Inboard and Sterndrive Marine Engines:

(A) Labels on Engines. Labels must be affixed to new engines by the engine manufacturer. The engine manufacturer is responsible for ensuring that appropriate environmental labels are properly applied to its engines. Improper labeling or distributing of labels will subject the engine manufacturer to penalties as described in paragraph (h) of this section.

(B) Labels on Watercraft. Labels must be affixed to the port side of watercraft by the watercraft/original equipment manufacturer. The watercraft/original equipment manufacturer is responsible for ensuring that appropriate labels are properly applied to its watercraft. Improper labeling or distributing of hull environmental labels will subject the watercraft/original equipment manufacturer to penalties as described in paragraph (h).

Engine manufacturers are responsible for providing labels that correspond with the engine for all engines supplied to watercraft/original equipment manufacturers. Engine manufacturers also are responsible for providing to the watercraft/original equipment manufacturers instructions regarding label selection and placement. Failure to provide appropriate labels and instructions to the watercraft/original equipment manufacturer will subject the engine manufacturer to penalties as described in paragraph (h) of this section.

(d) If the engine or watercraft cannot be adequately labeled under the

requirements of paragraph (c), the engine manufacturer may request modification of these requirements from the Executive Officer.

(e) Replacement engines installed in hulls, cowlings or watercraft that had been previously labeled in accordance with these specifications must have identical or improved emissions to that of the original certified engine.

(f) Samples of all labels produced pursuant to this section must be submitted to the Executive Officer with the applicable certification application.

(g) Engines that are labeled in accordance with this section and subsequently modified with add-on or modified parts that are not exempted by the Executive Officer are subject to label removal by an ARB Enforcement Officer or other authorized party.

(h) If the Executive Officer finds any engine manufacturer using labels for which it has responsibility for attaching that are different from those approved or that do not substantially comply with the discernibility or durability requirements set forth in these specifications, the engine manufacturer will be subject to being enjoined from any further sales or distribution of applicable equipment product line that uses noncompliant labels in the State of California pursuant to section 43017 of the Health and Safety Code. If the Executive Officer finds any engines or watercraft with labels that are not affixed in accordance with paragraph (c)(1)(B), the engine manufacturer or watercraft/original equipment manufacturer that was responsible for label placement must remove the labels from all affected watercraft and engines and will be subject to being enjoined from any further sales or distribution, of applicable equipment product line that uses noncompliant labels in the State of California pursuant to section 43017 of the Health and Safety Code. Additional penalties may be assessed to the extent permissible under Part 5, Division 26 of the Health and Safety Code. Before seeking remedial action against the engine or equipment manufacturer, the Executive Officer will consider any information provided by the engine or equipment manufacturer.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43105, 43150–43154, 43205.5 and 43210–43212, Health and Safety Code.

HISTORY

1. New section filed 12–8–99; operative 1–7–2000 (Register 99, No. 50).

2. Amendment filed 7–22–2002; operative 8–21–2002 (Register 2002, No. 30).

§ 2443.3. Environmental Label/Consumer Notification Requirements.

(a) Applicability. This section applies to model year 2001 and later spark-ignition personal watercraft and outboard marine engines and model year 2003 and later spark-ignition inboard and sterndrive marine engines, which have been certified to the applicable emission standards pursuant to Health and Safety Code section 43013.

(b) A nonpermanent label (i.e., hang tag) must be attached to each personal watercraft or outboard engine, as applicable, at time of sale. A nonpermanent label (i.e., hang tag) produced and supplied by the engine manufacturer must be attached, by the seller, to each inboard and sterndrive engine or watercraft, as applicable, when introduced for sale to ultimate purchasers. Environmental labels pursuant to this section shall include a copy of the following:

Front of Hang Tag:

The Star Label means Cleaner Marine Engines

This engine has been certified as a:

(<Check appropriate box.>)

The Symbol for Cleaner Marine Engines:**Cleaner Air and Water** – for a healthier lifestyle and environment.**Better Fuel Economy** – burns up to 30-40 percent less gas and oil than conventional carbureted two-stroke engines, saving money and resources.**Longer Emissions Warranty** – protects consumer for worry free operation.

Back of Hang Tag:

<facsimile of the one-star label>

One Star – Low-Emission

The one-star label identifies engines that meet the Air Resources Board's Personal Watercraft and Outboard marine engine 2001 exhaust emission standards. Engines meeting these standards have 75% lower emissions than conventional carbureted two-stroke engines. These engines are equivalent to the U.S. EPA's 2006 standards for marine engines.

<facsimile of the two-star label>

Two Stars – Very Low Emission

The two-star label identifies engines that meet the Air Resources Board's Personal Watercraft and Outboard marine engine 2004 exhaust emission standards. Engines meeting these standards have 20% lower emissions than One Star – Low-Emission engines.

<facsimile of the three-star label>

Three Stars – Ultra Low Emission

The three-star label identifies engines that meet the Air Resources Board's Personal Watercraft and Outboard marine engine 2008 exhaust emission standards or the Sterndrive and Inboard marine engine 2003–2008 exhaust emission standards. Engines meeting these standards have 65% lower emissions than One Star – Low Emission engines.

<facsimile of the four-star label>

Four Stars – Super Ultra Low Emission

The four-star label identifies engines that meet the Air Resources Board's Sterndrive and Inboard marine engine 2009 exhaust emission standards. Personal Watercraft and Outboard marine engines may also comply with these standards. Engines meeting these standards have 90% lower emissions than One Star – Low Emission engines.

Cleaner Watercraft – Get the Facts
1-800-END-SMOG
www.arb.ca.gov

(1) Facsimiles of the four environmental labels, as described in section 2443.2(c)(1), with the appropriate label circled or otherwise identified as being applicable to the spark-ignition marine engine, must be displayed on the nonpermanent label. Each facsimile must have dimensions no less than one inch by four-fifths inch.

(2) For outboard engines greater than 130 horsepower, facsimiles of only the "Low Emission Engine" and "Very Low Emission Engine" labels described in sections 2443.2(c)(1)(B)(i) and (ii) need to be displayed on the nonpermanent label until the earlier of:

(A) the 2004 model year; or

(B) the first model year after the date the ARB certifies the first outboard engine family greater than 130 horsepower to the 2008 model year standards.

(3) For personal watercraft, facsimiles of only the "Low Emission Engine" and "Very Low Emission Engine" labels described in sections 2443.2(c)(1)(B)(i) and (ii) need to be displayed on the nonpermanent label until the earlier of:

(A) the 2004 model year; or

(B) the first model year after the date the ARB certifies the first personal watercraft engine family to the 2008 model year standards.

(4) All textual information (i.e., characters and/or lettering) required by this section must be no smaller than two (2) millimeters in height.

(c) The information required by paragraph (b) must also be provided in the owner's manual and in the engine manufacturer's application for certification.

(d) Samples of all labels produced pursuant to this section must be submitted to the Executive Officer with the applicable certification application.

§ 2444. In-Use Compliance Testing and Recall Regulations — Model Year 2001 and Later Spark-Ignition Marine Engines.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43105, 43150–43154, 43205.5 and 43210–43212, Health and Safety Code.

HISTORY

1. New section filed 12–8–99; operative 1–7–2000 (Register 99, No. 50).
2. Renumbering of former section 2444 to new section 2444.1 filed 7–22–2002; operative 8–21–2002 (Register 2002, No. 30).

§ 2444.1. In-Use Compliance Testing and Recall Regulations — Model Year 2001 and Later Spark-Ignition Marine Engines.

(a) Applicability. This section applies to model year 2001 and later spark-ignition personal watercraft and outboard marine engines, which have been certified to the applicable emission standards pursuant to Health and Safety Code section 43013. Spark-ignition inboard and stern-drive marine engines shall comply with the in-use compliance testing and recall requirements found in Title 13, California Code of Regulations, Sections 2111 through 2140 and 2147.

(b) Manufacturer In-Use Compliance Test Procedures.

(1) For the purposes of this section, the Air Resources Board will accept emission data collected from the in-use testing program implemented by the United States Environmental Protection Agency as specified in Title 40, Code of Federal Regulations, section 91.803 [October 4, 1996], which is incorporated herein by reference.

(2) The Executive Officer, may, upon notice to the engine manufacturer and after review of the engine families identified by the United States Environmental Protection Agency for federal in-use testing, prescribe that a California-specific in-use testing program be conducted pursuant to paragraph (b)(3) at the engine manufacturer's expense if:

(A) The results obtained from the federal in-use test program pursuant to paragraphs (b)(1) of this section are determined not to be representative of engines sold and operated in California; or,

(B) The necessity is supported by other data or information (e.g., California-only engine families).

(3) California In-Use Testing Program.

(A) The Executive Officer shall identify engine families and those configurations within families offered for sale in California that the engine manufacturer must then subject to in-use testing for the specified model year. The number of engine families identified shall not exceed 25 percent of the engine manufacturer's families offered for sale in California. The Executive Officer may allow for reduced testing upon the engine manufacturer's demonstration of consistent compliance with the applicable emission standards.

(B) Number of Engines to be Tested. The number of engines to be tested by an engine manufacturer must be determined by the following method:

(i) A minimum of two (2) engines per family provided that no engine fails any standard. For each failing engine, two (2) more engines must be tested until the total number equals ten.

(ii) For engine families of less than 50 engines (California sales) for the identified model year or for engine manufacturers who make less than or equal to 200 engines (California sales) for that model year, a minimum of one engine per family provided that this engine does not fail any standard. If this engine fails, two (2) more engines shall be tested. For each additional engine failure, the engine manufacturer must continue testing two (2) additional engines until the total number equals eleven.

(iii) If an engine family was certified using carryover emission data and has been previously tested under paragraph (b)(3)(B) without an ordered recall, then only one engine for that family must be tested. If this engine fails any standard, testing must be conducted as outlined in paragraphs (b)(3)(B), as applicable.

(C) At the discretion of the Executive Officer, an engine manufacturer may test more engines than the minimums described in paragraph (b)(3)(B) or may concede failure before testing a total of ten engines.

(D) The Executive Officer will consider failure rates, average emission levels and the existence of any defects among other factors in determining whether to pursue remedial action under this subsection. The Executive Officer may request an ordered recall pursuant to paragraph (e)(2)

(E) The Executive Officer may approve an alternative to engine manufacturer in-use testing where:

(i) engine family production in California is less than or equal to 20 per year; or

(ii) engines cannot be obtained for testing because they are used substantially in watercraft that are not conducive to engine removal such as large watercraft where the engine cannot be removed without dismantling either the engine or the watercraft; or

(iii) other compelling circumstances associated with the structure of the industry and uniqueness of spark-ignition marine engine applications. Such alternatives shall be designed to determine whether the engine family is in compliance in-use.

(F) Collection of In-Use Engines. The engine manufacturer shall procure in-use engines that have been operated between half and three-quarters of the engine's useful life. For purposes of paragraph (b) only, "useful life" means ten (10) years or 350 hours of operation for outboard engines and five (5) years or 350 hours of operation for personal watercraft engines. The engine manufacturer may test engines from more than one model year in a given year. The engine manufacturer shall begin testing within twelve (12) months after receiving notice that the Executive Officer has identified a particular engine family for testing and shall complete testing within twelve months from the start of such testing. Test engines may be procured from sources associated with the engine manufacturer (i.e., manufacturer-established fleet engines, etc.) or from sources not associated with the engine manufacturer (i.e., consumer-owned engines, independently-owned fleet engines, etc.).

(G) Maintenance, Procurement and Testing of In-Use Engines.

(i) A test engine must have a maintenance and use history representative of actual in-use conditions.

a. The engine manufacturer must obtain information from the end users regarding the accumulated usage, maintenance, operating conditions and storage of the test engines.

b. Documents used in the procurement process must be maintained as required by section 30 of the Test Procedures.

(ii) The engine manufacturer may perform minimal "set-to-specification" maintenance on components of a test engine that are not subject to parameter adjustment. Maintenance may include only that which is listed in the owner's manual for engines with the amount of service and age of the acquired test engine. Documentation shall be maintained and retained as required by section 30 of the Test Procedures.

(iii) At least one valid emission test, performed according to the test procedures outlined in Part IV of the Test Procedures is required for each in-use engine.

(iv) The Executive Officer may waive portions or requirements of the test procedures, if any, that are not necessary to determine in-use compliance.

(v) If a selected in-use engine fails to comply with any applicable emission standard, the engine manufacturer must determine the reason for noncompliance. The engine manufacturer must report all such reasons of noncompliance within fifteen days of completion of testing.

(c) Reports and Evaluation

(1) The engine manufacturer must maintain and submit sufficient records to the Executive Officer within three months of completing testing from the in-use program. These records must include, but need not be limited to, the following for each test engine:

(A) Engine family.

(B) Engine model.

- (C) Engine identification (or serial) number.
- (D) Date of manufacture.
- (E) Estimated hours of use.
- (F) Date and time of each test attempt.
- (G) Results (if any) of each test attempt.
- (H) Results of all emission testing.
- (I) Summary of all maintenance and/or adjustments performed.
- (J) Summary of all modifications and/or repairs.
- (K) Determinations of noncompliance and probable causes of failure.
- (L) Description of operating and storage conditions.

(2) If the results of the in-use emission tests indicate that the average emissions of the test engines for any regulated pollutant exceed the applicable emission standards specified in Title 13, California Code of Regulations, section 2442, the entire engine population so represented shall be deemed to exceed the standards. The Executive Officer shall notify the engine manufacturer of the test results and upon receipt of the notification, the engine manufacturer has 45 days to submit a plan to make up all excess emissions resulting from in-use testing non-compliance in accordance with paragraph (c)(3). If excess emissions cannot be made up in accordance with paragraph (c)(3), the engine manufacturer must implement a voluntary recall plan in accordance with the applicable portions of paragraphs (d) and (e). If no excess emissions cannot be made up in accordance with paragraph (c)(3) and the engine manufacturer does not implement a voluntary recall plan, the Executive Officer may prescribe the implementation of an ordered recall pursuant to the applicable portions of paragraph (e)(2).

(3) All excess emissions resulting from in-use noncompliance with the California standard must be made up in the model year following the model year in which the notification of noncompliance is received. In-use noncompliance may not be remedied through implementation of the federal in-use credit program described in Title 40, Code of Federal Regulations, Part 91, Subpart N [October 4, 1996]. As an alternative to recall and with prior approval from the Executive Officer, the engine manufacturer may make up the excess emissions by any one or combination of the following options:

(A) Recertification of the noncompliant engine family to a lower emission level (or higher FEL) that makes up for the noncompliance, while maintaining compliance on a corporate average basis;

(B) Implementation of a running change and/or field fix on the non-compliant engine family;

(C) Implementation of market-based incentives, to be approved by the Executive Officer, to make up the noncompliance; or

(D) Payment of a noncompliance penalty to be determined by the Executive Officer on a per engine basis as provided by Part 5, Division 26 of the Health and Safety Code.

(d) Voluntary Emission Recalls.

(1) When an engine manufacturer initiates a voluntary emission recall campaign, the Executive Officer shall be notified of the recall at least thirty (30) days before owner notification is to begin. The engine manufacturer shall also submit a voluntary recall plan for approval, as described in paragraph (e) below. A voluntary recall plan shall be deemed approved by the Executive Officer within thirty (30) days after receipt of the recall plan unless objected to in the interim.

(2)(A) When any engine manufacturer, based on enforcement test results or any other information provided to or required by the ARB, proposes to initiate a voluntary emission recall program, the engine manufacturer shall submit for approval by the Executive Officer an emission recall plan as described in paragraph (e) below. The plan shall be submitted within 45 days following the receipt of a notification from the ARB that enforcement test results or other information demonstrate an engine noncompliance.

(B) The Executive Officer shall approve the recall plan in writing if it contains the information specified in paragraph (e) where specified and is designed to notify the engine/watercraft owner and correct the non-compliance in an expeditious manner. Notification of engine/watercraft owners and the implementation of recall repairs shall commence no later

than the schedule specified under paragraph (e)(1)(C) and (e)(1)(D), respectively, unless the engine manufacturer can show good cause for the Executive Officer to extend the deadline. If the plan does not contain the provisions of paragraph (e), the Executive Officer shall disapprove the plan in writing and require revisions where deemed necessary. The engine manufacturer may contest such a disapproval by requesting a hearing pursuant to Subchapter 1.25, Title 17, California Code of Regulations. If no request for a hearing is made or the hearing upholds the disapproval, the engine manufacturer shall incorporate all requested revisions to the plan and begin implementation of the recall plan within sixty (60) days of receipt of the disapproval.

(C) The engine manufacturer may also request a public hearing pursuant to the procedures set forth in Subchapter 1.25, Title 17, California Code of Regulations to contest the finding of nonconformity and the need for an ordered recall. If such a hearing occurs and the nonconformity is confirmed therefrom, the engine manufacturer shall submit the recall plan required by paragraph (e)(2) within thirty (30) days after receipt of the Board's decision unless an extension is granted by the Executive Officer.

(e) Voluntary and Ordered Recall Plans.

(1) The recall plan for voluntary and ordered recalls must be submitted to the Executive Officer for review and must contain the following information unless otherwise specified:

(A) A description of each class or category of engines recalled, including the number of engines to be recalled, the model year, and such other information as may be required to identify the engines recalled;

(B) A description of the specific modifications, alterations, repairs, corrections, adjustments or other changes to be made to correct the engines affected by the emission-related defect;

(C) A description of the method by which the engine manufacturer will notify engine/watercraft owners;

(D) A description of the procedure to be followed by engine/watercraft owners to obtain correction of the nonconformity. This may include the date on or after which the engine/watercraft owner can have the nonconformity corrected, the time reasonably necessary to perform the labor to correct the nonconformity and the designation of facilities at which the nonconformity can be remedied;

(E) A description of the class of persons other than dealers and authorized warranty agents of the engine manufacturer who will remedy the defect;

(F) A description of the system by which the engine manufacturer will assure that an adequate supply of parts is available to perform the repair under the plan, including the date by which an adequate supply of parts will be available to initiate the repair campaign, and the method to be used to assure the supply remains both adequate and responsive to engine/watercraft owner demand;

(G) A copy of the letter of notification to be sent to engine/watercraft owners; and

(H) A copy of all necessary instructions to be sent to those persons who are to perform the repair.

(2) For an ordered recall, the recall plan shall include the information required for voluntary recall plans as specified in paragraphs (e)(1). Additionally, it shall include the following:

(A) A plan describing how the maximum feasible capture rate will be achieved for recalls based on either the exceedance of emission standard or on the failure of an emission-related component.

(B) The plan shall also include a schedule for implementing actions to be taken including identified increments of progress towards implementation and deadlines for completion of each increment. If, after good faith efforts, the engine manufacturer cannot reach the maximum feasible capture rate by the applicable deadline, the engine manufacturer must propose mitigation efforts to be approved by the Executive Officer that will offset the emissions of the unrepaired engines.

(3) The engine manufacturer must not condition repair of the noncomplying engine/watercraft on the proper maintenance or use of the engine except for compelling reasons approved by the Executive Officer. The

engine manufacturer, however, is not obligated to repair a component which has been removed or modified.

(4) Record keeping and Reporting Requirements.

(A) The engine manufacturer shall report on the progress of the voluntary or ordered recall program by submitting a report one year from the date owner notification begins and a final report an additional year later. Such reports shall be submitted to the Chief, Mobile Source Operations Division, P.O. Box 8001, 9528 Telstar Avenue, El Monte, CA 91734-8001. For each class of engine subject to the recall program, the yearly report shall contain:

(i) Engine family and emission recall campaign number designated by the engine manufacturer.

(ii) Date engine/watercraft owner notification was begun, and date completed.

(iii) Number of engines involved in the voluntary or ordered recall campaign.

(iv) Number of engines known or estimated to be affected by the nonconformity and an explanation of how this number was determined.

(v) Number of engines inspected pursuant to the voluntary or ordered recall plan.

(vi) Number of inspected engines found to be affected by the nonconformity.

(vii) Number of engines receiving repair under the recall plan and a listing of these engines' engine identification numbers.

(viii) Number of engines determined to be ineligible for recall action due to removed or modified parts.

(ix) A copy of any service bulletins transmitted to dealers or other authorized repair facilities which pertain to the nonconformity to be corrected and that have not previously been reported.

(x) A copy of all communications transmitted to engine/watercraft owners that relate to the nonconformity and that have not previously been submitted.

(B) If the engine manufacturer determines that any of the information submitted pursuant to paragraph (4)(A) above has changed or was incorrect, revised information and an explanation must be submitted. Responses to subsections (4)(A)(v),(vi),(vii),(viii) and (ix) above shall be cumulative totals.

(C) The engine manufacturer shall maintain the names and addresses of engine/watercraft owners:

(i) To whom notification was given;

(ii) Whose engines were repaired or inspected under the recall plan; and

(iii) Whose engines were determined not to qualify for repair due to removed or modified components.

(D) All reports shall be maintained for not less than one year beyond the useful life of the engines and shall be made available to authorized personnel of the ARB upon request.

(f) Penalties. Under an ordered recall, failure of the engine manufacturer to notify the engine/watercraft owners and repair the engines in the manner specified in the recall plan constitutes a violation of Health and Safety Code section 43105 and subjects the engine manufacturer to penalties pursuant to Part 5, Division 26 of the Health and Safety Code.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43105, 43150-43154, 43205.5 and 43210-43212, Health and Safety Code.

HISTORY

1. Renumbering and amendment of former section 2444 to new section 2444.1 filed 7-22-2002; operative 8-21-2002 (Register 2002, No. 30).

§ 2444.2. On-Board Engine Malfunction Detection System Requirements – Model Year 2007 and Later Spark-Ignition Inboard and Sterndrive Marine Engines.

(a)(1) Engines certified under Option 1 of Section 2442(b)(1):

All 2007 and 2008 model year spark-ignition inboard and sterndrive marine engines certified to the 5.0 grams per kilowatt-hour HC+NO_x

standard shall comply with the requirements for subsections (b) through (i) below, except as noted. For all 2009 model year and later spark-ignition inboard and sterndrive marine engines, the requirements in *italics* shall also apply.

(2) Engines certified under Option 2 of Section 2442(b)(1):

All 2008-2009 model year spark-ignition inboard and sterndrive marine engines shall comply with the requirements for subsections (b) through (i) below, except as noted. For all 2010 model year and later spark-ignition inboard and sterndrive marine engines, the requirements in *italics* shall also apply.

This section shall be implemented according to the provisions of the following subsections or by means determined by the Executive Officer to be equivalent in meeting the requirements of this section.

This section shall be implemented according to the provisions of the following subsections or by means determined by the Executive Officer to be equivalent in meeting the requirements of this section.

(b) General requirements.

(1) Spark-ignition sterndrive and inboard marine engines sold as new shall be equipped with an integrated malfunction detection and notification system, hereinafter known as On-board Diagnostics-Marine (OBD-M) system, to identify emission-related malfunctions of the catalyst, fuel system, primary oxygen sensors used for feedback fuel control, secondary oxygen sensors (if equipped) used for catalyst monitoring, computer-sensed comprehensive components, and the on-board computer itself, by means of diagnostic trouble codes stored in non-volatile computer memory. For this section, a computer-sensed comprehensive component is any electronic device that:

(A) provides information to the on-board computer and significantly impacts emissions when malfunctioning; or

(B) is used to enable or disable any other OBD-M monitoring strategy.

(2) The OBD-M system shall not be required to identify engine misfire unless such monitoring is determined necessary by the Executive Officer to preserve or protect the catalyst system. The Executive Officer shall (as part of the in-water testing and development program to be conducted in conjunction with U.S. EPA, the U.S. Coast Guard, the marine industry, and catalyst manufacturers) identify whether, and to what extent, misfire in spark-ignition inboard and sterndrive marine engines may affect catalyst durability and performance. If the Executive Officer determines that engine misfire is a significant factor in reducing the durability and/or performance of marine catalysts, engine manufacturers shall be required to incorporate appropriate misfire detection diagnostics into the OBD-M system. In that case, the provisions in subsection (c)(5) shall be considered sufficient for satisfying the obligation to monitor misfire. Alternate misfire monitoring strategies shall be considered by the Executive Officer and may be implemented in lieu of subsection (c)(5) if demonstrated by the engine manufacturer to provide an equivalent degree of catalyst protection. Otherwise the provisions of that subsection shall be voluntary. In making a determination, the Executive Officer shall consider the cost effectiveness of requiring additional monitoring to address the concerns identified by the test program in addition to the leadtime necessary to modify existing hardware and software, to add misfire detection hardware (e.g., sensors) if necessary, and to develop engine-specific calibrations to accommodate misfire monitoring. Notwithstanding, misfire monitoring shall not be required prior to the 2009 model year, and may be delayed beyond that date pending Executive Officer discretion.

(3) The OBD-M system shall not be required to detect any emissions-related malfunction that prevents the engine from starting. The OBD-M system shall not be required to monitor any emissions-related component or system if the only reliable way to accomplish such monitoring would either significantly impair engine/vessel operability or decrease the safety involved with operating the engine/vessel.

(4) OBD-M systems shall have the capability to activate an audio or visual alert device located on the marine vessel to inform vessel occupants in the event of a malfunction, and to transmit diagnostic information locally via a standardized data link connector.

(5) Spark-ignition sterndrive and inboard marine vessels shall be equipped with an audio alert device and/or visual alert device that is compatible with the activation function of the OBD-M system on the installed engine.

(A) If equipped, the audio alert device shall provide sufficient volume and intensity to be readily perceptible to vessel occupants during normal modes of vessel operation and occupant activity, but shall not exceed applicable maximum noise levels as set by authorized federal or State agencies. Further, the audio alert device shall in no way impede the function of required sound-signaling devices, or other safety-related devices, already present on the vessel. The audio alert device shall sound briefly in the engine-run key position before engine cranking to indicate that the audio alert device is functional.

(B) If equipped, the visual alert device shall provide sufficient activation and be located such that it is readily visible under normal lighting conditions, but shall in no way impede the function of any visual distress-signaling device, fog signal, or navigational light. The visual alert device shall activate in the engine-run key position before engine cranking to indicate that the visual alert device is functional and shall, when activated, display the phrase "Service Required" or an equivalent standardized phrase or symbol to be determined as specified in Subsection (h).

(6) Malfunction thresholds for catalyst, fuel system, oxygen sensor, and computer-sensed comprehensive component diagnostics shall be determined by the engine manufacturer. However, the engine manufacturer must demonstrate that the determination of these thresholds is sufficient for detecting emission-related malfunctions in a timely and meaningful manner subject to Executive Officer approval (see Subsection (f)(2)).

(7) Regarding diagnostic system monitoring and audio/visual alert device activation requirements, engine manufacturers are required to define monitoring conditions that are representative of typical in-use operation, and which will result in the routine execution and completion of all OBD-M diagnostics in-use.

(8) For model years 2007–2008 on engines complying with paragraph (a)(1) of this section, and for model years 2008–2009 on engines complying with paragraph (a)(2) of this section, activation of the audio/visual alert device upon detection of a catalyst, fuel system, or oxygen sensor malfunction shall be optional. However, there are no exemptions from storing diagnostic trouble codes in non-volatile computer memory during these model years for any malfunction. The OBD-M must be capable of fully communicating stored information to a generic scan tool via the standardized data link connector.

(9) Engine manufacturers may employ alternate statistical audio/visual alert device activation and diagnostic trouble code storage protocols to those specified in these requirements, subject to Executive Officer approval, based on comparable timeliness in detecting a malfunction and evaluating system performance.

(10) Should emission control devices/strategies be introduced on the engine in addition to those identified herein as requiring monitoring (e.g., exhaust gas recirculation), the engine manufacturers shall notify the Executive Officer and submit a plan for monitoring the new device/strategy prior to its incorporation into the OBD-M system. This would not apply to low-permeation hoses should they be used to comply with the supplemental emission reduction requirements of Option 2 in Section 2442(b)(1).

(11) Engine manufacturers may request Executive Officer approval to disable any diagnostic strategy at ambient engine starting temperatures below forty (40) degrees Fahrenheit (low ambient temperature conditions may be determined based on intake air or engine coolant temperature at engine starting), and at elevations above six thousand five hundred (6,500) feet above sea level provided the engine manufacturer submits data and/or an engineering evaluation which adequately demonstrate that monitoring would be unreliable when such conditions exist. Notwithstanding, diagnostic system disablement may be requested at other ambient engine starting temperatures if the engine manufacturer adequately

demonstrates with data and/or an engineering evaluation that misdiagnosis would occur due to the impact of such ambient temperatures on the performance of the component itself.

(12) Engine manufacturers may disable individual monitors that can be affected by running out of fuel, provided disablement will not occur when the fuel level is above fifteen percent of the nominal capacity of the fuel tank.

(13) The Executive Officer may grant an extension for compliance with the requirements of this section, with respect to an engine model or engine family, if the engine manufacturer demonstrates that a present electronic control system cannot be modified in time for the 2007 or 2008 model year, as applicable per subsection (a) of this section, because major design changes, not consistent with the engine manufacturer's projected changeover schedule, would be needed to comply with the provisions of the regulation. The period of extension shall not exceed that period of time necessary to enable modification of the electronic control system in accordance with the engine manufacturer's projected changeover schedule, or a period of two years, whichever first occurs. Engine manufacturers requesting an extension shall, no later than six months prior to the applicable model year, submit to the Executive Officer a written request for exemption, setting forth the required demonstration and specifying the period for which the extension is requested.

(14) All engines certified to the 5.0 gram per kilowatt-hour NMHC+NO_x standard, including those engines certified using the corporate averaging provisions in 2442(b), must be equipped with OBD-M for the engine's emission-related components.

(c) Monitoring requirements.

(1) Catalyst monitoring.

(A) Purpose and scope:

(i) The diagnostic system shall monitor the catalyst system on spark-ignited marine engines to ensure that the performance of the catalyst has not been compromised due to engine misfire or other factors that can decrease catalyst durability.

(ii) Manufacturers of spark-ignited lean-burn marine engines may request that the Executive Officer exempt such applications from these catalyst monitoring requirements if it can be demonstrated that a reliable monitoring technology is not available. The Executive Officer shall approve such a request upon determining that all reasonable monitoring technologies have been considered to the extent possible.

(B) Malfunctioning criteria:

(i) The catalyst system shall be considered malfunctioning when the temperature of the measured catalyst(s) exceeds a threshold value, as determined by the engine manufacturer, indicating abnormally high operating temperature; or when the catalyst temperature fails to reach a minimum value, as determined by the engine manufacturer, indicating "light-off" of the catalyst after a manufacturer-specified time interval has elapsed.

(ii) Subject to executive officer approval, alternate malfunction criteria (e.g., correlating oxygen sensor frequencies to catalyst conversion efficiency) may be employed by the engine manufacturer if the alternate criteria are appropriate and would provide for enhanced monitoring capability.

(C) Monitoring conditions:

(i) The engine manufacturer shall define conditions for monitoring the catalyst with the constraints that the check shall:

- a. be conducted at the earliest acceptable opportunity encountered after the beginning of each operating cycle; and
- b. the monitoring system shall operate at least once per in-use operating cycle during which the engine manufacturer-defined monitoring conditions are met.

(D) Malfunctioning notification and diagnostic trouble code storage:

(i) Upon detection of a catalyst malfunction, the audio/visual alert device shall be activated and a diagnostic trouble code stored no later than the end of the next operating cycle during which monitoring occurs provided the malfunction is again present.

(ii) The diagnostic system shall temporarily disable catalyst monitoring when a malfunction exists that could affect the proper evaluation of catalyst efficiency.

(iii) The monitoring method for the catalyst(s) shall be capable of detecting when a catalyst trouble code has been cleared (except diagnostic system self-clearing), but the catalyst has not been replaced (e.g., catalyst overtemperature approaches may not be acceptable).

(2) Fuel system monitoring.

(A) Purpose and scope: The diagnostic system shall monitor the fuel delivery system for its ability to dynamically adjust fuel delivery.

(B) Malfunction criteria: The engine manufacturer shall establish malfunction criteria to monitor the fuel delivery system. If the engine is equipped with fuel trim circuitry, the engine manufacturer shall include as one of the malfunction criteria the condition where the trim circuitry has used up all of the trim adjustment allowed within the engine manufacturer's selected limit(s). Engine manufacturers may compensate the criteria limit(s) appropriately for changes in altitude or for other similar identifiable operating conditions when they occur.

(C) Monitoring conditions: The fuel system shall be monitored continuously for the presence of a malfunction.

(D) Malfunction notification and diagnostic trouble code storage:

(i) For fuel systems with short-term trim only capability, the diagnostic system shall store a diagnostic trouble code after the fuel system has attained the criteria limit for an engine manufacturer-defined time interval sufficient to determine a malfunction. If the malfunction criteria limit and time interval are exceeded, the audio/visual alert device shall be activated and a diagnostic trouble code stored no later than the end of the next operating cycle in which the criteria and interval are again exceeded; unless operating conditions similar to those under which the problem was originally detected (manufacturer-defined conditions) have been encountered without such an exceedance, in which case the initial temporary code and stored conditions may be erased. Furthermore, if similar operating conditions are not encountered during forty (40) operating cycles subsequent to the initial detection of a malfunction, the initial temporary code and stored conditions may be erased.

(ii) For fuel systems with long-term fuel trim capability, upon attaining a long-term based malfunction criteria limit independent of, or in combination with, the short-term trim system status, the audio/visual alert device shall be activated and a diagnostic trouble code stored no later than the end of the next operating cycle if the malfunction is again detected. If the malfunction is not detected during the second operating cycle, the audio/visual alert device shall be activated and a diagnostic trouble code stored no later than the next operating cycle in which the malfunction is again detected; unless operating conditions similar to those under which the problem was originally detected (manufacturer-defined conditions) have been encountered without an indication of a malfunction, in which case the initial temporary code and stored conditions may be erased. Furthermore, if similar operating conditions are not encountered during forty (40) operating cycles subsequent to the initial detection of a malfunction, the initial temporary code and stored conditions may be erased.

(3) Oxygen sensor monitoring.

(A) Purpose and scope:

(i) The diagnostic system shall monitor the output voltage and response rate of all primary (fuel control) oxygen (lambda) sensors for malfunction. It shall also monitor secondary oxygen sensors when used as a monitoring device for proper output voltage and/or response rate. Response rate is the time required for the oxygen sensor to switch from lean-to-rich once it is exposed to a richer than stoichiometric exhaust gas mixture or from rich-to-lean when exposed to a leaner than stoichiometric exhaust gas mixture. As a precaution, measuring oxygen sensor switching frequency may not be an adequate indicator of oxygen sensor response rate, particularly at low speeds.

(ii) Either the lean-to-rich or both the lean-to-rich and rich-to-lean response rates shall be checked. Response rate checks shall evaluate the

portions of the sensor's dynamic signal that are most affected by sensor malfunctions such as aging or poisoning.

Engine manufacturers may observe the voltage envelope of the sensor when cycled at a frequency of 1.5 Hertz or greater, as determined by the engine manufacturer, to evaluate a slow response rate sensor (i.e., a slow sensor cannot achieve maximum and/or minimum voltage as will a good sensor, given a properly chosen switching frequency and fuel step change for the check). With Executive Officer approval, engine manufacturers may use alternative parameters to comply with this requirement such as voltage ranges and fuel-air switching frequencies based on a determination that the modifications will result in an accurate and timely evaluation of the sensor.

(iii) For sensors with different characteristics, the engine manufacturer shall submit data and an engineering evaluation to the Executive Officer for approval based on showing equivalent evaluation of the sensor.

(B) Malfunction criteria:

An oxygen sensor shall be considered malfunctioning when the voltage, response rate, or other criteria, as determined by the engine manufacturer, are exceeded, or when sensor output characteristics are no longer sufficient (e.g., lack of sensor switching) for use as a diagnostic system monitoring device (e.g., for catalyst efficiency monitoring).

(C) Monitoring conditions:

(i) The engine manufacturer shall define conditions for monitoring the oxygen sensor(s) with the constraints that the check shall:

- a. be conducted at the earliest acceptable opportunity encountered after the beginning of each operating cycle; and
- b. operate at least once per in-use operating cycle during which the engine manufacturer-defined monitoring conditions are met.

(ii) For primary oxygen sensors(s) used for fuel control, the response rate and output voltage shall be monitored for malfunction after the engine has commenced closed-loop operation. If the oxygen sensor(s) is used as part of the monitoring strategy for the catalyst, the oxygen sensor(s) diagnostics should be scheduled to execute before the catalyst diagnostics begin.

(D) Malfunction notification and diagnostic trouble code storage: Upon detection of any oxygen sensor malfunction, the diagnostic system shall store a diagnostic trouble code and the audio/visual alert device shall activate no later than the end of the next operating cycle during which monitoring occurs provided the malfunction is again present.

(4) Computer-sensed comprehensive component monitoring.

(A) Purpose and scope: The diagnostic system shall monitor for malfunction any computer-sensed electronic engine components not otherwise described in this subsection that provide input to (directly or indirectly) the on-board computer, and that: 1) can affect emissions during any reasonable in-use operating condition, or 2) are used as part of the diagnostic strategy for any other monitored system or component.

(i) The monitoring system shall have the capability of detecting, *at a minimum, lack of circuit continuity and out of range values to ensure proper operation of the input device. The determination of out of range values shall include logic evaluation of available information to determine if a component is operating within its normal range (e.g., a low throttle position sensor voltage would not be reasonable at a high engine speed with a high mass airflow sensor reading). To the extent feasible, said logic evaluation shall be "two-sided" (i.e., verify a sensor output is not inappropriately high or low).*

(ii) Computer-sensed comprehensive components may include, but are not limited to, the engine speed sensor, crank angle sensor, knock sensor, throttle position sensor, coolant temperature sensor, cam position sensor, and other electronic components such as sensors and fuel injectors.

(iii) *The coolant temperature sensor shall be monitored for achieving a stabilized minimum temperature level that is needed to achieve closed-loop operation within an engine manufacturer-specified time interval after starting the engine. The time interval shall be a function of starting engine coolant temperature and/or a function of intake air temperature.*

Engine manufacturers may suspend or delay the diagnostic if the engine is subjected to conditions which could lead to false diagnosis (e.g., engine operation at idle for more than 50 to 75 percent of the warm-up time).

(B) Malfunction criteria:

Computer-sensed comprehensive components shall be considered malfunctioning when, *at a minimum*, lack of circuit continuity or engine manufacturer-specified out-of-range values occur.

(C) Monitoring conditions:

Computer-sensed components shall be monitored continuously for proper range of values and circuit continuity. *For rationality monitoring (where applicable), engine manufacturers shall define appropriate operating conditions that are representative of typical in-use operation and will result in the routine execution and completion of all diagnostics in-use. Rationality monitoring shall occur at least once per operating cycle during which the engine manufacturer-defined monitoring conditions are met.*

(D) Malfunction notification and diagnostic trouble code storage:

Upon detecting a malfunction, the diagnostic system shall store a diagnostic trouble code and activate the audio/visual alert device no later than the end of the next operating cycle during which monitoring occurs provided the malfunction is again detected.

(5) Misfire monitoring.

The provisions in this subsection shall be considered voluntary unless otherwise determined by the Executive Officer according to subsection (b)(2) above.

(A) Purpose and scope: The diagnostic system shall identify the occurrence of engine misfire that can result in damage to the catalyst system. Identification of the misfiring cylinder is not required, however all patterns of misfire must be identified regardless of whether it occurs in a single or multiple number of cylinders.

(B) Malfunctioning criteria: The diagnostic system shall identify a malfunction when the total number of misfires evaluated in 200 crankshaft-revolution increments for each engine speed and load condition exceeds a percentage (determined by the engine manufacturer to cause damage to the catalyst system) of the total number of firing events in each increment. These threshold percentages shall be provided in the certification documentation. Subject to Executive Officer approval, an interval longer than 200 crankshaft-revolutions may be used. The engine manufacturer shall submit in the certification documentation catalyst temperature data versus percent misfire over the full range of engine speed and load conditions. Alternatively, catalyst temperature data may be submitted for every 500 rpm increment along the Propeller Law curve beginning at engine idle and continuing throughout the "Not to Exceed Zone" for marine propulsion engines with Fixed- and Variable-pitch propellers, as defined in 40 CFR, section 94.106, (July 1, 2001), which is incorporated by reference herein. The data shall be obtained from a representative cross section (from small to large displacements) of an engine manufacturer's production. Up to three such engine evaluations shall be documented per engine manufacturer, though an engine manufacturer may submit more data, if desired. An engineering evaluation shall be provided for establishing malfunction criteria for the remainder of engine families in the engine manufacturer's product line. The Executive Officer shall waive the evaluation requirement each year if, in the judgment of the Executive Officer, technological changes do not affect the previously determined malfunction criteria.

(C) Monitoring conditions:

(i) Monitoring for misfire shall be continuous from engine starting under all steady-state positive torque engine speeds and load conditions.

(ii) As an exception to monitoring misfire during all positive torque operating conditions, engine manufacturers may disable misfire monitoring in the engine operating region bound by the positive torque line (i.e., engine load with the transmission in neutral), and the two following engine operating points:

a. an engine speed of 3,000 rpm with the engine load at the positive torque line; and

b. the redline engine speed (defined in section 2441) with the engine's manifold vacuum at four inches of mercury lower than that at the positive torque line.

Misfire detection systems unable to detect all misfire patterns under all required conditions shall be evaluated for compliance by the Executive Officer based on, but not limited to, the following factors:

- c. the magnitude of the region(s) in which misfire detection is limited,
- d. the degree to which misfire detection is limited in the region(s) (i.e., the probability of detection of misfire events),
- e. the frequency with which said region(s) are expected to be encountered in-use,
- f. the type of misfire patterns for which misfire detection is troublesome, and
- g. demonstration that the monitoring technology employed is not inherently incapable of detecting misfire under required conditions (i.e., compliance can be achieved on other engines).

The evaluation shall be based on the following misfire patterns:

- h. equally spaced misfire occurring on randomly selected cylinders,
- i. single cylinder continuous misfire; and
- j. paired cylinder (cylinders firing at the same crank angle) continuous misfire.

Further, with Executive Officer approval, the engine manufacturer may disable misfire monitoring or employ higher malfunction criteria when misfire cannot be distinguished from other effects (e.g., turbulence causing the propeller to alternately emerge from then re-submerge into the water.) when using the best reasonably available monitoring technology. The engine manufacturer shall present data and/or an engineering evaluation to the Executive Officer to justify the proposed action. Executive Officer approval shall be based on the extent to which monitoring is expected to be disabled in relation to the capabilities of the best available monitoring technologies as applied to other engines. However, any such disablement occurring within the first 5 seconds after engine starting shall not require Executive Officer approval. Additionally, for engines with greater than eight cylinders, the Executive Officer shall waive the requirements of this section provided the engine manufacturer submits data and/or an engineering evaluation which adequately demonstrates that misfire detection throughout the required operating region cannot be achieved when employing proven monitoring technology (i.e., a technology that provides for compliance with these requirements on other engines) and provided misfire is detected to the fullest extent permitted by the technology.

(D) Malfunction notification and diagnostic trouble code storage:

(i) Upon detection of the level of misfire specified in subsection (b)(5)(B) above, the following criteria shall apply for audio/visual alert device activation and diagnostic trouble code storage:

a. A temporary diagnostic trouble code shall be stored no later than after the third exceedance of the specified misfire level when operating in the region bound by modes 2 through 5 of the spark-ignition marine engine test cycle and no later than after the first exceedance of the specified misfire level when operating at any other engine speed and load condition during a single operating cycle. If the level of misfire is exceeded again (a single exceedance) during the following operating cycle, or the next operating cycle in which similar conditions are encountered (manufacturer defined conditions), the audio/visual alert device shall activate, a diagnostic trouble code shall be stored, and the audio/visual alert device shall remain continuously activated, even if the misfire ceases. The initial temporary code and stored conditions may be erased if misfire is not detected during the following operating cycle and similar conditions have been encountered without an exceedance of the specified misfire level. The code and conditions may also be erased if similar operating conditions are not encountered during forty operating cycles subsequent to the initial detection of a malfunction.

b. Notwithstanding, in engines that provide fuel shutoff and default fuel control to prevent over fueling during misfire conditions, the audio/visual alert device need not activate provided that the fuel shutoff and default control shall be activated as soon as misfire is detected. Fuel shutoff

and default fuel control may be deactivated only to permit fueling outside of the misfire range.

(d) Additional audio/visual alert device activation and diagnostic trouble code storage protocol.

(1) Audio/visual alert device activation: For all emission-related components/systems, upon final determination of a malfunction, the OBD-M system shall activate an audio or visual alert device.

(A) If so equipped, visual alert devices shall remain activated continuously whenever a malfunction has been identified by the OBD-M system, and may be deactivated only according to the provisions in paragraph (2) below, or with a scan tool after appropriate repairs have been effected.

(B) If so equipped, audio alert devices may remain activated continuously when a malfunction has been identified by the OBD-M system; however, the Executive Officer shall consider alternative strategies in which the audio alert is activated on a discontinuous, but repetitive, basis. To be acceptable, discontinuous audio alert strategies must convey a sense of urgency to vessel operators regarding the presence of OBD-M malfunctions.

Upon fulfillment of the standardization processes referred to in subsection (g) below, a protocol for audio alert device activation shall be specified authorizing only discontinuous activation. A standardized notification format is necessary to facilitate consumer association of the audio alert pattern with the identification of an OBD-M malfunction independent of manufacturer or platform. OBD-M system designers are encouraged to cooperate fully with each other and the ARB early on in this endeavor to minimize the redesigning of OBD-M audio alert activation algorithms once a standardized protocol has been finalized.

(C) The diagnostic system shall store a diagnostic trouble code whenever the audio/visual alert device is activated. The diagnostic system shall activate the audio/visual alert device and shall store a diagnostic trouble code whenever the engine enters a default or "limp home" mode of operation. The diagnostic system shall activate the audio/visual alert device and shall store a diagnostic trouble code whenever the engine control system fails to enter closed-loop operation (if employed) within an engine manufacturer specified minimum time interval.

(2) Audio/visual alert device deactivation:

(A) *Misfire and Fuel System Malfunctions*: For *misfire* or fuel system malfunctions, the audio/visual alert device may be deactivated if the fault does not recur when monitored during three subsequent sequential operating cycles in which conditions are similar to those under which the malfunction was first determined.

(B) *All Other Malfunctions*: For all other faults, the audio/visual alert device may be deactivated after three subsequent sequential operating cycles during which the monitoring system responsible for activating the audio/visual alert device functions without detecting the malfunction and if no other malfunction has been identified that would independently activate the audio/visual alert device according to the requirements outlined above.

(3) Erasing a diagnostic trouble code: The diagnostic system may erase a diagnostic trouble code if the same fault is not re-registered in at least forty (40) engine warm-up cycles, and the audio/visual alert device is not activated for that diagnostic trouble code.

(e) Tampering protection: Computer-coded engine operating parameters shall not be changeable without the use of specialized tools and procedures (e.g. soldered or potted computer components or sealed (or soldered) computer enclosures). Subject to Executive Officer approval, engine manufacturers may exempt from this requirement those product lines that are unlikely to require protection. Criteria to be evaluated in making an exemption include, but are not limited to, current availability of performance chips, high performance capability of the engine, and sales volume.

(f) Certification documentation: The engine manufacturer shall submit the following documentation for each engine family at the time of certification. With Executive Officer approval, one or more of the documentation requirements specified in this section may be waived or al-

tered if the information required would be redundant or unnecessarily burdensome to generate:

(1) A written description of the functional operation of each monitoring strategy within the diagnostic system.

(2) A table providing the following information for each monitored component or system (either computer-sensed or -controlled) of the emission control system:

(A) corresponding diagnostic trouble code.

(B) monitoring method or procedure for malfunction detection.

(C) primary malfunction detection parameter and its type of output signal.

(D) fault criteria limits used to evaluate output signal of primary parameter.

(E) other monitored secondary parameters and conditions (in engineering units) necessary for malfunction detection.

(F) monitoring time length and frequency of checks.

(G) criteria for activating the audio/visual alert device.

(3) A logic flowchart describing the general method of detecting malfunctions for each monitored emission-related component or system. To the extent possible, abbreviations in SAE J1930 "Electrical/Electronic Systems Diagnostic Terms, Definitions, Abbreviations, and Acronyms," May 1998, shall be used. J1930 is incorporated by reference herein. The information required in the chart under (2) above may instead be included in this flow chart, provided all of the information required in (2) is included.

(4) A listing and block diagram of the input parameters used to calculate or determine calculated load values and the input parameters used to calculate or determine fuel trim values.

(5) Any other information determined by the Executive Officer to be necessary to demonstrate compliance with the requirements of this section.

(g) Confirmatory testing: The ARB may perform confirmatory testing of engine manufacturers' diagnostic systems for compliance with requirements of this section in accordance with malfunction criteria submitted in the engine manufacturer's approved certification documentation. The ARB or its designee may install appropriately deteriorated or malfunctioning components in an otherwise properly functioning test engine (or simulate a deteriorated or malfunctioning component response) in order to test the fuel system, oxygen sensor, catalyst system, and misfire (if applicable) monitors for compliance with the applicable constraints in this section. Diagnostic systems of a representative sample of engines that uniformly fail to meet the requirements of this section may be recalled for correction.

(h) Standardization: The spark-ignition inboard and sterndrive marine industry, in cooperation with ARB, will develop and adhere to standardized specifications for the implementation of OBD-M, including diagnostics trouble code formats, communication, and scan tool protocols.

(i) Implementation schedule.

(1) These OBD-M requirements, unless otherwise specified, shall be implemented beginning with the 2007 model year for engines complying with (a)(1) of this section, and with the 2008 model year for engines complying with (a)(2) of this section.

(2) All engine manufacturers shall meet these OBD-M requirements by the 2009 model year for engines complying with (a)(1) of this section, and the 2010 model year for engines complying with (a)(2) of this section.

(3) The Executive Officer, upon receipt of an application from the engine manufacturer, may certify the engines in question even though said engines may not comply with one or more of the requirements of these subsections. Such certification is contingent upon the extent to which these requirements are satisfied overall on the engine applications in question and a demonstrated good-faith effort to meet these requirements in full by evaluating and considering the best available monitoring technology. Each incident of non-compliance will be recorded as a deficiency.

(A) Engine manufacturers of non-complying systems shall be subject to fines pursuant to section 43016 of the California Health and Safety Code for each deficiency identified subject to the following limitations:

(i) The specified fines shall apply to the third and subsequently identified deficiencies, with the exception that fines shall apply to all monitoring system deficiencies wherein a required monitoring strategy is completely absent from the OBD-M system; and

(ii) Engine manufacturers may not carry over monitoring system deficiencies for more than two model years unless it can be adequately demonstrated that substantial engine hardware modifications and additional lead time beyond two years would be necessary to correct the deficiency, in which case the deficiency may be carried over for three model years.

(B) For the third deficiency and every deficiency thereafter identified in an engine model, the fines shall be in the amount of \$25 per deficiency per engine for non-compliance with any of the monitoring requirements specified in this section. Total fines per engine under this section shall not exceed \$250 per engine and shall be payable to the State Treasurer for deposit in the Air Pollution Control Fund.

NOTE: Authority cited: Sections 39515, 39600, 39601, 43013, 43018, 43104 and 44036.2, Health and Safety Code; Sections 27156 and 38395, Vehicle Code. Reference: Sections 39002, 39003, 39667, 43000, 43004, 43008.6, 43013, 43016, 43018, 43100, 43101, 43101.5, 43102, 43104, 43105, 43106, 43204 and 44036.2, Health and Safety Code; Sections 27156, 38391 and 38395, Vehicle Code.

HISTORY

1. New section filed 7-22-2002; operative 8-21-2002 (Register 2002, No. 30).
2. Redesignation and amendment of introductory paragraphs as subsections (a)-(a)(2), subsection relettering, amendment of newly designated subsections (b)(2), (b)(5)(B), (b)(8), (b)(10) and (b)(13), new subsection (b)(14) and amendment of newly designated subsections (c)(5) and (h)(1)-(2) filed 11-13-2006; operative 12-13-2006 (Register 2006, No. 46).

§ 2445.1. Defects Warranty Requirements for Model Year 2001 and Later Spark-Ignition Marine Engines.

(a) Applicability. This section applies to model year 2001 and later spark-ignition personal watercraft and outboard marine engines, and to model year 2003 and later spark-ignition inboard and sterndrive marine engines. The warranty period begins on the date the engine or equipment is delivered to an ultimate purchaser or first placed into service (e.g., a demonstration engine or watercraft).

(b) General Emissions Warranty Coverage. The manufacturer of each spark-ignition marine engine must warrant to the ultimate purchaser and each subsequent purchaser that the engine is:

(1) Designed, built and equipped so as to conform with all applicable regulations adopted by the Air Resources Board pursuant to its authority in Chapters 1 and 2, Part 5, Division 26 of the Health and Safety Code; and

(2) Free from defects in materials and workmanship that cause the failure of a warranted part to be identical in all material respects to that part as described in the engine manufacturer's application for certification.

(c) Warranty Period. In the case of all new, spark-ignition marine engines, the warranty period will be:

(1) For model year 2001 and later spark-ignition personal watercraft and outboard marine engines, a period of 4 years or 250 hours of use, whichever occurs first.

(2) For model year 2003-2005 spark-ignition inboard and sterndrive marine engines, a period of 2 years.

(3) For model year 2006 and later spark-ignition inboard and sterndrive marine engines:

(A) Manufacturers certifying engines according to Option 1 in Section 2442(b)(1) for model years 2006-2008, a period of 2 years.

(B) Manufacturers certifying engines according to Option 2 in Section 2442(b)(1):

1. For model years 2006-2007, a period of 2 years.

2. For model year 2008, a period of 3 years or 480 hours, whichever first occurs.

(C) Model Year 2009 and Later:

1. Engines 373 kilowatts or less, a period of 3 years or 480 hours, whichever first occurs.

2. Engines greater than 373 kilowatts, but less than or equal to 485 kilowatts:

a. A period of 3 years or 480 hours, whichever first occurs, for electronic emission-related components including, but not limited to, sensors (e.g., oxygen sensors, mass air flow sensors, crankshaft position sensors, etc.), solenoids (e.g., fuel injectors, idle control valves, pressure regulators, etc.), ignition components, powertrain control modules, and for the following: catalysts, carburetors, fuel pumps, evaporative components (including low-permeation hoses), exhaust gas recirculation, and other direct emissions devices,

b. A period of 3 years or 150 hours, whichever first occurs, for mechanical emission-related components, including but not limited to, the engine block, crankshaft, camshaft, connecting rods, valves, manifolds, rotating parts, pistons, and turbo/superchargers.

3. Engines greater than 485 kilowatts:

a. A period of 3 years or 480 hours, whichever first occurs, for electronic emission-related components including, but not limited to, sensors (e.g., oxygen sensors, mass air flow sensors, crankshaft position sensors, etc.), solenoids (e.g., fuel injectors, idle control valves, pressure regulators, etc.), ignition components, powertrain control modules, and for the following: catalysts, carburetors, fuel pumps, evaporative components (including low-permeation hoses), exhaust gas recirculation, and other direct emissions devices,

b. A period of 1 year or 50 hours, whichever first occurs, for mechanical emission-related components, including but not limited to, the engine block, crankshaft, camshaft, connecting rods, valves, manifolds, rotating parts, pistons, and turbo/superchargers.

4. Notwithstanding (c)(3)(C)2. and (c)(3)(C)3. above, an engine manufacturer may request an alternate hourly warranty period for specific components in an engine family with rated power greater than 373 kW provided the following:

a. Under no circumstances may the manufacturer request an alternate interval that is less than 50 hours of operation, and the alternate interval must be at least as long as the engine manufacturer's recommended overhaul interval.

b. The manufacturer must submit actual durability test data if engines identical to those in the engine family for which the manufacturer is requesting an alternate warranty period have already been produced and are in use. Otherwise, the manufacturer must submit equivalent data from research engines or similar engine models that are already in production, along with an engineering evaluation relating the results of those data to the engine components for which an alternate interval is being requested.

c. The manufacturer may submit other information if the manufacturer believes it beneficial for demonstrating the appropriateness of the requested alternate interval.

d. The Executive Officer shall review the data provided, as well as any other information known to the executive officer, in determining whether or not the requested hourly interval is representative of the expected useful life of the affected components or of the engine itself. If this determination is affirmed, the Executive Officer shall approve the manufacturer's request for an alternate warranty period.

(d) Subject to the conditions and exclusions of Subsection (g), the warranty on emission-related parts is as follows:

(1) Any warranted part that is not scheduled for replacement as required maintenance in the written instructions required by Subsection (f) must be warranted for the warranty period defined in Subsection (c). If the part fails during the period of warranty coverage, the part must be repaired or replaced by the engine manufacturer according to Subsection (4) below. Any such part repaired or replaced under warranty must be warranted for the remainder of the period.

(2) Any warranted part that is scheduled only for regular inspection in the written instructions required by Subsection (f) must be warranted for the warranty period defined in Subsection (c). A statement in such written instructions to the effect of "repair and replace as necessary" will not reduce the period of warranty coverage. Any such part repaired or re-

placed under warranty must be warranted for the remaining warranty period.

(3) Any warranted part that is scheduled for replacement as required maintenance in the written instructions required by Subsection (f) must be warranted for the period of time before the first scheduled replacement date for that part. If the part fails before the first scheduled replacement, the part must be repaired or replaced by the engine manufacturer according to Subsection (4) below. Any such part repaired or replaced under warranty must be warranted for the remainder of the period prior to the first scheduled replacement point for the part.

(4) Repair or replacement of any warranted part under the warranty provisions of this article must be performed at a warranty station at no charge to the owner.

(5) Notwithstanding the provisions of Subsection (4), warranty services or repairs must be provided at all engine manufacturer distribution centers that are franchised to service the subject engines.

(6) The engine owner must not be charged for diagnostic labor that is directly associated with diagnosis of a defective, emission-related warranted part, provided that such diagnostic work is performed at a warranty station.

(7) The engine manufacturer is liable for damages to other engine components proximately caused by a failure under warranty of any warranted part.

(8) Throughout the engine's warranty period defined in Subsection (c), the engine manufacturer must maintain a supply of warranted parts sufficient to meet the expected demand for such parts.

(9) Any replacement part may be used in the performance of any warranty maintenance or repairs and must be provided without charge to the owner. Such use will not reduce the warranty obligations of the engine manufacturer.

(10) Add-on or modified parts, as defined in Section 1900(b)(1) and (b)(10), Title 13, that are not exempted by the Air Resources Board may not be used. The use of any non-exempted add-on or modified parts by the ultimate purchaser will be grounds for disallowing a warranty claim made in accordance with this article. The engine manufacturer will not be liable under this article to warrant failures of warranted parts caused by the use of a non-exempted add-on or modified part.

(11) The Executive Officer may request and, in such case, the engine manufacturer must provide, any documents that describe that engine manufacturer's warranty procedures or policies.

(e) Each engine manufacturer must provide a copy of the following emission warranty parts list with each new engine, using those portions of the list applicable to the engine.

(1) Fuel Metering System

(A) Carburetor and internal parts (and/or pressure regulator or fuel injection system)

(B) Air/fuel ratio feedback and control system

(C) Cold start enrichment system

(D) Intake valve(s)

(2) Air Induction System

(A) Controlled hot air intake system

(B) Intake manifold

(C) Air Filter

(D) Turbocharger systems

(E) Heat riser valve and assembly

(3) Ignition System

(A) Spark plugs

(B) Magneto or electronic ignition system

(C) Spark advance/retard system

(D) Ignition coil and/or control module

(E) Ignition wires

(4) Lubrication System

(A) Oil pump and internal parts

(B) Oil injector(s)

(C) Oil meter

(5) Positive Crankcase Ventilation (PCV) System

(A) PCV valve

(B) Oil filler cap

(6) Exhaust Gas Recirculation (EGR) System

(A) EGR valve body, and carburetor spacer if applicable

(B) EGR rate feedback and control system

(7) Air Injection System

(A) Air pump or pulse valve

(B) Valves affecting distribution of flow

(C) Distribution manifold

(8) Exhaust System

(9) Catalyst or Thermal Reactor System

(A) Catalytic converter

(B) Thermal reactor

(C) Exhaust manifold

(D) Exhaust valve(s)

(10) Miscellaneous Items Used in Above Systems

(A) Hoses, clamps, fittings, tubing, sealing gaskets or devices, and mounting hardware

(B) Pulleys, belts and idlers

(C) Vacuum, temperature, check, and time sensitive valves and switches

(D) Electronic Controls

(f) Each engine manufacturer must provide with each new engine written instructions for the maintenance and use of the engine by the owner. The instructions must be consistent with this Article. A copy of the instructions for each engine family must be provided to the Executive Officer upon commencement of its production.

(g) Exclusions.

(1) The repair or replacement of any warranted part otherwise eligible for warranty coverage under Subsection (d) may be excluded from such warranty coverage if the engine manufacturer demonstrates that the engine has been abused, neglected, or improperly maintained, and that such abuse, neglect, or improper maintenance was the direct cause of the need for the repair or replacement of the part.

(2) Engine manufacturers must warrant engines for the yearly warranty period specified in paragraph (c). For Outboard and Personal Watercraft engines, and for inboard/sterndrive engines greater than 485 kilowatts, manufacturers may warrant engines for the hour warranty period if the engines:

(A) are equipped with hour meters; (an ECM-integrated hour meter for inboard/sterndrive engines)

(B) are equipped with devices similar to hour meters that are approved by the Executive Officer; or

(C) are or will be accompanied by other evidence or methods that the Executive Officer determines reliable for determining engine usage in hours.

(3) Except as provided in Subsection (1) above, any adjustment of a component that has a factory installed, and properly operating, adjustment limiting device (such as an idle limiter cap or plug) is eligible for warranty coverage under Subsection (d).

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43105, 43150-43154, 43205.5 and 43210-43212, Health and Safety Code.

HISTORY

1. New section filed 12-8-99; operative 1-7-2000 (Register 99, No. 50).

2. Amendment of subsection (d)(10) filed 8-29-2000; operative 9-28-2000 (Register 2000, No. 35).

3. Amendment of subsections (a) and (c), new subsections (c)(1)-(3) and amendment of subsection (g)(2) filed 7-22-2002; operative 8-21-2002 (Register 2002, No. 30).

4. Amendment of subsections (c)(2)-(3), new subsections (c)(3)(A)-(c)(3)(C)4.d. and amendment of subsections (g)(2) and (g)(2)(A) filed 11-13-2006; operative 12-13-2006 (Register 2006, No. 46).

§ 2445.2. Emission Control Warranty Statements.

(a) Each engine manufacturer must provide a verbatim copy of the following statement with each new 2001 model year and later spark-ignition personal watercraft and outboard marine engine and with each new

2003 model year and later spark-ignition inboard and sterndrive marine engine, using those portions of the statement applicable to the engine.

WARRANTY STATEMENT
YOUR WARRANTY RIGHTS AND OBLIGATIONS**

The California Air Resources Board (and engine manufacturer's name, optional) is (are) pleased to explain the emission control system warranty on your (model year)(inboard, sterndrive, outboard, or personal watercraft) engine. In California, new (inboard, sterndrive, outboard, or personal watercraft) engines must be designed, built and equipped to meet the State's stringent anti-smog standards. (Engine manufacturer's name) must warrant the emission control system on your (inboard, sterndrive, outboard, or personal watercraft) engine for the periods of time listed below provided there has been no abuse, neglect or improper maintenance of your (inboard, sterndrive, outboard or personal watercraft) engine.

Your emission control system may include parts such as the carburetor or fuel injection system, the ignition system, and catalytic converter. Also included may be hoses, belts, connectors and other emission-related assemblies.

Where a warrantable condition exists, (engine manufacturer's name) will repair your (inboard, sterndrive, outboard or personal watercraft) engine at no cost to you, including diagnosis, parts and labor.

MANUFACTURER'S WARRANTY COVERAGE:

(For spark-ignition personal watercraft and outboard marine engines:) Select emission control parts from model year 2001 and later (outboard or personal watercraft) engines are warranted for 4 years, or for 250 hours of use, whichever occurs first.

(For 2003-2005 spark-ignition inboard and sterndrive marine engines:) Select emission control parts from model year 2003-2005 (inboard or sterndrive) engines are warranted for 2 years.

(For 2006-2008 spark-ignition inboard and sterndrive marine engines certified according to Option 1 in Section 2442(b)(1):)

Select emission control parts from 2006-2008 (inboard or sterndrive) engines are warranted for 2 years.

(For 2006-2007 spark-ignition inboard and sterndrive marine engines certified according to Option 2 in Section 2442(b)(1):)

Select emission control parts from 2006-2007 (inboard or sterndrive) engines are warranted for 2 years.

(For 2008 spark-ignition inboard and sterndrive marine engines certified according to Option 2 in Section 2442(b)(1):)

Select emission control parts from 2008 (inboard or sterndrive) engines are warranted for 3 years or 480 hours, whichever first occurs.

(For 2009 and later spark-ignition inboard and sterndrive marine engines 373 kilowatts and less:)

Select emission control parts from 2009 and later (inboard or sterndrive) engines are warranted for 3 years or 480 hours, whichever first occurs.

(For 2009 and later spark-ignition inboard and sterndrive marine engines greater than 373 kilowatts, but less than or equal to 485 kilowatts:)

Select electronic emission-related control parts from 2009 and later (inboard or sterndrive) engines are warranted for 3 years or 480 hours, whichever first occurs. Select mechanical emission-related components are warranted for 3 years or 150 hours of operation, whichever first occurs.

(For 2009 and later spark-ignition inboard and sterndrive marine engines greater than 485 kilowatts:)

Select electronic emission-related control parts from 2009 and later (inboard or sterndrive) engines are warranted for 3 years or 480 hours, whichever first occurs. Select mechanical emission-related components are warranted for 1 year or 50 hours of operation, whichever first occurs.

However, warranty coverage based on the hourly period is only permitted for engines that are equipped with hour meters as defined in § 2441(a)(13) or their equivalent. If any emission-related part on your engine is defective under warranty, the part will be repaired or replaced by (engine manufacturer's name).

OWNER'S WARRANTY RESPONSIBILITIES:

– As the (inboard, sterndrive, outboard or personal watercraft) engine owner, you are responsible for the performance of the required maintenance listed in your owner's manual. (Engine manufacturer's name) recommends that you retain all receipts covering maintenance on your (inboard, sterndrive, outboard or personal watercraft) engine, but (engine manufacturer's name) cannot deny warranty solely for the lack of receipts or your failure to ensure the performance of all scheduled maintenance.

– As the (inboard, sterndrive, outboard or personal watercraft) engine owner, you should however be aware that (engine manufacturer's name) may deny you warranty coverage if your (inboard, sterndrive, outboard or personal watercraft) engine or a part has failed due to abuse, neglect, improper maintenance or unapproved modifications.

– You are responsible for presenting your (inboard, sterndrive, outboard or personal watercraft) engine to a (engine manufacturer's name) distribution center as soon as a problem exists. The warranty repairs will be completed in a reasonable amount of time, not to exceed 30 days.

If you have any questions regarding your warranty rights and responsibilities, you should contact (Insert chosen contact of engine manufacturer) at 1-XXX-XXX-XXXX.

(b) Commencing with the 2001 model year, each engine manufacturer must also provide with each new engine a warranty statement in accordance with section 2445.1, Title 13, California Code of Regulations, that generally describes the obligations and rights of the engine manufacturer and engine owner under this article. Engine manufacturers must also include in the warranty statement a phone number the consumer may use to obtain their nearest franchised service center.

(c) Each engine manufacturer must submit the documents required by Subsections (a) and (b) with the engine manufacturer's application for new engine certification for approval by the Executive Officer. The Executive Officer may reject or require modifications of the documents to the extent the submitted documents do not satisfy the requirements of Subsections (a) and (b). Approval by the Executive Officer of the documents required by Subsections (a) and (b) is a condition of certification. The Executive Officer will approve or disapprove the documents required by Subsections (a) and (b) within ninety (90) days of the date such documents are received from the engine manufacturer. Any disapproval must be accompanied by a statement of reasons therefore. In the event of disapproval, the engine manufacturer may petition the Board to review the decision of the Executive Officer pursuant to Subchapter 1.25 of Title 17, California Code of Regulations.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43105, 43150-43154, 43205.5 and 43210-43212, Health and Safety Code.

HISTORY

1. New section filed 12-8-99; operative 1-7-2000 (Register 99, No. 50).
2. Amendment filed 7-22-2002; operative 8-21-2002 (Register 2002, No. 30).
3. Amendment of subsection (a) filed 11-13-2006; operative 12-13-2006 (Register 2006, No. 46).
4. Change without regulatory effect amending subsection (a) filed 11-13-2006 pursuant to section 100, title 1, California Code of Regulations (Register 2006, No. 46).

§ 2446. 2001 and Later Model Year Production-Line Test Procedures and Selective Enforcement Auditing Regulations for Spark-Ignition Marine Engines.

(a) Applicability. This section applies to 2001 and later spark-ignition personal watercraft and outboard marine engines. The allowable meth-

ods of production-line testing are specified in subsections (b) and (c), unless the engine manufacturer can satisfactorily provide an alternate method that shows an equivalent assurance of compliance to that of subsection (b). The engine manufacturer must choose only one method for each model year and submit its method of production-line testing to the Executive Officer for approval no later than 90 days prior to the start of the subject model year production. The 2003 and later spark-ignition inboard and sterndrive marine engines are only subject to the selective enforcement audit requirements specified within subsections (d) and (e) of this section. Inboard and sterndrive engines certified using the provision in Section 2442(b)(2)(F) are exempt from this Section.

(b) 2001 and Later Model Year Quality-Audit Production Line Test Procedures

(1) Engine Sample Selection.

(A) Except as provided in subsection (b)(2), the engine manufacturer must randomly select one percent of the California sales volume of engines from each engine family for quality-audit testing.

(B) The Executive Officer may, upon notice to the engine manufacturer, require the sample rate to be increased to a maximum of ten percent of production (not to exceed 30 additional engines or units of equipment) of the calendar quarterly production of any engine family.

(2) Alternate Quality-Audit Engine Selection Criteria for 2001 and Later Model Years.

(A) An engine manufacturer may use the alternate engine selection method outlined in this Subsection.

(B) Engines or equipment must be randomly selected at a rate of 1.0 percent of engine family production at the beginning of production. When test results of the first 10 engines or units of equipment have been accumulated, an evaluation as indicated below must be made.

(C) Calculate the family mean and standard deviation of HC+NOx. Identify engines or units of equipment that have emission levels greater than three standard deviations above the mean. Eliminate these emission data points and recalculate the mean and standard deviation. Continue the calculation until there are no values greater than three standard deviations above the mean. Count the number of these data points greater than the emission standard (outlier). If the total number of outlier is equal to or less than the allowable number in Table 1 for HC+NOx, the engine family is eligible to continue to a second evaluation, shown in paragraph (D) below. Otherwise, sampling must continue at a rate of 1.0 percent of production for the rest of the month.

(D) If the allowable outlier criterion is met, the family mean standard deviation, and sample size determined for HC + NOx before excluding any outlier, are substituted in the following expression:

$$\frac{(\text{emission standard} - \text{mean}) (N)^{0.5}}{(\text{standard deviation})}$$

(E) If the expression is greater than C in Table 2 below, and the engine manufacturer reasonably estimates that the quarterly engine family production will exceed 5,000 engines or units of equipment, the sampling rate for the remaining portion of the calendar month following the date of selection of the last of the 10 engines or equipment is 10 per month, applied on a prorated basis. If the expression is greater than C in Table 2 below, and the engine manufacturer reasonably estimates that the quarterly engine family production will be 5,000 engines or units of equipment or less, the sampling rate for the remaining portion of the calendar month following the date of selection of the last of the 10 engines or equipment is 5 per month, applied on a prorated basis. If the expression is equal to or less than C in Table 2, the sampling rate continues to be 1.0 percent of production for the remaining portion of the month in which selection of the 10 engines or equipment is completed. The value of C is a function of the coefficient of variation (standard deviation/mean). The coefficient of variation and C must be rounded to the number of decimal places shown in Table 2.

Table 1

Sample Size	Allowable Outlier	Sample Size	Allowable Outlier
1-32	1	430-478	11
33-68	2	479-528	12
69-107	3	529-578	13
108-149	4	579-629	14
150-193	5	630-680	15
194-238	6	681-731	16
239-285	7	732-783	17
286-332	8	784-835	18
333-380	9	836-887	19
381-429	10	888-939	20

Table 2

Coefficient of Variation	C
0.1	0.5
0.2	1.2
0.3	1.8
0.4	2.5
0.5	3.1
0.6	3.8
0.7	4.4
0.8	5.1
0.9	5.7

(F) At the conclusion of each month of quarterly engine family production, the emission test data must be evaluated in order to determine the sampling rate as set forth in Paragraphs C and D above. This evaluation must utilize all test data accumulated in the applicable quarter. The sample rate for the next month of production must be determined as follows: ten (10) engines per month when the engine manufacturer's estimated quantity of quarterly engine family production is greater than 5,000; five (5) engines per month when the engine manufacturer's estimated quantity of quarterly engine family production is equal to or less than 5,000; or, one (1) percent of the quarterly engine family production as determined by the sampling evaluation method set forth in Paragraphs D and E.

(G) For each subsequent quarter, the preceding sample selection method must be followed. The sample rate determination for the first month of each subsequent quarter must be based on the accumulated data from the previous quarter. The sample rate for the succeeding months of the quarter must be determined as previously set forth.

(H) If the start of production does not coincide with the first of a quarter, the sequence for sample rate determination must be followed, but references to remaining calendar months may not be appropriate.

(I) Where an engine manufacturer has sampled engines or equipment at a rate of 5 per month following a reasonable estimate that the quarterly engine family production will be 5,000 engines or units of equipment or less, and subsequently determines, or reasonably should determine based on information available to the engine manufacturer, that the quarterly engine family production will exceed 5,000 engines or units of equipment, the engine manufacturer must increase the sampling rate for the quarter such that the requirements of Paragraph D applicable to families reasonably estimated to exceed a quarterly production of 5,000 engines or units of equipment are satisfied.

(3) Compliance Evaluation.

(A) Each engine manufacturer must review the test results of the first 10 test engines or equipment of each engine family, from each calendar quarter of production or from the start of calendar year production. It must also review the quarter's cumulative test results of each engine family at the end of each month. If 10 or more engines or units of equipment have been tested, the engine manufacturer must notify the Chief of the Mobile Source Operations Division and the Manager of the New Vehicle Audit Section, P.O. Box 8001, 9528 Telstar Avenue, El Monte, CA, 91734-8001, in writing within ten working days whenever an engine family exceeds an emission standard.

(B) At the end of the quarter, all of the data accumulated during the quarter are evaluated, and the compliance of the engine family with the family emission levels or emission standards, whichever is applicable, is determined. If a sample size for a particular production quarter is less than ten engines, the data from that quarter must be combined with all of the data from each successive quarter of the calendar year until data from at least ten engines that have been quality-audit tested are included in the quarterly evaluation. If the sample size for the first quarter's production for a calendar year does not contain at least ten engines, the data available for that quarter are evaluated. However, compliance of the engine family with the family emission levels or emission standards, whichever is applicable, is not determined until subsequent quarterly production data is available that includes evaluations of at least ten engines. If the sample size for the last final quarter's production for a calendar year does not contain at least ten engines, the data from the last final quarter must be combined with all the data from each preceding quarter of the calendar year until the sample size contains at least ten engines.

(C) When the average value of any pollutant that is rounded off to the same number of significant digits as is the standard, in accordance with ASTM E 29-93a, exceeds the applicable family emission level or emission standard, whichever is applicable; or, when the engine manufacturer's submitted data reveal that the production line tests were performed improperly, the engine family may be determined to be in noncompliance. The Executive Officer will follow the manufacturer notification procedures in section (d)(4).

(D) A failed engine is one whose emission test results for a regulated pollutant exceeds the emission standard or FEL, as applicable.

(4) Reports.

(A) Each engine manufacturer shall submit a written report to the ARB within 45 calendar days of the end of each calendar quarter.

(B) The quarterly report shall include the following:

(i) The total production and sample size for each engine family.
(ii) Engine identification numbers and explanation of the identification code.

(iii) The applicable emissions standards or Family Emission Levels for each engine family.

(iv) A description of each test engine or equipment (i.e., date of test, engine family, engine size, engine or equipment identification number, fuel system, dynamometer power absorber setting in horsepower or kilowatts, engine code or calibration number, and test location).

(v) The exhaust emission data for HC+NO_x for each test engine or equipment. The data reported shall provide two significant figures beyond the number of significant figures in the applicable emission standard.

(vi) The retest emissions data, as described in Paragraph (v) above for any engine or unit of equipment failing the initial test, and description of the corrective measures taken, including specific components replaced or adjusted.

(vii) A statistical analysis of the quality-audit test results for each engine family stating:

1. Number of engines or units of equipment tested.
2. Average emissions and standard deviations of the sample for HC+NO_x.

(viii) Every aborted test data and reason for the aborted test.

(ix) The applicable quarterly report shall include the date of the end of the engine manufacturer's model year production for an engine family.

(x) The required information for all engine families in production during the quarter regardless of sample size.

(xi) The start and stop dates of batch-produced engine family production.

(C) Each engine manufacturer shall submit a copy of the report that has been stored (e.g., computer disc), or may be transmitted, in an electronically digitized manner, and in a format that is specified by the Executive Officer. This electronically based submission is in addition to the written submission of the report.

(c) 2001 and Later Model Year Cumulative Sum Production-Line Test Procedures.

(1) Engine Sample Selection.

(A) At the start of each model year, the engine manufacturer will begin to randomly select engines from each engine family with California sales greater than 20 units for production line testing, according to the criteria specified herein.

(i) For newly certified engine families: After two (2) engines are tested, the engine manufacturer will calculate the required sample size for the model year according to the Sample Size Equation in paragraph (c)(1)(B) of this section.

(ii) For carry-over engine families: After one engine is tested, the engine manufacturer must combine the test with the last test result from the previous model year and then calculate the required sample size for the model year according to the Sample Size Equation in paragraph (B) of this section.

(iii) The engines must be representative of the engine manufacturer's California sales. Each engine will be selected from the end of the assembly line. All engine models within the engine family must be included in the sample pool. Each selected engine for quality-audit testing must pass the inspection test, by being equipped with the appropriate emission control systems certified by the ARB. The procedure for randomly selecting engines or units of equipment must be submitted to the Chief, Mobile Source Operations Division, P.O. Box 8001, 9528 Telstar Avenue, El Monte, CA, 91734-8001, before the start of production for the first year of production.

(iv)a. Prior to the beginning of the 2001 model year, if an engine manufacturer cannot provide actual California sales data, it must provide its total production and an estimate of California sales at the end of the model year. The engine manufacturer must also provide supporting material for its estimate.

b. For the 2001 and later model years, engine manufacturers must provide actual California sales, or other information acceptable to the Executive Officer, including, but not limited to, an estimate based on market analysis and federal production or sales.

(B)(i) Engine manufacturers must calculate the required sample size for the model year for each engine family using the Sample Size Equation below. N is calculated from each test result. The number N indicates the number of tests required for the model year for an engine family. N is recalculated after each test. Test results used to calculate the variables in the Sample Size Equation must be final deteriorated test results as specified in paragraph (c)(3)(C).

$$N = \left[\frac{(t_{95} * \sigma)^2}{(x - FEL_{jx})} \right] + 1$$

where:

N = Required sample size for the model year.

t₉₅ = 95% confidence coefficient. It is dependent on the actual number of tests completed, n, as specified in the table in paragraph (c)(1)(B)(ii) of this section. It defines one-tail, 95% confidence intervals.

FEL_{jx} = Family Emission Limit

σ = Actual test sample standard deviation calculated from the following equation:

$$\sigma = \sqrt{\frac{\sum (X_i - x)^2}{n - 1}}$$

where:

X_i = Emission test result for an individual engine

x = Mean of emission test results of the actual sample

n = The actual number of tests completed in an engine family

(ii) Actual Number of Tests (n) and 1-tail Confidence Coefficients (t_{95}) are listed in Table 3 below:

Table 3
Actual Number of Tests (n) and 1-tail Confidence Coefficients (t_{95})

n	t_{95}	n	t_{95}	n	t_{95}
2	6.31	12	1.80	22	1.72
3	2.92	13	1.78	23	1.72
4	2.35	14	1.77	24	1.71
5	2.13	15	1.76	25	1.71
6	2.02	16	1.75	26	1.71
7	1.94	17	1.75	27	1.71
8	1.90	18	1.74	28	1.70
9	1.86	19	1.73	29	1.70
10	1.83	20	1.73	30	1.70
11	1.81	21	1.72	∞	1.645

(iii) An engine manufacturer must distribute the testing of the remaining number of engines needed to meet the required sample size N, evenly throughout the remainder of the model year.

(iv) After each new test, the required sample size, N, is recalculated using updated sample means, sample standard deviations and the appropriate 95% confidence coefficient.

(v) An engine manufacturer must continue testing and updating each engine family's sample size calculations according to paragraphs (c)(1)(B)(i) through (c)(1)(B)(iv) of this section until a decision is made to stop testing as described in paragraph (c)(1)(B)(vi) of this section or a noncompliance decision is made pursuant to paragraph (c)(2)(A)(v) of this section.

(vi) If, at any time throughout the model year, the calculated required sample size, N, for an engine family is less than or equal to the actual sample size, n, and the sample mean, \bar{x} , for each regulated pollutant is less than or equal to the FEL for that pollutant, the engine manufacturer may stop testing that engine family except as required by paragraph (c)(2)(A)(vi).

(vii) If, at any time throughout the model year, the sample mean, \bar{x} , for any regulated pollutant is greater than the FEL, the engine manufacturer must continue testing that engine family at the appropriate maximum sampling rate.

(viii) The maximum required sample size for an engine family (regardless of the required sample size, N, as calculated in paragraph (c)(1)(B)(i) of this section) is thirty (30) tests per model year.

(ix) Engine manufacturers may elect to test additional randomly chosen engines. All additional randomly chosen engines tested in accordance with the testing procedures specified in the Test Procedures must be included in the Sample Size and Cumulative Sum equation calculations as defined in paragraphs (c)(1)(B)(i) and (c)(2)(A)(i) of this section, respectively.

(C) The engine manufacturer must produce and assemble the test engines using its normal production and assembly process for engines to be distributed into commerce.

(D) No quality control, testing, or assembly procedures may be used on any test engine or any portion thereof, including parts and subassemblies, that have not been or will not be used during the production and assembly of all other engines of that family, unless the Executive Officer approves the modification.

(2) Calculation of the Cumulative Sum Statistic.

(A) Each engine manufacturer must review the test results obtained in paragraph (c)(1) using the following procedure:

(i) Engine manufacturers must construct the following Cumulative Sum Equation for each regulated pollutant for each engine family. Test results used to calculate the variables in the Cumulative Sum Equation must be final deteriorated test results as defined in paragraph (c)(3)(C).

$$C_i = \max[0 \quad \text{or} \quad (C_{i-1} + X_i - (FEL)_{jx} = F)]$$

where:

C_i = The current Cumulative Sum statistic

C_{i-1} = The previous Cumulative Sum statistic. Prior to any testing, the Cumulative Sum statistic = 0 (i.e., $C_0 = 0$)

X_i = The current emission test result for an individual engine

FEL_{jx} = Family Emission Limit

F = $0.25 \times \sigma$

After each test, C_i is compared to the action limit, H, the quantity that the Cumulative Sum statistic must exceed, in two (2) consecutive tests, before the engine family may be determined to be in noncompliance for purposes of paragraphs (a)(2)(A)(iv) and (a)(2)(A)(v).

H = The Action Limit. It is $5.0 \times \sigma$, and is a function of the standard deviation, σ .

σ = The sample standard deviation and is recalculated after each test.

(ii) After each engine is tested, the Cumulative Sum statistic must be promptly updated according to the Cumulative Sum Equation in paragraph (c)(2)(A)(i) of this section.

(iii) If, at any time during the model year, an engine manufacturer amends the application for certification for an engine family as specified in Part I, section 28 or 29 of the Test Procedures by performing an engine family modification (i.e., a change such as a running change involving a physical modification to an engine, a change in specification or setting, the addition of a new configuration, or the use of a different deterioration factor), all previous sample size and Cumulative Sum statistic calculations for the model year will remain unchanged.

(iv) A failed engine is one whose final deteriorated test results pursuant to paragraph (c)(3)(C), for a regulated pollutant exceeds the FEL for that pollutant.

(v) An engine family may be determined to be in noncompliance if, at any time throughout the model year, the Cumulative Sum statistic, C_i , for a regulated pollutant is greater than the action limit, H, for two (2) consecutive tests.

(vi) The engine manufacturer must perform a minimum of two tests per engine family per quarter, regardless of whether the conditions of paragraph (c)(1)(B)(vi) have been met. The Executive Officer may waive the requirement of this paragraph if the engine manufacturer does not have a failing engine family in the prior two model years of testing.

(vii) All results from previous quarters of the same model year must be included in the on-going Cumulative Sum analysis, provided that the engine family has not failed (e.g., if three engines of a family were tested in the first quarter, the first test of the second quarter would be considered as the fourth test).

(viii) If the Cumulative Sum analysis indicates that an engine family has failed, the engine manufacturer must notify the Chief of the Mobile Source Operations Division, in writing and by telephone, within ten working days. Corrective action will be taken as noted in paragraph (c)(4)(E).

(ix) If an engine manufacturer performs corrective action on a failed engine family and then resumes production, all previous tests will be void, and Cumulative Sum analysis will begin again with the next test.

(B) Within 45 days after the end of the quarter, or when the Cumulative Sum analysis indicates that a decision has been made, the engine manufacturer must provide all the data accumulated during the quarter.

(3) Calculation and Reporting of Test Results.

(A) Initial test results are calculated following the applicable test procedure specified in the Test Procedures.

(B) Final test results are calculated by summing the initial test results derived in paragraph (A) for each test engine and dividing by the number of tests conducted on the engine.

(C) The final deteriorated test results for each test engine are calculated by applying the appropriate deterioration factors, derived in the certification process for the engine family, to the final test results, and rounding in accordance with ASTM E29–93a, incorporated by reference herein, to the same number of decimal places contained in the applicable standard expressed to one additional significant figure.

(D) If, at any time during the model year, the Cumulative Sum statistic exceeds the applicable action limit, H, in two (2) consecutive tests, the engine family may be determined to be in noncompliance and the engine manufacturer must notify the Chief of the Mobile Source Operations Division and the Manager of the New Vehicle Audit Section, P.O. Box 8001, 9528 Telstar Avenue, El Monte, CA, 91734–8001, within ten working days of such exceedance by the Cumulative Sum statistic.

(E) Within 45 calendar days of the end of each quarter, each engine manufacturer must submit to the Executive Officer a report that includes the following information:

(i) The location and description of the engine manufacturer's or other's exhaust emission test facilities that were utilized to conduct testing reported pursuant to this section;

(ii) Total production and sample sizes, N and n, for each engine family;

(iii) The applicable emissions standards for each engine family;

(iv) A description of the process to obtain engines on a random basis;

(v) A description of the test engines or equipment (i.e., date of test, engine family, engine size, engine or equipment identification number, fuel system, dynamometer power absorber setting in horsepower or kilowatts, engine code or calibration number, and test location);

(vi) The date of the end of the engine manufacturer's model year production for each engine family;

(vii) For each test conducted,

a. A description of the test engine, including:

1. Configuration and engine family identification,

2. Year, make, and build date,

3. Engine identification number and explanation of the identification code, and

4. Number of hours of service accumulated on engine prior to testing;

b. Location where service accumulation was conducted and description of accumulation procedure and schedule;

c. Test number, date, test procedure used, initial test results before and after rounding, and final test results for all exhaust emission tests, whether valid or invalid, and the reason for invalidation, if applicable;

d. The exhaust emission data for CO, NO_x and HC for each test engine or watercraft. The data reported must provide two (2) significant figures beyond the number of significant figures in the applicable emission standard.

e. The retest emissions data, as described in paragraph (b)(4)(B)(vi) of this section, for any engine or watercraft failing the initial test, and description of the corrective measures taken, including specific components replaced or adjusted.

f. A complete description of any adjustment, modification, repair, preparation, maintenance, and/or testing that was performed on the test engine, was not reported pursuant to any other part of this article, and will not be performed on all other production engines;

g. A Cumulative Sum analysis, as required in paragraph (c)(2)(A)(i) of this section, of the production line test results for each engine family;

h. Any other information the Executive Officer may request relevant to the determination whether the new engines being manufactured by the engine manufacturer do in fact conform with the regulations with respect to which the Executive Order was issued;

(viii) For each failed engine as defined in paragraph (vii)d., above, a description of the remedy and test results for all retests;

(ix) Every aborted test data and reason for the aborted test;

(x) The start and stop dates of batch-produced engine family production; and

(xi) The required information for all engine families in production during the quarter regardless of sample size.

(F) Each engine manufacturer must submit a copy of the report that has been stored (e.g., computer disc), or may be transmitted, in an electronically digitized manner, and in a format that is specified by the Executive Officer. This electronically based submission is in addition to the written submission of the report.

(d) Test Procedures Applicable to All Production-Line and Selective Enforcement Audit Testing.

(1) Standards and Test Procedures. The emission standards are those specified in Section 2442. The exhaust sampling and analytical procedures are those described in the Test Procedures. An engine is in compliance with the production-line or selective enforcement audit standards and test procedures only when all portions of the production-line or selective enforcement audit test procedures and requirements specified in Part IV of the Test Procedures are fulfilled, except that any adjustable engine parameters must be set to any value or position that is within the range available to the ultimate purchaser.

(2) Air Resources Board (ARB) personnel and mobile laboratories must have access to engine or equipment assembly plants, distribution facilities, and test facilities for the purpose of engine selection, testing, and observation. Scheduling of access must be arranged with the designated engine manufacturer's representative and must not unreasonably disturb normal operations (See section 31 of the Test Procedures).

(3) Engine Preparation and Preconditioning.

(A) No emissions tests may be performed on an engine before the first production-line test or selective enforcement audit test on that engine.

(B) The engine or watercraft must be tested after the engine manufacturer's recommended break-in period. The engine manufacturer must submit to the Executive Officer the schedule for engine break-in and any changes to the schedule with each quarterly report. This schedule must be adhered to for all production-line testing, or as required by the Executive Officer for selective enforcement audit testing, within an engine family and subgroup or engine family and assembly plant as appropriate.

(C) If an engine or watercraft is shipped to a remote facility for production-line or selective enforcement audit testing, and adjustment or repair is necessary because of such shipment, the engine manufacturer must perform the necessary adjustments or repairs only after the initial test of the engine or watercraft. Engine manufacturers must report to the Executive Officer in the quarterly report for all production-line testing, or as required by the Executive Officer for selective enforcement audit testing, all adjustments or repairs performed on engines or watercraft prior to each test. In the event a retest is performed, a request may be made to the Executive Officer, within ten days of the production quarter, for permission to substitute the after-repair test results for the original test results. The Executive Officer will either affirm or deny the request by the engine manufacturer within ten working days from receipt of the request.

(D) If an engine manufacturer determines that the emission test results of an engine or watercraft are invalid, the engine or equipment must be retested. Emission results from all tests must be reported. The engine manufacturer must include a detailed report on the reasons for each invalidated test in the quarterly report for all production-line testing, or as required by the Executive Officer for selective enforcement audit testing.

(4) Manufacturer Notification of Failure.

(A) The Executive Officer will notify the engine manufacturer that the engine manufacturer may be subject to revocation or suspension of the Executive Order authorizing sales and distribution of the noncompliant engines in the State of California of the noncompliant engines in the State of California pursuant to section 43017 of the Health and Safety Code. Prior to revoking or suspending the Executive Order, or seeking to enjoin an engine manufacturer, the Executive Officer will consider all information provided by the engine manufacturer, and other interested parties, including, but not limited to corrective actions applied to the noncompliant engine family.

(B) The Executive Officer will notify the equipment manufacturer that the equipment manufacturer may be subject to revocation or suspension of the Executive Order or penalized pursuant to section 43017 of the

Health and Safety Code. Prior to revoking or suspending the Executive Order, or penalizing an equipment manufacturer, the Executive Officer will consider all information provided by interested parties, including, but not limited to corrective actions applied to the noncompliant engine family.

(5) Suspension and Revocation of Executive Orders.

(A) The Executive Order is automatically suspended with respect to any engine failing pursuant to paragraph (b)(3)(D) or (c)(2)(A)(iv) or whose test results for a regulated pollutant exceed the emission standards effective from the time that testing of that engine is completed.

(B) The Executive Officer may suspend the Executive Order for an engine family that is determined to be in noncompliance pursuant to paragraphs (b)(3)(C) or (c)(2)(A)(v). This suspension will not occur before fifteen (15) days after the engine family is determined to be in noncompliance.

(C) If the results of testing pursuant to these regulations indicate that engines of a particular family produced at one plant of an engine manufacturer do not conform to the regulations with respect to which the Executive Order was issued, the Executive Officer may suspend the Executive Order with respect to that family for engines manufactured by the engine manufacturer at all other plants.

(D) Notwithstanding the fact that engines described in the application for certification may be covered by an Executive Order, the Executive Officer may suspend such Executive Order immediately in whole or in part if the Executive Officer finds any one of the following infractions to be substantial:

(i) The engine manufacturer refuses to comply with any of the requirements of this section.

(ii) The engine manufacturer submits false or incomplete information in any report or information provided to the Executive Officer under this section.

(iii) The engine manufacturer renders inaccurate any test data submitted under this section.

(iv) An ARB enforcement officer is denied the opportunity to conduct activities authorized in this section.

(v) An ARB enforcement officer is unable to conduct activities authorized in paragraph (d)(2) of this section because an engine manufacturer has located its facility in a foreign jurisdiction where local law prohibits those activities.

(E) The Executive Officer will notify the engine manufacturer in writing of any suspension or revocation of an Executive Order in whole or in part. A suspension or revocation is effective upon receipt of the notification or fifteen (15) days from the time an engine family is determined to be in noncompliance pursuant to paragraph (d)(1), except that the Executive Order is immediately suspended with respect to any failed engines as provided for in paragraph (b)(3)(D) or (c)(2)(iv) of this section.

(F) The Executive Officer may revoke an Executive Order for an engine family after the Executive Order has been suspended pursuant to paragraphs (d)(5)(B) or (C) of this section if the proposed remedy for the nonconformity, as reported by the engine manufacturer to the Executive Officer, is one requiring a design change or changes to the engine and/or emission control system as described in the application for certification of the affected engine family.

(G) Once an Executive Order has been suspended for a failed engine, as provided for in paragraph (d)(5)(A) of this section, the engine manufacturer must take the following actions before the Executive Order is reinstated for that failed engine:

(i) Remedy the nonconformity;

(ii) Demonstrate that the engine conforms to its applicable FEL by re-testing the engine in accordance with these regulations; and

(iii) Submit a written report to the Executive Officer, after successful completion of testing on the failed engine, that contains a description of the remedy and test results for each engine in addition to other information that may be required by this part.

(H) Once an Executive Order for a failed engine family has been suspended pursuant to paragraphs (d)(5)(B), (C) or (D) of this section, the

engine manufacturer must take the following actions before the Executive Officer will consider reinstating the Executive Order:

(i) Submit a written report to the Executive Officer that identifies the reason for the noncompliance of the engines, describes the proposed remedy, including a description of any proposed quality control and/or quality assurance measures to be taken by the engine manufacturer to prevent future occurrences of the problem, and states the date on which the remedies will be implemented.

(ii) Demonstrate that the engine family for which the Executive Order has been suspended does in fact comply with the regulations of paragraphs (b) or (c), as applicable, by testing as many engines as needed so that the Cumulative Sum statistic, as calculated in paragraph (c)(2)(A)(i), falls below the action limit, or the average emissions from the Quality-Audit testing as calculated in paragraph (b)(3)(A) remains below the FEL, as applicable. Such testing must comply with the provisions of paragraphs (b) or (c), as applicable. If the engine manufacturer elects to continue testing individual engines after suspension of an Executive Order, the Executive Order is reinstated for any engine actually determined to be in conformance with the emission standards through testing in accordance with the applicable test procedures, provided that the Executive Officer has not revoked the Executive Order pursuant to paragraph (d)(5)(F) of this section.

(I) Once the Executive Order has been revoked for an engine family, if the engine manufacturer wants to introduce into commerce a modified version of that family, the following actions must be taken before the Executive Officer may issue an Executive Order for that modified family:

(i) If the Executive Officer determines that the proposed change(s) in engine design may have an effect on emission performance deterioration, the Executive Officer will notify the engine manufacturer, within five (5) working days after receipt of the report in paragraph (d)(5)(H)(i) of this section, whether subsequent testing under this section will be sufficient to evaluate the proposed change or changes or whether additional testing will be required; and

(ii) After implementing the change or changes intended to remedy the nonconformity, the engine manufacturer must demonstrate that the modified engine family does in fact conform with the regulations of paragraphs (b) or (c), as applicable, by testing as many engines as needed from the modified engine family so that the Cumulative Sum statistic, as calculated in paragraph (c)(2)(A)(i), falls below the action limit, or the average emissions from the Quality-Audit testing as calculated in paragraph (b)(3)(A) remains below the FEL, as applicable. When this requirement is met, the Executive Officer will reissue the Executive Order or issue a new Executive Order, as the case may be, to include that family. The revocation of engine family executive orders issued based on Cumulative Sum testing results remains in effect as long as the Cumulative Sum statistic remains above the action limit.

(J) At any time after the suspension of an Executive Order for a test engine under to paragraph (d)(5)(A) of this section, but not later than fifteen (15) days (or such longer period as may be allowed by the Executive Officer) after notification of the Executive Officer's decision to suspend or revoke an Executive Order in whole or in part pursuant to paragraphs (d)(5)(B), (C) or (F) of this section, an engine manufacturer may request a hearing pursuant to subchapter 1.25, Title 17, California Code of Regulations, as to whether the tests have been properly conducted or any sampling methods have been properly applied.

(K) Any suspension of an Executive Order under paragraph (d)(5)(D) of this section:

(i) must be made only after the engine manufacturer concerned has been offered an opportunity for a hearing pursuant to subchapter 1.25, Title 17, California Code of Regulations, and;

(ii) does not apply to engines no longer in the possession of the engine manufacturer.

(L) After the Executive Officer suspends or revokes an Executive Order pursuant to this section and before the commencement of a hearing, if the engine manufacturer demonstrates to the Executive Officer's satis-

faction that the decision to suspend or revoke the Executive Order was based on erroneous information, the Executive Officer will reinstate the Executive Order.

(M) To permit an engine manufacturer to avoid storing non-test engines while conducting subsequent testing of the noncomplying family, an engine manufacturer may request that the Executive Officer conditionally reinstate the Executive Order for that family. The Executive Officer may reinstate the Executive Order subject to the following condition: the engine manufacturer must commit to recall all engines of that family produced from the time the Executive Order is conditionally reinstated, and must commit to remedy any nonconformity at no expense to the owner.

(e) Selective Enforcement Auditing Regulations.

(1) Test Orders.

(A) A test order addressed to the engine manufacturer is required for any testing under paragraph (e).

(B) The test order is signed by the Executive Officer or his or her designee. The test order must be delivered in person by an ARB enforcement officer or ARB authorized representative to a company representative or sent by registered mail, return receipt requested, to the engine manufacturer's representative who signed the application for certification submitted by the engine manufacturer, pursuant to the requirements of the applicable portions of Title 13, California Code of Regulations, section 2447. Upon receipt of a test order, the engine manufacturer must comply with all of the provisions of this subsection and instructions in the test order.

(C) Information included in test order.

(i) The test order will specify the engine family to be selected for testing, the engine manufacturer's engine assembly plant or associated storage facility or port facility (for imported engines) from which the engines must be selected, the time and location at which engines must be selected, and the procedure by which engines of the specified family must be selected. The test order may specify the configuration to be audited and/or the number of engines to be selected per day. Engine manufacturers are required to select a minimum of four engines per day unless an alternate selection procedure is approved pursuant to paragraph (e)(2)(A), or unless total production of the specified configuration is less than four engines per day. If total production of the specified configuration is less than four engines per day, the engine manufacturer selects the actual number of engines produced per day.

(ii) The test order may include alternate families to be selected for testing at the Executive Officer's discretion in the event that engines of the specified family are not available for testing because those engines are not being manufactured during the specified time or are not being stored at the specified assembly plant, associated storage facilities, or port of entry.

(iii) If the specified family is not being manufactured at a rate of at least two (2) engines per day in the case of engine manufacturers specified in paragraph (e)(4)(G)(i) of this section, or one engine per day in the case of engine manufacturers specified in paragraph (e)(4)(G)(ii) of this section, over the expected duration of the audit, the Executive Officer or her or his designated representative may select engines of the alternate family for testing.

(iv) In addition, the test order may include other directions or information essential to the administration of the required testing.

(D) An engine manufacturer may submit a list of engine families and the corresponding assembly plants, associated storage facilities, or (in the case of imported engines) port facilities from which the engine manufacturer prefers to have engines selected for testing in response to a test order. In order that an engine manufacturer's preferred location be considered for inclusion in a test order for a particular engine family, the list must be submitted prior to issuance of the test order. Notwithstanding the fact that an engine manufacturer has submitted the list, the Executive Officer may order selection at other than a preferred location.

(E) Upon receipt of a test order, an engine manufacturer must proceed in accordance with the provisions of paragraph (e).

(2) Testing by the Executive Officer.

(A) The Executive Officer may require by test order under paragraph (e)(1) that engines of a specified family be selected in a manner consistent with the requirements of paragraph (e)(3) and submitted to the Executive Officer at the place designated for the purpose of conducting emission tests. These tests will be conducted in accordance with paragraph (e)(4) to determine whether engines manufactured by the engine manufacturer conform with the regulations with respect to which the certificate of conformity was issued.

(B) Designating official data.

(i) Whenever the Executive Officer conducts a test on a test engine or the Executive Officer and engine manufacturer each conduct a test on the same test engine, the results of the Executive Officer's test are the official data for that engine.

(ii) Whenever the engine manufacturer conducts all tests on a test engine, the engine manufacturer's test data are accepted as the official data, provided that if the Executive Officer makes a determination based on testing conducted under paragraph (e)(2)(A) of this section that there is a substantial lack of agreement between the engine manufacturer's test results and the Executive Officer's test results, no engine manufacturer's test data from the engine manufacturer's test facility will be accepted for purposes of this subsection.

(C) If testing conducted under paragraph (e)(1) is unacceptable under paragraph (B)(ii) of this subsection, the Executive Officer must:

(i) Notify the engine manufacturer in writing of the Executive Officer's determination that the test facility is inappropriate for conducting the tests required by this subsection and the reasons therefor; and

(ii) Reinstate any engine manufacturer's data upon a showing by the engine manufacturer that the data acquired under paragraph (e)(2) were erroneous and the engine manufacturer's data was correct.

(D) The engine manufacturer may request in writing that the Executive Officer reconsider the determination in paragraph (B)(ii) of this section based on data or information indicating that changes have been made to the test facility and these changes have resolved the reasons for disqualification.

(3) Sample selection.

(A) Engines comprising a test sample will be selected at the location and in the manner specified in the test order. If an engine manufacturer determines that the test engines cannot be selected in the manner specified in the test order, an alternative selection procedure may be employed, provided the engine manufacturer requests approval of the alternative procedure before starting test sample selection, and the Executive Officer approves the procedure.

(B) The engine manufacturer must produce and assemble the test engines of the family selected for testing using its normal production and assembly process for engines to be distributed into commerce. If, between the time the engine manufacturer is notified of a test order and the time the engine manufacturer finishes selecting test engines, the engine manufacturer implements any change(s) in its production or assembly processes, including quality control, which may reasonably be expected to affect the emissions of the engines selected, then the engine manufacturer must, during the audit, inform the Executive Officer of such changes. If the test engines are selected at a location where they do not have their operational and emission control systems installed, the test order will specify the manner and location for selection of components to complete assembly of the engines. The engine manufacturer must assemble these components onto the test engines using normal assembly and quality control procedures as documented by the engine manufacturer.

(C) No quality control, testing, or assembly procedures will be used on the test engine or any portion thereof, including parts and subassemblies, that have not been or will not be used during the production and as-

sembly of all other engines of that family, unless the Executive Officer approves the modification in production or assembly procedures pursuant to paragraph (B) of this subsection.

(D) The test order may specify that an ARB enforcement officer(s) or authorized representative(s), rather than the engine manufacturer, select the test engines according to the method specified in the test order.

(E) The order in which test engines are selected determines the order in which test results are to be used in applying the sampling plan in accordance with paragraph (e)(5).

(F) The engine manufacturer must keep on hand all untested engines, if any, comprising the test sample until a pass or fail decision is reached in accordance with paragraph (e)(5)(E). The engine manufacturer may ship any tested engine which has not failed the requirements as set forth in paragraph (e)(5)(B). However, once the engine manufacturer ships any test engine, it may not conduct retests as provided in paragraph (e)(4)(I).

(4) Test procedures.

(A)(i) For spark-ignition marine engines subject to the provisions of this subsection, the prescribed test procedures are the test procedures as specified in Part IV of the Test Procedures.

(ii) The Executive Officer may, on the basis of a written application by an engine manufacturer, prescribe test procedures other than those specified in paragraph (i) for any spark-ignition marine engine he or she determines is not susceptible to satisfactory testing using the procedures specified in paragraph (i).

(B)(i) The engine manufacturer may not adjust, repair, prepare, or modify the engines selected for testing and may not perform any emission tests on engines selected for testing pursuant to the test order unless this adjustment, repair, preparation, modification, and/or tests are documented in the engine manufacturer's engine assembly and inspection procedures and are actually performed or unless these adjustments and/or tests are required or permitted under this subsection or are approved in advance by the Executive Officer.

(ii) The Executive Officer may adjust or cause to be adjusted any engine parameter that the Executive Officer determines subject to adjustment for certification and Selective Enforcement Audit testing in accordance with Part I, section 18 of the Test Procedures, to any setting within the physically adjustable range of that parameter, as determined by the Executive Officer in accordance with section 18, prior to the performance of any tests. However, if the idle speed parameter is one which the Executive Officer has determined to be subject to adjustment, the Executive Officer may not adjust it to any setting that causes a lower engine idle speed than would have been possible within the physically adjustable range of the idle speed parameter if the engine manufacturer had accumulated 12 hours of service on the engine under paragraph (C) of this section, all other parameters being identically adjusted for the purpose of the comparison. The engine manufacturer may be requested to supply information needed to establish an alternate minimum idle speed. The Executive Officer, in making or specifying these adjustments, may consider the effect of the deviation from the engine manufacturer's recommended setting on emission performance characteristics as well as the likelihood that similar settings will occur on in-use engines. In determining likelihood, the Executive Officer may consider factors such as, but not limited to, the effect of the adjustment on engine performance characteristics and information from similar in-use engines.

(C) Service Accumulation. Before performing exhaust emission testing on a selective enforcement audit test engine, the engine manufacturer may accumulate on each engine a number of hours of service equal to the greater of 12 hours or the number of hours the engine manufacturer accumulated during certification on the emission data engine corresponding to the family specified in the test order.

(i) Service accumulation must be performed in a manner using good engineering judgment to obtain emission results representative of normal production engines. This service accumulation must be consistent with the new engine break-in instructions contained in the applicable owner's manual.

(ii) The engine manufacturer must accumulate service at a minimum rate of 6 hours per engine during each 24-hour period, unless otherwise approved by the Executive Officer.

a. The first 24-hour period for service begins as soon as authorized checks, inspections, and preparations are completed on each engine.

b. The minimum service accumulation rate does not apply on week-ends or holidays.

c. If the engine manufacturer's service or target is less than the minimum rate specified (6 hours per day), then the minimum daily accumulation rate is equal to the engine manufacturer's service target.

(iii) Service accumulation must be completed on a sufficient number of test engines during consecutive 24-hour periods to assure that the number of engines tested per day fulfills the requirements of paragraphs (G)(i) and (G)(ii) below.

(D) The engine manufacturer may not perform any maintenance on test engines after selection for testing, nor may the Executive Officer allow deletion of any engine from the test sequence, unless requested by the engine manufacturer and approved by the Executive Officer before any engine maintenance or deletion.

(E) The engine manufacturer must expeditiously ship test engines from the point of selection to the test facility. If the test facility is not located at or in close proximity to the point of selection, the engine manufacturer must assure that test engines arrive at the test facility within 24 hours of selection. The Executive Officer may approve more time for shipment based upon a request by the engine manufacturer accompanied by a satisfactory justification.

(F) If an engine cannot complete the service accumulation or an emission test because of a malfunction, the engine manufacturer may request that the Executive Officer authorize either the repair of that engine or its deletion from the test sequence.

(G) Whenever an engine manufacturer conducts testing pursuant to a test order issued under this subsection, the engine manufacturer must notify the Executive Officer within one working day of receipt of the test order as to which test facility will be used to comply with the test order. If no test cells are available at a desired facility, the engine manufacturer must provide alternate testing capability satisfactory to the Executive Officer.

(i) An engine manufacturer with projected spark-ignition marine engine sales for the California market for the applicable year of 20 or greater must complete emission testing at a minimum rate of two (2) engines per 24-hour period, including each voided test.

(ii) An engine manufacturer with projected spark-ignition marine engine sales for the California market for the applicable year of less than 20 must complete emission testing at a minimum rate of one engine per 24-hour period, including each voided test.

(iii) The Executive Officer may approve a lower daily rate of emission testing based upon a request by an engine manufacturer accompanied by a satisfactory justification.

(H) The engine manufacturer must perform test engine selection, shipping, preparation, service accumulation, and testing in such a manner as to assure that the audit is performed in an expeditious manner.

(I) Retesting.

(i) The engine manufacturer may retest any engines tested during a Selective Enforcement Audit once a fail decision for the audit has been reached in accordance with paragraph (e)(5)(E).

(ii) The Executive Officer may approve retesting at other times based upon a request by the engine manufacturer accompanied by a satisfactory justification.

(iii) The engine manufacturer may retest each engine a total of three times. The engine manufacturer must test each engine or vehicle the same number of times. The engine manufacturer may accumulate additional service before conducting a retest, subject to the provisions of paragraph (C) of this paragraph (4).

(J) An engine manufacturer must test engines with the test procedure specified in Part IV of the Test Procedures to demonstrate compliance

with the exhaust emission standard (or applicable FEL) for HC+NO_x. If alternate procedures were used in certification pursuant to Part 1, section 20(c) of the Test Procedures, then those alternate procedures must be used.

(5) Compliance with acceptable quality level and passing and failing criteria for selective enforcement audits.

(A) The prescribed acceptable quality level is 40 percent.

(B) A failed engine is one whose final test results for HC+NO_x pursuant to paragraph (b)(3)(D) or (c)(2)(iv), as applicable, exceed the applicable family emission level or whose test results for a regulated pollutant exceed the emission standards.

(C) The engine manufacturer must test engines comprising the test sample until a pass or fail decision is reached for HC+NO_x. A pass decision is reached when the cumulative number of failed engines, as defined in paragraph (B), for HC+NO_x is less than or equal to the pass decision number, as defined in paragraph (D), appropriate to the cumulative number of engines tested. A fail decision is reached when the cumulative number of failed engines for HC+NO_x is greater than or equal to the fail decision number, as defined in paragraph (D), appropriate to the cumulative number of engines tested.

(D) The pass and fail decision numbers associated with the cumulative number of engines tested are determined by using the tables in Appendix A to this subsection (e), "Sampling Plans for Selective Enforcement Auditing of Spark-Ignition Marine Engines," appropriate to the projected sales as made by the engine manufacturer in its report to ARB under paragraph (b)(4) or (c)(3)(A). In the tables in Appendix A to this subsection, sampling plan "stage" refers to the cumulative number of engines tested. Once a pass or fail decision has been made for HC+NO_x, the number of engines with final test results exceeding the emission standard for HC+NO_x shall not be considered any further for the purposes of the audit.

(E) Passing or failing a selective enforcement audit occurs when the decision is made on the last engine required to make a decision under paragraph (C).

(F) The Executive Officer may terminate testing earlier than required in paragraph (C) upon either a manufacturers' or Executive Officer's admission that further testing would not change the pass/fail decision.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43105, 43150-43154, 43205.5 and 43210-43212, Health and Safety Code.

HISTORY

1. New section and appendix (tables 1-6) filed 12-8-99; operative 1-7-2000 (Register 99, No. 50).
2. Amendment of section heading and section filed 7-22-2002; operative 8-21-2002 (Register 2002, No. 30).
3. Amendment of subsection (a) filed 11-13-2006; operative 12-13-2006 (Register 2006, No. 46).

Appendix to Paragraph (e) of Section 2446—Sampling Plans for Selective Enforcement Auditing of Spark-Ignition Marine Engines

§ 2447. California Exhaust Emission Standards and Test Procedures for 2001 Model Year and Later Spark-Ignition Marine Engines.

Test Procedures referred to in this chapter may be obtained from the State Air Resources Board at P.O. Box 8001, 9528 Telstar Avenue, El Monte, California 91734-8001.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018, 43101, 43102 and 43104, Health and Safety Code. Reference: Sections 43013, 43017, 43018, 43101, 43102, 43104, 43105, 43150-43154, 43205.5 and 43210-43212, Health and Safety Code.

HISTORY

1. New section filed 12-8-99; operative 1-7-2000 (Register 99, No. 50).

§ 2448. Sunset Review of the California Regulations for 2001 and Later Model Year Spark-Ignition Marine Engines.

Within five years from the effective date of adoption or date of implementation, whichever comes later, the Air Resources Board, in consultation with the Secretary for Environmental Protection, shall review the provisions of this Article to determine whether they should be retained, revised or repealed.

NOTE: Authority cited: Sections 39600, 39601, 43013 and 43018, Health and Safety Code. Reference: Sections 39600 and 39601, Health and Safety Code.

HISTORY

1. New section filed 12-8-99; operative 1-7-2000 (Register 99, No. 50).

Article 4.8. In-Use Off-Road Diesel-Fueled Fleets

§ 2449. General Requirements for In-Use Off-Road Diesel-Fueled Fleets.

(a) Purpose

The purpose of this regulation is to reduce diesel particulate matter (PM) and criteria pollutant emissions from in-use off-road diesel-fueled vehicles.

(b) Applicability

Except as provided in the paragraphs below, the regulation applies to any person, business, or government agency who owns or operates within California any diesel-fueled or alternative diesel fueled off-road compression ignition vehicle engine with maximum power of 25 horsepower (hp) or greater that is used to provide motive power in a workover rig or to provide motive power in any other motor vehicle that (1) cannot be registered and driven safely on-road or was not designed to be driven on-road, and (2) is not an implement of husbandry or recreational off-highway vehicle. Vehicles that were designed to be driven on-road, have on-road engines, and still meet the original manufacturer's on-road engine emission certification standard are considered on-road and are specifically excluded from this regulation, even if they have been modified so that they cannot be registered and driven safely on-road. Off-road vehicles that were designed for off-road use and have off-road engines are considered off-road and are subject to this regulation, even if they have been modified so that they can be driven safely on-road.

This regulation also applies to any person who sells a vehicle with such an engine within California.

Persons who provide financing in the form of “finance leases,” as defined in California Uniform Commercial Code Section 10103(a)(7), for in-use off-road diesel-fueled vehicles, do not “own” such vehicles for the purposes of this regulation.

Vehicles with engines subject to this regulation are used in construction, mining, rental, government, landscaping, recycling, landfilling, manufacturing, warehousing, ski industry, composting, airport ground support equipment, industrial, and other operations. The regulation does not cover locomotives, commercial marine vessels, marine engines, recreational vehicles, or combat and tactical support equipment. The regulation also does not cover stationary or portable equipment, equipment or vehicles used exclusively in agricultural operations, or equipment already subject to the Regulation for Mobile Cargo Handling Equipment at Ports and Intermodal Rail Yards. Off-road diesel vehicles owned and operated by an individual for personal, non-commercial, and non-governmental purposes are exempt from the provisions of this regulation.

(c) Definitions

(1) “Agricultural operations” means (1) the growing or harvesting of crops from soil (including forest operations) and the raising of plants at wholesale nurseries, but not retail nurseries), or the raising of fowl or ani-

mals for the primary purpose of making a profit, providing a livelihood, or conducting agricultural research or instruction by an educational institution, or (2) agricultural crop preparation services such as packing-houses, cotton gins, nut hullers and processors, dehydrators, and feed and grain mills. Agricultural crop preparation services include only the first processing after harvest, not subsequent processing, canning, or other similar activities. For forest operations, agricultural crop preparation services include milling, peeling, producing particleboard and medium density fiberboard, and producing woody landscape materials.

For purposes of this regulation, a vehicle that is used by its owner for both agricultural and nonagricultural operations is considered to be a vehicle engaged in agricultural operations, only if over half of its annual operating hours are for agricultural operations.

(2) *"Airport ground support equipment"* (GSE) is mobile diesel-fueled off-road compression ignition vehicles used to service and support aircraft operations. GSE vehicles perform a variety of functions, including but not limited to: aircraft maintenance, pushing or towing aircraft, transporting cargo to and from aircraft, loading cargo, and baggage handling. GSE vehicles include equipment types such as baggage tugs, belt loaders, and cargo loaders.

(3) *"Alternative diesel fuel"* means any fuel used in a compression ignition engine that is not a reformulated diesel fuel as defined in sections 2281 and 2282 of title 13, California Code of Regulations (CCR), and does not require engine or fuel system modifications for the engine to operate, although minor modifications (e.g., recalibration of the engine fuel control) may enhance performance. Examples of alternative diesel fuels include, but are not limited to, biodiesel, Fischer-Tropsch fuels, and emulsions of water in diesel fuel. A diesel fuel containing a fuel additive will be treated as an alternative diesel fuel unless:

(A) the additive is supplied to the vehicle or engine fuel by an on-board dosing mechanism, or

(B) the additive is directly mixed into the base fuel inside the fuel tank of the vehicle or engine, or

(C) the additive and base fuel are not mixed until engine fueling commences, and no more additive plus base fuel combination is mixed than required for a single fueling of a single engine or vehicle.

(4) *"Alternative fuel"* means natural gas, propane, ethanol, methanol, gasoline (when used in hybrid electric vehicles only), hydrogen, electricity, fuel cells, or advanced technologies that do not rely on diesel fuel. *"Alternative fuel"* also means any of these fuels used in combination with each other or in combination with other non-diesel fuels.

(5) *"Best Available Control Technology"* (BACT) means the exhaust retrofit and accelerated turnover requirements in sections 2449.1(a)(2) and 2449.2(a)(2).

(6) *"Captive Attainment Area Fleet"* means a fleet or an identified subpart of the fleet (fleet portion, consistent with section 2449(d)), in which all of the vehicles in the fleet or fleet portion operate exclusively within the following counties: Alpine, Colusa, Del Norte, Glenn, Humboldt, Lake, Lassen, Mendocino, Modoc, Monterey, Plumas, San Benito, San Luis Obispo, Santa Barbara, Santa Cruz, Shasta, Sierra, Siskiyou, Trinity, Tehama, and Yuba. A fleet or identified fleet portion that operates one or more vehicles outside the counties listed above is not a captive attainment area fleet.

(7) *"Carryover retrofit credit"*, as calculated under section 2449.2(a)(2)(A)2., means a way of tracking retrofits accomplished in excess of those required by the BACT retrofit requirements. Fleets may take credit for such excess retrofits in order to do less retrofitting in later years.

(8) *"Carryover turnover credit"*, as calculated under section 2449.1(a)(2)(A)2., means a way of tracking turnover accomplished in excess of the BACT turnover requirements. Fleets may take credit for such excess turnover to do less turnover in later years.

(9) *"Combat and Tactical Support Equipment"* means equipment that meets military specifications, is owned by the U.S. Department of Defense and/or the U.S. military services or its allies, and is used in combat,

combat support, combat service support, tactical or relief operations or training for such operations.

(10) *"Common ownership or control"* means being owned or managed day to day by the same person, corporation, partnership, or association. Vehicles managed by the same directors, officers, or managers, or by corporations controlled by the same majority stockholders are considered to be under common ownership or control even if their title is held by different business entities.

(11) *"Compression ignition engine"* means an internal combustion engine with operating characteristics significantly similar to the theoretical diesel combustion cycle. The regulation of power by controlling fuel supply in lieu of a throttle is indicative of a compression ignition engine.

(12) *"Dedicated Snow Removal Vehicle"* means a vehicle that is operated exclusively to remove snow from public roads, private roads, or other paths from which snow must be cleared to allow on-road vehicle access. Dedicated snow removal vehicles must have permanently affixed snow removal equipment such as a snow blower or auger and may include, but are not limited to, motor graders, loaders, and snow blowers.

(13) *"Diesel fuel"* has the same meaning as defined in title 13, CCR, sections 2281 and 2282.

(14) *"Diesel Particulate Filter"* means an emission control strategy that reduces diesel particulate matter emissions by directing all of the exhaust through a filter that physically captures particles but permits gases to flow through. Periodically, the collected particles are either physically removed or oxidized (burned off) in a process called regeneration.

(15) *"Diesel particulate matter"* (diesel PM) means the particles found in the exhaust of diesel-fueled compression ignition engines. Diesel PM may agglomerate and adsorb other species to form structures of complex physical and chemical properties. The Air Resources Board (ARB) has identified diesel PM as a toxic air contaminant.

(16) *"Diesel PM Index"* means an indicator of a fleet's overall diesel PM emission rate. The diesel PM Index for a specific fleet is determined by summing the product of the maximum power of each engine times the diesel PM Emission Factor, and dividing by the fleet's total maximum power.

(17) *"Diesel PM Target Rate"* means the fleet average that a specific fleet must meet in a compliance year in order to show compliance with the fleet average requirements. The Diesel PM Target Rate varies depending on a fleet's horsepower distribution. The Diesel PM Target Rate for a specific fleet for each compliance year is determined by summing (adding) the product of the maximum power of each engine times the diesel PM target, and dividing the resulting sum by the fleet's total maximum power.

(18) *"Emergency operation"* means helping alleviate an immediate threat to public health or safety. Examples of emergency operation include repairing or preventing damage to roads, buildings, terrain, and infrastructure as a result of an earthquake, flood, storm, fire, other infrequent act of nature, or terrorism. Routine maintenance or construction to prevent public health risks does not constitute emergency operation.

(19) *"Emission Factor"* means diesel PM or oxides of nitrogen (NOx) emission rate in grams per brake-horsepower hour (g/bhp-hr) as shown in Appendix A, unless the engine is a Post-2007 Flexibility Engine (see definition).

(A) Engines certified to Family Emission Limits and flexibility engines certified before January 1, 2007 must still use the emission factors in Appendix A.

(B) For engines that have been retrofit with VDECS, the PM Emission Factor is reduced 50 percent for a Level 2 VDECS, and 85 percent for a Level 3 VDECS; the NOx Emission Factor is reduced by the percentage NOx emission reductions that are verified, if any. The PM Emission Factor is not reduced for a Level 1 VDECS.

(20) *"Equipment Identification Number"* means a unique identification number assigned by ARB to each vehicle in an owner's fleet subject to this regulation. All reporting and recordkeeping will link vehicle data with this number.

(21) “*Executive Officer*” means the Executive Officer of the ARB or his or her authorized representative.

(22) “*Family Emission Limit*” (FEL) means an emission level that is declared by the manufacturer to serve in lieu of an emission standard for certification purposes and for the averaging, banking, and trading program, as defined in title 13, CCR, section 2423.

(23) “*Fleet*” means all off-road vehicles and engines owned by a person, business, or government agency that are operated within California and are subject to the regulation. A fleet may consist of one or more vehicles. A fleet does not include vehicles that have never operated in California.

(24) “*Fleet Owner*” means, except as qualified below, the person who owns and has possession of the vehicles in the fleet.

“*Rental or Leased Fleets*” — Vehicles that are owned by a rental or leasing company and that are leased by the same lessee for a period of one year or more may be excluded from the rental company fleet and included in the fleet of the lessee only if such arrangement is delineated in the written lease agreement.

Vehicles that are rented or leased for a period of less than one year must be included in the fleet of the rental or leasing company. Off-road vehicles and engines subject to this regulation that are owned by a lessor and leased to a lessee under a “lease” as defined in California Uniform Commercial Code, section 10103(a)(10), for a duration of at least one year, dated prior to the effective date of these regulations, are considered part of the fleet of the lessee rather than the lessor.

(25) “*Fleet Size Category*” — Fleets are classified by size as described below. A fleet must meet large fleet requirements if the total vehicles under common ownership or control would be defined as a large fleet. A fleet must meet medium fleet requirements if the total vehicles under common ownership or control would be defined as a medium fleet. Individual federal or state agencies may report as separate fleets, but all vehicles owned by agencies of the United States or the State of California agencies must meet the large fleet requirements. Low-use vehicles, dedicated snow-removal vehicles, and vehicles used solely for emergency operations need not be included in the total maximum power used to classify fleets by size.

(A) “*Large Fleet*” — A fleet with a total maximum power (as defined below) greater than 5,000 horsepower (hp). A fleet must meet large fleet requirements if the total vehicles under common ownership or control would be defined as a large fleet. All fleets owned by the United States, the State of California, or agencies thereof (i.e., an agency in the judicial, legislative, or executive branch of the federal or state government) will be considered as a unit whole and must meet the large fleet requirements.

(B) “*Medium Fleet*” — A fleet that is not a small or large fleet.

(C) “*Small Fleet*” — A fleet with total maximum power of less than or equal to 2,500 hp that is owned by a business, non-profit organization, or local municipality, or a local municipality fleet in a low population county irrespective of total maximum power, or a non-profit training center irrespective of total maximum power.

(26) “*Forest operations*” means cutting or removal or both of timber, other solid wood products, including Christmas trees, and biomass from forestlands for commercial purposes, together with all the work incidental thereto, including but not limited to, construction and maintenance of roads, fuel breaks, firebreaks, stream crossings, landings, skid trails, beds for falling trees, fire hazard abatement, and site preparation that involves disturbance of soil or burning of vegetation following forest removal activities. Forest operations include the cutting or removal of trees, tops, limbs and or brush which is processed into lumber and other wood products, and or for landscaping materials, or biomass for electrical power generation. Forest operations do not include conversion of forestlands to other land uses such as residential or commercial developments.

(27) “*Highest Level Verified Diesel Emission Control Strategy*” (VDECS) means the highest level VDECS verified by ARB under its *Verification Procedure, Warranty and In-Use Compliance Requirements for In-Use Strategies to Control Emission from Diesel Engines (Verification Procedure)*, title 13, CCR, sections 2700–2710, for a specific en-

gine as of 10 months prior to the compliance date, which (1) can be used without impairing the safe operation of the vehicle as demonstrated per section 2449(e)(8), and (2) the diesel emission-control strategy manufacturer and authorized diesel emission-control strategy dealer agree can be used on a specific engine and vehicle combination without jeopardizing the original engine warranty in effect at the time of application.

Plus designations do not matter; that is, a Level 3 Plus is the same diesel PM level as Level 3; and Level 2 Plus is the same diesel PM level as Level 2.

The highest level VDECS is determined solely based on verified diesel PM reductions, not based on verified NOx reductions. All Level 3 diesel PM devices are higher than all Level 2 diesel PM devices. Level 1 devices are never considered highest level VDECS for the purpose of this regulation.

(28) “*Implement of husbandry*” is as defined in California Vehicle Code (Veh.Code) division 16.

(29) “*Local Municipality*” means a city, county, city and county, special district, or other public agency, or two or more public entities acting jointly, or the duly constituted body of an Indian reservation or rancheria. Agencies of the United States of America or the State of California, and departments, divisions, public corporations, or public agencies of this State or of the United States are not considered local municipalities.

(30) “*Low-Population County Local Municipality Fleet*” means a fleet owned by a local municipality (as defined above) that is located in a county as defined in title 13, CCR, section 2022(b)(2) and identified in section 2022(c)(2), Table 2, or, using the criteria set forth in title 13, CCR, section 2022.1(c)(4), a local municipality not located in a low-population county that has requested and has received Executive Officer approval to be treated like a municipality in a low-population county. Fleets owned by such local municipalities shall be treated as small fleets even if their total maximum power exceeds 2,500 horsepower.

(31) “*Low-use vehicle*” means a vehicle that operated in California less than 100 hours during the preceding 12-month period running from March 1 to end of February. For example, when reporting in 2009, the hours of use between March 1, 2008 and February 28, 2009 would be used to determine low-use status. To be considered a low-use vehicle, the fleet owner must submit engine operation data from a functioning non-resettable hour meter.

(A) Vehicles used outside California — Vehicles that operate both inside and outside of California can meet the low-use vehicle definition if they are used less than 100 hours per year in California.

(B) Three-year rolling average — A vehicle operated only in California for the previous three years and owned by the same owner during that period will be considered low-use if it operated on average less than 100 hours per year during that previous three-year period.

(C) Emergency operation hours — Hours used for emergency operations are not counted when determining low-use status.

(32) “*Maximum power*” (Max Hp) means the engine’s net horsepower or net flywheel power certified to Society of Automotive Engineers (SAE) Method J1349 or International Organization for Standardization (ISO) Method 9249. If the engine’s net horsepower or net flywheel power certified to SAE Method J1349 or ISO Method 9249 is not readily available, another net horsepower or net flywheel power from the manufacturer’s sales and service literature or horsepower from the engine label may be used.

(33) “*Model year*” has the same meaning as defined in title 13, CCR, section 2421(a)(37).

(34) “*Motor vehicle*” has the same meaning as defined in Veh. Code section 415.

(35) “*New fleet*” means a fleet that is acquired or that enters California after March 1, 2009. Such fleets may include new businesses or out-of-state businesses that bring vehicles into California for the first time after March 1, 2009.

(36) “*NOx index*” means an indicator of a fleet’s overall NOx emission rate. The NOx Index for a specific fleet is determined by summing the

product of the maximum power of each engine times the NOx Emission Factor, and dividing by the fleet's total maximum power.

(37) "*NOx target rate*" means the NOx fleet average that a specific fleet must meet in a compliance year in order to show compliance with the fleet average requirements. The NOx Target Rate varies depending on a fleet's horsepower distribution. The NOx Target Rate for a specific fleet for each compliance year is determined by summing (adding) the product of the maximum power (Max Hp) of each engine times the NOx target, and dividing the resulting sum by the fleet's total maximum power.

(38) "*Non-Profit Training Center*" means an entity that operates a program for training in the use of off-road vehicles and qualifies as a non profit or not for profit organization under title 26 Internal Revenue Code section 501(a), (c)(3), (c)(5), or (c)(6).

(39) "*Off-highway vehicle*" is defined in Veh. Code division 16.5.

(40) "*Oxides of nitrogen*" (NOx) means compounds of nitric oxide, nitrogen dioxide, and other oxides of nitrogen. Nitrogen oxides are typically created during combustion processes and are major contributors to smog formation and acid deposition.

(41) "*Post-2007 Flexibility Engine*" means an engine certified on or after January 1, 2007 to the implementation flexibility standards in title 13, CCR, section 2423(d). Such flexibility engines are generally labeled as follows by the engine manufacturer:

"THIS ENGINE COMPLIES WITH CALIFORNIA EMISSION REQUIREMENTS UNDER 13, CCR 2423(d). . ." or

"THIS ENGINE CONFORMS TO CALIFORNIA OFF-ROAD COMPRESSION-IGNITION ENGINE REGULATIONS UNDER 13 CCR, 2423(d)."

Post-2007 flexibility engines should use the emission standard to which the engine is certified. For example, a Tier 4 engine flexed back to Tier 2 emission levels should use the Tier 2 PM standard in title 13, CCR, section 2423(b)(1)(A) as the emission factor (converted from grams per kilowatt hour (g/kW-hr) to g/bhp-hr by multiplying by 0.746).

(42) "*Queuing*" means the intermittent starting and stopping of a vehicle while the driver, in the normal course of doing business, is waiting to perform work or a service, and when shutting the vehicle engine off would impede the progress of the queue and is not practicable. Queuing does not include the time a driver may wait motionless in line in anticipation of the start of a workday or opening of a location where work or a service will be performed.

(43) "*Registered and driven safely on-road*" means a vehicle meets the requirements to be registered for on-road operation in Veh. Code division 3, chap. 1, article 1, sections 4000 et seq. (i.e., required to be registered or could be registered), and the requirements to be driven safely on-road in "Equipment of Vehicles" requirements in Veh. Code division 12, chap. 1, sections 24000 et seq. and "Size, Weight, and Load" requirements in Veh. Code division 15, sections 35000 et seq. Having a California Special Construction Equipment plate as defined in California Veh. Code sections 565 and 570 does not constitute registration.

(44) "*Repower*" means to replace the engine in a vehicle with another engine meeting a subsequent engine emissions standard (e.g., replacing a Tier 0 engine with a Tier 2 or later engine).

(45) "*Responsible Official*" means one of the following:

(A) For a corporation: A president, secretary, treasurer, or vice president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation,

(B) For a partnership or sole proprietorship: a general partner or the proprietor, respectively

(C) For a municipality, state, federal, or other public agency: either a principal executive officer or ranking elected official. For the purposes of this part, a principal executive officer of a federal agency includes the chief executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., a Regional Administrator of the U.S. EPA).

(46) "*Retire*" means to take an engine out of service and not operate it again in the State of California. To retire an engine, the vehicle with the engine may be moved outside of California, sold, or scrapped.

(47) "*Snow removal operations*" means removing snow from public roads, private roads, or driveways.

(48) "*Specialty vehicle*" means a vehicle for which no used vehicle with a cleaner engine that can serve an equivalent function and perform equivalent work is available.

(49) "*Tier 0 Engine*" means an engine not subject to the requirements in title 13, CCR, section 2423; Title 40, Code of Federal Regulations (CFR), Part 89; or Title 40, CFR, Part 1039.

(50) "*Tier 1 Engine*" means an engine subject to the Tier 1 new engine emission standards in title 13, CCR, section 2423(b)(1)(A) and/or Title 40, CFR, Part 89.112(a). This also includes engines certified under the averaging, banking, and trading program with respect to the Tier 1 Family Emission Limits (FEL) listed in title 13, CCR, section 2423(b)(2)(A) and/or Title 40, CFR, Part 89.112(d).

(51) "*Tier 2 Engine*" means an engine subject to the Tier 2 new engine emission standards in title 13, CCR, section 2423(b)(1)(A) and/or Title 40, CFR, Part 89.112(a). This also includes engines certified under the averaging, banking, and trading program with respect to the Tier 2 FEL listed in title 13, CCR, section 2423(b)(2)(A) and/or Title 40, CFR, Part 89.112(d).

(52) "*Tier 3 Engine*" means an engine subject to the Tier 3 new engine emission standards in title 13, CCR, section 2423(b)(1)(A) and/or Title 40, CFR, Part 89.112(a). This also includes engines certified under the averaging, banking, and trading program with respect to the Tier 3 FEL listed in title 13, CCR, section 2423(b)(2)(A) and/or Title 40, CFR, Part 89.112(d).

(53) "*Tier 4 Final Engine*" means an engine subject to the final after-treatment-based Tier 4 emission standards in title 13, CCR, section 2423(b)(1)(B) and/or Title 40, CFR, Part 1039.101. This also includes engines certified under the averaging, banking, and trading program with respect to the Tier 4 FEL listed in title 13, CCR, section 2423(b)(2)(B) and/or Title 40, CFR, Part 1039.101.

(54) "*Tier 4 Interim Engine*" means an engine subject to the interim Tier 4 emission standards (also known as transitional) in title 13, CCR, section 2423(b)(1)(B) and/or Title 40, CFR, Part 1039.101. This also includes engines certified under the averaging, banking, and trading program with respect to the Tier 4 FEL listed in title 13, CCR, section 2423(b)(2)(B) and/or Title 40, CFR, Part 1039.101.

(55) "*Total maximum power*" means the sum of maximum power for all of a fleet's engines that are subject to this regulation. Low-use vehicles, dedicated snow-removal vehicles, and vehicles used solely for emergency operations need not be included in the sum.

(56) "*Verified Diesel Emission Control Strategy*" (VDECS) means an emissions control strategy, designed primarily for the reduction of diesel PM emissions, which has been verified pursuant to the Verification Procedures. VDECS can be verified to achieve Level 1 diesel PM reductions (25 percent), Level 2 diesel PM reductions (50 percent), or Level 3 diesel PM reductions (85 percent). VDECS may also be verified to achieve NOx reductions. See also definition of Highest Level VDECS.

(57) "*VDECS Failure*" means the condition of not achieving the emissions reductions to which the VDECS is verified. Such condition could be due to inappropriate installation, damage, or deterioration during use. If a Level 3 VDECS is emitting visible smoke, it should be assumed to have failed.

(58) "*Workover rig*" means a mobile self-propelled rig used to perform one or more remedial operations, such as deepening, plugging back, pulling and resetting liners, on a producing oil or gas well to try to restore or increase the well's production.

(d) *Performance Requirements* —

Fleets that are subject to fleet average requirements may include vehicles and systems used in place of diesel vehicles in their fleet average index and target rate calculations as described in subsection (1) below.

Fleets that are subject to fleet average requirements may opt to include hours of operation in the fleet average calculation as described in subsection (2) below. Each fleet must meet the performance requirements in subsections (3) to (10) below. There are differing requirements for large, medium, and small fleets. If various portions of a fleet are under the control of different responsible officials because they are part of different subsidiaries, divisions, or other organizational structures of a company or agency, the fleet portions may comply with the performance requirements separately and be reported separately. However, the total maximum power of the vehicles under common ownership or control determines the fleet size. Fleets owned by low-population county local municipalities are subject to the small fleet requirements, even if their total maximum power exceeds 2,500 horsepower. Section 2449(d)(4) describes requirements for fleets that change in size.

(1) *Vehicles and Systems Used in Place of Diesel Vehicles* — Fleets with electric or alternative fuel vehicles may include such vehicles in their fleet average index and target rate calculations as follows:

(A) Electric and Alternative Fuel Vehicles Purchased on or after January 1, 2007

1. Fleets may include an electric and alternative fuel vehicle purchased on or after January 1, 2007, with a maximum power 25 horsepower or greater (or that replaced a diesel vehicle with maximum power 25 horsepower or greater) in their fleet average if all of the following conditions are met:

a. The owner can demonstrate it serves a function and performs the work equivalent to that of diesel vehicles and is used for a purpose for which diesel vehicles are predominantly used,

b. The electric or alternative fuel vehicle is used predominantly outdoors,

c. The electric or alternative fuel vehicle is not already included in the fleet average emission level requirements for large spark ignition engine fleets in title 13, Section 2775.1; and

d. If the vehicle is an alternative fuel vehicle, the owner must demonstrate that it is certified to a NOx standard less than or equal to the Tier 1 NOx standard for the same horsepower in title 13, CCR, section 2423(b)(1)(A) and is less than or equal to the NOx emissions of a diesel engine of the same model year and horsepower.

2. Fleets may include a diesel vehicle with a maximum power 25 horsepower or greater that has been converted to alternative fuel in their fleet average index and target rate calculations. The Emission Factor for NOx remains the same as the emission factor for the diesel vehicle. The Emission Factor for PM is 0.

3. For the purposes of compliance with sections 2449.1(a)(1) and 2449.2(a)(1), electric vehicles shall be credited as follows:

a. *Max Hp for Electric Vehicles* — For an electric vehicle that replaced a diesel vehicle in the owner's fleet, the maximum power of the diesel vehicle replaced may be used as the electric vehicle's *Max Hp*. For an electric vehicle added to the fleet, the fleet owner may apply to the Executive Officer to use the maximum power of a diesel vehicle that serves the same function and performs equivalent work to that of the electric vehicle. In making his or her determination, the Executive Officer will approve the use of the minimum *Max Hp* of a diesel vehicle that would be required to perform the same functions and equivalent work. If no request to the Executive Officer is received, the electric vehicle's own maximum power rating should be used.

b. *Double Credit for Electric in 2010–2016* — For compliance dates in 2010 through 2016, the *Max Hp* of all electric vehicles purchased on or after January 1, 2007 may be doubled in determining the *Max Hp* that is used in calculating the Diesel PM Index, and as appropriate, NOx Index. An Emission Factor of 0 may be used. The *Max Hp* of each electric vehicle is included but not doubled in the calculation of Diesel PM Target Rate and NOx Target Rate.

c. *Single Credit for Electric in 2017 and Later* — For compliance dates in year 2017 and later, the *Max Hp* of all electric vehicles purchased on or after January 1, 2007 is used in determining the *Max Hp* that is used

in calculating the Diesel PM and NOx Target Rates, Diesel PM Index, and, as appropriate, NOx Index. An *Emission Factor* of 0 may be used.

4. For the purposes of compliance with sections 2449.1(a)(1) and 2449.2(a)(1), each alternative fuel vehicle should use an Emission Factor equal to the emission standard to which its engine is certified in g/bhp-hr. If the alternative fuel vehicle is not certified to a NOx or diesel PM emission standard, the owner may apply to the Executive Officer to use an emission factor. In the application, the owner must demonstrate that the chosen emission factor is appropriate and not exceeded by the alternative fuel vehicle.

(B) Electric and Alternative Fuel Vehicle Purchased Prior to January 1, 2007

1. GSE: Electric airport GSE vehicles with a maximum power of 25 horsepower or greater (or that replaced a diesel vehicle with maximum power 25 horsepower or greater) purchased prior to January 1, 2007, may be partially counted in the fleet average calculations as follows:

a. *Max Hp for Electric Vehicles* — For an electric vehicle that replaced a diesel vehicle in the owner's fleet, the maximum power of the diesel vehicle replaced may be used as the electric vehicle's *Max Hp*. Otherwise, the electric vehicle's own maximum power rating should be used.

b. Include such vehicle's *Max Hp* times 0.2 as the *Max Hp* in calculating Target Rate, Diesel PM Index, and, as appropriate, NOx Index in sections 2449.1(a)(1) and 2449.2(a)(1), along with an *Emission Factor* of 0.

2. Non-GSE:

a. Fleet owners may count a non-GSE electric or alternative fuel vehicle purchased prior to January 1, 2007 in the fleet average calculations if all of the following conditions are met:

i. The owner can demonstrate it serves a function and performs the work equivalent to that of diesel vehicles and is used for a purpose for which diesel vehicles are predominantly used,

ii. the electric or alternative fuel vehicle is used predominantly outdoors,

iii. the vehicle is not already counted toward the fleet average emission level requirements for large spark ignition engine fleets in title 13, CCR, section 2775.1; and

iv. if the vehicle is alternative fuel vehicle with a certified NOx emission level, the certified NOx emission levels are lower than the NOx standard for the same model year and horsepower in section 2423(b)(1) and Title 40, CFR, Part 89.112(a) and Title 40, CFR, Part 1039.101.

b. Include such vehicle's *Max Hp* as the *Max Hp* in the calculating the Target Rate, Diesel PM Index, and, as appropriate, NOx Index in sections 2449.1(a)(1) and 2449.2(a)(1). For an electric vehicle, use an *Emission Factor* of 0. For an alternative fuel vehicle, use an Emission Factor equal to the emission standard to which its engine is certified in g/bhp-hr. If the alternative fuel vehicle is not certified to a NOx or diesel PM emission standard, the owner may apply to the Executive Officer to use an emission factor. In the application, the owner must demonstrate that the chosen emission factor is appropriate and not exceeded by the alternative fuel vehicle.

(C) *Stationary or Portable System Used to Replace Mobile Diesel Vehicle* Fleet owners may apply to the Executive Officer to include electric portable or electric stationary systems that replace mobile diesel vehicles, such as an electric conveyor system used to replace diesel haul trucks at a mine, in the fleet average calculations. The system may be considered in the fleet average calculations by including the maximum power of the diesel vehicles replaced in the calculations of Target Rate, Diesel PM Index, and NOx Index above, along with an *Emission Factor* of 0. In order to count such a system, all the following conditions must be met:

1. The owner must demonstrate that it replaced an off-road diesel fueled vehicle subject to this regulation on or after January 1, 2007, and

2. The system is not already counted toward the fleet average emission level requirements for large spark ignition engine fleets in title 13, CCR, section 2775.1 or for portable diesel engine fleets in title 17, CCR, section 93116.3.

(D) Gasoline-Powered Vehicles Used to Replace Diesel Vehicles — Fleets may include a gasoline-powered vehicle of 25 horsepower or greater that replaces a diesel vehicle on or after January 1, 2007 in their fleet average only if all the following conditions are met:

1. The owner can identify the diesel vehicle that the gasoline-powered vehicle replaced and show that the diesel vehicle was retired from the fleet within 6 months of the date that the gasoline-powered vehicle was added to the fleet.

2. The gasoline-powered vehicle serves the same function as the diesel vehicle that it replaced and is of similar horsepower.

3. The fleet would continue to be in compliance with the fleet average emission level requirements for large spark ignition engine fleets in title 13, CCR, section 2775.1 if the gasoline-powered vehicle that replaces a diesel vehicle were excluded from the large spark ignition average.

4. The owner must demonstrate the gasoline-powered vehicle is certified to a NOx standard less than or equal to the Tier 1 NOx standard for the same horsepower in title 13, CCR, section 2423(b)(1)(A) and less than or equal to the NOx emissions of a diesel engine of the same model year and horsepower.

If qualified, the gasoline-powered vehicle may use the maximum horsepower of the diesel vehicle replaced, a diesel PM emission factor of zero (0), and a NOx emission factor equal to the gasoline-powered vehicle's HC+NOx certified emission standard in g/bhp-hr multiplied by 0.95.

(2) *Hours in Fleet Average Option* — As an alternative to the formulas for calculating NOx index and diesel PM index in sections 2449.1(a)(1) and 2449.2(a)(1), fleet owners may opt to include annual hours of operation for all engines in the fleet on the compliance date in the calculation as follows:

NOx Index = 1.18 times [SUM of (Max Hp for each engine in fleet on compliance date multiplied by NOx Emission Factor for each engine in fleet on compliance date multiplied by Annual Hours of Operation for each engine in fleet on compliance date since the previous year's compliance date)] divided by [SUM of (Max Hp for each engine in fleet on compliance date multiplied by Annual Hours of Operation for each engine in fleet on compliance date since the previous year's compliance date)]

Diesel PM Index = 1.18 times [SUM of (Max Hp for each engine in fleet on compliance date multiplied by PM Emission Factor for each engine in fleet on compliance date multiplied by Annual Hours of Operation for each engine in fleet on compliance date since the previous year's compliance date)] divided by [SUM of (Max Hp for each engine in fleet on compliance date multiplied by Annual Hours of Operation for each engine in fleet on compliance date since the previous year's compliance date)]

Fleets that choose this option must have non-resettable hour meters on each vehicle in the fleet and must include hours in all index calculations for the compliance date.

(3) *Idling* — The idling limits in section 2449(d)(3) shall be effective and enforceable immediately upon this regulation being certified by the Secretary of State. Fleets must meet the following idling limits.

(A) *Idling Limit* — No vehicle or engines subject to this regulation may idle for more than 5 consecutive minutes. Idling of a vehicle that is owned by a rental company is the responsibility of the renter or lessee, and the rental agreement should so indicate. The idling limit does not apply to:

1. idling when queuing,
2. idling to verify that the vehicle is in safe operating condition,
3. idling for testing, servicing, repairing or diagnostic purposes,
4. idling necessary to accomplish work for which the vehicle was designed (such as operating a crane),
5. idling required to bring the machine system to operating temperature, and
6. idling necessary to ensure safe operation of the vehicle.

(B) *Written Idling Policy* — As of March 1, 2009, medium and large fleets must also have a written idling policy that is made available to operators of the vehicles and informs them that idling is limited to 5 consecutive minutes or less.

(C) *Waiver* — A fleet owner may apply to the Executive Officer for a waiver to allow additional idling in excess of 5 consecutive minutes. The Executive Officer shall grant such a request upon finding that the fleet owner has provided sufficient justification that such idling is necessary.

(4) *Changing Fleet Size* —

(A) Small fleets that become medium or large fleets must meet the medium or large fleet requirements, respectively, on the reporting date two years subsequent to the year they became a medium or large fleet. If such fleets become small again, they must keep meeting the medium or large fleet requirements for two years after becoming a small fleet.

(B) Large fleets that become medium fleets may meet either the medium or large fleet requirements on the next reporting date. Large fleets that become small fleets may meet either the small or large fleet requirements on the next reporting date.

(C) Medium fleets that become small fleets may meet either the small or medium fleet requirements on the next reporting date. Medium fleets that become large fleets must meet the large fleet requirements on the reporting date two years subsequent to the year they became a large fleet.

(5) *New Fleets* — New fleets must meet the fleet average requirements in sections 2449.1(a)(1) and 2449.2(a)(1) immediately upon purchasing vehicles subject to the regulation or bringing such vehicles into the State of California for the first time after March 1, 2009. New fleets do not have the option of complying with the BACT requirements in sections 2449.1(a)(2) and 2449.2(a)(2). New fleets must comply with the idling requirements in section 2449(d)(3) immediately upon purchasing vehicles subject to the regulation or upon bringing such vehicles into the State. New fleets must report vehicles subject to the regulation to ARB within 30 days of purchasing or bringing such vehicles into the State, in accordance with the requirements in section 2449(g).

(6) *Fleet Ownership Transferred* — If ownership of an entire fleet that was meeting the BACT requirements in lieu of the fleet average requirements is transferred to a new fleet owner who did not own a fleet before the transfer of ownership, the fleet may continue to meet the BACT requirements. That is, transfer of ownership to a new owner who did not own a fleet before does not automatically require the fleet to begin meeting the fleet average requirements in sections 2449.1(a)(1) and 2449.2(a)(1). Existing fleets may acquire other entire fleets without condition if both fleets were in compliance with the individual fleet requirements. If existing fleets acquire portions of fleets or entire fleets that did not previously comply with the regulation, however, they must meet the requirements for adding vehicles in section 2449(d)(7) when adding the entire fleet.

(7) *Adding Vehicles* — The requirements in (A) to (C) below apply to all fleets, except they do not apply to vehicles owned by a lessor and returned to the lessor fleet at the end of a lease, during which the vehicles were included in the fleet of the lessee. Vehicles returned to a lessor fleet must however be included in the lessor fleet's fleet average demonstration on subsequent compliance dates.

(A) *Beginning March 1, 2009* — Beginning March 1, 2009 a fleet may not add a vehicle with a Tier 0 engine to its fleet.

(B) *Between the First and Final Target Dates* — The following requirements apply between March 1, 2010 and March 1, 2020 for large fleets, between March 1, 2013 and March 1, 2020 for medium fleets, and between March 1, 2015 and March 1, 2025 for small fleets.

1. *Fleets Meeting the Target Rates* — If a fleet met the fleet average target rates in sections 2449.1(a)(1) and 2449.2(a)(2) on the previous compliance date, when it adds a vehicle to its fleet, the fleet must demonstrate that the fleet still meets the fleet average target rates within three months of adding the vehicle. That is, fleets may not add vehicles that cause them to exceed the most recent fleet average target rates. The added

vehicle also must be included in the fleet average demonstration required in sections 2449.1(a) and 2449.2(a) on the next compliance date.

2. **Fleets Not Meeting the Fleet Average Targets** — If a fleet did not meet the fleet average requirements in sections 2449.1(a)(1) and 2449.2(a)(1) on the previous compliance date, the fleet may not add a vehicle to its fleet that would further increase its emissions above the fleet average target rate, as described below.

a. **Large and Medium Fleets** — A large or medium fleet that met the BACT requirements in sections 2449.1(a)(2) and 2449.2(a)(2) instead of the fleet average requirements in sections 2449.1(a)(1) and 2449.2(a)(1) on the most recent compliance date may not add a vehicle to its fleet unless all of the following conditions are met:

i. The engine is Tier 2 or higher. (For the purposes of this requirement, a vehicle may be assumed to meet the new engine emission standard tier in effect for the model year unless the engine is a flexibility engine certified January 1, 2007 or later to the implementation flexibility standards at title 13 CCR, section 2423(d), in which case the emission standard tier to which the engine is certified should be used.)

ii. The vehicle engine's NO_x Emission Factor (after being adjusted for any VDECS) is less than or equal to the NO_x Target in Table 1 for engines in the same horsepower group for the most recent compliance date.

b. **Small Fleets** — A small fleet that met the BACT requirements in section 2449.2(a)(2) instead of the fleet average requirements in section 2449.2(a)(1) on the most recent compliance date may not add a vehicle to its fleet unless the following condition is met:

The vehicle engine is Tier 2 or higher. (For the purposes of this requirement, a vehicle may be assumed to meet the new engine emission standard tier in effect for the model year unless the engine is a flexibility engine certified January 1, 2007 or later to the implementation flexibility standards at title 13 CCR, section 2423(d), in which case the emission standard tier to which the engine is certified should be used.)

(C) **After the Final Target Date** — Commencing respectively on March 1, 2020 for large and medium fleets, and March 1, 2025 for small fleets, no fleet owner may add a vehicle to his fleet, unless the vehicle is equipped with an engine meeting the Tier 3, Tier 4 interim, or Tier 4 final emission standards.

(8) **VDECS Installation** — Before installing a VDECS on a vehicle, the fleet owner must ensure that:

(A) The VDECS is verified for use with the engine and vehicle, as described in the Executive Order for the VDECS.

(B) Use of the vehicle is consistent with the conditions of the Executive Order for the VDECS.

(C) The diesel emission control strategy is installed in a verified configuration.

(D) The engine to be retrofit is tuned up so that it meets engine manufacturer's specifications prior to VDECS installation.

(E) The VDECS label will be visible after installation.

(9) **VDECS Maintenance** — If a fleet owner installs a VDECS to meet the requirements in section 2449.1(a) or 2449.2(a), the VDECS must be kept installed until the VDECS fails or is damaged. Requirements for VDECS failure or damage are in section 2449(e)(1). The owner of a vehicle retrofit with a VDECS must ensure all maintenance on the VDECS and engine is performed as required by the respective manufacturers.

(10) **Compliance After the Final Target Date** —

(A) Commencing respectively on March 1, 2020, if a large or medium fleet does not meet the NO_x fleet average target rate for the final target date in section 2449.1(a)(1), the fleet must continue to meet the BACT turnover requirements in section 2449.1(a)(2)(A) and report annually each year until it does so.

(B) Except as provided below, commencing respectively on March 1, 2021 for large and medium fleets, and March 1, 2026 for small fleets, all vehicles in each fleet must be equipped with the highest level VDECS. The vehicles must be retrofit at the annual retrofit rate required in section 2449.2(a)(2)(A)1. for BACT PM retrofits, and the fleet must report annually until all vehicles have been retrofitted. In meeting the requirements of this paragraph, the fleet owner may not use any previously accrued

carryover PM retrofit credits. The following engines and vehicles are exempt from the requirements of this paragraph:

1. Low-use vehicles,

2. Engines for which there is no highest level VDECS (i.e., for which there is no Level 2 or 3 VDECS, or for which there is a Level 2 or 3 VDECS which cannot be used without impairing the safe operation of the vehicle as demonstrated per section 2449(e)(8)),

3. Engines equipped with an original equipment manufacturer diesel particulate filter that came new with the vehicle,

4. Engines already retrofit with a Level 2 or 3 VDECS that was the highest level VDECS available at time of installation, and

5. Vehicles in large and medium fleets that have not yet met the NO_x fleet average target rate for the final target date in section 2449.1(a)(1).

(e) **Special Provisions/Compliance Extensions**

(1) **VDECS Failure** — In the event of a failure or damage of a VDECS, the following conditions apply:

(A) **Failure or Damage During the Warranty Period.** If a VDECS fails or is damaged within its warranty period and it cannot be repaired, the fleet owner must replace it with the same level VDECS or higher for the vehicle within 90 days of the failure.

(B) **Failure or Damage Outside the Warranty Period.**

1. **Before Final Target Date** — If a VDECS fails or is damaged outside of its warranty period before March 1, 2021 for large and medium fleets, or before March 1, 2026 for small fleets, and cannot be repaired, and if the fleet could not meet an applicable fleet average target for the most recent compliance date without the failed VDECS, the fleet owner must replace the failed or damaged VDECS within 90 days of its failure, with the highest level VDECS available for the engine at time of failure.

2. **After Final Target Date** — If a VDECS fails or is damaged outside of its warranty period on or after March 1, 2021 for large and medium fleets, or on or after March 1, 2026 for small fleets, and cannot be repaired, the fleet owner must replace the failed or damaged VDECS within 90 days of its failure with the highest level VDECS available for the engine at time of failure, regardless of whether the fleet met the applicable fleet average requirement for the most recent compliance date.

(2) **Fuel-based Strategy VDECS** —

(A) If a fleet owner determines that the highest level VDECS for a large percentage of his fleet would be a Level 2 fuel verified as a diesel emission control strategy, and implementation of this VDECS would require installation of a dedicated storage tank, then the fleet owner may request prior approval from the Executive Officer to allow use of the level 2 fuel-based strategy across its fleet.

(B) **Waiver for Discontinuation of Fuel Verified as a Diesel Emission Control Strategy.** If a fleet owner has relied upon a fuel verified as a diesel emission control strategy to meet an applicable fleet average requirement and has to discontinue use of the fuel due to circumstances beyond the fleet owner's control, the fleet owner may apply to the Executive Officer no later than 30 days after discontinuing use of the fuel for a compliance waiver of up to two years to provide it time to return to compliance with the applicable fleet average requirement. The Executive Officer then has 30 days to act upon the request. Fleets that did not meet the applicable fleet average requirement in the most recent compliance year may not apply for this waiver.

(3) **Exemption for Vehicles Used for Emergency Operations** — Vehicles used solely for emergency operations are exempt from the performance requirements in sections 2449(d), 2449.1(a), 2449.2(a) and 2449.3(d) but still must be labeled and reported in accordance with sections 2449(f) and (g). Vehicles used solely for emergency operations need not be included when calculating fleet average indices or target rates, when determining fleet size, or when calculating the required horsepower for the BACT turnover and retrofit requirements in sections 2449.1(a)(2) and 2449.2(a)(2).

Owners of vehicles brought into California for emergency operations that last longer than three months must report such entry to ARB and request an equipment identification number within three months of entering the state. Vehicles used solely for emergency operations and that stay

in California for less than three months do not have to be labeled. For vehicles used both for emergency operations and for other purposes, hours of operation accrued when the vehicle is used for emergency operations do not need to be included when determining whether the vehicle meets the low-use vehicle definition.

(4) *Special Provisions for Snow Removal Vehicles* — Dedicated snow removal vehicles are exempt from the performance requirements in sections 2449(d), 2449.1(a), 2449.2(a) and 2449.3(d) but still must be labeled and reported in accordance with sections 2449(f) and (g). Dedicated snow removal vehicles need not be included when calculating fleet average indices or target rates, when determining fleet size, or when calculating the required horsepower for the BACT turnover and retrofit requirements in sections 2449.1(a)(2) and 2449.2(a)(2). Publicly owned vehicles used exclusively to support snow removal operations (such as a loader without a special snow removal attachment), but which do not meet the dedicated snow removal vehicle definition, are exempt from the performance requirements in sections 2449(d), 2449.1(a), 2449.2(a) and 2449.3(d) but still must be labeled and reported in accordance with sections 2449(f) and (g).

(5) *Use of Experimental Diesel Emission Control Strategies* — If a fleet owner wishes to use an experimental, or non-verified, diesel emission control strategy, the owner must first obtain approval from the Executive Officer for a compliance extension. To obtain approval, the owner must demonstrate either that (A) a VDECS is not available or not feasible or not safe for their vehicle or application, or (B) that use of the non-verified strategy is needed to generate data to support verification of the strategy. The owner or operator shall keep documentation of this use in records as specified by the Executive Officer. The application must include emissions data and detailed control technology description demonstrating the experimental control achieves at least a Level 2 diesel PM emission reduction. If the application demonstrates that the strategy achieves at least 50 percent reductions in diesel PM, it may be treated like a Level 2 VDECS. If the application demonstrates that the strategy achieves at least 85 percent reductions in diesel PM, it may be treated like a Level 3 VDECS. If the application demonstrates that the strategy achieves a NOx reduction over 15%, the NOx reduction may be counted.

Upon approval by the Executive Officer, each vehicle engine retrofit with the experimental strategy will be allowed to operate for a specified time period necessary to make a determination that the experimental strategy can achieve the projected emissions reductions. The vehicle equipped with the experimental strategy will be considered to be in compliance during the specified time period. A fleet owner who participates in an experimental diesel emission control program approved by the Executive Officer may retain carryover retrofit PM credits or carryover turnover credits actually accumulated during the experiment, regardless of whether the experiment achieved the projected emissions reductions or whether the strategy is eventually verified. If a strategy installed in an experimental diesel emission control program approved by the Executive Officer fails to be verified or is removed, it will no longer count in the fleet's fleet average calculations. The fleet owner must bring the fleet into compliance prior to the expiration of the experimental diesel emission control strategy extension.

(6) *Compliance Extension for Equipment Manufacturer Delays* — A fleet owner who has purchased new equipment (including VDECS) or vehicles in order to comply with this regulation, will be excused from immediate compliance if the new equipment or vehicles have not been received due to manufacturing delays as long as all the conditions below are met:

(A) The equipment or vehicle was purchased, or the fleet owner and seller had entered into contractual agreement for the purchase, at least four months prior to the required compliance date, or — for a VDECS purchased to replace a failed or damaged VDECS — the fleet owner and seller had entered into contractual agreement for the purchase within 60 days of the VDECS failure.

(B) Proof of purchase, such as a purchase order or signed contract for the sale, including engine specifications for each applicable piece of

equipment, must be maintained by the fleet owner and provided to an agent or employee of ARB upon request.

(C) The new equipment or vehicles are immediately placed into operation upon receipt.

(7) *Exemption for Low-Use Vehicles* — Low-use vehicles are exempt from the performance requirements in sections 2449(d), 2449.1(a), 2449.2(a) and 2449.3(d) but still must be labeled and reported in accordance with sections 2449(f) and (g). Low-use vehicles need not be included when calculating fleet average indices or target rates, when determining fleet size, or when calculating the required horsepower for the BACT turnover and retrofit requirements in sections 2449.1(a)(2) and 2449.2(a)(2).

Vehicles that formerly met the low-use vehicle definition, but whose use increases to 100 hours per year or greater must meet the BACT requirements or be included in the fleet average calculation by the next compliance date. For example, a formerly low-use engine that exceeds 100 hours per year between March 1, 2013 and February 28, 2014 must be included in the fleet average indices and target rates reported in 2014.

(8) *VDECS That Impairs Safe Operation of Vehicle* — A fleet owner may request that the Executive Officer find that a VDECS should not be considered the highest level VDECS available because (A) it cannot be safely installed or operated in a particular vehicle application, or (B) its use would make compliance with occupational safety and health requirements, mining safety and health requirements, or an ongoing local air district permit condition, such as for use of a diesel oxidation catalyst, impossible. If a VDECS manufacturer states that there is no safe or appropriate method of mounting its VDECS on the requesting party's vehicle, then the VDECS will not be considered safe. In the absence of such a declaration by the VDECS manufacturer, the requesting party shall provide other documentation to support its claims. Documentation must include published reports and other findings of federal, state or local government agencies, independent testing laboratories, engine or equipment manufacturers, or other equally reliable sources. The request will only be approved if the requesting party has made a thorough effort to find a safe method for installing and operating the VDECS, including considering the use of mirrors, various locations for VDECS mounting, and use of an actively regenerated VDECS. The Executive Officer shall review the documentation submitted and any other reliable information that he or she wishes to consider and shall make his or her determination based upon the totality of the evidence. Upon finding that a VDECS cannot be installed without violating the safety standards prescribed under title 8, CCR by the California Department of Industrial Relations, Division of Occupational Safety and Health or federal or state mine safety laws, the Executive Officer shall issue a determination that there is no highest level VDECS available. The Executive Officer shall inform the requesting party, in writing, of his or her determination, within 60 days of receipt of the request. Parties may appeal the Executive Officer's determination as described in (A) and (B) below. During the appeal process described in (A) and (B) below, the requesting party may request the administrative law judge to stay compliance until a final decision is issued. If the stay is granted and the Executive Officer denies the requesting party's request, the requesting party has six months from the date of the Executive Officer's final written decision to bring his or her fleet back into compliance.

(A) Appeals — Hearing Procedures —

1. Any party whose request has been denied may request a hearing for the Executive Officer to reconsider the action taken by sending a request in writing to the Executive Officer. A request for hearing shall include, at a minimum, the following:

- a. name of the requesting party;
- b. copy of the Executive Officer's written notification of denial;
- c. a concise statement of the issues to be raised, with supporting facts, setting forth the basis for challenging the denial (conclusory allegations will not suffice);
- d. a brief summary of evidence in support of the statement of facts required in c. above; and

- e. the signature of an authorized person requesting the hearing
 2. A request for a hearing shall be filed within 30 days from the date of issuance of the notice of the denial.
 3. A hearing requested pursuant to this section shall be heard by a qualified and impartial hearing officer appointed by the Executive Officer. The hearing officer may be an employee of the ARB, but may not be any employee who was involved with the denial at issue. In a request for reconsideration, the hearing officer, after reviewing the request for hearing and supporting documentation provided under paragraph 1. above, shall grant the request for a hearing if he or she finds that the request raises a genuine and substantial question of law or fact.
 4. If a hearing is granted, the hearing officer shall schedule and hold, as soon as practicable, a hearing at a time and place determined by the hearing officer.
 5. Upon appointment, the hearing officer shall establish a hearing file. The file shall consist of the following:
 - a. the determination issued by the Executive Officer which is the subject of the request for hearing;
 - b. the request for hearing and the supporting documents that are submitted with it;
 - c. all documents relating to and relied upon by the Executive Officer in making the initial determination to deny the requesting party's original claim; and
 - d. correspondence and other documents material to the hearing.
 6. The hearing file shall be available for inspection by the applicant at the office of the hearing officer.
 7. An applicant may appear in person or be represented by counsel or by any other duly-authorized representative.
 8. The ARB may be represented by staff or counsel familiar with the regulation and may present rebuttal evidence.
 9. Technical rules of evidence shall not apply to the hearing, except that relevant evidence may be admitted and given probative effect only if it is the kind of evidence upon which reasonable persons are accustomed to relying in the conduct of serious affairs. No action shall be overturned based solely on hearsay evidence, unless the hearsay evidence would be admissible in a court of law under a legally recognized exception to the hearsay rule.
 10. Declarations may be used upon stipulation by the parties.
 11. The hearing shall be recorded either electronically or by a certified shorthand reporter.
 12. The hearing officer shall consider the totality of the circumstances of the denial, including but not limited to, credibility of witnesses, authenticity and reliability of documents, and qualifications of experts. The hearing officer may also consider relevant past conduct of the applicant including any prior incidents involving other ARB programs.
 13. The hearing officer's written decision shall set forth findings of fact and conclusions of law as necessary.
 14. Within 30 days of the conclusion of a hearing, the hearing officer shall submit a written proposed decision, including proposed finding as well as a copy of any material submitted by the hearing participants as part of that hearing and relied on by the hearing officer, to the Executive Officer. The hearing officer may recommend to the Executive Officer any of the following:
 - a. uphold the denial as issued;
 - b. modify the denial; or
 - c. overturn the denial in its entirety.
 15. The Executive Officer shall render a final written decision within 60 working days of the last day of hearing. The Executive Officer may do any of the following:
 - a. adopt the hearing officer's proposed decision;
 - b. modify the hearing officer's proposed decision; or
 - c. render a decision without regard to the hearing officer's proposed decision.
- (B) Appeals — Hearing Conducted by Written Submission. In lieu of the hearing procedure set forth in (A) above, an applicant may request that the hearing be conducted solely by written submission. In such case

the requestor must submit a written explanation of the basis for the appeal and provide supporting documents within 20 days of making the request. Subsequent to such a submission the following shall transpire:

1. ARB staff shall submit a written response to the requestor's submission and documents in support of the Executive Officer's action no later than 10 days after receipt of requestor's submission;
2. The applicant may submit one rebuttal statement which may include supporting information, as attachment(s), but limited to the issues previously raised;
3. If the applicant submits a rebuttal, ARB staff may submit one rebuttal statement which may include supporting information, as attachment(s), but limited to the issues previously raised; and
4. The hearing officer shall be designated in the same manner as set forth in section 2449(c)(8)(A)3. above. The hearing officer shall receive all statements and documents and submit a proposed written decision and such other documents as described in section 2449(e)(8)(A)13. above to the Executive Officer no later than 30 working days after the final deadline for submission of papers. The Executive Officer's final decision shall be mailed to the applicant no later than 60 days after the final deadline for submission of papers.
5. The Executive Officer shall render a final written decision within 60 working days of the last day of hearing. The Executive Officer may do any of the following:
 - a. adopt the hearing officer's proposed decision;
 - b. modify the hearing officer's proposed decision; or
 - c. render a decision without regard to the hearing officer's proposed decision.

(9) *Compliance Flexibility for Delays in Availability of Tier 3 or Tier 4 Vehicles* — If the Executive Officer finds that there is a delay in availability of vehicles with engines meeting the Tier 3 or Tier 4 interim or final emission standards so that vehicles with Tier 3 or Tier 4 interim or final engines to meet a fleet's needs are not available or not available in sufficient numbers or in a sufficient range of makes, models, and sizes, then the Executive Officer may grant an extension to the fleet from the requirements in sections 2449.1(a)(1), 2449.2(a)(1), 2449.1(a)(2) and 2449.2(a)(2). If such a delay affects a group of fleets, the Executive Officer may issue an extension to all fleets with similar characteristics. Any such delay must be documented based on verifiable information from the fleet regarding its vehicle needs and/or verifiable information from the equipment manufacturer, engine manufacturer, distributor, and/or dealer regarding the unavailability of appropriate vehicles with Tier 3 or Tier 4 interim or final engines.

(10) *Exemption for Vehicles Awaiting Sale* — Vehicles in the possession of dealers, financing companies, or other entities who do not intend to operate the vehicle nor offer the vehicle for hire, that are operated only to demonstrate functionality to potential buyers or to move short distances while awaiting sale or for maintenance purposes are exempt from all requirements in sections 2449, 2449.1, 2449.2, and 2449.3.

(11) *Exemption for Vehicle Used Over Half the Time for Agriculture* — A vehicle that is used by its owner for agricultural operations for over half of its annual operating hours but that is not used exclusively for agricultural operations is exempt from the performance requirements in section 2449(d), 2449.1(a), and 2449.2(a), but still must be labeled and reported in accordance with sections 2449(f) and (g). Vehicles used exclusively for agricultural operations are completely exempt from the performance, labeling, and reporting requirements. A vehicle that is rented or leased for use by others is exempt only if it is exclusively used for agricultural operations.

(12) *Exemption for Vehicles Used Solely on San Nicolas or San Clemente Islands* — Vehicles used solely on San Nicolas or San Clemente Islands are exempt from all requirements in section 2449. If the land use plans for the islands are changed to allow use by the general public of the islands, this exemption shall no longer be applicable.

(13) *Exemption for Job Corps Vehicles* — Vehicles used by the Job Corps nonprofit apprenticeship training program are exempt from the performance requirements in sections 2449(d), 2449.1(a), 2449.2(a) and

2449.3(d) but still must be labeled and reported in accordance with sections 2449(f) and (g).

(f) *Labeling* —

All vehicles with engines subject to the regulation must be labeled with an ARB-issued equipment identification number (EIN). Electric and alternative fuel vehicles, stationary or portable systems, and gasoline-powered vehicles used to replace diesel vehicles under section 2449(d)(1)(C) must also be labeled with an ARB-issued EIN. ARB will issue unique EIN to the fleet owner for each vehicle subject to the regulation in response to the initial reporting described in section 2449(g)(1) and, for vehicles added in the 30 days before the annual reporting date, the annual reporting described in section 2449(g)(2). Vehicles with two engines that provide motive power will receive two EINs. All owners of vehicles subject to the regulation must comply with the following labeling requirements.

(1) *Application for EIN for added vehicle* — Notwithstanding the requirements for vehicles used for emergency operations in section 2449(e)(3), if a fleet owner adds a vehicle to his California fleet or brings a vehicle into California from outside the state, the fleet owner has 30 days from the date of purchase or the date the vehicle enters California to apply to ARB for an EIN or, if the vehicle already has an EIN, to inform ARB of the purchase using forms approved by the Executive Officer for submittal of required reporting information. If the reporting date under section 2449(g)(2) occurs before 30 days after purchase, the annual reporting may serve as the application for an EIN.

Applications for an equipment identification number should be submitted electronically per the guidelines approved by the Executive Officer for electronic data reporting, or mailed or delivered to ARB at the address listed immediately below:

CALIFORNIA AIR RESOURCES BOARD
MOBILE SOURCE CONTROL DIVISION (IN-USE OFF-ROAD DIESEL)
P.O. BOX 2815
SACRAMENTO, CA 95812.

(2) *Affixing Equipment Identification Number* — Within 30 days of receipt of the ARB-issued EIN, fleet owners shall permanently affix or paint the EIN(s) on the vehicle in clear view according to the following specification:

(A) The EIN shall be white on a red background.

(B) The EIN shall be located in clear view on the right (starboard) side of the outside of the vehicle approximately 5 feet above the ground, or, if the vehicle is not 5 feet tall, lower on the vehicle.

(C) Each character shall be at least 3 inches (7.6 centimeters) in height and 1.5 inches (3.8 centimeters) in width.

(D) The EIN shall be maintained in a manner that retains its legibility for the entire life of the vehicle.

(g) *Reporting* —

Reporting is required for each and every fleet. Large and medium fleets may report separately for different divisions or subsidiaries of a given company or agency. Fleet owners may submit reporting information using forms (paper or electronic) approved by the Executive Officer.

(1) *Initial reporting* — All fleet owners must submit the information in section 2449(g)(1)(A) through (G) to ARB by their initial reporting date. In the initial reporting, fleet owners must report information regarding each vehicle subject to this regulation that was in their fleet on March 1, 2009. Systems or non-diesel fueled vehicles that are used in place of a vehicle that would be subject to this regulation must also be reported. The initial reporting date for large fleets is April 1, 2009. The initial reporting date for medium fleets is June 1, 2009. The initial reporting date for small fleets is August 1, 2009. Reports must include the following information:

(A) *Fleet Owner* —

1. Fleet owner's name;
2. Corporate parent name (if applicable);
3. Corporate parent taxpayer identification number (if applicable);
4. Company taxpayer identification number;
5. Address;

6. Responsible person name;

7. Responsible person title;

8. Contact name;

9. Contact phone number;

10. Contact email address (if available);

11. Whether the fleet owner is a low population county local municipality fleet;

12. Whether the fleet owner has an approval from the Executive Officer to be treated as if in a low-population county;

13. Whether the fleet owner is a non-profit training center;

14. Whether the fleet has an idling policy documented and available to employees;

15. Whether the fleet is using a fuel-based strategy as an emissions control strategy;

16. Whether the fleet is a Captive Attainment Area Fleet.

(B) *Vehicle List* — A list of each vehicle subject to this regulation along with the following information for each vehicle:

1. Vehicle type;

2. Vehicle manufacturer;

3. Vehicle model;

4. Vehicle model year;

5. Vehicle serial number;

6. Whether the vehicle is a low-use vehicle;

7. If the vehicle is a low-use vehicle, whether the vehicle was operated outside of California during the previous compliance year;

8. Whether the vehicle is a specialty vehicle;

9. Whether the vehicle is a vehicle used solely for emergency operations;

10. Whether the vehicle is a dedicated snow removal vehicle;

11. Whether the vehicle is used for agricultural operations for over half of its annual operating hours;

12. Whether the vehicle is an electric vehicle that replaced a diesel vehicle;

13. Whether the vehicle has been retrofit, repowered, or replaced with Surplus Off-road Opt-in for NOx program funding and, if so, the start and end dates of the contract period;

14. Whether the vehicle has been retrofit, repowered, or replaced with Carl Moyer program funding;

15. Whether the vehicle has been retrofit through a demonstration program, and — if so — which program;

16. EIN if it has already been assigned.

(C) *Engines* — For each engine that powers a vehicle listed per section 2449(g)(1)(B) report the following information.

1. Engine manufacturer;

2. Engine model;

3. Engine family (if any);

4. Engine serial number;

5. Engine model year;

6. Engine maximum power;

7. Engine displacement;

8. Whether the engine is a repower and — if so — date repowered;

9. If the engine is a Post-2007 flexibility engine, an engine certified to on-road standards, or an engine certified by ARB or U.S. Environmental Protection Agency to a lower emission standard than shown in Appendix A, the emission standard to which the engine is certified and the certification Executive Order or certificate number;

10. Whether the engine has been rebuilt to a more stringent emissions configuration.

(D) *Verified Diesel Emission Control Strategies* — For each VDECS that is installed on an engine listed per section 2449(g)(1)(C) report the following information.

1. VDECS Manufacturer;

2. VDECS Model;

3. Verification level;

4. Verified percent NOx reduction (if any);

5. Date installed;

(E) Non-Diesel Vehicle Used in Place of a Diesel Vehicle — For each electric, alternative fueled, or gasoline fueled vehicle, report the information listed in sections 2449(g)(1)(B)1. through 2449(g)(1)(B)5. and sections 2449(g)(1)(C)1. through 2449(g)(1)(C)6. as well as

1. Date purchased;

2. If the vehicle replaced a diesel vehicle in the fleet, the horsepower of the diesel vehicle replaced and the date replaced;

3. If not electric, the NOx and PM emission factor;

(F) Stationary or Portable Systems Used in Place of a Diesel Vehicle — For stationary or portable systems that are used in place of a diesel vehicle, report the following information:

1. Description of the system;

2. Type and number of vehicles that would otherwise be used;

3. Horsepower of the vehicle(s) that would otherwise be used;

(G) Credit for Early Actions — Fleet owners claiming credit for early action must report information required under sections 2449(g)(1)(B)1. through 2449(g)(1)(B)5. and sections 2449(g)(1)(C)1. through 2449(g)(1)(C)6. for each vehicle for which credit is claimed. As appropriate, the following information must also be reported:

1. For each vehicle within the fleet that was repowered with a Tier 1 or newer engine prior to March 1, 2009, the date of repower;

2. For each vehicle within the fleet that was retrofit with the highest level VDECS available at the time of retrofit prior to March 1, 2009, the date of retrofit and whether Carl Moyer Incentive Program funding was used to pay for the retrofit;

3. Fleet owners claiming early credit for retirement of Tier 0 vehicles per section 2449.1(a)(2)(A)(2)a.ii. must report information on each and every vehicle within the fleet between March 1, 2006 and March 1, 2009, as required under sections 2449(g)(1)(B)1. through 2449(g)(1)(B)4. and sections 2449(g)(1)(C)1. through 2449(g)(1)(C)6. as well as the date of any purchase and/or retirement between March 1, 2006 and March 1, 2009.

(2) *Annual Reporting and Compliance Certification* — All fleet owners must review and update the information submitted under section 2449(g)(1) annually, and submit the information in section 2449(g)(2)(A) through (C) to ARB by the reporting date of each subsequent reporting year. The large fleet reporting date is April 1, the medium fleet reporting date is June 1, and the small fleet reporting date is August 1. Fleet owners must report information regarding each vehicle subject to this regulation as it was on March 1 of the reporting year. Large fleets must report annually each year from 2010 to 2021. Medium fleets must report annually each year 2012 to 2021. Small fleets must report annually each year from 2014 to 2026. Any fleet that fails to meet the fleet average target rate for the final target date in section 2449.1(a)(1) or 2449.2(a)(1) must continue to report annually each year until it does so. After the final target date in 2449.2(a)(1), any fleet that is required to apply VDECS under section 2449.2(a)(2) must continue to report each year until the March 1 after all such retrofits are complete. Any fleet that operates designated low-use vehicles must continue to report annually for each low-use vehicle for as long as the fleet owns or operates the vehicle. Fleets may use forms (paper or electronic) approved by the Executive Officer for submittal of the required reporting information.

(A) *Compliance Certification* — A certification signed by a responsible official or a designee thereof that the information reported is accurate and that the fleet is in compliance with the regulation. The certification must be submitted on a form (paper or electronic) approved by the Executive Officer. If a designee signs the compliance certification, a written statement signed by the responsible official designating the designee must be attached to the compliance certification and submitted to ARB. If the fleet is a Captive Attainment Area Fleet, the certification must certify that the fleet's vehicles did not operate outside the counties listed in 2449(c)(6).

(B) *Changes Since Last Reporting* — If any information reported per section 2449(g)(1) has changed since either the initial or last annual report filed with ARB, the fleet owner must, in its next annual report identi-

fy such changes. Such changes include vehicles removed from the fleet, vehicles added to the fleet through purchase or by bringing into California, vehicles newly designated as low-use or specialty vehicles, repowers, and retrofits. If there are no changes, the fleet shall indicate that there have been no changes since the last report.

(C) *Engine Hour Meter Readings* — Engine hour meter readings must be reported for each engine in the following cases.

1. If the fleet has chosen the hours in fleet average option, the fleet owner shall report two engine hour meter readings, one from on or before March 1 of the prior year and one from on or after March 1 of the current year, and the dates of reading for every engine in the fleet.

2. For vehicles that fleet owners intend to designate as low-use, report two engine hour meter readings, one from on or before March 1 of the prior year and one from on or after March 1 of the current year, and the dates of reading. If using the three-year rolling average definition of low-use, report two hour meter readings, one from on or before March 1 of the first year of the three year period and one from on or after March 1 of the current year. Low-use vehicles used in emergency operations, must report the total hours used in emergency operations. Additionally, for vehicles designated as low-use that operate both inside and outside California, the fleet owner shall submit a log that contains the following information.

a. Each date the vehicle entered California and the hour meter reading upon entry;

b. Each date the vehicle exited California and the hour meter reading upon exit.

3. For vehicles that are used in agricultural operations, the fleet owner shall report two engine hour meter readings, one from on or before March 1 of the prior year and one from on or after March 1 of the current year, and the dates of such readings. Also the fleet owner shall report, the total number of hours the vehicle has been used in non-agricultural use.

(3) *New Fleet Reporting* — New fleets must submit the information in section 2449(g)(1)(A) through (G) to ARB for vehicles subject to the regulation within 30 days of purchase or bringing such vehicles into the State. Beginning the first March 1 that is more than 30 days after the date of purchase or bringing a vehicle into the State, new fleets must comply with the annual reporting requirements in section 2449(g)(2).

(h) *Record keeping* —

Fleet owners must maintain copies of the information reported under section 2449(g), as well as the records described in section 2449(h) below, and provide them to an agent or employee of the ARB within five business days upon request. Records must be kept at a location within the State of California.

(1) *Changes Since Last Reporting Period* — Documentation of any additions, deletions, or changes to the fleet since the last reporting. Documentation may include bills of sale, purchase orders, or other documentation.

(2) *Vehicles Not Yet Labeled* — For newly purchased or acquired vehicles or vehicles recently brought into the state that have not yet been labeled per section 2449(f)(2), records must be kept of the vehicle purchase date or the date the vehicle entered the state.

(3) *Engines Rebuilt to a More Stringent Emissions Configuration* — Records of engines that are rebuilt to a more stringent emissions configuration in accordance with Title 40, CFR, Part 89.130 and Part 1068.120 must be kept as long as the engine remains in operation. For a fleet to claim credit for rebuild to a more stringent emissions configuration of a Tier 1 engine rated at or above 37 kW that is exempt from the requirements in Title 40, CFR, Part 89.130 and title 13, CCR, section 2423(l), the Tier 1 engine must be rebuilt in accordance with the rebuild practices of those sections and the fleet must keep the records that would have been required if the engine were not exempt from those requirements. Records must include the following information:

(A) The name of the company that performed the rebuild, address, contact name, and contact phone number for that company;

(B) An invoice, or proof of purchase of the engine rebuild;

(C) The date(s) the engine upgrade was performed;

(D) All records required under Title 40, CFR, Part 1068.120 or, for engines exempt from Title 40, CFR, Part 1068.120, the records that would be required if the engine were not exempt;

(E) All records required under title 13, CCR, section 2423(l) or, for engines exempt from 13, CCR, section 2423(l), the records that would be required if the engine were not exempt.

(4) *VDECS Failure* — Records of any VDECS failure and replacement.

(5) *VDECS Serial Numbers* — Records of the serial numbers of the VDECS installed on each vehicle.

(6) *Manufacturer Delay* — For any vehicles or VDECS for which the fleet owner is utilizing the equipment manufacturer delay provision in section 2449(e)(6), proof of purchase, such as a purchase order or signed contract for the sale, including engine specifications for each applicable piece of equipment or vehicle.

(7) *Records Pertaining to Executive Officer Approval* — Records of Executive Officer approval of any of the following:

(A) A waiver to allow additional idling in excess of 5 consecutive minutes;

(B) Upon discontinuation of a fuel verified as a Diesel Emission Control Strategy, approval for up to two years additional time to come back into compliance with the applicable fleet average requirement;

(C) A finding that a VDECS should not be considered the highest level VDECS available due to safety concerns;

(D) Approval to use the maximum power of a diesel vehicle that serves the same function as an electric vehicle;

(E) Approval of an alternative fuel vehicle NOx emission standard;

(F) Approval of a vehicle designation as a specialty vehicle;

(G) Approval of and experimental diesel PM control strategy;

(H) Approval to grant an extension to the fleet from the requirements when Tier 4 vehicles are not available;

(I) Approval to use a fuel strategy as an emissions control strategy as in section 2449(e)(2);

(8) *Record Retention* — Each fleet owner shall maintain the records for each vehicle subject to the regulation until it is retired and for the overall fleet as long as the owner has a fleet or March 1, 2030, whichever is earlier. If vehicle ownership is transferred, the seller shall convey the vehicle records including vehicle data per section 2449(g)(1)(B), engine data per section 2449(g)(1)(C), and VDECS data per section 2449(g)(1)(D) to the buyer. If fleet ownership is transferred, the seller shall convey the fleet records including fleet data per sections 2449(g)(1)(A) through (G) to the buyer. Dealers must maintain records of the disclosure of regulation applicability required by Section 2449(j) for three years after the sale.

(i) *Right of Entry* —

For the purpose of inspecting off-road vehicles and their records to determine compliance with these regulations, an agent or employee of ARB, upon presentation of proper credentials, has the right to enter any facility (with any necessary safety clearances) where off-road vehicles are located or off-road vehicle records are kept.

(j) *Disclosure of Regulation Applicability* —

Any person selling a vehicle with an engine subject to this regulation in California must provide the following disclosure in writing to the buyer on the bill of sale, "When operated in California, any off-road diesel vehicle may be subject to the California Air Resources Board In-Use Off-road Diesel Vehicle Regulation. It therefore could be subject to retrofit or accelerated turnover requirements to reduce emissions of air pollutants. For more information, please visit the California Air Resources Board website at <http://www.arb.ca.gov/msprog/ordiesel/ordiesel.htm>."

(k) *Penalties* —

Any person who fails to comply with the performance requirements of this regulation, who fails to submit any information, report, or state-

ment required by this regulation, or who knowingly submits any false statement or representation in any application, report, statement, or other document filed, maintained, or used for the purposes of compliance with this regulation may be subject to civil or criminal penalties under sections 39674, 39675, 42400, 42400.1, 42400.2, 42400.3.5, 42402, 42402.1, 42402.2, 42402.4, 42403, and 43016 of the Health and Safety Code. In assessing penalties, the Executive Officer will consider factors, including but not limited to the willfulness of the violation, the length of time of noncompliance, whether the fleet made an attempt to comply, and the magnitude of noncompliance.

(l) *ARB Certificate of Reported Compliance* —

After the initial reporting required by section 2449(g)(1) and the annual reporting and compliance certification required by section 2449(g)(2) is received by ARB, if the reporting indicates the fleet is in compliance with the requirements of the in-use off-road diesel vehicle regulation, ARB will provide the fleet with a Certificate of Reported Compliance with the In-Use Off-road Diesel Vehicle Regulation.

(m) *Severability* —

If any subsection, paragraph, subparagraph, sentence, clause, phrase, or portion of section 2449, 2449.1, 2449.2, or 2449.3 of this regulation is, for any reason, held invalid, unconstitutional, or unenforceable by any court of competent jurisdiction, such portion shall be deemed as a separate, distinct, and independent provision, and such holding shall not affect the validity of the remaining portions of the regulation.

NOTE: Authority cited: Sections 39002, 39515, 39516, 39600, 39601, 39602, 39650, 39656, 39658, 39659, 39665, 39667, 39674, 39675, 40000, 41511, 42400, 42400.1, 42400.2, 42400.3.5, 42402, 42402.1, 42402.2, 42402.4, 42403, 43000, 43000.5, 43013, 43016 and 43018, Health and Safety Code. Reference: Sections 39002, 39515, 39516, 39600, 39601, 39602, 39650, 39656, 39657, 39658, 39659, 39665, 39667, 39674, 39675, 40000, 41511, 42400, 42400.1, 42400.2, 42402.2, 43000, 43000.5, 43013, 43016 and 43018, Health and Safety Code.

HISTORY

1. New article 4.8 (sections 2449–2449.3) and section filed 5–16–2008; operative 6–15–2008 (Register 2008, No. 20).

§ 2449.1. NOx Performance Requirements.

(a) *Performance Requirements*

Each fleet must meet the fleet average requirements in this section by March 1 of each year or demonstrate that it met the best available control technology (BACT) requirements as described in section 2449.1(a)(2). There are differing requirements for large and medium fleets. Small fleets are not subject to the NOx performance requirements.

If various portions of a fleet are under the control of different responsible officials because they are part of different subsidiaries, divisions, or other organizational structures of a company or agency, the fleet portions may comply with the performance requirements separately and be reported separately. A fleet may have some fleet portions that meet the definition of captive attainment area fleet and some fleet portions that do not. However, the total maximum power of the vehicles under common ownership or control determines the fleet size. Once a fleet begins to comply and report separately as fleet portions, the fleet portions must continue to comply and report separately, and the fleet portions must meet the adding vehicle requirements in section 2449(d)(7) just as if they were separate fleets.

Fleets owned by low-population county local municipalities are subject to the small fleet requirements, even if their total maximum power exceeds 2,500 horsepower. Captive attainment area fleets are not subject to the NOx performance requirements. Section 2449(d)(4) describes requirements for fleets that change size.

(1) *Fleet Average Requirements*

(A) *Fleet Average Requirements for Large and Medium Fleets*

1. *NOx Fleet Average* — For each compliance date, a large or medium fleet that is not a captive attainment area fleet must demonstrate that its NOx Index was less than or equal to the calculated NOx Target Rate.

The equation for calculating NOx Target Rate is below:

NOx Target Rate = $\frac{\text{SUM of (Max Hp for each engine in fleet multiplied by Target for each engine in fleet) for all engines in fleet}}{\text{SUM of (Max Hp) for all engines in fleet}}$

where Target is the NOx target in g/bhp-hr from Table 1. To find the Target for each engine, read the value for the appropriate row based on the compliance year and the appropriate column based on the engine's maximum power from Table 1.

The equation for calculating NOx Index is below:

NOx Index = $\frac{\text{SUM of (Max Hp for each engine in fleet multiplied by NOx Emission Factor for each engine in fleet) for all engines in fleet}}{\text{SUM of (Max Hp) for all engines in fleet}}$

Table 1 shows the targets used to calculate the NOx Target Rate for each compliance date for large and medium fleets. The Emission Factors are defined in Appendix A.

Table 1 — Large and Medium Fleet NOx Targets
For Use in Calculating NOx Target Rates [g/bhp-hr]

Compliance Date: March 1 of Year	NOx Targets for each Max Hp Group							
	25–49 hp	50–74 hp	75–99 hp	100–174 hp	175–299 hp	300–599 hp	600–750 hp	>750 hp
2010 (large fleets only)	5.8	6.5	7.1	6.4	6.2	5.9	6.1	7.2
2011 (large fleets only)	5.6	6.2	6.7	6.0	5.8	5.5	5.6	6.8
2012 (large fleets only)	5.3	5.8	6.2	5.5	5.3	5.1	5.2	6.5
2013	5.1	5.5	5.7	5.1	4.9	4.7	4.8	6.1
2014	4.9	5.1	5.2	4.7	4.5	4.3	4.4	5.7
2015	4.6	4.8	4.8	4.3	4.1	3.9	4.0	5.3

(2) **BACT Requirements** — Each year, each fleet must determine if it will be able to meet the fleet average requirements for the next March 1 compliance date, and if not, the following BACT requirement must be met. If a fleet does not meet the NOx target rate in section 2449.1(a)(1), it must meet the BACT turnover requirements in section 2449.1(a)(2)(A) below.

(A) **Turnover Requirements for Fleets Not Meeting NOx Target Rate** — A fleet may meet the turnover requirements by retiring a vehicle, designating a vehicle as a low-use vehicle, repowering a vehicle, rebuilding the engine to a more stringent emissions configuration, or applying a VDECS verified to achieve NOx reductions. If repowering a vehicle or rebuilding the engine to a more stringent emissions configuration, the new engine must be Tier 2 or higher and must be a higher tier than the engine replaced or rebuilt. The method for counting VDECS verified to achieve NOx reductions is specified in section 2449.1(a)(2)(A)8.

1. **Turnover Rate** — If a fleet does not meet the NOx Target Rate in section 2449.1(a)(1) on a compliance date on or before March 1, 2015, it must demonstrate on the applicable compliance date that it has turned over 8 percent of the total maximum power of the fleet that existed on March 1 of the previous year since March 1 of the previous year. If a fleet does not meet the NOx Target Rate in section 2449.1(a)(1) on a compliance date after March 1, 2015, it must demonstrate on the applicable compliance date that it turned over 10 percent of its total maximum power that existed on March 1 of the previous year since March 1 of the previous year. Any carryover turnover credit previously accrued may be applied towards the turnover required in a later year.

2. **Carryover turnover credit** —

a. **Beginning** — All fleets other than those meeting the criteria in (i) or (ii) or (iii) below begin with zero carryover turnover credit on March 1, 2009. All fleets may begin accumulating carryover turnover credit on March 1, 2010.

i. **Credit for Early Repowers** — Fleets that have repowered their vehicles with Tier 1 or higher engines before March 1, 2009 begin with a carryover turnover credit (in horsepower) equal to: the maximum power of Tier 1 or higher repower engines installed in affected vehicles before

March 1, 2009. The credit can only be claimed for engines that remain in the fleet. To claim credit, fleets must keep adequate records as described in section 2449(h).

ii. **Credit for Early Retirement** — Fleets that have retired their Tier 0 vehicles at an average rate greater than 8 percent of total maximum power per year between March 1, 2006 and March 1, 2009 begin with carryover turnover credit (in horsepower) equal to: [(Total maximum power of Tier 0 vehicles retired between March 1, 2006 and March 1, 2009) minus (Total maximum power of Tier 0 vehicles added between March 1, 2006 and March 1, 2009)] minus [(Total maximum power of fleet on March 1, 2007 times 0.08) plus (Total maximum power of fleet on March 1, 2008 times 0.08) plus (Total maximum power of fleet on March 1, 2009 times 0.08)]. Tier 0 vehicles repowered with newer engines are counted under (i) above and shall not be counted under (ii). To claim such credit, fleets must keep adequate records as described in section 2449(h).

iii. **Credit for Early NOx Retrofits** — Fleets that have installed VDECS that have been verified as achieving NOx reductions on their vehicles before March 1, 2009 begin with a carryover turnover credit (in horsepower) equal to: (Verified Percent NOx Reduction divided by 60 percent) multiplied by (Maximum power on which VDECS verified to achieve NOx reductions was installed before March 1, 2009).

b. **Accumulating carryover turnover credit** —

i. **2010–2015** — From March 1, 2010 through March 1, 2015, a fleet accumulates carryover turnover credit each year it turns over more than 8 percent of its maximum power. The amount accumulated is the maximum power turned over in excess of 8 percent in the 12 months prior to March 1 of the year in which the carryover is calculated.

ii. **After 2015** — After March 1, 2015, a fleet accumulates carryover turnover credit each year it turns over more than 10 percent of its maximum power. The amount accumulated is the maximum power turned over in excess of 10 percent in the 12 months prior to March 1 of the year in which the carryover is calculated.

c. **Using carryover turnover credit** — Accumulated carryover turnover credit may be applied to meeting the turnover requirements of section 2449.1(a)(2)(A)1 in a later year. The amount of carryover turnover credit

used to meet the turnover requirements in any one year is subtracted from the carryover turnover credit total available in subsequent years. The amount of actual turnover plus the amount of carryover turnover credit used must equal the minimum BACT turnover required by section 2449.1(a)(2)(A)1.

3. Order of turnover — All engines in a fleet that were not subject to a PM standard for new engines (Tier 0 and Tier 1 with no PM standard, i.e., Tier 1 engines between 50 and 174 horsepower), except those in vehicles that qualify for an exemption under section 2449.1(a)(2)(A)4., must be turned over before turnover of any other higher tier engines may be counted toward the turnover requirements in section 2449.1(a)(2)(A) or toward accumulating carryover turnover credit.

4. Exemptions — A vehicle is exempt from the turnover of section 2449.1(a)(2)(A)1. if all vehicles in the fleet that do not qualify for an exemption under this section have been turned over and the vehicle meets one of the following conditions:

- a. On the compliance date, the vehicle is less than 10 years old from the date of manufacture;
- b. The vehicle meets all of the following specialty vehicle criteria:
 - i. The fleet has turned over all other vehicles first,
 - ii. No repower is available for the specialty vehicle, as demonstrated to the Executive Officer,
 - iii. A used vehicle with a cleaner engine is not available to serve a function and perform the work equivalent to that of the specialty vehicle, as demonstrated to the Executive Officer, and
 - iv. The specialty vehicle has been retrofit with highest level VDECS,
- c. The vehicle has been retrofitted within the last six years with a Level 2 or 3 VDECS that was highest level VDECS at the time of retrofit, or
- d. The vehicle has a Tier 4 interim or Tier 4 final engine.

5. Delay Tier 1 turnover — All vehicles with a Tier 1 or higher engine are exempt from the turnover requirement until March 1, 2013, provided that all Tier 0 vehicles in the fleet owner's fleet that do not qualify for an exemption under section 2449.1(a)(2)(A)4. have been turned over.

6. Designating vehicle as low-use — A fleet may designate a vehicle that was formerly used 100 hours or more per year as low-use by limiting its use to less than 100 hours per year and committing to keep its use less than 100 hours per year.

a. Only vehicles formerly used 100 hours or more per year may be so designated. Vehicles so designated may be counted toward the turnover requirements.

b. Once designated as low-use, a vehicle may never again be used more than 100 hours per year by the fleet unless the vehicle meets the adding vehicles requirements in section 2449(d)(7).

c. A fleet is not obliged to designate a vehicle whose use drops below 100 hours per year as low-use, or to count it toward the turnover requirements. If such a vehicle is not designated as low-use, its use may increase beyond 100 hours per year in subsequent years.

7. Rounding — If the horsepower required to be turned over under section 2449.1(a)(2)(A) is less than half of the maximum power of the lowest horsepower engine in the fleet that is subject to the turnover requirements, the next engine is not required to be turned over. However, on the next year's compliance date, any horsepower not turned over due to this rounding provision must be added to the required turnover under section 2449.1(a)(2)(A). Once the required horsepower to be turned over equals or exceeds half of the maximum power of the next engine in the fleet that is subject to the turnover requirements, the next engine must be turned

over.

8. Turnover Credit for NOx Retrofits — VDECS that have been verified as achieving NOx reductions may be used to satisfy the turnover requirements in section 2449.1(a)(2)(A)1 on each compliance date as follows:

Turnover credit for NOx retrofits equals (Verified Percent NOx Reduction divided by 60 percent) multiplied by (Maximum power on which VDECS verified to achieve NOx reductions was installed in last 12 months). Turnover credit for NOx retrofits may be applied to meet the turnover requirements of section 2449.1(a)(2)(A)1 or to accumulate carryover turnover credit.

NOTE: Authority cited: Sections 39002, 39515, 39516, 39600, 39601, 39602, 43000, 43000.5, 43013, 43016 and 43018, Health and Safety Code. Reference: Sections 39002, 39515, 39516, 39600, 39601, 39602, 39650, 39656, 39657, 39658, 39659, 39665, 39667, 43000, 43000.5, 43013, 43016 and 43018, Health and Safety Code.

HISTORY

1. New section filed 5-16-2008; operative 6-15-2008 (Register 2008, No. 20).

§ 2449.2. PM Performance Requirements.

(a) Performance Requirements —

Each fleet must meet the fleet average requirements in section 2449.2(a)(1) by March 1 of each year or demonstrate that it met the best available control technology (BACT) requirements as described in section 2449.2(a)(2). There are differing requirements for large and medium, and small fleets. If various portions of a fleet are under the control of different responsible officials because they are part of different subsidiaries, divisions, or other organizational structures of a company or agency, the fleet portions may comply with the performance requirements separately and be reported separately. However, the total maximum power of the vehicles under common ownership or control determines the fleet size. Fleets owned by low-population county local municipalities are subject to the small fleet requirements, even if their total maximum power exceeds 2,500 horsepower. Section 2449(d)(4) describes requirements for fleets that change size.

(1) Fleet Average Requirements

(A) Fleet Average Requirements for Large and Medium Fleets

1. Diesel PM Fleet Average — For each compliance date, a large or medium fleet must demonstrate that its Diesel PM Index was less than or equal to the calculated Diesel PM Target Rate.

The equation for calculating Diesel PM Target Rate is below:

Diesel PM
Target Rate

=[SUM of (*Max Hp* for each engine in fleet multiplied by *Target* for each engine in fleet) for all engines in fleet] divided by [SUM of (*Max Hp*) for all engines in fleet]

where *Target* is the Diesel PM target in g/bhp-hr from Table 2. To find the *Target* for each engine, read the value for the appropriate row based on the compliance year and the appropriate column based on the engine's maximum power from Table 2.

The equation for calculating Diesel PM Index is below:

Diesel PM Index = [SUM of (*Max Hp* for each engine in fleet multiplied by *PM Emission Factor* for each engine in fleet) for all engines in fleet] divided by [SUM of (*Max Hp*) for all engines in fleet]

Table 2 shows the targets used to calculate the Diesel PM Target Rate for each compliance date for large and medium fleets. The Emission Factors are defined in Appendix A.

Table 2 — Large and Medium Fleet PM Targets
For Use in Calculating PM Target Rates [g/bhp-hr]

Compliance Date: March 1 of Year	PM Targets for each Max Hp Group							
	25–49 hp	50–74 hp	75–99 hp	100–174 hp	175–299 hp	300–599 hp	600–750 hp	>750 hp
2010 (large fleets only)	0.46	0.60	0.62	0.33	0.23	0.18	0.20	0.30
2011 (large fleets only)	0.46	0.60	0.62	0.33	0.23	0.18	0.20	0.30
2012 (large fleets only)	0.39	0.43	0.46	0.26	0.16	0.14	0.14	0.24
2013	0.39	0.43	0.46	0.26	0.16	0.14	0.14	0.24
2014	0.29	0.23	0.24	0.18	0.11	0.11	0.11	0.18
2015	0.29	0.23	0.24	0.18	0.11	0.11	0.11	0.18
2016	0.21	0.18	0.19	0.14	0.08	0.08	0.08	0.11
2017	0.21	0.18	0.19	0.14	0.08	0.08	0.08	0.11
2018	0.12	0.12	0.13	0.10	0.06	0.06	0.06	0.08
2019	0.12	0.12	0.13	0.10	0.06	0.06	0.06	0.08
2020	0.08	0.08	0.07	0.06	0.03	0.03	0.03	0.06

(B) Fleet Average Requirements for Small Fleets — Small fleets must meet a PM fleet average beginning in 2015. To meet the PM fleet average, for each compliance date, a small fleet must demonstrate that its Diesel PM Index was less than or equal to the calculated Diesel PM Target Rate.

The equations for calculating Target Rates and Diesel PM Index are below:

Diesel PM Target Rate

$$= \frac{\text{SUM of ((Max Hp for each engine in fleet multiplied by Target for each engine in fleet))}}{\text{SUM of (Max Hp) for all engines in fleet}}$$

Diesel PM Index

where Target is the PM target in g/bhp-hr from Table 3. To find the Target for each engine, read the value for the appropriate row based on the compliance year and the appropriate column based on the engine's maximum power from Table 3.

$$= \frac{\text{SUM of (Max Hp multiplied by PM Emission Factor) for each engine in fleet}}{\text{SUM of (Max Hp) for all engines in fleet}}$$

Table 3 shows the targets used to calculate the Diesel PM Target Rate for each compliance date for small fleets. The Emission Factors are defined in Appendix A.

Table 3 – Small Fleet PM Targets
For Use in Calculating PM Target Rates [g/bhp-hr]

Compliance Date: March 1 of Year	PM Targets for each Max Hp Group							
	25–49 hp	50–74 hp	75–99 hp	100–174 hp	175–299 hp	300–599 hp	600–750 hp	>750 hp
2015	0.46	0.60	0.62	0.33	0.23	0.18	0.20	0.30
2016	0.46	0.60	0.62	0.33	0.23	0.18	0.20	0.30
2017	0.39	0.43	0.46	0.26	0.16	0.14	0.14	0.24
2018	0.39	0.43	0.46	0.26	0.16	0.14	0.14	0.24
2019	0.29	0.23	0.24	0.18	0.11	0.11	0.11	0.18
2020	0.29	0.23	0.24	0.18	0.11	0.11	0.11	0.18
2021	0.21	0.18	0.19	0.14	0.08	0.08	0.08	0.11
2022	0.21	0.18	0.19	0.14	0.08	0.08	0.08	0.11
2023	0.12	0.12	0.13	0.10	0.06	0.06	0.06	0.08
2024	0.12	0.12	0.13	0.10	0.06	0.06	0.06	0.08
2025	0.08	0.08	0.07	0.06	0.03	0.03	0.03	0.06

(2) BACT Requirements — Each year, each fleet must determine if it will be able to meet the fleet average requirements for the next March 1 compliance date, and if not, the following BACT requirement must be met. If a fleet does not meet the Diesel PM Target Rate in section 2449.2(a)(1), it must meet the BACT Retrofit Requirements in section 2449.2(a)(2)(A). Fleets that fail to meet both an applicable NOx target rate in section 2449.1(a)(1) and the Diesel PM Target Rates in section 2449.2(a)(1) in a compliance year must first meet the BACT turnover re-

quirements in section 2449.1(a)(2) in that year and then meet the BACT Retrofit Requirements in section 2449.2(a)(2)(A) in that year.

(A) PM Retrofit Requirements for Fleets Not Meeting Diesel PM Target Rate

1. PM Retrofit Rate — If a fleet does not meet the Diesel PM Target Rate in section 2449.2(a)(1), it must demonstrate that it retrofit 20 percent of its total maximum power (not including specialty vehicles retrofitted and exempted from turnover in section 2449.1(a)(2)(A)4.b.) with

highest level VDECS since March 1 of the previous year. Any carryover retrofit credit previously accrued may be applied toward the 20 percent retrofit required. If the VDECS is not new (i.e., is being reused), it must have been taken from a vehicle that is no longer operating in California. Fleets may count acquisition of vehicles with Tier 4 interim or Tier 4 final engines or retirement of Tier 0 vehicles toward the retrofit requirement as described below.

a. **Turnover to Tier 4 In Lieu of Retrofitting** — If since March 1 of the previous year, a fleet acquired Tier 4 interim or Tier 4 final engines already equipped with an original equipment manufacturer diesel particulate filter or vehicles equipped with such engines, the total maximum power of the Tier 4 interim and Tier 4 final engines may be counted toward the required hp to be retrofit under section 2449.2(a)(2)(A)1. or used to accumulate carryover PM retrofit credit if during that same period, the fleet also retired Tier 0, 1, 2, or 3 engines with that total maximum power or greater.

b. **Retirement of Tier 0 Vehicles in Lieu of Retrofitting for Fleets with Reduced Horsepower** — If since March 1 of the previous year, a fleet's total maximum power has decreased, the lesser of the total maximum power of Tier 0 vehicles retired since March 1 of the previous year and the total horsepower by which the fleet has been decreased may be counted toward the required hp to be retrofit under section 2449.2(a)(2)(A)1. Such retirement of Tier 0 vehicles may not be used to accumulate carryover PM retrofit credit. Retired Tier 0 vehicles that are counted toward the required hp to be retrofit under this subsection may not be used in subsection a. above to demonstrate that the fleet retired Tier 0, 1, 2, or 3 engines with at least the total maximum power of the Tier 4 engines added.

c. **Conversion of Diesel Vehicles to Alternative Fuel** — Fleets that convert a diesel vehicle subject to the regulation to alternative fuel may count the max power of the vehicle converted toward the required hp to be retrofit under section 2449.2(a)(2)(A)1. or to accumulate carryover PM retrofit credit.

2. Carryover PM retrofit credit —

a. **Beginning** — All fleets other than those meeting the criteria in (i) or (ii) below for vehicles remaining in their fleets begin with zero carryover retrofit credit on March 1, 2009.

i. **Double Credit for Early PM Retrofits** — Fleets that have installed the highest level VDECS on their vehicles before March 1, 2009 begin with a carryover retrofit credit equal to: 2 multiplied by total maximum power of engines on which highest level VDECS was installed before March 1, 2009, unless the contract for funding the VDECS stipulates single credit for installation of the VDECS.

ii. **Single Credit for Other PM Retrofits Before Initial Compliance Date** — Medium fleets that install highest level VDECS on their vehicles between March 1, 2009 and February 29, 2012 accumulate carryover retrofit credit equal to total maximum power of engines on which highest level VDECS was installed. Small fleets that install highest level VDECS on their vehicles between March 1, 2009 and February 28, 2014 accumulate carryover retrofit credit equal to total maximum power of engines on which highest level VDECS was installed.

b. **Accumulating carryover PM retrofit credit** — Beginning March 1, 2010 for large fleets, March 1, 2013 for medium fleets, and March 1, 2015 for small fleets, a fleet accumulates carryover retrofit credit each year it retrofits more than 20 percent of its maximum power. The amount accumulated is the percent of maximum power retrofit in excess of 20 percent in the past 12 months prior to March 1.

c. **Using carryover PM retrofit credit** — Accumulated carryover retrofit credit may be applied to meeting the retrofit requirements of section 2449.2(a)(2)(A)1. in a later year. The amount of carryover retrofit credit used to meet the retrofit requirements in any one year is subtracted from the carryover retrofit credit total available in subsequent years. The amount of actual retrofit plus the amount of carryover retrofit credit used must equal the minimum BACT retrofit rate required by section 2449.2(a)(2)(A)1.

3. **Order of PM Retrofit** — No Level 2 VDECS may be counted toward the retrofit requirements in section 2449.2(a)(2)(A) until all engines in vehicles older than 5 years for which the highest level VDECS available is a Level 3 VDECS have been retrofit, except for specialty vehicles utilizing the exemption in section 2449.1(a)(2)(A)4.b. for which Level 2 is the highest level VDECS.

4. **Exemptions** — A vehicle is exempt from the retrofit requirements in section 2449.2(a)(2)(A)1. if all vehicles in the fleet that do not qualify for an exemption under the following conditions have been retrofitted, and the vehicle meets one of the following conditions:

a. On the date of compliance, the vehicle is less than 5 years old from the vehicle's date of manufacture,

b. There is no highest level VDECS available for the vehicle's engine (i.e., there is no Level 2 or 3 VDECS, or there is no Level 2 or 3 VDECS which can be used without impairing the safe operation of the vehicle as demonstrated per section 2449(e)(8)),

c. The vehicle's engine is equipped with an original equipment manufacturer diesel particulate filter that came new with the vehicle, or

d. The vehicle's engine has already been retrofitted with a Level 2 or 3 VDECS that was the highest level VDECS available at time of installation. An engine with a Level 2 VDECS that was not the highest level VDECS at time of installation does not qualify for this exemption.

5. **Rounding** — If the horsepower required to be retrofit under section 2449.2(a)(2)(A) is less than half of the maximum power of the lowest horsepower engine in the fleet that is subject to the retrofit requirements, the next engine is not required to be retrofitted. However, on the next year's compliance date, any horsepower not retrofit due to this rounding provision must be added to the required retrofit under section 2449.2(a)(2)(A). Once the required horsepower to be retrofit equals or exceeds half of the maximum power of the next engine in the fleet that is subject to the retrofit requirements, the next engine must be retrofitted.

(3) **Adding Vehicles After the Final Target Date** — Commencing respectively on March 1, 2020 for large and medium fleets, and March 1, 2025 for small fleets, if a fleet owner adds a vehicle to his fleet and the engine did not come with an original equipment manufacturer diesel particulate filter, it must be equipped with the highest level VDECS within 3 months of acquisition.

NOTE: Authority cited: Sections 39002, 39515, 39516, 39600, 39601, 39602, 39650, 39656, 39658, 39659, 39665, 39667, 39674, 39675, 40000, 41511, 42400, 42400.1, 42400.2, 42400.3.5, 42402, 42402.1, 42402.2, 42402.4, 42403, 43000, 43000.5, 43013, 43016 and 43018, Health and Safety Code. Reference: Sections 39002, 39515, 39516, 39600, 39601, 39602, 39650, 39656, 39657, 39658, 39659, 39665, 39667, 39674, 39675, 40000, 41511, 42400, 42400.1, 42400.2, 42402.2, 43000, 43000.5, 43013, 43016 and 43018, Health and Safety Code.

HISTORY

1. New section filed 5-16-2008; operative 6-15-2008 (Register 2008, No. 20).

§ 2449.3. Surplus Off-Road Opt-In for NOx (SOON) Program.

(a) Purpose

To achieve additional reductions of oxides of nitrogen (NOx) emissions from in-use off-road diesel-fueled vehicles in California. The reductions must be surplus to those that would otherwise be achieved through implementation of title 13, California Code of Regulations, sections 2449, 2449.1 and 2449.2, "Regulation for In-Use Off-Road Diesel Vehicles".

(b) Applicability

(1) **District Applicability** — Section 2449.3 applies to any air quality management district or air pollution control district (jointly referred to hereafter as air district) whose governing board elects to opt into the provisions of this section as set forth in section 2449.3(f) below.

(2) **Fleet Applicability** — Section 2449.3 applies to a fleet that:

(A) Operates individual vehicles within the air district;

(B) As of January 1, 2008, on a statewide level, consisted of more than 40 percent Tier 0 and Tier 1 vehicles, and;

(C) Has a statewide fleet with maximum power greater than 20,000 horsepower (hp).

(c) Definitions

The definitions in title 13, CCR, section 2449(c) apply, along with the following definitions:

(1) *Contract period* means the period of time in which the vehicle participates in the program and is under contract to the air district to achieve additional emission reductions.

(2) *Operated within the district* means a vehicle that currently operates within the boundaries of the air district and, during the three years immediately prior to the solicitation deadline, operated at least one hundred hours per year and operated more hours within the boundaries of the air district than in any other district.

(3) *Project* means actions on one vehicle to reduce NOx emissions, such as retrofit, repower, or vehicle replacement, for which funding is requested.

(4) *Solicitation* means a public announcement by the air district, requesting that fleets submit grant applications to the air district to participate in emission reduction incentive programs under this section.

(5) *Solicitation deadline* means the last day, as provided in the solicitation, that an application may be physically received by the air district.

(d) Requirements

(1) If an air district, having held a public hearing and opted into the SOON program and made the program mandatory per section

2449.3(e)(9), issues a solicitation for applications for funding under the SOON program, and if the solicitation so requires, a fleet that meets the applicability criteria of subsection (b) on the date of the solicitation must, before the solicitation deadline, do the following:

(A) Report to District and ARB — File a report, in a format approved by the Executive Officer, of all information required under section 2449(g) with the air district and ARB on its statewide fleet and that part of the fleet that has operated within the air district, as defined in section (c)(2) above. If the solicitation deadline is before April 1, 2009, the fleet must provide information regarding the fleet as it existed on January 1, 2008. If the solicitation deadline is on or after April 1, 2009, the fleet must provide the information that was reported to ARB on the most recent April 1 reporting date.

(B) Calculate NOx index — Determine the NOx index for vehicles that operated within the air district for the year in which the solicitation deadline occurs according to the formula in section 2449.1(a)(1)(A)1.

(C) Calculate NOx target rate — Determine the NOx target rate for vehicles that operated within the air district for the year in which the solicitation deadline occurs according to the formula in section 2449.1(a)(1)(A)1, and using the NOx targets set forth in Table 1 below. If there is no NOx target rate for the year in which the solicitation deadline occurs, the nearest future target rate should be used.

Table 1: NOx Targets for each Max Hp Group [g/bhp-hr]

<i>Compliance Date: March 1 of Year</i>	<i>25–49 hp</i>	<i>50–74 hp</i>	<i>75–99 hp</i>	<i>100–174 hp</i>	<i>175–299 hp</i>	<i>300–599 hp</i>	<i>600–750 hp</i>	<i>>750 hp</i>
2011	5.6	6.2	6.7	6.0	5.4	5.1	5.3	6.4
2014	4.9	5.1	5.2	4.7	2.8	2.7	2.7	4.2
2017	4.2	4.1	3.8	3.4	1.5	1.5	1.5	3.2
2020	3.5	3.2	2.4	2.2	0.9	0.9	0.9	2.6
2023	3.5	3.2	2.4	2.2	0.9	0.9	0.9	2.6

(D) Apply for funding — Except as provided in section 2449.3(d)(2) and 2449.3(e)(3) below, a fleet for which the NOx index, as calculated in section 2449.3(d)(1)(B), is greater than the NOx target rate, as calculated in section 2449.3(d)(1)(C), must apply for SOON funding. The application submitted must be completed according to the guidelines and conditions established under the solicitation and, if the necessary NOx retrofits, repower, or vehicle replacements are available, must indicate how NOx retrofits, repowers, or vehicle replacements for which funding is requested will bring the NOx index for vehicles that operated within the air district from where it would have been under compliance with section 2449.1 to less than or equal to the NOx target rate calculated in section 2449.3(d)(1)(C). The application must also indicate whether the fleet wants the application to be given high priority for SOON program funding by the district. The funding priority shall be determined under the air district guidelines developed per section 2449.3(f)(2).

(E) Achieve NOx reductions — Fleets that receive SOON program funding must complete the actions for which they were funded per the conditions of the solicitation. Fleets that do not receive requested SOON program funding are not required to take actions beyond compliance with the in-use off-road diesel vehicle regulation, as specified in sections 2449, 2449.1, and 2449.2.

(2) Fleets not meeting the applicability provisions — A fleet that operates individual vehicles within the air district, but does not meet the applicability provisions of sections 2449.3(b)(2)(B) and 2449.3(b)(2)(C), are not required to file a report with the ARB or the air district under section 2449.3(d)(1). It is also not required to apply for funding under subsection (d)(1)(D), but may file a report with ARB or the air district under section 2449.3(d)(1) and apply for funding if the NOx index calculated for its fleet operating within the air district exceeds the NOx target rate, and the fleet would like to qualify for funding. If the air district approves the fleet's application for funding, the fleet must achieve the NOx reductions

as set forth in subsection (d)(1)(E). Participating in the SOON program in one year does not obligate the fleet to participate in subsequent years.

(3) Air districts that opt into the SOON program — Districts must prioritize requested projects based on the optimum NOx cost-effectiveness and on whether the fleet requesting the SOON program funding has requested high priority for SOON program funding. Air districts must report to ARB, in a format approved by the Executive Officer, all projects funded under the SOON program, including the equipment identification number of all vehicles funded.

*(e) Special Provisions —**(1) Accounting for the in-use off-road diesel vehicle rule —*

(A) Reductions achieved through the SOON program must be surplus, over the entire contract period, to those required by the "Regulation for In-Use Off-Road Diesel Vehicles", sections 2449–2449.2 above.

(B) During the contract period, vehicles equipped with NOx retrofits, repowered with new engines, or that have been replaced using SOON program funding, cannot use this lower emission rate to calculate NOx indices, PM indices, NOx target rates, PM target rates, turnover credit and retrofit credit under sections 2449.1 and 2449.2. Instead, for the purposes of calculating NOx indices, PM indices, NOx target rates, PM target rates, turnover credit and retrofit credit under sections 2449.1 and 2449.2, these vehicles must be reflected as if the actions taken under the SOON program did not occur. Actions taken using SOON program funding may be used for determining compliance under sections 2449.1 and 2449.2 after the completion of the SOON program project contract period for that vehicle. For example, if a Tier 0 vehicle is repowered with a Tier 3 engine with SOON program funds, for purposes of compliance with sections 2449.1 and 2449.2, that vehicle is still treated as if it were a Tier 0 until the end of the contract period for the SOON program project.

(C) If a fleet pays for a retrofit that is installed concurrently with a repower or vehicle replacement funded with SOON program funding, the fleet may count the retrofit toward determining compliance under section 2449.2. If a fleet's vehicle is repowered using SOON program funding with a Tier 4 engine that comes with an original engine manufacturer diesel particulate filter, and if the fleet pays a portion of the repower costs such that it offsets the cost of an equivalent retrofit diesel particulate filter, the fleet may count the retrofit toward determining compliance under section 2449.2.

(2) *Turnover in section 2449.1* — A fleet may apply to the Executive Officer for an extension from the requirements in section 2449.1(a)(2)(A) if, using the accounting provisions in section 2449.3(e)(1), section 2449.1(a)(2)(A) would require, prior to March 1, 2014, a fleet to turn over vehicles that are Tier 2 or better. The exemptions in section 2449.1(a)(2)(A)4.a. and section 2449.1(a)(2)(A)5. for vehicles less than 10 years old and Tier 1 vehicles do not apply to the SOON program.

(3) *Compliance plans* — In addition to a SOON program application, a fleet applying for SOON program funding must prepare and submit to the air district a compliance plan, in the format described in the district guidelines, laying out the actions it is required to take under sections 2449.1 and 2449.2 and the actions for which it is applying for funding under section 2449.3. Compliance plans must demonstrate that in the absence of any actions taken to satisfy section 2449.3, the fleet will be able to meet the requirements of sections 2449.1 and 2449.2 through the remaining actions set forth in the plan.

(4) *Surplus* — Participation in the SOON program does not reduce the actions required for any fleet to comply with any requirements in the statewide in-use off-road diesel vehicle regulation under sections 2449.1 and 2449.2.

(5) *Tracking devices* — An air district may require any vehicle repowered, retrofitted, or replaced with incentive money through the SOON program to be equipped with a vehicle location device (per the air district's guidelines and conditions for receiving funding) to ensure that the vehicle is used in the air district for the required percent of operating hours.

(6) *Particulate Matter Retrofits* —

a. The exemption from retrofit requirements for vehicles less than 5 years old in section 2449.2(a)(2)(A)4.a. does not apply to vehicles that are replaced or repowered with SOON program funds.

b. If a fleet has a vehicle that has been retrofitted within the last six years with a Level 2 or 3 VDECS, which was the highest level VDECS at the time of retrofit, the fleet may but is not required to apply for SOON funding for that vehicle.

c. A fleet that receives SOON funding to repower or replace a vehicle is not required to install the highest level VDECS along with the repower or replacement.

(7) *Funding Guidelines* — Projects funded under the SOON program with Carl Moyer program money must be administered consistent with applicable Carl Moyer program guidelines, except as noted in section 2449.3(e)(6)c. If a project is funded from other sources, the SOON program must be administered consistent with any applicable guidelines. The air district shall develop guidelines for administration of the SOON program, as provided in section 2449.3(f)(2).

(8) *Vehicles Scheduled to Leave District* — A fleet that has operated within the air district as defined in section 2449.3(c)(1) but that is planning to move vehicles out of the air district such that the vehicles will not operate enough hours in the air district to qualify for SOON funding may leave such vehicles out of the NOx index calculation in section 2449.3(d)(1)(B), the NOx target rate calculation in section 2449.3(d)(1)(C), and the application for funding in section 2449.3(d)(1)(D). The fleet must submit a statement under penalty of perjury to the district for each such vehicle stating its intent to move each such vehicle out of the district.

(9) *Voluntary or Mandatory Nature of SOON* — An air district, having held a public hearing and opted into this regulation, may issue a solicitation for applications for funding under the SOON program.

a. For fleets in the South Coast Air Quality Management District and San Joaquin Valley Air Pollution Control District, solicitations with a deadline before April 2, 2009, shall be voluntary. For solicitations with a deadline on or after April 2, 2009, the South Coast Air Quality Management District and San Joaquin Valley Air Pollution Control District may elect to make participation by fleets voluntary or mandatory.

b. In any district other than the South Coast Air Quality Management District or San Joaquin Valley Air Pollution Control District, for solicitations with a deadline before April 2, 2010, participation by fleets is voluntary. For solicitations with a deadline on or after April 2, 2010, the district may choose to make participation by fleets voluntary or mandatory.

c. The solicitation shall announce the air district's decision regarding voluntary or mandatory participation.

(f) *Local Air District Opt-In*

(1) To participate in the SOON program, an air district's governing board must hold a formally noticed public hearing, where public comment is taken, and, by majority vote, elect to opt into the program. As part of this hearing, for years when section 2449.3(e)(9) gives the district a choice between a voluntary and mandatory SOON program, the air district's governing board must decide whether participation by fleets is voluntary or mandatory.

(2) *District Guidelines* — An air district opting into section 2449.3 must develop, through a public process including a duly noticed public workshop and formally noticed public hearing, additional administrative provisions necessary to implement this section, including, but not limited to, funding guidelines (as required under section 2449.3(e)(7)), compliance planning requirements, and reporting and monitoring requirements. Funding guidelines may include limitations on the cost-effectiveness of projects that may be funded and must include the method used for prioritizing projects based on cost-effectiveness and whether applying fleets requested high priority for SOON program funding, and a description of any requirements on fleets that receive SOON funding to pay part of the SOON project cost. Compliance planning guidelines must indicate the format and length of compliance plans. Air district guidelines may include a pre-application process that collects vehicle data (model year, horsepower, hours of use) and then requires full SOON project applications only for vehicles likely to receive funding.

(3) *ARB Approval of District Guidelines* — Before any guidelines, including administrative or funding guidelines, approved by an air district take effect, they must be approved by the Executive Officer. Air district staff shall submit proposed guidelines to the Executive Officer before they are acted on by the district's governing board. The Executive Officer will respond within 30 days with a description of any required changes to the proposed guidelines necessary for Executive Officer approval. In evaluating proposed air district guidelines, the Executive Officer shall consider, among other factors, the adequacy of cost-effectiveness criteria, whether fleet requests for high priority for SOON funding are given preference, and uniformity of district guidelines between air districts. After guidelines are adopted by a district's governing board, air district staff shall submit the adopted guidelines to the Executive Officer. The Executive Officer will respond within 30 days with approval or a description of any required changes to the guidelines.

(4) *ARB Authority* — ARB has sole authority to enforce the requirements of section 2449.3. The Executive Officer retains the authority to review any district's administration of section 2449.3 and to address any unforeseen circumstances or events.

NOTE: Authority cited: Sections 39002, 39515, 39516, 39600, 39601, 39602, 43000, 43000.5, 43013, 43016 and 43018, Health and Safety Code. Reference: Sections 39002, 39515, 39516, 39600, 39601, 39602, 39650, 39656, 39657, 39658, 39659, 39665, 39667, 43000, 43000.5, 43013, 43016 and 43018, Health and Safety Code.

HISTORY

1. New section filed 5-16-2008; operative 6-15-2008 (Register 2008, No. 20).

Appendix A

Use the values in these tables unless engine is a Post-2007 Flexibility Engine, or unless the engine is an engine certified to on-road standards.

Engines certified to on-road standards should use the standard to which the engine is certified. Flexibility engines certified January 1, 2007 or later should use the emission standard to which the engine is certified. Engines certified to Family Emission Limits and flexibility engines certified before January 1, 2007, should still use the emission factors in the table below.

Replacement engines produced per title 13, CCR, section 2423(j) should use the engine model year of the engine replaced. For an engine certified to an emission standard lower than that shown in these tables for its model year, the emission standard to which the engine is certified may be used, provided that the certification Executive Order or certificate

number is provided along with the initial and annual reporting required by section 2449(g)(1) and 2449(g)(2).

If the model year of an engine is unknown because it is missing a serial number, manufacturer's build code, and/or an engine family number, and the engine manufacturer or authorized representative is unable to determine the model year of the engine by examining the engine's build and components, such an engine shall be treated as a 1969 model year engine. If a manufacturer can bracket the model year of an engine (for example that an engine was built between 1987 and 1994) by examining the engine's build and components, the earliest date the engine could have been manufactured shall be used as the model year of that engine (in the example, 1987).

For engines that have been retrofit with VDECS, the PM Emission Factor is reduced 50 percent for a Level 2 VDECS, and 85 percent for a Level 3 VDECS; the NOx Emission Factor is reduced by whatever percentage NOx emission reductions are verified. The PM Emission Factor is not reduced for a Level 1 VDECS.

PM Emissions Factors by Horsepower and Year (g/bhp-hr)

Engine Model Year	Horsepower Group							
	25-49	50-74	75-99	100-174	175-299	300-599	600-750	Over 750

Article 5. Portable Engine and Equipment Registration

§ 2450. Purpose.

These regulations establish a statewide program for the registration and regulation of portable engines and engine-associated equipment (portable engines and equipment units) as defined herein. Portable engines and equipment units registered under the Air Resources Board program may operate throughout the State of California without authorization (except as specified herein) or permits from air quality management or air pollution control districts (districts). These regulations preempt districts from permitting, registering, or regulating portable engines and equipment units, including equipment necessary for the operation of a portable engine (e.g. fuel tanks), registered with the Executive Officer of the Air Resources Board except in the circumstances specified in the regulations.

NOTE: Authority cited: Sections 39600, 39601, 41752, 41753, 41754, 41755, 43013(b) and 43018, Health and Safety Code. Reference: Sections 41750, 41751, 41752, 41753, 41754 and 41755, Health and Safety Code.

HISTORY

1. New article 5 (sections 2450–2465) and section filed 9–17–97; operative 9–17–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 38).
2. Amendment filed 12–1–99; operative 12–1–99 pursuant to Government Code section 11343.4(d) (Register 99, No. 49).

3. Amendment of section and NOTE filed 8–2–2005; operative 9–1–2005 (Register 2005, No. 31).

§ 2451. Applicability.

(a) Registration under this regulation is voluntary for owners of portable engines or equipment units.

(b) This regulation applies to portable engines and equipment units as defined in section 2452. Except as provided in paragraph (c) of this section, any portable engine or equipment unit may register under this regulation. Examples include, but are not limited to:

(1) portable equipment units driven solely by portable engines including confined and unconfined abrasive blasting, Portland concrete batch plants, sand and gravel screening, rock crushing, and unheated pavement recycling and crushing operations;

(2) consistent with section 209(e) of the federal Clean Air Act, engines and associated equipment used in conjunction with the following types of portable operations: well drilling, service or work-over rigs; power generation, excluding cogeneration; pumps; compressors; diesel pile-driving hammers; welding; cranes; woodchippers; dredges; equipment necessary for the operation of portable engines and equipment units; and military tactical support equipment.

(c) The following are not eligible for registration under this program:

(1) any engine used to propel mobile equipment or a motor vehicle of any kind as defined in section 2452(z)(1)(A);

(2) any engine or equipment unit not meeting the definition of portable as defined in section 2452(cc) of this regulation;

(3) engines, equipment units, and associated engines determined by the Executive Officer to qualify as part of a stationary source permitted by a district;

(4) any engine or equipment unit subject to an applicable federal Maximum Achievable Control Technology standard, or National Emissions Standard for Hazardous Air Pollutants, or federal New Source Performance Standard, except for equipment units subject to 40 CFR Part 60 Subpart OOO (Standards of Performance for Nonmetallic Mineral Processing Plants);

(5) any engine or equipment unit operating within the boundaries of the California Outer Continental Shelf (OCS) [Note: This shall not prevent statewide registration of portable engines and equipment units already permitted by a district for operation in the OCS. Such statewide registration shall only be valid for operation onshore and in State Territorial Waters (STW).];

(6) any dredging operation in the Santa Barbara Harbor;

(7) any dredging unit owned by a single port authority, harbor district, or similar agency in control of a harbor, and operated only within the same harbor;

(8) generators used for power production into the grid, except to maintain grid stability during an emergency event or other unforeseen event that affects grid stability; and

(9) generators used to provide primary or supplemental power to a building, facility, stationary source, or stationary equipment, except during unforeseen interruptions of electrical power from the serving utility, maintenance and repair operations, electrical upgrade operations including startup, shutdown, and testing that do not exceed 60 calendar days, operations where the voltage, frequency, or electrical current requirements can only be supplied by a portable generator, or remote operations where grid power is unavailable.

(d) In the event that the owner of an engine or equipment unit elects not to register under this program, the engine or equipment unit shall be subject to district permitting requirements pursuant to district regulations.

NOTE: Authority cited: Sections 39600, 39601, 41752, 41753, 41754, 41755, 43013(b) and 43018, Health and Safety Code. Reference: Sections 41750, 41751, 41752, 41753, 41754 and 41755, Health and Safety Code.

HISTORY

1. New section filed 9-17-97; operative 9-17-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 38).
2. Amendment filed 12-1-99; operative 12-1-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 49).
3. Amendment of section and NOTE filed 8-2-2005; operative 9-1-2005 (Register 2005, No. 31).
4. Amendment of subsections (a), (c)(1)-(c)(5) and (c)(9)-(e) filed 4-26-2007; operative 4-27-2007 pursuant to Government Code section 11343.4 (Register 2007, No. 17).
5. Amendment of subsections (c)(3) and (c)(9) filed 4-26-2007 as an emergency; operative 4-27-2007 (Register 2007, No. 17). A Certificate of Compliance must be transmitted to OAL by 10-23-2007 or emergency language will be repealed by operation of law on the following day.
6. Certificate of Compliance as to 4-26-2007 order, including further amendment of subsection (c)(3) and repealer of subsections (d)-(e), transmitted to OAL 7-31-2007 and filed 9-12-2007 (Register 2007, No. 37).
7. Change without regulatory effect amending subsections (c)(1)-(2) filed 4-7-2008 pursuant to section 100, title 1, California Code of Regulations (Register 2008, No. 15).

§ 2452. Definitions.

(a) "Air Contaminant" shall have the same meaning as set out in section 39013 of the Health and Safety Code.

(b) "ARB" means the California Air Resources Board.

(c) "Certified Compression-Ignition Engine" means an engine meeting the nonroad engine emission standards for compression-ignition engines, as set forth in Title 13 of the California Code of Regulations or 40 CFR Part 89 in effect at the time of application.

(d) "Certified Spark-Ignition Engine" means an engine meeting the nonroad engine emission standards for spark-ignition engines, as set forth in Title 13 of the California Code of Regulations or 40 CFR Part 1048 in effect at the time of application.

(e) "Compression-Ignition (CI) Engine" means an internal combustion engine with operating characteristics significantly similar to the theoretical diesel combustion cycle. Compression-ignition engines usually control fuel supply instead of using a throttle to regulate power.

(f) "Corresponding Onshore District" means the district which has jurisdiction for the onshore area that is geographically closest to the engine or equipment unit.

(g) "District" means an air pollution control district or air quality management district created or continued in existence pursuant to provisions of Part 3 (commencing with section 40000) of the California Health and Safety Code.

(h) "Electrical Upgrade" means replacement or addition of electrical equipment and systems resulting in increased generation, transmission and/or distribution capacity.

(i) "Emergency Event" means any situation arising from sudden and reasonably unforeseen natural disaster such as earthquake, flood, fire, or other acts of God, or other unforeseen events beyond the control of the portable engine or equipment unit operator, its officers, employees, and contractors that threatens public health and safety and that requires the immediate temporary operation of portable engines or equipment units to help alleviate the threat to public health and safety.

(j) "Engine" means any piston driven internal combustion engine.

(k) "Equipment Unit" means equipment that emits PM₁₀ over and above that emitted from an associated engine.

(l) "Executive Officer" means the Executive Officer of the California Air Resources Board or his/her designee.

(m) "Hazardous Air Pollutant (HAP)" means any air contaminant that is listed pursuant to section 112(b) of the federal Clean Air Act.

(n) "Home District" means the district designated by the responsible official as the district in which the registered engine or equipment unit resides most of the time. For registered engines or equipment units based out of California, the responsible official shall designate the home district based on where the registered engine or equipment unit is likely to be operated a majority of the time the registered engine or equipment units is in California.

(o) "Identical Replacement" means a substitution due to mechanical breakdown of a registered portable engine or equipment unit with another portable engine or equipment unit that has the same manufacturer, type, model number, manufacturer's maximum rated capacity, and rated brake horsepower; and is intended to perform the same or similar function as the original portable engine or equipment unit; and has equal or lower emissions expressed as mass per unit time; and meets the emission requirements of sections 2455 through 2457 of this article.

(p) "In-field Inspection" means an inspection that is conducted at the location that the portable engine or equipment unit is operated under normal load and conditions.

(q) "Location" means any single site at a building, structure, facility, or installation.

(r) "Maximum Achievable Control Technology (MACT)" means any federal requirement promulgated as part of 40 CFR Parts 61 and 63.

(s) "Maximum Rated Capacity" is the maximum throughput rating or volume capacity listed on the nameplate of the registered equipment unit as specified by the manufacturer.

(t) "Maximum Rated Horsepower (brake horsepower (bhp))" is the maximum brake horsepower rating specified by the registered engine manufacturer and listed on the nameplate of the registered engine.

(u) "Mechanical Breakdown" means any failure of an engine's electrical system or mechanical parts that necessitates the removal of the registered engine from service.

(v) "Modification" means any physical change to, change in method of operation of, or in addition to registered engine or equipment unit, which may cause or result in an increase in the amount of any air contaminant emitted or the issuance of air contaminants not previously emitted. Routine maintenance and/or repair shall not be considered a physical change. Unless previously limited by an enforceable registration condition, a change in the method of operation shall not include:

(1) an increase in the production rate, unless such increase will cause the maximum design capacity of the registered equipment unit to be exceeded;

(2) an increase in the hours of operation;

(3) a change of ownership; and

(4) the movement of a registered engine or equipment unit from one location to another;

(w) "New Nonroad Engine" means a nonroad engine, the equitable or legal title to which has never been transferred to an ultimate purchaser. If the equitable or legal title to an engine is not transferred to an ultimate purchaser until after the engine is placed into service, then the engine will no longer be new after it is placed into service. A nonroad engine is placed into service when it is used for its functional purposes. The term "ultimate purchaser" means, with respect to a new nonroad engine, the first person who purchases a new nonroad engine for purposes other than resale.

(x) "New Source Performance Standard (NSPS)" means any federal requirement promulgated as part of 40 CFR Part 60.

(y) "Non-field Inspection" means an inspection that is either conducted at a location that is mutually acceptable to the district and the owner or operator or where the engine or equipment unit is stored and does not require operation of the engine or equipment unit for purposes of the inspection.

(z) "Nonroad Engine" means:

(1) Except as discussed in paragraph (B) of this definition, a nonroad engine is any engine:

(A) in or on a piece of equipment that is self-propelled or serves a dual purpose by both propelling itself and performing another function (such as garden tractors, off-highway mobile cranes and bulldozers); or

(B) in or on a piece of equipment that is intended to be propelled while performing its function (such as lawnmowers and string trimmers); or

(C) that, by itself or in or on a piece of equipment, is portable or transportable, meaning designed to be and capable of being carried or moved from one location to another. Indicia of transportability include, but are not limited to, wheels, skids, carrying handles, dolly, trailer, or platform.

(2) An engine is not a nonroad engine if:

(A) the engine is used to propel a motor vehicle or a vehicle used solely for competition, or is subject to standards promulgated under section 202 of the federal Clean Air Act; or

(B) the engine is regulated by a federal New Source Performance Standard promulgated under section 111 of the federal Clean Air Act; or

(C) the engine otherwise included in paragraph (1)(C) of this definition remains or will remain at a location for more than 12 consecutive months or a shorter period of time for an engine located at a seasonal source. Any engine (or engines) that replaces an engine at a location and that is intended to perform the same or similar function as the engine replaced will be included in calculating the consecutive time period. An engine located at a seasonal source is an engine that remains at a seasonal source during the full annual operating period of the seasonal source. A seasonal source is a stationary source that remains in a single location on a permanent basis (at least two years) and that operates at that single location approximately three (or more) months each year.

(aa) "Outer Continental Shelf (OCS)" shall have the meaning provided by section 2 of the Outer Continental Shelf Lands Act (43 U.S.C. Section 1331 et seq.).

(bb) "Placard" means a visible indicator supplied by the Air Resources Board to indicate that an engine or equipment has been registered in the Portable Equipment Registration Program and is in addition to the registration identification device.

(cc) "Portable" means designed and capable of being carried or moved from one location to another. Indicia of portability include, but are not limited to, wheels, skids, carrying handles, dolly, trailer, or platform. For the purposes of this regulation, dredge engines on a boat or barge are considered portable. The engine or equipment unit is not portable if any of the following are true:

(1) the engine or equipment unit or its replacement is attached to a foundation, or if not so attached, will reside at the same location for more than 12 consecutive months. The period during which the engine or equipment unit is maintained at a storage facility shall be excluded from the residency time determination. Any engine or equipment unit such as back-up or stand-by engines or equipment units, that replace engine(s) or equipment unit(s) at a location, and is intended to perform the same or similar function as the engine(s) or equipment unit(s) being replaced, will be included in calculating the consecutive time period. In that case, the cumulative time of all engine(s) or equipment unit(s), including the time between the removal of the original engine(s) or equipment unit(s) and installation of the replacement engine(s) or equipment unit(s), will be counted toward the consecutive time period; or

(2) the engine or equipment unit remains or will reside at a location for less than 12 consecutive months if the engine or equipment unit is located at a seasonal source and operates during the full annual operating period of the seasonal source, where a seasonal source is a stationary source that remains in a single location on a permanent basis (at least two years) and that operates at that single location at least three months each year; or

(3) the engine or equipment unit is moved from one location to another in an attempt to circumvent the portable residence time requirements.

(dd) "Prevention of Significant Deterioration (PSD)" means any federal requirements contained in or promulgated pursuant to Part C of the federal Clean Air Act.

(ee) "Process" means any air-contaminant-emitting activity associated with the operation of a registered engine or equipment unit.

(ff) "Project, for the purposes of onshore operation," means the use of one or more registered engines or equipment units operated under the same or common ownership or control to perform a single activity.

(gg) "Project, for the purposes of State Territorial Waters (STW)," means the use of one or more registered engines and equipment units operating under the same or common ownership or control to perform any and all activities needed to fulfill specified contract work that is performed in STW. For the purposes of this definition, a contract means verbal or written commitments covering all operations necessary to complete construction, exploration, maintenance, or other work. Multiple or consecutive contracts may be considered one project if they are intended to perform activities in the same general area, the same parties are involved in the contracts, or the time period specified in the contracts is determined by the Executive Officer to be sequential.

(hh) "Provider of Essential Public Service (PEPS)" means any privately-owned corporation or public agency that owns, operates, controls, or manages a line, plant, or system for the transportation of people or property, the transmission of telephone or telegraph messages, or the production, generation, transmission or furnishing of heat, light, water, power, or sanitation directly or indirectly to the public.

(ii) "Registration" means issuance of a certificate by the Executive Officer acknowledging expected compliance with the applicable requirements of this article, and the intent by the owner or operator to operate the engine or equipment unit within the requirements established by this article.

(jj) "Rental Business" means a business which rents or leases registered engines or equipment units.

(kk) "Renter" means a person who rents and or operates registered engines or equipment units not owned by that person.

(ll) "Resident Engine" means either of the following:

(1) a portable engine that at the time of applying for registration, has a current, valid district permit or registration that was issued prior to January 1, 2006, or an engine that lost a permit to operate exemption through a formal district action. Moving an engine from a district that provides

a permit to operate exemption to a district that requires a permit to operate or registration does not qualify for consideration as a resident engine; or

(2) a certified compression-ignition engine that operated in California at any time between March 1, 2004 and October 1, 2006. The responsible official shall provide sufficient documentation to prove the engine's residency to the satisfaction of the Executive Officer. Examples of adequate documentation include but are not limited to: tax records, purchase records, maintenance records, or usage records.

An engine permitted or registered by a district pursuant to Title 17 of the California Code of Regulations Section 93116.3(b)(6) is not a resident engine.

(mm) "Responsible Official" refers to an individual employed by the company or public agency with the authority to certify that the registered engines or equipment units under his/her jurisdiction comply with applicable requirements of this regulation. A company or public agency may have more than one Responsible Official.

(nn) "Spark-Ignition (SI) Engine" means an internal combustion engine with a spark plug (or other sparking device) with operating characteristics significantly similar to the theoretical Otto combustion cycle. Spark-ignition engines usually use a throttle instead of using fuel supply to control intake air flow to regulate power.

(oo) "State Territorial Waters (STW)" includes all of the following: an expanse of water that extends from the California coastline to 3 miles off-shore; a 3 mile wide belt around islands; and estuaries, rivers, and other inland waterways.

(pp) "Statewide Registration Program" means the program for registration of portable engines and equipment units set out in this article.

(qq) "Stationary Source" means any building, structure, facility or installation which emits any air contaminant directly or as a fugitive emission. "Building," "structure," "facility," or "installation" includes all pollutant emitting activities which:

(1) are under the same ownership or operation, or which are owned or operated by entities which are under common control;

(2) belong to the same industrial grouping either by virtue of falling within the same two-digit standard industrial classification code or by virtue of being part of a common industrial process, manufacturing process, or connected process involving a common raw material; and

(3) are located on one or more contiguous or adjacent properties.

[NOTE: For purposes of this regulation a stationary source and nonroad engine are mutually exclusive.]

(rr) "Storage" means a warehouse, enclosed yard, or other area established for the primary purpose of maintaining registered engines or equipment units when not in operation.

(ss) "Tactical Support Equipment (TSE)" means equipment using a portable engine, including turbines, that meets military specifications, owned by the U.S. Department of Defense, the U.S. military services, or its allies, and used in combat, combat support, combat service support, tactical or relief operations, or training for such operations. Examples include, but are not limited to, internal combustion engines associated with portable generators, aircraft start carts, heaters and lighting carts.

(tt) "Third-party Rental" means a non-rental business renting or leasing registered engines and/or equipment units to another party by written agreement.

(uu) "Tier 1 Engine" means a certified compression-ignition engine according to the horsepower and model year as follows:

- ≥50 bhp and <100 bhp; 1998 through 2003
- ≥100 bhp and <175 bhp; 1997 through 2002
- ≥175 bhp and <300 bhp; 1996 through 2002
- ≥300 bhp and <600 bhp; 1996 through 2000
- ≥600 bhp and ≤750 bhp; 1996 through 2001
- >750 bhp; 2000 through 2005.

(vv) "Tier 2 Engine" means a certified compression-ignition engine according to the horsepower and model year as follows:

- ≥50 bhp and <100 bhp; 2004 through 2007
- ≥100 bhp and <175 bhp; 2003 through 2006
- ≥175 bhp and <300 bhp; 2003 through 2005

≥300 bhp and <600 bhp; 2001 through 2005

≥600 bhp and ≤750 bhp; 2002 through 2005

750 bhp; 2006 through 2010.

(ww) "Transportable" means the same as portable.

(xx) "U.S. EPA" means the United States Environmental Protection Agency.

(yy) "Vendor" means a seller or supplier of portable engines or equipment units for use in California.

(zz) "Volatile Organic Compound (VOC)" means any compound containing at least one atom of carbon except for the following exempt compounds: acetone, ethane, parachlorobenzotrifluoride (1-chloro-4-trifluoromethyl benzene), methane, carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, ammonium carbonates, methylene chloride (dichloromethane), methyl chloroform (1,1,1-trichloroethane), CFC-113 (trichlorotrifluoroethane), CFC-11 (trichlorofluoromethane), CFC-12 (dichlorodifluoromethane), CFC-22 (chlorodifluoromethane), CFC-23 (trifluoromethane), CFC-114 (dichlorotetrafluoroethane), CFC-115 (chloropentafluoroethane), HCFC-123 (dichlorotrifluoroethane), HFC-134a (tetrafluoroethane), HCFC-141b (dichlorofluoroethane), HCFC-142b (chlorodifluoroethane), HCFC-124 (chlorotetrafluoroethane), HFC-23 (trifluoromethane), HFC-134 (tetrafluoroethane), HFC-125 (pentafluoroethane), HFC-143a (trifluoroethane), HFC-152a (difluoroethane), cyclic, branched, or linear completely methylated siloxanes, the following classes of perfluorocarbons:

(1) cyclic, branched, or linear, completely fluorinated alkanes;

(2) cyclic, branched, or linear, completely fluorinated ethers with no unsaturations;

(3) cyclic, branched, or linear, completely fluorinated tertiary amines with no unsaturations; and

(4) sulfur-containing perfluorocarbons with no unsaturations and with the sulfur bonds to carbon and fluorine, acetone, ethane, and parachlorobenzotrifluoride (1-chloro-4-trifluoromethyl benzene).

NOTE: Authority cited: Sections 39600, 39601, 41752, 41753, 41754, 41755, 43013(b) and 43018, Health and Safety Code. Reference: Sections 41750, 41751, 41752, 41753, 41754 and 41755, Health and Safety Code.

HISTORY

1. New section filed 9-17-97; operative 9-17-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 38).
2. Amendment filed 12-1-99; operative 12-1-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 49).
3. Amendment of section and NOTE filed 8-2-2005; operative 9-1-2005 (Register 2005, No. 31).
4. New subsections (hh)(3)-(4) and (rr)-(ss) filed 12-27-2006 as an emergency; operative 12-27-2006 (Register 2006, No. 52). A Certificate of Compliance must be transmitted to OAL by 4-26-2007 or emergency language will be repealed by operation of law on the following day.
5. Reinstatement of section as it existed prior to 12-27-2006 emergency amendment by operation of Government Code section 11346.1(f) (Register 2007, No. 17).
6. Amendment filed 4-26-2007; operative 4-27-2007 pursuant to Government Code section 11343.4 (Register 2007, No. 17).
7. Amendment of subsections (o), (kk) and (mm), new subsections (mm)(1)-(2) and (uu)-(ww) and subsection relettering filed 4-26-2007 as an emergency; operative 4-27-2007 (Register 2007, No. 17). A Certificate of Compliance must be transmitted to OAL by 10-23-2007 or emergency language will be repealed by operation of law on the following day.
8. Certificate of Compliance as to 4-26-2007 order, including further amendment of section, transmitted to OAL 7-31-2007 and filed 9-12-2007 (Register 2007, No. 37).
9. Change without regulatory effect amending section filed 4-7-2008 pursuant to section 100, title 1, California Code of Regulations (Register 2008, No. 15).

§ 2453. Application Process.

(a) In order for an engine or equipment unit to be considered for registration by the Executive Officer, the engine or equipment unit must be portable as defined in section 2452(cc) and meet all applicable requirements established in this article.

(b) For purposes of registration under this article, an engine and the equipment unit it serves are considered to be separate emissions units and require separate applications.

(c) For an identical replacement, an owner or operator of a registered portable engine or equipment unit is not required to complete a new application and may immediately operate the identical replacement. Except for TSE, the owner or operator shall notify the Executive Officer in writing within five calendar days of replacing the registered engine or equipment unit with an identical replacement. Notification shall include company name, responsible official, phone number, registration certificate number of the engine or equipment unit to be replaced, and make, model, rated brake horsepower, serial number of the identical replacement; description of the mechanical breakdown; and applicable fees as required in section 2461. Misrepresentation of engine or equipment unit information or the failure to meet the requirements of this regulation shall be deemed a violation of this article.

(d) The Executive Officer shall inform the applicant, in writing, if the application is complete or deficient, within 30 days of receipt of an application. If deemed deficient, the Executive Officer shall identify the specific information required to make the application complete.

(e) The Executive Officer shall issue or deny registration within 90 days of receipt of a complete application.

(f) Upon finding that an engine or equipment unit meets the requirements of this article, the Executive Officer shall issue a registration for the engine or equipment unit. The Executive Officer shall notify the applicant in writing that the engine or equipment unit has been registered. The notification shall include a registration certificate, any conditions to ensure compliance with State and federal requirements, and a registration identification device for each engine or equipment unit registered pursuant to this regulation. Except for TSE, the registration identification device shall be affixed on the engine or equipment unit at all times, and the registration certificate including operating conditions shall be kept on the immediate premises with the engine or equipment at all times and made accessible to the Executive Officer or districts upon request. Failure to properly maintain the registration identification device shall be deemed a violation of this article.

(g) Except for TSE, each application for registration and the appropriate fee(s) as specified in section 2461, shall be submitted in a format approved by the Executive Officer and include, at a minimum, the following information:

- (1) indication of general nature of business (e.g., rental business, etc.);
- (2) the name of applicant, including mailing address and telephone number;
- (3) a brief description of typical engine or equipment-unit use;
- (4) detailed description, including engine or equipment-unit make, model, manufacture year (for portable engines only), rated brake horsepower, throughput, capacity, emission control equipment, and serial number;
- (5) necessary engineering data, emissions test data, or manufacturer's emissions data to demonstrate compliance with the requirements as specified in sections 2455, 2456, and 2457;
- (6) for resident engines, a copy of either a current permit to operate that was granted by a district, or documentation as described in section 2452(l); and
- (7) the printed name and signature of the responsible official and date of the signature.

(h) For TSE, application for registration and the appropriate fee(s) as specified in section 2461, shall be submitted in a format approved by the Executive Officer and include, at a minimum, the following information:

- (1) the name of applicant, including mailing address and telephone number;
- (2) a brief description of typical engine or equipment-unit use;
- (3) engine or equipment-unit description, including type and rated brake horsepower; and
- (4) the printed name and signature of the responsible official and date of the signature.

(i) All registered engines and equipment units shall have a designated home district as defined in section 2452(n) according to the following:

(1) Owners holding valid registration(s) prior to the effective date shall designate in writing to the Executive Officer a home district within 90 days of the effective date of this regulation. The Executive Officer shall designate the home district for any and all registered engines and equipment units for existing registration program participants that fail to designate a home district;

(2) a home district shall be designated on each application for initial registration of an engine or equipment unit; and

(3) except for registered engines or equipment units owned by a rental business or involved in a third party rental, if the engine or equipment unit, based on averaging of annual operation in each district from the three annual reports submitted during the 3 year registration cycle, operated the largest percentage of the time in a district other than the designated home district, the owner shall change the home district designation at the time of renewal. The change is not required if the difference between the home district operation percentage and the district with the largest operating percentage is 5 percent or less.

(j) Engines or equipment units owned and operated for the primary purpose of rental by a rental business shall be identified as rental at the time of application for registration and shall be issued a registration specific to the rental business requirements of this article. Misrepresentation of portable engine or equipment unit use in an attempt to qualify under the rental business definition shall be deemed a violation of this article.

(k) New applications for non-operational engines or equipment units will not be accepted by the Executive Officer.

(l) Once registration is issued by the Executive Officer, district permits or registrations for engines or equipment units registered in the Statewide Registration Program are preempted by the statewide registration and are, therefore, considered null and void, except for the following circumstances where a district permit shall be required:

(1) engines or equipment units used in a project(s) operating in the OCS. The requirements of the district permit or registration apply to the registered engine or equipment unit while operating at the project(s) in the OCS; or

(2) engines or equipment units used in a project(s) operating in both the OCS and STW. The requirements of the district permit or registration apply to the registered engine or equipment unit while operating at the project(s) in the OCS and STW; or

(3) at STW project(s) that trigger district emission offset thresholds; or

(4) at any specific location where statewide registration is not valid. The owner of the engine or equipment unit shall obtain a district permit or registration for the location(s) where the statewide registration is not valid; or

(5) at any location where an engine or equipment unit that has been determined to cause a public nuisance as defined in Health and Safety Code Section 41700.

Under no circumstances shall a portable engine or equipment unit be operated under both statewide registration and a district permit at any specific location. Where both a district permit for operation at a specific location and statewide registration have been issued for an engine or equipment unit, the terms of the district permit shall take precedence at that location.

(m) When ownership of a registered engine or equipment unit changes, the new owner shall submit a change of ownership application. This application shall be filed within 30 days of the change of ownership. During the 30 day period the new owner is authorized to operate the registered engine or equipment unit. If an application is not received within 30 days, the engine or equipment unit may not operate and the existing registration is not valid for the new owner until the application has been filed and all applicable fees have been paid. Registration will be reissued to the new owner after a complete application has been approved by the Executive Officer.

(n) Except for TSE, a placard shall be required for every engine or equipment unit registered in the Statewide Registration Program. The placard shall be affixed on the registered engine or equipment unit at all times so that it may be easily viewed from a distance. Placards shall be purchased at the time of the first renewal or at the time of initial registration, whichever occurs first. Failure to properly maintain the placard shall be deemed a violation of this article.

NOTE: Authority cited: Sections 39600, 39601, 41752, 41753, 41754, 41755, 43013(b) and 43018, Health and Safety Code. Reference: Sections 41750, 41751, 41752, 41753, 41754 and 41755, Health and Safety Code.

HISTORY

1. New section filed 9-17-97; operative 9-17-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 38).
2. Amendment filed 12-1-99; operative 12-1-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 49).
3. Amendment of section and NOTE filed 8-2-2005; operative 9-1-2005 (Register 2005, No. 31).
4. Change without regulatory effect amending subsection (g)(7) filed 10-27-2005 pursuant to section 100, title 1, California Code of Regulations (Register 2005, No. 43).
5. Amendment filed 4-26-2007; operative 4-27-2007 pursuant to Government Code section 11343.4 (Register 2007, No. 17).
6. Amendment of subsections (f), (g)(6) and (h)(5)-(n) filed 4-26-2007 as an emergency; operative 4-27-2007 (Register 2007, No. 17). A Certificate of Compliance must be transmitted to OAL by 10-23-2007 or emergency language will be repealed by operation of law on the following day.
7. Certificate of Compliance as to 4-26-2007 order, including amendment of subsection (g)(6), transmitted to OAL 7-31-2007 and filed 9-12-2007 (Register 2007, No. 37).
8. Change without regulatory effect amending subsections (a) and (g)(6) filed 4-7-2008 pursuant to section 100, title 1, California Code of Regulations (Register 2008, No. 15).

§ 2454. Registration Process.

(a) The Executive Officer shall make registration data available to the districts via the Internet.

(b) The Executive Officer may conduct an inspection of an engine or equipment unit and/or require a source test in order to verify compliance with the requirements of this article prior to issuance of registration.

(c) After obtaining registration in accordance with this article, an owner or operator of the registered engines or equipment units:

(1) shall comply with all conditions set forth in the issued registration. Failure to comply with such conditions shall be deemed a violation of this article; and

(2) may operate within the boundaries of the State of California so long as such registered engines or equipment units comply with all applicable requirements of this article and any other applicable federal or State law.

(d) Districts shall provide the Executive Officer with written reports or electronic submittals via the Internet, describing any inspections and the nature and outcome of any violation of local, State or federal laws by the owner or operator of registered engines or equipment units. The Executive Officer shall make available to all districts such information via the Internet.

NOTE: Authority cited: Sections 39600, 39601, 41752, 41753, 41754, 41755, 43013(b) and 43018, Health and Safety Code. Reference: Sections 41750, 41751, 41752, 41753, 41754 and 41755, Health and Safety Code.

HISTORY

1. New section filed 9-17-97; operative 9-17-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 38).
2. Amendment of NOTE filed 8-2-2005; operative 9-1-2005 (Register 2005, No. 31).
3. Amendment filed 4-26-2007; operative 4-27-2007 pursuant to Government Code section 11343.4 (Register 2007, No. 17).

§ 2455. General Requirements.

(a) The emissions from engines or equipment units registered under this article shall not, in the aggregate, interfere with the attainment or maintenance of any California or federal ambient air quality standard. The emissions from one or more registered engines or equipment units, exclusive of background concentration, shall not cause an exceedance of any ambient air quality standard. This paragraph shall not be construed as requiring operators of registered engines or equipment units to provide emission offsets for engines or equipment units registered under this article.

(b) Engines or equipment units registered under this article shall comply with article 1, chapter 3, part 4, division 26 of the California Health and Safety Code, commencing with section 41700.

(c) Except for engines or equipment units permitted or registered by a district in which an emergency event occurs, an engine or equipment unit operated during an emergency event as defined in section 2452(i) of this article, is considered registered under the requirements of this article for the duration of the emergency event and is exempt from sections 2455, 2456, 2457, 2458, and 2459 of this article for the duration of the emergency event provided the owner or operator notifies the Executive Officer within 24 hours of commencing operation. The Executive Officer may for good cause refute that an emergency event under this provision exists. If the Executive Officer deems that an emergency event does not exist, all operation of engines and equipment units covered by this provision shall cease operation immediately upon notification by the Executive Officer. Misrepresentation of an emergency event and failure to cease operation under notice of the Executive Officer shall be deemed a violation of this article.

(d) For the purposes of registration under this article, the owner or operator of a registered equipment unit must notify the U.S. EPA and comply with 40 CFR 52.21 if:

(1) the registered equipment unit operates at a major stationary source under 40 CFR 51.166 or 52.21, and

(A) the major stationary source is located within 10 kilometers of a Class I area; or

(B) the registered equipment unit, operating in conjunction with other registered equipment units, operates at the major stationary source and its operation would be defined as a major modification to the stationary source under 40 CFR 51.166 or 52.21; or

(2) the registered equipment unit, operating in conjunction with other registered equipment units, would be defined as a major stationary source, as defined under 40 CFR 51.166 or 52.21.

NOTE: Authority cited: Sections 39600, 39601, 41752, 41753, 41754, 41755, 43013(b) and 43018, Health and Safety Code. Reference: Sections 41750, 41751, 41752, 41753, 41754 and 41755, Health and Safety Code.

HISTORY

1. New section filed 9-17-97; operative 9-17-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 38).
2. Amendment filed 12-1-99; operative 12-1-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 49).
3. Amendment of subsection (c) and NOTE filed 8-2-2005; operative 9-1-2005 (Register 2005, No. 31).
4. Change without regulatory effect amending subsection (c) filed 10-27-2005 pursuant to section 100, title 1, California Code of Regulations (Register 2005, No. 43).
5. Amendment filed 4-26-2007; operative 4-27-2007 pursuant to Government Code section 11343.4 (Register 2007, No. 17).
6. Amendment of subsections (a) and (c) filed 4-26-2007 as an emergency; operative 4-27-2007 (Register 2007, No. 17). A Certificate of Compliance must be transmitted to OAL by 10-23-2007 or emergency language will be repealed by operation of law on the following day.
7. Certificate of Compliance as to 4-26-2007 order transmitted to OAL 7-31-2007 and filed 9-12-2007 (Register 2007, No. 37).
8. Editorial correction adding inadvertently omitted subsection (d) (Register 2007, No. 51).

§ 2456. Engine Requirements.

(a) For TSE, no air contaminant shall be discharged into the atmosphere, other than uncombined water vapor, for a period or periods aggregating more than three minutes in any one hour which is as dark or darker in shade as that designated as No. 2 on the Ringelmann Chart, as published by the United States Bureau of Mines, or of such opacity as to obscure an observer's view to a degree equal to or greater than does smoke designated as No. 2 on the Ringelmann Chart. No other requirements of this section are applicable to TSE.

(b) Registered diesel pile-driving hammers shall comply with the applicable provisions of section 41701.5 of the California Health and Safety Code and are otherwise exempt from further requirements of this section.

(c) To be registered in the Statewide Registration Program, a registered engine rated less than 50 brake horsepower shall be a certified compression-ignition engine or a certified spark-ignition engine, unless no

emission standards exist for that brake horsepower and year of manufacture. In that event, the engine shall comply with the applicable daily and annual emission limits contained in section 2456(d)(6) of this article. No other requirements of this section are applicable to portable engines rated less than 50 brake horsepower.

(d) After January 1, 2006, engines rated equal to, or greater than 50 bhp registered under this article shall:

(1) be certified compression-ignition engines or certified spark-ignition engines that meet the most stringent emissions standard in effect for the applicable horsepower range at the time the application is submitted by the responsible official. Spark-ignition engines that are not certified spark-ignition engines may be registered if they meet the emission standards in Table 1. Subsection (d)(1) does not apply to certified compression-ignition engines built under the flexibility provisions listed in 40 CFR part 89.102, engines that are resident engines, changes of ownership, or engines that meet the requirements of Title 17 of the California Code of Regulations sections 93116.3(b)(7) or 93116.3.1.

(2) meet all applicable requirements in Title 17 of the California Code of Regulations commencing with section 93116;

(3) use only fuels meeting the standards for California motor vehicle fuels as set forth in chapter 5, division 3, Title 13 of the California Code of Regulations, commencing with section 2250, or other fuels and/or additives that have been verified through the Verification Procedure for In-Use Strategies to Control Emissions from Diesel Engines;

(4) not exceed particulate matter emissions concentration of 0.1 grain per standard dry cubic feet corrected to 12 percent CO₂. This provision does not apply to certified compression-ignition engines, certified spark-ignition engines, or any spark-ignition engine meeting Table 1 requirements;

(5) not discharge air contaminants into the atmosphere for a period or periods aggregating more than three minutes in any one hour which is as dark as or darker than Ringelmann 1 or equivalent 20 percent opacity; and

(6) not exceed the following emission limits:

(A) 550 pounds per day per engine of carbon monoxide (CO);

(B) 150 pounds per day per engine of particulate matter less than 10 microns (PM₁₀);

(C) for registered engines operating onshore, 10 tons for each-pollutant per district per year per engine for NO_x, SO_x, VOC, PM₁₀, and CO in nonattainment areas; and

(D) for registered engines operating within STW:

1. the offset requirements of the corresponding onshore district apply. Authorization from the corresponding onshore district is required prior to operating within STW. If authorization is in the form of a current district permit, the terms and conditions of the district permit supersede the requirements of the statewide registration for the project, except that the most stringent of the technology and emission concentration limits required by the district permit or statewide registration are applicable. If the registered engine does not have a current district permit, the terms and conditions of the statewide registration apply, and the corresponding onshore district may require offsets pursuant to district rules and regulations. The requirement for district offsets shall not apply to the owner or operator of an engine(s) registered in the statewide registration program when the engine(s) is operated at a stationary source permitted by the district; and

2. the corresponding onshore district may perform an ambient air quality impact analysis (AQIA) for the proposed project prior to granting authorization. The owner or operator of engine(s) registered in the statewide registration program shall be required, at the request of the district, to submit any information deemed by the district to be necessary for performing the AQIA. Statewide registration shall not be valid at any location where the AQIA demonstrates a potential violation of an ambient air quality standard.

(E) for registered engines operating in the South Coast Air Quality Management District (SCAQMD), 100 pounds nitrogen oxides (NO_x)

per project per day [An owner may substitute SCAQMD permit or registration limits in effect on or before September 17, 1997 (optional)];

(F) 100 pounds NO_x per registered engine per day, except in SCAQMD where the limit is 100 pounds NO_x per project per day.

(7) In lieu of (6)(E) and (6)(F) above, operation of a registered new nonroad engine rated at 750 brake horsepower or greater for which a federal or California standard pursuant to 40 CFR Part 89 or Title 13 of the California Code of Regulations has not yet become effective, shall not exceed 12 hours per day.

(8) For registered engines that operate in both STW and onshore, the 10 tons per district per year per engine limit in (6)(C) above shall only apply onshore.

(9) For certified compression-ignition engines, certified spark-ignition engines, or any spark-ignition engine meeting Table 1 requirements, the daily and annual emission limitations in section 6 above shall not apply.

(10) Effective January 1, 2010, all registered spark-ignition engines rated at 50 brake horsepower or greater shall be certified spark-ignition engines or shall meet Table 1 requirements. For those spark ignition engines that are not certified spark-ignition engines or do not meet Table 1 requirements, the registration shall expire on December 31, 2009 and the engine will not be allowed to operate under the authority of this regulation.

(e) All registered engines shall be equipped with a functioning non-resettable hour meter, fuel meter or other operation tracking device approved by the Executive Officer. Engines registered prior to the effective date of this regulation, that are not equipped with a functional non-resettable hour meter, fuel meter or other operation tracking device shall install one and notify ARB in writing within 6 months of the effective date of this regulation.

(f) Registered TSE is exempt from district New Source Review and Title V programs, including any offset requirements. Further, emissions from registered TSE shall not be included in Title V or New Source Review applicability determinations.

NOTE: Authority cited: Sections 39600, 39601, 41752, 41753, 41754, 41755, 43013(b) and 43018, Health and Safety Code. Reference: Sections 41750, 41751, 41752, 41753, 41754 and 41755, Health and Safety Code.

HISTORY

1. New section filed 9-17-97; operative 9-17-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 38).
2. Amendment of section and Tables 1 and 2 filed 12-1-99; operative 12-1-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 49).
3. Amendment of section and NOTE, repealer of Table 1, renumbering of tables and amendment of newly designated Table 1 filed 8-2-2005; operative 9-1-2005 (Register 2005, No. 31).
4. Amendment of subsection (d)(5) and new subsections (k)-(k)(2) filed 12-27-2006 as an emergency; operative 12-27-2006 (Register 2006, No. 52). A Certificate of Compliance must be transmitted to OAL by 4-26-2007 or emergency language will be repealed by operation of law on the following day.
5. Reinstatement of section as it existed prior to 12-27-2006 emergency amendment by operation of Government Code section 11346.1(f) (Register 2007, No. 17).
6. Amendment filed 4-26-2007; operative 4-27-2007 pursuant to Government Code section 11343.4 (Register 2007, No. 17).
7. Amendment of subsections (a), (c) and (d)(1), repealer of subsections (d)(1)(A)-(C) and new subsection (d)(10) filed 4-26-2007 as an emergency; operative 4-27-2007 (Register 2007, No. 17). A Certificate of Compliance must be transmitted to OAL by 10-23-2007 or emergency language will be repealed by operation of law on the following day.
8. Certificate of Compliance as to 4-26-2007 order, including amendment of subsection (d)(1), transmitted to OAL 7-31-2007 and filed 9-12-2007 (Register 2007, No. 37).

Table 1. Spark-Ignition Engine Requirements*

<i>Pollutant Emission Limits</i>		
NO _x **	VOC**	CO**
80 ppmdv NO _x (1.5 g/bhp-hr)**	240 ppmdv VOC (1.5 g/bhp-hr)	176 ppmdv CO (2.0 g/bhp-hr)

*These requirements are in addition to requirements of section 2455 and 2456.

**For the purpose of compliance with this article, ppmdv is parts per million @ 15 percent oxygen averaged over 15 consecutive minutes. Limits of ppmdv are the

approximate equivalent to the stated grams per brake horsepower hour limit based on assuming the engine is 24.2 percent efficient.

§ 2457. Requirements for Registered Equipment Units.

(a) Emissions from a registered equipment unit, exclusive of emissions emitted directly from the associated portable engine, shall not exceed:

- (1) 10 tons per year per district of PM₁₀; and
- (2) 82 pounds per project per day of PM₁₀.

(3) For registered equipment units that operate within STW and on-shore, emissions released while operating both in STW and onshore shall be included toward the 10 tons per year limit.

(b) Registered equipment units shall also meet the following applicable requirements:

- (1) Confined abrasive blasting operations:

(A) no air contaminant shall be discharged into the atmosphere for a period or periods aggregating more than three minutes in any one hour which is as dark as or darker than Ringelmann 1 or equivalent 20 percent opacity;

(B) the particulate matter emissions shall be controlled using a fabric or cartridge filter dust collector;

(C) as a part of application for registration, the applicant shall provide manufacturer's specifications or engineering data to demonstrate a minimum particulate matter control of 99 percent for the dust collection equipment;

(D) except for vent filters, each fabric dust collector shall be equipped with an operational pressure differential gauge to measure the pressure drop across the filters; and

(E) there shall be no visible emissions beyond the property line on which the equipment is being operated.

- (2) Concrete batch plants:

(A) all dry material transfer points shall be ducted through a fabric or cartridge type filter dust collector, unless there are no visible emissions from the transfer point;

(B) all cement storage silos shall be equipped with fabric or cartridge type vent filters;

(C) the silo vent filters shall be maintained in proper operating condition;

(D) no air contaminant shall be discharged into the atmosphere for a period or periods aggregating more than three minutes in any one hour which is as dark as or darker than Ringelmann 1 or equivalent 20 percent opacity;

(E) open areas and all roads subject to vehicular traffic shall be paved, watered, or chemical palliatives applied to prevent fugitive emissions in excess of 20 percent opacity or Ringelmann 1;

- (F) silo service hatches shall be dust-tight;

(G) as a part of application for registration, the applicant shall provide manufacturer's specifications or engineering data to demonstrate a minimum particulate matter control of 99 percent for the fabric dust collection equipment;

(H) except for vent filters, each fabric dust collector shall be equipped with an operational pressure differential gauge to measure the pressure drop across the filters;

(I) all aggregate transfer points shall be equipped with a wet suppression system to control fugitive particulate emissions unless there are no visible emissions;

(J) all conveyors shall be covered, unless the material being transferred results in no visible emissions;

(K) wet suppression shall be used on all stockpiled material to control fugitive particulate emissions, unless the stockpiled material results in no visible emissions; and

(L) there shall be no visible emissions beyond the property line on which the equipment is being operated.

(3) Sand and gravel screening, rock crushing, and pavement crushing and recycling operations:

(A) no air contaminant shall be discharged into the atmosphere for a period or periods aggregating more than three minutes in any one hour

which is as dark as or darker than Ringelmann 1 or equivalent 20 percent opacity;

(B) there shall be no visible emissions beyond the property line on which the equipment is being operated;

(C) all transfer points shall be ducted through a fabric or cartridge type filter dust collector, or shall be equipped with a wet suppression system maintaining a minimum moisture content unless there are no visible emissions;

(D) particulate matter emissions from each crusher shall be ducted through a fabric dust collector, or shall be equipped with a wet suppression system which maintains a minimum moisture content to ensure there are no visible emissions;

(E) all conveyors shall be covered, unless the material being transferred results in no visible emissions;

(F) all stockpiled material shall be maintained at a minimum moisture content unless the stockpiled material results in no visible emissions;

(G) as a part of application for registration, the applicant shall provide manufacturer's specifications or engineering data to demonstrate a minimum particulate matter control of 99 percent for the fabric dust collection equipment;

(H) except for vent filters, each fabric dust collector shall be equipped with an operational pressure differential gauge to measure the pressure drop across the filters;

(I) open areas and all roads subject to vehicular traffic shall be paved, watered, or chemical palliatives applied to prevent fugitive emissions in excess of 20 percent opacity or Ringelmann 1; and

(J) if applicable, the operation shall comply with the requirements of 40 CFR Part 60 Subpart OOO.

- (4) Unconfined abrasive blasting operations:

(A) no air contaminant shall be discharged into the atmosphere for a period or periods aggregating more than three minutes in any one hour which is as dark as or darker than Ringelmann 2 or equivalent 40 percent opacity;

(B) only California Air Resources Board-certified abrasive blasting material shall be used [Note: see Title 17, California Code of Regulations, section 92530 for certified abrasives.];

- (C) the abrasive material shall not be reused;

(D) no air contaminant shall be released into the atmosphere which causes a public nuisance;

(E) all applicable requirements of Title 17 of California Code of Regulations shall also apply; and

(F) there shall be no visible emissions beyond the property line on which the equipment is being operated.

- (5) Tub grinders and trommel screens:

(A) there shall be no visible emissions beyond the property line on which the equipment is being operated;

(B) no air contaminant shall be discharged into the atmosphere for a period or periods aggregating more than three minutes in any one hour which is as dark as or darker than Ringelmann 1 or equivalent 20 percent opacity; and

(C) water suppression or chemical palliatives shall be used to control fugitive particulate emissions from the tub grinder whenever the tub grinder is in operation, unless there are no visible emissions.

(c) Registered equipment units not described in section 2457(b) above, shall be subject to the most stringent district Best Available Control Technology (BACT) requirements in effect for that category of source at the time of application for registration.

(d) No change in equipment unit configuration, operating scenario, or number of transfer points from that set out in the registration for the equipment unit shall be made unless a complete application for modification has been filed and approved by the Executive Officer prior to operation.

(e) Registration is not valid for any equipment unit operating at a location if by virtue of the activity to be performed hazardous air pollutants will be emitted (e.g., rock crushing plant operating in a serpentine

quarry). [Note: The equipment unit would be subject to the requirements of the district in which the equipment unit is operated.]

NOTE: Authority cited: Sections 39600, 39601, 41752, 41753, 41754, 41755, 43013(b) and 43018, Health and Safety Code. Reference: Sections 41750, 41751, 41752, 41753, 41754 and 41755, Health and Safety Code.

HISTORY

1. New section filed 9–17–97; operative 9–17–97 pursuant to Government Code section 11343.4(d) (Register 97, No. 38).
2. Amendment filed 12–1–99; operative 12–1–99 pursuant to Government Code section 11343.4(d) (Register 99, No. 49).
3. Amendment of subsections (a)(1), (b)(2)(I), (b)(3)(C), (b)(3)(F) and (b)(5)(B) and amendment of NOTE filed 8–2–2005; operative 9–1–2005 (Register 2005, No. 31).
4. Amendment of section heading and subsections (a), (b) and (c), new subsection (d), subsection relettering and amendment of newly designated subsection (e) filed 4–26–2007; operative 4–27–2007 pursuant to Government Code section 11343.4 (Register 2007, No. 17).

§ 2458. Recordkeeping and Reporting.

(a) Except for registered engines owned by a rental business, used in a third-party rental, operated by a PEPS, or TSE, the owner of registered engines, including engines otherwise preempted under section 209(e) of the federal Clean Air Act, or registered equipment units shall maintain records of operation of each registered engine and equipment unit. Recordkeeping for engines not previously required to maintain records shall begin upon the effective date of the regulation or January 1, 2007, whichever is later. For engines not previously required to have an hour meter, fuel meter or other device approved by the Executive Officer, the owner or operator shall record hours of operation until the hour meter, fuel meter or other device approved by the Executive Officer has been installed. The records shall be maintained at a central place of business for five years, and made accessible to the Executive Officer or districts upon request. Records shall be maintained in a format approved by the Executive Officer and include, at a minimum, all of the following:

- (1) engine or equipment unit registration number;
- (2) recordings from an hour meter, fuel meter, or other device approved by the Executive Officer, and the corresponding dates of the recordings for each registered engine or equipment unit based on the following:

(A) for each project as defined in 2452(ff) or (gg), readings shall be recorded prior to the commencement of operation and at the completion of the project; or

(B) for ongoing operation of a registered engine or equipment unit at multiple locations within a stationary source, readings shall be recorded at the beginning and end of each calendar week; or

(C) for each location, readings shall be recorded prior to commencement of operation and upon completion of operation at that location.

(3) For registered engines and equipment units subject to a daily operational limitation, daily records of either hours of operation, fuel usage, or process throughput as applicable.

(4) For equipment units subject to the requirements of section 2457(b)(3), daily throughput shall be the sum of measurements of material introduced into the equipment unit. These measurements shall be taken at the initial loading point(s) of the equipment unit.

(5) recordings from an hour meter, fuel meter, or other device approved by the Executive Officer and the corresponding dates of the recordings any time an engine or equipment unit is undergoing service, repair, or maintenance; and

(6) for each start and stop reading specified in (2) and (3) above, the location identified by district, county, or other indicator (i.e., street address, UTM coordinates, etc.)

(b) A rental business or the owner of a registered engine or equipment unit involved in a third party rental, shall maintain records for each rental or lease transaction. The written rental or lease agreement shall be kept onsite with the registered engine or equipment unit at all times. Recordkeeping for registered engines not previously required to maintain records shall begin upon the effective date of the regulations or January 1, 2007, whichever is later. For registered engines not previously required to have an hour meter, fuel meter or other device approved by the Execu-

tive Officer, the owner or operator shall record hours of operation until the hour meter, fuel meter or other device approved by the Executive Officer has been installed. The owner shall provide each person who rents a registered engine or equipment unit with a written copy of applicable requirements of this article, including recordkeeping and notification requirements, as a part of the agreement. The records, including written acknowledgment by each renter of the registered engine or equipment unit of having received the above information, shall be maintained by the rental business or the owner of the registered engine or equipment unit involved in a third-party rental at a central location for five years, and made accessible to the Executive Officer or districts upon request. Records shall be maintained in a format approved by the Executive Officer and include, at a minimum, for each rental engine all of the following:

- (1) registered engine registration number;
- (2) dates for the start and end of the rental transaction;
- (3) hours of operation for each rental period including the hour meter reading at the start of the rental transaction and the hour meter reading at the end of the rental transaction; and
- (4) location of use (by district, county or other indicator (i.e., street address, UTM coordinates, etc.)).

(c) For TSE, each military installation shall provide the Executive Officer an annual report, in a format approved by the Executive Officer, within 60 days after the end of each calendar year. The report shall include the number, type, and rating of registered TSE at each installation as of December 31 of that calendar year, and be accompanied by the applicable fees pursuant to section 2461. Any variation of registered TSE to actual TSE shall be accounted for in this annual report, and the Executive Officer shall issue an updated TSE list accordingly. A renewal registration will be issued with the updated TSE list every three years according to expiration date.

(d) For each registered engine subject to the requirements of Title 17 California Code of Regulations section 93116, the owner shall keep records and submit reports in accordance with Title 17 California Code of Regulations section 93116.4.

(e) Except for registered engines or equipment units owned by a rental business, used in a third-party rental, operated by a PEPS or TSE, the owner of a registered engine or equipment unit shall provide the Executive Officer an annual report signed by the responsible official, in a format approved by the Executive Officer, by March 1 of each calendar year containing all of the following information:

- (1) the reporting year;
- (2) the registration number of each registered engine and/or equipment unit;
- (3) for registered engines, quarterly summaries for each district or county the total fuel usage in gallons per quarter, or total hours of operation per quarter, for each registered engine; and
- (4) for registered equipment units, quarterly summaries for each district or county in which the registered equipment unit was operated and the total process weight or throughput.

(f) The owner of a registered engine or equipment unit owned by a rental business or used in a third-party rental transaction shall provide the Executive Officer an annual report signed by the responsible official, in a format approved by the Executive Officer, by March 1 of each calendar year containing all of the following information:

- (1) the reporting year;
- (2) the registration number of each registered engine and/or equipment unit;
- (3) total hours of operation for the reporting year for each registered engine based on, and including, beginning and ending annual hour meter readings and dates upon which the total hours of annual operation calculation is based;
- (4) list of all counties in which the registered engine operated in during the reporting year as reported by the entity(ies) that operated the registered engine;
- (5) estimate of the percentage of total hours for each engine operated in each of the counties identified in (4) above; and

(6) for registered equipment units, quarterly and annual summaries for each district or county in which the registered equipment unit was operated and the total process weight or throughput.

(g) the owner or operator of a registered engine or equipment unit used by a PEPS shall provide the Executive Officer an annual report, in a format approved by the Executive Officer, by March 1st of each calendar year containing all of the following information:

- (1) the reporting year;
- (2) the registration number of each registered engine and/or equipment unit;
- (3) total hours of operation; and
- (4) estimate of the percentage of hours or fuel usage for the three counties in which the registered engine or equipment unit operated the most.

(h) Records requests made by a district or Executive Officer shall be made to the responsible official. The responsible official shall provide the requested records within 30 days from receipt of the request. Failure to provide the records by the specified date shall be deemed a violation of this article.

(i) Each district shall provide the Executive Officer with an annual report, in a format approved by the Executive Officer, by March 31 following the year in which the information was collected containing all of the following information:

- (1) the number of portable engines and equipment units inspected;
- (2) the number of portable engines and/or equipment units found operating without valid district permits or statewide registrations;
- (3) the number of registered engines and equipment units inspected; and
- (4) summary of results of inspections.

(j) Vendors selling new portable engines and/or equipment units in California shall:

- (1) notify the buyer about this regulation; and
- (2) on a monthly basis submit to the Executive Officer the number of portable engines and/or portable equipment units sold by the vendor for use in California including: the name, address, and contact information of the purchaser, and description of the engine and/or equipment unit including make, model, and engine family name.

NOTE: Authority cited: Sections 39600, 39601, 41752, 41753, 41754, 41755, 43013(b) and 43018, Health and Safety Code. Reference: Sections 41750, 41751, 41752, 41753, 41754 and 41755, Health and Safety Code.

HISTORY

1. New section filed 9-17-97; operative 9-17-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 38).
2. Amendment filed 12-1-99; operative 12-1-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 49).
3. Amendment of section and NOTE filed 8-2-2005; operative 9-1-2005 (Register 2005, No. 31).
4. Amendment filed 4-26-2007; operative 4-27-2007 pursuant to Government Code section 11343.4 (Register 2007, No. 17).
5. Amendment of subsection (a), new subsection (a)(4), subsection renumbering, amendment of subsections (b)–(b)(1) and (f)(4)–(5) and new subsection (f)(6) filed 4-26-2007 as an emergency; operative 4-27-2007 (Register 2007, No. 17). A Certificate of Compliance must be transmitted to OAL by 10-23-2007 or emergency language will be repealed by operation of law on the following day.
6. Certificate of Compliance as to 4-26-2007 order transmitted to OAL 7-31-2007 and filed 9-12-2007 (Register 2007, No. 37).
7. Change without regulatory effect amending subsections (a)(2)(A) and (a)(6) filed 4-7-2008 pursuant to section 100, title 1, California Code of Regulations (Register 2008, No. 15).

§ 2459. Notification.

(a) Except as listed in subsection (d) of this section, if a registered equipment unit will be at a location for more than five days, the owner or operator of that registered equipment unit, shall notify the district in writing in a format approved by the Executive Officer, within two working days of commencing operations in that district. If the registered equipment unit is to be moved to different locations within the same district, the owner or operator shall be subject to the notification requirements above, unless the owner or operator and the district, by mutual

agreement, arrange alternative notification requirements on a case-by-case basis. The notification shall include all of the following:

- (1) the registration number of the registered equipment unit;
- (2) the name and phone number of the responsible official or renter with information concerning the locations where the registered equipment unit will be operated within the district; and
- (3) estimated time the registered equipment unit will be located in the district.

(b) If the district has not been notified as required in section 2459(a) above, because the owner or operator did not reasonably expect the duration of operation to trigger the notification requirement in section 2459(a) above, the owner or operator shall notify the district, in a format approved by the Executive Officer, within 12 hours of determining the registered equipment unit will be operating at a location more than five days.

(c) Owners and operators of TSE are not subject to the notification requirements of this section 2459.

(d) For STW projects, the owner or operator of a registered engine or registered equipment unit shall notify the corresponding onshore district in writing, in a format approved by the Executive Officer at least 14 days in advance of commencing operations in that district. The notification shall include all of the following:

- (1) the registration number of the registered engine or equipment unit;
- (2) the name and phone number of the responsible official with information concerning the locations where the registered engine or equipment unit will be operated within the district;
- (3) estimated time the registered engine(s) or equipment unit(s) will be located in the district; and
- (4) calculations showing the estimation of actual emissions expected for the project.

(e) Except as listed in section 2459(d) above, owners and operators of registered engines are not subject to notification requirements.

(f) The Executive Officer shall make available via the Internet a list of approved notification methods for each district.

(g) Failure to provide the required notifications within the timelines specified in this section shall be deemed a violation of this regulation.

NOTE: Authority cited: Sections 39600, 39601, 41752, 41753, 41754, 41755, 43013(b) and 43018, Health and Safety Code. Reference: Sections 41750, 41751, 41752, 41753, 41754 and 41755, Health and Safety Code.

HISTORY

1. New section filed 9-17-97; operative 9-17-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 38).
2. Amendment filed 12-1-99; operative 12-1-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 49).
3. Amendment of subsections (a), (a)(2), (e), (f) and (f)(2) and amendment of NOTE filed 8-2-2005; operative 9-1-2005 (Register 2005, No. 31).
4. Amendment filed 4-26-2007; operative 4-27-2007 pursuant to Government Code section 11343.4 (Register 2007, No. 17).
5. Amendment of subsection (g) filed 4-26-2007 as an emergency; operative 4-27-2007 (Register 2007, No. 17). A Certificate of Compliance must be transmitted to OAL by 10-23-2007 or emergency language will be repealed by operation of law on the following day.
6. Certificate of Compliance as to 4-26-2007 order transmitted to OAL 7-31-2007 and filed 9-12-2007 (Register 2007, No. 37).

§ 2460. Inspections and Testing.

(a) In determining if a portable engine or equipment unit is eligible for registration, the Executive Officer may inspect the portable engine or equipment unit and/or require a source test, at the owner's expense.

(b) Each district shall inspect all registered engines and equipment units for which the district has been designated as the home district pursuant to section 2453(i) above, as specified below:

(1) Within 45 days after the date of initial issuance or renewal of a registration, the owner or operator shall contact the home district to arrange for inspection of the registered engine or equipment unit to be completed within one year of the initial registration or renewal date. If the registered engine or equipment unit shall be operating in a district, other than the home district, the owner or operator may request the home district to arrange for an inspection by the other district.

(2) For portable engines, each home district should conduct no more than 20 percent of the arranged inspections for that district as in-field inspections. All arranged inspections not conducted as in-field inspections shall be conducted as non-field inspections. If a portable engine is found in violation during an in-field inspection, the next arranged inspection for that engine shall be an in-field inspection. This section does not limit the authority of a district to conduct any number of non-arranged in-field or non-field inspections for which no fee is charged.

(3) For registered equipment units operating with registered engines, the owner or operator may not request that the registered engine be inspected at the hourly rate specified in Table 3 for equipment unit inspections. Inspection fees for registered engines are to be paid as listed in item 14 in Table 3.

(4) Arranged inspections for PEPS engines and registered equipment units shall be non-field inspections unless an in-field inspection is requested by the holder of the registration and a reasonable in-field inspection location is arranged with the appropriate district.

(5) The time for an arranged inspection shall be agreed upon in advance with the district and company preferences regarding time of day shall be accommodated within reason. To the extent that an arranged inspection does not fall within the district's normal workday, the district may charge for the off-hour time based on a fee as specified in Table 3.

(6) If an arranged inspection of a registered engine or registered equipment unit does not occur due to unforeseen circumstances, the owner or operator and the home district shall reschedule the arranged inspection no later than 90 days of the initially scheduled inspection. Any unreasonable actions on the part of the owner or operator that prevents the inspection to occur within the specified time frame shall be deemed a violation of this article. Actions taken by the owner or operator that could be deemed "unreasonable" include, but are not limited to:

(A) failing to respond to the district correspondences or other contracts made to schedule the inspection;

(B) failing to ensure that the registered engine or equipment unit is in operation for arranged "in-field inspections" or where the district has provided advance notification to the owner or operator that the registered engine or equipment unit is required to be observed in operation.

(7) The owner or operator may request the scheduling of one or more arranged inspections for multiple engines in order to qualify for an inspection fee discount as specified in section 2461(d). Within 45 days of date of initial issuance of registration or by January 30 of each year for renewals, the owner or operator shall submit a letter of intent including an equipment list and registration numbers to the district to arrange for inspection of multiple engines. The inspections shall be completed within one year after the registration renewal date for each engine inspected.

(8) If a registered engine or equipment unit is out of California for one year or more following initial registration or renewal, the engine or equipment unit shall be excused from having the arranged inspection within that period if:

(A) within 45 days after the date of initial issuance or renewal of the registration, the owner or operator submitted a letter to the district noting the registration number of the registered engine or equipment unit and that the engine or unit is out of California for the one-year period; and

(B) upon the return of the registered engine or equipment unit to the State, the owner or operator shall arrange to have the registered engine or equipment unit inspected within 30 days.

(c) After issuance of registration, the Executive Officer or district may at any time conduct an inspection of any registered portable engine or equipment unit in order to verify compliance with the requirements of this article. The district shall not charge the owner or operator an additional inspection fee for that inspection. Source testing of engines for compliance purposes shall not be required more frequently than once every three years (including testing at the time of registration), except as provided in section 2460(e), unless evidence of engine tampering, lack of proper engine maintenance, or other problems or operating conditions that could affect engine emissions are identified. In no event shall the Executive Officer or district require source testing of a portable engine for

which there is no applicable emission standard, emission limit or other emission related requirement contained in this regulation.

(d) Testing shall be conducted in accordance with the following methods or other methods approved by the Executive Officer:

Particulate Matter:	ARB Test Method 5 with probe catch and filter catch only
VOC:	ARB Test Method 100 or U.S. EPA Test Method 25A
NOx:	ARB Test Method 100 or U.S. EPA Test Method 7E
Carbon Monoxide:	ARB Test Method 100 or U.S. EPA Test Method 10
Oxygen:	ARB Test Method 100 or U.S. EPA Test Method 3A
Gas Velocity and Flow Rate:	ARB Test Method 1 & 2 or U.S. EPA Test Method 1 & 2

(e) Initial or follow-up source testing of engines to verify compliance with the requirements of this regulation shall not be required for certified compression-ignition engines and spark-ignition engines.

(f) The exemption provided in section 2460(e) shall not apply to source testing of engines for compliance purposes where evidence of engine tampering, lack of proper engine maintenance, or other problems or operating conditions that could affect engine emissions are identified.

NOTE: Authority cited: Sections 39600, 39601, 41752, 41753, 41754, 41755, 43013(b) and 43018, Health and Safety Code. Reference: Sections 41750, 41751, 41752, 41753, 41754 and 41755, Health and Safety Code.

HISTORY

1. New section filed 9-17-97; operative 9-17-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 38).
2. Amendment filed 12-1-99; operative 12-1-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 49).
3. Amendment of subsections (c) and (d)(1) and amendment of NOTE filed 8-2-2005; operative 9-1-2005 (Register 2005, No. 31).
4. Amendment of section heading and section filed 4-26-2007; operative 4-27-2007 pursuant to Government Code section 11343.4 (Register 2007, No. 17).
5. Amendment of subsections (b)(3), (b)(5) and (e) filed 4-26-2007 as an emergency; operative 4-27-2007 (Register 2007, No. 17). A Certificate of Compliance must be transmitted to OAL by 10-23-2007 or emergency language will be repealed by operation of law on the following day.
6. Certificate of Compliance as to 4-26-2007 order, including further amendment of subsections (b)(3) and (b)(5), transmitted to OAL 7-31-2007 and filed 9-12-2007 (Register 2007, No. 37).

§ 2461. Fees.

(a) Except as otherwise set out herein, the Executive Officer shall assess and collect reasonable fees for registration, renewal, and associated administrative tasks, to recover the estimated costs to the Executive Officer for evaluating registration applications, and issuing registration documentation.

(b) Fees shall be due and payable to the Executive Officer at the time an application is filed or as part of any request requiring a fee. Fees are nonrefundable except in circumstances as determined by the Executive Officer.

(c) Except as provided in (k) below, the owner or operator of a registered engine or equipment unit shall submit fees to the Executive Officer in accordance with Table 3.

(d) The Executive Officer shall collect an inspection fee as listed in Table 3 one time per every three calendar years for each registered engine to be paid upon initial application and renewal. Except for TSE, when multiple registered engines are inspected at a given source or location, the owner shall receive a discount if the owner or operator intends to arrange multiple engines inspections with the district and complies with the requirements specified in section 2460(b)(7). The discounts shall be applied as follows:

- (1) no discount for 1 to 3 engines
- (2) 25 percent discount for 4 to 9 engines
- (3) 35 percent discount for 10 or more engines

(e) Failure to pay renewal fees when due may result in penalties. If a fee payment is not received or postmarked by the specified due date, fee

penalties may be assessed per unit in accordance with Table 2. Failure to pay renewal fees prior to expiration may result in cancellation of the registration. If a registration has expired for an engine or equipment unit that is eligible for reactivation, a canceled registration may be reactivated after payment of all renewal and penalty fees. Registration may be reissued under the original registration number and expiration date. A portable engine or equipment unit without valid registration is subject to the rules and regulations of the district in which it operates.

(f) Fees shall be periodically revised by the Executive Officer in accordance with the consumer price index, as published by the United States Bureau of Labor Statistics.

(g) A district may collect a fee for the inspection of a registered equipment unit pursuant to section 2460(b)(3). The district shall bill the owner of the equipment unit at a rate as specified in Table 3 of the regulation for actual staff time taken to perform the inspection, not to exceed the amount specified in Table 3. Upon receipt of the invoice for the inspection fee, the owner shall have the right to appeal the district's fee determination to the district Air Pollution Control Officer pursuant to the provisions of the district's rules and regulations that govern appeals of fee determinations.

(h) The Executive Officer shall annually distribute district inspection fees collected for that year. General inspection fees will be distributed equally among the districts. Home district inspection fees will be distributed to the corresponding home district.

(i) TSE fees are due at the time of the report pursuant to section 2458(c). Failure to submit the annual report and applicable fees within six calendar months after the end of the year will result in cancellation of the registration. For TSE, if registration is cancelled or allowed to expire, the applicant shall reapply and pay initial registration fees.

(j) The district may collect an inspection fee as listed in Table 3 one time per calendar year for each registered TSE inspected. When multiple registered TSE units are inspected at a given source or location, the inspection fee shall be equal to the lesser of the actual cost, including staff time, for conducting the inspection or the fee as listed in Table 3 per registered portable engine or equipment unit inspected. If the district performs an inspection leading to determination of non-compliance with this article, or any applicable state or federal requirements, the district may charge a fee as listed in Table 3 per portable engine or equipment unit for each inspection necessary for the determination and ultimate resolution of the violation. In no event shall the total fees exceed the actual costs, including staff time, to the district of conducting the investigations and resolving any violations.

(k) Portable engines qualifying for initial registration as resident engines per section 2452(l)(2) shall use the Table 2 fee schedule. The fees collected subject to this section shall be distributed to the districts, except that \$270 dollars per engine for initial registration, and an additional \$80 dollars per engine shall be retained by the Air Resources Board to provide for administrative costs. The fees shall be determined as follows:

(1) For tier 1 engines, as defined in section 2452(uu), registration fees will be based on the year listed in Table 2, as determined below:

(A) Where date of purchase can be verified by the Executive Officer, the earlier of:

- (1) for engines ≥ 50 bhp and < 100 bhp: year of purchase or 2004;
- (2) for engines ≥ 100 bhp and < 300 bhp: year of purchase or 2003;
- (3) for engines ≥ 300 bhp and < 600 bhp: year of purchase or 2001;
- (4) for engines ≥ 600 bhp and ≤ 750 bhp: year of purchase or 2002;
- (5) for engines > 750 bhp: year of purchase or 2006.

(B) Where the date of purchase can not be verified, the model year shall be used.

(2) For tier 2 engines, as defined in section 2452(vv), registration fees as listed in Table 2 will be based on the year the engine was purchased (as verified by the Executive Officer) or the model year of the engine (if purchase date is not available).

Table 2 Registration Fees For Resident Engines Per Section 2452(l)(2)

Portable Engine Date*	Application Submitted on or Before 12/31/07	Application Submitted in 2008	Application Submitted in 2009
1996	\$2,353	\$3,130	\$5,000
1997	\$2,195	\$2,920	\$4,685
1998	\$2,038	\$2,710	\$4,370
1999	\$1,880	\$2,500	\$4,055
2000	\$1,723	\$2,290	\$3,740
2001	\$1,565	\$2,080	\$3,425
2002	\$1,408	\$1,870	\$3,110
2003	\$1,250	\$1,660	\$2,795
2004	\$1,093	\$1,450	\$2,480
2005	\$935	\$1,240	\$2,165
2006	\$778	\$1,030	\$1,850

*As determined in section 2461(k).

Table 3. Fees for Statewide Registration Program
(Fees are per registered unit except where noted otherwise)

1	Initial Registration	\$270.00
2	TSE, initial registration	
A	Registration of first 25 units (or portion thereof)	\$750.00
B	Registration of every additional 50 units (or portion thereof)	\$750.00
3	Change of status from non-operational to operational	
A	Where initial evaluation has not been previously completed	\$180.00
B	Where initial evaluation has been previously completed	\$90.00
4	Identical replacement	\$75.00
5	Renewal, non-TSE	
6	Penalty fee for late renewal payments, non-TSE	\$225.00
A	Postmarked within 2 calendar months prior to registration expiration date	\$45.00
B	Postmarked within the calendar month prior to registration expiration date	\$90.00
C	Postmarked after the registration expiration date	\$250.00
7	Annual TSE inventory fee	
A	first 25 units (or portion thereof)	\$375.00
B	every additional 50 units (or portion thereof)	\$375.00
8	Modification to registered portable engine or equipment unit	\$75.00
9	Change of ownership	\$75.00
10	Replacement of registration identification device	\$30.00
11	Correction to an engine or equipment unit description	\$45.00
12	Update company information, copy of registration documents	\$45.00
13	Copy of registration documents	\$45.00
14	Total district inspection fee per registered portable engine, paid once every 3 years	\$345.00
A	General district inspection fee	\$30.00
B	Home district inspection fee	\$315.00
15	District off-hour service fee per hour	\$50.00
16	District inspection fees for equipment units:	
A	General district inspection fee, paid once every 3 years	\$75.00
B	District inspection fee per equipment unit, per hour	\$98.00 (not to exceed \$500.00)
17	TSE inspection fees:	
A	General district inspection fee per TSE unit, paid annually	\$10.00
B	District inspection fee per TSE unit per inspection	\$75.00
18	Placard	\$5.00

NOTE: Authority cited: Sections 39600, 39601, 41752, 41753, 41754, 41755, 43013(b) and 43018, Health and Safety Code. Reference: Sections 41750, 41751, 41752, 41753, 41754 and 41755, Health and Safety Code.

HISTORY

1. New section filed 9-17-97; operative 9-17-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 38).
2. Amendment of subsection (g), new subsection (l) and amendment of Table 3 filed 12-1-99; operative 12-1-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 49).
3. Amendment of section and NOTE, renumbering of Table 3 to Table 2 and amendment of table heading and table filed 8-2-2005; operative 9-1-2005 (Register 2005, No. 31).
4. Amendment of subsections (c)-(f) and new subsections (j)-(j)(2) and Table 3 filed 12-27-2006 as an emergency; operative 12-27-2006 (Register 2006, No. 52). A Certificate of Compliance must be transmitted to OAL by 4-26-2007 or emergency language will be repealed by operation of law on the following day.
5. Reinstatement of section as it existed prior to 12-27-2006 emergency amendment by operation of Government Code section 11346.1(f) (Register 2007, No. 17).

6. Amendment of section and Table filed 4-26-2007; operative 4-27-2007 pursuant to Government Code section 11343.4 (Register 2007, No. 17).
7. Amendment of section and Table filed 4-26-2007 as an emergency; operative 4-27-2007 (Register 2007, No. 17). A Certificate of Compliance must be transmitted to OAL by 10-23-2007 or emergency language will be repealed by operation of law on the following day.
8. Certificate of Compliance as to 4-26-2007 order transmitted to OAL 7-31-2007 and filed 9-12-2007 (Register 2007, No. 37).
9. Change without regulatory effect amending section filed 4-7-2008 pursuant to section 100, title 1, California Code of Regulations (Register 2008, No. 15).

§ 2462. Duration of Registration.

(a) Except for registrations that will expire on December 31, 2009 pursuant to sections 2456(d)(10) and 17 CCR 93116.3(b)(1)(A), registrations and renewals will be valid for three years from date of issuance. For change of ownership, the registration shall retain the original expiration date, except where the registration has expired.

[The next page is 309.]

(b) The Executive Officer shall mail to the owner of a registered engine or equipment unit a renewal invoice at least 60 days prior to the registration expiration. Failure to send or receive a renewal invoice does not relieve the responsible official from paying all applicable fees when due.

NOTE: Authority cited: Sections 39600, 39601, 41752, 41753, 41754, 41755, 43013(b) and 43018, Health and Safety Code. Reference: Sections 41750, 41751, 41752, 41753, 41754 and 41755, Health and Safety Code.

HISTORY

1. New section filed 9-17-97; operative 9-17-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 38).
2. Amendment of subsection (a) filed 12-1-99; operative 12-1-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 49).
3. Amendment of section and NOTE filed 8-2-2005; operative 9-1-2005 (Register 2005, No. 31).
4. Amendment filed 4-26-2007; operative 4-27-2007 pursuant to Government Code section 11343.4 (Register 2007, No. 17).
5. Amendment of subsection (a) filed 4-26-2007 as an emergency; operative 4-27-2007 (Register 2007, No. 17). A Certificate of Compliance must be transmitted to OAL by 10-23-2007 or emergency language will be repealed by operation of law on the following day.
6. Certificate of Compliance as to 4-26-2007 order, including further amendment of subsection (a), transmitted to OAL 7-31-2007 and filed 9-12-2007 (Register 2007, No. 37).

§ 2463. Suspension or Revocation of Registration.

(a) The Executive Officer for just cause may suspend or revoke registration in any of the following circumstances:

(1) the holder of registration has violated one or more terms and conditions of registration or has refused to comply with any of the requirements of this article;

(2) the holder of registration has materially misrepresented the meaning, findings, effect or any other material aspect of the registration application, including submitting false or incomplete information in its application for registration regardless of the holder's personal knowledge of the falsity or incompleteness of the information;

(3) the test data submitted by the holder of registration to show compliance with this regulation have been found to be inaccurate or invalid;

(4) enforcement officers of the ARB or the districts, after presentation of proper credentials, have been denied access, during normal business hours or hours of operation, to any facility or location where registered engines and equipment units are operated or stored and are prevented from inspecting such engines or equipment units as provided for in this article (the duty to provide access applies whether or not the holder of registration owns or controls the facility or location in question);

(5) enforcement officers of the ARB or the districts, after presentation of proper credentials, have been denied access to any records required by this regulation for the purpose of inspection and duplication;

(6) the registered engine or equipment unit has failed in-use to comply with the findings set forth in the registration. For the purposes of this section, noncompliance with the registration may include, but is not limited to:

(A) a repeated failure to perform to the standards set forth in this article; or

(B) modification of the engine or equipment unit that results in an increase in emissions or changes the efficiency or operating conditions of such engine or equipment unit, without prior notice to and approval by the Executive Officer; or

(7) the holder of registration has failed to take requested corrective action as set forth in a Notice of Violation or Notice to Comply within the time period set forth in such notice.

(8) the holder of the registration has failed to pay fees assessed by either the Executive Officer or district within 120 after the specified due date and there is no pending appeal.

(b) A holder of registration may be subject to a suspension or revocation action pursuant to this section based upon the actions of an agent, employee, licensee, or other authorized representative.

(c) The Executive Officer shall notify each holder of registration by certified mail of any action taken by the Executive Officer to suspend or revoke any registration granted under this article. The notice shall set

forth the reasons for and evidence supporting the action(s) taken. A suspension or revocation is effective upon receipt of the notification.

(d) A holder of registration having received a notice to revoke or suspend registration may request that the action be stayed pending a hearing under section 2464. In determining whether to grant the stay, the Executive Officer shall consider the reasonable likelihood that the registration holder of registration will prevail on the merits of the appeal and the harm the holder of registration will likely suffer if the stay is not granted. The Executive Officer shall deny the stay if the adverse effects of the stay on the public health, safety, and welfare outweigh the harm to the holder of registration if the stay is not granted.

(e) Once a registration has been suspended pursuant to (a) above, the holder of registration shall satisfy and correct all noted reasons for the suspension and submit a written report to the Executive Officer advising him or her of all such steps taken by the holder before the Executive Officer will consider reinstating the registration.

(f) After the Executive Officer suspends or revokes a registration pursuant to this section and prior to commencement of a hearing under section 2464, if the holder of registration demonstrates to the Executive Officer's satisfaction that the decision to suspend or revoke the registration was based on erroneous information, the Executive Officer will reinstate the registration.

(g) Nothing in this section shall prohibit the Executive Officer from taking any other action provided for by law for violations of the Health and Safety Code.

NOTE: Authority cited: Sections 39600, 39601, 41752, 41753, 41754, 41755, 43013(b) and 43018, Health and Safety Code. Reference: Sections 41750, 41751, 41752, 41753, 41754 and 41755, Health and Safety Code.

HISTORY

1. New section filed 9-17-97; operative 9-17-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 38).
2. Amendment of subsections (d)-(f) and amendment of NOTE filed 8-2-2005; operative 9-1-2005 (Register 2005, No. 31).
3. Amendment of subsections (a)(4)-(6), new subsection (a)(8) and amendment of subsections (b) and (d) filed 4-26-2007; operative 4-27-2007 pursuant to Government Code section 11343.4 (Register 2007, No. 17).

§ 2464. Appeals.

(a) Hearing Procedures.

(1) Any applicant for registration whose application has been denied or a holder of registration whose registration has been suspended, or revoked may request a hearing to review the action taken by sending a request in writing to the Executive Officer. A request for hearing shall include, at a minimum, the following:

(A) name of applicant or holder of registration;

(B) registration number;

(C) copy of the Executive Order revoking or suspending registration or the written notification of denial;

(D) a concise statement of the issues to be raised, with supporting facts, setting forth the basis for challenging the denial, suspension, or revocation (mere conclusory allegations will not suffice);

(E) a brief summary of evidence in support of the statement of facts required in (D) above; and

(F) the signature of an authorized person requesting the hearing.

(2) A request for a hearing shall be filed within 20 days from the date of issuance of the notice of the denial, suspension, or revocation.

(3) A hearing requested pursuant to this section shall be heard by a qualified and impartial hearing officer appointed by the Executive Officer. The hearing officer may be an employee of the ARB, but may not be any employee who was involved with the registration at issue. In a request for a hearing of a denial of registration, after reviewing the request for a hearing and supporting documentation provided under subsection (1) above, the hearing officer shall grant the request for a hearing if he or she finds that the request raises a genuine and substantial question of law or fact.

(4) Except as provided in (3) above, the hearing officer shall schedule and hold, as soon as practicable, a hearing at a time and place determined by the hearing officer.

(5) Upon appointment, the hearing officer shall establish a hearing file. The file shall consist of the following:

(A) the determination issued by the Executive Officer which is the subject of the request for hearing;

(B) the request for hearing and the supporting documents that are submitted with it;

(C) all documents relating to and relied upon in making the determination to deny registration or to suspend or revoke registration; and

(D) correspondence and other documents material to the hearing.

(6) The hearing file shall be available for inspection by the applicant at the office of the hearing officer.

(7) An applicant may appear in person or may be represented by counsel or by any other duly-authorized representative.

(8) The ARB may be represented by staff or counsel familiar with the registration program and may present rebuttal evidence.

(9) Technical rules of evidence shall not apply to the hearing, except that relevant evidence may be admitted and given probative effect only if it is the kind of evidence upon which reasonable persons are accustomed to relying in the conduct of serious affairs. No action shall be overturned based solely on hearsay evidence, unless the hearsay evidence would be admissible in a court of law under a legally recognized exception to the hearsay rule.

(10) The hearing shall be recorded either electronically or by a certified shorthand reporter.

(11) The hearing officer shall consider the totality of the circumstances of the denial, suspension, or revocation, including but not limited to, credibility of witnesses, authenticity and reliability of documents, and qualifications of experts. The hearing officer may also consider relevant past conduct of the applicant including any prior incidents involving other ARB programs.

(12) The hearing officer's written decision shall set forth findings of fact and conclusions of law as necessary.

(13) Within 30 days of the conclusion of a hearing, the hearing officer shall submit a written proposed decision, including proposed finding as well as a copy of any material submitted by the hearing participants as part of that hearing and relied on by the hearing officer, to the Executive Officer. The hearing officer may recommend to the Executive Officer any of the following:

(A) uphold the denial, suspension, or revocation action as issued;

(B) reduce a revocation to a suspension;

(C) increase a suspension to a revocation if the registration holder's conduct so warrants; or

(D) overturn a denial, suspension, or revocation in its entirety.

(14) The Executive Officer shall render a final written decision within 60 working days of the last day of hearing. The Executive Officer may do any of the following:

(A) adopt the hearing officer's proposed decision;

(B) modify the hearing officer's proposed decision; or

(C) render a decision without regard to the hearing officer's proposed decision.

(b) Hearing conducted by written submission.

(1) In lieu of the hearing procedure set forth in (a) above, an applicant may request that the hearing be conducted solely by written submission.

(2) In such case the requestor must submit a written explanation of the basis for the appeal and provide supporting documents within 20 days of making the request. Subsequent to such a submission the following shall transpire:

(A) ARB staff shall submit a written response to the requestors submission and documents in support of the Executive Officer's action no later than 10 days after receipt of requestor's submission;

(B) The registration holder may submit one rebuttal statement which may include supporting information, as attachment(s), but limited to the issues previously raised;

(C) If the registration holder submits a rebuttal, ARB staff may submit one rebuttal statement which may include supporting information, as attachment(s), but limited to the issues previously raised; and

(D) the hearing officer shall be designated in the same manner as set forth in (a)(3) above. The hearing officer shall receive all statements and

documents and submit a proposed written decision and such other documents as described in (a)13 above to the Executive Officer no later than 30 working days after the final deadline for submission of papers. The Executive Officer's final decision shall be mailed to the holder of registration no later than 60 days after the final deadline for submission of papers.

(E) The Executive Officer shall render a final written decision within 60 working days of the last day of hearing. The Executive Officer may do any of the following:

(1) adopt the hearing officer's proposed decision;

(2) modify the hearing officer's proposed decision; or

(3) render a decision without regard to the hearing officer's proposed decision.

NOTE: Authority cited: Sections 39600, 39601, 41752, 41753, 41754, 41755, 43013(b) and 43018, Health and Safety Code. Reference: Sections 41750, 41751, 41752, 41753, 41754 and 41755, Health and Safety Code.

HISTORY

1. New section filed 9-17-97; operative 9-17-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 38).

2. Amendment of subsection (b)(1) filed 12-1-99; operative 12-1-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 49).

3. Amendment of subsections (a)(3) and (a)(10) and amendment of NOTE filed 8-2-2005; operative 9-1-2005 (Register 2005, No. 31).

4. Amendment filed 4-26-2007; operative 4-27-2007 pursuant to Government Code section 11343.4 (Register 2007, No. 17).

§ 2465. Penalties.

Violation of the provisions of this article result in civil, and/or criminal penalties pursuant to the California Health and Safety Code. Each day during any portion of which a violation occurs is a separate violation.

NOTE: Authority cited: Sections 39600, 39601, 41752, 41753, 41754, 41755, 43013(b) and 43018, Health and Safety Code. Reference: Sections 41750, 41751, 41752, 41753, 41754 and 41755, Health and Safety Code.

HISTORY

1. New section filed 9-17-97; operative 9-17-97 pursuant to Government Code section 11343.4(d) (Register 97, No. 38).

2. Amendment filed 12-1-99; operative 12-1-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 49).

3. Amendment of section and NOTE filed 8-2-2005; operative 9-1-2005 (Register 2005, No. 31).

4. Amendment filed 4-26-2007; operative 4-27-2007 pursuant to Government Code section 11343.4 (Register 2007, No. 17).

§ 2466. Sunset Review.

NOTE: Authority cited: Sections 39600-39601, 41752-41755, 43013(b) and 43018, Health and Safety Code. Reference: Sections 39600, 39601 and 41750, Health and Safety Code.

HISTORY

1. New section filed 12-1-99; operative 12-1-99 pursuant to Government Code section 11343.4(d) (Register 99, No. 49).

2. Repealer filed 8-2-2005; operative 9-1-2005 (Register 2005, No. 31).

Article 6. Portable Fuel Containers and Spouts

§ 2467. Applicability.

(a) Except as provided in Section 2467.3, this article applies to any person who sells, supplies, offers for sale, advertises or manufactures for sale in California portable fuel containers or spouts or both portable fuel containers and spouts for use in California.

(b) Except as provided by Section 2467.3, no person shall sell, supply, offer for sale, advertise, or manufacture for sale in California a portable fuel container or spout or both portable fuel container and spout on or after July 1, 2007 unless said portable fuel container or spout or both portable fuel container and spout is covered by an Executive Order issued pursuant to this article.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975). Reference: Sections 39000, 39001, 39003, 39500, 39515, 39516, 41511, 43000, 43013, 43016, 43017 and 43018, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975).

HISTORY

1. New article 6 (sections 2470–2478) and section filed 9–11–2000; operative 10–11–2000 (Register 2000, No. 37).
2. Change without regulatory effect renumbering newly adopted section 2470 to new section 2467 and amending subsection (a) filed 9–14–2000 pursuant to section 100, title 1, California Code of Regulations (Register 2000, No. 37).
3. Amendment filed 1–13–2006; operative 2–12–2006 (Register 2006, No. 2).
4. New subsection (b) filed 9–11–2006; operative 10–11–2006 (Register 2006, No. 37).

§ 2467.1. Definitions.

(a) The definitions in Section 1900(b), Title 13 of the California Code of Regulations apply with the following additions:

- (1) “ASTM” means the American Society for Testing and Materials.
- (2) “Automatic closure” means a device or mechanism that causes a spill-proof system or spout to close, seal, and remain completely closed when not dispensing fuel.
- (3) “Automatically close” means a closure occurs through the activation of a device or mechanism that causes a spill-proof system or spout to close, seal, and remain completely closed when not dispensing fuel.
- (4) “Consumer” means the first person who in good faith purchases a new portable fuel container or spout or both portable fuel container and spout for purposes other than resale, including but not limited to personal, family, household, or institutional use.
- (5) “Distributor” means any person to whom a portable fuel container or spout or both portable fuel container and spout is sold or supplied for the purposes of resale or distribution in commerce. Manufacturers, retailers, and consumers are not distributors.
- (6) “Executive Officer” means the Executive Officer of the Air Resources Board, or his or her designee.
- (7) “Fuel” means all fuels subject to any provision of Title 13, California Code of Regulations, Chapter 5, Standards for Motor Vehicle Fuels, Sections 2250–2298, except for Sections 2292.5, 2292.6, and 2292.7.
- (8) “Kerosene” means any light petroleum distillate that is commonly or commercially known, sold or represented as kerosene, that is used in space heating, cook stoves, and water heaters, and is suitable for use as a light source when burned in wick-fed lamps.
- (9) “Manufacturer” means any person who imports, manufactures, assembles, packages, repackages, or re-labels a portable fuel container or spout or both portable fuel container and spout.
- (10) “Nominal Capacity” means the volume indicated by the manufacturer that represents the maximum recommended filling level.
- (11) “Outboard Engine” means a spark-ignition marine engine that, when properly mounted on a marine water-craft in the position to operate, houses the engine and drive unit external to the hull of the marine water-craft.
- (12) “Permeation” means the process by which individual fuel molecules may penetrate the walls and various assembly components of a portable fuel container directly to the outside ambient air.
- (13) “Person” has the same meaning as defined in Health and Safety Code Section 39047.
- (14) “Portable Fuel Container” means any container or vessel with a nominal capacity of ten gallons or less intended for reuse that is designed, used, sold, advertised or offered for sale for receiving, transporting, storing, and dispensing fuel or kerosene. Portable fuel containers do not include containers or vessels permanently embossed or permanently labeled, as described in 49 Code of Federal Regulations Section 172.407(a), as it existed on September 15, 2005, with language indicating said containers or vessels are solely intended for use with non-fuel or non-kerosene products.
- (15) “Product Category” means the applicable category that best describes the product with respect to its nominal capacity, material construction, fuel flow rate, and permeation rate, as applicable, as determined by the Executive Officer.
- (16) “Retailer” means any person who owns, leases, operates, controls, or supervises a retail outlet.

(17) “Retail Outlet” means any establishment at which portable fuel containers or spouts or both portable fuel containers and spouts are sold, supplied, or offered for sale.

(18) “ROG” (Reactive Organic Gas) means a reactive chemical gas, composed of hydrocarbons, that may contribute to the formation of smog. ROG is sometimes referred to as Non-Methane Organic Compounds (NMOC’s).

(19) “Spill Proof Spout” means any spout that complies with all of the performance standards specified in Section 2467.2(b) or with the certification requirement in Section 2467.2(c) and with the requirements in Section 2467.5.

(20) “Spill-Proof System” means any configuration of portable fuel container and firmly attached spout that complies with all of the performance standards in Section 2467.2(a) or with the certification requirement in Section 2467.2(c) and with the requirements in Section 2467.5.

(21) “Spout” means any device that can be firmly attached to a portable fuel container for conducting pouring through which the contents of a portable fuel container can be dispensed, not including a device that can be used to lengthen the spout to accommodate necessary applications.

(22) “Target Fuel Tank” means any receptacle that receives fuel from a portable fuel container.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass’n. v. Orange County Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975). Reference: Sections 39000, 39001, 39003, 39500, 39515, 39516, 41511, 43000, 43013, 43016, 43017 and 43018, Health and Safety Code; and *Western Oil and Gas Ass’n. v. Orange County Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975).

HISTORY

1. New section filed 9–11–2000; operative 10–11–2000 (Register 2000, No. 37).
2. Change without regulatory effect renumbering newly adopted section 2471 to new section 2467.1 and amending subsections (a)(16) and (a)(17) filed 9–14–2000 pursuant to section 100, title 1, California Code of Regulations (Register 2000, No. 37).
3. New subsection (a)(6), subsection renumbering and amendment of newly designated subsections (a)(12), (a)(17) and (a)(18) filed 1–13–2006; operative 2–12–2006 (Register 2006, No. 2).
4. New subsections (a)(2)–(3), subsection relettering and amendment of newly designated subsections (a)(19)–(21) filed 9–11–2006; operative 10–11–2006 (Register 2006, No. 37).

§ 2467.2. Performance Standards and Test Procedures for Portable Fuel Containers and Spill-Proof Spouts.

(a) Except as provided in Section 2467.3, during the time period beginning 30 days after the date of filing of this subsection with the Secretary of State, and ending June 30, 2007, no person shall sell, supply, offer for sale, or manufacture for sale in California any portable fuel container or any portable fuel container and spout which, at the time of sale or manufacture, does not meet all of the following Performance Standards for Spill-Proof systems:

- (1) An automatic shut-off stops the fuel flow before the target fuel tank overflows.
- (2) Automatically closes and seals when removed from the target fuel tank and remains completely closed when not dispensing fuel.
- (3) Has only one opening for both filling and pouring.
- (4) Does not exceed a permeation rate of 0.4 grams per gallon per day.
- (5) Warranted for a period of not less than one year against defects in materials and workmanship.

(b) Except as provided in Section 2467.3, during the time period beginning 30 days after the date of filing of this subsection with the Secretary of State, and ending June 30, 2007, no person shall sell, supply, offer for sale, or manufacture for sale in California any spout which, at the time of sale or manufacture, does not meet all of the following Performance Standards for Spill-Proof Spouts:

- (1) An automatic shut-off stops the fuel flow before the target fuel tank overflows.
- (2) Automatically closes and seals when removed from the target fuel tank and remains completely closed when not dispensing fuel.
- (3) Warranted for a period of not less than one year against defects in materials and workmanship.

(c) Except as provided in Section 2467.3, every portable fuel container, spout, or portable fuel container and spout produced on or after July 1, 2007 that is manufactured for sale, advertised for sale, sold, or offered for sale in California or that is introduced, delivered or imported into California for introduction into commerce and that is subject to any of the standards prescribed in this article and documents incorporated by reference therein, must be certified for use and sale by the manufacturer through the Air Resources Board and covered by an Executive Order issued pursuant to Section 2467.2(d).

(d) The criteria for obtaining certification, including all test procedures for determining certification and compliance with the standards applicable to portable fuel containers, spouts, or portable fuel containers and spouts produced on or after July 1, 2007 that are manufactured for sale, advertised for sale, sold, or offered for sale in California, or that are introduced, delivered or imported into California for introduction into commerce and that are subject to any of the standards prescribed in this article and documents incorporated by reference therein are set forth in "CP-501, Certification Procedure for Portable Fuel Containers and Spill-Proof Spouts," adopted July 26, 2006, which is incorporated by reference herein.

(e) The Executive Officer shall coordinate compliance procedures with these Performance and Certification and Compliance Standards with:

- (1) California State Fire Marshal (SFM)
- (2) California Department of Industrial Relations, Division of Occupational Safety and Health (DOSH)

(f) Compliance with the Performance Certification or Compliance Standards in this Section does not exempt spill-proof systems or spill-proof spouts from compliance with other applicable federal and state statutes and regulations such as state fire codes, safety codes, and other safety regulations, nor will the Air Resources Board test for or determine compliance with such other statutes or regulations.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975). Reference: Sections 39000, 39001, 39003, 39500, 39515, 39516, 41511, 43000, 43013, 43016, 43017 and 43018, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975).

HISTORY

1. New section filed 9-11-2000; operative 10-11-2000 (Register 2000, No. 37).
2. Change without regulatory effect renumbering newly adopted section 2472 to new section 2467.2 and amending subsections (a), (b), (c) and (f) filed 9-14-2000 pursuant to section 100, title 1, California Code of Regulations (Register 2000, No. 37).
3. Amendment of section heading and section filed 9-11-2006; operative 10-11-2006 (Register 2006, No. 37).

§ 2467.3. Exemptions.

(a) This Article does not apply to any portable fuel container or spout or both portable fuel container and spout manufactured in California for shipment, sale, and use outside of California.

(b) This article does not apply to a manufacturer or distributor who sells, supplies, or offers for sale in California a portable fuel container or spout or both portable fuel container and spout that does not comply with the Performance Standards specified in Sections 2467.2(a) or (b), or the Certification and Compliance Standards specified in Section 2467.2(d), as long as the manufacturer or distributor can demonstrate that: (1) the portable fuel container or spout or both portable fuel container and spout is intended for shipment and use outside of California; and (2) that the manufacturer or distributor has taken reasonable prudent precautions to assure that the portable fuel container or spout or both portable fuel container and spout is not distributed to California.

This subsection (b) does not apply to portable fuel containers or spouts or both portable fuel containers and spouts that are sold, supplied, or offered for sale by any person to retail outlets in California.

(c) This Article does not apply to safety cans meeting the requirements of Title 29, Code of Federal Regulations Part 1926, Subpart F (§ 1926.150 et seq.).

(d) This Article does not apply to portable fuel containers with a nominal capacity less than or equal to one quart.

(e) This Article does not apply to rapid refueling devices with nominal capacities greater than or equal to four gallons, provided such devices are designed for use in officially sanctioned off-highway motor sports such as car racing or motorcycle competitions and either create a leak-proof seal against a stock target fuel tank or are designed to operate in conjunction with a receiver permanently installed on the target fuel tank.

(f) This Article does not apply to portable fuel tanks manufactured specifically to deliver fuel through a hose attached between the portable fuel tank and the outboard engine for the purpose of operating the outboard engine.

(g) This Article does not apply to closed-system portable fuel containers that are used exclusively for fueling remote control model airplanes. NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975). Reference: Sections 39000, 39001, 39003, 39500, 39515, 39516, 41511, 43000, 43013, 43016, 43017 and 43018, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975).

HISTORY

1. New section filed 9-11-2000; operative 10-11-2000 (Register 2000, No. 37).
2. Change without regulatory effect renumbering newly adopted section 2473 to new section 2467.3 and amending subsection (b) filed 9-14-2000 pursuant to section 100, title 1, California Code of Regulations (Register 2000, No. 37).
3. Amendment of subsections (b), (c) and (e) and new subsection (g) filed 9-11-2006; operative 10-11-2006 (Register 2006, No. 37).

§ 2467.4. Innovative Products.

(a) The Executive Officer may exempt a portable fuel container or spout or both portable fuel container and spout from one or more of the requirements of Section 2467.2 if a manufacturer demonstrates by clear and convincing evidence that, due to the product's design, delivery system, or other factors, the use of the product will result in cumulative ROG emissions below the highest emitting representative spill-proof system or representative spill-proof spout in its product category as determined from applicable testing.

(b) For the purposes of this Section, "representative spill-proof system" or a "representative spill-proof spout" means a portable fuel container or spout or both portable fuel container and spout which, at the time of application in (c) of this Section, meets the Performance Standards specified in Sections 2467.2(a) or (b) or the Certification Requirements specified in "CP-501, Certification Procedure for Portable Fuel Containers and Spill-Proof Spouts, adopted July 26, 2006," which is incorporated by reference herein.

(c) A manufacturer (applicant) must apply in writing to the Executive Officer for an innovative product exemption claimed under subsection (a). The application must include the supporting documentation that quantifies the emissions from the innovative product, including the actual physical test methods used to generate the data. In addition, the applicant must provide any information necessary to enable the Executive Officer to establish enforceable conditions for granting the exemption. All information including proprietary data submitted by a manufacturer pursuant to this section shall be handled in accordance with the procedures specified in Title 17, California Code of Regulations, Sections 91000-91022.

(d) Within 30 days of receipt of the exemption application the Executive Officer shall determine whether an application is complete as provided in section 60030(a), Title 17, California Code of Regulations.

(e) Within 90 days after an application has been deemed complete, the Executive Officer will determine whether, under what conditions, and to what extent, an exemption from the requirements of Sections 2467.2 will be permitted. The applicant and the Executive Officer may mutually agree to a longer time period for reaching a decision. An applicant may submit additional supporting documentation before a decision has been reached. The Executive Officer will notify the applicant of the decision in writing and specify such terms and conditions that are necessary to ensure that emissions from use of the product will meet the emissions re-

ductions specified in subsection (a), and that such emissions reductions can be enforced.

(f) In granting an innovative product exemption for a portable fuel container or spout or both portable fuel container and spout, the Executive Officer shall specify the test methods for determining conformance to the conditions established. The test methods may include criteria for reproducibility, accuracy, and sampling and laboratory procedures.

(g) For any portable fuel container or spout or both portable fuel container and spout for which an innovative product exemption has been granted pursuant to this section, the manufacturer shall notify the Executive Officer in writing at least 30 days before the manufacturer changes a product's design, delivery system, or other factors that may effect the ROG emissions during recommended usage. The manufacturer must also notify the Executive Officer within 30 days after the manufacturer learns of any information that would alter the emissions estimates submitted to the Executive Officer in support of the exemption application.

(h) If the Performance Standards specified in Section 2467.2 are amended for a product category, all innovative product exemptions granted for products in the product category, except as provided in this subsection (i), have no force and effect as of the effective date of the amended Performance Standards.

(i) If the Executive Officer believes that a portable fuel container or spout or both portable fuel container and spout for which an exemption has been granted no longer meets the criteria for an innovative product specified in subsection (a), the Executive Officer may hold a public hearing in accordance with the procedures specified in Title 17, California Code of Regulations, Division 3, Chapter 1, Subchapter 1.25, to determine if the exemption should be modified or revoked.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975). Reference: Sections 39000, 39001, 39003, 39500, 39515, 39516, 41511, 43000, 43013, 43016, 43017 and 43018, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975).

HISTORY

1. New section filed 9-11-2000; operative 10-11-2000 (Register 2000, No. 37).
2. Change without regulatory effect renumbering newly adopted section 2474 to new section 2467.4 and amending subsections (a), (b), (e) and (h) filed 9-14-2000 pursuant to section 100, title 1, California Code of Regulations (Register 2000, No. 37).
3. Amendment of subsections (b) and (i) filed 9-11-2006; operative 10-11-2006 (Register 2006, No. 37).

§ 2467.5. Administrative Requirements.

(a) Each manufacturer of a portable fuel container or portable fuel container and spout subject to and complying with Section 2467.2(a) must clearly display on each spill-proof system:

- (1) the phrase "Spill-Proof System";
- (2) a date of manufacture or representative date; and
- (3) a representative code identifying the portable fuel container or portable fuel container and spout as subject to and complying with Section 2467.2(a).

(b) Each manufacturer of a spout subject to and complying with Section 2467.2(b) must clearly display on the accompanying package, or for spill-proof spouts sold without packaging, on either the spill-proof spout or a label affixed thereto:

- (1) the phrase "Spill-Proof Spout";
- (2) a date of manufacture or representative date; and
- (3) a representative code identifying the spout as subject to and complying with Section 2467.2(b).

(c) Each manufacturer of a portable fuel container or portable fuel container and spout subject to and complying with Section 2467.2(c) must clearly display on each spill-proof system:

- (1) the phrase "Spill-Proof System";
- (2) a date of manufacture or representative date; and
- (3) a representative code identifying the Executive Order Number issued by the Air Resources Board for the portable fuel container or portable fuel container and spout.

(d) Each manufacturer of a spout subject to and complying with Section 2467.2(c) must clearly display on the accompanying package, or for spill-proof spouts sold without packaging, on either the spill-proof spout or a label affixed thereto:

- (1) the phrase "Spill-Proof Spout";
- (2) a date of manufacture or representative date; and
- (3) a representative code identifying the Executive Order Number issued by the Air Resources Board for the spout.

(e) Each manufacturer subject to subsection (a), (b), (c) or (d) must file an explanation of both the date code and representative code with the Executive Officer no later than the later of three months after the effective date of this article or within three months of production, and within three months after any change in coding.

(f) Each manufacturer of a spout subject to subsection (b) or (d) must clearly display the make, model number, and size of only those portable fuel container(s) the spout is designed to accommodate and can demonstrate compliance with Section 2467.2(a) or 2467.2(c) on the accompanying package, or for spill-proof spouts sold without packaging, on either the spill-proof spout, or a label affixed thereto.

(g) Manufacturers of portable fuel containers or portable fuel containers and spouts not subject to or not in compliance with Section 2467.2 may not display the phrase "Spill-Proof System" or "Spill-Proof Spout" on the portable fuel container or spout, respectively, on any sticker or label affixed thereto, or on any accompanying package.

(h) Each manufacturer of a portable fuel container or spout or both portable fuel container and spout subject to and complying with Section 2467.2 that due to its design or other features cannot be used to refuel one or more on-road motor vehicles must clearly display the phrase "Not Intended For Refueling On-Road Motor Vehicles" in type of 34 point or greater on each:

- (1) spill-proof system or label affixed thereto, and on the accompanying package, if any; and
- (2) package accompanying a spill-proof spout sold separately from a spill-proof system, or for spill-proof spouts sold without packaging, on either the spill-proof spout, or a label affixed thereto.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975). Reference: Sections 39000, 39001, 39003, 39500, 39515, 39516, 41511, 43000, 43013, 43016, 43017 and 43018, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975).

HISTORY

1. New section filed 9-11-2000; operative 10-11-2000 (Register 2000, No. 37).
2. Change without regulatory effect renumbering newly adopted section 2475 to new section 2467.5 and amending section filed 9-14-2000 pursuant to section 100, title 1, California Code of Regulations (Register 2000, No. 37).
3. New subsections (c)-(d)(3), subsection relettering, repealer of former subsection (d) and amendment of newly designated subsections (e)-(f) filed 9-11-2006; operative 10-11-2006 (Register 2006, No. 37).

§ 2467.6. Variances.

(a) Any person or manufacturer who cannot comply with the requirements set forth in Section 2467.2, due to extraordinary reasons beyond the person's reasonable control, may apply in writing to the Executive Officer for a variance. The variance application must set forth:

- (1) the specific grounds upon which the variance is sought;
- (2) the proposed date(s) by which compliance with the provisions of Section 2467.2 will be achieved; and
- (3) a compliance report reasonably detailing the method(s) by which compliance will be achieved.

(b) Upon receiving a complete variance application containing the information required in subsection (a), the Executive Officer shall hold a public hearing to determine whether, under what conditions, and to what extent, a variance from the requirements in Section 2467.2 is necessary and will be permitted. A hearing will be initiated no later than 75 days after receipt of a complete variance application. Notice of the time and place of the hearing must be sent to the applicant by certified mail not less than 30 days before to the hearing. Notice of the hearing must also be submitted for publication in the California Regulatory Notice Register and

sent to every person who requests such a notice, not less than 30 days before the hearing. The notice must state that the parties may, but not need to be, represented by counsel at the hearing. At least 30 days before the hearing, the variance application must be made available to the public for inspection. Interested members of the public must be allowed a reasonable opportunity to testify at the hearing and their testimony must be considered.

(c) No variance may be granted unless all of the following findings are made:

(1) that, due to reasons beyond the reasonable control of the applicant, required compliance with Section 2467.2 would result in extraordinary economic hardship;

(2) that the public interest in mitigating the extraordinary hardship to the applicant by issuing the variance outweighs the public interest in avoiding any increased emissions of air contaminants that would result from issuing the variance; and

(3) that the compliance report proposed by the applicant can reasonably be implemented, and will achieve compliance as expeditiously as possible.

(d) Any variance order shall specify a final compliance date by which the requirements of Section 2467.2 will be achieved. Any variance order shall contain a condition that specifies increments of progress necessary to assure timely compliance, and such other conditions that the Executive Officer, in consideration of the testimony received at the hearing, finds necessary to carry out the purposes of Division 26 of the Health and Safety Code.

(e) A variance shall cease to be effective upon failure of the party to whom the variance was granted to comply with any term or condition of the variance.

(f) Upon the application of any person, the Executive Officer may review, and for good cause, modify or revoke a variance from requirements of Section 2467.2 after holding a public hearing in accordance with the provisions of subsection (b).

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975). Orange County Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975).

HISTORY

1. New section filed 9-11-2000; operative 10-11-2000 (Register 2000, No. 37).

2. Change without regulatory effect renumbering newly adopted section 2476 to new section 2467.6 and amending section filed 9-14-2000 pursuant to section 100, title 1, California Code of Regulations (Register 2000, No. 37).
3. Amendment of subsection (b) filed 9-11-2006; operative 10-11-2006 (Register 2006, No. 37).

§ 2467.7. Performance Standard Test Procedures.

(a) Testing to determine compliance with Section 2467.2(b) of this article shall be performed by using the following test procedures:

(1) "Test Method 510, Automatic Shut-Off Test Procedure For Spill-Proof Systems And Spill-Proof Spouts," adopted July 6, 2000, (section numbers corrected September 13, 2000), as amended July 26, 2006, which is incorporated by reference herein.

(2) "Test Method 511, Automatic Closure Test Procedure For Spill-Proof Systems And Spill-Proof Spouts," adopted July 6, 2000, (section numbers corrected September 13, 2000), which is incorporated by reference herein.

(b) Testing to determine compliance with Section 2467.2(a) of this article shall be performed by using all test procedures in (a) above and the following test procedure:

(1) "Test Method 513, Determination Of Permeation Rate For Spill-Proof Systems," adopted July 6, 2000, (section numbers corrected September 13, 2000), which is incorporated by reference herein.

(c) Alternative methods that are shown to be accurate, precise, and appropriate may be used upon written approval of the Executive Officer.

(d) Test procedures referred to in this Article can be obtained from the California Air Resources Board, and may be available at <http://www.arb.ca.gov>.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975). Orange County Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975).

HISTORY

1. New section filed 9-11-2000; operative 10-11-2000 (Register 2000, No. 37).
2. Change without regulatory effect renumbering newly adopted section 2477 to new section 2467.7 and amending section filed 9-14-2000 pursuant to section 100, title 1, California Code of Regulations (Register 2000, No. 37).
3. Amendment of section heading and subsection (a)(1), repealer of subsection (a)(3) and amendment of subsection (b)(1) filed 9-11-2006; operative 10-11-2006 (Register 2006, No. 37).

[The next page is 310.3.]

§ 2467.8. Certification and Compliance Test Procedures.

(a) Testing to determine compliance with Section 2467.2(c) of this article shall be performed by using the test procedures specified in "CP-501, Certification Procedure for Portable Fuel Containers and Spill-Proof Spouts," adopted July 26, 2006, which is incorporated by reference herein.

(b) Alternative methods that are shown to be accurate, precise, and appropriate may be used upon written approval of the Executive Officer.

(c) Test procedures referred to in this Article can be obtained from the California Air Resources Board, and may be available at <http://www.arb.ca.gov>.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975). Reference: Sections 39000, 39001, 39003, 39500, 39515, 39516, 41511, 43000, 43013, 43016, 43017 and 43018, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975).

HISTORY

1. New section filed 9-11-2000; operative 10-11-2000 (Register 2000, No. 37).
2. Change without regulatory effect renumbering newly adopted section 2478 to new section 2467.8 filed 9-14-2000 pursuant to section 100, title 1, California Code of Regulations (Register 2000, No. 37).
3. Repealer and new section heading and section filed 9-11-2006; operative 10-11-2006 (Register 2006, No. 37).

§ 2467.9. Enforcement.

(a) If the Executive Officer finds any manufacturer, distributor, or retailer manufacturing for sale, advertising for sale, selling, or offering for sale in the State of California a portable fuel container or spout or both portable fuel container and spout that does not comply with the requirements set forth in this article, he or she may enjoin said manufacturer, distributor, or retailer from any further manufacture, advertisement, sales, offers for sale, or distribution of such noncompliant portable fuel containers or spouts or both portable fuel containers and spouts, in the State of California pursuant to Section 43017 of the Health and Safety Code. The Executive Officer may also assess penalties to the extent permissible under Part 5, Division 26 of the Health and Safety Code and/or revoke any Executive Order(s) issued for the noncompliant portable fuel container, spout or both portable fuel container and spout.

(b) Before seeking remedial action against any manufacturer, distributor, or retailer the Executive Officer will consider any information provided by the manufacturer, distributor, or retailer.

NOTE: Authority cited: Sections 39600, 39601, 43013, 43018 and 43101, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975). Reference: Sections 39000, 39001, 39003, 39500, 39515, 39516, 41511, 43000, 43013, 43016, 43017 and 43018, Health and Safety Code; and *Western Oil and Gas Ass'n. v. Orange County Pollution Control District*, 14 Cal.3d 411, 121 Cal.Rptr. 249 (1975).

HISTORY

1. New section filed 9-11-2006; operative 10-11-2006 (Register 2006, No. 37).

Article 7. Certification Procedures for Aftermarket Parts for Off-Road Vehicles, Engines, Equipment

§ 2470. Applicability.

This article shall apply to all aftermarket parts which are sold, offered for sale, or advertised for sale for use on off-road vehicles, engines, or equipment which are subject to California or federal emission standards.

NOTE: Authority cited: Sections 39600, 39601, 43013 and 43018, Health and Safety Code; and Sections 27156, 38390, 38391 and 38395, Vehicle Code. Reference: Sections 39002, 39003, 43000, 43000.5, 43013 and 43018, Health and Safety Code.

HISTORY

1. New article 7 (sections 2470-2476) and section filed 8-29-2000; operative 9-28-2000 (Register 2000, No. 35).

§ 2471. Definitions.

(a) The definitions in Section 1900(b), Chapter 3, Title 13 of the California Code of Regulations shall apply with the following additions:

(1) "All-Terrain Vehicle (ATV)" means any motorized off-highway vehicle 50 inches (1270 mm) or less in overall width, designed to travel on four low pressure tires, having a seat designed to be straddled by the operator and handlebars for steering control, and intended for use by a single operator and no passengers. The vehicle is designed to carry not more than 350 pounds (160 kg) payload, excluding the operator, and is powered by an internal combustion engine. Width shall be exclusive of accessories and optional equipment. A golf cart is not, for purposes of this regulation, to be classified as an all-terrain vehicle.

(2) "Alternate Fuel" means any fuel that will reduce non-methane hydrocarbons (on a reactivity-adjusted basis), NOx, CO, and the potential risk associated with toxic air contaminants as compared to gasoline or diesel fuel and would not result in increased deterioration of the engine. Alternate fuels include, but are not limited to, methanol, ethanol, liquefied petroleum gas, compressed natural gas, and electricity.

(3) "Alternative fuel" refers to liquefied petroleum gas, natural gas, alcohol, and alcohol/gasoline fuels.

(4) "Alternative fuel conversion system" means a package of fuel, ignition, emission control, and engine components that are modified, removed, or added during the process of modifying a vehicle/engine/equipment to operate on an alternative fuel and to perform at an emission rate lower than or equal to the rate to which the engine family was originally certified.

(5) "Alternative fuel conversion system manufacturer" refers to a person who manufactures or assembles an alternative fuel conversion system for sale in California, requests, and is granted the Executive Order certifying the conversion system.

(6) "Confirmatory testing" means an ARB directed follow-up emissions test and inspection of the test engine or test vehicle that had been used by the manufacturer to obtain test data for submittal with the certification application. The emissions tests can be conducted at ARB or contracted out facilities or at the manufacturer's facility.

(7) "Conventional fuel" means gasoline or diesel fuel.

(8) "Diesel Cycle Engine" means a type of engine with operating characteristics significantly similar to the theoretical diesel combustion cycle. The primary means of controlling power output in a diesel cycle engine is by limiting the amount of fuel that is injected into the combustion chambers of the engine. A diesel cycle engine may be petroleum-fueled (i.e. diesel-fueled) or alternate-fueled.

(9) "Driveability" of an off-road vehicle or off-road equipment means the smooth delivery of power, as demanded by the driver or operator. Typical causes of driveability degradation are rough idling, misfiring, surging, hesitation, or insufficient power. Conversion from conventional fuels to alternative fuels may entail losses of volumetric efficiency, resulting in some power loss. Such power loss is not considered to be driveability degradation.

(10) "Dual fuel" refers to a conversion system which utilizes both an alternative fuel and a conventional fuel without further hardware change-over required.

(11) "Emission Control System" includes any component, group of components, or engine modification that controls or causes the reduction of substances emitted from an engine.

(12) "Engine Family" is a subclass of a basic engine based on similar emission characteristics. The engine family is the grouping of engines that is used for the purposes of certification.

(13) "Executive Officer" means the Executive Officer of the Air Resources Board or his or her authorized representative.

(14) "Exhaust Emissions" means substances emitted into the atmosphere from any opening downstream from the exhaust port of an off-road vehicle, engine, or equipment.

(15) "Fuel System" means the combination of any of the following components: fuel tank, fuel pump, fuel lines, oil injection metering system, carburetor or fuel injection components, evaporative controls and all fuel system vents.

(16) "Go-Kart" means any four wheeled, open framed vehicle equipped with an internal combustion engine. These vehicles are gener-

ally found at amusement parks and rented to patrons on a "pay-by-play" basis. These vehicles are generally designed for a single rider and run on a confined track. A go-kart that is not used exclusively in competition/racing events in a closed course is not a competition/racing vehicle for purposes of these regulations.

(17) "Golf Cart" means a vehicle used to convey equipment and no more than two persons, including the driver, to play the game of golf in an area designated as a golf course. Golf carts are designed to have an unladen weight of less than 1,300 pounds and carry not more than 100 pounds, excluding passengers, accessories and optional equipment. A golf cart is not used for grounds keeping or maintenance purposes.

(18) "Heavy-Duty Off-Road Diesel Cycle Engines" or "Engines" are identified as: diesel or alternate fuel powered diesel cycle internal combustion engines 175 horsepower and greater, operated on or in any device by which any person or property may be propelled, moved or drawn upon a highway, but are primarily used off a highway. The engines are designed for powering construction, farm, mining, forestry and industrial implements and equipment. They are designed to be used in, but are not limited to use in, the following applications: agricultural tractors, backhoes, excavators, dozers, log skidders, trenchers, motor graders, portable generators and compressors and other miscellaneous applications. Specifically excluded from this category are: (1) engines operated on or in any device used exclusively upon stationary rails or tracks; (2) engines used to propel marine vessels; (3) internal combustion engines attached to a foundation at a location; (4) transportable engines subject to District permitting rules which have been operated at a location for a period of one year or more on January 1, 1997; and (5) stationary or transportable gas turbines for power generation.

(19) "Inboard Engine" means a four-stroke spark-ignition marine engine not used in a personal watercraft that is designed such that the propeller shaft penetrates the hull of the marine watercraft while the engine and the remainder of the drive unit is internal to the hull of the marine watercraft.

(20) "Installer" means a person who installs alternative fuel conversion systems on off-road vehicles/engines/equipment.

(21) "Marine watercraft" means every description of boat, ship or other artificial contrivance used, or capable of being operated on water.

(22) "Model year" means the manufacturer's annual production period which includes January 1 of a calendar year or, if the manufacturer has no annual production period, the calendar year.

(23) "Off-Highway Recreational Vehicle Engines" or "Engines" are identified as: two-stroke or four-stroke, air-cooled, liquid-cooled, gasoline, diesel, or alternate fuel powered engines or electric motors that are designed for powering off-road recreational vehicles and engines included in, but not limited to use in, the following: off-road motorcycles, all-terrain vehicles, and golf carts. All engines and equipment that fall

within the scope of the preemption of Section 209(e)(1)(A) of the Federal Clean Air Act, as amended, and as defined by regulation of the Environmental Protection Agency, are specifically not included within this category.

(24) "Off-Road Aftermarket Parts Manufacturer" means any person engaged in the manufacturing of add-on or modified parts, as defined in Section 1900(b), (1) and (10), Chapter 3, Title 13, California Code of Regulations, for off-road vehicles, engines or equipment subject to California or federal emission standards.

(25) "Off-Road Engine" means any internal combustion engine or motor designed for powering off-road vehicles or off-road equipment. All engines that fall within the scope of the preemption of Section 209(e)(1)(A) of the Federal Clean Air Act, as amended, and as defined by regulation of the Environmental Protection Agency, are specifically not included within this category.

(26) "Off-Road Large Spark-ignition Engines" or "LSI Engines" means any engine that produces a gross horsepower 25 and greater horsepower or is designed (e.g., through fueling, engine calibrations, valve timing, engine speed modifications, etc.) to produce 25 and greater horsepower. If an engine family has models at or above 25 horsepower and models below 25 horsepower, only the models at or above 25 horsepower would be considered LSI engines. The engine's operating characteristics are significantly similar to the theoretical Otto combustion cycle with the engine's primary means of controlling power output being to limit the amount of air that is throttled into the combustion chamber of the engine. LSI engines or alternate fuel powered LSI internal combustion engines are designed for powering, but not limited to powering, fork-lift trucks, sweepers, generators, and industrial equipment and other miscellaneous applications. All engines and equipment that fall within the scope of the preemption of Section 209(e)(1)(A) of the Federal Clean Air Act, as amended, and as defined by regulation of the Environmental Protection Agency, are specifically excluded from this category.

Specifically excluded from this category are: 1) engines operated on or in any device used exclusively upon stationary rails or tracks; 2) engines used to propel marine vessels; 3) internal combustion engines attached to a foundation at a location for at least 12 months; 4) off-road recreational vehicles and snowmobiles; and 5) stationary or transportable gas turbines for power generation.

(27) "Off-Road Motorcycle" means any two or three-wheeled vehicle equipped with an internal combustion engine and weighing less than 1,499 pounds. An off-road motorcycle is primarily designed for use off highways. These vehicles are mainly used for recreational riding on dirt trails but are not limited to this purpose.

(28) "Off-Road Vehicle" or "Off-Road Equipment" means any non-stationary device, powered by an internal combustion engine or motor,

used primarily off the highways to propel, move, or draw persons or property including any device propelled, moved, or drawn exclusively by human power, and used in, but not limited to, the following applications: Marine Vessels, Construction/Farm Equipment, Locomotives, Small Off-Road Engines, Off-Road Motorcycles, and Off-Highway Recreational Vehicles.

(29) "Otto Cycle Engine" means a type of engine with operating characteristics significantly similar to the theoretical Otto combustion cycle. The primary means of controlling power output in an Otto cycle engine is by limiting the amount of air and fuel which can enter the combustion chambers of the engine. As an example, gasoline-fueled engines are Otto cycle engines.

(30) "Outboard engine" means a spark-ignition marine engine that, when properly mounted on a marine watercraft in the position to operate, houses the engine and drive unit external to the hull of the marine watercraft.

(31) "Personal watercraft engine" means a spark-ignition marine engine that does not meet the definition of outboard engine, inboard engine or sterndrive engine, except that the Executive Officer may in his or her discretion classify a personal watercraft engine as an inboard or sterndrive engine if it is comparable in technology and emissions to an inboard or sterndrive engine.

(32) "Scheduled Maintenance" means any adjustment, repair, removal, disassembly, cleaning, or replacement of components or systems required by the manufacturer which is performed on a periodic basis to prevent part failure or equipment or engine malfunction, or anticipated as necessary to correct an overt indication of malfunction or failure for which periodic maintenance is not appropriate.

(33) "Small off-road engine" means any engine that produces a gross horsepower less than 25 horsepower, or is designed (e.g., through fuel feed, valve timing, etc.) to produce less than 25 horsepower, that is not used to propel a licensed on-road motor vehicle, an off-road motorcycle, an all-terrain vehicle, a marine vessel, a snowmobile, a model airplane, a model car, or a model boat. If an engine family has models below 25 horsepower and models at or above 25 horsepower, only the models under 25 horsepower would be considered small off-road engines. Uses for small off-road engines include, but are not limited to, applications such as lawn mowers, weed trimmers, chain saws, golf carts, specialty vehicles, generators and pumps. All engines and equipment that fall within the scope of the preemption of Section 209(e)(1)(A) of the Federal Clean Air Act, as amended, and as defined by regulation of the Environmental Protection Agency, are specifically not included within this category.

(34) "Spark-ignition marine engine" means any engine used to propel a marine watercraft, and which utilizes the spark-ignition combustion cycle.

(35) "Specialty Vehicles" means any vehicle powered by an internal combustion engine having not less than 3 wheels in contact with the ground, having an unladen weight generally less than 2,000 pounds, which is typically operated between 10 and 35 miles per hour. The recommended bed payload for specialty vehicles is usually up to 2,000 pounds. Specialty vehicles are mainly used off of highways and residential streets. Applications of such vehicles include, but are not limited to, carrying passengers, hauling light loads, grounds keeping and maintenance, resort or hotel areas, airports, etc.

(36) "Sterndrive engine" means a four-stroke spark-ignition marine engine not used in a personal watercraft that is designed such that the drive unit is external to the hull of the marine watercraft, while the engine is internal to the hull of the marine watercraft.

(37) "Test engine" means the engine or group of engines that a manufacturer uses during certification, production line and in-use testing to determine compliance with emission standards.

(38) "Ultimate Purchaser" means the first person who in good faith purchases a replacement, add-on, or modified part for purposes other than resale.

(39) "Warrantable Condition" means any condition of an engine that requires the manufacturer to take corrective action pursuant to applicable defects warranty provisions.

(40) "Warranted Part" means any emissions-related part installed on an engine by the equipment or engine manufacturer, or installed in a warranty repair, which is listed on the warranty parts list.

(41) "Warranty period" means the period of time, either in years or hours of operation, that the engine or part is covered by the warranty provisions.

(42) "Warranty station" means a service facility authorized by the equipment or engine manufacturer to perform warranty repairs. This includes all manufacturer distribution centers that are franchised to service the subject equipment or engines.

HISTORY

1. New section filed 8-29-2000; operative 9-28-2000 (Register 2000, No. 35).

§ 2472. Air Pollution Control and Modification Devices.

(a) No person shall install, sell, offer for sale, or advertise any device, apparatus, or mechanism intended for use with, or as a part of, any required off-road vehicle, engine, or equipment pollution control device or system which alters or modifies the original design or performance of any such pollution control device or system.

(b) No person shall operate or maintain in a condition of readiness for operation any off-road vehicle, engine, or equipment which is required to be equipped with a pollution control device under Part 5 (commencing with Section 43000) of Division 26 of the Health and Safety Code or with any other certified off-road vehicle, engine, or equipment pollution control device required by any other state law or any rule or regulation adopted pursuant to such law, or required to be equipped with an off-road vehicle, engine, or equipment pollution control device pursuant to the Clean Air Act (42 U.S.C.1857 et seq.) and the standards and regulations promulgated thereunder, unless it is equipped with the required off-road vehicle, engine, or equipment pollution control device which is correctly installed and in operating condition. No person shall disconnect, modify, or alter any such required device.

(c) This section shall not apply to an alteration, modification, or modifying device, apparatus, or mechanism found by resolution of the State Air Resources Board to do either of the following:

(1) Not to reduce the effectiveness of any required off-road vehicle, engine, or equipment pollution control device.

(2) To result in emissions from any such modified or altered off-road vehicle, engine, or equipment which are at levels which comply with existing state or federal standards for that model-year of the vehicle, engine or equipment being modified or converted.

NOTE: Authority cited: Sections 39600, 39601, 43013 and 43018, Health and Safety Code; and Sections 27156, 38390, 38391 and 38395, Vehicle Code. Reference: Sections 39002, 39003, 43000, 43000.5, 43013, 43017 and 43018, Health and Safety Code.

HISTORY

1. New section filed 8-29-2000; operative 9-28-2000 (Register 2000, No. 35).

§ 2473. Replacement Parts.

(a) Any replacement part subject to the provisions of this article shall be presumed to be in compliance with this article unless the executive officer makes a finding to the contrary pursuant to Section 2475(a).

(b) The manufacturer of any replacement part subject to the provisions of this article shall maintain sufficient records, such as performance specifications, test data, or other information, to substantiate that such a replacement part is in compliance with this article. Such records shall be open for reasonable inspection by the executive officer or his/her representative. All such records shall be maintained for four years from the year of manufacture of the replacement part. The manufacturer may determine the format for maintaining such records (including, but not limited to, electronic or computer readable files, backup tapes, or magnetic

media), provided the format allows the records to be readily retrieved and displayed to the executive officer.

NOTE: Authority cited: Sections 39600, 39601, 43013 and 43018, Health and Safety Code. Reference: Sections 39002, 39003, 39500, 43000, 43000.5, 43013, 43017 and 43018, Health and Safety Code; and Sections 27156, 38391 and 38395, Vehicle Code.

HISTORY

1. New section filed 8-29-2000; operative 9-28-2000 (Register 2000, No. 35).

§ 2474. Add-On Parts and Modified Parts.

(a) As used in this section, the terms "advertise" and "advertisement" include, but are not limited to, any notice, announcement, information, publication, catalog, listing for sale, or other statement concerning a product or service communicated to the public for the purpose of furthering the sale of the product or service.

(b) (1) Except for publishers as provided in subsection 3, no person or company doing business solely in California or advertising only in California shall advertise any device, apparatus, or mechanism which alters or modifies the original design or performance of any required off-road vehicle, engine, or equipment pollution control device or system unless such part, apparatus, or mechanism has been exempted from Vehicle Code (VC) Sections 27156, 38391 or California Code of Regulations (CCR), Title 13, Section 2472, and the limitations of the exemption, if any, are contained within the advertisement in type size to give reasonable notice of such limitations.

(2) Except for publishers as provided in subsection 3, no person or company doing business in interstate commerce shall advertise in California any device, apparatus, or mechanism which alters or modifies the original design or performance of any required off-road vehicle, engine, or equipment pollution control device or system and is not exempted from VC Sections 27156, 38391 or CCR, Title 13, Section 2472, unless each advertisement contains a legally adequate disclaimer in type size adequate to give reasonable notice of any limitation on the sale or use of the device, apparatus, or mechanism.

(3) No publisher, after receipt of notice from the state board or after otherwise being placed on notice that the advertised part is subject to and has not been exempted from the provisions of VC Sections 27156, 38391 or CCR, Title 13, Section 2472, shall make or disseminate or cause to be made or disseminated before the public in this state any advertisement for add-on or modified parts subject to the provisions of this article, which have not been exempted from VC Sections 27156, 38391 or CCR, Title 13, Section 2472, unless such advertisement clearly and accurately states the legal conditions, if any, on sale and use of the parts in California.

(4) The staff of the state board shall provide, upon request, model language which satisfies these requirements.

(c) No person shall advertise, offer for sale, or install a part as an off-road vehicle, engine, or equipment pollution control device or as an exempted device, when in fact such part is not an off-road vehicle, engine, or equipment pollution control device or is not approved or exempted by the state board.

(d) No person shall advertise, offer for sale, sell, or install an add-on or modified part as a replacement part.

(e) The executive officer may exempt add-on and modified parts based on an evaluation conducted in accordance with the "Procedures for Exemption of Add-On and Modified Parts for Off-Road Categories," adopted July 14, 2000, which is hereby incorporated by reference herein.

(f) Each person engaged in the business of retail sale or installation of an add-on or modified part which has not been exempted from VC Sections 27156, 38391 or CCR, Title 13, Section 2472 shall maintain records of such activity which indicate date of sale, purchaser name and address, vehicle, engine, or equipment model and work performed if applicable. Such records shall be open for reasonable inspection by the executive officer or his/her representative. All such records shall be maintained for four years from the date of sale or installation.

(g) A violation of any of the prohibitions set forth in this section shall be grounds for the executive officer to invoke the provisions of section 2476.

(h) (1) The executive officer shall exempt new aftermarket non-original equipment catalytic converters for off-road vehicles, engines, and equipment from the prohibitions of VC Sections 27156, 38391 or CCR, Title 13, Section 2472 based on an evaluation conducted in accordance with the "California Evaluation Procedures for New Aftermarket Non-Original Equipment Catalytic Converters for Off-Road Vehicles, Engines, and Equipment," adopted October 1, 1999, which is hereby incorporated by reference herein.

(2) No person shall install, sell, offer for sale or advertise any new non-original equipment aftermarket catalytic converter for off-road vehicles, engines, and equipment in California that has not been exempted pursuant to the procedures as provided in this subsection.

(3) For the purposes of this regulation, a new non-original equipment aftermarket catalytic converter for off-road vehicles, engines, and equipment is a catalytic converter which is constructed of all new materials and is not a replacement part as defined in Title 13, CCR, Section 1900, or which includes any new material or construction which is not equivalent to the materials or construction of the original equipment converter for off-road vehicles, engines, and equipment.

(i) (1) No person shall install, sell, offer for sale or advertise any used catalytic converter for off-road vehicles, engines, or equipment in California unless such catalytic converter has been exempted pursuant to the "Procedures for Exemption of Add-On and Modified Parts for Off-Road Categories," adopted July 14, 2000, which is hereby incorporated by reference herein.

(2) No person shall install, sell, offer for sale or advertise any recycled or salvaged used catalytic converter for off-road vehicles, engines, and equipment in California unless such converters have been exempted from the prohibitions of VC Sections 27156, 38391 or CCR, Title 13, Section 2472 pursuant to the procedures provided in this subsection.

(3) For the purposes of this regulation, a "used catalytic converter" for off-road vehicles, engines, and equipment is a catalytic converter which is not a new aftermarket non-original equipment catalytic converter for off-road vehicles, engines, and equipment as defined in subsection (h)(3), or a replacement part as defined in Title 13, CCR, Section 1900.

(j) (1) The executive officer shall exempt alternative fuel conversion systems for off-road vehicles, engines, and equipment from the prohibitions of VC Sections 27156, 38391 or CCR, Title 13, Section 2472 based on an evaluation conducted in accordance with the "California Certification and Installation Procedures for Systems Designed to Convert Off-Road Vehicles, Engines, and Equipment to Use Alternative Fuels," adopted October 1, 1999, which is hereby incorporated by reference herein.

(2) No person shall install any alternative fuel conversion system for off-road vehicles, engines, and equipment in California unless the alternative fuel conversion system has been exempted and installed in accordance with the procedures and requirements pursuant to the "California Certification and Installation Procedures for Systems Designed to Convert Off-Road Vehicles, Engines, and Equipment to Use Alternative Fuels," adopted October 1, 1999, which is hereby incorporated by reference herein.

NOTE: Authority cited: Sections 39600, 39601, 43013 and 43018, Health and Safety Code. Reference: Sections 39002, 39003, 43000, 43000.5, 43013, 43017 and 43018, Health and Safety Code; and Sections 27156, 38391 and 38395, Vehicle Code.

HISTORY

1. New section filed 8-29-2000; operative 9-28-2000 (Register 2000, No. 35).

§ 2475. Surveillance.

(a) Replacement parts. The executive officer may order, for cause, the manufacturer of any replacement part subject to the provisions of this article to submit any records relating to such part which are maintained pursuant to section 2473(b) above. The executive officer may order, for cause, the manufacturer of any replacement part subject to the provisions of this article to submit a reasonable number of parts typical of the manufacturer's production for testing and evaluation. If, after a review of all records submitted by the manufacturer and of the results of any tests conducted by the state board's staff, the executive officer finds that such

part is not in fact a replacement part, the executive officer may invoke section 2476. Replacement parts evaluated pursuant to this section shall be compared with the specifications contained in the applicable off-road vehicle, engine or equipment manufacturer's application for certification.

(b) Add-on parts and modified parts. The executive officer may order, for cause, the manufacturer of any add-on part or modified part subject to the provisions of this article to submit a reasonable number of parts typical of the manufacturer's production for testing and evaluation. In-use performance will also be evaluated. If, after a review of the results of any tests or evaluations conducted by the state board's staff and of any information submitted by the manufacturer, the executive officer finds that an add-on part or a modified part does not conform to the "Procedures for Exemption of Add-On and Modified Parts for Off-Road Categories," adopted October 1, 1999, which is hereby incorporated by reference herein, the executive officer may invoke Section 2476.

NOTE: Authority cited: Sections 39600, 39601, 43013 and 43018, Health and Safety Code. Reference: Sections 39002, 39003, 43000, 43000.5, 43013, 43017 and 43018, Health and Safety Code; and Sections 27156, 38391 and 38395, Vehicle Code.

HISTORY

1. New section filed 8-29-2000; operative 9-28-2000 (Register 2000, No. 35).

§ 2476. Enforcement Action.

(a) When this section is invoked pursuant to other sections of this article, the executive officer may issue a cease and desist order and may require the person to submit a plan for correcting any deficiencies found by the state board. The executive officer may order any of the actions contained in the plan, and/or may declare a part to be not in compliance with VC Sections 27156, 38391 or CCR, Title 13, Section 2472 unless he/she finds the plan adequate to correct the deficiencies found by the state board. The plan may be required to include such corrective actions as the cessation of sale of non-complying parts, the recall of any non-complying parts already sold, and corrective advertising to correct misleading information regarding the emission control capabilities of the device and to ensure compliance with California's laws. The executive officer may also seek fines for violations of VC Sections 27156, 38391 or CCR, Title 13, Section 2472, or other laws or regulations, as applicable.

(b) When this section is invoked by the executive officer on either his/her own initiative or in response to complaints received, an investigation may be made by the executive officer or his/her representative to gather evidence regarding continuing violations of this article by any person engaged in the business of advertising, offering for sale, selling, or installing an add-on or modified part.

(c) Any person against whom enforcement action (other than the filing of an action in court) is initiated pursuant to this section may request a public hearing to review the enforcement action.

(d) Nothing in this article shall prohibit the executive officer from taking any other action provided for by law, including the prosecution of an action in court.

NOTE: Authority cited: Sections 39515, 39516, 39600, 39601, 43013 and 43018, Health and Safety Code. Reference: Sections 39002, 39003, 43000, 43000.5, 43013, 43017 and 43018, Health and Safety Code; and Sections 27156, 38391 and 38395, Vehicle Code.

HISTORY

1. New section filed 8-29-2000; operative 9-28-2000 (Register 2000, No. 35).

Article 8. Off-Road Airborne Toxic Control Measures

§ 2477. Airborne Toxic Control Measure for In-Use Diesel-Fueled Transport Refrigeration Units (TRU) and TRU Generator Sets, and Facilities Where TRUs Operate.

(a) Purpose. Diesel particulate matter (PM) was identified in 1998 as a toxic air contaminant. This regulation implements provisions of the

Diesel Risk Reduction Plan, adopted by the Air Resources Board in October, 2000, as mandated by the Health and Safety Code Sections 39650-39675, to reduce emissions of substances that have been determined to be toxic air contaminants. Specifically, this regulation will use a phased approach to reduce the diesel PM emissions from in-use transport refrigeration units (TRUs) and TRU generator (gen) set equipment used to power electrically driven refrigerated shipping containers and trailers that are operated in California.

(b) Applicability.

(1) Except as provided in subsection (c), this regulation applies to owners and operators of diesel-fueled TRUs and TRU gen sets (see definition of operator and owner in subsection (d) that operate in the state of California. This specifically includes:

(A) Operators and owners of California-based TRUs and TRU gen sets that are installed on trucks, or trailers, shipping containers, or railcars; and

(B) Operators and owners of non-California-based TRUs and TRU gen sets that are installed on trucks, trailers, shipping containers, or trailers.

(2) This regulation applies to facilities located in California with 20 or more loading dock doors serving refrigerated areas where perishable goods are loaded or unloaded for distribution on trucks, trailers, shipping containers, or rail cars that are equipped with TRUs and TRU gen sets and that are owned, leased, or contracted for by the facility, its parent company, affiliate, or subsidiary that are under facility control (see definition).

(3) To the extent not already covered under subsections (b)(1) and (b)(2), above, subsection (g) of this regulation shall apply to any person engaged in this State in the business of selling to an ultimate purchaser, or renting or leasing new or used TRUs or TRU gen sets, including, but not limited to, manufacturers, distributors, and dealers.

(4) Severability. If any subsection, paragraph, subparagraph, sentence, clause, phrase, or portion of this regulations is, for any reason, held invalid, unconstitutional, or unenforceable by any court of competent jurisdiction, such portion shall be deemed as a separate, distinct, and independent provision, and such holding shall not affect the validity of the remaining portions of the regulation.

(c) Exemptions. This regulation does not apply to military tactical support equipment.

(d) Definitions. For purposes of this regulation, the following definitions apply:

(1) "Affiliate or Affiliation" refers to a relationship of direct or indirect control or shared interests between the subject business and another business.

(2) "Alternative Fuel" means natural gas, propane, ethanol, methanol, or advanced technologies that do not rely on diesel fuel, except as a pilot ignition source at an average ratio of less than 1 part diesel fuel to 10 parts total fuel on an energy equivalent basis. Alternative fuels also means any of these fuels used in combination with each other or in combination with other non-diesel fuels. Alternative-fueled engines shall not have the capability of idling or operating solely on diesel fuel at any time.

(3) "Alternative-Fueled Engine" means an engine that is fueled with a fuel meeting the definition of alternative fuel.

(4) "Alternative Diesel Fuel" means any fuel used in diesel engines that is not commonly or commercially known, sold or represented as diesel fuel No. 1-D or No. 2-D, pursuant to the specification for Diesel Fuel Oils D975-81, and does not require engine or fuel system modifications for the engine to operate, although minor modifications (e.g. recalibration of the engine fuel control) may enhance performance. Examples of alternative diesel fuels include, but are not limited to, biodiesel, Fischer Tropsch fuels, and emulsions of water in diesel fuel. Natural gas is not an alternative diesel fuel. An emission control strategy using a fuel additive will be treated as an alternative diesel fuel based strategy unless:

(A) The additive is supplied to the vehicle or engine fuel by an on-board dosing mechanism, or

(B) The additive is directly mixed into the base fuel inside the fuel tank of the vehicle or engine, or

(C) The additive and base fuel are not mixed until vehicle or engine fueling commences, and no more additive plus base fuel combination is mixed than required for a single fueling of a single engine or vehicle.

(5) "ARB" means the California Air Resources Board.

(6) "B100 Biodiesel Fuel" means 100% biodiesel fuel derived from vegetable oil or animal fat and complying with ASTM D 6751-02 and commonly or commercially known, sold, or represented as "neat" biodiesel or B100. B100 biodiesel fuel is an alternative diesel fuel.

(7) "B100 Biodiesel-Fueled" (compression-ignition engine) means a compression-ignition engine that is fueled by B100 biodiesel fuel.

(8) "Business" means an entity organized for profit including, but not limited to, an individual, sole proprietorship, partnership, limited liability partnership, corporation, limited liability company, joint venture, association or cooperative; or solely for purposes of the Prompt Payment Act (Government Code 927 et seq.), a duly authorized nonprofit corporation.

(9) "California-Based TRUs and TRU Gen Sets" means TRUs and TRU gen sets equipped on trucks, trailers, shipping containers, or railcars that a reasonable person would find to be regularly assigned to terminals within California.

(10) "CARB Diesel Fuel" means any diesel fuel that is commonly or commercially known, sold or represented as diesel fuel No. 1-D or No. 2-D, pursuant to the specification for Diesel Fuel Oils D975-81 and meets the specifications defined in 13 CCR 2281, 13 CCR 2282, and 13 CCR 2284.

(11) "Carbon Monoxide (CO)" means a colorless, odorless gas resulting from the incomplete combustion of hydrocarbon fuels.

(12) "Carrier" means any person, party, or entity who undertakes the transport of goods from one point to another.

(13) "Certification" means the obtaining of an Executive Order for a new offroad compression-ignition engine family that complies with the off-road compression-ignition emission standards and requirements specified in the California Code of Regulations, Title 13, Section 2423. A "certified engine" is an engine that belongs to an engine family that has received a certification Executive Order.

(14) "Certification Data" means the ARB Executive Order number and related exhaust emission data for each test cycle mode used to certify the engine family and obtain the certification level shown in the certification Executive Order. Such data includes modal exhaust emissions data for nitrogen oxides, nonmethane hydrocarbons, carbon monoxide, and particulate matter includes, as a minimum, torque, engine speed, weight factor, power, mass emission rate (grams per hour), and certification test fuel.

(15) "Compression Ignition (CI) Engine" means an internal combustion engine with operating characteristics significantly similar to the theoretical diesel combustion cycle. The regulation of power by controlling fuel supply in lieu of a throttle is indicative of a compression ignition engine.

(16) "Consignee" (see receiver).

(17) "Consignor" (see shipper).

(18) "Cryogenic Temperature Control System" means a heating and cooling system that uses a cryogen, such as liquid carbon dioxide or liquid nitrogen that is routed through an evaporator coil that cools air blown over the coil. The cryogenic system uses a vapor motor to drive a fan and alternator, and a propane-fired heater superheats the carbon dioxide for heating and defrosting. Electrically driven fans may be used instead of a vapor motor and heating and defrost needs may be met by using electric heaters and/or vehicle engine coolant.

(19) "Deterioration Factor (DF)" means a factor that is applied to the certification emission test data to represent emissions at the end of the useful life of the engine. Separate DFs apply to each measured pollutant, except that a combined NMHC+NOx DF applies to engines that do not use aftertreatment devices. Decreasing emissions over time would not be allowed to offset increasing emissions of the other pollutant in this combined DF.

(20) "Diesel Fuel" means any fuel that is commonly or commercially known, sold, or represented as diesel fuel, including any mixture of primarily liquid hydrocarbons — organic compounds consisting exclusively of the elements carbon and hydrogen — that is sold or represented as suitable for use in an internal combustion, compression-ignition engine.

(21) "Diesel-Fueled" means fueled by diesel fuel or CARB diesel fuel in whole or in part, except as allowed for a pilot ignition source under the definition for "alternative fuel".

(22) "Diesel Oxidation Catalyst (DOC)" means the use of a catalyst to promote the oxidation processes in diesel exhaust. Usually refers to an emission control device that includes a flow-through substrate where the surfaces that contact the exhaust flow have been catalyzed to reduce emissions of the organic fraction of diesel particulates, gas-phase hydrocarbons, and carbon monoxide.

(23) "Diesel Particulate Filter (DPF)" means an emission control technology that reduces PM emissions by trapping the particles in a flow filter substrate. Periodically the collected particles are either physically removed or oxidized (burned off) in a process called regeneration.

(24) "Diesel Particulate Matter" means the particles found in the exhaust of diesel-fueled CI engines. Diesel PM may agglomerate and adsorb other species to form structures of complex physical and chemical properties.

(25) "Dual-Fuel Engine" means an engine designed to operate on a combination of alternative fuel, such as compressed natural gas (CNG) or liquefied petroleum gas (LPG), and conventional fuel, such as diesel or gasoline. These engines have two separate fuel systems, which either inject both fuels simultaneously into the engine combustion chamber or fumigate the gaseous fuel with the intake air and inject the liquid fuel into the combustion chamber.

(26) "Emergency" means any of the following times:

(A) A failure or loss of normal power service that is not part of an "interruptible service contract" (see definition in subsection (d));

(B) A failure of a facility's internal power distribution system, provided the failure is beyond the reasonable control of the operator;

(C) When an affected facility is placed under an involuntary "rotating outage" (see definition in subsection (d)).

(27) "Emission Control Strategy" means any device, system, or strategy employed with a diesel-fueled CI engine that is intended to reduce emissions. Examples of emission control strategies include, but are not limited to, particulate filters, diesel oxidation catalysts, selective catalytic reduction systems, alternative fuels, fuel additives used in combination with particulate filters, alternative diesel fuels, and combinations of the above.

(28) "Emissions Rate" means the weight of a pollutant emitted per unit of time (e.g., grams per second).

(29) "Executive Officer" means the Executive Officer of the California Air Resources Board or his or her delegate.

(30) "Facility" means any facility where TRU-equipped trucks, trailers, shipping containers or railcars are loaded or unloaded with perishable goods. This includes, but is not limited to, grocery distribution centers, food service distribution centers, cold storage warehouses, and intermodal facilities. Each business entity at a commercial development is a separate facility for the purposes of this regulation, provided the businesses are "independently owned and operated" (see definition in subsection (d)).

(31) "Facility Control (of TRUs or TRU Gen Sets)" means the TRUs or TRU gen sets located at the facility are owned or leased by the facility, its parent company, affiliate, or a subsidiary, or under contract for the purpose of providing carrier service to the facility, and the TRUs' or TRU gen sets' arrival, departure, loading, unloading, shipping and/or receiving of cargo is determined by the facility, parent company, affiliate, or subsidiary (e.g. scheduled receiving, dispatched shipments).

(32) "Fischer-Tropsch Diesel Fuel" See "ultra-low-aromatic synthetic diesel fuel".

(33) "Fuel Additive" means any substance designed to be added to fuel or fuel systems or other engine-related engine systems such that it is present in-cylinder during combustion and has any of the following effects: decreased emissions, improved fuel economy, increased performance of the engine; or assists diesel emission control strategies in decreasing emissions, or improving fuel economy or increasing performance of the engine.

(34) "Generator Set (gen set)" means a CI engine coupled to a generator used as a source of electricity.

(35) "Hybrid Cryogenic Temperature Control System" means a temperature control system that uses a cryogenic temperature control system in conjunction with a conventional TRU.

(36) "Independently Owned and Operated" means a business concern that independently manages and controls the day-to-day operations of its own business through its ownership and management, without undue influence by an outside entity or person that may have an ownership and/or financial interest in the management responsibilities of the applicant business or small business.

(37) "Intermodal Facility" means a facility involved in the movement of goods in one and the same loading unit or vehicle which uses successively several modes of transport without handling of the goods themselves in changing modes. Such a facility is typically involved in loading and unloading refrigerated shipping containers and trailers to and from railcars, trucks, and ocean-going ships.

(38) "Interruptible Service Contract" means any arrangement in which a nonresidential electrical customer agrees to reduce or consider reducing its electrical consumption during periods of peak demand or at the request of the System Operator in exchange for compensation, or assurances not to be blacked out or other similar non-monetary assurances.

(39) "In Use TRU, TRU gen set, or engine" means a TRU, TRU gen set, or engine that is not a "new" TRU, TRU gen set, or engine.

(40) "Low Emission TRU (LETRU or L)" means a TRU or TRU gen set that meets the performance standards described under paragraph (e)(1)(A)1. or (e)(1)(A)2.

(41) "Manufacturer" means a business as defined in Government Code § 14837(c).

(42) "Military tactical support equipment (TSE)" means equipment that meets military specifications, owned by the U.S. Department of Defense and/or the U.S. military services, and used in combat, combat support, combat service support, tactical or relief operations, or training for such operations.

(43) "Model Year (MY)" means diesel-fueled engine manufacturer's annual production period, which includes January 1st of a calendar year, or if the manufacturer has no annual production period, the calendar year.

(44) "New TRU, TRU Gen Set, or Engine" means any TRU, TRU gen set, or engine that has never been subject to a retail sale or lease to an "ultimate purchaser" (see definition in subsection (d)).

(45) "Nitrogen Oxide (NO_x)" means compounds of nitric oxide (NO), nitrogen dioxide (NO₂), and other oxides of nitrogen. Nitrogen oxides are typically created during combustion processes and are major contributors to smog formation and acid deposition.

(46) "Non-California-Based TRUs and TRU Gen Sets" means TRUs and TRU gen sets that are equipped on or used in trucks, trailers, shipping containers, or railcars that a reasonable person would find to be regularly assigned to terminals outside of California and operate in California from time to time for the purpose of transporting perishable goods into or out of the state.

(47) "Non-methane Hydrocarbons (NMHC)" means the sum of all hydrocarbon air pollutants except methane. NMHCs are precursors to ozone formation.

(48) "Operate" means to start, cause to function, program the temperature controller, select an operating program or otherwise control, fuel, monitor to assure proper operation, or keep in operation.

(49) "Operator" means any person, party or entity that operates a TRU or TRU gen set for the purposes of transporting perishable goods, exclud-

ing an employee driver and third party maintenance and repair service, and including but not limited to:

(A) Manufacturer, producer, supplier, carrier, shipper, consignee, consignee, receiver, distribution center, or warehouse of perishable goods;

(B) An individual, trust, firm, joint stock company, business concern, partnership, limited liability company, association, or corporation including but not limited to, a government corporation;

(C) Any city, county, district, commission, the state or any department, agency, or political subdivision thereof, any interstate body, and the federal government or any department or agency thereof to the extent permitted by law.

(50) "Owner" means any person that legally holds the title (or its equivalent) showing ownership of a TRU or TRU gen set, excluding a bank or other financial lending institution, and including but not limited to:

(A) Manufacturer, producer, supplier, carrier, shipper, consignee, consignee, receiver, distribution center, warehouse;

(B) An individual, trust, firm, joint stock company, business concern, partnership, limited liability company, association, or corporation including but not limited to, a government corporation;

(C) Any city, county, district, commission, the state or any department, agency, or political subdivision thereof, any interstate body, and the federal government or any department or agency thereof to the extent permitted by law.

(51) "Owner/Operator" means a requirement applies to the owner and/or operator of a TRU or TRU gen set, as determined by agreement or contract between the parties if the two are separate business entities.

(52) "Parent Company" means a company that has a controlling interest in another company, usually through ownership of more than one-half the voting stock.

(53) "Particulate Matter (PM)" means the particles found in the exhaust of CI engines, which may agglomerate and adsorb other species to form structures of complex physical and chemical properties.

(54) "Rated Brake Horsepower" means the power delivered, according to the statement of the engine manufacturer, at the rated speed.

(55) "Real Emission Reductions" means that an action is taken that results in reductions in the PM emission rate of an in-use engine (e.g. a VDECS is installed that reduced the PM emissions rate by more than 50%).

(56) "Receiver" means the person, party, or entity that receives shipped goods, cargo, or commodities.

(57) "Refrigerated Trailer" means a trailer van, railcar, or shipping container equipped with a TRU or TRU gen set. Pursuant to Health and Safety Code section 39618, refrigerated trailers are mobile sources and shall be regulated by the ARB on a statewide basis.

(58) "Rotating Outage" means a controlled involuntary curtailment of electrical power service to consumers as ordered by the system operator — see definition in subsection (d).

(59) "Shipper" means the person, party, or entity who usually owns or supplies the commodities shipped by a carrier.

(60) "System Operator" means one of the several organizations that control energy in California. System operators include, but are not limited to, the California Independent System Operator, the Los Angeles Department of Water and Power, the Imperial Irrigation District, the Sacramento Municipal Utility District.

(61) "Terminal" means any place where a TRU or TRU gen set equipped truck, trailer, shipping container, railcar or TRU gen set is regularly garaged, maintained, operated, or dispatched from, including a dispatch office, cross-dock facility, maintenance shop, business, or private residence.

(62) "Tier 4 Nonroad/Offroad Emission Standards" means the emission standards and associated procedures promulgated by U.S. Environmental Protection Agency in "Control of Emissions of Air Pollution from

Nonroad Diesel Engines and Fuel; Final Rule" (Vol. 69, No. 124 Fed.Reg. pp. 38957–39273 (June 29, 2004).

(63) "Transport Refrigeration Unit (TRU)" means refrigeration systems powered by integral internal combustion engines designed to control the environment of temperature sensitive products that are transported in trucks and refrigerated trailers. TRUs may be capable of both cooling and heating.

(64) "TRU Generator Set (TRU gen set)" means a generator set that is designed and used to provide electric power to electrically driven refrigeration units of any kind. This includes, but is not limited to gen sets that provide electricity to electrically powered refrigeration systems for semi-trailer vans and shipping containers.

(65) "Ultimate Purchaser" means with respect to a new TRU, TRU gen set, or engine, the first person who in good faith purchases a new TRU, TRU gen set, or engine for purposes other than resale.

(66) "Ultra-Low-Aromatic Synthetic Diesel Fuel" means fuel produced from natural gas, coal, or biomass by the Fischer-Tropsch gas-to-liquid chemical conversion process, or similar process that meets the following properties:

Table 1

Property	ASTM	Value
Sulfur Content (ppmw)	D5453-93	<1
Total Aromatic Content (wt %)	D5186-96	<1.5%
Polynuclear Aromatic Content (wt %)	D5186-96	<0.5%
Natural Cetane Number	D613-84	>74

(67) "Ultra-Low Emission TRU (ULETRU or U)" means a TRU or TRU gen set that meets the performance standards described under subparagraph (e)(1)(A)1. and (e)(1)(A)2. or that uses an "alternative technology" in accordance with subparagraph (e)(1)(A)3.

(68) "Verification Classification Level" means the classification assigned to a Diesel Emission Control Strategy by the Executive Officer as defined in the *Verification Procedure, Warranty and In-Use Compliance Requirements for In-Use Strategies to Control Emission from Diesel Engines (13 CCR Sections 2700 – 2710)*. PM reductions correspond as follows: Level 1: ≥ 25%; Level 2: ≥ 50%; Level 3: ≥ 85% or 0.01 g/hp-hr.

(69) "Verified Diesel Emission Control Strategy" (VDECS) means an emission control strategy designed primarily for the reduction of diesel particulate matter emissions that has been verified per the *Verification Procedure, Warranty and In-Use Compliance Requirements for In-Use Strategies to Control Emissions from Diesel Engines (13 CCR Sections 2700 – 2710)*. Examples of diesel retrofit systems that may be verified include, but are not limited to, diesel particulate filters, diesel oxidation catalysts, fuel additives (e.g. fuel-borne catalysts), alternative fuels (e.g. dual fuel), alternative diesel fuels, and combinations of the above.

(e) Requirements.

(1) In-Use Operation:

(A) In-Use Performance Standards: In accordance with the schedule set forth below in paragraph (e)(1)(B), no owner/operator shall operate a TRU or TRU gen set in California unless it meets the in-use emission category performance standards set forth below.

1. In-Use performance standard categories for TRU and TRU gen set engines with rated brake horsepower less than 25 horsepower (<25 hp) are shown in Table 2, along with the engine certification standards or the level of Verified Diesel Emission Control Strategy (VDECS) (see definition) that is necessary to qualify for each category.

Table 2

<25 HP TRU and TRU Gen Set In-Use PM Performance Standards

In-Use Emission Category	Engine Certification (g/hp-hr)	Level of VDECS Equipped with
Low Emission TRU (LETRU or L)	0.30 ¹	Level 2
Ultra-Low Emission TRU (ULETRU or U)	NA ²	Level 3

a. Compliance can be achieved by:

I. Using a certified engine meeting the applicable nonroad/offroad emissions standards for all regulated pollutants and the in-use PM performance standard. Only engines for which certification data and deterioration factors have been provided to ARB shall be considered when determining compliance. The Executive Officer will consider such submittals, publish, and make available a list of qualifying engines.

II. Equipping the engine with the required Level of VDECS.

2. In-Use performance standard categories for TRU and TRU gen set engines with rated brake horsepower greater than or equal to 25 horsepower (≥25 hp) are shown in Table 3, along with the engine certification standards or the level of VDECS that is necessary to qualify for each category.

Table 3

≥25 HP TRU and TRU Gen Set In-Use PM Performance Standards

In-Use Emission Category	Engine Certification (g/hp-hr)	Level of VDECS Equipped with
Low Emission TRU (LETRU or L)	0.22 ³	Level 2
Ultra-Low Emission TRU (ULETRU or U)	0.02 ⁴	Level 3

a. Compliance can be achieved by:

I. Using a certified engine meeting the applicable nonroad/offroad emissions standards for all regulated pollutants and the in-use PM performance standard. Only engines for which certification data and deterioration factors have been provided to ARB shall be considered when determining compliance. The Executive Officer will consider such submittals, publish, and make available a list of qualifying engines.

II. Equipping the engine with the required Level of VDECS.

3. As an alternative to meeting the ULETRU in-use performance standards in subsections (e)(1)(A)1. and 2., an owner/operator may operate a TRU or TRU gen set in California meeting one of the *Alternative Technology* options listed below. Alternative Technologies qualify to meet the ULETRU in-use performance standard only if the TRU or TRU gen set is operated under the conditions included in the description listed below.

a. Electric standby, provided that the TRU is not operated under diesel engine power while at a facility, except during an emergency.

b. Cryogenic temperature control systems or hybrid cryogenic temperature control systems, provided that the TRU does not operate under diesel engine power while at a facility, except during an emergency.

c. Alternative-fueled engines (see definition in subsection (d)). If the engine is a CI engine, a VDECS is required.

NOTE: If the engine is not a compression ignition diesel fueled engine, this regulation would not apply, but the engine may have to meet other emission standards (e.g. large spark-ignited engine standards if >25 hp).

d. Fuel exclusively with an alternative diesel fuel (see definition in subsection (d)) that has been verified as a VDECS, provided it is used in accordance with the requirements of subsection (e)(2)(A) and the alternative diesel fuel contains no conventional diesel or CARB diesel fuel.

e. Power by fuel cells. If a reformer is used with diesel fuel as the source of hydrocarbons, then emissions must be evaluated and verified through the *Verification Procedure, Warranty and In-Use Compliance Requirements for In-Use Strategies to Control Emissions from Diesel Engines (13 CCR sections 2700 – 2710)*.

f. Equip with any other system approved by the Executive Officer to not emit diesel PM or increase public health risk while at a facility.

(B) In-Use Compliance Dates.

1. No owner/operator shall operate a 2001 and older model year (MY) TRU or TRU gen set engine in California unless it meets the in-use performance criteria set forth in paragraph (e)(1)(A) for

a. LETRU on or before December 31, 2008, and

b. ULETRU on or before December 31, 2015, as shown in Tables 4 and 5.

2. No owner/operator shall operate a 2002 MY TRU or TRU gen set engine in California unless it meets the in-use performance criteria set forth in paragraph (e)(1)(A) for

a. LETRU on or before December 31, 2009, and

b. ULETRU on or before December 31, 2016, as shown in Tables 4 and 5.

3. No owner/operator shall operate a 2003 MY and subsequent MY TRU or TRU gen set engine in California unless it meets the in-use per-

formance criteria set forth in paragraph (e)(1)(A) for ULETRU on or before December 31st of the seventh year past the unit's model year, as shown in Tables 4 and 5.

(C) Replacements Due to Failures.

1. If a VDECS fails within its warranty period, the owner/operator of the TRU or TRU gen set must replace it with the same VDECS or a higher verification classification level, if available.

2. If a VDECS fails outside its warranty period and a higher verification classification level VDECS is available, then the owner/operator of the TRU or TRU gen set shall upgrade to the highest level VDECS re-

quired under paragraphs (e)(1)(A)1. and (e)(1)(A)2. that is determined to be cost-effective by the Executive Officer.

(D) In-Use Recordkeeping and Reporting. In-use recordkeeping and reporting shall be completed by the operator in accordance with the requirements of subsection (f)(1).

(E) ARB Identification Numbering Requirements. Identification numbers will be issued to help expedite the inspection procedure and prevent shipping delays.

1. California-based TRUs and TRU gen sets:

a. On or before January 31, 2009, owner/operators of all California-based TRUs and TRU gen sets subject to this regulation shall apply for an ARB identification number for all California-based TRUs or TRU gen sets operated by the operator by submitting an application that includes the information listed below.

I. Operator name, address, and contact information for the responsible official (e.g. phone number, email address, fax number).

II. Owner name, address, and contact information (if other than operator).

III. TRU or TRU gen set make, model, model year, and serial number.

IV. TRU engine make, model, model year, and serial number.

V. Terminal or terminals that the TRU-equipped truck or trailer is assigned to, with address and contact information.

VI. Other associated identification numbers, which may include (as applicable):

i. Vehicle Identification Number (VIN) of the TRU-equipped truck or trailer.

ii. Vehicle license number of the TRU-equipped truck or trailer.

iii. Railcar recording mark and car number.

iv. Shipping container number (for TRU-equipped shipping containers only).

v. Company equipment number (if any).

VII. Compliance status with paragraph (e)(1)(A) requirements. If compliance not as-yet required, mark N/A.

i. Date when compliance was achieved.

ii. What performance standard was met (e.g. LETRU or ULETRU).

iii. How compliance was achieved (e.g. new compliant TRU, TRU engine replacement, or description of VDECS that was used).

iv. Identify who did the installation work (if applicable).

b. Applications shall be submitted by one of the following methods:

I. Mail or deliver a physical report to ARB at the address listed immediately below:

CALIFORNIA AIR RESOURCES BOARD
STATIONARY SOURCE DIVISION (TRU)
P.O. BOX 2815
SACRAMENTO, CA 95812

II. Electronically submit through ARB's web site. The web address will be identified in an advisory.

c. TRUs and TRU gen sets added to an operator's TRU operations after January 31, 2009 shall be brought into compliance with subsection (e)(1)(E). An application shall be submitted to ARB within 30 days of the unit entering the operator's control:

I. Requesting an ARB I.D. number for a new TRU or TRU gen set that was not previously numbered, or

II. Requesting a change in owner or operator (or other pertinent application information) for used equipment that already has an ARB I.D. number.

d. Failure to apply or submittal of false information is a violation of state law subject to civil penalty.

e. On or before February 1, 2009, the Executive Officer shall begin issuing identification numbers to TRU and TRU gen set operators for each unit based in California for which a complete application has been filed. The number will include a 2-digit prefix for model year (e.g. 2001 model year would have a prefix 01); a 6-digit serial number; a check-digit, and a letter indicating compliance status with in-use performance standards (either "L" or "U"). In the event that an operator applies for an early compliance certificate in accordance with subsection (e)(1)(F), ARB will also issue a certificate which acknowledges early compliance per (e)(1)(F)3.

f. Within 30 days of receipt of the ARB-issued identification number, owner/operators shall permanently affix or paint the identification number on the TRU or TRU gen set chassis housing in clear view according to the following specification:

I. The ARB identification number shall be preceded by the letters "ARB".

II. Letters and numbers shall contrast sharply in color with the color of the background surface on which the letters are placed.

III. The location of the I.D. number shall be as follows:

i. Truck and trailer TRUs — both sides of TRU chassis housing.

ii. Rail car and shipping container TRUs — both sides of the TRU.

iii. TRU gen sets — both sides of gen set housing.

IV. Letters and numbers shall be readily legible during daylight hours, from a distance of 50 feet (15.24 meters) while unit is stationary.

V. Marking shall be kept maintained in a manner that retains the legibility required by the subparagraph immediately above.

2. Non-California-based TRUs and TRU Gen Sets:

a. Operators of non-California-based TRUs and TRU gen sets may voluntarily apply for ARB identification numbers for TRUs that are based outside of California but operate within California during the normal course of business. Non-California-based operators may voluntarily submit the same application information listed above in subparagraph (e)(1)(E)1.a., above, using the same methods of submittal listed in subparagraph (e)(1)(E)1.b., above. Upon application approval, ARB would issue identification numbers to the operator in accordance with subparagraph (e)(1)(E)1.e., above. The non-California-based operator would then permanently affix or paint the identification number on the TRU or TRU gen set chassis in clear view, in accordance with (e)(1)(E)1.f., above.

(F) Early Compliance with LETRU In-Use Performance Standards.

1. For 2002 and older MY TRU and TRU gen set engines, operators or owners that meet the LETRU in-use performance standard earlier than required in paragraph (e)(1)(B) may apply to the Executive Officer for a delay in the ULETRU in-use performance standard. Except as provided below, early compliance would be achieved through any of the options available in paragraph (e)(1)(A).

a. This delay would not be available to the operator or owner if the engine manufacturer of the replacement engine is using the early compliance with engine emissions standards in U.S. EPA's Averaging, Banking, and Trading Program (or California's equivalent program).

b. Early compliance is conditioned upon real emission reductions (refer to definition in sub section (d)) occurring earlier than the applicable compliance deadline.

c. This delay may not be available to the operator or owner if public funds were used for early compliance. The applicant shall disclose whether public funds were used for any portion of early compliance and what program the funding came from.

2. Early LETRU compliance with real emission reductions would allow specific units to delay compliance with ULETRU in-use performance standards by up to three years, according to the rounding conventions and examples listed below.

a. Each year of early compliance with the LETRU in-use performance standards would be rewarded with 1 year delay in the ULETRU in-use performance standard.

I. One full year early compliance qualifies for one full year delay in meeting ULETRU compliance.

II. Two full years early compliance qualifies for two full years delay in meeting ULETRU compliance.

III. Three full years early compliance qualifies for three full years delay in meeting ULETRU compliance.

b. A partial year of early LETRU compliance would be rounded to the nearest full year for the delayed ULETRU requirements.

I. Early LETRU compliance of 183 days or more in a calendar year would count toward a one year ULETRU delay.

II. Early LETRU compliance of 182 days or less in a calendar year would not count toward a ULETRU delay.

3. Upon receipt of an application to delay ULETRU compliance, the Executive Officer shall determine if the application demonstrates early compliance with LETRU in-use performance standards in accordance

with subsection (e)(1)(F)1., and if the application is approved, shall delay the in-use ULETRU compliance date for specific TRUs and TRU gen sets operating in California in accordance with subparagraph (e)(1)(F)2.

4. Upon approval of the application, ARB shall issue a certificate and ARB identification number in accordance with subsection (e)(1)(E)1.e. which acknowledges early compliance with LETRU requirements and discloses the number of years delay granted, and resulting ULETRU compliance date.

5. The operator shall maintain a legible copy of the certificate in a water-tight sleeve mounted inside the TRU or TRU gen set chassis housing. The operator shall paint the identification number in clear view in accordance with subsection (e)(1)(E)1.f. on the specific TRU or TRU gen set that was granted the compliance extension.

(2) Fuel Requirements.

(A) Operators Choosing to Use Alternative Diesel Fuels. Operators choosing to use alternative diesel fuels in compression ignition TRU and TRU gen set engines to meet the requirements of subsection (e)(1) shall:

1. Maintain records in accordance with subsection (f)(1)(B) of this regulation.

2. Use only fuel that is a VDECS alternative diesel fuel that contains no conventional diesel or CARB diesel fuel in TRUs or TRU gen sets operated in California.

3. Permanently affix a label in clear view near the fill spout that identifies the proper fuel that is required to be in compliance.

4. In the event that the operator decides to revert to using conventional diesel or CARB diesel fuel, the operator shall comply with the requirements of subsection (e)(1) within 10 days of discontinuation of alternative diesel fuel use. Within 10 days of discontinuation, the operator shall notify the Executive Officer in writing of this change in fuel use and shall include an update to any ARB I.D. number application or annual report submitted to comply with subsections (e)(1)(E), (e)(1)(F), or (f)(1).

(B) Operators that Retrofit TRUs or TRU Gen Sets with a VDECS. Operators that retrofit TRUs or TRU gen sets with a VDECS that requires certain fuel properties to be met in order to achieve the required PM reduction or PM emissions shall only fuel the subject TRU or TRU gen set with fuel that meets these specifications when operating in the state of California. In addition, operators that choose a VDECS that requires certain fuel properties to be met in order to prevent damage to the VDECS or an increase in toxic air contaminants, other harmful compounds, or in the nature of the emitted PM shall only fuel the subject TRU or TRU gen set with fuel that meets these specifications.

(f) Monitoring, Recordkeeping, and Reporting Requirements.

(1) TRU and TRU Gen Set Operator Recordkeeping and Reporting.

(A) Operator Reporting.

1. All operators subject to this regulation shall submit an Operator Report to ARB by January 31, 2009 that shall include the following information:

a. Operator name, address, and contact information for the responsible official (phone number, email address, fax number).

b. List of all terminals owned or leased by the operator located within California, with address, phone number, and terminal contact name.

c. TRU and TRU gen set inventory information for each TRU and TRU gen set based in California that is owned or leased by the operator:

I. TRU or gen set make, model, model year, and serial number.

II. TRU owner, and if other than operator, owner name, address, and contact.

III. Engine make, model, model year, and serial number.

IV. Terminal(s) that the TRU is assigned to.

V. ARB TRU or TRU gen set identification number, if already issued.

If the ARB identification number has not been issued or there has been a change in the other identification numbers listed below since the prior annual report, then provide the following identification numbers (as applicable):

i. Vehicle Identification Number.

ii. Vehicle license number.

iii. Railcar recording mark and car number.

iv. Shipping container number (for TRU-equipped shipping containers only).

v. Company equipment number.

VI. Compliance status with paragraph (e)(1)(A) requirements.

2. The Operator Report shall be updated within 30 days when changes to any of the above operator information occur.

a. Operator Reports shall be submitted by one of the following methods:

I. Mail or deliver a physical report to ARB at the address listed immediately below:

CALIFORNIA AIR RESOURCES BOARD
STATIONARY SOURCE DIVISION (TRU)
P.O. BOX 2815
SACRAMENTO, CA 95812

II. Electronically submit through ARB's web site. The web address will be identified in an advisory.

3. Failure to report or submittal of false information is a violation of state law subject to civil penalty.

(B) Alternative Diesel Fuel Use and Fuel Additive Recordkeeping and Reporting.

1. Operators that choose a compliance pathway that involves the use of alternative diesel fuel in accordance with subparagraph (e)(1)(A)3.d. (e.g. B100 biodiesel fuel or ultra-low-aromatic synthetic diesel fuel) and/or a VDECS that includes the use of a fuel additive (e.g. fuel-borne catalyst) shall maintain records that document exclusive use of the chosen fuel or additive for each affected CI engine and hours of operation. Appropriate records would be copies of receipts or invoices of appropriate fuel and/or fuel additive and daily operating hour logs.

2. Records shall be kept available for a minimum of three (3) years and shall be compiled and made available to the ARB upon request.

3. Failure to keep records or submittal of false information is a violation of state law subject to civil penalty.

(2) Facility Monitoring, Recordkeeping, and Reporting.

(A) Facility Reporting. All facilities subject to this subsection shall submit a Facility Report to ARB by January 31, 2006, containing the following information, as of December 31, 2005:

1. Contact information for the facility's responsible official.

2. Provide all North American Industrial Classification System codes (NAICS) applicable to the facility.

3. The number of loading dock doors serving refrigerated storage space.

4. The number of square feet of refrigerated storage space.

5. The number of TRUs or TRU gen sets under facility control by model year and horsepower category.

6. The number of refrigerated trucks, trailers, shipping containers, or railcars leased or rented.

7. The total annual TRU engine operating hours for all TRUs or TRU gen sets under facility control during 2005 (e.g. total TRU engine operating time for both on-road and off-road operations).

8. The average weekly number of inbound refrigerated trucks, trailers, shipping containers, and railcars delivering goods to the facility during 2005, calculated by dividing the annual total inbound refrigerated loads by 52.

9. The average weekly number of outbound refrigerated trucks, trailers, shipping containers and railcars delivering goods from the facility during 2005, calculated by dividing the annual total outbound refrigerated loads by 52.

10. The average total number of hours per week that outbound TRU or TRU gen set engines operate while at the facility during 2005. Average TRU or TRU gen set engine operating time at facility for outbound refrigerated loads may be used if the result is representative of the outbound TRU or TRU gen set operations at facilities, as determined by the Executive Officer. Average values would be determined for outbound loads based on recordkeeping, conducted in accordance with subparagraph (f)(2)(B)2., and applied to the total annual number of refrigerated outbound loads, and then weekly averages calculated as follows: Average

TRU or TRU gen set engine operating time per outbound refrigerated load multiplied by the total annual number of outbound loads, divided by 52 weeks equals the average total number of hours per week that outbound TRU or TRU gen set engines operate while at the facility.

11. The average total number of hours per week that inbound TRU or TRU gen set engines operate while at the facility during 2005. Average TRU or TRU gen set engine operating time at facility for inbound refrigerated loads may be used if the result is representative of the inbound TRU or TRU gen set operations at facilities, as determined by the Executive Officer. Average values would be determined for inbound loads based on recordkeeping, conducted in accordance with subparagraph (f)(2)(B)2., and applied to the total annual number of refrigerated inbound loads, and then weekly averages calculated as follows: Average TRU or TRU gen set engine operating time per inbound refrigerated load multiplied by the total annual number of inbound loads, divided by 52 weeks equals the average total number of hours per week that inbound TRU or TRU gen set engines operate while at the facility.

12. The number of refrigerated trailers (as defined) that are used at the facility for cold storage, the total annual number of hours of TRU engine operation associated with these refrigerated trailers, and the total annual number of hours of operation using electric standby associated with these refrigerated trailers.

(B) Recordkeeping.

1. Recordkeeping that substantiates the information reported in the Facility Report shall be maintained and shall be compiled and made available to State inspectors upon request for a minimum of three (3) years.

2. The Executive Officer may approve alternative recordkeeping and calculation procedures for determining the average weekly hours of TRU engine operation at a facility for inbound and outbound refrigerated loads, provided the Executive Officer finds that the alternative procedures meet the intent of subparagraph (f)(2).

(C) Facility Report Submittals. Facility Reports shall be submitted by one of the following methods:

1. Mail or deliver a physical report to ARB at the address listed immediately below:

CALIFORNIA AIR RESOURCES BOARD
STATIONARY SOURCE DIVISION (TRU)
P.O. BOX 2815
SACRAMENTO, CA 95812

2. Electronically submit through ARB's web site. The web address will be identified in an advisory.

(D) Failure to report or submittal of false information. Failure to report or submittal of false information is a violation of state law subject to civil penalty.

(g) Prohibitions.

(1) No person who is engaged in this State in the business of selling to an ultimate purchaser, or renting or leasing new or used TRUs or TRU gen sets, including, but not limited to, manufacturers, distributors, and dealers, shall intentionally or negligently import, deliver, purchase, receive, or otherwise acquire a new or used TRU or TRU gen set engine that does not meet the performance requirements or alternatives set forth in section (e)(1) above.

(2) No person who is engaged in this State in the business of selling to an ultimate purchaser new or used TRU or TRU gen set engines, including, but not limited to, manufacturers, distributors, and dealers, shall sell, or offer to sell, to an ultimate purchaser who is a resident of this State or a person that could reasonably be expected to do business in this State a new or used TRU or TRU gen set engine that does not meet the performance requirements or alternatives set forth in section (e)(1) above.

(3) No person who is engaged in this State in the business of renting or leasing new or used TRU or TRU gen set engines, including, but not limited to, manufacturers, distributors, and dealers, shall lease, offer to lease, rent, or offer to rent, in this state any new or used TRU or TRU gen set engine that does not meet the performance requirements or alternatives set forth in section (e)(1) above.

(4) Operators of affected facilities and operators of affected TRUs and TRU gen sets are prohibited from taking action to divert affected TRUs

to alternative staging areas in order to circumvent the requirements of this section.

(h) Penalties.

(1) All persons, as defined in section 19 of the Health and Safety Code, found to be in violation of title 13, CCR, section 2477 may be cited and subject to the penalty provisions set forth in Health and Safety Code sections 39674, 39675, 42400 et seq., 42402 et seq., and 42410.

¹ The Engine Certification value for the Low Emission TRU category corresponds to the "Interim" Tier 4 Nonroad/Offroad Emission Standards that are to go into effect in 2008.

² Not Applicable — ARB and U.S. EPA will perform a technical review in 2007 to evaluate DOC or filter-based standard for <25 hp category new engines in 2013. If a more stringent "long term" level for new tier 4 (as identified in the Tier 4 Nonroad/Offroad Emission Standards) engines is adopted by U.S. EPA for this horsepower category, the Board will consider adopting an engine certification in-use performance standard for ULETRU for <25 hp TRUs and TRU gen sets.

³ The Engine Certification value for Low Emission TRU category corresponds to the "Interim" Tier 4 Nonroad/Offroad Emission Standards that are to go into effect in 2008.

⁴ The Engine Certification value for the Ultra-Low Emission TRU category corresponds to the "Long Term" Tier 4 Nonroad/Offroad Emission Standards that will go into effect in 2012 or 2013.

⁵ Compliance date is December 31st of the compliance year shown. "MY" means model year. Black shaded areas are years with no requirements since in-use compliance year precedes model year. Dark shaded areas without letter codes have no requirements, pending in-use compliance date. "L" means must meet LETRU in-use performance standards. "U" means must meet ULETRU in-use performance standards.

⁶ TRUs and TRU gen sets with MY 2003 engines and subsequent MY engines shall be required to comply with ULETRU requirements by the end of the seventh year after the model year. The exception to this is ≥25 hp 2013 and subsequent model years, since these model years would meet ULETRU in-use performance standards as new engines.

⁷ Compliance date is December 31st of the compliance year shown. "MY" means model year. Black shaded areas are years with no requirements since in-use compliance year precedes model year. Dark shaded areas without letter codes have no requirements, pending in-use compliance date. "L" means must meet LETRU in-use performance standards. "U" means must meet ULETRU in-use performance standards.

⁸ TRUs and TRU gen sets with MY 2003 engines and subsequent MY engines shall be required to comply with ULETRU requirements by the end of the seventh year after the model year. The exception to this is ≥25 hp 2013 and subsequent model years, since these model years would meet ULETRU in-use performance standards as new engines.

NOTE: Authority cited: Sections 39600, 39601, 39618, 39658, 39659, 39666, 39667, 39674, 39675, 42400 et seq., 42402 et seq., 42410, 43013 and 43018, Health and Safety Code. Reference: Sections 39618, 39650, 39658, 39659, 39666, 39667, 39674, 39675, 42400 et seq., 42402 et seq., 42410, 40717.9, 43013 and 43018, Health and Safety Code.

HISTORY

1. New article 8 (section 2477) and section filed 11-10-2004; operative 12-10-2004 (Register 2004, No. 46).

§ 2479. Regulation for Mobile Cargo Handling Equipment at Ports and Intermodal Rail Yards.

(a) Purpose

The purpose of this regulation is to reduce diesel particulate matter (PM) and criteria pollutant emissions from compression ignition (CI) mobile cargo handling equipment that operate at ports and intermodal rail yards in the state of California.

(b) Applicability

Except as provided in subsection (c), the regulation would apply to any person who conducts business in California who sells, offers for sale, leases, rents, purchases, owns or operates any CI mobile cargo handling equipment that operates at any California port or intermodal rail yard.

(c) Exemptions

(1) The requirements of this section do not apply to mobile cargo handling equipment that do not operate at a port or intermodal rail yard;

(2) The requirements of this section do not apply to portable CI engines;

(3) The requirements of subsections (e), (f), (g), (h), and (i) do not apply to mobile cargo handling equipment that are not used to handle cargo at any time but are used for transporting personnel or fuel delivery. Examples include, but are not limited to, fuel delivery trucks operating sole-

ly at the terminal to deliver fuel to terminal equipment and vans and buses used to transport personnel; and

(4) The requirements of this section do not apply to military tactical support cargo handling equipment.

(d) Definitions

For purposes of this section, the definitions of Health and Safety Code section 39010 through 39060 shall apply except to extent that such definitions may be modified by the following definitions that apply specifically to this regulation:

(1) "Alternative Diesel Fuel" means any fuel used in a CI engine that is not commonly or commercially known, sold, or represented by the supplier as diesel fuel No. 1-D or No. 2-D, pursuant to the specifications in ASTM D975-81, "Standard Specification for Diesel Fuel Oils," as modified in May 1982, which is incorporated herein by reference, or an alternative fuel, and does not require engine or fuel system modifications for the engine to operate, although minor modifications (e.g., recalibration of the engine fuel control) may enhance performance. Examples of alternative diesel fuels include, but are not limited to, biodiesel that does not meet the definition of CARB diesel fuel; Fischer-Tropsch fuels; emulsions of water in diesel fuel; and fuels with a fuel additive, unless:

(A) the additive is supplied to the engine fuel by an on-board dosing mechanism, or

(B) the additive is directly mixed into the base fuel inside the fuel tank of the engine, or

(C) the additive and base fuel are not mixed until engine fueling commences, and no more additive plus base fuel combination is mixed than required for a single fueling of a single engine.

(2) "Alternative Fuel" means natural gas, propane, ethanol, methanol, gasoline (when used in hybrid electric mobile cargo handling equipment only), hydrogen, electricity, fuel cells, or advanced technologies that do not rely on diesel fuel. "Alternative fuel" also means any of these fuels used in combination with each other or in combination with other non-diesel fuel.

(3) "Basic Container Handling Equipment" means mobile cargo handling equipment, other than yard trucks, bulk cargo handling equipment, and RTG cranes, used to handle cargo containers. Basic Container Handling Equipment includes but is not limited to top handlers, side handlers, reach stackers, straddle carriers, and forklifts.

(4) "Bulk Cargo Handling Equipment" means mobile cargo handling equipment, other than yard trucks, basic container handling equipment, and RTG cranes, generally used to move non-containerized cargo, including but not limited to dozers, excavators, loaders, tractors, mobile cranes (excluding rubber-tired gantry cranes), aerial lifts, and sweepers.

(5) "California Air Resources Board (CARB) Diesel Fuel" means any diesel fuel that meets the specifications of vehicular diesel fuel, as defined in title 13 CCR, sections 2281, 2282, and 2284.

(6) "Carbon Monoxide (CO)" is a colorless, odorless gas resulting from the incomplete combustion of hydrocarbon fuels.

(7) "Cargo Handling Equipment" means any off-road, self-propelled vehicle or equipment used at a port or intermodal rail yard to lift or move container, bulk, or liquid cargo carried by ship, train, or another vehicle, or used to perform maintenance and repair activities that are routinely scheduled or that are due to predictable process upsets. Equipment includes, but is not limited to, mobile cranes, rubber-tired gantry cranes, yard trucks, top handlers, side handlers, reach stackers, forklifts, loaders, sweepers, aerial lifts, excavators, and dozers.

(8) "Certified Off-road Diesel Engine" means an engine certified to California off-road engine emission standards under title 13 CCR, section 2423.

(9) "Certified On-road Diesel Engine" means an engine certified to California on-road diesel engine emission standards under title 13 CCR, section 1956.8.

(10) "Compression Ignition (CI) Engine" means an internal combustion engine with operating characteristics significantly similar to the theoretical diesel combustion cycle. The regulation of power by control-

ling fuel supply in lieu of a throttle is indicative of a compression ignition engine.

(11) "Contiguous Properties" means two or more parcels of land with a common boundary or separated solely by a public roadway or other public right-of-way.

(12) "Diesel Fuel" means any fuel that is commonly or commercially known, sold, or represented by the supplier as diesel fuel, including any mixture of primarily liquid hydrocarbons (HC) — organic compounds consisting exclusively of the elements carbon and hydrogen — that is sold or represented by the supplier as suitable for use in an internal combustion, compression-ignition engine.

(13) "Diesel-Fueled" means a CI engine fueled by diesel fuel, CARB diesel fuel, or jet fuel, in whole or part.

(14) "Diesel Oxidation Catalyst (DOC)" means a catalyst promoting oxidation processes in diesel exhaust, and usually designed to reduce emissions of the organic fraction of diesel particulates, gas-phase HC, and CO.

(15) "Diesel Particulate Filter (DPF)" means an emission control technology that reduces PM emissions by trapping the particles in a flow filter substrate and periodically removes the collected particles by either physical action or by oxidizing (burning off) the particles in a process called regeneration.

(16) "Diesel Particulate Matter (Diesel PM)" means the particles found in the exhaust of diesel-fueled CI engines. Diesel PM may agglomerate and adsorb other species to form structures of complex physical and chemical properties.

(17) "Dozer" means an off-road tractor, either tracked or wheeled, equipped with a blade.

(18) "Emission Control Strategy" means any device, system, or strategy employed with a diesel engine that is intended to reduce emissions, including, but not limited to, diesel oxidation catalysts, selective catalytic reduction systems, fuel additives, diesel particulate filters, alternative diesel fuels, water emulsified fuels, and any combination of the above.

(19) "Excavator" means an off-road vehicle consisting of a backhoe and cab mounted on a pivot atop an undercarriage with tracks or wheels.

(20) "Executive Officer" means the Executive Officer of the California Air Resources Board or his/her designee.

(21) "Fleet" means the total number of mobile cargo handling equipment vehicles owned, rented, or leased by an owner or operator at a specific terminal or intermodal yard location.

(22) "Forklift" means an off-road industrial truck used to hoist and transport materials by means of steel fork(s) under the load.

(23) "Fuel Additive" means any substance designed to be added to fuel or fuel systems or other engine-related engine systems such that it is present in-cylinder during combustion and has any of the following effects: decreased emissions, improved fuel economy, increased performance of the engine; or assists diesel emission control strategies in decreasing emissions, or improving fuel economy or increasing performance of the engine.

(24) "Heavy-duty Pilot Ignition Engine" means an engine designed to operate using an alternative fuel, except that diesel fuel is used for pilot ignition at an average ratio of no more than one part diesel fuel to ten parts total fuel on any energy equivalent basis. An engine that can operate or idle solely on diesel fuel at any time does not meet this definition.

(25) "Hydrocarbon (HC)" means the sum of all hydrocarbon air pollutants.

(26) "In-Use" means a CI engine that is not a "new" CI engine.

(27) "Intermodal Rail Yard" means any transportation facility primarily dedicated to the business of rail and/or intermodal rail operations where cargo is transferred to or from a train and any other form of conveyance, such as train to ship, ship to train, train to truck, or truck to train.

(28) "Lease" means a contract by which one conveys cargo handling equipment for a specified term and for a specified rent.

(29) "Level" means one of three categories of Air Resources Board-verified diesel emission control strategies as set forth in title 13, CCR,

section 2701 et seq: Level 1 means the strategy reduces engine diesel particulate matter emissions by between 25 and 49 percent, Level 2 means the strategy reduces engine diesel particulate matter emissions by between 50 and 84 percent, and Level 3 means the strategy reduces engine diesel particulate matter emissions by 85 percent or greater, or reduces engine emissions to less than or equal to 0.01 grams diesel PM per brake horsepower-hour.

(30) "Loader" means any type of off-road tractor with either tracks or rubber tires that uses a bucket on the end of movable arms to lift and move material; can be also referred to as a front-end loader, front loader, skid steer loader, backhoe, rubber-tired loader, or wheeled loader.

(31) "Military Tactical Support Cargo Handling Equipment" means cargo handling equipment that meets military specifications, owned by the U.S. Department of Defense and/or the U.S. military services, and used in combat, combat support, combat service support, tactical or relief operations, or training for such operations.

(32) "Minimum Use Requirement" means an agreement, as part of state or local incentive funding programs or written agreement between mobile cargo handling equipment owners or operators and the Ports of Long Beach, Los Angeles, or Oakland, to use an emission control device on mobile cargo handling equipment for a specified minimum number of years and/or hours.

(33) "Mobile Crane" means the propulsion engine of a crane other than a rubber-tired gantry crane.

(34) "Model Year" means the CI engine manufacturer's annual production period, which includes January 1st of a calendar year, or if the manufacturer has no annual production period, the calendar year.

(35) "Newly Purchased, Leased, or Rented Cargo Handling Equipment" means mobile cargo handling equipment, or a diesel-fueled CI engine installed in mobile cargo handling equipment, that is newly purchased, rented, or leased by an owner or operator on or after January 1, 2007, and is operated at a port or intermodal rail yard in the state of California after January 1, 2007.

(36) "Nitrogen Oxides (NOx)" means compounds of nitric oxide (NO), nitrogen dioxide (NO₂), and other oxides of nitrogen, which are typically created during combustion processes and are major contributors to smog formation and acid deposition.

(37) "Non-Methane Hydrocarbons (NMHC)" means the sum of all HC air pollutants except methane.

(38) "Non-Yard Truck Mobile Cargo Handling Equipment" means all mobile cargo handling equipment other than yard trucks.

(39) "Ocean-going Vessel" means a commercial, government, or military vessel meeting any one of the following criteria:

(A) a vessel with a "registry" (foreign trade) endorsement on its United States Coast Guard certificate of documentation, or a vessel that is registered under the flag of a country other than the United States;

(B) a vessel greater than or equal to 400 feet in length overall (LOA) as defined in 50 CFR § 679.2, as adopted June 19, 1996;

(C) a vessel greater than or equal to 10,000 gross tons (GT ITC) per the convention measurement (international system) as defined in 46 CFR 69.51-.61, as adopted September 12, 1989; or

(D) a vessel propelled by a marine compression ignition engine with a per-cylinder displacement of greater than or equal to 30 liters.

(40) "Off-Road Engine" means an engine used in an off-road vehicle, or piece of equipment, including a certified on-road diesel engine.

(41) "Off-Road Vehicle or Equipment" means any non-stationary device, including registered motor vehicles, powered by an internal combustion engine or motor, used primarily off the highways to propel, move, or transport persons or property.

(42) "Owner or Operator" means any person subject to the requirements of this section, including but not limited to:

(A) an individual, trust, firm, joint stock company, business concern, partnership, limited liability company, association, or corporation including but not limited to, a government corporation; and

(B) any city, county, district, commission, the state or any department, agency, or political subdivision thereof, any interstate body, and the fed-

eral government or any department or agency thereof to the extent permitted by law.

(43) "Particulate Matter (PM)" means the particles found in the exhaust of CI engines, which may agglomerate and adsorb other species to form structures of complex physical and chemical properties.

(44) "Port" means a place, which typically consists of different terminals, where cargo is loaded onto and unloaded from ocean-going vessels primarily. A port includes military terminals that operate cargo handling equipment when located as part of, or on contiguous properties with, non-military terminals.

(45) "Portable CI Engine" means a compression ignition (CI) engine designed and capable of being carried or moved from one location to another. Indicators of portability include, but are not limited to, wheels, skids, carrying handles, dolly, trailer, or platform. Portable engines are not self-propelled.

(46) "Purchased" means the date shown on the front of the cashed check, the date of the financial transaction, or the date on the engine purchasing agreement, whichever is earliest.

(47) "Railcar Mover" means an off-road vehicle fitted with rail couplers and capable of traveling on both roads and rail tracks.

(48) "Reach Stacker" means an off-road truck-like cargo container handler that uses an overhead telescopic boom that can reach across two or more stacks of cargo containers and lift the containers from the top.

(49) "Registered Motor Vehicle" means a yard truck or other cargo handling vehicle that is registered as a motor vehicle under Vehicle Code section 4000, et seq.

(50) "Rent" means payment for the use of mobile cargo handling equipment for a specified term.

(51) "Retirement" or "Retire" means an engine or vehicle that will be taken out of service by an owner or operator and will not be operated at a port or intermodal rail yard in the State of California. The engine may be sold outside of California or scrapped.

(52) "Rubber-tired Gantry Crane or RTG Crane" means an off-road overhead cargo container crane with the lifting mechanism mounted on a cross-beam supported on vertical legs which run on rubber tires.

(53) "Side Handler or Side Pick" means an off-road truck-like cargo container handler that uses an overhead telescopic boom to lift empty or loaded cargo containers by grabbing either two top corners on the longest side of a container, both arms of one side of a container, or both top and bottom sides of a container.

(54) "Sweeper" means an off-road vehicle with attached brushes underneath that sweep the ground and pick up dirt and debris.

(55) "Terminal" means a facility, including one owned or operated by the Department of Defense or the U.S. military services, that operates cargo handling equipment at a port or intermodal rail yard.

(56) "Tier 4 Off-road Emission Standards" means the emission standards promulgated by the United States Environmental Protection Agency in "Control of Emissions of Air Pollution from Nonroad Diesel Engines and Fuel; Final Rule" (Vol. 69, No. 124 Fed. Reg. pp. 38957-39273, June 29, 2004) which harmonize with the final amended emission standards for newly manufactured off-road engines approved by the Air Resources Board on December 12, 2004.

(57) "Top Handler or Top Pick" means an off-road truck-like cargo container handler that uses an overhead telescopic boom to lift empty or loaded cargo containers by grabbing the top of the containers.

(58) "Verification Procedure, Warranty and In-Use Compliance Requirements for In-Use Strategies to Control Emissions from Diesel Engines (Verification Procedure)" means the Air Resources Board (ARB) regulatory procedure codified in title 13, CCR, sections 2700-2710, which is incorporated herein by reference, that engine manufacturers, sellers, owners, or operators may use to verify the reductions of diesel PM and/or NOx from in-use diesel engines using a particular emission control strategy.

(59) "Verified Diesel Emission Control Strategy (VDECS)" means an emission control strategy, designed primarily for the reduction of diesel PM emissions, which has been verified pursuant to the "Verification Pro-

cedure for In-Use Strategies to Control Emissions from Diesel Engines” in title 13, California Code of Regulations, commencing with section 2700.

(60) “Yard truck” means an off-road mobile utility vehicle used to carry cargo containers with or without chassis; also known as utility tractor rig (UTR), yard tractor, yard goat, yard hostler, yard hustler, or prime mover.

(e) Requirements

(1) Newly Purchased, Leased, or Rented Equipment Performance Standards:

(A) Yard Trucks:

1. Except as provided in subsection (c), on or after January 1, 2007, no owner or operator shall operate any newly purchased, leased, or rented yard trucks unless they are equipped with the following types of engines:

a. Yard trucks that are registered as motor vehicles shall be equipped with engines that meet the on-road emission standards as specified in title 13, California Code of Regulations, section 1956.8, for the model year in which the yard trucks and engines were newly purchased, leased, or rented.

b. Yard trucks that are *not* registered as motor vehicles shall be equipped with engines:

i. that are certified to the on-road emission standards set forth in title 13, CCR, section 1956.8; for the model year in which the yard trucks and engines were newly purchased, leased, or rented; or

ii. that have been certified to meet the final Tier 4 off-road emission standards for the rated horsepower.

(B) Non-Yard Truck Cargo Handling Equipment:

1. Except as provided in subsection (c), on or after January 1, 2007, no owner or operator shall operate any newly purchased, leased, or rented non-yard truck vehicles or equipment unless they meet the following:

a. Non-yard truck mobile cargo handling equipment that are registered as motor vehicles shall be equipped with engines that meet the on-road emission standards as specified in title 13, California Code of Regulations, section 1956.8, for the model year in which the non-yard truck mobile cargo handling equipment and engines were newly purchased, leased, or rented.

b. Non-yard truck mobile cargo handling equipment that are *not* registered as motor vehicles shall be equipped with engines:

i. that have been certified to meet the on-road emission standards as specified in title 13, California Code of Regulations, section 1956.8 for the model year in which the non-yard truck mobile cargo handling equipment and engines were newly purchased, leased, or rented; or

ii. that have been certified to meet the Tier 4 off-road emission standards for the model year and rated horsepower of the newly purchased, leased, or rented non-yard truck mobile cargo handling equipment engines; or

c. if (b) above is not available for the specific application and equipment type, the non-yard truck mobile cargo handling equipment shall be equipped with engines that have been certified to meet the highest avail-

able level off-road diesel engine emission standards as specified in title 13, California Code of Regulations, section 2423 for the rated horsepower and model year in which the equipment were newly purchased, leased, or rented, provided the owner or operator must install the highest level VDECS available within one year after the purchase, lease, or rental of the equipment, or within 6 months of when a VDECS becomes available, if that occurs after one year after the purchase, lease, or rental.

(2) In-Use Performance Standards for Yard Trucks

(A) In accordance with the schedule set forth below in paragraph (e)(2)(B), no owner or operator shall operate an in-use yard truck at a port or intermodal rail yard unless the engine meets the performance standards set forth below:

1. is certified to 2007 or later on-road emission standards for the model year of the year purchased as specified in title 13, California Code of Regulations, section 1956.8; or

2. is certified to final Tier 4 off-road emission standards for the rated horsepower; or

3. is equipped with a VDECS that results in emissions less than or equal to the diesel PM and NOx emission standards for a certified final Tier 4 off-road diesel engine of the same horsepower rating.

(B) Compliance Schedules for In-Use Yard Trucks

1. All owners or operators of three or fewer yard trucks shall comply with subsection (e)(2) according to the schedule in Table 1:

Table 1: Compliance Schedule for In-Use Yard Truck Fleets of Three or Less

2006	Greater of 3 or 25% 50% 100%	Dec. 31, 2015 Dec. 31, 2016 Dec. 31, 2017

a. for each compliance deadline, the percentage of yard trucks (25 percent, 50 percent, or 100 percent) that must meet the requirements of subsection (e)(2) is determined based on the total population of yard trucks for a specific model year or model year group (i.e., pre-2000 or pre-2003, depending upon whether the equipment is characterized as on- or off-road) that exist in the owner's or operator's yard truck fleet as of January 1 of the first compliance deadline year for that model year or model year group; and

b. if the number of yard trucks is not a whole number, conventional rounding practices apply (i.e., if less 0.5, round down; if 0.5 or greater, round up).

(3) In-Use Performance Standards for Non-Yard Truck Mobile Cargo Handling Equipment

(A) In accordance with the schedule set forth in subsection (e)(3)(C), no owner or operator shall operate non-yard truck mobile cargo handling equipment unless they meet all of the following:

1. Use one of the Compliance Options for each vehicle or equipment in the active fleet as specified in paragraph (e)(3)(B) per the compliance schedule listed in Table 3 in subsection (e)(3)(C); and

2. Adherence to any special circumstances that may apply when a diesel emission control strategy is used as a Compliance Option as specified in subsection (g); and

3. Maintenance of all records as specified in subsection (i); and

4. Continuous Compliance. An owner or operator is required to keep all mobile cargo handling equipment operating in California in compliance with the requirements of this regulation at all times.

(B) Compliance Option. Each owner or operator shall use one of the following Compliance Options on each engine or vehicle in his fleet as required by the implementation schedule listed in Table 3 in subsection (e)(3)(C):

1. Basic Container Handling Equipment:

a. An engine or power system, including a diesel, alternative fuel, or heavy-duty pilot ignition engine, certified to either the 2007 or later model year on-road emission standards for the year manufactured as specified in title 13, CCR, section 1956.8, or the Tier 4 off-road emission standards for the rated horsepower and model year of the year manufactured; or

b. An engine or power system certified to the on-road emission standards for the year manufactured as specified in title 13, CCR, section 1956.8, or certified to the Tier 2 or Tier 3 off-road diesel engine standard for the rated horsepower and model year of the year manufactured, and used in conjunction with the highest level VDECS that is verified for a specific engine family and model year. If the highest level VDECS used is Level 1, the engine or power system must meet the certified Tier 4 off-road emission standards, or be equipped with a Level 3 VDECS by December 31, 2015; or

c. An engine or power system either certified to the Tier 1 off-road diesel engine standard, as specified in title 13, CCR, section 2423, or manufactured prior to implementation of the Tier 1 off-road diesel engine standard, both of which must be used in conjunction with the highest level VDECS that is verified for the specific engine family and model year. If the highest level VDECS used is Level 1 or Level 2, the engine or power system must meet the certified Tier 4 off-road emission standards or be equipped with a Level 3 VDECS by December 31, 2015.

2. Bulk Cargo Handling Equipment:

a. An engine or power system, including a diesel, alternative fuel, or heavy-duty pilot ignition engine, certified to either the 2007 or later model year on-road emission standards for the year manufactured as specified in title 13, CCR, section 1956.8, or the Tier 4 off-road emission standards for the rated horsepower and model year of the year manufactured; or

b. An engine or power system certified to the on-road emission standards for the year manufactured as specified in title 13, CCR, section 1956.8, or certified to the Tier 2 or Tier 3 off-road diesel engine standard for the rated horsepower and model year of the year manufactured, and used in conjunction with the highest level VDECS that is verified for a specific engine family and model year. If the highest level VDECS used is Level 1, the engine or power system must meet the certified Tier 4 off-

road emission standards, or be equipped with a Level 3 VDECS by December 31, 2015; or

c. An engine or power system either certified to the Tier 1 off-road diesel engine standard, as specified in title 13, CCR, section 2423, or manufactured prior to implementation of the Tier 1 off-road diesel engine standard, both of which must be used in conjunction with the highest level VDECS that is verified for the specific engine family and model year. If the highest level VDECS used is Level 1, the engine or power system must meet the certified Tier 4 off-road emission standards or be equipped with a Level 3 VDECS by December 31, 2015.

3. Rubber-Tired Gantry Cranes:

a. An engine or power system, including a diesel, alternative fuel, or heavy-duty pilot ignition engine, certified to either the 2007 or later model year on-road emission standards for the year manufactured as specified in title 13, CCR, section 1956.8, or the Tier 4 off-road emission standards for the rated horsepower and model year of the year manufactured; or

b. An engine or power system certified to the on-road emission standards for the year manufactured as specified in title 13, CCR, section 1956.8, or certified to the Tier 2 or Tier 3 off-road diesel engine standard for the rated horsepower and model year of the year manufactured, and used in conjunction with the highest level VDECS that is verified for a specific engine family and model year; or

c. An engine or power system either certified to the Tier 1 off-road diesel engine standard, as specified in title 13, CCR, section 2423, or manufactured prior to implementation of the Tier 1 off-road diesel engine standard, both of which must be used in conjunction with the highest level VDECS that is verified for the specific engine family and model year. If the highest level VDECS used is Level 1 or Level 2, the engine or power system must meet the certified Tier 4 off-road emission standards or be equipped with a Level 3 VDECS by the latter of model year plus 12 years or December 31, 2015.

(C) Compliance Schedule for Non-Yard Truck Mobile Cargo Handling Equipment

1. All owners or operators of non-yard truck mobile cargo handling equipment shall comply with subsection (e)(3) according to the schedule in Table 3:

Table 3: Compliance Option Compliance Schedule for Non-Yard Truck In-Use Mobile Cargo Handling Equipment

Engine Model Years	Non-Yard Truck Fleets of 3 or Fewer	Compliance Date ¹ Non-Yard Truck Fleets of 4 or More			
		First 3 or 25% (whichever is greater)	50%	75%	100%
pre-1988	2007	2007	2008	2009	2010
1988-1995	2008	2008	2009	2010	2011
1996-2002	2009	2009	2010	2011	2012
2003-2006	2010	2010	2011	2012	2013

¹ Compliance date refers to December 31st of the year indicated.

a. for each compliance deadline, the percentage of non-yard truck equipment (25 percent, 50 percent, or 100 percent) that must meet the requirements of subsection (e)(3) is determined based on the total population of non-yard truck equipment for a specific model year group (i.e., pre-1988) that exist in the owner's or operator's non-yard truck fleet as of January 1 of the first compliance deadline year for that model year group; and

b. if the number of non-yard truck equipment is not a whole number, conventional rounding practices apply (i.e., if less 0.5, round down; if 0.5 or greater, round up).

(4) Fuel Requirements

(A) Except as provided for in subsection (c), on or after January 1, 2007, no owner or operator of cargo handling equipment shall fuel the equipment with any fuel unless the fuel is one of the following:

1. CARB Diesel Fuel; or

2. An alternative diesel fuel that meets the requirements of the Verification Procedure; or

3. An alternative fuel; or

4. CARB Diesel Fuel used with fuel additives that meets the requirements of the Verification Procedure; or

5. Any combination of (e)(4)(A)1. through (e)(4)(A)4. above.

(B) Owners or operators choosing to use alternative diesel fuels in mobile cargo handling equipment to meet the requirements of subsections (e)(2) and (e)(3) shall:

1. Maintain records in accordance with subsection (i); and

2. Use only fuel that is a VDECS alternative diesel fuel in mobile cargo handling equipment at ports or intermodal rail yards in California; and

3. Permanently affix a label in clear view near the fill spout that identifies the proper fuel that is required to be in compliance; and

4. In the event that the owner or operator decides to revert to using CARB diesel fuel, the operator shall comply with the requirements of subsections (e)(2) and (e)(3) within 10 days of discontinuation of alternative diesel fuel use. Within 10 days of discontinuation, the owner or operator shall notify the Executive Officer in writing of this change in fuel use and shall include an update to any annual report submitted to comply with subsections (j).

(C) Owners or operators that retrofit mobile cargo handling equipment with a VDECS that requires certain fuel properties to be met in order to achieve the required PM reduction or PM emissions shall only fuel the subject mobile cargo handling equipment with fuel that meets these specifications. In addition, owners or operators that choose a VDECS that requires certain fuel properties to be met in order to prevent damage to the VDECS or an increase in toxic air contaminants, other harmful compounds, or in the nature of the emitted PM, shall only fuel the subject mobile cargo handling equipment with fuel that meets these specifications.

(f) Compliance Extensions

An owner or operator may be granted an extension to a compliance deadline specified in subsection (e) for one of the following reasons. If a compliance extension is granted by the Executive Officer, the owner or operator shall be deemed to be in compliance as specified by the Executive Officer's authorization. Unless specifically stated, compliance extensions may not be combined or used consecutively, and only one compliance extension type may be granted per engine or vehicle.

(1) Compliance Extension for an Engine Near Retirement. If an owner or operator has applied a Compliance Option to its fleet pursuant to the schedule set forth in Table 3 of subsection (e), and the next engine subject to the Compliance Options is scheduled to be retired from the active fleet within one year of the applicable compliance deadline, the owner or operator does not need to apply a Compliance Option to that engine for up to one year, provided the owner or operator maintains appropriate records and documentation, as specified in subparagraph (i)(1)(F), regarding the assigned retirement date and the engine is retired on or before the assigned date. If upon inspection, ARB finds the aforementioned conditions to have not been met, the engine would be in noncompliance from the date that compliance would otherwise have been required under the schedule set forth in Table 3 of subsection (e).

(2) Compliance Extension Based on No Verified Diesel Emission Control Strategy for Non-Yard Truck Mobile Cargo Handling Equipment. If the Executive Officer has not verified a diesel emission control strategy or one is not commercially available for a particular engine and equipment combination, an annual extension in compliance, up to a maximum of two years, may be granted by the Executive Officer. The Executive Officer shall grant the extension upon determining that the following circumstances have been met:

(A) The owner or operator has applied to the Executive Officer for a compliance extension for an engine six months prior to each compliance deadline specified in subsection (e)(3)(C) and provided sufficient documentation to meet the conditions set forth below. The owner or operator may, six-months prior to the expiration of the extension, apply for an additional one-year extension. In such a case, the owner or operator shall once again be required to show to the Executive Officer's satisfaction that the conditions set forth below have been met:

1. Establish that it has applied a Compliance Option specified in subsection (e)(3) to all applicable engines in its fleet for which a Compliance Option is feasible pursuant to the schedule set forth in Table 3 of subsection (e),

2. Identify each engine for which an extension is requested by engine serial number; engine manufacturer, model year, family, and series; and type of mobile cargo handling equipment, for which a specific diesel emission control strategy would jeopardize the original engine warranty and a statement from the engine manufacturer or authorized dealer stating the original engine warranty would be jeopardized; or

3. Identify each engine and equipment or vehicle combination for which an extension is requested by engine serial number; engine manufacturer, model year, family, and series; and type of mobile cargo

handling equipment, for which no diesel emission control strategy is commercially available and a list of manufacturers that have been contacted with their responses to a request to purchase, and

4. Describe the reason(s) for the request for a compliance extension for each engine or engine and equipment or vehicle combination.

(3) Use of Experimental Diesel Particulate Matter Emission Control Strategies for Non-Yard Truck Mobile Cargo Handling Equipment. An annual compliance extension may be granted by the Executive Officer for the use of an experimental, or non-verified, diesel PM emission control strategy if a VDECS is not available or if the owner or operator can demonstrate that an existing VDECS is not feasible for their equipment or application. The owner or operator shall keep documentation of this use in records as specified in paragraph (i)(1)(G). Each mobile cargo handling equipment engine will be considered to be in compliance for the duration of the experiment, until the extension expires. The owner or operator must bring the mobile cargo handling equipment into compliance prior to the end of the annual compliance extension. The Executive Officer may grant the extension upon determining that the owner or operator has met the conditions specified below:

(A) The engine owner or operator has applied to the Executive Officer for a compliance extension six months prior to each compliance deadline, including annually if the owner or operator wishes to continue with the experimental controls. The application must include emissions data demonstrating the experimental control achieves at least a Level 1 diesel PM emission reduction through:

1. off-road engine certification test data for the cargo handling equipment engine;

2. engine manufacturer test data;

3. emissions test data from a similar engine;

4. emissions test data used in meeting the requirements of the Verification Procedure for the emission control strategy implemented; or

5. emissions testing conducted under the following conditions:

a. baseline testing may be conducted with the emission control strategy in place, provided the test sample is taken upstream of the emission control strategy;

b. control strategy testing shall be performed on the cargo handling equipment engine with full implementation of the emission control strategy;

c. the percent change from baseline shall be calculated as the baseline emissions minus control strategy emissions, with the difference being divided by the baseline emissions and the result expressed as a percentage;

d. the same test method shall be used for determining both baseline emissions and control strategy emissions; and

e. diesel PM, NO_x, CO, HC, NMHC, and CO₂ testing shall be done in accordance with one of the following methods:

i. International Organization for Standardization (ISO) 8178 Test procedures: ISO 8178-1: 1996(E) ("ISO 8178 Part 1"); ISO 8178-2: 1996(E) ("ISO 8178 Part 2"); and ISO 8178-4: 1996(E) ("ISO 8178 Part 4"), which are incorporated herein by reference; or

ii. Title 13, California Code of Regulations, section 2423, "Exhaust Emission Standards and Test Procedures — Off-Road Compression Ignition Engines," which is incorporated herein by reference.

(B) The application for extension must include the following: explanation demonstrating that the highest level VDECS are not feasible for the specific equipment or application (if applicable), identification of each engine (serial number, engine manufacturer, model year, family, and series), description of the emission control system to be demonstrated, emissions data required in (A) above, the contact information for the emission control system supplier, and a letter of intent from the supplier that they intend to apply for verification of the experimental system;

(C) The owner or operator must bring the mobile cargo handling equipment into compliance prior to the end of the compliance extension period;

(D) If VDECS are available, or become available during the extension period, and are determined to be feasible for the specific engine and equipment type, the owner or operator must demonstrate that the exper-

imental control achieves equivalent to or better than a Level I VDECS; and

(E) No experimental diesel particulate matter emission control strategy may be used on mobile cargo handling equipment after December 31, 2015.

(4) Compliance Extension for Equipment Manufacturer Delays. An owner or operator who has purchased new equipment in order to comply with subsection (e), including an owner or operator who has been granted a compliance extension per subsections (f)(2), (f)(3), or (f)(5), will be considered to be in compliance if the new equipment has not been received due to manufacturing delays, as long as the following conditions are met:

(A) The equipment was purchased, or the owner or operator and seller had entered into contractual agreement for the purchase, at least six months prior to the required compliance date as specified in subsection (e); and

(B) Proof of purchase, such as a purchase order or signed contract for the sale, including engine specifications for each applicable equipment, must be maintained by the owner or operator and provided to an agent or employee of ARB upon request.

(5) Compliance Extension for Yard Trucks Having VDECS with Minimum Use Requirements. If VDECS were installed on a yard truck prior to December 31, 2005, and the minimum use requirements of the VDECS, as established under a public funding program, is later than the compliance date as specified in subsection (e)(2)(B), an exemption from compliance may be extended to three years beyond the installation date of the VDECS if the following conditions are demonstrated by the owner or operator:

(A) The VDECS was installed using funding from a public agency; and

(B) The funding program stipulated minimum use requirements that would expire after the required compliance date as specified in subsection (e)(2)(B).

(g) Diesel Emission Control Strategy Special Circumstances

An owner or operator shall maintain the original level of the elected Compliance Option for each engine once that engine is required to be in compliance, and is not required to upgrade to a higher level of Compliance Option, except under specified special circumstances, as follows:

(1) In the event of a failure or damage of a diesel emission control strategy, the following conditions apply:

(A) Failure or Damage during the Warranty Period. If a diesel emission control strategy fails or is damaged within its warranty period and the diesel emission control strategy manufacturer or authorized dealer determines it cannot be repaired, the owner or operator shall replace the diesel emission control strategy with either the same level diesel emission control strategy or another approved Compliance Option as defined in subsection (e)(3) within 90 days of diesel emission control strategy failure.

(B) Failure or Damage Outside of Warranty Period. If a diesel emission control strategy fails or is damaged outside of its warranty period, and it cannot be repaired, the owner or operator shall apply a Compliance Option within 90 days, as defined in subsection (e)(3).

(h) Alternative Compliance Plan for Non-Yard Truck Cargo Handling Equipment

(1) Requirements

(A) The purpose of this subsection is to allow any person ("person" or "applicant") subject to this regulation the option of complying with the requirements of this subsection (h) in lieu of the requirements of subsection (e)(3). Under this subsection (h), alternative emission control strategies (AECS) can be implemented as an alternative compliance plan (ACP), provided they result in no greater emissions, expressed in pounds, of diesel PM and NOx from the non-yard truck cargo handling equipment, over the applicable calendar year, relative to the emissions that would have occurred under subsection (e)(3).

(B) An applicant wishing to participate in an ACP may include one or more non-yard truck cargo handling equipment in the ACP, but the ap-

plicant shall only include equipment that the person owns or operates under their direct control at the same port or intermodal rail yard.

(C) No cargo handling equipment shall be included in more than one ACP.

(D) AECS may include, but are not limited to:

1. equipment engine modifications,
2. exhaust treatment control,
3. engine repower,
4. equipment replacement, and
5. use of alternative fuels or fuel additives.

(E) The ACP application demonstrating compliance with this subsection shall contain, at a minimum, the following information:

1. the company name, address, and contact information;
2. the equipment subject to the ACP, including equipment and engine make, model, and serial numbers, and other information that uniquely identify the equipment;
3. documentation, calculations, emissions test data, or other information that establishes the diesel PM and NOx reductions, expressed in pounds, from non-yard truck cargo handling equipment will be equivalent to or greater than the emission reductions that would have been achieved upon compliance with subsection (e)(3);
4. the proposed recordkeeping, reporting, monitoring, and testing procedures that the applicant plans to use to demonstrate continued compliance with the ACP.

(F) Emission reduction calculations demonstrating equivalence with the requirements of subsection (e)(3) shall only include diesel PM and NOx emissions from non-yard truck cargo handling equipment that operate at the California port or intermodal rail yard to which the ACP applies.

(G) Any owner or operator subject to an approved ACP shall maintain operating records in a manner and form as specified by the Executive Officer in the approved ACP. Required records may include, but are not limited to, information on hours of operation, fuel usage, maintenance procedures, and emissions test results. Such records and reports shall be retained for a period of not less than three (3) years and shall be submitted to the Executive Officer in the manner specified in the approved ACP and upon request by the Executive Officer.

(H) Emission reductions included in an ACP shall not include reductions that are otherwise required by any local, State, or federal rule, regulation, or statute, or that are achieved or estimated from equipment not located at the specific port or intermodal rail yard to which the ACP applies.

(I) No person may operate any non-yard truck cargo handling equipment under an ACP unless the applicant has first been notified in writing by the Executive Officer that the ACP application has been approved. Prior to such approval, applicants shall comply with the provisions of this section, including the requirements in subsection (e)(3).

(2) Application Process

(A) Applications for an ACP shall be submitted in writing to the Executive Officer for evaluation.

(B) The Executive Officer shall establish an Internet site ("ACP Internet site") in which all documents pertaining to an ACP application will be made available for public review. The Executive Officer shall also provide a copy of all such documents to any person upon request ("interested party(ies)"). The Executive Officer shall provide two separate public comment periods during the ACP application process, as specified in this subsection (h)(2).

(C) Completeness Determination

Within 15 days after receiving an ACP application(s), the Executive Officer shall notify the applicant whether the application is deemed sufficiently complete to proceed with further evaluation. If the application is deemed incomplete, the notification shall identify the application's deficiencies. The Executive Officer shall have an additional 15-day period for reviewing each set of documents or information submitted in response to an incompleteness determination. Nothing in this subsection prohibits the Executive Officer from requesting additional information

from the applicant, during any part of the ACP application process, which the Executive Officer determines is necessary to evaluate the application.

(D) Notice of Completeness and 30-Day First Public Comment Period

After an ACP application has been deemed complete, the Executive Officer shall provide a 30-day public comment period to receive comments on any element of the ACP application and whether the Executive Officer should approve or disapprove the ACP application based on the contents and merits of the application. The Executive Officer shall notify all interested parties of the following:

1. the applicant(s);
2. the start and end dates for the 30-day first comment period; and
3. the address of the ACP Internet site where the application is posted.

The Executive Officer shall also make this notification available for public review on the ACP Internet site.

(E) Proposed Action and 15-Day Second Public Comment Period

Within 30 days after the first public comment period ends, the Executive Officer shall notify the applicant and all interested parties of ARB's proposed approval or disapproval. This notification shall propose to approve the application as submitted, disapprove the application, or approve the ACP application with modifications as deemed necessary by the Executive Officer. The notification shall identify the start and end dates for the 15-day second public comment period. During the second public comment period, any person may comment on the Executive Officer's proposed approval or disapproval of the ACP application and any element of the application. The Executive Officer shall also make this notification available for public review on the ACP Internet site.

(F) Final Action

Within 15 days after the second public comment period ends, the Executive Officer shall take final action to either approve or deny an ACP application and shall notify the applicant accordingly. If the application is denied or modified, the Executive Officer shall state the reasons for the denial or modification in the notification. The notification to the applicant and approved ACP, if applicable, shall be made available to the public on the ACP Internet site. In addition, the Executive Officer shall consider and address all comments received during the first and second public comment periods, and provide responses to each comment on the ACP Internet site.

(G) Notification to the Executive Officer of Changes to an Approved ACP

The applicant shall notify the Executive Officer in writing within 30 days upon learning of any information that would alter the emissions estimates submitted during any part of the ACP application process. If the Executive Officer has reason to believe that an approved ACP has been granted to a person that no longer meets the criteria for an ACP, the Executive Officer may, pursuant to subsection (h)(3) below, modify or revoke the ACP as necessary to assure that the applicant and subject non-yard truck cargo handling equipment will meet the emission reduction requirements in this section.

(3) Revocation or Modification of Approved ACPs

With 30-days notice to the ACP holder, the Executive Officer may revoke or modify, as needed, an approved ACP if there have been multiple violations of the ACP provisions or the requirements of the approved ACP; or if the Executive Officer has reason to believe that an approved ACP has been granted that no longer meets the criteria or requirements for an ACP or the applicant can no longer comply with the requirements of the approved ACP in its current form.

Public notification of a revocation or modification of an approved ACP shall be made available on the ACP Internet site.

(i) Recordkeeping Requirements

Beginning December 31, 2006, an owner or operator of mobile cargo handling equipment shall maintain the following records or copies of records at port and intermodal rail yard facilities where applicable. The owner or operator shall provide the following records for inspection to an agent or employee of ARB upon request, including copies of these records at the department's expense, for all mobile cargo handling equipment subject to compliance with the regulation:

(1) Records Kept at Terminal. The owner or operator shall keep the following records accessible either in hard copy format or computer records at the terminal where the mobile cargo handling equipment normally resides:

(A) Owner or Operator Contact Information

1. Company name
2. Contact name, phone number, address, e-mail address
3. Address of equipment

(B) Equipment and Engine Information

1. Make of equipment and engine
2. Model of equipment and engine
3. Engine family (if applicable)
4. Engine serial number
5. Year of manufacture of equipment and engine (if unable to determine, approximate age)
6. Rated brake horsepower
7. Control equipment (if applicable)
 - a. Type of diesel emission control strategy
 - b. Serial number of installed diesel emission control strategy
 - c. Manufacturer of installed diesel emission control strategy
 - d. Model of installed diesel emission control strategy
 - e. Installation date of installed diesel emission control strategy
 - f. Level of control (1, 2, or 3); if using a Level 1 or 2, include the reason for the choice

g. Documentation for Minimum Use Requirement Compliance Extension pursuant to paragraph (f)(5)

(C) Records of maintenance for each installed diesel emission control strategy

(D) Fuel(s) Used

1. CARB Diesel
2. Alternative diesel fuel (specify)
3. Alternative fuel (specify)
4. Combination (dual fuel) (specify)
5. Other (specify)

(E) Operation Information

1. Describe general use of engine
2. Typical load (percent of maximum bhp rating)
3. Typical annual hours of operation
4. If seasonal, months of year operated and typical hours per month operated

(F) For each engine for which an owner or operator is claiming an exemption pursuant to paragraph (f)(1), the retirement date correlated to the information in paragraph (i)(1) above

(G) For each engine for which an owner or operator is claiming an extension pursuant to paragraph (f)(3), the records of the test plan, including start and end dates of the experiment; diesel particulate matter emission control strategy manufacturer name and contact information (representative, address, and phone number); name and type of experimental diesel particulate matter emission control strategy; and targeted data to be generated by experiment, correlated to the information in paragraph (i)(1) above

(H) For each engine for which an owner or operator is claiming an extension pursuant to paragraph (f)(4), the purchase order or signed contract between the owner or operator and seller of the new equipment that has been purchased in order to comply with subsection (e)

(I) A statement of compliance, prepared beginning January 1, 2007, and renewed each January 1 thereafter until January 1, 2016, certifying that the owner's or operator's engines are in compliance as required, including the following:

1. "The mobile cargo handling equipment at terminal (insert terminal name and name of port or intermodal rail yard) are in compliance with title 13, California Code of Regulations, section 2479;" and
2. The owner's or operator's name, business address, business telephone; and
3. The signature of the owner or operator or its agent and date signed.

(2) Records Kept in Mobile Cargo Handling Equipment. For each mobile cargo handling equipment, the owner or operator shall keep the following information affixed to the driver's side door jamb, or another readily accessible location known by the owner or operator of each mobile cargo handling equipment, in the form of a legible and durable label or in an alternative form approved by the Executive Officer or designee that is immediately accessible at the time of inspection by the enforcement agency:

(A) For each installed diesel emission control strategy, label information as specified in title 13, CCR, section 2706(g), and the installation date; or

(B) For each mobile cargo handling equipment that has installed a certified on-road or off-road engine in order to comply with subsection (e), the engine make, model, and installation date; or

(C) Engine model year and planned compliance date; or

(D) Engine model year and retirement date for an engine for which an owner or operator is claiming an extension pursuant to paragraph (f)(1); or

(E) Engine model year and beginning and end date for which an owner or operator is claiming an extension pursuant to paragraph (f)(2); or

(F) Engine model year and beginning and ending date of the test plan for an engine for which an owner or operator is claiming an extension pursuant to paragraph (f)(3); or

(G) Engine model year and date of purchase of replacement engine or equipment for which an owner or operator is claiming an extension pursuant to paragraph (f)(4); or

(H) Engine model year, date of installation of VDECS, and supporting documentation for public funding program, for the engine and equipment for which an owner or operator is claiming an extension pursuant to paragraph (f)(5).

(3) Each owner or operator shall maintain these records for each mobile cargo handling equipment until it is sold outside of the State of California or is no longer used at a port or intermodal rail yard in the State of California. If ownership is transferred, the seller shall convey the records to the buyer.

(j) Reporting Requirements

(1) Compliance Plan. By January 31, 2007, each owner or operator of in-use mobile cargo handling equipment subject to the requirements of subsection (e) shall provide the following information to the Executive Officer:

(A) Information listed in paragraph (i)(1), and

(B) An identification of the planned control strategy (Compliance Plan) for each mobile cargo handling equipment listed in paragraph (i)(1) that, when implemented, will result in compliance with subsection (e). If applicable, the information should include the Executive Order number issued by the Executive Officer for a VDECS that has been approved by the Executive Officer through the Verification Procedure. The Compliance Plan is not binding and can be changed by the owner or operator prior to the required compliance date(s).

(2) Demonstration of Compliance. By no later than the earliest applicable compliance date specified in subsections (e)(2)(B) or (e)(3)(C), for each in-use cargo handling equipment subject to the requirements of subsection (e), the owner or operator shall provide the following information to the Executive Officer:

(A) Information listed in (i)(1), and

(B) An identification of the control strategy implemented for each mobile cargo handling equipment in accordance with the requirements of subsection (e) for purposes of demonstrating compliance.

(3) Annual Reporting. Each terminal owner or operator shall submit an annual report to the Executive Officer by January 31, 2007, and by each January 31 annually, through 2016 as described below:

(A) Company name;

(B) Contact name, phone number, address, e-mail address;

(C) Address of equipment, including name of port or intermodal rail yard where equipment is operated;

(D) The population, as of January 1 of that year, of equipment in each yard truck model year group and each non-yard truck model year group; and

(E) A signed affidavit stating the completeness and accuracy of the annual report.

(4) Reporting for Off-Road Equipment that Does Not Handle Cargo at any Time. Each terminal owner or operator to whom subsection (c)(3) applies, shall submit a report to the Executive Officer by January 31, 2007, as described below:

(A) Owner or Operator Contact Information

1. Company name

2. Contact name, phone number, address, e-mail address

3. Address of equipment

(B) Equipment and Engine Information

1. Make of equipment and engine

2. Model of equipment and engine

3. Engine family (if applicable)

4. Engine serial number

5. Year of manufacture of equipment and engine (if unable to determine, approximate age)

6. Rated brake horsepower

7. Control equipment (if applicable)

a. Type of diesel emission control strategy

b. Serial number of installed diesel emission control strategy

c. Manufacturer of installed diesel emission control strategy

d. Model of installed diesel emission control strategy

e. Installation date of installed diesel emission control strategy

f. Level of control (1, 2, or 3)

(C) Fuel(s) Used

1. CARB Diesel

2. Alternative diesel fuel (specify)

3. Alternative fuel (specify)

4. Combination (dual fuel) (specify)

5. Other (specify)

(D) Operation Information

1. Describe general use of engine

2. Typical load (percent of maximum bhp rating)

3. Typical annual hours of operation

4. If seasonal, months of year operated and typical hours per month operated

(k) Right of Entry

An agent or employee of the Air Resources Board has the right of entry to port and intermodal rail yard cargo handling facilities for the purpose of inspecting on-road and off-road cargo handling equipment and their records to determine compliance to these regulations.

(l) Prohibitions

No person who is engaged in this State in the business of selling to an ultimate purchaser, or renting or leasing new or used mobile cargo handling equipment, including, but not limited to, manufacturers, distributors, and dealers, shall sell, offer for sell, import, deliver, purchase, receive, or otherwise acquire a new or used mobile cargo handling equipment for the purpose of selling, renting, or leasing in California, that does not meet the performance requirements of this regulation.

(m) Severability

If any subsection, paragraph, subparagraph, sentence, clause, phrase, or portion of this regulation is, for any reason, held invalid, unconstitutional, or unenforceable by any court of competent jurisdiction, such portion shall be deemed as a separate, distinct, and independent provision, and such holding shall not affect the validity of the remaining portions of the regulation.

(n) Submittal of Documents

(A) All documents required under this regulation to be submitted to the Executive Officer shall be submitted as follows:

CALIFORNIA AIR RESOURCES BOARD
STATIONARY SOURCE DIVISION, CARGO HANDLING EQUIPMENT
P.O. BOX 2815
SACRAMENTO, CALIFORNIA 95812-2815

(B) An alternative method, including electronic submittals, may be approved by the Executive Officer.

Reference: Sections 39618, 39650, 39658, 39659, 39667, 39674, 39675, 42400, 42400.1, 42400.2, 42400.3, 42400.3.5, 42400.6, 42402, 42402.1, 42402.2, 42402.3, 42402.4, 42410, 43013 and 43018, Health and Safety Code.

HISTORY

1. New section filed 12-1-2006; operative 12-1-2006 pursuant to Government Code section 11343.4 (Register 2006, No. 48).

Chapter 10. Mobile Source Operational Controls

Article 1. Motor Vehicles

§ 2480. Airborne Toxic Control Measure to Limit School Bus Idling and Idling at Schools.

(a) Purpose. This airborne toxic control measure seeks to reduce public exposure, especially school age children's exposure, to diesel exhaust particulate matter and other toxic air contaminants by limiting unnecessary idling of specified vehicular sources.

(b) Applicability. Except as provided in subsection (d), this section applies to the operation of every school bus, transit bus, school pupil activity bus, youth bus, general public paratransit vehicle, and other commercial motor vehicle as defined in subsection (h).

(c) Idling Control Measure.

(1) A driver of a school bus, school pupil activity bus, youth bus, or general public paratransit vehicle:

(A) must turn off the bus or vehicle engine upon stopping at a school or within 100 feet of a school, and must not turn the bus or vehicle engine on more than 30 seconds before beginning to depart from a school or from within 100 feet of a school; and

(B) must not cause or allow a bus or vehicle to idle at any location greater than 100 feet from a school for:

- (i) more than five consecutive minutes; or
- (ii) a period or periods aggregating more than five minutes in any one hour.

(2) A driver of a transit bus or of a commercial motor vehicle not identified in (c)(1):

(A) must turn off the bus or vehicle engine upon stopping at a school and must not turn the bus or vehicle engine on more than 30 seconds before beginning to depart from a school; and

(B) must not cause or allow a bus or vehicle to idle at any location within 100 feet of, but not at, a school for:

- (i) more than five consecutive minutes; or
- (ii) a period or periods aggregating more than five minutes in any one hour.

(3) A motor carrier of a school bus, school pupil activity bus, youth bus, or general public paratransit vehicle must ensure that:

(A) the bus or vehicle driver, upon employment and at least once per year thereafter, is informed of the requirements in (c)(1), and of the consequences, under this section and the motor carrier's terms of employment, of not complying with those requirements;

(B) all complaints of non-compliance with, and enforcement actions related to, the requirements of (c)(1) are reviewed and remedial action is taken as necessary; and

(C) records of (3)(A) and (B) are kept for at least three years and made available or accessible to enforcement personnel as defined in subsection (g) within three business days of their request.

(4) A motor carrier of a transit bus or of a commercial motor vehicle not identified in (c)(1) must ensure that:

(A) the bus or vehicle driver, upon employment and at least once per year thereafter, is informed of the requirements in (c)(2), and of the consequences, under this section and the motor carrier's terms of employment, of not complying with those requirements;

(B) all complaints of non-compliance with, and enforcement actions related to, the requirements of (c)(2) are reviewed and remedial action is taken as necessary; and

(C) records of (4)(A) and (B) are kept for at least three years and made available or accessible to enforcement personnel as defined in subsection (g) within three business days of their request.

(d) Exemptions

This section does not apply for the period or periods during which:

(1) idling is necessary while stopped:

(A) for an official traffic control device;

(B) for an official traffic control signal;

(C) for traffic conditions over which the driver has no control, including, but not limited to: stopped in a line of traffic; or

(D) at the direction of a peace officer;

(2) idling is necessary to ascertain that the school bus, transit bus, school pupil activity bus, youth bus, general public paratransit vehicle, or other commercial motor vehicle is in safe operating condition and equipped as required by all provisions of law, and all equipment is in good working order, either as part of the driver's daily vehicle inspection, or as otherwise needed;

(3) idling is necessary for testing, servicing, repairing, or diagnostic purposes;

(4) idling is necessary, for a period not to exceed three to five minutes (as per the recommendation of the manufacturer), to cool down a turbo-charged diesel engine before turning the engine off;

(5) idling is necessary to accomplish work for which the vehicle was designed, other than transporting passengers, for example:

(A) collection of solid waste or recyclable material by an entity authorized by contract, license, or permit by a school or local government;

(B) controlling cargo temperature; or

(C) operating a lift, crane, pump, drill, hoist, mixer, or other auxiliary equipment other than a heater or air conditioner;

(6) idling is necessary to operate:

(A) a lift or other piece of equipment designed to ensure safe loading, unloading, or transport of persons with one or more disabilities; or

(B) a heater or an air conditioner of a bus or vehicle that has, or will have, one or more children with exceptional needs aboard;

(7) idling is necessary to operate defrosters, heaters, air conditioners, or other equipment to ensure the safety or health of the driver or passengers, or as otherwise required by federal or State motor carrier safety regulations; or

(8) idling is necessary solely to recharge a battery or other energy storage unit of a hybrid electric bus or vehicle.

(e) Relationship to Other Law

Nothing in this section allows idling in excess of other applicable law, including, but not limited to:

(1) Title 13 California Code of Regulations Section 1226;

(2) Vehicle Code Section 22515; or

(3) any local ordinance or requirement as stringent as, or more stringent than, this section.

(f) Penalties

(1) For each violation of subsection (c)(1), a driver of a school bus, school pupil activity bus, youth bus, or general public paratransit vehicle is subject to a minimum civil penalty of 100 dollars and to criminal penalties to the maximum extent provided by law.

(2) For each violation of subsection (c)(2), a driver of a transit bus or other commercial motor vehicle is subject to a minimum civil penalty of 100 dollars and to criminal penalties to the maximum extent provided by law.

(3) For each violation of subsection (c)(3), a motor carrier of a school bus, school pupil activity bus, youth bus, or general public paratransit vehicle

hicle is subject to a minimum civil penalty of 100 dollars and to criminal penalties to the maximum extent provided by law.

(4) For each violation of subsection (c)(4), a motor carrier of a transit bus or other commercial motor vehicle is subject to a minimum civil penalty of 100 dollars and to criminal penalties to the maximum extent provided by law.

(g) Enforcement. This section may be enforced by the Air Resources Board, peace officers as defined in California Penal Code, title 3, chapter 4.5, Sections 830 et seq. and their respective law enforcement agencies' authorized representatives, and air pollution control or air quality management districts.

(h) Definitions.

The following terms are defined for the purposes of this section:

(1) Children With Exceptional Needs. "Children with exceptional needs" means children meeting eligibility criteria described in Education Code Section 56026.

(2) Commercial Motor Vehicle. "Commercial Motor Vehicle" means any vehicle or combination of vehicles defined in Vehicle Code Section 15210(b) and any other motor truck with a gross vehicle weight rating of 10,001 pounds or more, with the following exceptions:

(A) a zero emission vehicle; or

(B) a pickup truck defined in Vehicle Code Section 471.

(3) Driver. "Driver" means any person who drives or is in actual physical control of a vehicle.

(4) General Public Paratransit Vehicle. "General public paratransit vehicle" means any motor vehicle defined in Vehicle Code Section 336, other than a zero emission general public paratransit vehicle, that is transporting school pupils at or below the 12th grade level to or from public or private schools or public or private school activities.

(5) Gross Vehicle Weight Rating. "Gross vehicle weight rating" means the weight specified by the manufacturer as the loaded weight of a single vehicle.

(6) Hybrid Electric Bus or Vehicle. "Hybrid electric bus or vehicle" means any school bus, transit bus, school pupil activity bus, youth bus, general public paratransit vehicle, or other commercial motor vehicle equipped with at least the following two sources of motive energy on board:

(A) an electric drive motor that must be used to partially or fully drive the bus or vehicle wheels; and

(B) one of the following:

(i) an internal combustion engine;

(ii) a turbine; or

(iii) a fuel cell.

(7) Idling. "Idling" means the engine is running while the bus or vehicle is stationary.

(8) Motor Carrier. "Motor carrier" means the registered owner, lessee, licensee, school district superintendent, or bailee of any school bus, transit bus, school pupil activity bus, youth bus, general public paratransit vehicle, or other commercial motor vehicle who operates or directs the operation of any such bus or vehicle on either a for-hire or not-for-hire basis.

(9) Motor Truck. "Motor truck" or "motortruck" means a motor vehicle designed, used, or maintained primarily for the transportation of property.

(10) Official Traffic Control Device. "Official traffic control device" means any sign, signal, marking or device, consistent with Section 21400 of the Vehicle Code, placed or erected by authority of a public body or official having jurisdiction, for the purpose of regulating, warning, or guiding traffic, but does not include islands, curbs, traffic barriers, speed humps, speed bumps, or other roadway design features.

(11) Official Traffic Control Signal. "Official traffic control signal" means any device, whether manually, electrically, or mechanically operated, by which traffic is alternately directed to stop and proceed and which is erected by authority of a public body or official having jurisdiction.

(12) School. "School" means any public or private school used for the purposes of education and instruction of more than 12 school pupils at or below the 12th grade level, but does not include any private school in which education and instruction is primarily conducted in private homes. The term includes any building or structure, playground, athletic field, or other area of school property. The term excludes unimproved school property.

(13) School Bus. "School bus" means any school bus defined in Vehicle Code Section 545, except a zero emission school bus.

(14) School Pupil Activity Bus. "School pupil activity bus" means any bus defined in Section 546 of the Vehicle Code, except a zero emission school pupil activity bus.

(15) Transit Bus. "Transit bus" means any bus defined in Vehicle Code Section 642, except a zero emission transit bus.

(16) Youth Bus. "Youth bus" means any bus defined in Vehicle Code Section 680, except a zero emission youth bus.

(17) Zero Emission School Bus, Transit Bus, School Pupil Activity Bus, Youth Bus, General Public Paratransit Vehicle, or Other Commercial Motor Vehicle. A "zero emission school bus, transit bus, school pupil activity bus, youth bus, general public paratransit vehicle, or other commercial motor vehicle" means any bus or vehicle certified to zero-emission standards.

NOTE: Authority cited: Sections 39600, 39601, 39658, 39667 and 39674, Health and Safety Code; and *Western Oil & Gas Assn. v. Orange County Air Pollution Control Dist.* (1975) [14 Cal.3d.411]. Reference: Sections 39002, 39003, 39027, 39500, 39600, 39650, 39655, 39656, 39657, 39658, 39659, 39662, 39665, 39674, 39675 and 42403.5, Health and Safety Code; and Section 27153, Vehicle Code.

HISTORY

1. New chapter 10, article 1 (section 2480) and section filed 6-16-2003; operative 7-16-2003 (Register 2003, No. 25).

§ 2485. Airborne Toxic Control Measure to Limit Diesel-Fueled Commercial Motor Vehicle Idling.

(a) Purpose. The purpose of this airborne toxic control measure is to reduce public exposure to diesel particulate matter and other air contaminants by limiting the idling of diesel-fueled commercial motor vehicles.

(b) Applicability. This section applies to diesel-fueled commercial motor vehicles that operate in the State of California with gross vehicular weight ratings of greater than 10,000 pounds that are or must be licensed for operation on highways. This specifically includes:

(1) California-based vehicles; and

(2) Non-California-based vehicles.

(c) Requirements.

(1) Idling Restriction. On or after February 1, 2005, the driver of any vehicle subject to this section shall comply with the following requirements, except as noted in subsection (d) below:

(A) the driver shall not idle the vehicle's primary diesel engine for greater than 5.0 minutes at any location.

(B) the driver shall not operate a diesel-fueled auxiliary power system (APS) to power a heater, air conditioner, or any ancillary equipment on that vehicle during sleeping or resting in a sleeper berth for greater than 5.0 minutes at any location when within 100 feet of a restricted area.

(2) Use of Alternative Technologies.

(A) On or after January 1, 2008, the driver shall not operate an internal combustion APS on any vehicle equipped with a 2007 and subsequent model year primary diesel engine unless the vehicle is:

1. equipped with an APS meeting the emissions performance requirements found in subsection (c)(3)(A), below; and

2. the vehicle is equipped with a label meeting the requirements pursuant to section 35.B.4 of the "California Exhaust Emission Standards and Test Procedures for 2004 and Subsequent Model Heavy-Duty Diesel Engines and Vehicles," as incorporated by reference in title 13, CCR, section 1956.8(b).

(B) On or after January 1, 2008, the driver shall not operate a fuel-fired heater on any vehicle equipped with a 2007 and subsequent model year

primary diesel engine unless the fuel-fired heater meets the emissions performance requirements found in subsection (c)(3)(B), below;

(C) On or after January 1, 2008, the driver of a vehicle equipped with a 2006 or older model year primary diesel engine may use and operate in California any certified internal combustion APS with or without the additional PM control specified in subsection (c)(3)(A)1. or any other certified alternative idling reduction technology.

(3) Compliance Requirements. As an alternative to idling the primary engine, diesel engines/vehicles may, as an option, be equipped with alternative technologies, as listed and defined below in (A), (B), and (C) of this subsection. If so equipped, these technologies are subject to the following requirements:

(A) Internal Combustion APS.

1. In order to operate in California, an APS utilizing an internal combustion engine must comply with applicable California off-road and/or federal non-road emission standards and test procedures for its fuel type and power category. In addition, diesel-fueled APSs installed on vehicles equipped with primary engines certified to the 2007 and subsequent model year heavy-duty diesel engine standards, pursuant to section 1956.8(a)(2)(A) of title 13, CCR, shall either,

- a. be equipped with a verified Level 3 in-use strategy for particulate matter control (see title 13, CCR, sections 2700 to 2710), or
- b. have its exhaust routed directly into the vehicle's exhaust pipe, upstream of the diesel particulate matter aftertreatment device.

2. With advance Executive Officer approval, a certifying/verifying APS manufacturer may petition for an alternate compliance strategy other than described in (A)1. a. or b. in this subsection above. However, this provision is limited to manufacturers that can demonstrate, to the satisfaction of the Executive Officer, that their alternative strategy is equivalent (or "cleaner"), from an emissions standpoint, compared to the requirement described in (A)1.a. or b. in this subsection above. As an example, strategies that can use the available electric power infrastructure, instead of solely operating a diesel-fueled APS for engine and/or cab heating and cooling, may be able to use such a strategy to demonstrate compliance with these requirements.

(B) Fuel-Fired Heaters. Fuel-fired heaters must comply with the applicable California emission standards and test procedures as specified in the Low Emission Vehicle program requirements found in title 13, CCR, subsections 1961(a)(15) and (d), or in Part I.E.1.13 of the "California Exhaust Emission Standards and Test Procedures for 2001 and Subsequent Model Passenger Cars, Light-Duty Trucks and Medium-Duty Vehicles," as incorporated by reference in title 13, CCR, section 1961(d). However, the specified requirement that limits fuel-fired heaters from being operated above 40°F does not apply.

(C) Other Idle Reduction Technologies. Other technologies that will reduce idling emissions may also be used, including the use of batteries, fuel cells, power inverter/chargers for on-shore electrical power, on-shore electric power infrastructure also known as truck stop electrification, and other technologies that produce minimal or no emissions. With the exception of battery and fuel cell powered APSs, power inverter/chargers, and electric power infrastructure, the use of other technologies are subject to advance Executive Officer approval and must be at least as effective in reducing idling emissions as the technologies described in subsections (c)(3)(A), above, or the NOx idling emission standard specified in title 13, CCR, section 1956.8(a)(6)(C). The Executive Officer shall use good engineering judgment and test data to determine if an idle reduction technology provides idling emission controls equivalent to the standards specified in subsection (c)(3)(A) above, or in title 13, CCR, section 1956.8(a)(6)(C).

(D) Labeling Requirements. 2007 and subsequent model year commercial diesel vehicles equipped with an internal combustion APS meeting the requirements specified in subsection (c)(3)(A) shall have a label affixed to the hood of the vehicle to allow operation of the APS in California. The labels shall meet the requirements specified in section 35.B.4 of the "California Exhaust Emission Standards and Test Procedures for

2004 and Subsequent Model Heavy-Duty Diesel Engines and Vehicles," as incorporated by reference in title 13, CCR, section 1956.8(b).

(d) Exceptions.

(1) Except when a vehicle is located within 100 feet of a restricted area, subsection (c)(1)(A) does not apply, if the vehicle is equipped with

(A) a primary diesel engine meeting the optional NOx idling emission standard pursuant to title 13, CCR, section 1956.8(a)(6)(C); and

(B) a label meeting the requirements pursuant to section 35.B.4 of the "California Exhaust Emission Standards and Test Procedures for 2004 and Subsequent Model Heavy-Duty Diesel Engines and Vehicles," as incorporated by reference in title 13, CCR, section 1956.8(b).

(2) Subsection (c)(1) does not apply for the period or periods during which

(A) a bus is idling for

1. up to 10.0 minutes prior to passenger boarding, or
2. when passengers are onboard;

(B) prior to January 1, 2008, idling of the primary diesel-engine is necessary to power a heater, air conditioner, or any ancillary equipment during sleeping or resting in a sleeper berth. This provision does not apply when operating within 100 feet of a restricted area;

(C) idling when the vehicle must remain motionless due to traffic conditions, an official traffic control device, or an official traffic control signal over which the driver has no control, or at the direction of a peace officer, or operating a diesel-fueled APS or other device at the direction of a peace officer;

(D) idling when the vehicle is queuing that at all times is beyond 100 feet from any restricted area;

(E) idling of the primary diesel engine, operating a diesel-fueled APS, or operating other devices when forced to remain motionless due to immediate adverse weather conditions affecting the safe operation of the vehicle or due to mechanical difficulties over which the driver has no control;

(F) idling to verify that the vehicle is in safe operating condition as required by law and that all equipment is in good working order, either as part of a daily vehicle inspection or as otherwise needed, provided that such engine idling is mandatory for such verification;

(G) idling of the primary diesel engine, operating a diesel-fueled APS, or operating other devices is mandatory for testing, servicing, repairing, or diagnostic purposes, including regeneration or maintenance of the exhaust emission control device during engine idling when the dashboard indicator light, if so equipped, is illuminated indicating that regeneration or maintenance is in progress;

(H) idling when positioning or providing a power source for equipment or operations, other than transporting passengers or propulsion, which involve a power take off or equivalent mechanism and is powered by the primary engine for:

1. controlling cargo temperature, operating a lift, crane, pump, drill, hoist, mixer (such as a ready mix concrete truck), or other auxiliary equipment;

2. providing mechanical extension to perform work functions for which the vehicle was designed and where substitute alternate means to idling are not reasonably available; or

3. collection of solid waste or recyclable material by an entity authorized by contract, license, or permit by a school or local government;

(I) idling of the primary diesel engine, operating a diesel-fueled APS, or operating other devices when operating defrosters, heaters, air conditioners, or other equipment solely to prevent a safety or health emergency;

(J) idling of the primary diesel engine, operating a diesel-fueled APS, or operating other devices by authorized emergency vehicles while in the course of providing services for which the vehicle is designed;

(K) idling of military tactical vehicles during periods of training, testing, and deployment; and

(L) idling when operating equipment such as a wheelchair or people assist lift as prescribed by the Americans with Disabilities Act.

(e) Relationship to Other Law.

Nothing in this section allows idling in violation of other applicable law, including, but not limited to:

- (1) California Vehicle Code Section 22515;
- (2) Title 13, Section 2480, California Code of Regulations;
- (3) California Health and Safety Code Section 40720; or
- (4) any applicable ordinance, rule, or requirement as stringent as, or more stringent than, this section.

(f) Enforcement. This section may be enforced by the Air Resources Board; peace officers as defined in California Penal Code, title 3, chapter 4.5, Sections 830 et seq. and their respective law enforcement agencies' authorized representatives; and air pollution control or air quality management districts.

(g) Penalties. For violations of subsection (c)(1), (c)(2) or (c)(3), the driver of a subject vehicle is subject to a minimum civil penalty of 300 dollars and to criminal penalties as specified in the Health and Safety Code and the Vehicle Code.

(h) Definitions.

The following definitions apply to this section:

(1) "Authorized emergency vehicle" is as defined in Vehicle Code Section 165.

(2) "Auxiliary power system" or "APS" means any device that is permanently dedicated to the vehicle on which it is installed and provides electrical, mechanical, or thermal energy to the primary diesel engine, truck cab and/or sleeper berth, bus's passenger compartment or any other commercial vehicle's cab, as an alternative to idling the primary diesel engine.

(3) "Bus" means any vehicle defined in Title 13, California Code of Regulations, Section 2480, subsections (h) (13)–(16), inclusive or as defined in the Vehicle Code Section 233.

(4) "Commercial Motor Vehicle" means any vehicle or combination of vehicles defined in Vehicle Code Section 15210(b) and any other motor truck or bus with a gross vehicle weight rating of 10,001 pounds or more, except the following:

- (A) a zero emission vehicle; or
 - (B) a pickup truck as defined in Vehicle Code Section 471.
- (5) "Driver" is as defined in Vehicle Code Section 305.

(6) "Fuel-fired heater" means a fuel burning device that creates heat for the purpose of (1) warming the cab or sleeper berth compartment of a vehicle or (2) warming the engine oil and/or coolant for easy start-up of the vehicle's engine but does not contribute to the propulsion of the vehicle.

(7) "Gross vehicle weight rating" is as defined in Vehicle Code Section 350.

(8) "Highway" is as defined in Vehicle Code Section 360.

(9) "Idling" means the vehicle engine is running at any location while the vehicle is stationary.

(10) "Motor truck" or "motortruck" means a motor vehicle designed, used, or maintained primarily for the transportation of property.

(11) "Official traffic control device" is as defined in Vehicle Code Section 440.

(12) "Official traffic control signal" is as defined in Vehicle Code Section 445.

(13) "Owner" is as defined in Vehicle Code Section 460.

(14) "Primary diesel engine" means the diesel-fueled engine used for vehicle propulsion.

(15) "Queuing" means (A) through (C)

- (A) the intermittent starting and stopping of a vehicle;
- (B) while the driver, in the normal course of doing business, is waiting to perform work or a service; and
- (C) when shutting the vehicle engine off would impede the progress of the queue and is not practicable.

(D) Queuing does not include the time a driver may wait motionless in line in anticipation of the start of a workday or opening of a location where work or a service will be performed.

(16) "Restricted area" means any real property zoned for individual or multifamily housing units that has one or more of such units on it.

(17) "Safety or health emergency" means:

- (A) a sudden, urgent, or usually unforeseen, occurrence; or
- (B) a foreseeable occurrence relative to a medical or physiological condition.

(18) "Sleeper berth" is as defined in Title 13, California Code of Regulations, Section 1265.

(19) "Vehicle" is as defined in the Vehicle Code Section 670.

NOTE: Authority cited: Sections 39600, 39601, 39614(b)(6)(A), 39658, 39667, 43000.5(d), 43013(b), 43013(h), 43018(b) and 43018(c), Health and Safety Code; and *Western Oil & Gas Assn. v. Orange County Air Pollution Control Dist.* (1975), 14 Cal.3d.411. Reference: Sections 39002, 39003, 39027, 39500, 39600, 39650, 39655, 39656, 39657, 39658, 39659, 39662, 39665, 39674, 39675, 42400, 42400.1, 42400.2, 42400.3, 42402, 42402.1, 42402.2, 42402.3, 42403.5, 42410, 43013, 43018 and 43704, Health and Safety Code; Sections 305, 336, 350, 440, 445, 545, 546, 642, 680, 21400, 22452, 22515, 27153, 40001 and 40001(b)(5), Vehicle Code; and Sections 1201, 1900, 1962 and 2480, Title 13, California Code of Regulations.

HISTORY

1. New section filed 1–27–2005; operative 2–1–2005 pursuant to Government Code section 11343.4 (Register 2005, No. 4).
2. Amendment filed 10–16–2006; operative 11–15–2006 (Register 2006, No. 42).
3. Change without regulatory effect amending subsection (g) and NOTE filed 3–4–2008 pursuant to section 100, title 1, California Code of Regulations (Register 2008, No. 10).

Chapter 12. Halogenated Refrigerants

§ 2500. Phase-Out of CFC Refrigerants in New Motor Vehicle Air Conditioning Systems for Model Years 1993 and Subsequent.

(a) Applicability

This section is applicable to all new 1993 and subsequent model year motor vehicles which are sold, supplied, or offered for sale in California on or after January 1, 1993, and which are either (1) certified pursuant to article 2 (commencing with section 1950) or article 7 (commencing with section 2047) of Chapter 1, Division 3, Title 13, California Code of Regulations; or (2) federally certified vehicles which are sold in California pursuant to Health and Safety Code Section 43102; or (3) heavy-duty diesel-powered motor vehicles, with the exception of such vehicles which are classified as "off-road vehicles" as defined in section 2421(a)(19) of Chapter 11, Division 3, Title 13, California Code of Regulations.

(b) Definitions

The definitions of this section supplement and are governed by the definitions set forth in Chapter 2 (commencing with section 39010), Part 1, Division 26 of the Health and Safety Code. The following definitions shall also govern the provisions of this section:

(1) "Authorized dealership" means any dealership to which a manufacturer supplies new motor vehicles for the purpose of reselling such vehicles to the ultimate purchaser.

(2) "Authorized supplier" means any person supplying, to a manufacturer's authorized dealership, air conditioning systems which may be installed in a new motor vehicle under warranty from the manufacturer.

(3) "Calendar quarter" means any of those three-month periods of time which start on the first days of January, April, July, and October.

(4) "CFC refrigerants" means any of the compounds commonly known as Chlorofluorocarbon-11 (CFC-11 or trichlorofluoromethane) or Chlorofluorocarbon-12 (CFC-12 or dichlorodifluoromethane).

(5) "Dealership" shall have the same meaning as the term "dealer", as defined in section 285 of the Vehicle Code.

(6) "Executive Officer" means the Executive Officer of the Air Resources Board, or his or her delegate.

(7) "Factory-installed" means installed at a manufacturer's motor vehicle production facility or port-of-entry facility.

(8) "Incomplete vehicle" means any vehicle which does not have the primary load carrying device or container attached by the original manufacturer.

(9) "Manufacturer" means any person engaged in the production of new motor vehicles from raw materials or new basic components, in order to sell such vehicles for money or other thing of value. Except as noted below, for a vehicle which is produced by one manufacturer and sold to a dealership or the ultimate purchaser by another manufacturer, the manufacturer for whom the requirements of this section are applicable shall be the manufacturer who sells, supplies, or offers the vehicle for sale to the dealership or the ultimate purchaser.

For incomplete vehicles only, the manufacturer for whom the requirements of this section are applicable shall be the initial manufacturer who predetermines the type of air conditioning system, if the air conditioning system that is ultimately installed is the same as the predetermined system. If the air conditioning system that is ultimately installed is not the same as the predetermined system, the manufacturer for whom the requirements of this section are applicable shall be the manufacturer who ultimately installs the air conditioning system. For the purposes of this section, "predetermine" means to either (1) manufacture or physically configure the vehicle in such a way, or (2) partially install the compressor, condenser, or other air conditioning components in such a way, that the specific configuration or installation is compatible with an air conditioning system that uses only one particular type of refrigerant.

(10) "Motor vehicle," as used in this section 2500, means those categories of motor vehicles that are specified in subsection (a).

(11) "Port-of-entry facility" means a facility at which a manufacturer's vehicles first arrive in the United States, and at which vehicles originally produced without vehicle air-conditioning systems may have such systems installed.

(12) "Small-volume manufacturer" means any manufacturer which sells less than 3000 new motor vehicles in California during the applicable model-year.

(13) "Vehicle air-conditioner" means any mechanical vapor compression refrigeration equipment used to cool the driver's or passenger compartment of any motor vehicle. "Vehicle air-conditioning system" has the same meaning as "vehicle air-conditioner."

(c) Percentage of Air-Conditioner-Equipped New Motor Vehicles Which May Use CFC Refrigerants for Vehicle Air Conditioning.

(1) Unless an applicable exemption has been granted pursuant to subsection (e), each manufacturer's percentage of air-conditioner equipped new motor vehicles that are sold, supplied, or offered for sale in California, and use or contain any CFC refrigerant for air-conditioning, shall not exceed the following percentages for the specified model years during the specified time periods:

<i>Model Year</i>	<i>Time Period</i>	<i>Maximum Vehicle Percentage</i>
1993 and 1994	January 1, 1993– December 31, 1993	90*
1994 and 1995	January 1, 1994– December 31, 1994	75*
1995	September 1, 1994– December 31, 1994	10

*These requirements shall not apply to small volume manufacturers.

Compliance with the "maximum vehicle percentage" requirements shall be determined as set forth in subsections (d)(3) and (d)(4).

(2) Effective January 1, 1995, no person shall sell, supply, or offer for sale in California any new 1995 or later model-year motor vehicle using any CFC refrigerant for vehicle air conditioning.

(3) Unless an applicable exemption has been granted pursuant to subsection (e), any person who fails to meet the requirements of subsections (c)(1) or (c)(2) shall be subject to the civil penalties specified in Health and Safety Code section 44474. For the purposes of Health and Safety Code section 44474:

(A) Any cause of action against a manufacturer under subsection (c) shall be deemed to accrue on the date(s) when the records required pursuant to subsection (d)(4) are submitted by a manufacturer to the Executive Officer, and

(B) A separate "incident" of violation shall be deemed to have occurred: 1. for each new motor vehicle which is sold, supplied, or offered for sale in California in excess of the allowable percentages specified in subsection (c)(1); or 2. for each new motor vehicle which is sold, supplied, or offered for sale in violation of subsection (c)(2); or 3. for each day in which a manufacturer fails to submit any required report by the time deadlines specified in subsection (d).

(d) Reporting Requirements and Compliance Determination

(1) No later than 30 days prior to the start of each calendar year, each manufacturer shall submit to the Executive Officer a good faith statement describing whether, during the following calendar year, compliance with the phase-out percentages specified in subsection (c)(1) will be achieved, or whether an exemption will be applied for.

(2) Commencing with the calendar quarter which begins on January 1, 1993, each manufacturer shall submit to the Executive Officer a quarterly report within 45 days of the end of each calendar quarter. Each quarterly report shall list the number and the model year of all air-

[The next page is 311.]

conditioned—equipped new motor vehicles produced and delivered for sale in California by the manufacturer during the immediately preceding quarterly period, and the number and percentages of these vehicles using factory—installed CFC and non—CFC vehicle air—conditioning systems. For 1995 model—year vehicles only, the quarterly report for the period October—December 1994 shall also include the above information for the period September—December 1994.

(3) Commencing with the 1993 calendar year, each manufacturer shall submit to the Executive Officer an annual report within 45 days of the end of each calendar year. Each annual report shall list the number and model year of all air—conditioner—equipped new motor vehicles produced and delivered for sale in California by the manufacturer during the immediately preceding calendar year. Each annual report shall also include the number and percentage of these vehicles using factory—installed CFC air—conditioning systems (F_a) and factory—installed non—CFC air—conditioning systems (F_b). Each report shall also include the percentage of the manufacturer's total production of new motor vehicles produced and delivered for sale in California with factory—installed vehicle air—conditioning systems during the immediately preceding calendar year (CY_1), and during each of the calendar years prior to the immediately preceding calendar year (CY_2 , CY_3 , and CY_4).

Provided that the quantity CY_1 is greater than or equal to 0.95 times the average of CY_2 , CY_3 , and CY_4 , then (A) compliance with the “maximum vehicle percentage” requirements of subsection (c)(1) for each model year during the applicable time period shall be determined by comparison of F_a with the applicable “maximum vehicle percentage” requirements, and (B) the manufacturer shall not be subject to the provisions set forth in subsection (d)(4).

(4) If the quantity CY_1 is less than 0.95 times the average of CY_2 , CY_3 , and CY_4 , the manufacturer shall supplement the information contained in the annual report within 60 days of submitting the report to the Executive Officer. The supplemental information shall detail the number and model year of new motor vehicles sold to the ultimate purchaser: (A) without air—conditioning, (B) with non—CFC manufacturer—warranted vehicle air—conditioner systems installed by the manufacturer's authorized dealerships, and (C) with CFC manufacturer—warranted vehicle air—conditioner systems installed by the manufacturer's authorized dealerships. The supplemental information shall then be used to determine the “actual percentage” of a manufacturer's air—conditioned—equipped new motor vehicles, sold during the applicable time periods, that use or contain CFC refrigerants. Compliance with the “maximum vehicle percentage” requirements of subsection (c)(1) shall be based on a comparison of this “actual percentage” with the applicable “maximum vehicle percentage” requirement.

(5) The reporting requirements of this subsection (d) shall cease to apply for any manufacturer that has submitted an annual report demonstrating that no new motor vehicles equipped with CFC—refrigerant air—conditioning systems were produced and delivered for sale by the manufacturer in California.

(6) Notwithstanding the provisions of subsections (d)(1) and (d)(2), small volume manufacturers shall not be required to (A) submit any quarterly reports for the time period from January 1, 1993, to August 31, 1994, or (B) submit annual reports for the 1993 or 1994 calendar years.

(e) Exemptions

(1) Any manufacturer who cannot comply with the requirements set forth in subsection (c) may apply in writing to the Executive Officer for an exemption. The exemption application form shall set forth:

(A) the specific grounds upon which the exemption is sought;

(B) the proposed date(s) by which compliance with the provisions of subsection (c) will be achieved; and

(C) a plan reasonably detailing the method(s) by which compliance will be achieved.

(2) Within 90 days of receipt of an exemption application containing the information required in subsection (e)(1), the Executive Officer shall determine whether, under what conditions, and to what extent, an exemp-

tion from the requirements of subsection (c) is necessary and will be permitted.

(3) No exemption shall be granted unless all of the following findings are made:

(A) that, because alternatives to CFC refrigerants are not yet available or in sufficient supply, or because a manufacturer requires additional time to redesign and produce vehicle air conditioning systems, requiring compliance with subsection (c) would result in a severe economic hardship;

(B) that the compliance plan proposed by the manufacturer can reasonably be implemented and will achieve compliance as expeditiously as possible.

(4) The exemption order shall specify a final compliance date by which the requirements of subsection (c) will be achieved. Any exemption order may contain a condition which specifies increments of progress necessary to assure timely compliance, and such other conditions as the Executive Officer finds necessary to carry out the purposes of Health and Safety Code sections 44470–44474. No exemption shall allow an extension of more than two years for any of the time deadlines specified in subsection (c).

(5) An exemption shall cease to be effective upon failure of the party to whom the exemption was granted to substantially comply with any condition specified in the exemption order.

(6) The Executive Officer may review, and for good cause, modify or revoke an exemption as is necessary to assure that the purposes of Health and Safety Code Sections 44470–44474 are met. The Executive Office shall not revoke or modify an exemption without first affording the manufacturer an opportunity for a hearing in accordance with the procedures specified in Title 17, California Code of Regulations, Division 3, Chapter 1, Subchapter 1, Article 4 (commencing with section 60040), to determine if the exemption should be modified or revoked.

NOTE: Authority cited: Sections 39600, 39601 and 44473, Health and Safety Code. Reference: Sections 39002, 39003 and 44470–44474, Health and Safety Code; and Section 338(k), Code of Civil Procedure.

HISTORY

1. New chapter 12 and section filed 6–3–93; operative 7–5–93 (Register 93, No. 23).

Chapter 13. Voluntary Accelerated Vehicle Retirement Enterprises

Article 1. Voluntary Accelerated Light-Duty Vehicle Retirement Enterprises

§ 2600. Purpose.

(a) The provisions of this article apply to the generation of emission reduction credits through the accelerated retirement of light-duty on-road motor vehicles, including passenger cars and light-duty trucks.

(b) Within five years from the effective date of adoption or date of implementation, whichever comes later, the Air Resources Board, in consultation with the Secretary for Environmental Protection, shall review the provisions of this chapter to determine whether it should be retained, revised or repealed.

NOTE: Authority cited: Sections 39600, 39601 and 44101, Health and Safety Code. Reference: Sections 39002, 39003, 43000, 43013, 44100 and 44101, Health and Safety Code.

HISTORY

1. New chapter 13, article 1 (sections 2600–2610 and appendix A) and section filed 12–8–99; operative 1–7–2000 (Register 99, No. 50).

§ 2601. Definitions.

(a) “CO” means carbon monoxide, as emitted in vehicle exhaust.

(b) “Collector—interest vehicle” means any vehicle purchased by a collector or enthusiast primarily for its historic or esthetic value, rather than primarily as a means of transportation.

(c) "Day" means any week or weekend day including all holidays.

(d) "Dismantle" means to punch, crush, stamp, hammer, shred, or otherwise render permanently and irreversibly incapable of functioning as originally intended, any vehicle or vehicle part.

(e) "Dismantler" means the person or business, defined and licensed according to the requirements of California Vehicle Code §220, §221, §11500, et seq., and other business codes and the regulations of the Department of Motor Vehicles (DMV), who dismantles or otherwise removes from service those vehicles obtained as part of a Voluntary Accelerated Vehicle Retirement (VAVR) enterprise.

(f) "District" means a local air quality management district or air pollution control district, as defined by California Health and Safety Code, Part 3, Section 40000 et seq., that has responsibility for administering VAVR enterprises within its jurisdiction.

(g) "Drive train parts" means all parts associated with the drive train such as engine, drive mechanism, transmission, differential, axles, and brakes.

(h) "Emission reduction credit" means the amount of emission reductions from the accelerated retirement of vehicles, that can be applied to the emission reduction obligations of another source or to air quality attainment goals.

(i) "Emissions-related part" means any vehicle part which affects any regulated emissions from a vehicle that is subject to California or federal emissions standards and includes, but is not limited to, those parts specified in the "Emissions-Related Parts List," adopted by the State Board on November 4, 1977, as last amended June 1, 1990.

(j) "Enterprise operator" means a person, who conducts a voluntary accelerated vehicle retirement enterprise according to these regulations, purchases vehicles, arranges for a vehicle's permanent removal from operation, and receives any emission reduction credit generated.

(k) "Executive Officer" means the Executive Officer of the Air Resources Board (ARB).

(l) "High Emitting Vehicle" means a vehicle that is identified as one that is emitting pollution in excess of emission standards pursuant to Title 16, Division 33, Article 5.5, Section 3340.42 of the California Code of Regulations.

(m) "NOx" means oxides of nitrogen, NO and NO₂, measured as NO₂, emitted in vehicle exhaust.

(n) "PM" means particulate matter, as emitted in vehicle exhaust.

(o) "Remote sensing device (RSD)" means a device or devices that measure one or any combination of CO, NO_x, and ROG concentrations in the exhaust of an on-road vehicle through infrared, ultraviolet, or other ARB-approved technology.

(p) "ROG" means reactive organic gases, as emitted in both vehicle exhaust and evaporative emissions.

(q) "Smog Check" means the motor vehicle inspection and maintenance program established by California Health and Safety Code Section 44000, et seq.

(r) "Useful life" means the physical condition of a vehicle proposed for retirement such that the vehicle passes the functional and equipment eligibility inspections, as defined in Section 2603 of this regulation, and has passed the last scheduled Smog Check.

(s) "VAVR enterprise" means a privately owned and/or operated business by an enterprise operator.

(t) "Voluntary accelerated vehicle retirement" or "VAVR" means a program in which cash payments or other incentives are offered to a vehicle owner to voluntarily retire their older, more polluting vehicle that is operational and still has a useful life.

NOTE: Authority cited: Sections 39600, 39601 and 44101, Health and Safety Code. Reference: Sections 39002, 39003, 43000, 43013, 44081, 44090, 44100, 44101, 44102, 44103, 44105 and 44122, Health and Safety Code.

HISTORY

1. New section filed 12-8-99; operative 1-7-2000 (Register 99, No. 50).
2. New subsections (r) and (s) filed 1-3-2003; operative 1-3-2003 pursuant to Government Code section 11343.4 (Register 2003, No. 1).
3. Repealer of subsections (a)-(s) and new subsections (a)-(t) filed 7-13-2007; operative 8-12-2007 (Register 2007, No. 28).

§ 2602. District Responsibility.

(a) Within six (6) months of the date of adoption of these regulations, each district allowing the operation of VAVR enterprises shall implement and enforce these regulations or shall amend existing rules to comply with these regulations.

(b) Each participating district shall, with ARB oversight:

(1) Administer and audit VAVR enterprises;

(2) Administer and monitor the use of credits generated by VAVR enterprises operated under these regulations in accordance with all state, federal, and local laws, rules, and regulations;

(3) Certify or reject the accuracy and validity of any credits generated, as required; and

(4) Retain the records received according to Section 2609(b) for a period not less than the life of the related credits.

(c) Each participating district shall verify that any vehicle accepted for participation in a VAVR enterprise within sixty-one to ninety (61-90) days of its next required Smog Check inspection has not failed the Smog Check inspection during this time frame.

(d) District approval to generate emission reduction credits shall be revoked if a VAVR enterprise operator demonstrates a recurrent pattern of accepting vehicles that do not meet the eligibility requirements pursuant to Section 2603 or if a VAVR enterprise operator violates any part of Section 2609(b).

NOTE: Authority cited: Sections 39600, 39601 and 44101, Health and Safety Code. Reference: Sections 39002, 39003, 43000, 43013, 44100 and 44101, Health and Safety Code.

HISTORY

1. New section filed 12-8-99; operative 1-7-2000 (Register 99, No. 50).
2. Amendment of subsection (d) and redesignation of former subsection (f) as subsection (e) filed 1-3-2003; operative 1-3-2003 pursuant to Government Code section 11343.4 (Register 2003, No. 1).
3. Amendment filed 7-13-2007; operative 8-12-2007 (Register 2007, No. 28).

§ 2603. Vehicle Eligibility.

(a) To be eligible for generation of emission reduction credits through a VAVR enterprise, a vehicle shall meet the following criteria:

(1) It shall be voluntarily sold to the enterprise operator for a price mutually agreed between the vehicle seller and the enterprise operator;

(2) It shall be currently registered with the DMV as an operable vehicle and shall have been so registered for at least 24 months prior to the final date of sale to the VAVR enterprise to an address or addresses within the district in which the VAVR enterprise is being operated;

(A) Smog Checks must have been performed as required by the DMV in order for the vehicle to be considered registered;

(B) A vehicle may also be eligible if the owner of the vehicle placed the vehicle in planned non-operational status per Vehicle Code Section 4604, et seq., for a total of two (2) or fewer months during the continuous twenty-four (24) months registration period and occurring at least three (3) months prior to the date of sale to the VAVR enterprise operator;

(C) A vehicle may also be eligible if the registration has lapsed for less than 181 days during the previous twenty-four (24) months, pursuant to Health and Safety Code 44094, and all appropriate registration fees and late penalties have been paid to the DMV, provided that the vehicle is registered for at least ninety (90) days immediately prior to its date of sale to a VAVR enterprise operator; and

(D) Determination of an individual vehicle's registration history shall be based on:

1. Registration data for that vehicle obtained from DMV records and

2. If D.1 provides inconclusive results for an individual vehicle, then copies of the applicable vehicle registration certificates may be used;

(3) It shall be a passenger car or a light-duty truck that includes, but is not limited to, a pick-up truck, sports utility vehicle (SUV), or van up to 8,500 pounds gross vehicular weight rating;

(4) It shall not be operating under a Smog Check repair cost waiver or economic hardship extension;

(5) If a vehicle volunteered for retirement is within sixty (60) days of its next required Smog Check inspection, the vehicle shall pass the Smog

Check inspection without receiving a repair cost waiver or economic hardship extension prior to acceptance by a VAVR enterprise operator;

(6) Owners of vehicles requiring Smog Check inspections pursuant to Section 2603(a)(5) shall be required to submit documentation issued by a Bureau of Automotive Repair (BAR) licensed Smog Check technician demonstrating compliance with Section 2603(a)(5) to the person performing the functional and equipment eligibility inspection; and

(7) Vehicles that are tampered, pursuant to Section 3340.41.5 of Title 16, Division 33, Article 5.5 of the California Code of Regulations, shall not be eligible for acceptance into a VAVR program.

(b) Each vehicle shall pass a functional and equipment eligibility inspection performed by the VAVR enterprise operator or other ARB-approved inspector (inspector), conducted on-site at the VAVR enterprise location and shall include the following:

(1) The candidate vehicle must have been driven to the inspection site under its own power. If an inspector has knowledge that a vehicle was towed or pushed for any portion of the trip to the inspection site, then the inspector shall not approve the vehicle for eligibility in a VAVR program;

(2) The inspector shall inspect the vehicle to ensure it meets the following equipment eligibility requirements and shall reject the vehicle for emission reduction credit generation if the vehicle fails any of these requirements:

- (A) All doors shall be present and in place;
- (B) The hood shall be present and in place;
- (C) The dashboard shall be in place;
- (D) Windshield shall be present and in place;
- (E) The driver's seat must be present and in place;
- (F) Interior pedals shall be operational;
- (G) One bumper and all side and/or quarter panels shall be present and in place;
- (H) Vehicle driveability must not be affected by any body, steering, or suspension damage;
- (I) Exhaust system shall be present and in place;
- (J) One headlight, one taillight, and one brake light shall be present and in place;
- (K) One side window glass shall be present and in place; and
- (L) The requirements of Section 2603(a) regarding Smog Check status have been met; and

(3) The inspector shall complete the following functional eligibility inspection and shall reject the vehicle for credit generation if the vehicle fails to complete the following test: Insert key, vehicle engine shall start using keyed ignition system. In addition to the keyed ignition switch, ignition or fuel kill switch may be activated if required to start engine. The vehicle must start readily through ordinary means without the use of starting fluids or external booster batteries. The vehicle shall be driven forward for a minimum of 25 feet under its own power. The vehicle shall be driven in reverse for a minimum of 25 feet under its own power;

(4) Upon satisfactory completion of the inspection, the inspector shall issue a certificate of functional and equipment eligibility, as specified in Appendix A to this Article, "Vehicle Functional and Equipment Eligibility Inspection Form";

(5) Vehicles failing the requirements pursuant to Section 2603(b)(2) may be retested by the inspector for compliance with these requirements and issued a certificate of equipment eligibility at any time after modifications have been made to the vehicle to correct all deficiencies; and

(6) Vehicles failing the requirements pursuant to Section 2603(b)(1) and (3) may be re-tested by the inspector for compliance with these requirements and issued a certificate of functional eligibility provided inoperable vehicle odometers are fixed prior to conducting this test, the vehicle has traveled a minimum of 50 miles subsequent to the failure determination, and the vehicle passes the functional eligibility inspection.

(c) Districts may adopt vehicle functional and equipment eligibility inspection requirements that are more stringent than those specified in Sec-

tion 2603(b) but may not omit or weaken any of the required functional or equipment tests.

NOTE: Authority cited: Sections 39600, 39601, 44094, 44101, 44102, 44106 and 44107, Health and Safety Code. Reference: Sections 39002, 39003, 43000, 43013, 44100, 44101, 44102, 44103 and 44107, Health and Safety Code.

HISTORY

1. New section filed 12-8-99; operative 1-7-2000 (Register 99, No. 50).
2. Amendment filed 1-3-2003; operative 1-3-2003 pursuant to Government Code section 11343.4 (Register 2003, No. 1).
3. Amendment of section and NOTE filed 7-13-2007; operative 8-12-2007 (Register 2007, No. 28).

§ 2604. VAVR Enterprise Operator Requirements.

(a) All owners and operators of VAVR enterprises shall comply with all applicable district rules and these regulations.

(b) The enterprise operator shall either:

(1) Be an auto dismantler, licensed according to the requirements of the California Vehicle Code and other business codes and the regulations of the DMV, for the purpose of vehicle disposal after purchase or

(2) Have a binding agreement with a duly authorized auto dismantler for the purpose of vehicle disposal after purchase.

(c) At least thirty (30) days prior to commencing operations as a VAVR enterprise operation, the operator shall notify the local district, in writing, of the intent to conduct such operations;

(1) The notification shall be submitted as specified by the district and shall contain information demonstrating the ability of the enterprise operator to comply with all provisions of this regulation;

(2) This information shall include, but is not limited to, enterprise operator name and business address, licensed auto dismantler name and business address, anticipated initiation date and duration of vehicle retirement operation, and time of vehicle intake; and

(3) The auto dismantler shall include a written statement under penalty of perjury certifying compliance with:

- (A) Local water conservation regulations;
- (B) State, county, and city energy and hazardous materials response regulations;
- (C) Local water agency soil, surface, and ground water contamination regulations; and
- (D) Any other information requested in applicable district rules.

(d) The local district shall have the right to refuse permission to generate emission reduction credits through VAVR to any requesting enterprise operator deemed by the local district as not meeting the requirements of these regulations or any applicable district rules.

(e) The district may assess an application fee to cover the costs of this approval process.

(f) The enterprise operator shall contract with an ARB-approved inspection entity to provide inspector services to perform the vehicle functional and equipment eligibility inspection specified in Section 2603(b) on-site at VAVR enterprise locations, if the VAVR enterprise operator is unable to or chooses not to perform this function.

(g) For each vehicle purchased as part of a VAVR enterprise and whose accelerated retirement creates emission reductions to be used as the basis for generating emission reduction credits, the enterprise operator shall:

(1) Verify that the vehicle meets the vehicle registration eligibility requirements of Section 2603(a); and

(2) Obtain from the vehicle owner the certificate of functional and equipment eligibility issued per Section 2603(b).

(h) At time of final sale of a vehicle to the VAVR enterprise, the enterprise operator shall verify that the person delivering the vehicle for sale is the legal owner or an authorized representative of the legal owner, properly empowered to complete the sale.

(i) The enterprise operator shall provide to the district, by the 5th day of each month, a list of all vehicles accepted for participation into a VAVR enterprise that are within sixty-one to ninety days (61-90) of their next required Smog Check inspection for the purpose of district compliance with Section 2602(c). Information to be provided for each

vehicle includes, but is not limited to, vehicle identification number (VIN); vehicle license plate number; and vehicle make, model, and model year.

(j) Violation of any provision of these regulations by any entity contracted to a district to conduct a VAVR enterprise, including falsification of any information or data, shall constitute a citable violation making the violator subject to all applicable penalties specified in the California Health and Safety Code.

(k) Violation of any provision of Section 2603 by a VAVR enterprise operator or its subcontractors shall result in the issuance of a Notice of Violation(s).

NOTE: Authority cited: Sections 39600, 39601 and 44101, Health and Safety Code. Reference: Sections 39002, 39003, 43000, 43013, 44100, 44101, 44102, 44103, 44105, 44107 and 44120, Health and Safety Code.

HISTORY

1. New section filed 12-8-99; operative 1-7-2000 (Register 99, No. 50).
2. Repealer of subsections (f)-(f)(4), subsection relettering and amendment of newly designated subsection (f) filed 1-3-2003; operative 1-3-2003 pursuant to Government Code section 11343.4 (Register 2003, No. 1).
3. Amendment filed 7-13-2007; operative 8-12-2007 (Register 2007, No. 28).

§ 2605. Offering Vehicles to the Public.

(a) There shall be a minimum period of ten (10) days between the day the VAVR enterprise operator provides a description of a vehicle to the local district and the day a DMV Registration 42 form (Report to Dismantler) is transmitted to the DMV for the vehicle. During this period, if any person contacts the enterprise operator and indicates an interest in purchasing the vehicle, the enterprise operator shall hold the vehicle for a minimum of an additional seven (7) days. During this extended waiting period, the enterprise operator shall arrange for the interested party to examine the vehicle and, if appropriate, negotiate the sale of the vehicle or any of its parts. Notwithstanding the foregoing, nothing in this section places the enterprise operator under any obligation to hold the vehicle for an interested party that has missed two or more prior appointments to examine any vehicle, or sell the vehicle or any of its parts if a mutually acceptable price cannot be negotiated.

(1) The enterprise operator will submit to the local district a description of the vehicle including, at a minimum, the vehicle make, model year, and first eight characters of the VIN. The district will, in turn, make this information available to an appropriate segment of the public. The intent is to allow interested third parties, including car collector enthusiasts and those interested in affordable transportation, an opportunity to examine the car and to negotiate with the enterprise operator the purchase of the vehicle or any of its parts according to Section 2606.

(2) Entire vehicles and/or parts may be sold prior to entry into the program; however, no emission reduction credits shall be granted for any vehicle resold to the public in this manner according to Section 2606.

NOTE: Authority cited: Sections 39600, 39601 and 44101, Health and Safety Code. Reference: Sections 39002, 39003, 43000, 43013, 44100, 44101, 44102, 44103, 44105, 44107, 44109 and 44120, Health and Safety Code.

HISTORY

1. New section filed 12-8-99; operative 1-7-2000 (Register 99, No. 50).
2. Repealer and new section filed 1-3-2003; operative 1-3-2003 pursuant to Government Code section 11343.4 (Register 2003, No. 1).
3. Amendment filed 7-13-2007; operative 8-12-2007 (Register 2007, No. 28).

§ 2606. Parts Recycling and Resale.

(a) On vehicles used for the generation of emission reduction credits, parts recycling and resale is limited to non-emission-related and non-drive train parts per the List of Emission-Drive Train Related Parts List shown in Appendix B to Article 1 — Emission/Drive Train-Related Parts List;

(1) Parts recycling is at the sole discretion of the VAVR enterprise operator, subject to the limitations included herein.

(b) After the ten-day waiting period (and additional seven-days if appointment for inspection is made) and prior to offering non-emission and non-drive train parts for resale, the engine, emission-related parts, transmission, and drive train parts must be removed from a vehicle used for

the generation of emission reduction credits and destroyed by the enterprise operator, or the enterprise operator's duly contracted dismantler:

(1) For the purpose of this regulation, a part will be considered destroyed when it has been punched, crushed, shredded, or otherwise rendered permanently and irreversibly incapable of functioning as originally intended;

(2) A checklist is provided in Appendix C to Article 1 — Quality Control Checklist with a list of emission-related and drive train parts;

(3) After all emission-related and drive train parts are removed and destroyed, a quality control inspector (designated by the VAVR enterprise operator) must perform an inspection of the non-emission-related and non-drive train parts as well as the vehicle body;

(4) Upon verification by the quality control inspector that no emission-related parts or drive train parts have been exchanged with the non-emission-related and non-drive train parts, the quality control inspector must sign the checklist; and

(5) After the quality control inspector signs the check list, the dismantler may place the remaining non-emission parts, non-drive train parts, and vehicle body in yard to be available for sale to public.

(c) If the VAVR enterprise operator does not recover parts from a vehicle, then the entire vehicle must be dismantled within 90 days of acquisition by the operator;

(1) No parts may be removed, for sale or reuse, from any dismantled, retired vehicle for the purpose of generating emission reduction credits. The only allowable use for any retired vehicle is as a source of scrap metal and other scrap material;

(2) An enterprise operator may separate ferrous and non-ferrous metals from a dismantled, retired vehicle to sell as a source of scrap metal only; and

(3) An enterprise operator may sell tires and batteries from a dismantled, retired vehicle to an intermediary tire/battery recycler only.

(A) All facilities generating or receiving waste tires must use the services of a registered tire hauler/recycler and

(B) Battery recyclers must be registered and licensed by the State of California to handle batteries.

(d) No emission reduction credits or other compensation with public funds shall be granted for any vehicle from which emission-related or drive train parts have been sold.

(e) All activities associated with retiring vehicles, including but not limited to the disposal of vehicle fluids and vehicle components, shall comply with:

(1) Local water conservation regulations;

(2) State, county, and city energy and hazardous materials response regulations; and

(3) Local water agency soil, surface, and ground water contamination regulations.

(f) Local districts are required to perform audits of all parts recycling and resale activities.

NOTE: Authority cited: Sections 39600, 39601 and 44101, Health and Safety Code. Reference: Sections 39002, 39003, 43000, 43013, 44100, 44101, 44102, 44103, 44105, 44107 and 44120, Health and Safety Code.

HISTORY

1. New section filed 12-8-99; operative 1-7-2000 (Register 99, No. 50).
2. Renumbering of former section 2606 to section 2607 and new section 2606 filed 1-3-2003; operative 1-3-2003 pursuant to Government Code section 11343.4 (Register 2003, No. 1).
3. Amendment filed 7-13-2007; operative 8-12-2007 (Register 2007, No. 28).

§ 2607. Advertising.

(a) Any advertising conducted by an enterprise operator for the purpose of recruiting vehicle owners to sell their cars into a VAVR enterprise shall not contain any language stating that the VAVR enterprise is anything but voluntary for the consumer or that the VAVR enterprise is affiliated with or is operated by the State of California;

(1) Any contracts or agreements between a vehicle seller and an enterprise operator relating to the sale of a vehicle to a VAVR enterprise shall not contain any language stating that the VAVR enterprise is anything

but voluntary for the consumer or that the VAVR enterprise is affiliated with or is operated by the State of California.

(b) Any enterprise operator requesting the DMV to send notices to vehicle owners as prospective VAVR participants, pursuant to Health and Safety Code Section 44103, shall meet the following requirements:

(1) Prominently display the disclaimer statement as follows: "This voluntary accelerated vehicle retirement enterprise is conducted by a private operator under the auspices of the State of California and your local air pollution control district/air quality management district. It is not operated by the State of California. State funds are not used for the purchase of vehicles. Emission reduction credits may be purchased by the State for air quality improvements. Your participation is entirely voluntary." and

(2) Provide the DMV with adequate criteria for selecting those registered vehicle owners who own the desired target vehicles which may consist of vehicle makes, models, model years, geographical locales, or any other criteria deemed acceptable or necessary by the DMV.

NOTE: Authority cited: Sections 39600, 39601 and 44101, Health and Safety Code. Reference: Sections 39002, 39003, 43000, 43013, 44100, 44101, 44102, 44103, 44105, 44107 and 44109, Health and Safety Code.

HISTORY

1. New section filed 12-8-99; operative 1-7-2000 (Register 99, No. 50).
2. Renumbering of former section 2607 to section 2608 and renumbering of former section 2606 to section 2607 filed 1-3-2003; operative 1-3-2003 pursuant to Government Code section 11343.4 (Register 2003, No. 1).
3. Amendment filed 7-13-2007; operative 8-12-2007 (Register 2007, No. 28).

§ 2608. Emission Reduction Credits.

(a) VAVR enterprise operators may generate emission reduction credits that can be sold on the open market.

(b) VAVR enterprise operators may not make emission reduction credits available for purchase until they are approved and issued by the district.

(c) Districts shall not approve and issue emission reduction credits unless a VAVR enterprise operator demonstrates compliance with all applicable provisions in this regulation.

(d) Each district shall be responsible for approving and issuing emission reduction credits generated to VAVR enterprise operators, based on data supplied by each enterprise operator pursuant to Sections 2609.

(e) A district shall not approve and issue emission reduction credits for any vehicle retired within sixty-one to ninety (61-90) days of its next required Smog Check inspection until it has verified that the vehicle did not fail its Smog Check inspection during that time frame pursuant to Section 2602(c). Emission reduction credits shall not be issued for any vehicle failing its Smog Check inspection during the sixty-one to ninety (61-90) day time frame.

(f) The default lifetime of emission reduction credits is three (3) years;

(1) The maximum credit amount shall be no greater than the calculated emission reduction on which the credit is based;

(2) Districts may apply a discount factor to credits calculated under these regulations, consistent with applicable district and Board credit rules and programs; and

(3) Credit usage shall be in accordance with all federal, state, and local laws and regulations in effect at time of usage.

(g) Emission reduction credits shall be generated by the retirement of any vehicle for reductions of NO_x, ROG, CO, and PM where the magnitude of the credit for each pollutant shall be determined by the methodology described in Appendix D to this Article, "Calculation of Default Emission Reduction Credit."

(h) Extra emission reduction credits may be generated by the retirement of any high emitting vehicle for reductions of NO_x, ROG, and PM when retired in accordance with Section 2610;

(1) The detailed methodology that will be used to calculate extra emission reductions shall be submitted in a high emitting vehicle VAVR plan, as required by Section 2610(f), by the district or enterprise operator to the ARB for approval;

(2) The methodology for calculating extra emission reductions shall be consistent with the methodologies recommended by the ARB;

(3) The ARB shall publish the methodology for calculating extra emission reductions in the Carl Moyer Program Guidelines, pursuant to Health and Safety Code section 44275 et seq.;

(4) Any calculation of extra emission reductions that is not consistent with the methodology recommended by the ARB shall include a detailed and complete technical justification for the changes and differences;

(5) The ARB shall evaluate the methodology for calculating extra emission reductions within sixty (60) days of receipt using the following criteria:

(A) The methodology must clearly show how emissions are estimated from the raw data or initial measurements through the final emission rate in pounds per year;

(B) The methodology shall include all equations used to estimate the final emission rate, clearly define assumptions and constants, and include references for the derivation of any uncommon equations that are used;

(C) The methodology shall contain an example calculation showing how the final emission rate was calculated from the raw data or initial measurement; and

(D) The methodology must verify that emission reductions are real, surplus, quantifiable, and enforceable; and

(6) A detailed and complete technical justification for any other proposed change from the requirements of Section 2608 shall be provided with the high emitting vehicle VAVR plan.

NOTE: Authority cited: Sections 39600, 39601 and 44101, Health and Safety Code. Reference: Sections 39002, 39003, 43000, 43013, 44100, 44101, 44102, 44121 and 44122, Health and Safety Code.

HISTORY

1. New section filed 12-8-99; operative 1-7-2000 (Register 99, No. 50).
2. Renumbering of former section 2608 to section 2609 and renumbering of former section 2607 to section 2608, including amendment of subsection (a), filed 1-3-2003; operative 1-3-2003 pursuant to Government Code section 11343.4 (Register 2003, No. 1).
3. Amendment filed 7-13-2007; operative 8-12-2007 (Register 2007, No. 28).

§ 2609. Records and Auditing.

(a) Districts and enterprise operators shall meet the following records and auditing requirements.

(b) An enterprise operator shall maintain and store the following information for each vehicle dismantled and used to generate emission reduction credits:

- (1) Vehicle Identification Number (VIN);
- (2) Vehicle license plate number;
- (3) Vehicle model year;
- (4) Vehicle odometer reading;
- (5) Vehicle make and model;
- (6) Name, address, and phone number of legal owner selling vehicle to the enterprise operator;
- (7) Name, address, and phone number of registered owner if different from (b)(6);
- (8) Name and business address of inspector conducting the vehicle's eligibility inspection, if the VAVR enterprise operator contracts with an ARB-approved inspection entity to perform the vehicle functional and equipment eligibility inspection;
- (9) Date of purchase of vehicle by the enterprise operator;
- (10) Date of vehicle retirement;
- (11) The emission reduction amount claimed pursuant to Section 2608;
- (12) Reproductions of California Certificate of Title and registration, as signed-off by the seller at time of final sale to the VAVR enterprise;
- (13) Reproduction of the applicable certificate of functional and equipment eligibility;
- (14) Reproduction of the applicable Notice to Dismantler (report of vehicle to be dismantled and notice of acquisition, DMV Registration 42 form);
- (15) Reproduction of written documentation from the DMV verifying that a vehicle meets the requirements of Section 2603(a);
- (16) If applicable, reproduction of documentation issued pursuant to Section 2603(a)(6); and

(17) Any other pertinent data requested by the district.

(c) Upon request of the district, the data required in Section 2609(b) shall be transmitted to the district in an electronic database format, mutually agreed upon between the district and the enterprise operator, in lieu of paper copies.

(d) The enterprise operator shall maintain copies of the information listed in Section 2609(b) for a minimum period of time commensurate with the life of the emission reduction credits generated from each vehicle pursuant to Section 2608 and shall make those records available to the ARB or the district upon request.

(e) The district may conduct announced and unannounced audits and on-site inspections of VAVR enterprise operations to ensure that enterprises are being operated according to all applicable rules and regulations;

(1) The district shall report the results of any such audits and inspections to the Executive Officer, notify any non-compliant enterprise operator of the nature of the violation, and initiate any enforcement or remedial action necessary and

(2) Enterprise operators and their subcontractors shall allow the district to conduct announced and unannounced audits and inspections and shall cooperate fully.

NOTE: Authority cited: Sections 39600, 39601 and 44101, Health and Safety Code. Reference: Sections 39002, 39003, 42400, 42400.1, 42400.2, 42400.3, 42400.4, 42400.5, 42400.6, 42401, 42402, 42402.1, 42402.2, 42402.3, 42402.5, 42403, 43000, 43013, 43016, 44100, 44101, 44102, 44103, 44105, 44106 and 44107, Health and Safety Code.

HISTORY

1. New section filed 12-8-99; operative 1-7-2000 (Register 99, No. 50).
2. Renumbering of former section 2609 to section 2610 and renumbering of former section 2608 to section 2609, including amendment of section and NOTE, filed 1-3-2003; operative 1-3-2003 pursuant to Government Code section 11343.4 (Register 2003, No. 1).
3. Amendment of section heading and section filed 7-13-2007; operative 8-12-2007 (Register 2007, No. 28).

§ 2610. Identification of High Emitting Vehicles.

(a) Remote sensing devices (RSD) and other ARB-approved technologies, including but not limited to databases such as a high emitter profile or smoking vehicles, may be used to identify potential high emitting vehicles for voluntary entry into a VAVR program and to generate extra emission reduction credit.

(1) The technology must be a common, scientifically established technology;

(2) The technology must identify ROG, NOx, PM, and/or CO emissions from potential high emitting vehicles; and

(3) The technology must identify vehicles whose emissions will most likely exceed the ASM Emission Standards and Gross Polluter Standards pursuant to Title 16, Division 33, Article 5.5, Section 3340.42 of the California Code of Regulations.

(b) The use of these technologies in a VAVR program is entirely optional.

(c) A high emitting vehicle VAVR program using these technologies shall comply with all applicable requirements of these regulations.

(d) All equipment and software associated with the technology shall be calibrated, operated, and maintained in accordance with the latest, approved manufacturer's standard operating procedures or other ARB-approved equivalent documentation for that technology.

(e) Any extra emission reduction credit generated by the voluntary retirement of a high emitting vehicle shall be calculated according to the requirements of Section 2608(h).

(f) A detailed plan to operate a high emitting vehicle VAVR program shall be submitted to the ARB for approval and shall not be implemented until written approval to proceed is received from the Executive Officer of the ARB.

(g) The plan shall contain, at a minimum, the following elements:

(1) A detailed description of the type and model of all equipment and software used to identify high emitting vehicles;

(2) A detailed description of the operation of the technology including but not limited to set up, typical operation, location and location criteria, calibration, and maintenance;

(3) A copy of the standard operating procedures or protocols for that technology including maintenance of the technology including equipment and software;

(4) The specific criteria to be used in the application of the technology to identify a high emitting vehicle;

(5) A detailed description of the methodology that will be used to calculate extra emission reduction credits including an example calculation pursuant to Section 2608;

(6) Documentation that personnel who will be operating the technology are trained and qualified for such operation;

(7) A description of how the high emitting vehicle VAVR program will be administered and operated in compliance with all applicable requirements of this regulation; and

(8) A detailed description of any anticipated deviations from the standard operating procedures or protocols of the technology, as required by this Section, and the recommended methodology for calculating extra emission reduction credits, as specified in Section 2608(h).

(h) The ARB shall evaluate the plan according to the following criteria. The plan shall:

(1) Be complete;

(2) Meet all of the requirements listed in Sections 2610(a), (c), and (d);

(3) Fully address all elements listed in Section 2610(g);

(4) Be approved, signed, and dated by a management-level official who has the authority to approve the plan; and

(5) Be approved for implementation by the ARB within sixty (60) days or returned to the submitter within sixty (60) days for revision.

NOTE: Authority cited: Sections 39600, 39601, 44101 and 44109, Health and Safety Code. Reference: Sections 39002, 39003, 43000, 43013, 44100, 44101 and 44105, Health and Safety Code.

HISTORY

1. New section and appendix A filed 12-8-99; operative 1-7-2000 (Register 99, No. 50).
2. Renumbering of former section 2610 to section 2611 and renumbering of former section 2609 to section 2610 filed 1-3-2003; operative 1-3-2003 pursuant to Government Code section 11343.4 (Register 2003, No. 1).
3. Repealer and new section heading and section and amendment of NOTE filed 7-13-2007; operative 8-12-2007 (Register 2007, No. 28).

§ 2611. Procurement of Credits for SIP Measure M1.

NOTE: Authority cited: Sections 39600 and 39601, 44101 and 44104, Health and Safety Code. Reference: Sections 39002, 39003, 43000, 43013, 44100, 44101 and 44104, Health and Safety Code.

HISTORY

1. Renumbering of former section 2610 to section 2611 and new appendices C and D filed 1-3-2003; operative 1-3-2003 pursuant to Government Code section 11343.4 (Register 2003, No. 1).
2. Repealer of section filed 7-13-2007; operative 8-12-2007 (Register 2007, No. 28).

Appendix A

VEHICLE FUNCTIONAL AND EQUIPMENT
ELIGIBILITY INSPECTION FORM

Legal Owner: _____ Address: _____
 City: _____ Zip: _____
 VIN: _____ License Number: _____
 Make: _____ Model: _____
 Model Year: _____ Odometer Reading: _____

VEHICLE QUALIFICATION

Vehicle within 61–90 days of next scheduled Smog Check: ☐ yes ☐ no 2602(c)
 If yes, vehicle failed next scheduled Smog Check: ☐ yes* ☐ no
 Vehicle registered in District for at least 24 months: ☐ yes ☐ no* 2603(a)(2)
 Vehicle on BAR repair cost waiver ☐ yes* ☐ no 2603(a)(4)
 Vehicle on BAR economic hardship extension ☐ yes* ☐ no 2603(a)(4)
 Vehicle within 60 days of next scheduled Smog Check: ☐ yes ☐ no 2603(a)(5)
 If yes, vehicle passed next scheduled Smog Check: ☐ yes ☐ no*
 The vehicle has been tampered with: ☐ yes* ☐ no 2603(a)(7)
 The vehicle has been driven to the inspection site ☐ yes ☐ no* 2603(b)(1)
 * Vehicle is not qualified for the VAVR program.

EQUIPMENT ELIGIBILITY

The following shall be present and in place:

2603(b)(3)

All doors	<input type="checkbox"/> yes <input type="checkbox"/> no*	Hood	<input type="checkbox"/> yes <input type="checkbox"/> no*
Dashboard	<input type="checkbox"/> yes <input type="checkbox"/> no*	Driver's seat	<input type="checkbox"/> yes <input type="checkbox"/> no*
One bumper	<input type="checkbox"/> yes <input type="checkbox"/> no*	All side and/or quarter panels	<input type="checkbox"/> yes <input type="checkbox"/> no*
Exhaust system	<input type="checkbox"/> yes <input type="checkbox"/> no*	One headlight	<input type="checkbox"/> yes <input type="checkbox"/> no*
One taillight	<input type="checkbox"/> yes <input type="checkbox"/> no*	One brake light	<input type="checkbox"/> yes <input type="checkbox"/> no*
One side window	<input type="checkbox"/> yes <input type="checkbox"/> no*	Interior pedals operational	<input type="checkbox"/> yes <input type="checkbox"/> no*

FUNCTIONAL ELIGIBILITY

The following shall be completed:

2603(b)(4)

Vehicle starts using keyed ignition ☐ yes ☐ no*
 Vehicle starts without the use of starting fluids or external battery ☐ yes ☐ no*
 Vehicle driven forward for a minimum of 25 feet ☐ yes ☐ no*
 Vehicle driven in reverse for a minimum of 25 feet ☐ yes ☐ no*
 * Vehicle is not eligible for the VAVR program.

INSPECTOR CERTIFICATION: (Check correct boxes.) I certify that this vehicle has (☐ passed ☐ not passed) both the functional and equipment eligibility inspections and (☐ is ☐ is not) eligible for acceptance into the VAVR program pursuant to California Code of Regulations, Title 13, Sections 2602 and 2603.

Printed Name: _____ Date: _____
 Signed: _____

The following should be completed if the vehicle is eligible for acceptance into a VAVR program.

OWNER ACCEPTANCE: I accept receipt of this CERTIFICATION of eligibility into a VAVR program. I agree not to alter the vehicle's equipment or functionality from that presented to the inspector. I agree to maintain the vehicle's condition and registration until the vehicle is retired.

Printed Name: _____ Date: _____
 Signed: _____

HISTORY

1. New appendix A filed 12–8–99; operative 1–7–2000 (Register 99, No. 50).

2. Repealer and new appendix A filed 7–13–2007; operative 8–12–2007 (Register 2007, No. 28).

Appendix B

State of California
Air Resources Board

Emission–Drive Train Related Parts List

Adopted November 4, 1977
Amended May, 1981
Amended June 1, 1990

The following list of components are examples of emission related parts as defined in Section 1900(b)(3), Chapter 3, Title 13, California Code of Regulations.

I. Carburetion and Air Induction System**A. Air Induction System:**

1. Temperature sensor elements
2. Vacuum motor for air control
3. Hot air duct & stove
4. Air filter housing & element
5. Turbocharger or supercharger
6. Intercooler

B. Emission Calibrated Carburetors:

1. Metering jets
2. Metering rods
3. Needle and seat
4. Power valve
5. Float circuit
6. Vacuum break
7. Choke mechanism
8. Throttle–control solenoid
9. Deceleration valve
10. Dashpot
11. Idle stop solenoid, anti–dieseling assembly
12. Accelerating pump
13. Altitude compensator

C. Mechanical Fuel Injection:

1. Pressure regulator
2. Fuel injection pump
3. Fuel injector
4. Throttle–position compensator
5. Engine speed compensator
6. Engine temperature compensator
7. Altitude cut–off valve
8. Deceleration cut–off valve
9. Cold–start valve

D. Continuous Fuel Injection:

1. Fuel pump
2. Pressure accumulator
3. Fuel filter
4. Fuel distributor
5. Fuel injections
6. Air–flow sensor
7. Throttle–position compensator
8. Warm–running compensator
9. Pneumatic overrun compensator
10. Cold–start valve

E. Electronic Fuel Injection:

1. Pressure regulator
2. Fuel distribution manifold
3. Fuel injectors
4. Electronic control unit
5. Engine speed sensor
6. Engine temperature sensor
7. Throttle–position sensor
8. Altitude/manifold–pressure sensor

9. Cold–start valve
- F. Air Fuel Ratio Control:**
1. Frequency valve
 2. Oxygen sensor
 3. Electronic control unit
- G. Intake Manifold**

II. Ignition System**A. Distributor**

1. Cam
2. Points
3. Rotor
4. Condenser
5. Distributor cap
6. Breaker plate
7. Electronic components (breakerless or electronic system)

B. Spark Advance/Retard System:

1. Centrifugal advance mechanism:
 - a. Weights
 - b. Springs
2. Vacuum advance unit
3. Transmission controlled spark system:
 - a. Vacuum solenoid
 - b. Transmission switch
 - c. Temperature switches
 - d. Time delay
 - e. CEC valve
 - f. Reversing relay
4. Electronic spark control system:
 - a. Computer circuitry
 - b. Speed sensor
 - c. Temperature switches
 - d. Vacuum switching valve
5. Orifice spark advance control system:
 - a. Vacuum bypass valve
 - b. OSAC (orifice spark advance control) valve
 - c. Temperature control switch
 - d. Distributor vacuum control valve
6. Speed controlled spark system:
 - a. Vacuum solenoid
 - b. Speed sensor and control switch
 - c. Thermal vacuum switch

Appendix D

VOLUNTARY ACCELERATED LIGHT-DUTY VEHICLE RETIREMENT PROGRAM
DEFAULT EMISSION REDUCTIONS

ARB shall annually calculate the emission reductions for voluntary accelerated vehicle retirement. By December 31 of each year, ARB shall calculate the emission reductions for vehicles retired in the next calendar year and shall make them publicly available in tabular form.

For exhaust (tailpipe) emissions, the following equation is used to calculate emission reduction credits. Exhaust emission reduction credits may be generated from reductions in oxides of nitrogen (NO_x), reactive organic gas (ROG), carbon monoxide (CO), and particulate matter (PM):

$$\text{ExhReduction} = [(\text{ER}_{\text{retired}} * \text{VMT}_{\text{retired}}) - (\text{ER}_{\text{replacement}} * \text{VMT}_{\text{replacement}})] * \text{Life}_{\text{retired}}$$

where:

ExhReduction	= total emission reduction for tailpipe emissions (grams/life);
ER _{retired}	= the retired vehicle exhaust emission rate (grams/mile) = the average exhaust emission rate of the model year vehicle retired calculated using ARB's emission inventory model;
VMT _{retired}	= the retired vehicle miles traveled (miles/year) = the average VMT of the model year vehicle retired calculated using ARB's emission inventory model;
Life _{retired}	= the retired vehicle remaining life (years) = 3 years;
ER _{replacement}	= the replacement vehicle exhaust emission rate (grams/mile) = the fleet average exhaust emission rate calculated using ARB's emission inventory model;
VMT _{replacement}	= the replacement vehicle miles traveled (miles/year) = VMT _{retired}

For evaporative emissions, the following equation is used to calculate emission reduction credits. Evaporative emission reduction calculations apply only to ROG emissions:

$$\begin{aligned} \text{EvapReduction} = & \{[(\text{ER}_{\text{runloss}})_{\text{retired}} - (\text{ER}_{\text{runloss}})_{\text{replacement}}] * \text{VMT}_{\text{retired}} + \\ & [(\text{ER}_{\text{hotsoak}})_{\text{retired}} - (\text{ER}_{\text{hotsoak}})_{\text{replacement}}] * \text{Trips}_{\text{retired}} + \\ & [(\text{ER}_{\text{diurnal}})_{\text{retired}} - (\text{ER}_{\text{diurnal}})_{\text{replacement}}] * 365 \text{ days/year} + \\ & [(\text{ER}_{\text{resting}})_{\text{retired}} - (\text{ER}_{\text{resting}})_{\text{replacement}}] * 365 \text{ days/year}\} * \text{Life}_{\text{retired}} \end{aligned}$$

where:

EvapReduction	= total lifetime reduction of evaporative ROG emissions (grams/life);
(ER _{runloss}) _{retired}	= the retired vehicle running loss evaporative emission rate (grams/mile) = the average running loss evaporative emission rate of the model year vehicle retired calculated using ARB's emission inventory model;
(ER _{runloss}) _{replacement}	= the replacement vehicle running loss evaporative emission rate (grams/mile) = the fleet average running loss evaporative emission rate calculated using ARB's emission inventory model;
(ER _{hotsoak}) _{retired}	= the retired vehicle evaporative emission rate attributed to hot soak after shut down (grams/trip) = the average hot soak evaporative emission rate of the model year vehicle retired calculated using ARB's emission inventory model;
(ER _{hotsoak}) _{replacement}	= the replacement vehicle evaporative emission rate attributed to hot soak after shut down (grams/trip) = the fleet average hot evaporative emission rate calculated using ARB's emission inventory model;
(ER _{diurnal}) _{retired}	= the retired vehicle emission rate for evaporative emissions occurring while vehicle is not operating and during periods of ambient temperature increase (grams/day) = the average diurnal evaporative emission rate of the model year vehicle retired calculated using ARB's emission inventory model;
(ER _{diurnal}) _{replacement}	= the replacement vehicle emission rate for evaporative emissions occurring while vehicle is not operating and during periods of ambient temperature increase (grams/day) = the fleet average diurnal evaporative emission rate calculated using ARB's emission inventory model;
(ER _{resting}) _{retired}	= the retired vehicle emission rate for evaporative emissions occurring while vehicle is not operating and during periods of constant or decreasing ambient temperature (grams/day) = the average resting evaporative emission rate of the model year vehicle retired calculated using ARB's emission inventory model;
(ER _{resting}) _{replacement}	= the replacement vehicle emission rate for evaporative emissions occurring while vehicle is not operating and during periods of ambient temperature increase (grams/day) = the fleet average resting evaporative emission rate calculated using ARB's emission inventory model;
Trips _{retired}	= number of trips per year expected from retired vehicle = the average trips of the model year vehicle retired calculated using ARB's emission inventory model.

HISTORY

1. New appendix D filed 1-3-2003; operative 1-3-2003 pursuant to Government Code section 11343.4 (Register 2003, No. 1).

2. Redesignation of former appendix D as appendix C and redesignation of former appendix B as new appendix D, including repealer and new appendix heading and appendix, filed 7-13-2007; operative 8-12-2007 (Register 2007, No. 28).

Chapter 14. Verification Procedure, Warranty and In-Use Compliance Requirements for In-Use Strategies to Control Emissions from Diesel Engines

§ 2700. Applicability.

These procedures apply to in-use strategies which, through the use of sound principles of science and engineering, control emissions of particulate matter (PM) and oxides of nitrogen (NOx) from diesel-fueled diesel engines. These strategies may include but are not limited to, diesel particulate filters, diesel oxidation catalysts, fuel additives, selective catalytic reduction systems, exhaust gas recirculation systems, and alternative diesel fuels.

NOTE: Authority cited: Sections 39002, 39003, 39500, 39600, 39601, 39650–39675, 40000, 43000, 43000.5, 43011, 43013, 43018, 43105, 43600 and 43700, Health and Safety Code. Reference: Sections 39650–39675, 43000, 43009.5, 43013, 43018, 43101, 43104, 43105, 43106, 43107 and 43204–43205.5, Health and Safety Code; and Title 17 California Code of Regulations Section 93000.

[The next page is 325.]

HISTORY

1. New chapter 14 (sections 2700–2710) and section filed 5–12–2003; operative 6–11–2003 (Register 2003, No. 20).

§ 2701. Definitions.

(a) The definitions in Section 1900(b), Chapter 1, Title 13 of the California Code of Regulations are incorporated by reference herein. The following definitions shall govern the provisions of this chapter:

(1) “15 ppmw or less sulfur fuel” means diesel fuel with a sulfur content equal to or less than 15 parts per million by weight (ppmw).

(2) “Alternative Diesel Fuel” means any fuel used in diesel engines that is not commonly or commercially known, sold or represented as diesel fuel No. 1–D or No. 2–D, pursuant to the specifications in ASTM Standard Specification for Diesel Fuel Oils D975–81, and does not require engine or fuel system modifications for the engine to operate, although minor modifications (e.g. recalibration of the engine fuel control) may enhance performance. Examples of alternative diesel fuels include, but are not limited to, biodiesel, Fischer Tropsch fuels, and emulsions of water in diesel fuel. Natural gas is not an alternative diesel fuel. An emission control strategy using a fuel additive will be treated as an alternative diesel fuel based strategy unless:

(A) The additive is supplied to the vehicle or engine fuel by an on-board dosing mechanism, or

(B) The additive is directly mixed into the base fuel inside the fuel tank of the vehicle or engine, or

(C) The additive and base fuel are not mixed until vehicle or engine fueling commences, and no more additive plus base fuel combination is mixed than required for a single fueling of a single engine or vehicle.

(3) “Approach Light System with Sequenced Flasher Lights in Category 1 and Category 2 Configurations” (ALSF–1 and ALSF–2) mean high intensity approach lighting systems with sequenced flashers used at airports to illuminate specified runways during category II or III weather conditions, where category II means a decision height of 100 feet and runway visual range of 1,200 feet, and category III means no decision height or decision height below 100 feet and runway visual range of 700 feet.

(4) “Applicant” means the entity that has applied for or has been granted verification under this Procedure.

(5) “Auxiliary Emission Control Device” (AECD) means any device or element of design that senses temperature, vehicle speed, engine revolutions per minute (RPM), transmission gear, manifold vacuum, or any other parameter for the purpose of activating, modulating, delaying, or deactivating the operation of the emission control system.

(6) “Average” means the arithmetic mean.

(7) “Backpressure Monitor” means a device that includes a sensor for measuring the engine backpressure upstream of a hardware-based diesel emission control system or component thereof installed in the exhaust system and an indicator to notify the operator when the backpressure exceeds specified high and in some cases low backpressure limits, as defined by the engine manufacturer or the applicant for verification of a diesel emission control strategy.

(8) “Baseline” means the test of a vehicle or engine without the diesel emission control strategy implemented.

(9) “Cold Start” means the start of an engine only after the engine oil and water temperatures are stabilized between 68 and 86 degrees F after a minimum of 15 minutes.

(10) “Diesel emission control strategy” or “Diesel emission control system” means any device, system, or strategy employed with an in-use diesel vehicle or piece of equipment that is intended to reduce emissions. Examples of diesel emission control strategies include, but are not limited to, particulate filters, diesel oxidation catalysts, selective catalytic reduction systems, fuel additives used in combination with particulate filters, alternative diesel fuels, and combinations of the above.

(11) “Diesel Emission Control Strategy Family Name.” See Section 2706(g)(2).

(12) “Diesel Engine” means an internal combustion engine with operating characteristics significantly similar to the theoretical diesel com-

bustion cycle. The primary means of controlling power output in a diesel cycle engine is by limiting the amount of fuel that is injected into the combustion chambers of the engine. A diesel cycle engine may be petroleum-fueled (i.e., diesel-fueled) or alternate-fueled.

(13) “Durability” means the ability of the applicant’s diesel emission control strategy to maintain a level of emissions below the baseline and maintain its physical integrity over some period of time or distance determined by the Executive Officer pursuant to these regulations. The minimum durability testing periods contained herein are not necessarily meant to represent the entire useful life of the diesel emission control strategy in actual service.

(14) “Emergency Standby Engine” means a diesel engine operated solely for emergency use, except as otherwise provided in airborne toxic control measures adopted by the ARB.

(15) “Emergency Use” means using a diesel engine to provide electrical power or mechanical work during any of the following events and subject to the following conditions:

(A) The failure or loss of all or part of normal electrical power service or normal natural gas supply to the facility,

(B) The failure of a facility’s internal power distribution system,

(C) The pumping of flood water or sewage to prevent or mitigate a flood or sewage overflow,

(D) The pumping of water for fire suppression or protection,

(E) The powering of ALSF–1 and ALSF–2 airport runway lights under category II or III weather conditions,

(F) Other conditions as specified in airborne toxic control measures adopted by the ARB.

(16) “Emission control group” means a set of diesel engines and applications determined by parameters that affect the performance of a particular diesel emission control strategy. The exact parameters depend on the nature of the diesel emission control strategy and may include, but are not limited to, certification levels of engine emissions, combustion cycle, displacement, aspiration, horsepower rating, duty cycle, exhaust temperature profile, and fuel composition. Verification of a diesel emission control strategy and the extension of existing verifications are done on the basis of emission control groups.

(17) “Executive Officer” means the Executive Officer of the Air Resources Board or the Executive Officer’s designee.

(18) “Executive Order” means the document signed by the Executive Officer that specifies the verification level of a diesel emission control strategy for an emission control group and includes any enforceable conditions and requirements necessary to support the designated verification.

(19) “Fuel Additive” means any substance designed to be added to fuel or fuel systems or other engine-related systems such that it is present in-cylinder during combustion and has any of the following effects: decreased emissions, improved fuel economy, increased performance of the entire vehicle or one of its component parts, or any combination thereof; or assists diesel emission control strategies in decreasing emissions, or improving fuel economy or increasing performance of a vehicle or component part, or any combination thereof. Fuel additives used in conjunction with diesel fuel may be treated as an alternative diesel fuel. See Section 2701 (a)(2).

(20) “Hot Start” means the start of an engine within four hours after the engine is last turned off. The first hot start test run should be initiated 20 minutes after the cold start for Federal Test Procedure testing following Section 86.1327–90 of the Code of Federal Regulations, Title 40, Part 86.

(21) “Portable Engine” means an engine designed and capable of being carried or moved from one location to another, except as defined in section 2701(a)(24). Engines used to propel mobile equipment of a motor vehicle of any kind are not portable. Indicators of portability include, but are not limited to, wheels, skids, carrying handles, dolly, trailer, or platform. A portable engine cannot remain at the same facility location for more than 12 consecutive rolling months or 365 rolling days, whichever occurs first, not including time spent in a storage facility. If it does remain

at the facility for more than 12 months, it is considered to be a stationary engine. The definitions in Title 13 California Code of Regulations section 2452(g) and section 2452(x) are incorporated by reference herein.

(22) “Regeneration”, in the context of diesel particulate filters, means the periodic or continuous combustion of collected particulate matter that is trapped in a particulate filter through an active or passive mechanism. Active regeneration requires a source of heat other than the exhaust itself to regenerate the particulate filter. Examples of active regeneration strategies include, but are not limited to, the use of fuel burners and electrical heaters. Passive regeneration does not require a source of heat for regeneration other than the exhaust stream itself. Examples of passive regeneration strategies include, but are not limited to, the use of fuel additives and the catalyst-coated particulate filter. In the context of NO_x reduction strategies, “regeneration” means the desorption and reduction of NO_x from NO_x adsorbers (or NO_x traps) during rich operation conditions.

(23) “Revoke” means to cancel the verification status of a diesel emission control strategy. If a diesel emission control strategy’s verification status is revoked by the Executive Officer, the applicant must immediately cease and desist selling the diesel emission control strategy to end-users.

(24) “Stationary Engine” means an engine that is designed to stay in one location, or remains in one location. An engine is stationary if any of the following are true:

(A) The engine or its replacement is attached to a foundation, or if not so attached, will reside at the same location for more than 12 consecutive months. Any engine that replaces engine(s) at a location, and is intended to perform the same or similar function as the engine(s) being replaced, will be included in calculating the consecutive time period. In that case, the cumulative time of all engine(s), including the time between the removal of the original engine(s) and installation of the replacement engine(s), will be counted toward the consecutive time period; or

(B) The engine remains or will reside at a location for less than 12 consecutive months if the engine is located at a seasonal source and operates during the full annual operating period of the seasonal source, where a seasonal source is a stationary source that remains in a single location on a permanent basis (at least two years) and that operates at that single location at least three months each year; or

(C) The engine is moved from one location to another in an attempt to circumvent the residence time requirements [Note: The period during which the engine is maintained at a storage facility shall be excluded from the residency time determination.] The definitions in Title 13 California Code of Regulations section 2452(g) and section 2452(x) are incorporated by reference herein.

(25) “Verification” means a determination by the Executive Officer that a diesel emission control strategy meets the requirements of this Procedure. This determination is based on both data submitted or otherwise known to the Executive Officer and engineering judgement.

NOTE: Authority cited: Sections 39002, 39003, 39500, 39600, 39601, 39650–39675, 40000, 43000, 43000.5, 43011, 43013, 43018, 43105, 43600 and 43700, Health and Safety Code. Reference: Sections 39650–39675, 43000, 43009.5, 43013, 43018, 43101, 43104, 43105, 43106, 43107 and 43204–43205.5, Health and Safety Code; and Title 17 California Code of Regulations Section 93000.

HISTORY

1. New section filed 5–12–2003; operative 6–11–2003 (Register 2003, No. 20).
2. Amendment of subsection (a)(2) filed 7–15–2004; operative 8–14–2004 (Register 2004, No. 29).
3. New subsections (a)(3), (a)(14)–(a)(15)(F), (a)(21) and (a)(24)–(a)(24)(C), repealer of subsections (a)(13), (a)(19) and (a)(22) and subsection renumbering filed 12–2–2004; operative 1–1–2005 (Register 2004, No. 49).

§ 2702. Application Process.

(a) Overview. Before submitting a formal application for the verification of a diesel emission control strategy for use with an emission control group, the applicant must submit a proposed verification testing protocol (pursuant to Section 2702(b)) at the Executive Officer’s discretion. To obtain verification, the applicant must conduct emission reduction testing (pursuant to Section 2703), durability testing (pursuant to Section 2704), a field demonstration (pursuant to Section 2705), and submit the

results along with comments and other information (pursuant to Sections 2706 and 2707) in an application to the Executive Officer, in the format shown in Section 2702(d). If the Executive Officer grants verification of a diesel emission control strategy, it will issue an Executive Order to the applicant identifying the verified emission reduction and any conditions that must be met for the diesel emission control strategy to function properly. After the Executive Officer grants verification of a diesel emission control strategy, the applicant must provide a warranty, conduct in-use compliance testing of the strategy after having sold or leased a specified number of units, and report the results to the Executive Officer (pursuant to Section 2709). A diesel emission control strategy that employs two or more individual systems or components must be tested and submitted for evaluation as one system. Applicants seeking verification of an alternative diesel fuel must follow the procedure described in Section 2710.

(b) Proposed Verification Testing Protocol. Before formally submitting an application for the initial verification of a diesel emission control strategy, the applicant must submit a proposed verification testing protocol at the Executive Officer’s discretion. The Executive Officer shall use the information in the proposed protocol to help determine whether the strategy relies on sound principles of science and engineering to control emissions, the need for additional analyses, and the appropriateness of allowing alternatives to the prescribed requirements. The protocol should include the following information:

(1) Identification of the contact persons, phone numbers, names and addresses of the responsible party proposing to submit an application.

(2) Description of the diesel emission control strategy’s principles of operation. A schematic depicting operation should be included as appropriate. It is the responsibility of the applicant to demonstrate that its product relies on sound principles of science and engineering to achieve emission reductions.

(A) If, after reviewing the proposed protocol, the Executive Officer determines that the applicant has not made a satisfactory demonstration that its product (diesel emission control strategy) relies on sound principles of science and engineering to achieve emission reductions, the Executive Officer shall notify the applicant of the determination in writing. The applicant may choose to withdraw from the verification process or submit additional materials and clarifications. The additional submittal must be received by the Executive Officer no later than 60 days from the date of the notification letter or the application may be suspended.

(B) If, after reviewing the additional submittal, the Executive Officer determines that the applicant has not yet made a satisfactory demonstration that its product relies on sound principles of science and engineering to achieve emission reductions, the application shall be suspended. If an application has been suspended, it may only be reactivated at the discretion of the Executive Officer.

(C) If at any time, the Executive Officer has reason to doubt the scientific or engineering soundness of a product, the Executive Officer may require the applicant to submit additional supporting materials and clarifications no later than 60 days from the date of the notification letter. If the additional submittal is not received by the Executive Officer by the deadline established in the notification letter, the application may be suspended or the existing verification may be revoked. In deciding whether to suspend an application or revoke an existing verification the Executive Officer will review submittals as provided in subsection (B) above.

(3) Preliminary parameters for defining emission control groups that are appropriate for the diesel emission control strategy. The Executive Officer will work with the applicant to determine appropriate emission control group parameters.

(4) The applicant’s plan for meeting the requirements of Sections 2703–2706. Existing test data may be submitted for the Executive Officer’s consideration. The protocol must focus on verification of the diesel emission control strategy for use with a single emission control group.

(5) A brief statement that the applicant agrees to provide a warranty pursuant to the requirements of section 2707.

(c) If an applicant submits a proposed verification testing protocol, the Executive Officer shall, within 30 days of its receipt, determine whether the applicant has identified an appropriate testing protocol to support an

application for verification and notify the applicant in writing that it may submit an application for verification. The Executive Officer may suggest modifications to the proposed verification testing protocol to facilitate verification of the diesel emission control strategy. All applications, correspondence, and reports must be submitted to:

CHIEF, HEAVY-DUTY DIESEL IN-USE STRATEGIES BRANCH
AIR RESOURCES BOARD
9528 TELSTAR AVENUE
EL MONTE, CA 91731

(d) Application Format. The application for verification of a diesel emission control strategy must follow the format shown below. If a section asks for information that is not applicable to the diesel emission control strategy, the applicant must indicate "not applicable." If the Executive Officer concurs with the applicant's judgement that a section is not applicable, the Executive Officer may waive the requirement to provide the information requested in that section.

1. Introduction
 - 1.1 Identification of applicant, manufacturer, and product
 - 1.2 Identification of type of verification being sought
 - 1.2.1 Description of emission control group selected
 - 1.2.2 Emission reduction claim
2. Diesel Emission Control Strategy Information
 - 2.1 General description of the diesel emission control strategy
 - 2.1.1 Discussion of principles of operation and system design
 - 2.1.2 Schematics depicting operation (as appropriate)
 - 2.2 Description of regeneration method
 - 2.2.1 Operating condition requirements for regeneration
 - 2.2.2 Thresholds and control logic to activate regeneration
 - 2.2.3 Description of backpressure monitor including thresholds and control logic
 - 2.3 Favorable operating conditions
 - 2.4 Unfavorable operating conditions and associated reductions in performance
 - 2.5 Fuel requirements and misfueling considerations
 - 2.6 Identification of failure modes and associated consequences
 - 2.7 Complete discussion of potential safety issues (e.g., *uncontrolled regeneration, lack of proper maintenance, unfavorable operating conditions, etc.*)
 - 2.8 Installation requirements
 - 2.9 Maintenance requirements
3. Alternative Diesel Fuel Information
 - 3.1 Information from Section 2710(b)
 - 3.2 Emission control group compatibility considerations
 - 3.3 Misfueling prevention strategies
4. Diesel Emission Control Strategy and Emission Control Group Compatibility
 - 4.1 Compatibility with the engine
 - 4.1.1 Discussion on calibrations and design features that may vary from engine to engine
 - 4.1.2 Effect on overall engine performance
 - 4.1.3 Effect on engine backpressure
 - 4.1.4 Additional load on the engine
 - 4.1.5 Effect on fuel consumption
 - 4.1.6 Engine oil consumption considerations
 - 4.2 Compatibility with the application
 - 4.2.1 Dependence of calibration and other design features on application characteristics
 - 4.2.2 Presentation of typical exhaust temperature profiles and other relevant field-collected data from representative applications within the emission control group
 - 4.2.3 Comparison of field-collected application data with operating conditions suitable for the diesel emission control strategy
5. Testing Information
 - 5.1 Emission reduction testing
 - 5.1.1 Test facility identification

5.1.2 Description of test vehicle and engine (*make, model year, engine family name, etc.*)

5.1.3 Test procedure description (*—pre-conditioning period, test cycle, etc.*)

5.1.4 Test results and comments

5.2 Durability testing

5.2.1 Test facility identification

5.2.2 Description of field application (where applicable)

5.2.3 Description of test vehicle and engine (*make, model year, engine family name, etc.*)

5.2.4 Test procedure description (*field or bench, test cycle, etc.*)

5.2.5 Test results and comments

5.2.6 Summary of evaluative comments from third-party for in-field durability demonstration (e.g., *driver or fleet operator*)

5.3 Field demonstration (where applicable)

5.3.1 Field application identification

5.3.2 Description of test vehicle and engine (*make, model year, engine family name, etc.*)

5.3.3 Engine backpressure and exhaust temperature graphs with comments

5.3.4 Summary of evaluative comments from third-party (e.g., *driver or fleet operator*)

6. References

7. Appendices

A. Laboratory test report information (*for all tests*)

A.1 Actual laboratory test data

A.2 Plots of engine backpressure and exhaust temperature

A.3 Driving traces for chassis dynamometer tests

A.4 Quality assurance and quality control information

B. Third-party letters or questionnaires describing in-field performance

C. Diesel emission control system label

D. Owner's manual (as described in Section 2706(i))

E. Other supporting documentation

(e) Within 30 days of receipt of the application, the Executive Officer shall notify the applicant whether the application is complete.

(f) Within 60 days after an application has been deemed complete, the Executive Officer shall determine whether the diesel emission control strategy merits verification and shall classify it as shown in Table 1:

Table 1. Verification Classifications for Diesel Emission Control Strategies

Pollutant	Reduction	Classification
PM	< 25%	Not verified
	≥ 25%	Level 1
		Level 1 Plus*
	≥ 50%	Level 2
		Level 2 Plus*
	≥ 85%, or ≤ 0.01 g/bhp-hr	Level 3
		Level 3 Plus*
NOx	< 15%	Not verified
	≥ 15%	Verified in 5% increments

*The diesel emission control strategy complies with the 20 percent NO₂ limit before January 1, 2009 (and after January 1, 2007).

The applicant and the Executive Officer may mutually agree to a longer time period for reaching a decision, and additional supporting documentation may be submitted by the applicant before a decision has been reached. The Executive Officer shall notify the applicant of the decision in writing and specify the verification level for the diesel emission control strategy and identify any terms and conditions that are necessary to support the verification.

(g) Extensions of an Existing Verification. If the applicant has verified a diesel emission control strategy with one emission control group and wishes to extend the verification to include additional emission control groups, it may apply to do so using the original test data, additional test data, engineering justification and analysis, or any other information

deemed necessary by the Executive Officer to address the differences between the emission control group already verified and the additional emission control group(s). Processing time periods follow sections (e) and (f) above.

(h) Design Modifications. If an applicant modifies the design of a diesel emission control strategy that has already been verified or is under consideration for verification by the Executive Officer, the modified version must be evaluated under this Procedure. The applicant must provide a detailed description of the design modification along with an explanation of how the modification will change the operation and performance of the diesel emission control strategy. To support its claims, the applicant must submit additional test data, engineering justification and analysis, or any other information deemed necessary by the Executive Officer to address the differences between the modified and original designs. Processing time periods follow sections (e) and (f) above.

(i) Treatment of Confidential Information. Information submitted to the Executive Officer by an applicant may be claimed as confidential, and such information shall be handled in accordance with the procedures specified in Title 17, California Code of Regulations, Sections 91000–91022. The Executive Officer may consider such confidential information in reaching a decision on a verification application.

(j) The Executive Officer may lower the verification level or revoke the verification status of a verified diesel emission control strategy family if there are errors, omissions or inaccurate information in the application for verification or supporting information.

NOTE: Authority cited: Sections 39002, 39003, 39500, 39600, 39601, 39650–39675, 40000, 43000, 43000.5, 43011, 43013, 43018, 43105, 43600 and 43700, Health and Safety Code. Reference: Sections 39650–39675, 43000, 43009.5, 43013, 43018, 43101, 43104, 43105, 43106, 43107 and 43204–43205.5, Health and Safety Code; and Title 17 California Code of Regulations Section 93000.

HISTORY

1. New section filed 5–12–2003; operative 6–11–2003 (Register 2003, No. 20).
2. Amendment of subsections (b) and (b)(2) and new subsections (b)(2)(A)–(C) and (b)(5) filed 12–2–2004; operative 1–1–2005 (Register 2004, No. 49).
3. Amendment of subsections (f)–(h) filed 2–9–2007; operative 2–9–2007 pursuant to Government Code section 11343.4 (Register 2007, No. 6).

§ 2703. Emission Testing Requirements.

(a) The applicant must test the diesel emission control strategy on an emission control group basis and identify the emission control group. The applicant must identify the test engines and vehicles, if applicable, by providing the engine family name, make, model, model year, and PM and NOx certification levels if applicable. The applicant must also describe the applications for which the diesel emission control strategy is intended to be used by giving examples of in-use vehicles or equipment, characterizing typical duty cycles, indicating any fuel requirements, and/or providing other application-related information.

(b) Test Engine Requirements and Pre-conditioning. The applicant may tune-up or rebuild test engines prior to, but not after, baseline testing unless rebuilding the engine is an integral part of the diesel emission control strategy. All testing should be performed with the test engine in a proper state of maintenance. Emissions of NO₂ from the test engine must not exceed 15 percent of the total baseline NOx emissions by mass. If there is a special category of engines with NO₂ emission levels that normally exceed 15 percent, this requirement may be adjusted for those engines at the discretion of the Executive Officer.

(c) Diesel Emission Control System Pre-conditioning. The engine or vehicle installed with a diesel emission control system must be operated for a break-in period of between 25 and 125 hours before emission testing. Note that special pre-conditioning requirements may apply. See section 2706(a)(4) for details.

(d) Test Fuel.

(1) The test fuel must meet the specifications in the California Code of Regulations (Sections 2280 through 2283 of Title 13), with the exception of the sulfur content or other properties previously identified by the applicant and approved by the Executive Officer.

(2) If operation or performance of a diesel emission control strategy is affected by fuel sulfur content, the sulfur content of the test fuel must be no less than 66 percent of the stated maximum sulfur content for the diesel emission control strategy, unless

(A) the testing is performed with fuel containing 15 ppmw or less sulfur for verification on 15 ppmw or less sulfur diesel fuel, or

(B) the testing is performed with diesel fuel commercially available in California for verification on CARB diesel fuel (i.e., fuel meeting the specifications in Title 13, California Code of Regulations, Sections 2280 through 2283).

(3) Baseline testing may be conducted with commercially available diesel fuel or diesel fuel with 15 ppmw or less sulfur. Baseline and control tests must be performed using the same fuel unless the control fuel is specified as a component of the emission control strategy.

(4) The test fuel (or batch of fuel purchased) must be analyzed using American Society for Testing and Materials (ASTM) test methods listed in Table 6 (See Section 2710), which are incorporated herein by reference. At a minimum, sulfur content, aromatic content, polycyclic aromatic hydrocarbons, nitrogen content, and cetane number must be reported. The Executive Officer may ask for additional properties to be reported if evidence suggests those properties may affect functioning of the diesel emission control strategy.

(e) Test Cycle. The diesel emission control strategy must be tested using the test cycles indicated in subparagraphs 1–3 below (summarized in Table 2) or with an alternative cycle(s) approved by the Executive Officer pursuant to subsection (f) below.

Table 2. Test Cycles for Emission Reduction Testing*

Test Type	On-Road	Off-Road (including portable engines)	Stationary
Engine	FTP Heavy-duty Transient Cycle (1 cold-start and 3 hot-starts)	Steady-state test cycle from ARB off-road regulations (3 hot-starts)	Steady-state test cycle from ARB off-road regulations (3 hot-starts)
Chassis	UDDS (3 hot-starts) and a low-speed test cycle per 2703 (e)(1)(B)(ii) (3 hot-starts).	Not Applicable	Not Applicable

*Additional hot-starts are required for NOx emission reductions between 15 to 25 percent (see Section 2703(h)).

FTP = Federal Test Procedure; UDDS = Urban Dynamometer Driving Schedule

(1) On-road Engines and Vehicles. For on-road diesel-fueled vehicles, the applicant may choose between engine dynamometer testing and chassis dynamometer testing, subject to the following conditions. Engine testing may be used for verification of an absolute engine emissions level or a percent emission reduction. Chassis testing may be used only to verify a percent emission reduction. The applicant may use emission test data to satisfy the durability test data requirement, but must follow the same testing option for the remaining durability tests (see Section 2704).

(A) Engine testing must consist of one cold-start and at least three hot-start tests using the Federal Test Procedure (FTP) Heavy-duty Transient Cycle for engines used in on-road applications, in accordance with the provisions in the Code of Federal Regulations, Title 40, Part 86, Subpart N.

(B) The applicant must conduct all chassis tests in accordance with the provisions of the Code of Federal Regulations, Title 40, Part 86, Subpart N insofar as they pertain to chassis dynamometer testing. Chassis testing must include two separate test cycles as follows:

1. At least three hot-start tests using the Urban Dynamometer Driving Schedule (UDDS) (see Code of Federal Regulations, Title 40, Part 86, appendix I (d)).

2. Three hot-start tests using a low-speed chassis test cycle representing urban stop-and-go traffic operation. The test cycle must include a repetitive series of idling periods immediately followed by events of maximum vehicle acceleration. The applicant can propose, for Executive

Officer approval, a low-speed cycle as applicable to the type of vehicle and vehicle operation for which the diesel emission control strategy is intended. The Executive Officer will provide examples (e.g., New York Bus Cycle) of appropriate test cycles upon request by the applicant during the verification process. The applicant may request that the Executive Officer waive the requirement to conduct the low-speed chassis test. In reviewing this request, the Executive Officer may consider all relevant information including, but not limited to, characteristics of the duty cycles in the emission control group and the principles of operation of the diesel emission control strategy.

3. The driver must follow the test cycles as closely as possible and must not deviate beyond the following tolerances (See Code of Federal Regulation, Part 86, Subpart M, 86.1215-85).

(i) The upper limit is 4 miles per hour higher than the highest point on the trace within 1 second of the given time.

(ii) The lower limit is 4 miles per hour lower than the lowest point on the trace within 1 second of the given time.

(iii) Speed variations greater than the tolerances (such as may occur during gear changes or braking spikes) are acceptable, provided they occur for less than 2 seconds on any occasion and are clearly documented as to the time and speed at that point of the test cycle.

(iv) Speeds lower than those prescribed are acceptable, provided the vehicle is operated at maximum available power during such occurrences.

(C) For any diesel emission control strategy intended to reduce NOx from on-road applications, the following requirements apply: (i) The applicant must identify and discuss the effects of elevated NOx emissions on the diesel emission control strategy (emissions of NOx that are significantly greater than certified levels are said to be elevated, and may result, for example, from the activation of an AECD that advances fuel injection timing under cruise conditions). The applicant's discussion must include effects on emission reduction performance, durability, and safety considerations, how the strategy would respond to elevated NOx emissions that do not occur at the time the strategy is calibrated, and must be supported by engineering justification and any pertinent data. (ii) The applicant must perform three hot-start tests with an additional test cycle that gives rise to significant periods of elevated NOx emissions, except as provided below.

1. The applicant may request that the Executive Officer provide assistance with determining an engine or chassis test cycle or may propose a test cycle for approval by the Executive Officer. The Executive Officer will evaluate the proposed test cycle based on its representativeness of real-life operation and consistency with established procedures for determining off-cycle emissions.

2. The applicant may request that the Executive Officer waive the requirement to conduct this additional testing. In reviewing the request, the Executive Officer may consider all relevant information including, but not limited to, the principles of operation of the diesel emission control strategy and the availability of an appropriate test cycle.

(2) Off-road Engines and Equipment (including portable engines). For off-road diesel-fueled vehicles and equipment, the applicant must follow the steady-state test procedure outlined in the ARB off-road regulations (California Code of Regulations, Title 13, Section 2423 and the incorporated California Exhaust Emission Standards and Test Procedures for New 2000 and Later Off-Road Compression-Ignition Engines, Part I-B). A minimum of three hot-start tests must be conducted using the specified test cycle. Applicants may request that the Executive Officer consider alternative test cycles, as described in subsection (f).

(3) Stationary Engines. For stationary engines, the applicant must follow the steady-state test procedure outlined in the ARB off-road regulations (as referenced in (2) above). A minimum of three hot-start tests must be conducted using the specified test cycle. Applicants may request that the Executive Officer consider alternative test cycles and methods, as described in subsection (f).

(f) Alternative Test Cycles and Methods. The applicant may request the Executive Officer to approve an alternative test cycle or method in

place of a required test cycle or method. In reviewing this request, the Executive Officer may consider all relevant information including, but not limited to, the following:

(1) Test procedures specified in airborne toxic control measures adopted by the ARB, e.g. the Airborne Toxic Control Measure for Stationary Compression Ignition Engines,

(2) Similarity of average speed, percent of time at idle, average acceleration, and other characteristics to the specified test cycle or method and in-use duty cycle,

(3) Body of existing test data generated using the alternative test cycle or method,

(4) Technological necessity, and

(5) Technical ability to conduct the required test.

(g) Test Run. The number of tests indicated in Table 2 must be run for both baseline (without the diesel emission control strategy implemented) and control configurations. For strategies that include exhaust aftertreatment, engine backpressure and exhaust temperature must be measured and recorded on a second-by-second basis (1 Hertz) during at least one baseline run and each of the control test runs.

(h) Verification of NOx Emission Reductions. The procedure for verifying NOx reductions depends on the magnitude and nature of the claimed reductions as follows:

(1) For NOx reductions of 25 percent or more below the baseline NOx emissions, the testing protocol described in (e) may be used.

(2) For NOx reductions of less than 25 percent below the baseline NOx emissions, additional hot-start test runs are required to attain equivalent confidence in the results.

(A) For NOx reductions equal to or more than 20 percent, but less than 25 percent, each set of three hot-starts in paragraph (e) above must be augmented to five hot-starts

(B) For NOx reductions equal to or more than 15 percent, but less than 20 percent, each set of three hot-starts in paragraph (e) above must be augmented to nine hot-starts.

(i) Emissions During Particulate Filter Regeneration Events. For any diesel emission control strategy that has a distinct regeneration event, emissions that occur during the event must be measured and taken into account when determining the net emission reduction efficiency of the system. If a regeneration event will not occur during emission testing, applicants may pre-load the diesel emission control system with diesel PM to force such an event to occur during testing, subject to the approval of the Executive Officer. Applicants must provide data or engineering analysis indicating when events occur on test cycles and in actual operation (e.g., backpressure data).

(j) Results. For all valid emission tests used to support emission reduction claims, the applicant must report emissions of total PM, non-methane hydrocarbons or total hydrocarbons (whichever is used for the relevant engine or vehicle certification), oxides of nitrogen, nitrogen dioxide, carbon monoxide, and carbon dioxide.

(1) For mobile sources, or for engines tested using an engine dynamometer, emissions must be reported in grams/mile (g/mile) or grams/brake horsepower-hour (g/bhp-hr).

(2) For stationary engines, gaseous and particulate matter emissions must be reported as required by the test methods approved by the Executive Officer.

(k) Incomplete and Aborted Tests. The applicant must identify all incomplete and aborted tests and explain why those tests were incomplete or aborted.

(l) Additional Analyses. The Executive Officer may require the applicant to perform additional analyses if there is reason to believe that the use of a diesel emission control strategy may result in the increase of toxic air contaminants, other harmful compounds, or a change in the nature or amount of the emitted particulate matter.

(1) In its determination, the Executive Officer may consider all relevant data, including but not limited to the following:

(A) The addition of any substance to the fuel, intake air, or exhaust stream,

(B) Whether a catalytic reaction is known or reasonably suspected to increase toxic air contaminants or ozone precursors,

(C) Results from scientific literature,

(D) Field experience, and

(E) Any additional data.

(2) These additional analyses may include, but are not limited to, measurement of the following:

(A) Benzene

(B) 1,3-butadiene

(C) Formaldehyde

(D) Acetaldehyde

(E) Polycyclic aromatic hydrocarbons (PAH)

(F) Nitro-PAH

(G) Dioxins

(H) Furans

(3) The Executive Officer will determine appropriate test methods for additional analyses in consultation with the applicant.

(m) Quality Control of Test Data. The applicant must provide information on the test facility, test procedure, and equipment used in the emission testing. For data gathered using on-road and off-road test cycles and methods, applicants must provide evidence establishing that the test equipment used meets the specifications and calibrations given in the Code of Federal Regulations, Title 40, Part 86, subpart N.

(n) The Executive Officer may, with respect to any diesel emission control strategy sold, leased, offered for sale, or manufactured for sale in California, order the applicant or strategy manufacturer to make available for testing and/or inspection a reasonable number of diesel emission control systems, and may direct that they be delivered at the applicant's expense to the state board at the Haagen-Smit Laboratory, 9528 Telstar Avenue, El Monte, California or where specified by the Executive Officer. The Executive Officer may also, with respect to any diesel emission control strategy being sold, leased, offered for sale, or manufactured for sale in California, have an applicant test and/or inspect a reasonable number of units at the applicant or manufacturer's facility or at any test laboratory under the supervision of the Executive Officer.

NOTE: Authority cited: Sections 39002, 39003, 39500, 39600, 39601, 39650-39675, 40000, 43000, 43000.5, 43011, 43013, 43018, 43105, 43600 and 43700, Health and Safety Code. Reference: Sections 39650-39675, 43000, 43009.5, 43013, 43018, 43101, 43104, 43105, 43106, 43107 and 43204-43205.5, Health and Safety Code; and Title 17 California Code of Regulations Section 93000.

HISTORY

1. New section filed 5-12-2003; operative 6-11-2003 (Register 2003, No. 20).
2. Amendment of subsections (e)(2)-(3), new subsection (f)(1) and subsection renumbering filed 12-2-2004; operative 1-1-2005 (Register 2004, No. 49).
3. Amendment of subsections (b) and (c) filed 2-9-2007; operative 2-9-2007 pursuant to Government Code section 11343.4 (Register 2007, No. 6).

§ 2704. Durability Testing Requirements.

(a) The applicant must demonstrate, to the satisfaction of the Executive Officer, the durability of the applicant's diesel emission control strategy through an actual field or laboratory-based demonstration combined with chassis or engine dynamometer-based emission tests. If the applicant chooses a laboratory-based durability demonstration, an additional field demonstration will be required to demonstrate in-field compatibility (pursuant to Section 2705). If the applicant has demonstrated the durability of the identical system in a prior verification or has demonstrated durability through field experience, the applicant may request that the Executive Officer accept the previous demonstration in fulfillment of this requirement. In evaluating such a request, the Executive Officer may consider all relevant information including, but not limited to, the similarity of baseline emissions and application duty cycles, the relationship between the emission control group used in previous testing and the current emission control group, the number of engines tested, evidence of successful operation and user acceptance, and published reports.

(b) Engine Selection. Subject to the approval of the Executive Officer, the applicant may choose the engine and application to be used in the durability demonstration. The engine and application must be representa-

tive of the emission control group for which verification is sought. The selected engine need not be the same as the engine used for emission testing, but if the applicant does use the same engine, the emission testing may also be used for the initial durability tests. Emissions of NO₂ from the emissions test engine must not exceed 15 percent of the total baseline NO_x emissions by mass. If there is a special category of engines with NO₂ emission levels that normally exceed 15 percent, this requirement may be adjusted for those engines at the discretion of the Executive Officer.

(c) Test Fuel.

(1) The test fuel must meet the specifications in the California Code of Regulations (Sections 2280 through 2283 of Title 13), with the exception of the sulfur content or other properties previously identified by the applicant and approved by the Executive Officer.

(2) If operation or performance of a diesel emission control strategy is affected by fuel sulfur content, the sulfur content of the test fuel must be no less than 66 percent of the stated maximum sulfur content for the diesel emission control strategy, unless

(A) the testing is performed with fuel containing 15 ppmw or less sulfur for verification on 15 ppmw or less sulfur diesel fuel, or

(B) the testing is performed with diesel fuel commercially available in California for verification on CARB diesel fuel (i.e., fuel meeting the specifications in Title 13, California Code of Regulations, Sections 2280 through 2283).

(3) Baseline testing may be conducted with commercially available diesel fuel or diesel fuel with 15 ppmw or less sulfur. Baseline and control tests must be performed using the same fuel unless the control fuel is specified as a component of the emission control strategy.

(4) The test fuel (or batch of fuel purchased) must be analyzed using American Society for Testing and Materials (ASTM) test methods listed in Table 6 (See Section 2710), which are incorporated herein by reference. At a minimum, sulfur content, aromatic content, polycyclic aromatic hydrocarbons, nitrogen content, and cetane number must be reported. The Executive Officer may ask for additional properties to be reported if evidence suggests those properties may affect functioning of the diesel emission control strategy.

(d) Service Accumulation. The durability demonstration consists of an extended service accumulation period in which the diesel emission control strategy is implemented in the field or in a laboratory, with emission reduction testing before and after the service accumulation. Service accumulation begins after the first emission test and concludes before the final emission test. The pre-conditioning period required in Section 2703 (c) cannot be used to meet the service accumulation requirements.

(1) Minimum Durability Demonstration Periods. The minimum durability demonstration periods are shown in Table 3, below. For strategies that include exhaust aftertreatment, engine backpressure and exhaust temperature must be measured and recorded for 1000 hours or over the entire durability period (whichever is shorter). The applicant may propose a sampling scheme for approval by the Executive Officer. The sampling scheme may include, but is not limited to, logging only significant changes in a parameter, averages, or changes above some threshold value. Data must be submitted electronically in columns as a text file or another format approved by the Executive Officer.

Table 3. Minimum Durability Demonstration Periods

Engine Type	Minimum Durability Demonstration Period
On-Road	50,000 miles or 1000 hours
Off-Road (including portable engines) and Stationary	1000 hours
Stationary Emergency Standby Engines	500 hours

(2) Fuel for Durability Demonstrations. The fuel used during durability demonstrations should be equivalent to the test fuel, or a fuel with properties less favorable to the durability of the emission control strategy. Durability demonstrations may, at the applicant's option and with the Executive Officer's approval, include intentional misfueling events so that data on the effects of misfueling may be obtained.

(e) Third-Party Statement for In-field Durability Demonstrations. For in-field durability demonstrations, the applicant must provide a written statement from an Executive Officer approved third party, such as the owner or operator of the vehicle or equipment used, at the end of the durability period. The statement must describe overall performance, maintenance required, problems encountered, and any other relevant comments. The results of a visual inspection conducted by the third party at the end of the demonstration period must also be described. The description should comment on whether the diesel emission control strategy is physically intact, securely mounted, leaking any fluids, and should include any other evaluative observations.

(f) Test Cycle. Testing requirements are summarized in Table 4. Note that the same cycle(s) must be used for both the initial and final tests.

(1) On-Road Applications. The applicant must perform either chassis or engine dynamometer-based testing before beginning and after completion of the service accumulation as specified in Table 4. A minimum of three hot-start tests are required for chassis testing while a minimum of one cold-start and three hot-start tests are required for engine testing. Chassis testing requires an additional three hot-starts on a low-speed cycle as described in Section 2703(e)(1)(B)2. As indicated in Section 2703(e)(1)(B)2., the applicant may request the Executive Officer to waive the tests on a low-speed cycle. If a field durability demonstration is selected, the applicant must perform chassis dynamometer testing, or request that the Executive Officer consider engine dynamometer testing. In reviewing the request, the Executive Officer may consider all relevant information, including, but not limited to the following:

(A) Similarity of the field vehicle's engine to the laboratory engine, and

(B) Similarity of the diesel emission control system's calibration and set-up when installed on the field vehicle to that when installed on the laboratory engine.

(2) Off-road and Stationary Applications. The applicant must use the same cycle for the emission reduction testing as defined in Section 2703. A minimum of three hot-start tests is required.

(g) Test Run. The requirements for emissions reduction testing are summarized in Table 4, below. Note that special pre-conditioning requirements may apply. See section 2706(a)(4) for details.

(1) The diesel emission control strategy must undergo one set of emission tests before beginning and after completion of the service accumulation. Baseline testing with test repetitions as indicated in Table 4 must be conducted for either the initial test or the final test, but is suggested for both. If there are substantial test data from previous field studies or field demonstrations, applicants may request that the Executive Officer consider these in place of the initial emission tests.

(2) As an alternative to testing a single unit before and after the service accumulation period, the applicant may request that the Executive Officer consider the testing of two identical units, one that has been preconditioned and another that has completed the service accumulation period. In reviewing the request, the Executive Officer may consider all relevant information, including, but not limited to, the following:

(A) The effect of the diesel emission control strategy on engine operation over time. Strategies that cause changes in engine operation are likely not to qualify for this testing option.

(B) The quality of the evidence the applicant can provide to support that the two units are identical,

(C) Previous experience with similar or related technologies, and

(D) Whether the applicant is participating in the U.S. EPA verification process and has made an agreement with U.S. EPA to test two units.

(3) For strategies that include exhaust aftertreatment, engine backpressure and exhaust temperature must be measured and recorded on a

second-by-second basis (1 Hertz) during at least one baseline run and each of the control test runs.

Table 4. Emission Tests Required for Durability Demonstrations

Application	Test Type	<i>Initial Test (prior to service accumulation)</i> <i>Final Test (after completion of 100% of the service accumulation)</i>
On-Road	Engine	FTP Heavy-duty Transient Cycle (1 cold and 3 hot-starts)
	Chassis	UDDS (3 hot-starts) and a low-speed cycle per 2703 (e)(1)(B)2. (3 hot-starts)
Off-Road and portable engines	Engine	Steady-state test cycle from ARB off-road regulations or an alternative cycle (3 hot-starts)
Stationary	Engine	Steady-state test cycle from ARB off-road regulations or an alternative cycle (3 hot-starts)

(h) Maintenance During Durability Demonstration. Except for emergency engine repair, only scheduled maintenance on the engine and diesel emission control system and re-fill of additives (if any) may be performed during the durability demonstration. If normal maintenance includes replacement of any component of the diesel emission control system, the time (miles, years, or hours) between component change or refill must be reported with the results of the demonstration.

(i) Performance Requirements. The diesel emission control strategy must meet the following requirements throughout the durability demonstration period:

(1) If the applicant claims a percent emission reduction, the percent emission reduction must meet or exceed the initial verified percent emission reduction level.

(2) If the applicant claims to achieve 0.01 g/bhp-hr for PM, the PM emission level must not exceed 0.01 g/bhp-hr.

(3) The diesel emission control system must maintain its physical integrity. Its physical structure and all of its components not specified for regular replacement during the durability demonstration period must remain intact and fully functional.

(4) The diesel emission control strategy must not cause any damage to the engine, vehicle, or equipment.

(5) The backpressure caused by the diesel emission control strategy should not exceed the engine manufacturer's specified limits, or must not result in any damage to the engine.

(6) No maintenance of the diesel emission control system beyond that specified in its owner's manual will be allowed without prior Executive Officer approval.

(j) Conditional Verification for Off-road and Stationary Applications. If the Executive Officer determines that the diesel emission control strategy is technologically sound and appropriate for the intended application, he may grant a conditional verification for off-road and stationary applications upon completion of 33 percent of the minimum durability period. In making this determination, the Executive Officer may consider all relevant information including, but not limited to, the following: the design of the diesel emission control system, filter and catalyst substrates used, similarity of the system under consideration to verified systems, the intended application of the diesel emission control system, other relevant testing data, and field experience. Where conditional verification is granted, full verification must be obtained by completing the durability testing and all other remaining requirements. These requirements must be completed within a year after receiving conditional verification if laboratory testing is chosen and within three years if field testing is chosen. For the aforementioned time periods, conditional verification is equivalent to verification for the purposes of satisfying the requirements of in-use emission control regulations.

(k) Failure During the Durability Demonstration Period. If the diesel emission control strategy fails to maintain its initial verified percent emission reduction or emission level for any reason, the Executive Offi-

cer may downgrade the strategy to the verification level which corresponds to the lowest degraded performance observed in the durability demonstration period. If the diesel emission control strategy fails to maintain at least a 25 percent PM reduction or 15 percent NO_x reduction at any time during the durability period, the diesel emission control strategy will not be verified. If the diesel emission control strategy fails in the course of the durability demonstration period, the applicant must submit a report explaining the circumstances of the failure within 90 days of the failure. The Executive Officer may then determine whether to deny verification or allow the applicant to correct the failed diesel emission control strategy and either continue the durability demonstration or begin a new durability demonstration.

NOTE: Authority cited: Sections 39002, 39003, 39500, 39600, 39601, 39650–39675, 40000, 43000, 43000.5, 43011, 43013, 43018, 43105, 43600 and 43700, Health and Safety Code. Reference: Sections 39650–39675, 43000, 43009.5, 43013, 43018, 43101, 43104, 43105, 43106, 43107 and 43204–43205.5, Health and Safety Code; and Title 17 California Code of Regulations Section 93000.

HISTORY

1. New section filed 5–12–2003; operative 6–11–2003 (Register 2003, No. 20).
2. Amendment of subsection (d)(1), redesignation of portions of subsection (g) as new subsections (g)(1) and (g)(3) and new subsections (g)(2)–(g)(2)(D) filed 12–2–2004; operative 1–1–2005 (Register 2004, No. 49).
3. Amendment of subsections (b) and (g) filed 2–9–2007; operative 2–9–2007 pursuant to Government Code section 11343.4 (Register 2007, No. 6).

§ 2705. Field Demonstration Requirements.

(a) The applicant must demonstrate compatibility of its diesel emission control strategy in the field with at least one vehicle or piece of equipment belonging to the initial emission control group for which it seeks verification. Note that if the durability demonstration selected by the applicant is in-field, it may be used to satisfy the field demonstration requirement for that emission control group.

(1) Compatibility is determined by the Executive Officer based on the third-party statement (see part (c) of this section) and any other data submitted including backpressure data. A diesel emission control strategy is compatible with the chosen application if it:

- (A) Does not cause damage to the engine or engine malfunction
- (B) Does not cause backpressure outside of the engine manufacturer's specified limits or which results in any damage to the engine
- (C) Does not hinder or detract from the vehicle or equipment's ability to perform its normal functions
- (D) Is physically intact and well mounted with no signs of leakage or other visibly detectable problems

(2) To determine whether additional emission control groups require separate field demonstrations, the Executive Officer may consider all relevant information, including, but not limited to existing field experience and engineering justification and analysis.

(b) Test Period.

(1) For on- and off-road engines, and stationary engines not used in emergency generators, a vehicle or piece of equipment must be operated with the diesel emission control strategy installed for a minimum period of 200 hours or 10,000 miles, whichever occurs first.

(2) For stationary emergency standby engines, the emission control system must remain in the field for at least 30 days and operation must include:

- (A) 12 maintenance runs (allowing for engine cool down between runs), and
- (B) a minimum of two separate 4 hour sessions where the engine is operated under load (allowing engine cool down between runs).

(c) Reporting Requirements.

(1) For strategies that include exhaust aftertreatment, engine backpressure and exhaust temperature must be measured and recorded over the entire demonstration period. The applicant may propose a sampling scheme for approval by the Executive Officer. The sampling scheme may include, but is not limited to, logging only significant changes in a parameter, averages, or changes above some threshold value. Data must be sub-

mitted electronically in columns as a text file or another format approved by the Executive Officer.

(2) The applicant must provide a written statement from a third party approved by the Executive Officer, such as the owner or operator of the vehicle or equipment used in the field demonstration. The written statement must be provided at the end of the test period and must describe the following aspects of the field demonstration: overall performance of the test application and the diesel emission control strategy, maintenance performed, problems encountered, and any other relevant information. The results of a visual inspection conducted by the third party at the end of the demonstration period must also be described. The description should comment on whether the diesel emission control strategy is physically intact, securely mounted, leaking any fluids, and should include any other evaluative observations.

(d) Failure During the Field Demonstration. If the diesel emission control strategy fails in the course of the field demonstration, the applicant must submit a report explaining the circumstances of the failure within 90 days of the failure. The Executive Officer may then determine whether to deny verification or allow the applicant to correct the failed diesel emission control strategy and either continue the field demonstration or begin a new field demonstration.

NOTE: Authority cited: Sections 39002, 39003, 39500, 39600, 39601, 39650–39675, 40000, 43000, 43000.5, 43011, 43013, 43018, 43105, 43600 and 43700, Health and Safety Code. Reference: Sections 39650–39675, 43000, 43009.5, 43013, 43018, 43101, 43104, 43105, 43106, 43107 and 43204–43205.5, Health and Safety Code; and Title 17 California Code of Regulations Section 93000.

HISTORY

1. New section filed 5–12–2003; operative 6–11–2003 (Register 2003, No. 20).
2. Amendment of subsection (b)(2) filed 12–2–2004; operative 1–1–2005 (Register 2004, No. 49).

§ 2706. Other Requirements.

(a) Limit and Procedure for Measuring Nitrogen Dioxide (NO₂).

(1) In order for a diesel emission control strategy to be verified, effective January 1, 2007, the diesel emission control strategy must not increase emissions of NO₂ by more than an increment equivalent in mass to 30 percent of the baseline NO_x emission level. Effective January 1, 2009, the increment is reduced to 20 percent of the baseline NO_x emission level. The average of NO₂ emission levels from both the initial and final emissions tests described in Section 2704(g) is used to determine compliance with the NO₂ limit. For chassis dynamometer testing, only the NO₂ emission level over the UDDS cycle is used. The first NO₂ emission limit takes effect beginning on January 1, 2007. Diesel emission control strategies verified and installed prior to January 1, 2007 are exempted from this requirement. Those verified prior to January 1, 2007 will no longer be allowed for installation after January 1, 2007 unless they meet the appropriate NO₂ emission limit. After January 1, 2007, all diesel emission control strategies verified and installed must meet this requirement.

(2) NO₂ emissions are to be quantified by one of the following methods:

- (A) Two chemiluminescence analyzers,
- (B) A dual-path chemiluminescence analyzer, or
- (C) An alternative method approved by the Executive Officer.

(3) Analyzer configuration and determination of NO₂ emission level. For (2)(A) and (2)(B), the analyzers are to be fed from a heated and conditioned sample path. If two chemiluminescence analyzers are employed, they are to be simultaneously fed from a common heated sample path. One instrument (or path) shall be set to NO_x mode, while the second shall be set to nitric oxide (NO) mode. The instrument (or path) set to NO_x mode receives a sample that has passed through an NO₂-to-NO converter, and the resultant concentration is designated as total NO_x (NO+NO₂) in the sample. The instrument (or path) that is set to NO mode receives a sample that has not passed through the converter and quantifies the amount of NO only. The difference between NO and NO_x is the amount of NO₂ in the sample. Both NO and NO_x signals are recorded by an external data acquisition system at 1 Hertz. Using the average concentrations

of NO and NO_x over the entire test cycle, the conventional equation for calculating total NO_x (Code of Federal Regulations, Title 40, part 86, Subpart N) is then used to generate a gram per mile or g/bhp-hr value for both NO and NO_x. The resulting value for NO is then subtracted from that for NO_x to determine the gram per mile or g/bhp-hr value for NO₂. The instrument for measuring NO and NO_x must be calibrated in accordance with the NO_x calibration procedure as described in the Code of Federal Regulations, Title 40, part 86, Subpart N.

(4) Pre-conditioning requirements. If the Executive Officer determines that NO₂ emissions from a diesel emission control system could be affected by the presence of particulate matter or ash (as with a catalyzed diesel particulate filter), the system must be preconditioned according to the following procedure:

(A) Initial test (prior to service accumulation). Before conducting the initial emissions test, the unit being tested must be pre-conditioned as follows:

1. Install the unit on an engine that is an appropriate size for the unit, in a good state of maintenance, and certified to a PM standard equal to or more stringent than that of the engines in the emission control group for which the applicant seeks verification.

2. Operate the engine on one of the test cycles specified below for 25 to 30 hours. For on-road verifications, use either the FTP (hotstart) or UDDS cycle as identified in 2703(e), or the 13-mode Supplemental Emissions Test (SET) in the Code of Federal Regulations, Title 40, Part 86. For off-road and stationary verifications, use either the steady-state test cycle from ARB off-road regulations or the Nonroad Transient Cycle (NRTC) in the Code of Federal Regulations, Title 40, Part 1039. For up to 10 hours of the 25 to 30 hour period, an applicant may alternatively:

- a. Run the engine at high load such that the exhaust temperature is between 350 and 450 degrees Celsius, or

- b. Alternate back and forth between high and low loads such that the exhaust temperature never exceeds 525 degrees Celsius and the low load operation does not result in significant soot accumulation at the end of the pre-conditioning period.

3. Measure and record the backpressure on a second-by-second basis (1 Hertz) for at least the first three of the repeated test cycles (when the unit is brand new) and the last three (which follow the optional high load operation of up to 10 hours). Determine the average backpressure for each run.

4. Following the 25 to 30 hour period of operation, run three test repetitions (hot-start) of the emissions test cycle with the unit installed on the emissions test engine. If using a chassis dynamometer, run the UDDS. For each run, measure and record the backpressure on a second-by-second basis (1 Hertz) and determine the average. Proceed with the emissions test.

(B) Final test (after the service accumulation). Before conducting the final emissions test, the aged unit may need to be pre-conditioned. Run three repetitions (hot-start) of the emissions test cycle with the unit installed on the emissions test engine. If using a chassis dynamometer, run the UDDS. For each run, measure and record the backpressure on a second-by-second basis (1 Hertz) and determine the average. Proceed with the emissions test if the average backpressure is within 30 percent of the average backpressure recorded for the initial test unit. If the backpressure is too high, burn off excess soot or clean out excess ash as necessary. Run an additional repetition of the emissions test cycle (hot-start) to check if the unit complies with the backpressure criterion. Repeat as necessary.

(C) In-use compliance testing. Before conducting the first phase of in-use compliance emissions testing, the test units may need to be preconditioned. Using the required test cycle, measure and record the backpressure on a second-by-second basis (1 Hertz) of a cleaned (or pre-conditioned per subsection (A) above) reference unit installed on the engine to be used for in-use compliance testing. The reference unit must be identical to the test units. Measure and record the backpressure of the test units retrieved from the field using the same engine and test cycle as

used with the reference unit. If the backpressure of the test units is within 30 percent of the average backpressure recorded for the reference unit, they do not require preconditioning. Otherwise, the test units must be pre-conditioned following subsection (B) above. Other units may not be substituted for the selected test units.

(5) Determination of compliance with the NO₂ limit. Compliance with the NO₂ limit is based on the average incremental increase in NO₂ emissions as determined by the following equation:

$$\text{Percent Increase} = 100\% \times 0.5 \times [(NO_2^i - NO_2^b) + (NO_2^f - NO_2^b)] / NO_x^b$$

Where "NO₂" and "NO_x" stand for the mass-based emission rates of NO₂ and NO_x, respectively, as determined in subsection (a)(3) above, and the superscripts "i", "f", and "b" stand for "initial test", "final test", and "baseline test", respectively. For in-use compliance testing, the equation is:

$$\text{Percent Increase} = 100\% \times (NO_2^c - NO_2^b) / NO_x^b$$

Where the superscript "c" stands for the in-use compliance emissions testing conducted with the unit installed on the test engine.

(6) Alternative Method to Measure NO₂. The applicant may request the Executive Officer to approve an alternative method in place of the required methods. In reviewing this request, the Executive Officer may consider all relevant information including, but not limited to, the following:

- (A) Correlation of the alternative method with the methods stated in 2(A) or 2(B).

- (B) Body of existing data generated using the alternative method.

- (b) Limits on Other Pollutants.

- (1) Limits on non-methane hydrocarbon (NMHC) and NO_x. In order for a diesel emission control strategy to be verified, the applicant must comply with one of the following:

- (A) The diesel emission control strategy must not increase the emissions of either NMHC or NO_x by more than ten percent of the baseline emissions level as reported under section 2708 (a), or

- (B) For strategies verified prior to July 1, 2006, the applicant must provide sufficient evidence to demonstrate that the sum of NMHC and NO_x emissions with the strategy implemented does not exceed the baseline emission level sum of NMHC and NO_x as reported under Section 2708(a); or

- (C) For strategies verified on or after July 1, 2006, the applicant must provide atmospheric modeling data which indicates that widespread use of the strategy will not result in an increase in exposure of the public to ozone. The atmospheric model employed must be approved in advance by the Executive Officer.

- (2) Limit on CO.

- (A) On-road and Off-road (including portable) Engines. In order for a diesel emission control strategy to be verified, the diesel emission control strategy must not increase the emissions of CO greater than the current CO emission standards for new diesel engines adopted by the Air Resources Board and in effect at the time of verification.

- (B) Stationary Engines. In order for a diesel emission control strategy to be verified, the diesel emission control strategy must either:

1. Meet the applicable CO standard for off-road engines of the same model year and maximum rated power as specified in the Off-Road Compression-Ignition Engine Standards (title 13, CCR, section 2423). If no standards have been established for an off-road engine of the same model year and maximum rated power as the stationary diesel-fueled CI engine, then the stationary diesel-fueled CI engine shall meet the Tier 1 standard in title 13, CCR, section 2423 for an off-road engine of the same maximum rated power, irrespective of the stationary diesel-fueled CI engine's model; Or

2. Not increase the emissions of CO by more than 10 percent of the baseline emissions level as reported under section 2708(a).

- (3) Limit on Ammonia (NH₃). In order for a diesel emission control strategy to be verified, the diesel emission control strategy must not increase the emissions of ammonia to a level greater than 25 parts per mil-

lion by volume on average over any test cycle used to support emission reduction claims.

(A) Emissions of ammonia are to be quantified with a method subject to approval by the Executive Officer which employs Fourier Transform Infrared (FTIR) spectroscopy. The applicant may request the Executive Officer to approve an alternative method in place of the required method. In reviewing this request, the Executive Officer may consider all relevant information including, but not limited to, consistency with the method required by U.S. EPA and the body of existing data generated using the alternative method.

(B) If an applicant does not expect its diesel emission control strategy to increase emissions of ammonia, the applicant may request that the Executive Officer waive the requirement to conduct testing for ammonia emissions. In reviewing the request, the Executive Officer may consider all relevant information including, but not limited to, the principles of operation of the diesel emission control strategy, the existence of a mechanism for ammonia formation, and published emissions data from similar technologies.

(C) The strategy must be in compliance with applicable federal, state, and local government requirements relating to ammonia emissions, which may be more stringent than the limit presented here.

(4) Other Pollutants. In order for a diesel emission control strategy to be verified, the diesel emission control strategy must not increase the emissions of other pollutants by more than ten percent of the baseline emission level as reported under Section 2708(a).

(c) Fuel Additives. Diesel emission control strategies that use fuel additives must meet the following additional requirements for verification. Fuel additives must be used in combination with a level 3 diesel particulate filter unless they can be proven to the satisfaction of the Executive Officer to be safe for use alone. In addition, the applicant must meet the following requirements:

(1) The applicant must submit the exact chemical formulation of the fuel additive.

(2) Diesel emission control systems employing the dosing of an additive in conjunction with a diesel particulate filter must include an on-board monitor of the additive level in the reservoir, integrated with the diesel particulate filter. The on-board monitor for fuel additive must include indicators to notify the operator when the additive level becomes low and when the additive tank is empty. In addition, the on-board monitor must be capable of shutting off the supply of additive, if there is a detected diesel particulate filter problem.

(3) The applicant must submit to the Executive Officer environmental, toxicological, epidemiological, and other health-related data pertaining to the fuel additive every two years. The Executive Officer will review the data, including any new information, and may revoke the verification if the data indicate that the fuel additives cause, or are linked, to negative environmental, or health consequences.

(4) The applicant must conduct additional emission tests of fuel additives.

(A) Except as provided in (B) below, the additional emission tests must follow the same test procedures, test cycles, and number of test runs as indicated in Section 2703, except that the concentration of the additive must be at least 50 ppm or 10 times higher than that specified for normal use, whichever is highest. In all other respects, the additive in the high concentration test solutions must be identical to that in the fuel additive submitted for verification.

(B) The applicant may petition to use a concentration less than that required in (A), above, if the higher dose would result in catastrophic damage to the engine. The applicant must supply information on the failure modes, and the level of the additive that would trigger failure. The applicant must also supply information and data supporting the highest feasible dose for testing. An increase in emissions is not by itself sufficient to justify a dose lower than that required in (A), above, and must be correlated to potential engine damage. After reviewing this information and any other relevant information, the Executive Officer shall determine if

testing at a lower level could be accepted, or if testing must be conducted at 50 ppm or ten times the specified dose rate as required in (A).

(5) Fuel additives must be in compliance with applicable federal, state, and local government requirements. This requirement includes, but is not limited to, registration of fuel additives with the U.S. EPA.

(d) Engine Backpressure and Monitoring. During the emission and durability testing, the applicant must demonstrate that the backpressure caused by its diesel emission control system is within the engine manufacturer's specified limits, or will not result in any damage to the engine. Furthermore,

(1) If operation of the engine with the diesel emission control system installed will result in a gradual build-up of backpressure exceeding the engine's specified limits over time (such as due to the accumulation of ash in a filter), information describing how the backpressure will be reduced must be included.

(2) All filter-based diesel emission control systems must be installed with a backpressure monitor to notify the operator when the high backpressure limit, as specified by the engine manufacturer or included in the verification, is approached. The applicant must identify the high backpressure limits of the system in its application for verification.

(3) The Executive Officer reserves the right to require monitors that identify low backpressure limits in those cases where failures leading to low backpressure are unlikely to be detected, or have the potential to cause environmental damage beyond that caused by the engine prior to being equipped with the emission control strategy (e.g., systems that introduce additives into the fuel).

(e) Fuel and Oil Requirements. The applicant must specify the fuel and lubricating oil requirements necessary for proper functioning of the diesel emission control system. The applicant must also specify any consequences that will be caused by failure to comply with these requirements, as well as methods for reversing any negative consequences.

(f) Maintenance Requirements. The applicant must identify all normal maintenance requirements for the diesel emission control system. The applicant must specify the recommended intervals for cleaning and/or replacing components. Any components to be replaced within the defects warranty period must be covered with the original diesel emission control system package or provided free of charge to the customer at the appropriate maintenance intervals. Any normal maintenance items that the applicant does not intend to provide free of charge must be approved by the Executive Officer (the applicant is not required to submit cost information for these items). In addition, the applicant must specify procedures for proper handling of spent components and/or materials cleaned from the diesel emission control system. If any such materials are hazardous, the applicant must identify them as such in the owner's manual. For filter-based diesel emission control strategies, the applicant must include procedures for resetting any backpressure monitors after maintenance procedures are completed.

(g) System Labeling.

(1) The applicant must ensure that a legible and durable label is affixed on both the diesel emission control system and the engine on which the diesel emission control system is installed except as noted in (3) below. The required labels must identify the name, address, and phone number of the manufacturer, the diesel emission control strategy family name (defined in (2) below), a unique serial number, and the month and year of manufacture. The month and year of manufacture are not required on the label if this information can be readily obtained from the applicant by reference to the serial number. A scale drawing of a sample label must be submitted with the verification application. Unless an alternative is approved by the Executive Officer, the label information must be in the following format:

Name, Address, and Phone Number of Manufacturer
 Diesel Emission Control Strategy Family Name
 Product Serial Number
 ZZ-ZZ (Month and Year of manufacture, e.g., 06-02)

(2) Diesel Emission Control Strategy Family Name. Each diesel emission control strategy shall be assigned a family name defined as below: CA/MMM/YYYY/PM#/N##/APP/XXXXX

CA: Designates a diesel emission control strategy verified in California

MMM: Manufacturer code (assigned by the Executive Officer)

YYYY: Year of verification

PM#: PM verification level 1, 1+, 2, 2+, 3, or 3+ (e.g., PM3 means a level 3 PM emission control system).

N##: NOx verified reduction level in percent, if any (e.g., N25 means NOx reduction of 25 percent).

APP: Verified application which may include a combination of On-road (ON), Off-road (OF), or Stationary (ST)

XXXXX: Five alphanumeric character code issued by the Executive Officer

(3) The applicant may request that the Executive Officer approve an alternative format or waive the requirement to affix a label to the diesel emission control system or engine as described in this section. In reviewing this request, the Executive Officer may consider all relevant information including, but not limited to, the informational content of an alternative label as proposed by the applicant.

(h) Additional Information. The Executive Officer may require the applicant to provide additional information about the diesel emission control strategy or its implementation when such information is needed to assess environmental impacts associated with its use.

(i) Owner's Manual. The applicant must provide a copy of the diesel emission control system owner's manual, which must clearly specify at least the following information:

(1) Warranty statement including the warranty period over which the applicant is liable for any defects.

(2) Installation procedure and maintenance requirements for the diesel emission control system.

(3) Possible backpressure range imposed on the engine.

(4) Fuel consumption penalty, if any.

(5) Fuel requirements including sulfur limit, if any.

(6) Handling and supply of additives, if any.

(7) Instructions for reading and resetting the backpressure monitor.

(8) Requirements for lubrication oil quality and maximum lubrication oil consumption rate.

(9) Contact information for replacement components and cleaning agents.

(10) Contact information to assist an end-user to determine proper ways to dispose of waste generated by the diesel emission control strategy (e.g., ash accumulated in filter-based systems). At a minimum, the owner's manual should indicate that disposal must be in accordance with all applicable Federal, State and local laws governing waste disposal.

(j) Noise Level Control. Any diesel emission control system that replaces a muffler must continue to provide at a minimum the same level of exhaust noise attenuation as the muffler with which the vehicle was originally equipped by the vehicle or engine manufacturer. Applicants must ensure that the diesel emission control system complies with all applicable noise limits contained in Part 205, Title 40, Code of Federal Regulations and California Vehicle Code, Sections 27150, 27151 and 27200 through 27207, for the gross vehicle weight rating and year of manufacture of the vehicle for which the diesel emission control strategy is intended. All diesel emission control systems must be in compliance with applicable local government requirements for noise control.

(k) Multimedia Assessment for Fuel Strategies. Diesel emission control strategies which rely on fuel changes either through use of additives or through use of alternative diesel fuels must undergo an evaluation of the multimedia effects. No diesel emission control strategy that relies on the use of an additive or an alternative fuel may be verified unless a multimedia evaluation of the additive or alternative fuel has been conducted and the California Environmental Policy Council established by Public Resources Code section 71017 has determined that such use will not cause a significant adverse impact on the public health or the environ-

ment, pursuant to Health and Safety Code section 43830.8. No person shall sell, offer for sale, supply or offer for supply an alternative fuel or a diesel fuel in California that contains an additive for use in a verified diesel emission control strategy unless such a multimedia evaluation has been conducted and resulted in a determination that use of the alternative fuel or additive will not cause a significant adverse impact on the public health and the environment. The applicant shall bear the expense of conducting the multimedia assessment.

(l) Verification of a diesel emission control strategy by the Air Resources Board does not release the applicant from complying with all other applicable legal requirements.

NOTE: Authority cited: Sections 39002, 39003, 39500, 39600, 39601, 39650–39675, 40000, 43000, 43000.5, 43011, 43013, 43018, 43105, 43600, 43700 and 43830.8, Health and Safety Code. Reference: Sections 39650–39675, 43000, 43009.5, 43013, 43018, 43101, 43104, 43105, 43106, 43107, 43204–43205.5 and 43830.8, Health and Safety Code; Section 71017, Public Resources Code; and Title 17 California Code of Regulations Section 93000.

HISTORY

1. New section filed 5–12–2003; operative 6–11–2003 (Register 2003, No. 20).
2. Amendment of subsections (a)(1) and (a)(3), redesignation of portion of subsection (b)(2) as new subsection (b)(2)(A) and new subsections (b)(2)(B)–(b)(2)(B)2. filed 12–2–2004; operative 1–1–2005 (Register 2004, No. 49).
3. Amendment of subsections (a)(1) and (a)(3), new subsections (a)(4)–(a)(5), subsection renumbering, amendment of subsection (g)(2) and new subsection (l) filed 2–9–2007; operative 2–9–2007 pursuant to Government Code section 11343.4 (Register 2007, No. 6).

§ 2707. Warranty Requirements.

(a)(1) Product Warranty.

(A) The applicant must warrant to all owners, for ownership within the warranty period and lessees, for lease contracts within the warranty period, that its verified diesel emission control strategy is free from defects in design, materials, workmanship, or operation of the diesel emission control strategy which cause the diesel emission control strategy to fail to conform to the emission control performance level it was verified to, or to the other requirements of Sections 2700–2706, and 2710 for the minimum periods shown in Table 5, provided the operation of and conditions of use for the vehicle, equipment, engine, and diesel emission control strategy conform with the operation and conditions specified in the ARB's Executive Order.

(B) For each engine type and size listed in Table 5, the minimum defects warranty period is terminated by that listed event which occurs first. The warranty must cover the full repair or replacement cost of the diesel emission control strategy, including parts and labor.

(C) The warranty must also cover the full repair or replacement cost of returning engine components to the condition they were in prior to the failure, including parts and labor, for damage to the engine proximately caused by the verified diesel emission control strategy. Repair or replacement of any warranted part, including the engine, must be performed at no charge to the vehicle or engine owner. This includes only those relevant diagnostic expenses in the case in which a warranty claim is valid. The applicant may, at its option, instead pay the fair market value of the engine prior to the time the failure occurs.

(D) The repair or replacement of any warranted part otherwise eligible for warranty coverage, may be excluded from such warranty coverage if the diesel emission control strategy, vehicle or engine has been abused, neglected, or improperly maintained, and that such abuse, neglect, or improper maintenance was the direct cause of the need for the repair or replacement of the part.

(E) Failure of the vehicle or engine owner to ensure scheduled maintenance or to keep maintenance records for the vehicle, equipment, engine, or diesel emission control strategy may, but shall not per se, be grounds for disallowing a warranty claim.

(2) Installation Warranty

(A) A person or company who installs a verified diesel emission control strategy must warrant that the installation is free from defects in workmanship or materials which cause the diesel emission control strategy to fail to conform to the emission control performance level it was ver-

ified to or the other requirements of sections 2700–2706 for the minimum time periods shown in Table 5.

(B) For each engine type and size listed in Table 5, the minimum defects warranty period is terminated by that listed event whichever occurs first. The extent of the warranty coverage provided by installers must be the same as the warranty provided by the applicant as established in subsection (a)(1) and the same exclusions must apply.

Table 5. Minimum Warranty Periods

Engine Type	Engine Size	Minimum Warranty Period
	Light heavy-duty, 70 to 170 hp, Gross Vehicle Weight Rating (GVWR) less than 19,500 lbs.	5 years or 60,000 miles
On-Road	Medium heavy-duty, 170 to 250 hp, GVWR from 19,500 lbs. to 33,000 lbs.	5 years or 100,000 miles
	Heavy heavy-duty, exceeds 250 hp, GVWR exceeds 33,000 lbs.	5 years or 150,000 miles
	Heavy heavy-duty, exceeds 250 hp, GVWR exceeds 33,000 lbs., and the truck is: 1. Typically driven over 100,000 miles per year, and 2. Has less than 300,000 miles on the odometer at the time of installation.	2 years, unlimited miles
Off-Road (includes portable engines) and Stationary	Under 25 hp, and for constant speed engines rated under 50 hp with rated speeds greater than or equal to 3,000 rpm	3 years or 1,600 hours
	At or above 25 hp and under 50 hp	4 years or 2,600 hours
	At or above 50 hp	5 years or 4,200 hours

(b)(1) Product Warranty Statement. The applicant must furnish a copy of the following statement in the owner's manual. The applicant may include descriptions of circumstances that may result in a denial of warranty coverage, but these descriptions shall not limit warranty coverage in any way.

YOUR WARRANTY RIGHTS AND OBLIGATIONS

(Applicant's name) must warrant the diesel emission control system in the application for which it is sold or leased to be free from defects in design, materials, workmanship, or operation of the diesel emission control system which cause the diesel emission control system to fail to conform to the emission control performance level it was verified to, or to the requirements in the California Code of Regulations, Title 13, Sections 2700 to 2706, and 2710, for the periods of time listed below, provided there has been no abuse, neglect, or improper maintenance of your diesel emission control system, vehicle or equipment, as specified in the owner's manuals. Where a warrantable condition exists, this warranty also covers the engine from damage caused by the diesel emission control system, subject to the same exclusions for abuse, neglect or improper maintenance of your vehicle or equipment. Please review your owner's manual for other warranty information. Your diesel emission control system may include a core part (e.g., particulate filter, diesel oxidation catalyst, selective catalytic reduction converter) as well as hoses, connectors, a back pressure monitor (if applicable), and other emission-related assemblies. Where a warrantable condition exists, (applicant's name) will repair or replace your diesel emission control system at no cost to you including diagnosis, parts, and labor.

WARRANTY COVERAGE:

For a (engine size) engine used in a(n) (type of application) application, the warranty period will be (years or hours or miles of operation) whichever occurs first. If any emission-related part of your diesel emission control system is defective in design, materials, workmanship, or operation of the diesel emission control system thus causing the diesel emission control system to fail to conform to the emission control performance level it was verified to, or to the requirements in the California Code of Regulations, Title 13, Sections 2700 to 2706, and 2710, within the warranty period, as defined above, (Applicant's name) will repair or replace the diesel emission control system, including parts and labor.

In addition, (applicant's name) will replace or repair the engine components to the condition they were in prior to the failure, including parts and labor, for damage to the engine proximately caused by the verified diesel emission control strategy. This also includes those relevant diagnostic expenses in the case in which a warranty claim is valid. (Applicant's name) may, at its option, instead pay the fair market value of the engine prior to the time the failure occurs.

OWNER'S WARRANTY RESPONSIBILITY

As the (vehicle, engine, equipment) owner, you are responsible for performing the required maintenance described in your owner's manual. (Applicant's name) recommends that you retain all maintenance records and receipts for maintenance expenses for your vehicle, engine, or equipment, and diesel emission control system. If you do not keep your receipts or fail to perform all scheduled maintenance, (applicant's name) may have grounds to deny warranty coverage. You are responsible for presenting your vehicle, equipment, or engine, and diesel emission control system to a (applicant's name) dealer as soon as a problem is detected. The warranty repair or replacement should be completed in a reasonable amount of time, not to exceed 30 days. If a replacement is needed, this may be extended to 90 days should a replacement not be available, but must be performed as soon as a replacement becomes available.

If you have questions regarding your warranty rights and responsibilities, you should contact (Insert chosen applicant's contact) at 1-800-xxx-xxxx or the California Air Resources Board at 9528 Telstar Avenue, El Monte, CA 91731, or (800) 363-7664, or electronic mail: helpline@arb.ca.gov.

(2) Installation Warranty Statement. The installer must furnish the owner with a copy of the following statement.

YOUR WARRANTY RIGHTS AND OBLIGATIONS

(Installer's name) must warrant that the installation of a diesel emission control system is free from defects in workmanship or materials which cause the diesel emission control system to fail to conform to the emission control performance level it was verified to, or to the requirements in the California Code of Regulations, Title 13, Sections 2700 to 2706. The warranty period and the extent of the warranty coverage provided by (installer's name) must be the same as the warranty provided by the product manufacturer, and the same exclusions must apply.

OWNER'S WARRANTY RESPONSIBILITY

As the vehicle, engine, or equipment owner, you are responsible for presenting your vehicle, engine, or equipment, and diesel emission control system to (installer's name) as soon as a problem with the installation is detected.

If you have questions regarding your warranty rights and responsibilities, you should contact (Insert chosen installer's contact) at 1-800-xxx-xxxx or the California Air Resources Board at 9528 Telstar Avenue, El Monte, CA 91731, or (800) 363-7664, or electronic mail: helpline@arb.ca.gov.

(c) Diesel Emission Control Strategy Warranty Report. The applicant must submit a warranty report to the Executive Officer by April 1 of each calendar year. The applicant must also submit a warranty report within 30 calendar days if warranty claims exceed four percent of the number of diesel engines using the diesel emission control strategy. The warranty report must include the following information:

(1) Annual and cumulative sales, and annual and cumulative leases of diesel emission control systems (California only).

(2) Annual and cumulative production of diesel emission control systems (California only).

(3) Annual summary of warranty claims (California only). The summary must include:

(A) A description of the nature of the claims and of the warranty replacements or repairs. The applicant must categorize warranty claims for each diesel emission control strategy family by the component(s) replaced or repaired.

(B) The number and percentage of diesel emission control systems of each model for which a warranty replacement or repair was identified.

(C) A short description of the diesel emission control system component that was replaced or repaired under warranty and the most likely reason for its failure.

(4) Date the warranty claims were filed and the engine family and application the diesel emission control systems were used with.

(5) Delineate the reason(s) for any instances in which warranty service is not provided to end-users that file warranty claims.

NOTE: Authority cited: Sections 39002, 39003, 39500, 39600, 39601, 39650–39675, 40000, 43000, 43000.5, 43011, 43013, 43018, 43105, 43600 and 43700, Health and Safety Code. Reference: Sections 39650–39675, 43000, 43009.5, 43013, 43018, 43101, 43104, 43105, 43106, 43107 and 43204–43205.5, Health and Safety Code; and Title 17 California Code of Regulations Section 93000.

HISTORY

1. New section filed 5–12–2003; operative 6–11–2003 (Register 2003, No. 20).
2. Amendment of subsections (a)(1)(C)–(D), (a)(2)(B) and (b)(1) filed 12–2–2004; operative 1–1–2005 (Register 2004, No. 49).
3. Amendment of subsection (c) filed 2–9–2007; operative 2–9–2007 pursuant to Government Code section 11343.4 (Register 2007, No. 6).

§ 2708. Determination of Emissions Reduction.

(a) Calculation of Emissions Reduction. The emissions reduction verified for a diesel emission control strategy is based on the average of all valid test results before (baseline) and after (control) implementation of the diesel emission control strategy. Test results from both emission testing and durability testing are to be used. If the applicant chooses to perform either the initial or the final durability baseline test, but not both, it must use those results to calculate the reductions obtained in both the initial and final control tests.

(1) Percentage Reduction. The percentage reduction for a given pair of baseline and control test sets (where a “set” consists of all test cycle repetitions, e.g., the test set of 3 hot–start UDDS tests) is the difference between the average baseline and average control emissions divided by the average baseline emissions, multiplied by 100 percent. The average of all such reductions, as shown in the equation below, is used in the verification of a diesel emission control strategy.

$$\text{Percentage Reduction} = 100\% \times \frac{\sum (\text{baseline}_{\text{AVG}} - \text{control}_{\text{AVG}}) / \text{baseline}_{\text{AVG}}}{\text{Number of control test sets}}$$

Where:

Σ = sum over all control test sets
 $\text{baseline}_{\text{AVG}}$ or $\text{control}_{\text{AVG}}$ = average of emissions from all baseline or control test repetitions within a given set

(A) For any test set involving cold and hot starts, the time weighted emission result is to be calculated by weighting the cold–start emissions by one–seventh (1/7) and the hot–start emissions by six–sevenths (6/7) as shown below.

$$\text{Weighted Emission Result} = 1/7 * \text{average cold–start emissions} + 6/7 * \text{average hot–start emissions}$$

(B) For applicants seeking verification of NOx reductions from on–road applications, weighted test results from the additional test set described in subsection 2703(e)1(C) are included in the percentage reduction equation above. The Executive Officer shall determine an appropriate weighting factor in consultation with the applicant based on factors including, but not limited to, the amount of time that vehicles within the selected emission control group have elevated NOx emissions and the breadth of engines and applications encompassed by the emission control group.

(2) The absolute emission level is the average control emission level, as defined in the following equation:

$$\text{Absolute Emission Level} = \frac{\sum (\text{control}_{\text{AVG}})}{\text{Number of control test sets}}$$

(b) Categorization of the Diesel Emission Control Strategy. The Executive Officer shall categorize diesel emission control strategies to reduce PM and NOx emissions based on their verified emission reductions. Diesel emission control strategies that reduce NOx will be assigned their verified emission reduction in five percent increments. Diesel emission control strategies are categorized by their PM reductions as follows:

(1) Level one: the system has been demonstrated under these procedures to reduce PM emissions by at least 25 percent from the baseline emission level.

(2) Level two: the system has been demonstrated under these procedures to reduce PM emissions by at least 50 percent from the baseline emission level.

(3) Level three: the system has been demonstrated under these procedures to reduce PM emissions by at least 85 percent from the baseline emission level, or to achieve PM emission levels of 0.01 grams per brake–horsepower–hour (g/bhp–hr) or less.

NOTE: Authority cited: Sections 39002, 39003, 39500, 39600, 39601, 39650–39675, 40000, 43000, 43000.5, 43011, 43013, 43018, 43105, 43600 and 43700, Health and Safety Code. Reference: Sections 39650–39675, 43000, 43009.5, 43013, 43018, 43101, 43104, 43105, 43106, 43107 and 43204–43205.5, Health and Safety Code; and Title 17 California Code of Regulations Section 93000.

HISTORY

1. New section filed 5–12–2003; operative 6–11–2003 (Register 2003, No. 20).

§ 2709. In–Use Compliance Requirements.

(a) Applicability. These in–use compliance requirements apply to all diesel emission control strategies for on–road, off–road, and stationary applications. It is the responsibility of the applicant to perform in–use compliance testing for each verified diesel emission control strategy family (see Section 2706(g)(2)). Testing is required when 50 units within a given diesel emission control strategy family have been sold or leased in the California market. Applicants must submit an in–use compliance testing proposal for approval by the Executive Officer prior to the in–use compliance testing.

(b) Test Phases. In–use compliance testing, as described below in (c), (d), and (e), must be conducted at two different phases for each diesel emission control strategy family:

(1) Phase 1. Applicants must obtain and test diesel emission control systems once they have been operated for at least one year or within three months of their first maintenance, whichever comes first.

(2) Phase 2. Applicants must obtain and test diesel emission control systems once they have been operated between 60 and 80 percent of their minimum warranty period. For all systems used with heavy heavy–duty vehicles, the 60 to 80 percent window must be applied to the 5 year or 150,000 mile minimum warranty period.

(c) Selection of Diesel Emission Control Systems for Testing. For each diesel emission control strategy family and for both test phases, the Executive Officer will identify a representative sample of engines or vehicles equipped with diesel emission control systems for in–use compliance testing. The engines or vehicles equipped with the selected diesel emission control systems must have good maintenance records and may receive a tune–up or normal maintenance prior to testing. The applicant must obtain information from the end users regarding the accumulated mileage or hours of usage, maintenance records (to the extent practica-

ble), operating conditions and a description of any unscheduled maintenance that may affect the emission results.

(d) Number of Diesel Emission Control Systems to be Tested. The number of diesel emission control systems an applicant must test in each of the two test phases will be determined as follows:

(1) A minimum of four diesel emission control systems in each diesel emission control strategy family must be tested. For every system tested that does not reduce emissions by at least 90 percent of the lower bound of its initial verification level (or does not achieve an emission level less than or equal to 0.011 g/bhp-hr of PM) or does not meet the NO₂ requirement in section 2709(j), two more diesel emission control systems from the same family must be obtained and tested. The total number of systems tested shall not exceed ten per diesel emission control strategy family.

(2) At the discretion of the Executive Officer, applicants may begin by testing more than the minimum of four diesel emission control systems. Applicants may concede failure of an emission control system before testing a total of ten diesel emission control systems.

(e) In-use Compliance Emission Testing. Applicants must follow the testing procedure used for emission reduction verification as described in Section 2703 (both baseline and control tests are required), and special pre-conditioning requirements may apply (see section 2706(a)(4) for details). In addition, applicants must select the same test cycle(s) that they used to verify the diesel emission control strategy originally. If a diesel emission control strategy verified by U.S. EPA must perform engine dynamometer testing with the Heavy-duty Transient FTP cycle to fulfill the in-use compliance requirements of that program, but was verified by the Executive Officer with chassis dynamometer testing, the Executive Officer will also accept testing with the Heavy-duty Transient FTP cycle for the in-use compliance requirements of this Procedure. If a diesel emission control strategy fails catastrophically during the in-use compliance testing, the applicant must provide an investigative report detailing the causes of the failure to the Executive Officer within 90 days of the failure.

(f) The Executive Officer may approve an alternative to the in-use testing described above, on a case by case basis, if such testing is overly burdensome to either the applicant or to the end-users due to the nature of the industry the particular diesel emission control systems are used in. The proposed alternative must use scientifically-sound methodology and be designed to determine whether the diesel emission control strategy is in compliance with the emission reductions the Executive Officer verified it to.

(g) The Executive Officer may, with respect to any diesel emission control strategy sold, leased, offered for sale, or manufactured for sale in California, order the applicant or strategy manufacturer to make available for compliance testing and/or inspection a reasonable number of diesel emission control systems, and may direct that they be delivered at the applicant's expense to the state board at the Haagen-Smit Laboratory, 9528 Telstar Avenue, El Monte, California or where specified by the Executive Officer. The Executive Officer may also, with respect to any diesel emission control strategy being sold, leased, offered for sale, or manufactured for sale in California, have an applicant compliance test and/or inspect a reasonable number of units at the applicant or manufacturer's facility or at any test laboratory under the supervision of the ARB Executive Officer.

(h) In-Use Compliance Report. The applicant must submit an in-use compliance report to the Executive Officer within three months of completing each phase of testing. The following information must be reported for each of the minimum of four diesel emission control systems tested:

- (1) Parties involved in conducting the in-use compliance tests.
- (2) Quality control and quality assurance information for the test equipment.
- (3) Diesel emission control strategy family name and manufacture date.
- (4) Vehicle or equipment and type of engine (engine family name, make, model year, model, displacement, etc.) the diesel emission control system was applied to.

(5) Estimated mileage or hours the diesel emission control system was in use.

(6) Results of all emission testing.

(7) Summary of all maintenance, adjustments, modifications, and repairs performed on the diesel emission control system.

(i) The Executive Officer may request the applicant to perform additional in-use testing if the warranty claims exceed four percent of the number of diesel engines using the diesel emission control strategy, or based on other relevant information. As noted in Section 2707(c), if warranty claims exceed four percent of the number of diesel engines using the diesel emission control strategy, the applicant must notify the Executive Officer and submit a warranty report within 30 calendar days of that time.

(j) Conditions for Passing In-Use Compliance Testing. For a diesel emission control strategy to pass in-use compliance testing, emission test results must indicate that the strategy reduced emissions by at least 90 percent of the lower bound of the emission reduction level the Executive Officer originally verified it to. In addition, the strategy must meet the requirements of section 2706(a) with the exception that the strategy must not increase emissions of NO₂ by more than an increment equivalent in mass to 33 or 22 percent of the baseline NO_x emission level for systems verified under the 30 or 20 percent NO₂ limits, respectively. If the first four diesel emission control systems tested within a diesel emission control strategy family meet both of these standards, the diesel emission control strategy passes in-use compliance testing. If any of the first four diesel emission control systems tested within a diesel emission control strategy family fail to meet either of these standards, and more than four units are tested, at least 70 percent of all units tested must meet both standards for the diesel emission control strategy family to pass in-use compliance testing. For each failed test, for which the cause of failure can be attributed to the product and not to maintenance or other engine-related problems, two additional units must be tested, up to a total of ten units per diesel emission control strategy family.

(k) Failure of In-use Compliance Testing. If a diesel emission control strategy family does not meet the minimum requirements for compliance, the applicant must submit a remedial report within 90 days after the in-use compliance report is submitted. The remedial report must include:

- (1) Summary of the in-use compliance report.
- (2) Detailed analysis of the failed diesel emission control systems and possible reasons for failure.
- (3) Remedial measures to correct or replace failed diesel emission control systems as well as the rest of the in-use diesel emission control systems.

(l) The Executive Officer may evaluate the remedial report, annual warranty report, and all other relevant information to determine if the diesel emission control strategy family passes in-use compliance testing. The Executive Officer may request more information from the applicant. Based on this review, the Executive Officer may lower the verification level or revoke the verification status of a verified diesel emission control strategy family. The Executive Officer may also lower the verification level or revoke the verification status of a verified diesel emission control strategy family, if the applicant does not conduct in-use compliance testing in accordance with this section, or if the Executive Officer conducts in-use compliance testing in accordance with this section (including alternative testing) and the diesel emission control strategy family does not pass the standards in this section.

(m) The Executive Officer may lower the verification level or revoke the verification status of a verified diesel emission control strategy family if the applicant fails to observe the requirements of Sections 2706 or 2707. The Executive Officer must allow the applicant an opportunity to address the possible lowering or revocation of the verification level in a remedial report to the Executive Officer and the Executive Officer may make this determination based on all relevant information.

NOTE: Authority cited: Sections 39002, 39003, 39500, 39600, 39601, 39650-39675, 40000, 43000, 43000.5, 43011, 43013, 43018, 43105, 43600 and

43700, Health and Safety Code. Reference: Sections 39650–39675, 43000, 43009.5, 43013, 43018, 43101, 43104, 43105, 43106, 43107 and 43204–43205.5, Health and Safety Code; and Title 17 California Code of Regulations Section 93000.

HISTORY

1. New section filed 5–12–2003; operative 6–11–2003 (Register 2003, No. 20).
2. Amendment of subsection (b)(2) filed 12–2–2004; operative 1–1–2005 (Register 2004, No. 49).
3. Amendment of subsections (d)(1), (e) and (j) filed 2–9–2007; operative 2–9–2007 pursuant to Government Code section 11343.4 (Register 2007, No. 6).

§ 2710. Verification of Emission Reductions for Alternative Diesel Fuels.

(a) Applicability. This section applies to in-use strategies that include emission reductions from the use of alternative diesel fuels. The requirements in this section are in addition to those in Sections 2700–2709, except as specifically noted.

(b) Alternative Diesel Fuel Proposed Test Protocol. The applicant must submit a proposed test protocol which includes:

(1) References to criteria pollutant and toxic emissions sampling and analyses that are consistent with the requirements of Section 2703.

(2) Description and Parameters of Alternative Diesel Fuels.

(A) The applicant must describe the applicability of the alternative diesel fuel to diesel engines and identify any requirements for engine or fuel system modifications.

(B) The applicant must provide a general description of the alternative diesel fuel that includes the fuel type, fuel characteristics, fuel properties, fuel formulation, and chemical composition. The applicant for the candidate alternative diesel fuel must specify the following:

1. Identity, chemical composition, and concentration of fuel additives
2. Sulfur content
3. Total aromatic content
4. Total polycyclic aromatic hydrocarbon content
5. Nitrogen content
6. API gravity (density)
7. Distillation temperature distribution information, initial boiling point (IBP),
8. 10% recovered (REC), 50% REC, 90% REC, and end point (EP)

(C) The applicant must provide information on the candidate alternative diesel fuel that may affect engine performance, engine wear, and safety. The applicant for the candidate alternative diesel fuel must specify the following:

1. Viscosity (engine performance)
2. Fuel volatility (engine performance)
3. Ignition quality (engine performance)
4. Fuel operating temperatures (engine performance)
5. Engine wear tendencies (engine wear)
6. Corrosion (engine wear)
7. Lubricity (engine wear)
8. Fuel flash point (safety)

(D) The applicant must provide information on the candidate alternative diesel fuel to determine if there are chemicals in the fuel that may increase levels of toxic compounds or potentially form toxic compounds in the fuel. The applicant will conduct an analysis for metals and elements by a method specified by the applicant. Copper, iron, cerium, lead, cadmium, chromium, and phosphorus must be included in the analysis. Additional analysis for other toxic compounds may be required after reviewing the chemical composition of the candidate alternative diesel fuel and its additives. (Note: For alternative diesel fuels that are in part comprised of standard diesel fuel, such as emulsified diesel fuels, a toxic analysis of the diesel base fuel is not necessary).

(E) With the approval of the Executive Officer or designee, an applicant may also specify different fuel parameters and test methods that are appropriate to better characterize the candidate alternative diesel fuel.

(3) Upon review of the proposed test protocol, the Executive Officer or designee may require additional fuel components, parameters, and specifications to be determined. Reference Fuel Specifications. The ref-

erence fuel used in the comparative testing described in Section 2710(d) allows the applicant three options in selecting a reference fuel.

(4)(A) Option (1). The first option is to use a 10 percent aromatic California diesel reference fuel. The reference fuel must be produced from straight-run California diesel fuel by a hydroaromatization process and must have the characteristics set forth below under "Reference Fuel Specifications" (the listed ASTM methods are incorporated herein by reference).

(B) Option (2). The second option is to make the reference fuel from a custom blend using a "like" California diesel fuel made from a straight-run California diesel fuel by a hydroaromatization process and must have the characteristics set forth below under "Reference fuel Specifications. In addition the reference fuel must exhibit the bell shaped distillation curve characteristic of diesel fuel and no chemical feedstocks or pure chemicals such as solvents can be used as blend stocks. Details of the source and specifications of the feedstocks must be provided in the protocol and the processes and diesel feedstocks used to make the reference fuel must be reviewed and approved by the Executive Officer.

(C) Option (3). For alternative diesel fuels that contain diesel as a base fuel such as emulsified diesel fuel and 80:20 biodiesel fuel (80 percent diesel/20 percent biodiesel), the base diesel fuel used to make the alternative diesel fuel can be used in place of the 10 percent aromatic California diesel reference fuel. The base diesel fuel must be a certified, commercially available diesel fuel sold in California. The sulfur content, aromatic hydrocarbon content, polycyclic aromatic hydrocarbon content, nitrogen content, natural cetane number, API gravity, viscosity, and distillation specifications must be provided for the base diesel fuel used for the reference fuel.

Table 6. Fuel Test Methods and Reference Fuel Specifications

<i>Property</i>	<i>General Reference Fuel Specifications</i>	<i>ASTM Test Method</i>
Sulfur Content	500 ppm max	D5453–93
Aromatic Hydrocarbon content, Vol. %	10% max	D5186–96
Polycyclic Aromatic Hydrocarbon content %	1.4% max	D5186–96
Nitrogen Content	10 ppm max	D4629–96
Natural Cetane Number	48 min	D613–84
Gravity, API	33–39	D287–82
Viscosity at 40°, cSt	2.0–4.1	D445–83
Flash point, °F	130	D93–80
Distillation, °F		D86–96
IBP	340–420	
10%REC	400–490	
50%REC	470–560	
90%REC	550–610	
EP	580–660	

(5) The identity of the entity proposed to conduct the tests described in Section 2710(d);

(6) Reasonably adequate quality assurance and quality control procedures;

(7) Notification of any outlier identification and exclusion procedure that will be used, and

(8) A demonstration that any procedure meets generally accepted statistical principles.

(c) Application for Alternative Diesel Fuel Emission Reduction Verification. Upon completion of the tests, the applicant may submit an application for verification to the Executive Officer or designee. The application must follow the format in Section 2702(d) as applicable and include:

- (1) The approved test protocol,
- (2) All of the test data,

(3) Copy of the complete test log prepared in accordance with Section 2710(d)(3)(B).

(4) A demonstration that the candidate alternative diesel fuel meets the requirements for verification set forth in this section, and

(5) Such other information as the Executive Officer or designee may reasonably require.

(d) Emissions Test Procedures for Particulates, Nitrogen Oxides, Soluble Organic Fraction, Hydrocarbons, and Toxics.

(1) Criteria pollutants test requirements. In each test of a fuel, exhaust emissions of NO_x, NO₂ (pursuant to Section 2706(a)(2)), total PM, carbon monoxide, carbon dioxide, and hydrocarbons must be measured. In addition, for each test the soluble organic fraction (SOF) of the particulate matter in the exhaust emissions must be determined in accordance with the Air Resources Board's "Test Method for Soluble Organic Fraction (SOF) Extraction" dated April 1989, which is incorporated herein by reference.

(2) Toxic emissions sampling and analysis requirements. Exhaust emissions of formaldehyde, acetaldehyde, benzene, toluene, ethyl benzene, xylenes, butadiene, and polycyclic aromatic hydrocarbons are to be sampled and analyzed as specified in Table 7 for a minimum of three test samples collected from separate emission test repetitions.

Table 7. Toxics sampling and analysis ^{1,2}

Toxics	Method
Formaldehyde and acetaldehyde	ARB SOP 104
Benzene toluene, ethyl benzene, xylenes, and butadiene	ARB SOP 102/103
Polycyclic aromatic hydrocarbons	ARB method 429 ³

¹Additional toxics sampling may be required depending on the chemical composition of the additives in the fuel.

²At a minimum tunnel blanks are required prior to and after conducting toxic emissions sampling for the reference fuel and candidate alternative diesel fuel.

³PAH sampling consists of a filter to collect particulate PAHs and XAD resin to collect volatile PAHs. The sampling protocol needs to be included in the test protocol. Analysis of the samples will be performed by ARB method 429.

(3) Emission test requirements and test sequence for emissions test program.

(A) The applicant must follow the emission test requirements from Section 2703 subsections (a), (b), (k), (l), (m), and (n). For all on-road,

off-road, and stationary diesel vehicles and equipment, the applicant must conduct engine dynamometer testing using the Federal Test Procedure (FTP) Heavy-duty Transient Cycle, in accordance with the provisions in the Code of Federal Regulations, Title 40, Part 86, Subpart N. The applicant must use one of the following test sequences:

1. If both cold start and hot start exhaust emission tests are conducted, a minimum of five exhaust emission tests must be performed on the engine with each fuel, using either of the following sequences, where "R" is the reference fuel and "C" is the candidate alternative diesel fuel: RC RC RC RC (and continuing in the same order) or RC RC RC RC RC (and continuing in the same order). The engine mapping procedures and a conditioning transient cycle must be conducted with the reference fuel before each cold start procedure using the reference fuel. The reference cycle used for the candidate alternative diesel fuel must be the same as determined for the reference fuel.

2. If only hot start exhaust emission tests are conducted, one of the following test sequences must be used throughout the testing, where "R" is the reference fuel and "C" is the candidate alternative diesel fuel:

Alternative 1: RC RC RC RC (continuing in the same order for a given calendar day; a minimum of twenty individual exhaust emission tests must be completed with each fuel)

Alternative 2: RR CC RR CC (continuing in the same order for a given calendar day; a minimum of twenty individual exhaust emission tests must be completed with each fuel)

Alternative 3: RRR CCC RRR CCC (continuing in the same order for a given calendar day; a minimum of twenty-one individual exhaust emission tests must be completed with each fuel)

For all alternatives, an equal number of tests must be conducted using the reference fuel and the candidate alternative diesel fuel on any given calendar day. At the beginning of each calendar day, the sequence of testing must begin with the fuel that was tested at the end of the preceding day. The engine mapping procedures and a conditioning transient cycle must be conducted at the beginning of each day for the reference fuel. The reference cycle used for the candidate alternative diesel fuel must be the same as determined for the reference fuel.

3. Alternative test sequence. The applicant may request the Executive Officer to approve an alternative test sequence in place of the above test sequences. In reviewing this request, the Executive Officer may consider all relevant information including, but not limited to, the following:

- (i.) Statistical and scientific equivalence to 1. or 2., and
- (ii.) Body of existing test data using the alternative test sequence.

[The next page is 339.]

(B) The applicant must submit a test schedule to the Executive Officer or designee at least one week prior to commencement of the tests. The test schedule must identify the days on which the tests will be conducted, and must provide for conducting test consecutively without substantial interruptions other than those resulting from the normal hours of operations at the test facility. The Executive Officer or designee should be permitted to observe any tests. The party conducting the tests must maintain a test log which identifies all tests conducted, all engine mapping procedures, all physical modifications to or operational tests of the engine, all recalibrations or other changes to the test instruments, and all interruptions between tests, and the reason for each interruption. The party conducting the tests or the applicant must notify the Executive Officer or designee by telephone and in writing of any unscheduled interruption resulting in a test delay of 48 hours or more, and the reason for such delay. Prior to restarting the test, the applicant or person conducting the tests must provide the Executive Officer or designee with a revised schedule for the remaining tests. All tests conducted in accordance with the test schedule, other than any test rejected in accordance with an outlier identification and exclusion procedure included in the approved test protocol, must be included in the comparison of emissions.

(C) Upon approval of the Executive Officer or designee, the applicant may specify an alternative test sequence to Section 2710(d)(3)(A). The applicant must provide the rationale demonstrating that the alternative test sequence better characterizes the average emissions difference between the reference fuel and the alternative diesel fuel.

(e) Durability.

(1) The applicant must meet the durability demonstration requirements in Section 2704 subsections (a), (b), (d), (e), and (h) with the exceptions of emission testing and fuel requirements. If the applicant's diesel emission control strategy includes hardware components in addition to the alternative diesel fuel, then the emission testing requirements in Section 2704 apply.

(2) The applicant must provide test data obtained after completion of the service accumulation, described in Section 2704(d), showing that the candidate alternative diesel fuel does not adversely affect the performance and operation of diesel engines or cause premature wear or cause damage to diesel engines. This must include but is not limited to lubricity, corrosion, and damage to engine parts such as fuel injector tips. The applicant must provide data showing under what temperature and conditions the candidate alternative diesel fuel remains stable and usable in California.

(f) Multimedia Assessment for Fuel Strategies. Diesel emission control strategies which rely on fuel changes either through use of additives or through use of alternative diesel fuels must undergo an evaluation of the multimedia effects. No diesel emission control strategy that relies on the use of an additive or an alternative fuel may be verified unless a multimedia evaluation of the additive or alternative fuel has been conducted and the California Environmental Policy Council established by Public Resources Code section 71017 has determined that such use will not cause a significant adverse impact on the public health or the environment, pursuant to Health and Safety Code section 43830.8. No person shall sell, offer for sale, supply or offer for supply an alternative fuel or a diesel fuel in California that contains an additive for use in a verified diesel emission control strategy unless such a multimedia evaluation has been conducted and resulted in a determination that use of the alternative fuel or additive will not cause a significant adverse impact on the public health and the environment. The applicant shall bear the expense of conducting the multimedia assessment.

(g) Other Requirements.

(1) The candidate alternative diesel fuel must be in compliance with applicable federal, state, and local government requirements.

(2) Applicants planning to market fuel in California must contact and register with the U.S. EPA and the California Dept. of Food and Agriculture. Contacts are listed below.

OFFICE OF TRANSPORTATION AND AIR QUALITY
U.S. EPA HEAD QUARTERS
ARIEL RIOS BLVD.
1200 PENNSYLVANIA AVE, N.W.
WASHINGTON DC 20468
PHONE (202) 564-9303

PETROLEUM PRODUCTS/WEIGHMASTER ENFORCEMENT BRANCH
DIVISION OF MEASUREMENT STANDARDS
DEPT. OF FOOD AND AGRICULTURE
8500 FRUITRIDGE ROAD, SACRAMENTO CA 95826
PHONE (916) 229-3000

(3) Additional government agencies such as the California Energy Commission, Area Council Governments, and Local Air Quality Management Districts may be contacted to facilitate the marketing of alternative diesel fuel in California.

(h) Conditional Verification.

(1) The Executive Officer may grant a conditional verification for an alternative diesel fuel for off-road or stationary application only after the conditional verification for on-road application is granted. The Executive Officer may grant a conditional verification for on-road application if the applicant meets the following conditions:

(A) The applicant has applied for U.S. EPA registration of the alternative diesel fuel;

(B) The U.S. EPA has granted a research and development exemption or otherwise granted permission for the alternative diesel fuel to be used, and;

(C) All relevant requirements of Sections 2700–2710 have been met with the exception that registration with the U.S. EPA has not been completed.

(D) Multimedia Assessment as specified in Section 2710 (f).

(2) Where conditional verification is granted, full verification must be obtained by completing the U.S. EPA registration process within a year after receiving conditional verification. During that year, conditional verification is equivalent to verification for the purposes of satisfying the requirements of in-use emission control regulations.

(i) Extensions of an Existing Verification. See Section 2702 (g). The applicant may request the Executive Officer to approve a reduced number of emission tests when extending an existing verification to other emission control groups. In reviewing this request, the Executive Officer may consider all relevant information including, but not limited to, the following:

(1) Variability in the test results used for the existing verification,

(2) Characteristics of the duty cycles in the other emission control groups,

(3) The mechanism by which the alternative diesel fuel reduces emissions, and

(4) Body of existing test data.

Chapter 15. Additional Off-Road Vehicles and Engines Pollution Control Requirements

Article 1. Evaporative Emission Requirements for Off-Road Equipment

§ 2750. Purpose.

The purpose of these regulations is to:

(a) Set performance standards for gasoline-fueled, spark-ignited small off-road engines rated at equal to or less than 19 Kilowatts, and equipment utilizing such engines;

(b) In order to give manufacturers maximum flexibility, compliance programs are available beginning the 2006 model year. The two options are identified in section 2754(a) and in section 2754(b), and assume running loss emissions are controlled during engine operation, which result in greater evaporative emissions reductions. Manufacturers must select one option for each evaporative family they certify.

NOTE: Authority cited: Sections 39600, 39601 and 43013, Health and Safety Code. Reference: Section 43013, Health and Safety Code.

HISTORY

1. New chapter 15 (article 1), article 1 (sections 2750-2773) and section filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2751. Applicability.

(a) For the model year engines or equipment subject to this Article, no person shall:

- (1) manufacture for sale or lease for use or operation in California, or
- (2) sell or lease or offer for sale or lease for use or operation in California, or
- (3) deliver or import into California for introduction into commerce in California, without an evaporative emission control system that has been certified and labeled pursuant to this Article.

(b) This Article does not apply to:

- (1) engines or equipment that use compression-ignition engines, or engines or equipment powered with compressed natural gas (CNG), propane, liquefied petroleum gas (LPG), or liquefied natural gas (LNG).
- (2) engines or equipment that use small off-road engines manufactured in California for sale and use outside of California.
- (3) snowthrowers or ice augers.

NOTE: Authority cited: Sections 39600, 39601 and 43013, Health and Safety Code. Reference: Section 43013, Health and Safety Code.

HISTORY

1. New section filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2752. Definitions.

(a) The definitions in section 2401(a), and section 2403(b), Chapter 9, Title 13 of the California Code of Regulations, apply to this Article with the following additions:

- (1) "Coextruded Multilayer Fuel Tank" means a multi-layered high-density polyethylene fuel tank with a continuous nylon or ethylene vinyl alcohol layer(s) present within the walls of the tank.
- (2) "CP-901" means "Certification and Approval Procedures for Small Off-Road Engine Fuel Tanks", adopted July 26, 2004.
- (3) "CP-902" means "Certification and Approval Procedures for Evaporative Emission Control Systems", adopted July 26, 2004.
- (4) "Diurnal Emissions" means evaporative emissions resulting from the daily cycling of ambient temperatures and include resting losses, and permeation emissions, as measured according to test procedures incorporated in this Article.

(5) "Equivalent Fuel Tank" means a metal or coextruded multilayer fuel tank used on a small off-road engine. Fuel tanks approved per section 2767 are also deemed equivalent fuel tanks. The volume of an equivalent tank must be less than or equal to a nominal tank. An equivalent tank must be functionally equivalent to a nominal tank.

(6) "Equivalent Fuel Line" means a fuel line that permeates less than or equal to 15 grams per square meter per day when tested per SAE J1737 at 40°C or higher, and ambient pressure using Phase II California Reformulated Certification (CERT) fuel, CE10, CM10, CM15, or Indolene.

(7) "Evaporative Emissions" means emissions that result from the evaporation of reactive organic gases into the atmosphere.

(8) "Evaporative Emission Control System" means the fuel system and associated components that are designed to control evaporative emissions.

(9) "Evaporative Family" means a class of off-road engines or equipment that are grouped together based on similar fuel system characteristics

as they relate to evaporative emissions. For equipment less than or equal to 80 cc, the engine family and evaporative family are considered equivalent. For integrated equipment greater than 80 cc the engine family and the evaporative family may be considered equivalent at the manufacturer's discretion.

(10) "Evaporative Model Emission Limit (EMEL)" means the diurnal emissions level declared by the manufacturer for a model within an evaporative family. The declared level must be based on diurnal emissions test results for a worst case model of engine or equipment within the evaporative family, obtained by following Test Procedure 902.

(11) "Evaporative Family Emission Limit Differential (EFELD)" means the emission level differential between the effective standard level for a specific model and the EMEL declared for the model and is applicable to the entire evaporative family represented by the model.

(12) "Executive Order of Certification" means an order signed by the Executive Officer that documents certification of evaporative emission control systems on engines or equipment to the performance standards of this Article.

(13) "Holder" means the person to whom the Executive Order of Certification is issued.

(14) "Hot Soak Emissions" means evaporative emissions that occur for the one-hour period following the termination of engine operation.

(15) "Hydrocarbon" means a molecule composed primarily of carbon and hydrogen atoms.

(16) "Manufacturer" means either an engine manufacturer or equipment manufacturer.

(17) "Nominal Capacity" means the volume of fuel indicated by the manufacturer that represents the maximum recommended fill level.

(18) "Nominal Fuel Tank" means the fuel tank that is used by an engine or equipment manufacturer to certify the evaporative emissions control system on a small off-road engine.

(19) "Nominal Fuel Line" means the fuel line that is used by an engine or equipment manufacturer to certify the evaporative emissions control system on a small off-road engine.

(20) "Permeation Emissions" means evaporative emissions that result from reactive organic gas molecules penetrating through the walls of fuel system components and evaporating on outside surfaces, as measured by test procedures incorporated in this Article. Permeation emissions are a component of diurnal emissions, as measured by test procedures incorporated in this Article.

(21) "Permeation Rate" means the total mass of reactive organic gas molecules passing through the internal surface area of a fuel tank in a 24-hour period, as measured by test procedures incorporated in this Article.

(22) "Person" means any individual, association, partnership, limited liability company, or corporation.

(23) "Reactive Organic Gases (ROG)" means any compound of carbon, excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate, and excluding the following:

	CAS *
(1) methane;	[74-82-8]
methylene chloride (dichloromethane);	[75-09-2]
1,1,1-trichloroethane (methyl chloroform);	[71-55-6]
trichlorofluoromethane (CFC-11);	[75-69-4]
dichlorodifluoromethane (CFC-12);	[75-71-8]
1,1,2-trichloro-1,2,2-trifluoroethane (CFC-113);	[76-13-1]
1,2-dichloro-1,1,2,2-tetrafluoroethane (CFC-114);	[76-14-2]
chloropentafluoroethane (CFC-115);	[76-15-3]
chlorodifluoromethane (HCFC-22);	[75-45-6]
1,1,1-trifluoro-2,2-dichloroethane (HCFC-123);	[306-83-2]
2-chloro-1,1,1,2-tetrafluoroethane (HCFC-124);	[2837-89-0]
1,1-dichloro-1-fluoroethane (HCFC-141b);	[1717-00-6]
1-chloro-1,1-difluoroethane (HCFC-142b);	[75-68-3]
trifluoromethane (HFC-23);	[75-46-7]
pentafluoroethane (HFC-125);	[354-33-6]
1,1,2,2-tetrafluoroethane (HFC-134);	[359-35-3]
1,1,1,2-tetrafluoroethane (HFC-134a);	[811-97-2]
1,1,1-trifluoroethane (HFC-143a);	[420-46-2]

	CAS *
1,1-difluoroethane (HFC-152a);	[75-37-6]
cyclic, branched, or linear completely methylated siloxanes;	[various]
the following classes of perfluorocarbons:	[various]
(A) cyclic, branched, or linear, completely fluorinated alkanes;	
(B) cyclic, branched, or linear, completely fluorinated ethers with no unsaturations;	
(C) cyclic, branched, or linear, completely fluorinated tertiary amines with no unsaturations; and	
(D) sulfur-containing perfluorocarbons with no unsaturations and with the sulfur bonds only to carbon and fluorine; and	
(2) the following low-reactive organic compounds which have been exempted by the U.S. EPA:	
acetone;	[67-64-1]
ethane;	[74-84-0]
methyl acetate;	[79-20-9]
perchloroethylene; and	[127-18-4]
parachlorobenzotrifluoride (1-chloro-4-trifluoromethyl benzene).	[98-56-6]

* NOTE: Chemical Abstract Service (CAS) identification numbers have been included in brackets [] for convenience.

(24) "Running Loss Emissions" means evaporative emissions from a small off-road engine that occur while it is being operated.

(25) "SHED" (Sealed Housing Evaporative Determination) means the enclosure and associated equipment used to determine evaporative emissions. A SHED must meet the design specifications in 40 Code of Federal Regulations Part 86.107-96.

(26) "Small Production Volume Tank Exemption applies to all models with identical tanks produced by an engine or equipment manufacturer with total California sales of 400 or fewer units per year.

(27) "Structurally Integrated Nylon Fuel Tank" means a fuel tank having the following characteristics:

(A) The fuel tank is made of a polyamide material which:

1. does not contain more than 50 percent by weight of a reinforcing glass fiber and/or mineral filler; and
2. does not contain more than 10 percent by weight of impact modified polyamides which use rubberized agents such as EPDM rubber

(B) The fuel tank must be:

1. used in a chainsaw; or
2. of a pre-existing design that is substantially similar to a current production fuel tank used by the same manufacturer that is integrated into a major structural member where, as a single component, the fuel tank material is a primary structural/stress member for other major components such as the engine, transmission or cutting attachment.

(28) "TP-901" means "Test Procedure for Determining Permeation Emissions from Small Off-Road Engine Equipment Fuel Tanks," adopted July 26, 2004.

(29) "TP-902" means "Test Procedure for Determining Diurnal Evaporative Emissions from Small Off-Road Engines," adopted July 26, 2004.

(30) "Total Hydrocarbons" means the total mass of open chain and cyclic hydrocarbon molecules, as measured under the test procedures incorporated in this Article.

(31) "Walk-Behind Mower" means a grass-cutting product which has:

(A) A Class I vertical shaft engine that includes a blade brake mechanism that provides for compliance with ANSI B71.1 requirements;

(B) A horizontally fixed blade and/or string directly attached to the crankshaft of a vertical shaft engine.

NOTE: Authority cited: Sections 39600, 39601 and 43013, Health and Safety Code. Reference: Section 43013, Health and Safety Code.

HISTORY

1. New section filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2753. Certification Requirements and Procedures.

(a) Certification

Small off-road engines or equipment that use small off-road engines subject to this Article must contain evaporative emission control systems. For engines less than or equal to 80 cc, the evaporative emission

control system consists of the fuel tank only. The evaporative emission control systems must be certified annually to the performance-based or system design standards set out in sections 2754 through 2757 by the Air Resources Board. An Executive Order of Certification for such engines or equipment must be obtained prior to the sale or lease, or the offering for sale or lease, for use or operation in California or the delivery or importation for introduction into commerce in California. Engine manufacturers or equipment manufacturers may apply for an Executive Order of Certification. Applicants must follow the certification procedures outlined in CP-901, adopted July 26, 2004 or CP-902, July 26, 2004, as applicable, which are incorporated by reference herein.

(b) Certification of Complete Systems

Certification of a complete evaporative emission control system is required. An applicant for certification of an evaporative emission control system that complies with the diurnal standards specified in section 2754(a), or section 2757 must submit diurnal evaporative emission data for an engine or equipment that exhibits the highest evaporative emission characteristics for an evaporative family as part of the certification application.

(1) An applicant for certification of an evaporative emission control system that complies with the fuel hose permeation standard specified in section 2754(a) must submit fuel hose permeation data for model year 2006 equipment as part of the certification application. Alternatively, manufacturers may submit the Executive Order number approving the component pursuant to section 2767.1 of this Article.

(2) An applicant for certification of an evaporative emission control system that complies with the design standards specified in section 2754(b) must submit fuel tank permeation data, fuel hose permeation data, and carbon canister butane working capacity data or equivalent for an engine or equipment that exhibits the highest evaporative emission characteristics for an evaporative family as part of the certification application. Alternatively, manufacturers may submit the Executive Order number approving the component pursuant to section 2767.1 of this Article.

(3) An applicant for certification of an evaporative emission control system that complies with the fuel tank permeation standards specified in section 2755 must submit fuel tank permeation data that exhibits the highest evaporative emission characteristics for an evaporative family as part of the certification application. For engines less than or equal to 80 cc, the manufacturer need only test the tank with the most surface area for all evaporative families with the same material/process. These certification test results can then be used in the certification of other tanks/engine families constructed of the same materials/processes.

(4) TP-901, adopted July 26, 2004, is used to determine fuel tank permeation. TP-902, adopted July 26, 2004, is used to determine the evaporative emissions from engines or equipment with complete evaporative emission control systems.

(c) Modifications to the Evaporative Emission Control System

(1) Manufacturers are allowed to replace the nominal fuel tank and/or nominal fuel line of a certified evaporative emission control system that complies with the performance-based standards specified in section 2754 with an equivalent fuel tank and/or equivalent fuel line. All other evaporative emission control components in a system that complies with the performance-based standards in section 2754 must function similarly and have equivalent or better performance to those components used to certify the control system.

(2) Modification of any certified evaporative emission control systems in any manner other than replacement of the nominal tanks and/or fuel lines with equivalent fuel tanks and/or fuel lines invalidates the certification of the control system. When any evaporative emission control system's certification is invalidated due to an unapproved modification, a new certification is required per CP-902, adopted July 26, 2004.

(3) Manufacturers are required to notify the Executive Officer in writing of any modification of any certified evaporative emission control system. The notification must include a statement citing the basis for the equivalent fuel tank and/or fuel line determination.

(d) Reduced Certification Requirements

Manufacturers meeting the requirements of section 2766 of this Article must be certified annually by the Air Resources Board by submitting a Letter of Conformance. The Letter of Conformance must include, at a minimum, a statement citing the basis for complying with section 2766. An Executive Order of Certification for such engines or equipment must be obtained prior to the sale or lease, or the offering for sale or lease, or the delivery or importation for introduction into commerce in California of such engines or equipment in California.

NOTE: Authority cited: Sections 39600, 39601 and 43013, Health and Safety Code. Reference: Section 43013, Health and Safety Code.

HISTORY

1. New section filed 9–20–2004; operative 10–20–2004 (Register 2004, No. 39).

§ 2754. Evaporative Emission Performance and Design Standards.

The table below specifies the evaporative emission performance and design standards for small off-road engines, and equipment that use small off-road engines, with displacements greater than 80 cc.

Table 1
Evaporative Emission Standards

Effective Date Model Year	Performance Requirements Section 2754(a) ¹	Design Requirements Section 2754(b)		
	Diurnal Standard Grams HC/day	Fuel Hose Permeation Grams ROG/m ² /day	Fuel Tank Permeation ² Grams ROG/m ² /day	Carbon Canister ³ or Equivalent Butane Working Capacity Grams HC
Displacement Category: Walk-Behind Mowers >80 cc – <225cc				
2006	None	15	None	None
2007 and 2008	1.3	N/A	N/A	N/A
2009	1.0	N/A	N/A	N/A
Displacement Category: Non Walk-Behind Mowers > 80 cc – <225cc				
2006	None	15	None	None
2007 through 2011	1.20 + 0.056*tank vol. (liters)	15	2.5	Specified in TP-902
2012	0.95 + 0.056*tank vol. (liters)	15	1.5	Specified in TP-902
Displacement Category: >225 cc				
2006 and 2007	None	15	None	None
2008	1.20 + 0.056*tank vol. (liters)	15	2.5	Specified in TP-902
2010 ⁴	None	15	None	Specified in TP-902
2013	1.20 + 0.056*tank vol. (liters)	15	1.5	Specified in TP-902

¹ For model year 2006 only, all engines and equipment with displacements > 80 cc – <225cc must comply with the fuel hose permeation design requirement in section 2754(a)(1)(C). Engines and equipment with displacements greater than or equal to 225 cc must comply with the fuel hose permeation design requirement in section 2754(a)(1)(C) for model years 2006 and 2007 only.

² Permeation emissions as determined by TP-901. Permeation emissions must be measured to two significant figures.

³ Canister design requirements and the procedure for determining butane working capacity are specified in TP-902. The Executive Officer may designate technology equivalent to carbon canisters on a case by case basis as part of the certification process per section 2766.

⁴ Applies to small production volume tanks exempted pursuant to section 2766.

(a) On or after the model year set out in Table 1 of section 2754, evaporative emissions from any small off-road engine or equipment that use small off-road engines certifying under this section 2754(a) must not exceed the performance requirements specified in Table 1 of section 2754.

(1) Manufacturers certifying engines or equipment under this section 2754(a) shall do the following:

(A) Submit a determination in the certification application that running loss emissions are controlled from being emitted into the atmosphere. The Executive Officer must approve the determination for an Executive Order of Certification to be issued. Approval by the Executive Officer is not required if actively purged carbon canisters meeting the requirements of this article are used.

(B) Test all evaporative families in accordance with TP-902.

(C) Provide test data in the certification application showing that fuel lines meet the permeation requirement of 15 grams/m²/day using test procedure SAE J1737 (Issued August 1997). The permeation testing must be conducted at 40°C, or higher, and ambient pressure using Phase II California Reformulated Certification (CERT) fuel, CE10, CM15, or Indolene. Alternatively, manufacturers can submit the Executive Order

number approving the component pursuant to section 2767.1 of this Article.

(b) On or after the model year set out in Table 1 of section 2754, evaporative emissions from any small off-road engine or equipment that use small off-road engines certifying under this section 2754(b) must not exceed the design requirements specified in Table 1 of section 2754.

(1) Manufacturers certifying engines or equipment under 2754(b) shall also do the following:

(A) Submit a determination in the certification application that the running loss emissions are controlled from being emitted into the atmosphere. The Executive Officer must approve the determination before an Executive Order of Certification can be issued. Approval by the Executive Officer is not required if actively purged carbon canisters meeting the requirements of this article are used.

(B) Provide test data in the certification application showing that the fuel tank and carbon canister meet the applicable design requirements. Provide test data in the certification application showing that fuel lines meet the permeation requirement of 15 grams/m²/day using test procedure SAE J1737 (Issued August 1997). The permeation testing must be

conducted at 40°C, or higher, and ambient pressure using Phase II California Reformulated Certification (CERT) fuel, CE10, CM15, or Indolene. Alternatively, manufacturers can submit the Executive Order number approving the component pursuant to section 2767.1 of this Article.

NOTE: Authority cited: Sections 39600, 39601 and 43013, Health and Safety Code. Reference: Section 43013, Health and Safety Code.

HISTORY

1. New section filed 9–20–2004; operative 10–20–2004 (Register 2004, No. 39).
2. Change without regulatory effect adding footnote 4 to Table 1 filed 8–18–2005 pursuant to section 100, title 1, California Code of Regulations (Register 2005, No. 33).

§ 2754.1. Certification Averaging and Banking.

(a) Applicability — The averaging requirements specified in this section 2754 apply only to engines or equipment with complete evaporative emission control systems certified to the diurnal emission performance standards specified in section 2754(a) of this Article. Participation in the certification averaging and banking program is voluntary. The provisions of this section are applicable only for determining compliance with this section.

(b) General provisions.

(1) The certification averaging and banking provisions for diurnal emissions from eligible engines and equipment are described in this section.

(2) A manufacturer of an evaporative family subject to this Article may use the averaging and banking provisions of this section 2754 for the purpose of creating diurnal emissions credits.

(3) A manufacturer shall not include in its calculation of credit generation and may exclude from its calculation of credit usage, any new engines or equipment not subject to this Article.

(4) A manufacturer may include its entire inventory of an evaporative family subject to this Article in calculating the diurnal emissions credit for a given model year.

A manufacturer shall certify evaporative families to an Evaporative Family Emission Limit Differential (EFELD). The EFELD is declared by an engine or equipment manufacturer and can be positive or negative subject to the limitation in subsections (b)(6) and (b)(7) of this section, provided the sum of the manufacturer's projected balance of credits from all credit transactions for each engine class in a given model year is greater than or equal to zero, as determined under subsection (e). The EFELD is determined based on the diurnal test results, in accordance with TP-902, of the worst case model of engine or equipment within an evaporative family. The worst case model of engine or equipment is defined as the engine or equipment expected to produce the highest negative or the smallest positive EFELD within the family on a per unit basis. The EFELD is calculated by setting the EMEL for the model of engine or equipment tested at a level above the diurnal test results and then subtracting the EMEL from the applicable standard level for the model.

(A) A manufacturer of an evaporative family with a negative EFELD shall obtain positive emission credits sufficient to address the associated credit shortfall within the time period set out in (8) below.

(B) An evaporative family with a positive EFELD may generate positive emission credits for averaging, or banking, or a combination thereof.

(6) No walk-behind mowers within an evaporative family may have diurnal emissions greater than 1.5 times the applicable diurnal standard in section 2754(a).

(7) No model of Class I or Class II engine or equipment (excluding walk-behind mowers) within an evaporative family may have diurnal emissions greater than 3.0 times the applicable diurnal standard in section 2754(a).

(8) A manufacturer must demonstrate compliance with this section within 270 days of the end of the model year.

(9) No new Executive Order of Certifications will be issued to the manufacturer until a plan to make up the emissions deficit plus a penal amount of 25% of the deficit has been approved by the Executive Officer.

(10) The failure of a manufacturer to comply with the diurnal emissions standards in accordance with this section 2754 shall be grounds for revocation or suspension of the Executive Order of Certification in accordance with section 2770. A revocation under this provision shall be deemed to revoke the Executive Order of Certification *ab initio*.

(11) The failure of a manufacturer to submit the plan required in subsection (b)(9) above within 270 days of the end of a model year shall be grounds for revocation or suspension of the Executive Order of Certification in accordance with section 2770. A revocation under this provision shall be deemed to revoke the Executive Order of Certification *ab initio*.

(c) Averaging.

(1) Negative credits from evaporative families with negative EFELDs must be offset by positive credits from evaporative families having positive EFELDs, as allowed under the provisions of this section. Averaging of credits in this manner is used to determine compliance under subsection (e)(2).

(2) Subject to the provisions in subsection (b)(9), credits used in averaging for a given model year may be obtained from credits generated in the same model year by another evaporative family, or credits banked in previous model years. The restrictions of this subsection notwithstanding, credits from a given model year may be used to address credit needs of previous model year engines.

(d) Banking.

(1) Beginning with the 2007 model year, a manufacturer of an evaporative family with a positive EFELD for model year 2007 and subsequent engines and equipment may bank credits in that model year for use in averaging. Positive credits may be banked only according to the requirements of subsection (e)(1) of this section.

(2) A manufacturer may bank emission credits only after the end of the model year and after ARB has reviewed the manufacturer's end-of-year reports. During the model year and before submittal of the end-of-year report, credits originally designated in the certification process for banking will be considered reserved and may be redesignated for averaging in the end-of-year report and final report.

(3) A manufacturer may use credits claimed from a previous model year that have not been approved by the ARB, in an averaging calculation pending the review of the ARB. In the event such review does not substantiate the amount of credits claimed, an Executive Order will not be issued until a plan to make up the emissions deficit has been approved by the Executive Officer.

(e) Credit Calculation and Manufacturer Compliance with Emission Standards

(1) For evaporative family, diurnal emission credits (positive or negative) are to be calculated according to the following equation and rounded to the nearest tenth of a gram. Consistent units with two significant digits are to be used throughout the equation.

EFELD = Applicable standard level — EMEL

Credits = EFELD x Sales

Where:

EMEL = the declared evaporative model emission limit for the model tested within the evaporative family in grams

EFELD = the calculated evaporative family emission limit differential in grams

Sales = the total Sales for all models within a given evaporative family

Sales or Eligible Sales means the actual or calculated sales of an evaporative family in California for the purposes of averaging and banking. Upon Executive Officer approval, an engine or equipment manufacturer may calculate its eligible sales through market analysis. Because of the multiple steps in the product distribution chain and confidential nature of sales information for many retailers and original equipment manufacturers an educated and consistent estimate with the best available documentation will be acceptable as the final report of sales in California. Actual sales are sales calculated at the end of a model year on that model year's production, rather than estimates of production. Actual sales volume is used in determining actual credits for end-of-year compliance determination.

(2) Manufacturer compliance with this section is determined on a corporate average basis at the end of each model year. A manufacturer is in compliance when the sum of positive and negative emission credits it holds is greater than or equal to zero.

(f) Certification Using Credits.

(1) For certification relying on averaging or banking of credits, a manufacturer shall:

(A) Submit a statement that the engines for which certification is requested will not, to the best of the manufacturer's knowledge, cause the manufacturer to be in noncompliance under subsection (e)(2) when all credits are calculated for all the manufacturer's engine families.

(B) Declare an EFELD for the evaporative family. The EFELD must be calculated to two significant digits.

(C) Indicate the projected number of emission credits generated/needed for this family; the projected applicable eligible sales volume and the values required to calculate credits as given in section 2754(e).

(D) Submit calculations in accordance with section 2754(e) of projected emission credits (positive or negative) based on production projections for each family.

(E)(i) If the evaporative family is projected to generate negative emission credits, state specifically the source (manufacturer/evaporative family or reserved) and quantity of the credits necessary to offset the credit deficit according to projected production.

(ii) If the evaporative family is projected to generate positive emission credits, state specifically the recipient (manufacturer/evaporative family or reserved) and quantity of the credits used to offset a deficit banked according to where the projected credits will be applied.

(2) The manufacturer may supply the information required above in section 2754(f)(1)(C), (D), and (E) by use of a spreadsheet detailing the manufacturer's annual production plans and the credits generated or consumed by each evaporative family.

(3) The manufacturer bears the burden of establishing to the satisfaction of the Executive Officer that the conditions upon which the Executive Order was issued were satisfied.

(4) Projected credits based on information supplied in the certification application may be used to obtain an Executive Order. However, any such credits may be revoked based on review of end-of-year reports, follow-up audits, and any other verification steps considered appropriate by the Executive Officer.

(g) Maintenance of records.

(1) The manufacturer shall establish, maintain, and retain the following adequately organized and indexed records for each evaporative family:

(A) ARB evaporative family identification code,

(B) Declared EFELD,

(C) Projected sales volume for the model year, and

(D) Records appropriate to establish the quantities of engines or equipment that constitute eligible sales for each evaporative family.

(2) The manufacturer shall retain all records required to be maintained under this section for a period of eight years from the due date for the end-of-model year report. Records may be retained as hard copy, CD-ROM, diskettes, and so forth, depending on the manufacturer's record retention procedure; provided, that in every case all information contained in the hard copy is retained.

(3) Nothing in this section limits the Executive Officer's discretion in requiring the manufacturer to retain additional records or submit information not specifically required by this section.

(4) A manufacturer shall submit all information requested by the Executive Officer within 30 days of the date of such request.

(5) The Executive Officer may revoke or suspend the Executive Order for an evaporative family for which the manufacturer fails to retain the records required in this section or to provide such information to the Executive Officer upon request. No new Executive Orders will be issued to the manufacturer until the requested records are made available and/or a plan that describes the records to be retained as required by this section is approved by the Executive Officer.

(h) End-of-year and final reports.

(1) End-of-year and final reports must indicate the evaporative family, the actual sales volume, the values required to calculate credits as given in subsection (e), and the number of credits generated/required. Manufacturers shall also submit how and where credit surpluses were dispersed (or are to be banked) and/or how and through what means credit deficits were met. The report must include a calculation of credit balances to show that the credit summation for each class of engines or equipment is equal to or greater than zero.

(2) The calculation of eligible sales as defined in subsection (e)(1) of this section for end-of-year and final reports must be based on the location of the point of first retail sale (for example, retail customer or dealer) also called the final product purchase location. Upon advance written request, the Executive Officer will consider other methods to track engines for credit calculation purposes, such as shipments to distributors of products intended for sale in California.

(3)(A) End-of-year reports must be submitted within 90 days of the end of the model year to:

CHIEF, MOBILE SOURCE OPERATIONS DIVISION,
AIR RESOURCES BOARD,
9528 TELSTAR, EL MONTE, CA 91731.

(B) Unless otherwise approved by the Executive Officer, final reports must be submitted within 270 days of the end of the model year to: Chief, Mobile Source Operations Division, Air Resources Board, 9528 Telstar, El Monte, CA 91731.

(4) Failure by a manufacturer to submit any end-of-year or final reports in the specified time for any engines or equipment subject to regulation under this section is a violation of this section for each engine or equipment in the evaporative family covered by the report.

(5) A manufacturer generating credits for banking only who fails to submit end-of-year reports in the applicable specified time period (90 days after the end of the model year) may not use the credits until such reports are received and reviewed by ARB. Use of projected credits pending ARB review is not permitted in these circumstances.

(6) Errors discovered by ARB or the manufacturer in the end-of-year report, including errors in credit calculation, may be corrected in the final report.

(7) If ARB or the manufacturer determines that a reporting error occurred on an end-of-year or final report previously submitted to ARB under this section, the manufacturer's credits and credit calculations must be recalculated. Erroneous positive credits will be void except as provided in subsection (h) of this section. Erroneous negative credit balances may be adjusted by ARB.

(8) If within 270 days of the end of the model year, ARB review determines a reporting error in the manufacturer's favor (that is, resulting in an increased credit balance) or if the manufacturer discovers such an error within 270 days of the end of the model year, ARB must restore the credits for use by the manufacturer.

NOTE: Authority cited: Sections 39600, 39601 and 43013, Health and Safety Code. Reference: Section 43013, Health and Safety Code.

HISTORY

1. New section filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2754.2. Validation Study.

(a) To confirm that the performance-based evaporative certification option in section 2754(a) and the design-based evaporative certification option in section 2754(b) are achieving ARB's overall emission reduction goals, ARB will conduct an inventory validation study utilizing diurnal test data from such equipment.

(b) This validation study will be conducted at two time periods: (a) in 2010 for the years 2008, 2009 and 2010 and (b) in 2015 for the years 2013, 2014 and 2015.

(c) For each year in the study, the Executive Officer will select engine and/or equipment evaporative families and request, from the certificate holder, one production unit from each identified family from production inventory according to a method specified by the Executive Officer. Diurnal testing of each selected unit (including the complete evaporative

emission control system) will be conducted pursuant to TP-902, including pre-conditioning. Unless otherwise directed by the Executive Officer, three data points will be generated and submitted to the Executive Officer for each engine and / or equipment tested.

(d) The number of data points and equipment to be tested for this validation study is as follows:

<i>Year</i>	<i>Number of Data Points (# of Equipment Tested) for Units Certified per the Performance-Based Standards Under Section 2754(a)</i>	<i>Number of Data Points (# of Equipment Tested) for Units Certified per the Design-Based Standards Under Section 2754(b)</i>
2008	9 (3)	45 (15)
2009	3 (1)	15 (5)
2010	3 (1)	15 (5)
2013	9 (3)	45 (15)
2014	3 (1)	15 (5)
2015	3 (1)	15 (5)

(e) The costs for testing engines or equipment certified under the design-based element of the validation study are the responsibility of the certificate holder. The costs for testing engines or equipment certified under the performance-based element of the validation study are the responsibility of ARB. For each of the years 2010 and 2015, the Executive Officer will also review the annual performance-based and design-based certification submissions for that year and two prior years (i.e., 2010, 2009, 2008 for the 2010 validation and 2015, 2014, 2013 for the 2015 validation) to supplement this validation study.

(f) The Executive Officer will evaluate the data collected and, based on reasonable criteria, make a determination whether the performance-based option in section 2754(a) and the design-based option in section 2754(b) are achieving ARB's overall emission reduction goals. In making this determination, the Executive Officer will consider, among other things, whether a particular product tested is in full compliance with the underlying standards and whether the product configurations are non-representative (i.e., large tanks).

HISTORY

1. New section filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2755. Permeation Emissions Performance Standard.

On or after the model year set out herein, fuel tanks used on equipment subject to this section must not exceed the following permeation rates:

<i>Permeation Rate Standard (grams per meter² per day)</i>		
<i>Effective Date Model Year</i>	<i>Applicability</i>	<i>Requirement¹ Tank Permeation</i>
2007	Equipment That Use Gasoline Powered Small Off-Road Engines With Displacements ≤80cc	Fuel Tank Permeation Emissions Shall Not Exceed 2.0 Grams Per Square Meter Per Day As Determined By TP-901.

¹ Permeation rate must be measured to two significant digits.

(a) Data documenting the permeation rate of fuel tanks must be included in a certification application, except for models of equipment which use "equivalent fuel tanks." Such data are not required for engines or equipment meeting the requirements of section 2766.

(b) The test procedure for determining compliance with the standards for permeation rates from small off-road engine fuel tanks are set forth in "Test Procedure for Determining Permeation Emissions from Small Off-Road Engine Equipment Fuel Tanks, TP-901," adopted July 26, 2004, which is incorporated by reference herein.

NOTE: Authority cited: Sections 39600, 39601 and 43013, Health and Safety Code. Reference: Section 43013, Health and Safety Code.

HISTORY

1. New section filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2756. Fuel Cap Performance Standard.

For the model year set out herein, no person shall sell, supply, offer for sale or manufacture for sale fuel caps for fuel tanks for small off-road engines or equipment that use small off-road engines with displacements >80 cc subject to this Article that do not meet the following performance standards unless exempted in an Executive Order issued pursuant to section 2767 of the Article:

Fuel Cap Performance Standards

(a) Fuel cap must be permanently tethered to the tank, equipment, or engine; and

(b) Fuel cap must be designed to provide physical and/or audible feedback to the user that a fuel tank vapor seal is established.

The following table defines equipment subject to the fuel cap performance standards of this section:

Equipment Subject to the Fuel Cap Performance Standards

<i>Effective Date Model Year</i>	<i>Applicability</i>
2007	Fuel Caps For ALL SORE Equipment With Small Off-Road Engines >80 cc to <225cc
2008	Fuel Caps For ALL SORE Equipment With Small Off-Road Engines ≥ 225 cc

NOTE: Authority cited: Sections 39600, 39601 and 43013, Health and Safety Code. Reference: Section 43013, Health and Safety Code.

HISTORY

1. New section filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2757. Optional Performance Standards.

The Air Resources Board recognizes that evaporative emissions can be further reduced by incorporating advanced fuel system designs that reduce or eliminate carburetor and permeation emissions. These optional performance standards are emission targets that are more stringent than the performance standards set out in section 2754, and 2755. These optional performance standards will be part of a statewide clean air-labeling program. Upon implementation, a manufacturer certifying to an optional performance standard would be allowed to affix a "Blue Sky Label" on their equipment.

Optional Permeation Rate Standard

<i>Effective Date Model Year</i>	<i>Applicability</i>	<i>Requirement¹ Tank Permeation</i>
2007	Equipment That Use Gasoline Powered Small Off-Road Engines With Displacements <80 cc	Fuel Tank Permeation Emissions Shall Not Exceed 1.0 Grams Per Square Meter Per Day As Determined By TP-901.

¹ Permeation rate must be measured to two significant digits.

Optional Evaporative Emission Standards (Grams per 24-hour diurnal test)

<i>Effective Date Model Year</i>	<i>Applicability</i>	<i>Requirement¹ Total Hydrocarbons</i>
2007	All Equipment That Use Small Off-Road Engines With Displacements > 80 cc To < 225cc	Diurnal Emissions Shall Not Exceed 0.5 Grams Total Hydrocarbons Per Day As Determined By TP-902.
2008 and Later	All Equipment That Use Small Off-Road Engines With Displacements ≥ 225 cc	Diurnal Emissions Shall Not Exceed 1.0 Grams Total Hydrocarbons Per Day As Determined By TP-902.

¹ Diurnal emissions must be measured to two significant digits.

NOTE: Authority cited: Sections 39600, 39601 and 43013, Health and Safety Code. Reference: Section 43013, Health and Safety Code.

HISTORY

1. New section filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2758. Test Procedures.

(a) Testing to determine compliance with section 2754 of this Article shall be performed using TP-902, adopted July 26, 2004, which is incorporated by reference herein.

(b) Testing to determine compliance with section 2755 of this Article shall be performed using TP-901, adopted July 26, 2004, which is incorporated by reference herein.

(c) Testing to determine compliance with section 2757 of this Article shall be performed using TP-901, adopted July 26, 2004 to determine permeation emissions, and TP-902, adopted July 26, 2004, to determine diurnal emissions.

Test procedures referred to in this Article may be obtained from the California Air Resources Board at P.O. Box 2815, Sacramento, California 95812 or over the Internet at <http://www.arb.ca.gov>.

NOTE: Authority cited: Sections 39600, 39601 and 43013, Health and Safety Code. Reference: Section 43013, Health and Safety Code.

HISTORY

1. New section filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2759. Equipment and Component Labeling.

(a) Purpose. The Air Resources Board recognizes that certain emissions—critical and/or emissions—related parts must be properly labeled in order to identify equipment that meets applicable evaporative emission standards. These specifications require equipment and/or engine manufacturers to affix a certification label (or labels) on each production equipment (or engine, as applicable).

(b) Applicability. These specifications apply to:

(1) Engines or equipment that have been certified to the applicable evaporative emission standards in this Article.

(2) Equipment manufacturers who use an engine certified under this Article if their equipment obscures the emissions control label of such certified engine.

(c) Certification Label Content and Location.

(1) A plastic or metal label must be welded, riveted or otherwise permanently attached by the equipment or engine manufacturer to an area on the engine or equipment in such a way that it will be readily visible.

(2) In selecting an acceptable location, the possibility of accidental damage must be considered (e.g. possibility of tools or sharp instruments coming in contact with the label). Each certification label must be affixed in such a manner that it cannot be removed without destroying or defacing the label, and must not be affixed to any engine (or equipment, as applicable) component that is easily detached from the engine or equipment as applicable.

(3) The engine or equipment label information must be written in the English language and use block letters and numerals (i.e., sans serif, upper-case characters) that must be of a color that contrasts with the background of the label.

(4) The engine or equipment label must contain the following information:

(A) The label heading must read: "IMPORTANT EMISSIONS INFORMATION." When combined with an exhaust label, "EMISSIONS" relates to both exhaust and evaporative emissions.

(B) The full corporate name or trademark of the engine or equipment manufacturer.

1. A manufacturer may request approval to delete its name and trademark, and substitute the name and trademark of another manufacturer, original equipment manufacturer, or third-party distributor.

2. Such an approval does not relieve the manufacturer of complying with the requirements imposed by this Article.

(C) Identification of the evaporative emission control system. Abbreviations per SAE J1930 dated May 14, 2002, or manufacturers evaporative code as defined in the owners manual are allowed if they are submitted as part of the certification application.

(D) The date of engine manufacture (month and year) for evaporative emission control systems certified by the engine manufacturer or the date of equipment manufacture (month and year) for evaporative emission control systems certified by the equipment manufacturer.

(E) An unconditional statement of compliance with the appropriate model year(s) (for 2006 and later) California regulations; for example, "THIS ENGINE MEETS 2006 CALIFORNIA EVP EMISSION REGULATIONS FOR SMALL OFF-ROAD ENGINES".

(F) Evaporative emissions family. Attachment 1 of the Certification Procedures, CP-902, adopted July 26, 2004, contains the classification criteria for determining an evaporative family for engines greater than 80 cc. For equipment less than or equal to 80 cc, the engine exhaust family is the evaporative family.

(d) Conformance with Other Requirements. A label may state that the equipment conforms to any applicable Federal, Canadian, or European evaporative emission standards for new equipment; or any other information that the manufacturer deems necessary for, or useful to, the proper operation and satisfactory maintenance of the engine.

(e) Label Visibility. As used in these specifications, readily visible to the average person means that a label is readable from a distance of 46 centimeters (18 inches) without any obstructions from equipment or engine parts (including all original equipment manufacturer or engine manufacturer (as applicable) available optional equipment) except for flexible parts (e.g., vacuum hoses, ignition wires) that can be moved out of the way without disconnection. Alternatively, information required by these specifications to be printed on the equipment and/or engine (as applicable) must be no smaller than 2 millimeters in height provided that no equipment or engine parts (including all manufacturer available optional equipment), except for flexible parts, obstruct the label(s).

(f) Label Durability. The labels and any adhesives used must be designed to withstand, for the equipment's useful life, typical equipment environmental conditions in the area where the labels required by this section are attached. Typical equipment environmental conditions include, but are not limited to, exposure to engine fuels, lubricants and coolants (e.g., gasoline, motor oil, water, and ethylene glycol). The engine or equipment manufacturer must submit, with its certification application, a statement attesting that its labels comply with these requirements.

(g) Sample Label Submission. Samples of all actual production labels used within an evaporative family must be submitted to the Executive Officer within thirty days after the start of production. Sample labels are not required for carry over certification unless labels are revised. Engine manufacturers must provide samples of their own applicable production labels, and samples of applicable production labels of the equipment manufacturer that are accessible to the engine manufacturers due to any direct market arrangement between such manufacturers.

(h) The Executive Officer may approve alternate label locations or may, upon request, waive or modify the label content requirements provided that the intent of these specifications is met. Such approval may be conditioned upon providing such information in the owner's manual as the Executive Officer deems appropriate.

(i) Labeling Enforcement

Use of labels that are different from those approved will be grounds for revocation or suspension of the Executive Order of Certification.

NOTE: Authority cited: Sections 39600, 39601 and 43013, Health and Safety Code. Reference: Section 43013, Health and Safety Code.

HISTORY

1. New section filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2760. Defects Warranty Requirements for Small Off-Road Engines.

(a) Applicability. This section applies to small off-road engines or equipment that use small off-road engines subject to the performance standards in this Article. The warranty period begins on the date the engine or equipment is delivered to an ultimate purchaser.

(b) General Evaporative Emissions Warranty Coverage. The engine or equipment must be warranted to the ultimate purchaser and any subse-

quent owner that the evaporative emission control system when installed was:

(1) Designed, built, and equipped so as to conform with all applicable regulations; and

(2) Free from defects in materials and workmanship that causes the failure of a warranted part for a period of two years.

(c) The warranty on evaporative emissions-related parts will be interpreted as follows:

(1) Any warranted part that is not scheduled for replacement as required maintenance in the written instructions required by subsection (e) must be warranted for the warranty period defined in subsection (b)(2). If any such part fails during the period of warranty coverage, it must be repaired or replaced by the manufacturer issuing the warranty according to subsection (4) below. Any such part repaired or replaced under the warranty must be warranted for a time not less than the remaining warranty period.

(2) Any warranted part that is scheduled only for regular inspection in the written instructions required by subsection (e) must be warranted for the warranty period defined in subsection (b)(2). A statement in such written instructions to the effect of "repair or replace as necessary" will not reduce the period of warranty coverage. Any such part repaired or replaced under warranty must be warranted for a time not less than the remaining warranty period.

(3) Any warranted part that is scheduled for replacement as required maintenance in the written instructions required by subsection (e) must be warranted for the period of time prior to the first scheduled replacement point for that part. If the part fails prior to the first scheduled replacement, the part must be repaired or replaced by the manufacturer according to subsection (4) below. Any such part repaired or replaced under warranty must be warranted for a time not less than the remainder of the period prior to the first scheduled replacement point for the part.

(4) Repair or replacement of any warranted part under the warranty provisions of this article must be performed at no charge to the owner at a warranty station.

(5) Notwithstanding the provisions of subsection (4) above, warranty services or repairs must be provided at distribution centers that are franchised to service the subject engines or equipment.

(6) The owner must not be charged for diagnostic labor that leads to the determination that a warranted part is in fact defective, provided that such diagnostic work is performed at a warranty station.

(7) Throughout the evaporative emission control system's warranty period set out in subsection (b)(2), the manufacturer issuing the warranty must maintain a supply of warranted parts sufficient to meet the expected demand for such parts.

(8) Manufacturer approved replacement parts must be used in the performance of any warranty maintenance or repairs and must be provided without charge to the owner. Such use will not reduce the warranty obligations of the manufacturer issuing the warranty.

(9) The use of any add-on or modified parts will be grounds for disallowing a warranty claim made in accordance with this article. The manufacturer issuing the warranty will not be liable under this Article to warrant failures of warranted parts caused by the use of an add-on or modified part.

(10) The manufacturer issuing the warranty shall provide any documents that describe that manufacturer's warranty procedures or policies within five working days of request by the Executive Officer.

(d) A copy of the following evaporative emission warranty parts list must be included with each new engine or equipment subject to this Article, using those portions of the list applicable to the engine or equipment.

- (1) Fuel Tank*
- (2) Fuel Cap
- (3) Fuel Line
- (4) Fuel Line Fittings
- (5) Clamps**
- (6) Pressure Relief Valves**

- (7) Control Valves**
- (8) Control Solenoids**
- (9) Electronic Controls**
- (10) Vacuum Control Diaphragms**
- (11) Control Cables**
- (12) Control Linkages**
- (13) Purge Valves
- (14) Vapor Hoses
- (15) Liquid/Vapor Separator
- (16) Carbon Canister
- (17) Canister Mounting Brackets
- (18) Carburetor Purge Port Connector

*NOTE: The parts list for equipment less than or equal to 80 cc only includes the fuel tank.

**NOTE: As they relate to the evaporative emission control system.

(e) Written instructions for the maintenance and use of the evaporative emissions control system by the owner shall be furnished with each new engine or equipment subject to this Article. The instructions must be consistent with this article and applicable regulations contained herein.

(f) The documents required by subsection (d) must be submitted with the application for evaporative emission control system certification for approval by the Executive Officer. Approval by the Executive Officer of the documents required by subsection (d) is a condition of certification. The Executive Officer will approve or disapprove the documents required by subsection (d) within 90 days of the date such documents are received.

(g) The application for evaporative emission control system certification must also include a statement regarding the maintenance of the evaporative emission control system. The statement must include, but not be limited to, information on evaporative emission control system maintenance, and a maintenance schedule.

NOTE: Authority cited: Sections 39600, 39601 and 43013, Health and Safety Code. Reference: Section 43013, Health and Safety Code.

HISTORY

1. New section filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2761. Emission-Related Defect Reporting Requirements.

(a) Applicability. This section applies to 2007 model year and later small off-road engines and equipment that use small off-road engines. The requirement to report evaporative emission-related defects affecting a given class or category of engines or equipment will remain applicable for five years from the end of the calendar year in which such engines or equipment were manufactured.

(b) A manufacturer must file a defect information report whenever, on the basis of data obtained subsequent to the effective date of these regulations:

(1) The manufacturer determines, in accordance with procedures established by the manufacturer to identify either safety-related or performance defects, that a specific evaporative emission-related defect exists; and

(2) A specific evaporative emission-related defect exists in 25 or more tanks, engines or equipment of a given evaporative family manufactured in the same Executive Order or model year.

(c) No report must be filed under this section for any evaporative emission-related defect corrected prior to the sale of the affected engines or equipment to ultimate purchasers.

(d) The manufacturer must submit defect information reports to Chief, Mobile Source Operations Division, Air Resources Board, 9528 Telstar, El Monte, CA 91731, not more than 15 working days after an emission-related defect is found to affect 25 or more engines or equipment certified under the same Executive Order or model year. Information required by subsection (d) of this section that is either not available within 15 working days or is significantly revised must be submitted to the Executive Officer as it becomes available.

(e) Each defect report must contain the following information:

- (1) The manufacturer's corporate name.
- (2) A description of the defect.

(3) A description of each class or category of engines or equipment potentially affected by the defect including make, model, model year, calendar year produced, and any other information required to identify the engines affected.

(4) For each class or category of engines or equipment described in response to subsection (d) of this section, the following must also be provided:

(A) The number of engines or equipment known or estimated to have the defect and an explanation of the means by which this number was determined.

(B) The address of the plant(s) at which the potentially defective engines or equipment were produced.

(5) An evaluation of the evaporative emissions impact of the defect and a description of any operational problems that a defective engine or equipment might exhibit.

(6) Available evaporative emission data that relate to the defect.

(7) An indication of any anticipated manufacturer follow-up.

NOTE: Authority cited: Sections 39600, 39601 and 43013, Health and Safety Code. Reference: Section 43013, Health and Safety Code.

HISTORY

1. New section filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2762. Voluntary Emission Recall Program.

(a) When any manufacturer initiates a voluntary emissions recall program involving 25 or more tanks, engines, or equipment, the manufacturer must submit a report describing the manufacturer's voluntary emissions recall plan as prescribed by this section within 15 working days of the date owner notification began. The report must contain the following:

(1) A description of each class or category of engines or equipment recalled including the number of tanks, engines or equipment to be recalled, the model year, the make, the model, and such other information as may be required to identify the engines recalled;

(2) A description of the specific modifications, alterations, repairs, corrections, adjustments, or other changes to be made to correct the tanks, engines, or equipment affected by the emission-related defect;

(3) A description of the method by which the manufacturer will notify engine or equipment owners and, if applicable, the method by which the manufacturer will determine the names and addresses of engine or equipment owners;

(4) A description of the proper maintenance or use, if any, upon which the manufacturer conditions eligibility for repair under the recall plan, an explanation of the manufacturer's reasons for imposing any such conditions, and a description of the proof to be required of an engine or equipment owner to demonstrate compliance with any such conditions;

(5) A description of the procedure to be followed by engine or equipment owners to obtain correction of the nonconformity. This may include designation of the date on or after which the owner can have the nonconformity remedied, the time reasonably necessary to perform the labor to remedy the defect, and the designation of facilities at which the defect can be remedied;

(6) A description of the class of persons other than dealers and authorized warranty agents of the manufacturer who will remedy the defect;

(7) When applicable, three copies of any letters of notification to be sent engine owners;

(8) A description of the system by which the manufacturer will assure that an adequate supply of parts is available to perform the repair under the plan, and that the supply remains both adequate and responsive to owner demand;

(9) Three copies of all necessary instructions to be sent to those persons who are to perform the repair under the recall plan;

(10) A description of the impact of the proposed changes on fuel consumption, performance, and safety of each class or category of engines or equipment to be recalled;

(11) A sample of any label to be applied to engines or equipment that participated in the voluntary recall campaign.

(b) The manufacturer must submit at least one report on the progress of the recall campaign. Such report must be submitted no later than 18

months from the date notification was begun and include the following information:

(1) The methods used to notify both engine or equipment owners, dealers and other individuals involved in the recall campaign;

(2) The number of engines or equipment to be affected by the emission-related defect and an explanation of the means by which this number was determined;

(3) The number of engines or equipment actually receiving repair under the plan; and

(4) The number of engines or equipment determined to be ineligible for remedial action due to a failure to properly maintain or use such engines.

(c) Send the defect report, voluntary recall plan, and the voluntary recall progress report to: Chief, Mobile Source Operations Division, Air Resources Board, 9528 Telstar Avenue, El Monte, CA, 91731.

(d) Retain the information gathered by the manufacturer to compile the reports for not less than five years from the date of the end of the model year. The manufacturer must make this information available to duly authorized officials of the ARB upon request.

(e) The filing of any report under the provisions of this section does not affect a manufacturer's responsibility to file reports or applications, obtain approval, or give notice under any provision of law.

(f) The act of filing an Emission Defect Information Report is inconclusive as to the existence of a defect subject to the warranty provided by section 2764 of this Article.

(g) A manufacturer may include on each page of its Emission Defect Information Report a disclaimer stating that the filing of a Defect Information Report pursuant to these regulations is not conclusive as to the applicability of the warranty provided by section 2764 of this Article.

NOTE: Authority cited: Sections 39600, 39601 and 43013, Health and Safety Code. Reference: Section 43013, Health and Safety Code.

HISTORY

1. New section filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2763. Ordered Recalls.

(a)(1) If the Executive Officer determines that a substantial number of any class or category of engines or equipment, or components used on such engines or equipment certified pursuant to section 2754(b), although properly maintained and used, do not meet the performance or design standards prescribed under this Article, when in actual use throughout their useful life, the Executive Officer shall immediately notify the responsible manufacturer of such nonconformity and require the manufacturer to submit a plan for remedying the nonconformity.

The manufacturer's plan shall provide that the nonconformity of any such engines or equipment that are properly used and maintained will be remedied at the expense of the manufacturer.

If the manufacturer disagrees with such determination of nonconformity, the manufacturer may appeal such determination pursuant to section 2771.

(2) Any notification required to be given by the manufacturer under subsection (a)(1) of this section with respect to any class or category of engines or equipment shall be given to dealers, ultimate purchasers, and subsequent purchasers (if known) in such manner and containing such information as required in section 2761 of this Article.

(3)(A) Prior to an ARB ordered recall, the manufacturer may perform a voluntary emissions recall pursuant to section 2762 of this Article. Such manufacturer is subject to the reporting and record keeping requirements of section 2762 subsections (c) and (d) of this Article.

(B) Once ARB determines that a substantial number of engines or equipment fail to conform to the requirements of this Article, the manufacturer will not have the option of a voluntary recall.

(b) The manufacturer bears all cost obligation a dealer incurs as a result of a requirement imposed by subsection (a) of this section. The transfer of any such cost obligation from a manufacturer to a dealer through franchise or other agreement is prohibited.

(c) Any inspection of an engine or equipment for purposes of subsection (a)(1) of this section, after its sale to the ultimate purchaser, is to be

made only if the owner of such engine or equipment voluntarily permits such inspection to be made, except as may be provided by any state or local inspection program.

NOTE: Authority cited: Sections 39600, 39601 and 43013, Health and Safety Code. Reference: Section 43013, Health and Safety Code.

HISTORY

1. New section filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2764. Evaporative Emission Control Warranty Statement.

(a) Any application for an evaporative emission control system certification must include a copy of the following statement:

CALIFORNIA EVAPORATIVE EMISSION CONTROL WARRANTY STATEMENT YOUR WARRANTY RIGHTS AND OBLIGATIONS

The California Air Resources Board (and manufacturer's name, optional) is pleased to explain the evaporative emission control system's warranty on your (year(s)) (equipment type). In California, new equipment that use small off-engines must be designed, built, and equipped to meet the State's stringent anti-smog standards. (Manufacturer's name) must warrant the evaporative emission control system on your (equipment type) for the period listed below provided there has been no abuse, neglect or improper maintenance of your equipment.

Your evaporative emission control system may include parts such as: carburetors, fuel tanks, fuel lines, fuel caps, valves, canisters, filters, vapor hoses, clamps, connectors, and other associated components. **For engines less than or equal to 80 cc, only the fuel tank is subject to the evaporative emission control warranty requirements of this section.**

A combined exhaust and evaporative warranty statement is acceptable. For combined warranty statements, "evaporative emission" can be replaced with "emissions" where "emissions" is understood to mean both exhaust and evaporative emissions.

MANUFACTURER'S WARRANTY COVERAGE:

This evaporative emission control system is warranted for two years. If any evaporative emission-related part on your equipment is defective, the part will be repaired or replaced by (manufacturer's name).

OWNER'S WARRANTY RESPONSIBILITIES:

- As the (equipment type) owner, you are responsible for performance of the required maintenance listed in your owner's manual. (Manufacturer's name) recommends that you retain all receipts covering maintenance on your (equipment type), but (manufacturer's name) cannot deny warranty solely for the lack of receipts.
- As the (equipment type) owner, you should however be aware that the (manufacturer's name) may deny you warranty coverage if your (equipment type) or a part has failed due to abuse, neglect, or improper maintenance or unapproved modifications.
- You are responsible for presenting your (equipment type) to a (manufacturer's name) distribution center or service center as soon as the problem exists. The warranty repairs should be completed in a reasonable amount of time, not to exceed 30 days. If you have a question regarding your warranty coverage, you should contact (Insert chosen manufacturer's contact) at 1-XXX-XXX-XXXX.

NOTE: Authority cited: Sections 39600, 39601 and 43013, Health and Safety Code. Reference: Section 43013, Health and Safety Code.

HISTORY

1. New section filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2765. New Equipment Compliance Testing.

(a) Compliance Test Procedures.

(1) The Executive Officer may order an engine or equipment manufacturer to make available for compliance testing and/or inspection five fuel

lines, carbon canisters, tanks, engines, or equipment units. Unless otherwise directed by the Executive Officer, the fuel lines, carbon canisters, tanks, engines, or equipment units shall be delivered to the Haagen-Smit Laboratory, 9528 Telstar Avenue, El Monte, California. Fuel lines, carbon canisters, tanks, engines or equipment units must be selected at random from sources specified by the Executive Officer according to a method approved by the Executive Officer, that, insofar as practical, must exclude engines or equipment that would result in an unreasonable disruption of the manufacturer's distribution system. Such an order may include a requirement to demonstrate that the measured rate or volume of purge from a representative sample of production canisters and engines certified under section 2754 (b) meets any design specification required by the Executive Officer in the applicable Executive Order of Certification or included by the manufacturer in the application for such an Order.

(2) The method for selection and testing of the fuel lines, carbon canisters, tanks, engines or equipment and the evaluation of test data must be made in accordance with the procedures set forth herein.

(3) Air Resources Board personnel shall have access to the fuel line, carbon canister, tank, engine, or equipment assembly plants, or distribution facilities for the purposes of tank, engine, or equipment selection and testing. Scheduling of access shall be arranged with the representative designated in the application for certification.

(4) All testing must be conducted in accordance with the applicable model year evaporative emission test procedures. Any evaporative emission control system parameters must be set to values or positions that are within the range available to the ultimate purchaser as determined by ARB. No break-in or modifications, adjustments, or special preparation or maintenance will be allowed on engines or equipment units chosen for compliance testing without the written consent of the Executive Officer.

(5) Correction of damage or maladjustment that may reasonably be found to have resulted from shipment of the engine or equipment is permitted only after an initial test of the engine or equipment, except where 100 percent of the manufacturer's production is given that inspection or maintenance by the manufacturer's own personnel. The manufacturer may request that the engine or equipment be repaired from shipping damage, and be retested. If the Executive Officer concurs, the engine or equipment may be retested, and the original test results may be replaced by the after-repair test results.

(6) Engines or equipment must be randomly chosen from the selected evaporative family or subgroup.

(7) Five fuel lines, carbon canisters, tanks, engines or equipment of the same model within an evaporative family or subgroup will be selected for testing per the applicable test procedure. An evaporative family or subgroup will be deemed to have passed the compliance testing if all five test results are below the applicable standard. If one or more of the test results are above the applicable standard, an evaporative family or subgroup will be deemed to have failed the compliance testing if the upper 95% confidence limit of the five samples is greater than 150%, 130%, or 110% of the applicable performance standards specified in sections 2754 through 2757 of this Article per the following table:

Test Category	"Pass" If "U" is less than or equal to	"Fail" If "U" is greater than
1st Year of Production of Evaporative Families	1.5*Applicable Standard	1.5*Applicable Standard
2nd Year of Production of Evaporative Families	1.3*Applicable Standard	1.3*Applicable Standard
3rd and Subsequent Years of Production of Evaporative Families	1.1*Applicable Standard	1.1*Applicable Standard

Where:

$$U = \bar{x} + 2.776 * \frac{s}{\sqrt{n}}$$

$$\bar{x} = \frac{\sum_{i=1}^n \text{sample}_i}{n}$$

$$s = \sqrt{\frac{\sum_{i=1}^n (x_i - \bar{x})^2}{n-1}}$$

$$n = 5$$

(8) If any group of fuel lines, carbon canisters, tanks, engines, or equipment units selected for inspection fails an evaporative emission test as determined by subsection (a)(7), or fails to conform to the labeling requirements of section 2759, the Executive Officer shall notify the manufacturer in accordance with subsection (b).

(b) Notification of Failure

If compliance testing identifies engines or equipment units that do not meet the standards set out in (a)(7) above, or that do not conform with the permeation control design or permeation specifications of section 2754, the Executive Officer will notify the Holder of the Executive Order of Certification covering the engines or equipment. The Executive Officer shall also notify such Holder that the Executive Order of Certification may be suspended or revoked. The Holder of the Executive Order of Certification shall have 30 calendar days in which to notify the Executive Officer of their intent to provide additional information and/or independent test results for five tanks, engines, or equipment that document compliance of the evaporative family. The Executive Officer will consider all relevant information provided by the manufacturer, and other interested parties, including, but not limited to corrective actions applied to the non-compliant evaporative family and emission credits to remedy the failure.

(c) Suspension and Revocation of Executive Orders.

(1) The Executive Officer shall not revoke or suspend the Executive Order of Certification, without considering any information provided by the holder of such certification pursuant to (b) above.

(2) If the results of the compliance testing indicate that the failed tanks, engines, or equipment units of a particular evaporative family or subgroup are produced at one plant, the Executive Officer may elect to suspend the Executive Order of Certification with respect to that evaporative family for engines or equipment manufactured at that plant.

(3) Notwithstanding the foregoing, the Executive Officer may suspend an Executive Order of Certification, in whole or in part, effective upon written notice to the Holder if the Executive Officer finds that:

(A) The Holder of the Executive Order of Certification has refused to comply with any of the requirements of this section; or

(B) The Holder has submitted false or incomplete information in any report or information provided to the Executive Officer under this section;

(C) The Holder has rendered inaccurate any test data submitted under this section;

(D) That ARB personnel have been denied the opportunity to conduct activities authorized under this section after a warrant or court order is presented to the Holder;

(E) That ARB personnel were unable to conduct activities authorized in this Article because the facility is located in a foreign jurisdiction where local law prohibits those activities.

(4) The Executive Officer may revoke an Executive Order of Certification for an evaporative family after the Executive Order of Certification has been suspended pursuant to subsection (1) or (2) of this section if the proposed remedy for the nonconformity, as reported by the Holder to the Executive Officer, is one requiring a design change or changes to the evaporative emission control system as described in the application for certification of the affected evaporative family or subgroup.

(5) Once an Executive Order of Certification has been suspended for a failed tank, engine, or equipment, as provided for in subsection (1) of

this section, the Holder must take the following actions before the Executive Order of Certification can be reinstated:

(A) Remedy the nonconformity;

(B) Demonstrate that the tank, engine, or equipment conforms to the evaporative emission standards by retesting the tank, engine, or equipment in accordance with these regulations; and

(C) Submit a written report to the Executive Officer, after successful completion of testing on the failed tank, engine, or equipment that contains a description of the remedy and test results for each tank, engine, or equipment in addition to other information that may be required by this part.

(6) Once an Executive Order of Certification for a failed evaporative family or subgroup has been suspended pursuant to subsection (1), (2) or (3) of this section, the Holder must take the following actions before the Executive Officer will consider reinstating the Executive Order of Certification:

(A) Submit a written report to the Executive Officer that identifies the reason for the noncompliance of the tanks, engines, or equipment, describes the proposed remedy, including a description of any proposed quality control and/or quality assurance measures to be taken by the Holder to prevent future occurrences of the problem, and states the date on which the remedies will be implemented; and

(B) Demonstrate that the evaporative family or subgroup for which the Executive Order of Certification has been suspended does in fact comply with the regulations of this part by testing no fewer than five tanks, engines, or equipment. The results must meet the "Pass" criteria in subsection (a)(7). Such testing must comply with the provisions of this section.

(7) Once the Executive Order of Certification has been revoked for an evaporative family or subgroup, if the Holder desires to continue introduction into commerce of a modified version of that evaporative family or subgroup, the Holder must:

After implementing the change or changes intended to remedy the nonconformity, demonstrate that the modified evaporative family does in fact conform to the applicable standards of this Article by testing five engines or equipment from the modified evaporative family unless such testing is waived by the Executive Officer.

(8) To permit a Holder to avoid storing non-test engines or equipment while conducting subsequent testing of the noncomplying evaporative family, a Holder may request that the Executive Officer conditionally reinstate the Executive Order of Certification for that evaporative family.

HISTORY

1. New section filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2766. Exemptions.

(a) Low Permeation Tanks — Metal tanks, coextruded multilayer tanks, and structurally integrated nylon fuel tanks on SORE equipment with engine displacements < 80 cc are specifically exempt from section 2755 of this Article. Tank permeation data is not required to be submitted in the certification application.

(b) Small Production Volume Tank Exemption. These engines or equipment qualifying under section 2752(a)(26) are exempt from the diurnal standards in section 2754 and the fuel tank permeation standard in 2754 of this Article if the equipment contains the following:

(1) An evaporative emission control system certified by an engine manufacturer that uses an actively purged carbon canister, an equivalent fuel line, and a sealed tethered fuel cap; or

(2) An evaporative emission control system that passively vents fuel tank vapors to a carbon canister with a minimum butane working capacity as specified in TP-902, an equivalent fuel line, and a sealed tethered fuel cap.

Tank permeation data is not required to be submitted in the certification application for Small Production Volume Tanks.

(c) Equipment Fueled by a Vehicle Fuel Tank — Generators that are fueled from the fuel tank of an on-road motor vehicle or marine vessel are exempt from the diurnal performance requirements in section 2754

and the fuel tank permeation and carbon canister design requirements in section 2754(b). However, these generators must use fuel hose that meets the design requirements specified in section 2754(b).

NOTE: Authority cited: Sections 39600, 39601 and 43013, Health and Safety Code. Reference: Section 43013, Health and Safety Code.

HISTORY

1. New section filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2767. Innovative Products.

(a) The Executive Officer may make a determination that tank vent emission control achieved by an innovative technology may be approved per section 2767.1 if an evaluation of the innovative technology reveals that the technology can meet the evaporative emission requirements in section 2754.

(b) The Executive Officer may make a determination to exempt engines and equipment from section 2756(b) of this Article if an evaluation of the innovative technology reveals that the technology can meet the diurnal evaporative emission standards in section 2754.

(c) The Executive Officer may make a determination that fuel tanks that have undergone special treatment or that have been manufactured from a unique material are "equivalent fuel tanks" if it can be demonstrated that they meet the permeation standard in section 2755 of this Article when using TP-901, July 26, 2004. Tanks deemed equivalent augment "equivalent fuel tanks" already defined in section 2752 of this Article.

(d) A manufacturer must apply in writing to the Executive Officer for an innovative product equivalency claimed under subsection (a, b, or c). The application must include the supporting documentation that quantifies the emissions from at least 5 samples of the innovative product, including the test methods used to generate the data. The test methods shall include criteria for reproducibility, accuracy, and sampling and laboratory procedures. In addition, the applicant must provide any information to enable the Executive Officer to establish conditions for making a determination of "equivalency". All information, including proprietary data submitted by a manufacturer pursuant to this section, shall be handled in accordance with the procedures specified in title 17, California Code of Regulations, sections 91000-91022.

(e) Within 30 days of receipt of the application, the Executive Officer shall determine whether an application is complete.

(f) Within 90 days after an application has been deemed complete, the Executive Officer will determine whether, under what conditions, and to what extent, a determination of "equivalency" will be permitted. The applicant and the Executive Officer may mutually agree to a longer time period for reaching a decision. An applicant may submit additional supporting documentation before a decision has been reached. The Executive Officer will notify the applicant of the decision in writing and specify such terms and conditions that are necessary to ensure that emissions from use of the product will meet the emissions reductions specified in subsection (a, b, or c).

(g) In granting an "equivalency" determination for a fuel tank, the Executive Officer shall specify the test method(s) for determining conformance to the conditions established.

(h) For any fuel tank for which an innovative product "equivalency" has been granted pursuant to this section, the manufacturer shall notify the Executive Officer in writing at least 30 days before the manufacturer changes a product's design, connections, or other factors that may effect the ROG emissions during recommended usage. The manufacturer must also notify the Executive Officer within 30 days after the manufacturer learns of any information that would alter the emissions estimates submitted to the Executive Officer in support of the "equivalency" application.

(i) If the permeation standards are amended for a product category, all innovative "equivalency" determinations granted for products in the product category, except as provided in subsection (j), have no force and effect as of the effective date of the amended permeation standards.

(j) If the Executive Officer believes that a fuel tank for which an "equivalency" determination has been granted no longer meets the crite-

ria for an innovative product specified in subsections (a, b, or c), the Executive Officer may hold a public hearing in accordance with the procedures specified in title 17, California Code of Regulations, article 1, subchapter 1.25, Chapter 1, Division 3, to determine if the "equivalency" determination should be modified or revoked.

NOTE: Authority cited: Sections 39600, 39601 and 43013, Health and Safety Code. Reference: Section 43013, Health and Safety Code.

HISTORY

1. New section filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2767.1. Approved Evaporative Emission Control System Components.

(a) The Executive Officer may make a determination to approve components (fuel tanks, fuel hoses, and carbon canisters) for use on evaporative emission control systems that have been shown to meet the Design Requirements in Table 1 of section 2754 of this Article.

(b) A component manufacturer must apply in writing to the Executive Officer for a component claimed under subsection (a). The application shall include the supporting documentation that quantifies the emissions or performance from at least five samples of the component, including the test methods used to generate the data. If the test methods are not as prescribed in this article the test methods shall include criteria for reproducibility, accuracy, and sampling and laboratory procedures. All information, including proprietary data submitted by a manufacturer pursuant to this section, shall be handled in accordance with the procedures specified in title 17, California Code of Regulations, sections 91000-91022.

(c) Within 30 days of receipt of the application, the Executive Officer shall determine whether an application is complete.

(d) Within 90 days after an application has been deemed complete, the Executive Officer will approve/disapprove the component. If approved, an Executive Order will be issued for the component. The applicant and the Executive Officer may mutually agree to a longer time for reaching a decision. An applicant may submit additional supporting documentation before a decision has been reached. The Executive Officer will notify the applicant of the decision in writing and specify such terms and conditions that are necessary to ensure that the component will meet the performance standards in subsection (a).

(e) If the Evaporative Emission Performance and Design Standards (reference section 2754) are amended for a product category, all "approvals" granted for components in the product category, except as provided in subsection (f), have no force and effect as of the effective date of the amended standards unless the applicable component requirements are not amended.

(f) If the Executive Officer determines that a component for which an "approval" has been granted no longer meets the performance standards specified in subsection (a), the Executive Officer may deny, suspend or revoke the Executive Order following provisions of Section 2770 of this Article.

NOTE: Authority cited: Sections 39600, 39601 and 43013, Health and Safety Code. Reference: Section 43013, Health and Safety Code.

HISTORY

1. New section filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2768. Variances.

(a) Any manufacturer of small off-road engines or equipment that use small off-road engines or fuel tanks subject to this Article that cannot meet the requirements set forth in sections 2754 through 2757 of this Article, due to extraordinary reasons beyond the manufacturer's reasonable control, may apply in writing for a variance. The variance application must set forth:

- (1) The provisions of the regulations for which a variance is sought;
- (2) the specific grounds upon which the variance is sought;
- (3) the proposed date(s) by which compliance will be achieved; and
- (4) a compliance plan detailing the method(s) that will achieve compliance.

(b) Within 75 calendar days of receipt of a variance application containing the information required in subsection (a), the Executive Officer

or his nominee shall hold a public hearing to determine whether, under what conditions, and to what extent, a variance is necessary and should be allowed. Notice of the time and place of the hearing must be sent to the applicant by certified mail not less than 30 days before to the hearing. Notice of the hearing must also be submitted for publication in the California Regulatory Notice Register and sent to every person who requests such a notice, not less than 30 days before the hearing. The notice must state that the parties may, but not need to be, represented by counsel at the hearing. At least 30 days before the hearing, the variance application must be made available to the public for inspection. Interested members of the public must be allowed a reasonable opportunity to testify at the hearing and their testimony must be considered.

(c) No variance may be granted unless all of the following findings are made:

(1) that, due to reasons beyond the reasonable control of the applicant, compliance would result in extraordinary economic hardship;

(2) that the public interest in mitigating the extraordinary hardship to the applicant by issuing the variance outweighs the public interest in avoiding any increased emissions of air contaminants that would result from issuing the variance;

(3) that the compliance plan proposed by the applicant can reasonably be implemented, and will achieve compliance as expeditiously as possible; and

(4) that the applicant has mitigated the noncompliance to the maximum extent feasible.

(d) Any variance order shall specify a final date by which compliance will be achieved. Any variance order shall contain a condition that specifies increments of progress necessary to assure timely compliance, and such other conditions that the Executive Officer, in consideration of the testimony received at the hearing, finds necessary to carry out the purposes of Division 26 of the Health and Safety Code.

(e) A variance shall cease to be effective upon failure of the party to whom the variance was granted to comply with any term or condition of the variance.

(f) Upon the application of any person, the Executive Officer may review, and for good cause, modify or revoke a variance from requirements of sections 2753 through 2756 or section 2759 after holding a public hearing in accordance with the provisions of subsection (b).

(g) A variance shall not be granted for more than one full model year after the year such variance is granted.

NOTE: Authority cited: Sections 39600, 39601 and 43013, Health and Safety Code. Reference: Section 43013, Health and Safety Code.

HISTORY

1. New section filed 9–20–2004; operative 10–20–2004 (Register 2004, No. 39).

§ 2769. Inspection.

The Executive Officer, or an authorized representative of the Executive Officer, may periodically inspect any facility of a manufacturers of equipment, manufacturers of engines, or manufacturers of evaporative emission control components, technology, or systems subject to this Article as deemed necessary to ensure compliance with these regulations. Failure of a manufacturer, distributor, or retailer or other person subject to this Article to allow access for inspection purposes shall be grounds for suspension or revocation of an Executive Order of Certification.

NOTE: Authority cited: Sections 39600, 39601 and 43013, Health and Safety Code. Reference: Section 43013, Health and Safety Code.

HISTORY

1. New section filed 9–20–2004; operative 10–20–2004 (Register 2004, No. 39).

§ 2770. Denial, Suspension or Revocation of Certification.

(a) The Executive Officer for just cause may deny, suspend or revoke an Executive Order of Certification in any of the following circumstances:

(1) An applicant or Holder has materially misrepresented the meaning, findings, effect or any other material aspect of the certification application, including submitting false or incomplete information in its applica-

tion for certification regardless of the applicant's personal knowledge of the falsity or incompleteness of the information;

(2) An applicant or Holder that uses a label other than the approved label on any engine or equipment, or the label used otherwise fails to comply with the requirements of this Article.

(3) An applicant or Holder may be denied certification or be subject to a suspension or revocation action pursuant to this section based upon the actions of an agent, employee, licensee, or other authorized representative.

(4) Pursuant to section 2754.1(b)(10) and (11) and 2769 above.

(b) The Executive Officer shall notify the applicant or Holder by certified mail of any action taken by the Executive Officer to deny, suspend or revoke any certification granted under this Article. The notice shall set forth the reasons for and evidence supporting the action(s) taken. A suspension or revocation is effective upon receipt of the notification.

(c) A Holder may request that the suspension or revocation be stayed pending a hearing under section 2771. In determining whether to grant the stay, the Executive Officer shall consider the harm the Holder will likely suffer if the stay is not granted. The Executive Officer shall deny the stay if the adverse effects of the stay on the public health, safety, and welfare outweigh the harm to the Holder if the stay is not granted.

(d) Once an Executive Order of Certification has been suspended pursuant to (a) above, the Holder must satisfy and correct all noted reasons for the suspension and submit a written report to the Executive Officer advising him or her of all such steps taken by the Holder before the Executive Officer will consider reinstating the Executive Order of Certification.

(e) Nothing in this section shall prohibit the Executive Officer from taking any other action provided for by law for violations of the Health and Safety Code.

NOTE: Authority cited: Sections 39600, 39601 and 43013, Health and Safety Code. Reference: Section 43013, Health and Safety Code.

HISTORY

1. New section filed 9–20–2004; operative 10–20–2004 (Register 2004, No. 39).

§ 2771. Appeals.

Any person whose application for Executive Order of Certification has been denied, or whose certification has been suspended or revoked may request a hearing to review the action as provided herein. Any such request shall be made within fifteen working days of the date the action for which review is sought became final.

(a) Hearing Procedure.

Except as provided for in subsection (b) below, any appeal pursuant to this section shall be conducted in accordance with the Administrative Hearing Procedures for Petitions for Review of Executive Officer Decisions, title 17, California Code of Regulations, Division 3. Chapter 1 Article 2, commencing with section 60055.1.

(b) Review by written submission.

(1) In lieu of the hearing procedure set forth in (a) above, a manufacturer may request that a review of the Executive Officer's decision be conducted by a hearing officer solely by written submission.

(2) A manufacturer may request a review of the Executive Officer's decision to deny, suspend or revoke a certification no later than 20 days from the date of issuance of the notice of the denial, suspension, or revocation. Such request shall include, at a minimum, the following:

(A) name of the manufacturer, the name, address and telephone number of the person representing the manufacturer and a statement signed by a senior officer of the manufacturer warranting that the representative has full authority to bind the manufacturer as to all matters regarding the appeal;

(B) copy of the Executive Order granting certification and the written notification of denial;

(C) a statement of facts and explanation of the issues to be raised setting forth the basis for challenging the denial, suspension, or revocation (conclusory allegations will not suffice) together with all documents relevant to those issues; and

(D) the signature of the representative named in (A) above.

(3) Upon receipt of a request for review, the request shall be referred to the administrative hearing office of the state board for assignment of a hearing officer.

(4) Within 15 days of appointment of a hearing officer ARB staff shall submit a written response to the manufacturer's submission and documents in support of the Executive Officer's action no later than 10 days after receipt of the manufacturer's submission;

(5) within 7 days of receipt of the ARB response, the manufacturer may submit one rebuttal statement which shall be limited to the issues raised in the ARB rebuttal;

(6) if the manufacturer submits a rebuttal, ARB staff may, within 7 days of receipt of the manufacturer's rebuttal, submit one rebuttal statement which shall be limited to the issues raised in the manufacturer's rebuttal; and

(7) the hearing officer shall receive all statements and documents and render a written decision. The hearing officer's decision shall be mailed to the manufacturer no later than 60 working days after the final deadline for submission of papers.

HISTORY

1. New section filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2772. Penalties.

In addition to suspension or revocation of an Executive Order of Certification as provided in this Article, the Executive Officer may seek civil or criminal penalties as provided for by law and/or such equitable relief deemed appropriate by the Executive Officer for any violation of these regulations. Such penalties shall apply on a per engine or equipment unit basis. Each day in which there is a violation shall be a separate violation.

NOTE: Authority cited: Sections 39600, 39601 and 43013, Health and Safety Code. Reference: Section 43013, Health and Safety Code.

HISTORY

1. New section filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

§ 2773. Severability.

Each part of this article is severable, and in the event that any part of this article is held to be invalid, the remainder of this article remains in full force and effect.

NOTE: Authority cited: Sections 39600, 39601 and 43013, Health and Safety Code. Reference: Section 43013, Health and Safety Code.

HISTORY

1. New section filed 9-20-2004; operative 10-20-2004 (Register 2004, No. 39).

Article 2. Large Spark-Ignition (LSI) Engine Fleet Requirements

§ 2775. Applicability.

(a) *General Applicability.* This article applies to operators of off-road large spark-ignition (LSI) engine forklifts, sweepers/scrubbers, industrial tow tractors or airport ground support equipment operated within the State of California in the conduct of business with:

(1) 25 horsepower or more (greater than 19 kilowatts for 2005 and later model year engines), and

(2) greater than 1.0 liter displacement.

(b) *Exemptions.*

(1) Small Fleets as defined in subsection (d).

(2) Rental or leased equipment operated in California no more than 30 aggregated calendar days per year shall be exempt from the requirements of this article.

(3) Off-road military tactical vehicles or equipment exempt from regulation under the federal national security exemption, 40 CFR, subpart J, section 90.908, are exempt from the requirements of this article. Vehicles and equipment covered by the definition of military tactical vehicle that are commercially available and for which a federal certificate

of conformity has been issued under 40 CFR Part 90, subpart B, shall also be exempt from the requirements of this article.

(4) Each part of this article is severable, and in the event that any part of this chapter or article is held to be invalid, the remainder of the article shall remain in full force and effect.

(c) *Definitions.* The definitions in Section 1900(b), Chapter 1, and Section 2431(a), Chapter 9 of Title 13 of the California Code of Regulations apply to this article. In addition, the following definitions apply to this article:

"Aggregated Operations" means all of an operator's California facilities for which equipment purchasing decisions are centrally made. Facilities that budget and make equipment purchasing decisions independent of a government or corporate headquarters are assumed to be independent and therefore are not required to be aggregated for the purpose of determining fleet size.

"Agricultural Crop Preparation Services" means packinghouses, cotton gins, nut hullers and processors, dehydrators, feed and grain mills, and other related activities that fall within the United States Census Bureau NAICs (North American Industry Classification System) definition for Industry 115114 — "Postharvest Crop Activities," as published in the North American Industry Classification System — United States, 2002.

"Airport Ground Support Equipment," "Ground Service Equipment," or "GSE" means any large spark-ignition engine or electric-powered equipment contained in the 24 categories of equipment included in section B.3. of Appendix 2 of the South Coast Ground Support Equipment Memorandum of Understanding, dated November 27, 2002. Specifically included in this definition are those categories of GSE equipment designed for on-road use, but not licensed for on-road use ("On-Road Equivalent" GSE).

"Baseline Inventory" means an inventory of equipment as defined in this subdivision that reflects all equipment owned at the time of the inventory.

"Certification Standard" means the level to which an LSI engine is certified, in grams per kilowatt-hour of hydrocarbon and oxides of nitrogen, combined, as identified in an Executive Order (EO) issued by the Executive Officer of the California Air Resources Board.

"Dehydrators" means sun drying of fruits, vegetables, tomatoes, dates, prunes, raisins and olives, or artificially drying and dehydrating fruits, vegetables, tomatoes, dates, prunes, raisins, grapes, and olives.

"Emission Control System" means any device or system employed with a new or in-use off-road LSI-engine vehicle or piece of equipment that is intended to reduce emissions. Examples of LSI emission control systems include, but are not limited to, closed-loop fuel control systems, fuel injection systems, three-way catalysts, and combinations of the above.

"Equipment" or "Pieces of Equipment" means one or more forklifts, industrial tow tractors, sweeper/scrubbers, or pieces of airport ground support equipment as defined in this section.

"Executive Officer" means the Executive Officer of the California Air Resources Board, or his or her delegate.

"Executive Order" means a document signed by the Executive Officer that specifies the standard to which a new LSI engine is certified or the level to which an LSI retrofit emission control system is verified.

"Facility" means any structure, appurtenance, installation, and improvement on land that operates and/or garages one or more pieces of equipment.

"Facility Sample" means the selection of one or more individual facilities from an operator's California facilities for comparison to the operator's aggregate fleet inventory for fleet average calculation.

"Fleet Average Emission Level" means the arithmetic mean of the combined hydrocarbon plus oxides of nitrogen emissions certification standard or verification absolute emissions level for each piece of applicable equipment comprising an operator's fleet. For the purposes of calculating the fleet average, electric-powered equipment shall be considered to have combined hydrocarbon plus oxides of nitrogen emissions level of zero (0). Electric-powered equipment of less than 19 kilowatts

shall be allowed to be included in the fleet average calculation provided that the operator can demonstrate that the equipment performs the work equivalent of an LSI engine-powered piece of equipment. For the purposes of calculating the fleet average for a non-forklift fleet, each piece of On-Road Equivalent GSE shall be considered to have a combined hydrocarbon plus oxides of nitrogen emissions level as follows: 1.1 g/bhp-hr (1.5 g/kW-hr) for purposes of determining compliance with the 1/1/2009 standard; 0.8 g/bhp-hr (1.1 g/kW-hr) for purposes of determining compliance with the 1/1/2011 standard; and 0.7 g/bhp-hr (0.9 g/kW-hr) for purposes of determining compliance with the 1/1/2013 standard. For the purpose of calculating the fleet average, fleet operators shall be permitted to exclude at their discretion any electric-powered equipment that could otherwise be used to lower the LSI fleet's average emission level.

"Forklift" means an electric Class 1 or 2 rider truck or a large spark-ignition engine-powered Class 4 or 5 rider truck as defined by the Industrial Truck Association. Electric Class 3 trucks are not forklifts for the purposes of this regulation.

"Industrial Tow Tractor" means an electric or large spark-ignition engine-powered Class 6 truck as defined by the Industrial Truck Association. Industrial tow tractors are designed primarily to push or pull non-powered trucks, trailers, or other mobile loads on roadways or improved surfaces. Industrial tow tractors are commonly referred to as tow motors or tugs. Industrial tow tractors are distinct from airport ground support equipment tugs for the purposes of this regulation.

"Label" means a permanent material that is welded, riveted or otherwise permanently attached to the engine block or other major component in such a way that it will be readily visible after installation of the engine in the equipment. If the equipment obscures the label on the engine, the equipment manufacturer must attach a supplemental label such that it is readily visible. The label will state the emission standard or verification absolute emissions level to which the engine or equipment was certified or verified.

"Large Fleet" means an operator's aggregated operations in California of 26 or more pieces of equipment.

"Leased forklift" for use in agricultural crop preparation services means a forklift under a contract or agreement for a term or period of one year or more that may include an option to purchase the forklift.

"LSI Retrofit Emission Control System" means an emission control system employed exclusively with an in-use off-road LSI-engine vehicle or piece of equipment.

"Manufacturer" means the manufacturer granted new engine certification or retrofit emission control system verification.

"Medium Fleet" means an operator's aggregated operations in California of 4 to 25 pieces of equipment.

"Memorandum of Understanding Signatories" or "MOU Signatories" means any of the airlines that entered into the South Coast Ground Support Equipment Memorandum of Understanding, dated November 27, 2002.

"Military tactical vehicles or equipment" means vehicles or pieces of equipment that meet military specifications, are owned by the U.S. Department of Defense and/or the U.S. military services or its allies, and are used in combat, combat support, combat service support, tactical or relief operations, or training for such operations.

"Model Year" means the manufacturer's annual production period, which includes January 1 of a calendar year or, if the manufacturer has no annual production period, the calendar year.¹

"New Engine" means an engine's ownership has not been transferred to the ultimate consumer.]

"Non-forklift fleet" means an operator's aggregated operations in California of four (4) or more sweeper/scrubbers, industrial tow tractors, or pieces of airport ground support equipment, alone or in combination.

"Nut hullers and processors" means facilities where nuts are received, hulled, aspirated, shelled, sized, stored, packaged and shipped. Facilities that blanch, slice, dice, roast, salt, or smoke nuts or nut meats are not included in the "nut hullers and processors" definition.

["Off-Road Large Spark-ignition Engines" or "LSI Engines" means any engine that produces a gross horsepower of 25 horsepower or greater (greater than 19 kilowatts for 2005 and later model years) or is designed (e.g., through fueling, engine calibrations, valve timing, engine speed modifications, etc.) to produce 25 horsepower or greater (greater than 19 kilowatts for 2005 and later model years). If an engine family has models at or above 25 horsepower (greater than 19 kilowatts) and models below 25 horsepower (at or below 19 kilowatts), only the models at or above 25 horsepower (above 19 kilowatts) would be considered LSI engines. The engine's operating characteristics are significantly similar to the theoretical Otto combustion cycle with the engine's primary means of controlling power output being to limit the amount of air that is throttled into the combustion chamber of the engine. LSI engines or alternate fuel-powered LSI internal combustion engines are designed for powering, but not limited to powering, forklift trucks, sweepers, generators, and industrial equipment and other miscellaneous applications. All engines and equipment that fall within the scope of the preemption of Section 209(e)(1)(A) of the Federal Clean Air Act, as amended, and as defined by regulation of the Environmental Protection Agency, are specifically excluded from this category. Specifically excluded from this category are: 1) engines operated on or in any device used exclusively upon stationary rails or tracks; 2) engines used to propel marine vessels; 3) internal combustion engines attached to a foundation at a location for at least 12 months; 4) off-road recreational vehicles and snowmobiles; and 5) stationary or transportable gas turbines for power generation.]

"Operator" means a person with legal right of possession and use of LSI engine equipment other than a person whose usual and customary business is the rental or leasing of LSI engine equipment. Operator includes a person whose usual and customary business is the rental or leasing of LSI engine equipment for any LSI engine equipment not solely possessed or used for rental or leasing.

"Rental forklift" for use in agricultural crop preparation services means a forklift under a contract or agreement for a term or period of less than one year that may include an option to renew the contract or agreement.

"Repower" means a new or remanufactured engine and parts offered by the OEM or by a non-OEM rebuilder that has been demonstrated to the ARB to be functionally equivalent from a durability standpoint to the OEM engine and components being replaced.

"Retrofit" means the application of an emission control system to a non-new LSI engine.

"Serial Number" means an engine serial number and date of engine manufacture (month and year) that are stamped on the engine block or stamped on a metal label riveted or permanently attached to the engine block. Engine manufacturers must keep records such that the engine serial number can easily be used to determine if an engine was certified for the applicable model year, and beginning January 1, 2007, the standard to which the engine was certified.

"Small Fleet" means an operator's aggregated operations in California of 1 to 3 forklifts and/or 1 to 3 pieces of non-forklift equipment.

"Sweeper/scrubber" means an electric or large spark-ignition engine-powered piece of industrial floor cleaning equipment designed to brush and vacuum up small debris and litter or scrub and squeegee the floor, or both.

"Specialty Equipment" means a piece of equipment with unique or specialized performance capabilities that allow it to perform prescribed tasks and as approved by the Executive Officer.

["Ultimate Purchaser" means the first person who in good faith purchases a new LSI engine or equipment using such engine for purposes other than resale.]

"Uncontrolled LSI Engine" means pre-2001 uncertified engines and 2001-2003 certified uncontrolled LSI engines. The default emission rate for an uncontrolled LSI engine is 16.0 grams per kilowatt-hour of hydrocarbon plus oxides of nitrogen.

"Verification" means a determination by the Executive Officer that the LSI emission control system meets the requirements of this Proce-

ture. This determination is based on both data submitted or otherwise known to the Executive Officer and engineering judgement.

“Verification Level” means one of four emission reduction classifications that apply to the performance capability of retrofit emission control systems as described in Title 13, California Code of Regulations, Section 2782(f), Table 1, as set forth in Table 1:

Table 1. LSI Engine Retrofit System Verification Levels

Classification	Percentage Reduction (HC+NOx)	Absolute Emissions (HC+NOx)
LSI Level 1 ⁽¹⁾	> 25% ⁽²⁾	Not Applicable
LSI Level 2 ⁽¹⁾	> 75% ⁽³⁾	3.0 g/bhp-hr ⁽³⁾ (4.0 g/kW-hr)
LSI Level 3a ⁽¹⁾	> 85% ⁽⁴⁾	0.5, 1.0, 1.5, 2.0, 2.5 g/bhp-hr (0.7, 1.3, 2.0, 2.7, 3.4 g/kW-hr)
LSI Level 3b ⁽⁵⁾	Not Applicable	0.5, 1.0, 1.5, 2.0 g/bhp-hr (0.7, 1.3, 2.0, 2.7 g/kW-hr)

Notes:

(1) Applicable to uncontrolled engines only

(2) The allowed verified emissions reduction is capped at 25% regardless of actual emission test values

(3) The allowed verified reduction for LSI Level 2 is capped at 75% or 3.0 g/bhp-hr (4.0 g/kW-hr) regardless of actual emission test values

(4) Verified in 5% increments, applicable to LSI Level 3a classifications only

(5) Applicable to emission-controlled engines only

¹ Bracketed definitions are replicated for ease of use and presentation clarity from Section 1900(b), Chapter 1, or Section 2431(a), Chapter 9, of Title 13 of the California Code of Regulations.

NOTE: Authority cited: Sections 39600, 39601, 43013 and 43018, Health and Safety Code. Reference: Sections 43013, 43017 and 43018, Health and Safety Code.

HISTORY

1. New article 2 (sections 2775–2775.2) and section filed 4–12–2007; operative 5–12–2007 (Register 2007, No. 15).

§ 2775.1. Standards.

(a) Operators of forklift and/or non-forklift fleets shall first determine the size of their fleets, using the equipment definitions in Section 2775. Then, except as provided in subdivisions (c), (d), (e), and (f), operators of medium and large forklift fleets and operators of non-forklift fleets with more than three pieces of equipment shall comply with the fleet average emission level standards in Table 2 by the specified compliance dates.

Table 2: Fleet Average Emission Level Standards
in grams per kilowatt-hour (brake-horsepower-hour)
of hydrocarbons plus oxides of nitrogen

Fleet Type	Initial Compliance Date		
	1/1/2009	1/1/2011	1/1/2013
Large Forklift Fleet	3.2 (2.4)	2.3 (1.7)	1.5 (1.1)
Medium Forklift Fleet	3.5 (2.6)	2.7 (2.0)	1.9 (1.4)
Non-forklift Fleet	4.0 (3.0)	3.6 (2.7)	3.4 (2.5)

(1) Fleet operators subject to the fleet average provisions shall include in their fleet average calculations any piece of equipment that the operator has rented or leased or reasonably expects to rent or lease for a period of one year or more.

(2) Fleet operators may exclude from the fleet average calculation uncontrolled 2003 and 2004 model year rental equipment (if the equipment is rented for a period of less than one year) until January 1, 2010.

(3) In addition to the provisions of (a)(2) above, fleet operators may exclude from the fleet average calculation rental or leased equipment if:

(A) the rental or lease is for a period of less than one year, and

(B) the rental or lease component comprises no more than 20 percent of the operator's equipment at any time, and

(C) the equipment rented or leased during the period from January 1, 2009 through December 31, 2010 is controlled to a 4.0 g/kW-hr (3.0 g/bhp-hr) standard or better and equipment rented or leased on or after January 1, 2011 is controlled to a 2.7 g/kW-hr (2.0 g/bhp-hr) standard or better.

(4) Fleet operators shall comply with the applicable fleet average standard in Table 2 with the following exceptions:

(A) if through business expansion, a fleet meets the definition of a larger size category, the fleet may continue to comply with the applicable fleet standard for the initial size category until the subsequent compliance date, at which time the fleet must meet the applicable fleet standard for the new fleet size category, or

(B) if through retirement or other fleet size reduction mechanism the fleet would otherwise be required to comply with a less stringent fleet standard, then the less stringent fleet standard becomes effective immediately.

(b) Operators of mixed fleets comprised of forklifts and non-forklift equipment shall determine fleet size individually for forklift fleets and non-forklift fleets; a mixed fleet with three or fewer forklifts and three or fewer non-forklift pieces of equipment shall be considered to be a small fleet.

(c) Except as provided in subdivisions (d), (e), and (f), each operator of a forklift fleet used in agricultural crop preparation services shall address emissions from their uncontrolled forklifts engines as follows:

(1) by January 1, 2009, identify that portion of the owned 1990 and newer LSI forklift fleet for which retrofit emission control systems have been verified and control 20 percent of that portion as prescribed in subdivision (d)(1)(D)(i) below; and

(2) by January 1, 2012, control 100 percent of the owned 1990 and newer LSI forklift fleet for which retrofit emission control systems have been verified as prescribed in subdivision (d)(1)(D)(i) below.

(3) Operators of fleets used in agricultural crop preparation services may exclude from their LSI forklift fleet:

(A) leased forklifts provided the forklifts meet a 4.0 g/kW-hr (3.0 g/bhp-hr) standard or better. Forklifts under a lease agreement that was initiated prior to May 25, 2006 may also be excluded from the 4.0 g/kW-hr standard for the life of the lease, or until January 1, 2010, whichever is earlier, and

(B) rental forklifts rented on or after January 1, 2009, provided the forklifts meet a 4.0 g/kW-hr standard or better. Forklifts with an uncontrolled 2003 or 2004 model year engine may be excluded from the requirements of this subpart until January 1, 2010.

(d) *Limited Hours of Use Provisions.*

(1) Forklift and non-forklift equipment in medium and large fleets shall be exempted from the provisions of subdivision (a) of this section provided that:

(A) the equipment is used, on average over any three year period, less than 251 hours per year, and

(B) the equipment is equipped with an operational hours of use meter, and

(C) the operator maintains hours of use records for the piece of equipment at a facility, and

(D) the operator addresses the emissions by January 1, 2011, through option (i) or (ii) below:

(i) retrofit or repower the equipment to a Level 2 or Level 3 verification level as described in Title 13, California Code of Regulations, Section 2782 (f), or

(ii) retire the equipment or replace the equipment with a new or used piece of equipment certified to a 4.0 g/kW-hr (3.0 g/bhp-hr) hydrocarbon plus oxides of nitrogen standard.

(2) Forklifts used in agricultural crop preparation services fleets shall be exempted from the provisions of subdivision (c) of this section provided that they meet the requirements of subdivisions (d)(1)(A) through (d)(1)(C).

(e) *Specialty Equipment Exemption.*

(1) Forklift and non-forklift specialty equipment shall be exempt from the requirements of subdivisions (a) through (c) of this section provided that:

(A) the replacement cost exceeds the replacement cost of a "typical" piece of equipment from that category by 50 percent or the retrofit cost exceeds the "typical" retrofit cost of a piece of equipment from that category by 100 percent, and

(B) they meet the requirements of subdivisions (d)(1)(A) through (d)(1)(C), and

(C) the Executive Officer approves the listing of the piece of equipment as specialty equipment.

(f) *Alternate Compliance Option for Operators of Fleets used in Agricultural Crop Preparation Services.*

(1) Operators of forklift fleets used in agricultural crop preparation services shall be exempted from the provisions of subdivision (c) of this section provided that the forklift fleet complies with a 4.0 g/kW-hr (3.0 g/bhp-hr) fleet average emission level.

(g) *Use of Experimental Emission Control Strategies.*

(1) An operator may use an experimental emission control strategy provided by or operated by the manufacturer in no more than ten percent of his total fleet for testing and evaluation purposes. The operator shall keep documentation of this use in records as specified in Section 2775.2(b).

(h) *Severability.* If any provision of this section or the application thereof to any person or circumstance is held invalid, such invalidity shall not affect other provisions or applications of the section that can be given effect without the invalid provision or application, and to this end the provisions of this section are severable.

NOTE: Authority cited: Sections 39600, 39601, 43013 and 43018, Health and Safety Code. Reference: Sections 43013, 43017 and 43018, Health and Safety Code.

HISTORY

1. New section filed 4-12-2007; operative 5-12-2007 (Register 2007, No. 15).

§ 2775.2. Compliance Requirements for Fleet Operators.

(a) Fleet operators subject to the fleet average emission level requirements contained in Table 2 of section 2775.1(a) shall conduct a baseline inventory of their fleet within six months of May 12, 2007 and shall maintain records at their facilities of their baseline inventory and subsequent inventories indicating accessions and retirements until June 30, 2016.

(b) At a minimum, fleet operators subject to the fleet average emission level requirements contained in Table 2 of section 2775.1(a) shall record and maintain on file at their facilities, information on the equipment type, make, model, serial number, and emission certification standard or retrofit verification level. Fleet operators shall also maintain on file, for a period of three years, information on the quality of propane fuel they purchased for their fleet that includes a written statement, product delivery ticket, or receipt from the fuel supplier, if obtainable, that the fuel supplied to the operator meets all applicable state and federal laws for use in their engines. Operators that maintain multiple facilities may aggregate the records at a centralized facility or headquarters. Records for all equipment at all facilities shall be made available to the Air Resources Board within 30 calendar days upon request. Compliance staff may then select a facility sample for inspection purposes.

(c) Medium and large fleets shall be required to demonstrate at any time between January 1, 2009 and December 31, 2015, based on actual inventory, and reconciled against inventory records, that they meet the applicable fleet average emission level standard in Section 2775.1(a).

(d) Agricultural crop preparation services fleets shall be required to demonstrate at any time on or after January 1, 2009, based on actual inventory and reconciled against inventory records, that they have addressed their 1990 and newer uncontrolled LSI engines as prescribed in Section 2775.1(c).

(e) *Compliance Extensions.* An operator may be granted an extension to a compliance deadline specified in Section 2775.1 for one of the following reasons:

(1) Compliance Extension based on No Verified Retrofit Emission Control System.

(A) If the Executive Officer has not verified a retrofit emission control system, or if one is not commercially available for a particular engine and equipment combination, the Executive Officer may grant a one-year extension in compliance if prior to each compliance deadline specified in subsections (a), (c), and (d), the Executive Officer finds that insufficient numbers of retrofit emission control systems are projected to be available.

(2) Compliance Extensions for GSE.

(A) Compliance Extension based on no Verified or Commercially Available Retrofit Emission Control Systems for GSE. GSE of model year 1990 or newer with an uncontrolled LSI engine for which there is no verified retrofit as of January 1, 2007, or for which such verified retrofits are not commercially available by that date, shall be excluded from the GSE fleet average emission level standards contained in section 2775.1(a) until January 1, 2011. GSE of model year 1990 or newer with an uncontrolled LSI engine for which there is still no verified retrofit as of January 1, 2009, or for which such verified retrofits are not commercially available by that date, shall be excluded from the GSE fleet average emission level standards contained in section 2775.1(a) until January 1, 2013.

(B) Other Compliance Extensions for GSE. Operators may apply to the Executive Officer for an initial compliance extension of up to two years and one or more compliance extension renewals of up to one year in circumstances other than those addressed in subsection 2(A) above. The Executive Officer shall grant such applications if the applicant has made a good faith effort to comply with the fleet average emission level standards contained in section 2775.1(a) in advance of the compliance dates contained in the same section and documents either that it meets one of the following criteria independently, or that, when considering any combination of the criteria, the documentation justifies granting the application:

(i) due to conditions beyond the reasonable control of the applicant, sufficient numbers of tested and reliable emission-controlled GSE are not projected to be available at a commercially reasonable cost;

(ii) due to conditions beyond the reasonable control of the applicant, use of available emission-controlled GSE would result in significant operational or safety issues;

(iii) any other criterion that reasonably relates to whether the application should be granted.

(C) Compliance extensions granted under subsections (e)(2)(A) and (e)(2)(B) shall not extend beyond January 1, 2013. After January 1, 2013, all uncontrolled GSE shall be included in calculations for determining compliance with the GSE fleet average emission level standards contained in section 2775.1(a).

(3) If an extension to the compliance deadline is granted by the Executive Officer, the operator shall be deemed to be in compliance as specified by the Executive Officer's authorization.

(f) *Continuous Compliance.* An operator is required to keep his equipment in compliance with this regulation, once it is in compliance, so long as the operator is operating the equipment in California.

(g) *Severability.* If any provision of this section or the application thereof to any person or circumstance is held invalid, such invalidity shall not affect other provisions or applications of the section that can be given effect without the invalid provision or application, and to this end the provisions of this section are severable.

NOTE: Authority cited: Sections 39600, 39601, 43013 and 43018, Health and Safety Code. Reference: Sections 43013, 43017 and 43018, Health and Safety Code.

HISTORY

1. New section filed 4-12-2007; operative 5-12-2007 (Register 2007, No. 15).

Article 3. Verification Procedure, Warranty, and In-Use Compliance Requirements for Retrofits to Control Emissions from Off-Road Large Spark-Ignition Engines

§ 2780. Applicability and Purpose.

These procedures apply to LSI retrofit emission control systems, which, through the use of sound principles of science and engineering, control emissions of hydrocarbons (HC) and oxides of nitrogen (NOx) from off-road large spark-ignition (LSI) engines. These systems may include but are not limited to, closed-loop fuel control systems, fuel injection systems, and three-way catalysts. These procedures are not applicable to retrofit strategies that employ or make use of fuel additives.

The use of LSI retrofit emission control systems verified in accordance with this article may be a means of complying with other state board regulations applicable to the use of LSI engines, to the extent provided for in those regulations.

NOTE: Authority cited: Sections 39002, 39003, 39500, 39600, 39601, 39650-39675, 40000, 43000, 43000.5, 43011, 43013, 43018, 43105, 43600 and 43700, Health and Safety Code. Reference: Sections 39650-39675, 43000, 43009.5, 43013, 43018, 43101, 43104, 43105, 43106, 43107 and 43204-43205.5, Health and Safety Code; and Title 17 California Code of Regulations Section 93000.

HISTORY

1. New article 3 (sections 2780-2789) and section filed 4-12-2007; operative 5-12-2007 (Register 2007, No. 15).

§ 2781. Definitions.

(a) The definitions in Section 1900(b), Chapter 1, Title 13 of the California Code of Regulations are incorporated by reference herein. The following definitions shall govern the provisions of this chapter:

(1) "Applicant" means the entity that has applied for or has been granted verification under this Procedure

(2) "Average" means the arithmetic mean.

(3) "Baseline" means: (i) for uncontrolled engines, the emission levels from the engine as tested without the LSI retrofit emission control system implemented using the test cycle specified in this verification procedure; and (ii) for certified engines, the emission standards to which the engine was certified.

(4) "Certified engine" means an engine manufactured in compliance with ARB or EPA emission standards.

(5) "Durability" means the ability of the applicant's LSI retrofit emission control system to maintain a level of emissions at or below its verification emission level and maintain its physical integrity over the durability periods specified in these regulations. The minimum durability demonstration periods contained herein are not necessarily meant to represent the entire useful life of the LSI retrofit emission control system in actual service.

(6) "Emergency Engine Repair" means repair conducted outside of normal scheduled maintenance that is required for the safe operation of the equipment.

(7) "Emission Control Group" means a set of LSI engines and applications determined by parameters that affect the performance of a particular LSI retrofit emission control system. The exact parameters depend on the nature of the LSI retrofit emission control system and may include, but are not limited to, baseline or certification levels of engine emissions, combustion cycle, displacement, aspiration, horsepower rating, duty cycle, exhaust temperature profile, and fuel composition. An applicant could specify an emission control group to be comprised of engines from several different engine families, applications and equipment manufacturers. Verification of an LSI retrofit emission control system and the extension of existing verifications is done on the basis of emission control groups.

(8) "Executive Officer" means the Executive Officer of the Air Resources Board or the Executive Officer's designee.

(9) "Executive Order" means the document signed by the Executive Officer that specifies the verification level or percentage reduction of an LSI retrofit emission control system for an emission control group and includes any enforceable conditions and requirements necessary to support the designated verification.

(10) "Hot Start" means the start of an engine within four hours after the engine is last turned off.

(11) "LSI retrofit emission control system" means any device or system employed with an in-use off-road LSI-engine vehicle or piece of equipment that is intended to reduce emissions. Examples of LSI retrofit emission control systems include, but are not limited to, closed-loop fuel control system, fuel injection system, three-way catalysts, and combinations of the above.

(12) "LSI Retrofit Emission Control Group Name." See Section 2786(c)(2).

(13) "Off-Road Large Spark-Ignition Engine" or "LSI Engine" means any spark ignition engine that produces a gross power of greater than 19 kilowatts (25 horsepower) or is designed (e.g., through fueling, engine calibrations, valve timing, engine speed modifications, etc.) to produce greater than 19 kW (>25 hp), and is used in an off-road vehicle or equipment that is not excluded below. If an engine family has models at or below 19 kW (25 hp) and models above 19 kW (25 hp), only the models above 19 kW (25 hp) would be considered LSI engines. A spark ignition engine's operating characteristics are significantly similar to the theoretical Otto combustion cycle with the engine's primary means of controlling power output being to limit the amount of air and fuel that is throttled into the combustion chamber of the engine. LSI engines are designed for powering equipment applications including, but not limited to, forklift trucks, sweepers, generators, and industrial equipment and other miscellaneous applications. Specifically excluded from this category are: i) engines operated on or in any device used exclusively upon stationary rails or tracks; ii) engines used to propel marine vessels; iii) internal combustion engines attached to a foundation at a location for at least 12 months; iv) off-road recreational vehicles and snowmobiles; and v) stationary or transportable gas turbines for power generation.

(14) "Off-Road Vehicle" or "Off-Road Equipment" means any non-stationary device, powered by an internal combustion engine or motor, used primarily off the highways to propel, move, or draw persons or property including any device propelled, moved, or drawn exclusively by human power. Examples include, but are not limited to, marine vessels, construction/farm equipment, industrial equipment, locomotives, small off-road engines, off-road motorcycles, and off-highway recreational vehicles.

(15) "Otto Cycle Engine" means a type of engine with operating characteristics significantly similar to the theoretical Otto combustion cycle. The primary means of controlling power output in an Otto cycle engine is by limiting the amount of air and fuel that can enter the combustion chambers of the engine. As an example, gasoline-fueled and LPG engines are Otto cycle engines.

(16) "Revoke" means to cancel the verification status of an LSI retrofit emission control system. If an LSI retrofit emission control system's verification status is revoked by the Executive Officer, the applicant must immediately cease and desist selling the LSI retrofit emission control system to end-users.

(17) "Verification" means that after the data submitted has been thoroughly evaluated and an engineering judgment has determined that an LSI Retrofit Emission Control System for installation on in-use equipment will meet the requirements of this procedure, an Executive Order is issued. This ensures the emissions reductions achieved by the control strategy are real and durable and production units in the field achieve reductions consistent with the verification procedure.

NOTE: Authority cited: Sections 39002, 39003, 39500, 39600, 39601, 39650-39675, 40000, 43000, 43000.5, 43011, 43013, 43018, 43105, 43600 and 43700, Health and Safety Code. Reference: Sections 43000, 43009.5, 43013,

43018, 43101, 43104, 43105, 43106, 43107, 43204, 43205 and 43205.5, Health and Safety Code.

HISTORY

1. New section filed 4-12-2007; operative 5-12-2007 (Register 2007, No. 15).

§ 2782. Application Process.

(a) *Overview.* Before submitting a formal application for the verification of an LSI retrofit emission control system for use with an emission control group, the applicant must submit a letter of intent with a proposed verification plan to ARB (pursuant to Section 2782(b)). To obtain verification, the applicant must conduct emissions reduction testing (pursuant to Section 2783), a durability demonstration with testing (pursuant to Section 2784), and a field demonstration (pursuant to Section 2785), and must submit the results along with comments and other information (pursuant to Sections 2786 and 2787) in an application to the Executive Officer, in the format shown in Section 2782(d). If the Executive Officer grants a verification of an LSI retrofit emission control system, he or she will issue an Executive Order to the applicant identifying the verified emission reduction and any conditions that must be met for the LSI retrofit emission control system to function properly. After the Executive Officer grants verification of an LSI retrofit emission control system, the applicant must provide a warranty, conduct in-use compliance testing of the system after having sold or leased a specified number of units, and report the results to the Executive Officer (pursuant to Section 2789). An LSI retrofit emission control system that employs two or more individual sub-systems or components must be tested and submitted for evaluation as one system.

(b) *Proposed Verification Plan.* Before formally submitting an application for the verification of an LSI retrofit emission control system, the applicant must submit a proposed verification plan to ARB. The proposed verification plan should outline the applicant's plans for meeting the testing and other requirements. The Executive Officer shall use the information in the proposed plan to help determine the need for additional analyses and the appropriateness of allowing alternatives to the prescribed requirements and in determining whether the control strategy relies on sound principles of science and engineering. The proposed plan should include the following information:

(1) Identification of the contact persons, phone numbers, names and addresses of the responsible party proposing to submit an application.

(2) Description of the LSI retrofit emission control system and principles of operation. A schematic depicting operation should be included as appropriate. It is the responsibility of the applicant to demonstrate that the product relies on sound principles of science and engineering to achieve emission reductions. The description of the LSI retrofit emission control system must include, at a minimum, the information described in section 2782(d), items 2 and 3.

(A) If, after reviewing the description of the LSI retrofit emission control system, the Executive Officer determines that the applicant has not made a satisfactory demonstration that its product relies on sound principles of science and engineering to achieve emissions reductions, the Executive Officer shall notify the applicant of the determination in writing. The applicant may choose to withdraw from the verification process or submit additional materials and clarifications. The additional submittal must be received by the Executive Officer no later than 60 days from the date of the notification letter or the Executive Officer may suspend reviewing the proposed verification plan.

(B) If, after reviewing the additional submittal, the Executive Officer determines that the applicant has not yet made a satisfactory demonstration that its product relies on sound principles of science and engineering to achieve emission reductions, the review shall be suspended. If the Executive Officer has suspended reviewing the proposed verification plan, it may only be reactivated at the discretion of the Executive Officer.

(C) If at any time, the Executive Officer has reason to doubt the scientific or engineering soundness of a product, the Executive Officer may require the applicant to submit additional supporting materials and clarifications no later than 60 days from the date of the notification letter. If the additional submittal is not received by the Executive Officer by the

deadline established in the notification letter, the review of the proposed verification plan may be suspended. In deciding whether to suspend reviewing the proposed verification plan the Executive Officer will review submittals as provided in subsection (B) above.

(3) Preliminary parameters for defining emission control groups that are appropriate for the LSI retrofit emission control system. The Executive Officer will work with the applicant to determine appropriate emission control group parameters.

(4) The applicant's plan for meeting the requirements of Sections 2783-2786. Existing test data may be submitted for the Executive Officer's consideration. The proposed verification plan must focus on verification of the LSI retrofit emission control system for use with a single emission control group.

(5) A brief statement that the applicant agrees to provide a warranty pursuant to the requirements of Section 2787.

(c) *Executive Officer Review.* After an applicant submits a proposed verification plan, the Executive Officer shall determine whether the applicant has identified an appropriate testing procedure to support an application for verification and notify the applicant in writing that it may submit an application for verification. The Executive Officer may suggest modifications to the proposed verification plan to facilitate verification of the LSI retrofit emission control system. All applications, correspondence, and reports must be submitted to:

AIR RESOURCES BOARD
9528 TELSTAR AVENUE
EL MONTE, CA 91731

(d) *Application Format.* The application for verification of an LSI retrofit emission control system must follow the format shown below. If a section asks for information that is not applicable to the LSI retrofit emission control system, the applicant must indicate "not applicable." If the Executive Officer concurs with the applicant's judgment that a section is not applicable, the Executive Officer may waive the requirement to provide the information requested in that section.

1. Identification

1.1 Identification of applicant, manufacturer, and product

1.2 Identification of contact names for engineering or technical information of product or system

1.3 Identification and description of the emission control group (see 2781(a)(7) and 2783(a))

1.4 Identification of level of verification being sought

1.4.1 Emissions reduction claim

2. LSI Retrofit Emission Control System Information

2.1 General description of the LSI retrofit emission control system

2.1.1 Discussion of principles of operation and system design

2.1.2 Schematics depicting operation (as appropriate)

2.2 Favorable operating conditions

2.3 Unfavorable operating conditions (e.g., inappropriate duty cycle or application, geographical limitations, etc.) and associated reductions in performance

2.4 Fuel and lubrication oil requirements (e.g., fuel specifications) and misfueling considerations (see 2783(d)(2), 2784(c2), 2786(a) and (e).

2.5 Identification of failure modes and associated consequences

2.6 Discussion of potential safety issues (e.g., *lack of proper maintenance, unfavorable operating conditions, etc.*)

2.7 Installation requirements

2.8 Maintenance requirements

3. LSI Retrofit Emission Control System and Emission Control Group Compatibility

3.1 Compatibility with the engine

3.1.1 Discussion on calibrations and design features that may vary from engine to engine

3.1.2 Effect on overall engine performance

3.1.3 Effect on fuel consumption

3.1.4 Engine oil consumption considerations

3.2 Compatibility with the equipment/application

3.2.1 Dependence of calibration and other design features on application characteristics

3.2.2 Comparison of field data with operating conditions of equipment applications suitable for the LSI retrofit emission control group.

4. Testing Information

4.1 Emission testing requirements

4.1.1 Test facility identification

4.1.2 Description of engine and equipment (*make, model year, engine family name, etc.*)

4.1.3 Test procedure description (*–pre-conditioning period, test cycle, etc.*)

4.1.4 Test fuel and lubrication oil (see 2783(d))

4.1.5 Test results and comments electronically submitted in delimited columns in spreadsheet or text files

4.2 Durability Demonstration requirements

4.2.1 Test facility identification

4.2.2 Description of field application (where applicable)

4.2.3 Description of engine and equipment (*make, model year, engine family name, etc.*)

4.2.4 Test procedure description (*field or bench, test cycle, etc.*)

4.2.5 Test fuel and lubrication oil (see 2784(c))

4.2.6 Test results and comments electronically submitted in delimited columns in spreadsheet or text files

4.2.7 Summary of evaluative comments from third-party for in-field durability demonstration (*e.g., driver or fleet operator*)

4.3 Field Demonstration requirements (where applicable)

4.3.1 Field application identification

4.3.2 Description of engine and equipment (*make, model year, engine family name, etc.*)

4.3.3 Summary of evaluative comments on retrofit compatibility of the LSI retrofit emission control system with the equipment from third-party (*e.g., driver or fleet operator*)

4.4 Alternative In-Use Compliance Test Procedure (where applicable)

4.4.1 Description of the proposed alternative in-use test procedure

4.4.2 Description of test equipment, including measurement accuracy and precision

4.4.3 Description of advantages and limitations of the proposed alternative in-use test procedure

4.4.4 Description of the emission correlation of the proposed alternative in-use test procedure with emission results from engine dynamometer test conducted for verification of the LSI retrofit emission control system

4.4.5 Test results and comments

5. References

6. Appendices

6.1 Laboratory test report information (*for all tests*)

6.1.1 Actual laboratory test data

6.1.2 Quality assurance and quality control information

6.2 Third-party letters or questionnaires describing in-field performance

6.3 LSI retrofit emission control system label

6.4 Owner's manual (as described in Section 2786(e))

6.5 Other supporting documentation

(e) Within 30 days of receipt of the application, the Executive Officer shall notify the applicant whether the application is complete.

(f) Within 60 days after an application has been deemed complete, the Executive Officer shall determine whether the LSI retrofit emission control system merits verification and shall classify it as shown in Table 1. The applicant and the Executive Officer may mutually agree to a longer time period for reaching a decision, and the applicant may submit additional supporting documentation before a decision has been reached. The Executive Officer shall notify the applicant of the decision in writing and specify the classification level and the percentage reduction or absolute emissions and identify any terms and conditions that are necessary to support the verification.

Table 1. LSI Engine Retrofit System Verification Levels

Classification	Percentage Reduction (HC+NOx)	Absolute Emissions (HC+NOx)
LSI Level 1 ⁽¹⁾	> 25% ⁽²⁾	Not Applicable
LSI Level 2 ⁽¹⁾	> 75% ⁽³⁾	3.0 g/bhp-hr ⁽³⁾
LSI Level 3a ⁽¹⁾	> 85% ⁽⁴⁾	0.5, 1.0, 1.5, 2.0, 2.5 g/bhp-hr
LSI Level 3b ⁽⁵⁾	Not Applicable	0.5, 1.0, 1.5, 2.0 g/bhp-hr

Notes:

(1) Applicable to uncontrolled engines only

(2) The allowed verified emissions reduction is capped at 25% regardless of actual emission test values

(3) The allowed verified reduction for LSI Level 2 is capped at 75% or 3.0 g/bhp-hr regardless of actual emission test values

(4) Verified in 5% increments, applicable to LSI Level 3a classifications only

(5) Applicable to emission-controlled engines only

(g) Extensions of an Existing Verification. If the applicant has verified an LSI retrofit emission control system with one emission control group and wishes to extend the verification to include additional engines or equipment into the existing emission control group, or it wishes to include additional emission control groups, it may apply to do so using the original test data, additional test data, engineering justification and analysis, and any other information deemed necessary by the Executive Officer to address the differences between the emission control group already verified and the additional emission control group(s). Processing time periods follow sections (e) and (f) above.

(h) *Design Modifications.* If an applicant modifies the design of an LSI retrofit emission control system that has already been verified or is under consideration for verification by the Executive Officer, the modified version must be evaluated under this Procedure. The applicant must provide a detailed description of the design modification along with an explanation of how the modification will change the operation and performance of the LSI retrofit emission control system. To support its claims, the applicant must submit additional test data, engineering justification and analysis, and any other information deemed necessary by the Executive Officer to address the differences between the modified and original designs. An applicant must have written approval from the Executive Officer prior to making any design modifications to an LSI retrofit emission control system that has already been verified or is under consideration for verification by the Executive Officer. Processing time periods follow sections (e) and (f) above.

(i) *Treatment of Confidential Information.* Information submitted to the Executive Officer by an applicant may be claimed as confidential, and such information shall be handled in accordance with the procedures specified in Title 17, California Code of Regulations, Sections 91000–91022. The Executive Officer may consider such confidential information in reaching a decision on a verification application.

(j) The Executive Officer may lower the verification level or revoke the verification status of a verified LSI retrofit emission control system later if there are serious errors, omissions or inaccurate information in the application for verification or supporting information which, if known at the time of verification, would have justified lowering the verification level or denying the application.

NOTE: Authority cited: Sections 39002, 39003, 39500, 39600, 39601, 39650–39675, 40000, 43000, 43000.5, 43011, 43013, 43018, 43105, 43600 and 43700, Health and Safety Code. Reference: Sections 43000, 43009.5, 43013, 43018, 43101, 43104, 43105, 43106, 43107, 43204, 43205 and 43205.5, Health and Safety Code.

HISTORY

1. New section filed 4–12–2007; operative 5–12–2007 (Register 2007, No. 15).

§ 2783. Emissions Reduction Testing Requirements.

(a) *Emission Control Group.* The applicant must identify the emission control group and test the LSI retrofit emission control system on representative engines from that emission control group. The applicant must

identify the test engines, and equipment if applicable, by providing the engine family name, if available, make, model, and model year. The applicant must also describe equipment applications on which the LSI retrofit emission control system is intended to be used, by giving examples of in-use equipment, characterizing typical duty cycles, indicating any fuel requirements, and/or providing other application-related information.

(b) *Engine Pre-conditioning.* All testing should be performed with the test engine in a proper state of maintenance. The applicant may tune-up or rebuild the test engine prior to, but not after, baseline testing, unless rebuilding the engine is a part of the requirements for installation of the LSI retrofit emission control system.

(c) *LSI Retrofit System Pre-conditioning.* The engine or equipment installed with an LSI retrofit emission control system must be operated for a break-in period of between 25 and 100 hours before emission testing.

(d) *Test Fuel.*

(1) The test fuel used shall be consistent with the fuel specifications as outlined in the "California Exhaust Emission Standards and Test Procedures for 2001 and Subsequent Model Passenger Cars, Light-Duty Trucks, and Medium-Duty Vehicles," as incorporated by reference in section 1961(d). If the engine is tested using the U.S. EPA test fuel, as outlined in 40 CFR Part 1065, the manufacturer shall demonstrate that the emission results are consistent with these Test Procedures.

(2) During all engine tests, the engine shall employ lubricating oil consistent with the engine manufacturer's specifications for that particular engine. These specifications shall be recorded and declared in the verification application.

(e) *Test Cycle.*

(1) *Systems verified prior to 2007.* Any LSI retrofit emission control system verified before January 1, 2007 must be tested using the steady-state test procedure (C2) set forth in the, "California Exhaust Emission Standards and Test Procedures for New 2001 through 2006 Off-Road Large Spark-Ignition Engines" as incorporated by reference in section 2433(c), or the U.S. EPA transient test procedure as set forth in 40 CFR Part 1048, Subpart F, as adopted July 13, 2005. For off-road engines used in constant-speed operation, the applicant must use the steady-state test procedure (D2) set forth in the "California Exhaust Emission Standards and Test Procedures for New 2001 through 2006 Off-Road Large Spark-Ignition Engines" as incorporated by reference in section 2433(c), or the U.S. EPA transient test cycle as outlined in 40 CFR Part 1048, Subpart F, as adopted July 13, 2005. The required test cycles are summarized in Table 2, below.

Table 2. Test Cycles for Emissions Reduction Testing

Test Type	LSI Retrofit System Verification Date	Off-Road (including portable engines)	Off-Road (constant-speed operation)
Engine	Pre-2007	Steady-state test cycle (C2) from ARB off-road regulations or U.S. EPA transient test cycle	Steady-state test cycle (D2) from ARB off-road Regulations or U.S. EPA transient test cycle
Engine	2007 and later	U.S. EPA transient test cycle	U.S. EPA transient test cycle

(2) *Systems verified in 2007 or later.* Any LSI retrofit emission control system verified on or after January 1, 2007, must be tested using the U.S. EPA transient test procedure as set forth in 40 CFR Part 1048, Subpart F, as adopted July 13, 2005.

(f) *Alternative Test Cycles and Methods.* The applicant may request the Executive Officer to approve an alternative test cycle or method in place of a required test cycle or method. In reviewing this request, the Executive Officer may consider all relevant information including, but not limited to, the following:

(1) Similarity of characteristics to the specified test cycle or method and in-use duty cycle.

(2) Body of existing test data generated using the alternative test cycle or method.

(3) Technological necessity.

(4) Technical ability to conduct the required test.

(g) *Test runs to Verify HC, NOx, and CO Emissions Reductions.* A minimum of three hot-start tests for the test cycle selected from Table 2, or an Executive Officer-approved alternative test cycle, must be run for baseline and control configurations.

(h) *Results.* For all valid emission tests used to support emissions reduction claims, the applicant must report emissions of total hydrocarbons, oxides of nitrogen, and carbon monoxide in grams/brake horsepower-hour (g/bhp-hr).

(i) *Incomplete and Aborted Tests.* The applicant must identify all incomplete and aborted tests and explain why those tests were incomplete or aborted.

(j) *Additional Analyses.* The Executive Officer may require the applicant to perform additional analyses if there is reason to believe that the use of an LSI retrofit emission control system may result in the increase of toxic air contaminants, or other harmful compounds.

(1) In its determination, the Executive Officer may consider all relevant data, including but not limited to the following:

(A) The addition of any substance to the fuel, intake air, or exhaust stream.

(B) Whether a catalytic reaction is known or reasonably suspected to increase toxic air contaminants or ozone precursors.

(C) Results from scientific literature.

(D) Field experience.

(E) Any additional data.

(2) The Executive Officer will determine appropriate test methods for additional analyses in consultation with the applicant.

(k) *Quality Control of Test Data.* The applicant must provide information on the test facility, test procedure, and equipment used in the emission testing, including evidence establishing that the test equipment used meets the specifications and calibrations given in 40 CFR Part 1065.

(l) *Testing or inspection.* The Executive Officer may, with respect to any verified LSI retrofit emission control system sold, leased, offered for sale, or manufactured for sale in California, order the applicant to make available for testing and/or inspection a reasonable number of LSI retrofit emission control systems, and may direct that they be delivered at the applicant's expense to the state board at the Haagen-Smit Laboratory, 9528 Telstar Avenue, El Monte, California or where specified by the Executive Officer. The Executive Officer may also, with respect to any verified LSI retrofit emission control system being sold, leased, offered for sale, or manufactured for sale in California, have an applicant test and/or inspect a reasonable number of units at the applicant or manufacturer's facility or at any test laboratory under the supervision of the Executive Officer.

NOTE: Authority cited: Sections 39002, 39003, 39500, 39600, 39601, 39650-39675, 40000, 43000, 43000.5, 43011, 43013, 43018, 43105, 43600 and 43700, Health and Safety Code. Reference: Sections 43000, 43009.5, 43013, 43018, 43101, 43104, 43105, 43106, 43107, 43204, 43205 and 43205.5, Health and Safety Code.

HISTORY

1. New section filed 4-12-2007; operative 5-12-2007 (Register 2007, No. 15).

§ 2784. Durability Demonstration Requirements.

(a) The applicant must demonstrate, to the satisfaction of the Executive Officer, the durability of the applicant's LSI retrofit emission control system through an actual field or laboratory-based demonstration test. If the applicant chooses a laboratory-based durability demonstration, an additional field demonstration will be required to demonstrate in-field compatibility (pursuant to Section 2785). If the applicant has demonstrated the durability of the identical system in a prior verification or OEM certification, or has demonstrated durability through field experience, the applicant may request that the Executive Officer accept the pre-

vious demonstration in fulfillment of this requirement. In evaluating such a request, the Executive Officer may consider all relevant information including, but not limited to, the similarity of baseline emissions and application duty cycles, the relationship between the emission control group or engine family(ies) used in previous testing and the current emission control group, the number of engines tested, evidence of successful operation and user acceptance, and published reports.

(b) *Engine Selection.* Subject to the approval of the Executive Officer, the applicant may choose the engine to be used in the durability demonstration. The engine must be representative of the engines in the emission control group for which verification is sought. The selected engine need not be the same as the engine used for the emission testing (pursuant to Section 2783), but if the applicant does use the same engine, the emission testing results may also be used for the zero-hour durability tests.

(c) *Test Fuel.*

(1) The test fuel used shall be consistent with the fuel specifications as outlined in the "California Exhaust Emission Standards and Test Procedures for 2001 and Subsequent Model Passenger Cars, Light-Duty Trucks, and Medium-Duty Vehicles," as incorporated by reference in section 1961(d). If the engine is tested using the U.S. EPA test fuel, as outlined in 40 CFR Part 1065, the manufacturer shall demonstrate that the emission results are consistent with ARB Test Procedures. Manufacturers can use "commercially available fuels" to accumulate service hours but emission testing must be conducted using test fuel as specified in this section.

(2) During all engine tests, the engine shall employ lubricating oil consistent with the engine manufacturer's specifications for that particular engine. These specifications shall be recorded and declared in the verification application.

(d) *Service Accumulation.* The durability demonstration consists of an extended service accumulation period in which the LSI retrofit emission control system is used in the field or in a laboratory, with emissions reduction testing before and after the service accumulation. Service accumulation begins after the first emission test and concludes before the final emission test. The pre-conditioning period required in Section 2783 (c) cannot be used to meet the service accumulation requirements.

(1) *Minimum Durability Demonstration Periods.* The minimum durability demonstration period is 1,000 hours if it can be correlated or demonstrated to be equivalent to 2,500 hours in-use. The applicant must provide to the Executive Officer sufficient written documentation to justify the request for the minimum durability demonstration period. The applicant may propose a sampling scheme that could be used to support an accelerated durability schedule for approval by the Executive Officer. The sampling scheme may include, but is not limited to, logging only significant changes in a parameter, averages, or changes above some threshold value. Data must be submitted electronically in columns as a text file or another format approved by the Executive Officer.

(2) *Fuel for Durability Demonstrations.* The fuel used during durability demonstrations should be equivalent to the test fuel, or a fuel with properties less favorable to the durability of the retrofit emission control system. Durability demonstrations may, at the applicant's option and with the Executive Officer's approval, include intentional use of out-of-specification fuels so that data on the effects of using out-of-specification fuels may be obtained.

(e) *Test Cycle.* Testing requirements are summarized in Table 3. Note that the same cycle(s) must be used for both the initial (zero hour) and final (2,500 hour) tests as defined in Section 2783(e).

Table 3. Emission Tests Required for Durability Demonstrations

Application	LSI Retrofit System Verification Date	Test Type	Zero-Hour Test (prior durability demonstration) 2,500-Hour Test (after completion of 100% of the durability demonstration or the minimum durability demonstration)
Off-Road and portable engines	Pre-2007	Engine	Steady-state test cycle from ARB off-road regulations or U.S. EPA transient test cycle or an alternative cycle

Application	LSI Retrofit System Verification Date	Test Type	Zero-Hour Test (prior durability demonstration) 2,500-Hour Test (after completion of 100% of the durability demonstration or the minimum durability demonstration)
Off-Road and portable engines	2007 and later	Engine	U.S. EPA transient test cycle or an alternative cycle

(f) *Test Run.* The number of tests to be conducted in accordance with the required test cycle shown in Table 3 is described below.

(1) The LSI retrofit emission control system must undergo one set of emission tests: (3 hot starts each for baseline and with the retrofit emission control system) at the beginning (zero hour) and one set of emission tests (3 hot starts for baseline and with the emission control system) after completion of the durability demonstration (2,500 hours) or the minimum durability demonstration period (1,000 hours). If there are substantial test data from previous field studies or field demonstrations, applicants may request that the Executive Officer consider these in place of the initial emission tests.

(2) As an alternative to testing a single unit before and after the service accumulation period, the applicant may request that the Executive Officer consider the testing of two identical units, one that has been pre-conditioned and another that has completed the service accumulation period. In reviewing the request, the Executive Officer may consider all relevant information, including, but not limited to, the following:

(A) The effect of the LSI retrofit emission control system on engine operation over time. Strategies that cause changes in engine operation are likely not to qualify for this testing option.

(B) The quality of the evidence the applicant can provide to support that the two units are identical.

(C) Previous experience with similar or related technologies.

(g) *Maintenance During Durability Demonstration.* Except for emergency engine repair, only scheduled maintenance on the engine and LSI retrofit emission control system may be performed during the durability demonstration. If normal maintenance includes replacement of any component of the engine emission control system, the time (years or hours) between component change must be reported with the results of the demonstration. If emergency repair was conducted on an engine equipped with the LSI retrofit emission control system within the durability demonstration period, the applicant must, within 30 days of the repair, report to the Executive Officer on what repair was performed and what components were involved, and provide an explanation on the possible cause(s) for the engine's and/or LSI retrofit emission control system's malfunction. Based on the information provided by the applicant, the Executive Officer will decide whether to allow that engine to continue to be used in the durability demonstration program, or to start anew the durability demonstration period.

(h) *Performance Requirements.* The LSI retrofit emission control system must meet the following requirements throughout the durability demonstration period:

If the applicant claims a percent emissions reduction, the percent emissions reduction must meet or exceed the minimum percent emissions reduction associated with the LSI Level for which the applicant is seeking verification.

If the applicant claims a reduced emission level, the reduced emission level must not exceed the emission level associated with the LSI Level for which the applicant is seeking verification.

The LSI retrofit emission control system must maintain its physical integrity. Its physical structure and all of its components not specified for regular replacement during the durability demonstration period must remain intact and fully functional.

The LSI retrofit emission control system must not cause any damage to the engine, vehicle, or equipment.

Except for emergency engine repair, no maintenance of the LSI retrofit emission control system beyond that specified in its owner's manual will be allowed without prior Executive Officer approval.

(i) *Failure During the Durability Demonstration Period.* If the LSI retrofit emission control system fails to maintain its initial verified percent emissions reduction or absolute emissions for any reason, the Executive Officer may downgrade the system to the verification level that corresponds to the lowest degraded performance observed in the durability demonstration period. If the LSI retrofit emission control system fails to maintain the emissions reduction performance pursuant to Sections 2784(h)(1) and 2784(h)(2), as demonstrated during the emission test pursuant to Section 2783, during the durability period, the LSI retrofit emission control system will not be verified. If the LSI retrofit emission control system fails in the course of the durability demonstration period, the applicant must submit a report explaining the circumstances of the failure within 90 days of the failure. The Executive Officer may then, as appropriate, determine whether to deny verification or allow the applicant to correct the failed LSI retrofit emission control system and either continue the durability demonstration or begin a new durability demonstration.

NOTE: Authority cited: Sections 39002, 39003, 39500, 39600, 39601, 39650–39675, 40000, 43000, 43000.5, 43011, 43013, 43018, 43105, 43600 and 43700, Health and Safety Code. Reference: Sections 43000, 43009.5, 43013, 43018, 43101, 43104, 43105, 43106, 43107, 43204, 43205 and 43205.5, Health and Safety Code.

HISTORY

1. New section filed 4–12–2007; operative 5–12–2007 (Register 2007, No. 15).

§ 2785. Field Demonstration Requirements.

(a) *Compatibility.* The applicant must demonstrate compatibility of its LSI retrofit emission control system in the field with at least one piece of equipment belonging to the emission control group for which it seeks verification. Note that if the durability demonstration selected by the applicant is in-field, it may be used to satisfy the field demonstration requirement for that emission control group. An applicant that elected to demonstrate durability in-field must still comply with the reporting requirements as specified in 2785(c).

(1) Compatibility is determined by the Executive Officer based on the third-party statement (see section 2785(c)) and any other data submitted. An LSI retrofit emission control system is compatible with the chosen application if it:

- (A) Does not cause damage to the engine or engine malfunction;
- (B) Does not hinder or detract from the vehicle or equipment's ability to perform its normal functions; and
- (C) Is physically intact and well mounted with no signs of leakage or other visibly detectable problems.

(2) To determine whether separate field demonstrations are required when applying to extend additional engine or equipment in an existing emission control group or when applying to verify additional emission control groups, the Executive Officer may consider all relevant information, including, but not limited to existing field experience and engineering justification and analysis.

(b) *Test Period.* A piece of equipment must be operated with the LSI retrofit emission control system installed for a minimum period of 200 hours.

(c) *Reporting Requirements.* The applicant must provide a written statement from a third party approved by the Executive Officer, such as the owner or operator of the equipment used in the field demonstration. The written statement must be provided at the end of the test period and must describe the following aspects of the field demonstration: overall performance of the test application and the LSI retrofit emission control system, maintenance performed, problems encountered, and any other relevant information. The results of a visual inspection conducted by the third party at the end of the demonstration period must also be described. The description should comment on whether the LSI retrofit emission control system is physically intact, securely mounted, or leaking any fluids, and should include any other evaluative observations.

(d) *Failure During the Field Demonstration.* The LSI retrofit emission control system will be deemed to fail the field demonstration requirements if it could not comply with the criteria specified in Section 2785(a)(1) during the test period. If the LSI retrofit emission control system fails in the course of the field demonstration, the applicant must notify ARB within 15 days of the failure, and submit a report explaining the circumstances of the failure within 90 days of the failure. The Executive Officer may then determine whether to deny verification or allow the applicant to correct the failed LSI retrofit emission control system and either continue the field demonstration or begin a new field demonstration.

NOTE: Authority cited: Sections 39002, 39003, 39500, 39600, 39601, 39650–39675, 40000, 43000, 43000.5, 43011, 43013, 43018, 43105, 43600 and 43700, Health and Safety Code. Reference: Sections 43000, 43009.5, 43013, 43018, 43101, 43104, 43105, 43106, 43107, 43204, 43205 and 43205.5, Health and Safety Code.

HISTORY

1. New section filed 4–12–2007; operative 5–12–2007 (Register 2007, No. 15).

§ 2786. Other Requirements.

(a) *Fuel and Oil Requirements.* The applicant must specify the fuel and lubricating oil requirements necessary for proper functioning of the LSI retrofit emission control system. The applicant must also specify any consequences that will result from failure to comply with these requirements, as well as methods for reversing any negative consequences.

(b) *Maintenance Requirements.* The applicant must identify all normal maintenance requirements for the LSI retrofit emission control system and specify the recommended intervals for cleaning and/or replacing components. Components to be replaced within the defects warranty period must be included with the original LSI retrofit emission control system package or provided free of charge to the customer at the appropriate maintenance intervals. Any normal maintenance items that the applicant does not intend to provide free of charge must be approved by the Executive Officer (the applicant is not required to submit cost information for these.)

(c) System Labeling.

(1) The applicant must either affix legible and durable labels, or provide such labels to the installer along with instructions on how to affix them, on both the retrofit emission control system and the engine on which the retrofit emission control system is installed, except as noted in (3) below. The required labels must identify the name, address, and phone number of the manufacturer, the LSI retrofit emission control group name (defined in (2) below), a unique serial number for the LSI retrofit emission control system and the month and year of manufacture. The month and year of manufacture are not required on the label if this information can be readily obtained from the applicant by reference to the serial number. A scale drawing of a sample label must be submitted with the verification application. Unless an alternative is approved by the Executive Officer, the label information must be in the following format:

Name, Address, and Phone Number of Manufacturer

LSI Retrofit Emission Control Group Name

Product Serial Number

ZZ–ZZ (Month and Year of manufacture, e.g., 11–05)

(2) LSI Retrofit Emission Control Group Name. Each LSI retrofit emission control system shall be assigned a name defined as below:

CA/V/MMM/LL##/NHP## or NHL##/APP/XXXXX

Where:

CA: Designates an LSI retrofit emission control system verified in California

V: Year of verification

MMM: Manufacturer code (assigned by the Executive Officer)

LL##: Verified LSI Level (e.g., LL2 means the retrofit system was verified to the "LSI Level 2", LL3a means the retrofit system was verified to "LSI Level 3a).

NHP##: Verified HC + NOx reduction percent (e.g., NH75 means HC + NOx reduction of 75 percent).

NHL##: Verified HC + NO_x absolute emissions in units of g/kW-hr, (e.g., NH4.0 means verified HC + NO_x emission level of 4.0 g/kW-hr).

APP: Verified application includes a combination of Off-road (OF), or Stationary (ST)

XXXXX: Five alphanumeric character code issued by the Executive Officer

(3) The applicant may request that the Executive Officer approve an alternative label. In reviewing this request, the Executive Officer may consider all relevant information including, but not limited to, the informational content of an alternative label as proposed by the applicant.

(d) *Additional Information.* The Executive Officer may require the applicant to provide additional information about the LSI retrofit emission control system or its implementation when such information is needed to assess environmental impacts associated with its use.

(e) *Owner's Manual.* The applicant must provide a copy of the LSI retrofit emission control system owner's manual, which must clearly specify at least the following information:

Warranty statement including the warranty period over which the applicant is liable for any defects.

Installation procedure and maintenance requirements for the LSI retrofit emission control system.

Fuel consumption improvement or penalty, if any.

Fuel requirements, if any.

Requirements for lubrication oil quality and maximum lubrication oil consumption rate

Contact information for replacement components and cleaning agents.

Maintenance Requirements

(f) *Noise Level Control.* Applicants must ensure that the LSI retrofit emission control system complies with all applicable local government requirements for noise control.

(g) *Limit on CO.* In order for an LSI retrofit emission control system to be verified, it must comply with one of the following two limits on CO:

(1) For an LSI retrofit emission control system designed to be installed in a certified engine, the system must not increase the emissions of CO greater than the CO emission standards for new, emission-certified, off-road LSI engines adopted by the Air Resources Board and in effect for the model year in which the engine certification was issued;

(2) For an LSI retrofit system designed to be installed in an engine that is not emission-certified, the system must not cause the CO emission level to exceed the greater of 37 g/bhp-hr or ten percent above the engine's baseline CO emission level as determined in accordance with sections 2783 and 2784.

(h) *Emission Sampling Ports.* To facilitate in-field and normal maintenance diagnostic emission measurements, the applicant may choose to design the LSI retrofit emission control system to have a minimum of two sampling ports where emissions measurements could be made. Guideline suggestions for the sampling port criteria are presented here:

(1) The sampling ports are to be designed to allow for measurements of uncontrolled, engine-out emissions and controlled, tailpipe emissions;

(2) The sampling ports are to be 1/4 inch NPT half couplings, either welded to the exhaust system, or manufactured into the retrofit emission control device where possible;

(3) The sampling port to be used for measuring uncontrolled, engine-out emissions is to be located in a straight section of the exhaust pipe upstream from the retrofit emission control device, after the turbocharger, if so equipped, with a minimum of one to two pipe diameters from any elbows upstream of the sampling port. It is acceptable to locate the sampling port adjacent to the oxygen sensor threaded port, if so equipped;

(4) The sampling port to be used for measuring controlled, tailpipe emissions is to be placed on the muffler body, after the catalyst, if so equipped, or if in the exhaust pipe, should be located a minimum distance of 10 inches from the tailpipe opening, if feasible, otherwise, it should be located as far as possible from the tailpipe opening;

(5) The locations of the sampling ports are to be designed to be accessible to test personnel without removing major engine or equipment components, such as the forklift counterweight, for example;

(6) The sampling ports are to be equipped with threaded plugs.

(7) If the sampling ports are designed to be installed by the retrofit system installer, the applicant must provide all necessary parts and complete instructions for proper installation;

NOTE: Authority cited: Sections 39002, 39003, 39500, 39600, 39601, 39650-39675, 40000, 43000, 43000.5, 43011, 43013, 43018, 43105, 43600 and 43700, Health and Safety Code. Reference: Sections 43000, 43009.5, 43013, 43018, 43101, 43104, 43105, 43106, 43107, 43204, 43205 and 43205.5, Health and Safety Code.

HISTORY

1. New section filed 4-12-2007; operative 5-12-2007 (Register 2007, No. 15).

§ 2787. Warranty Requirements.

(a)(1) *Product Warranty.*

(A) The applicant must provide a warranty to all owners, for ownership within the warranty period, and lessees, for lease contract within the warranty period, that its verified LSI retrofit emission control system is free from defects in design, materials, workmanship, or operation of the LSI retrofit emission control system which cause the LSI retrofit emission control system to fail to conform to at least 90 percent of the its verified level for the minimum warranty period of 3 years or 2,500 hours, whichever occurs first, provided the operation of and conditions of use for the equipment, engine, and LSI retrofit emission control system conform with the operation and conditions specified in the ARB's Executive Order and that the engine or equipment belongs to the emission control group as specified in the ARB's Executive Order for that LSI retrofit emission control system.

(B) In the absence of a device to measure hours of use, the LSI retrofit emission control system must be warranted for a period of three years. If a device to measure hours is used, the engine must be warranted for 3 years or 2,500 hours, whichever occurs first. The warranty must cover the full repair or replacement cost of the LSI retrofit emission control system, including parts and labor.

(C) The warranty must also cover the full repair or replacement cost of returning the engine components to the condition they were in prior to the failure, including parts and labor, for damage to the engine proximately caused by the verified LSI retrofit emission control system. Repair or replacement of any warranted part, including the engine, must be performed at no charge to the equipment or engine owner. This includes only those relevant diagnostic expenses if a warranty claim is valid. The applicant may, at its option, instead pay the fair market value of the engine prior to the time the failure occurs.

(D) The repair or replacement of any warranted part, otherwise eligible for warranty coverage, may be excluded from such warranty if the LSI retrofit emission control system or engine has been abused, neglected, or improperly maintained, and such abuse, neglect, or improper maintenance was the direct cause of the need for the repair or replacement of the part.

(E) Failure of the equipment or engine owner to ensure scheduled maintenance or to keep maintenance records for the equipment, engine, or LSI retrofit emission control system may, but shall not per se, be grounds for disallowing a warranty claim.

(2) *Installation Warranty*

(A) A person or company that installs a verified LSI retrofit emission control system must warrant that the installation is free from defects in workmanship or materials which cause the LSI retrofit emission control system to fail to conform to at least 90 percent of its verified level for the minimum warranty period of 3 years or 2,500 hours, whichever occurs first, except as noted in 2787(a)(1)(B), or the other requirements as specified in sections 2786(c) and (e).

(B) The extent of the warranty coverage provided by installers must be the same as the warranty provided by the applicant as established in subsection (a)(1) and the same exclusions must apply.

(b)(1) *Product Warranty Statement.* The applicant must furnish a copy of the following statement in the owner's manual. The applicant may include descriptions of circumstances that may result in a denial of warranty coverage, but these descriptions shall not otherwise limit warranty coverage in any way.

YOUR PRODUCT WARRANTY RIGHTS AND OBLIGATIONS

(Applicant's name) must warrant the LSI retrofit emission control system in the equipment for which it is sold or leased to be free from defects in design, materials, workmanship, or operation of the LSI retrofit emission control system which cause the LSI retrofit emission control system to fail to conform to the emission control performance level it was verified to, or to the requirements in the California Code of Regulations, Title 13, Chapter 9, Article 8, Sections 2780 to 2786, and 2789, for 3 years or 2,500 hours, whichever occurs first, pursuant to Section 2787(a)(1), provided there has been no abuse, neglect, or improper maintenance of your LSI retrofit emission control system, engine or equipment, as specified in the owner's manuals. Where a warrantable condition exists, this warranty also covers the engine from damage caused by the LSI retrofit emission control system, subject to the same exclusions for abuse, neglect or improper maintenance. Please review your owner's manual for other warranty information. Your LSI retrofit emission control system may include a core part (e.g., three-way catalyst, carburetor, mixer or regulator) as well as hoses, connectors, and other emission-related assemblies. Where a warrantable condition exists, (applicant's name) will repair or replace your LSI retrofit emission control system at no cost to you including diagnosis, parts, and labor.

WARRANTY COVERAGE:

For a (engine size) engine used in a(n) (type of application) application, the warranty period will be 3 years or 2,500 hours of operation, whichever occurs first. If any emission-related part of your LSI retrofit emission control system is defective in design, materials, workmanship, or operation of the LSI retrofit emission control system thus causing the LSI retrofit emission control system to fail to conform to the emission control performance level it was verified to, or to the requirements in the California Code of Regulations, Title 13, Chapter 9, Article 8, Sections 2780 to 2786, and 2789, within the warranty period, as defined above. (Applicant's name) will repair or replace the LSI retrofit emission control system, including parts and labor.

In addition, (applicant's name) will replace or repair the engine components to the condition they were in prior to the failure, including parts and labor, for damage to the engine proximately caused by the verified LSI retrofit emission control system. This also includes those relevant diagnostic expenses in the case in which a warranty claim is valid. (Applicant's name) may, at its option, instead pay the fair market value of the engine prior to the time the failure occurs.

OWNER'S WARRANTY RESPONSIBILITY

As the (engine, equipment) owner, you are responsible for performing the required maintenance described in your owner's manual. (Applicant's name) recommends that you retain all maintenance records and receipts for maintenance expenses for your engine or equipment, and LSI retrofit emission control system. If you do not keep your receipts or fail to perform all scheduled maintenance, (applicant's name) may have grounds to deny warranty coverage. You are responsible for presenting your equipment or engine, and LSI retrofit emission control system to (applicant's name) or a (applicant's name) dealer as soon as a problem is detected. The warranty repair or replacement should be completed in a reasonable amount of time, not to exceed 30 days. If a replacement is needed, this may be extended to 90 days should a replacement not be available, but must be performed as soon as a replacement becomes available.

If you have questions regarding your warranty rights and responsibilities, you should contact (Insert chosen applicant's contact) at 1-800-xxx-xxxx or the California Air Resources Board at 9528 Telstar

Avenue, El Monte, CA 91731, or (800) 363-7664, or electronic mail: helpline@arb.ca.gov.

(b)(2) *Installation Warranty Statement.* The installer must furnish the owner with a copy of the following statement.

YOUR INSTALLATION WARRANTY RIGHTS AND OBLIGATIONS

(Installer's name) must warrant that the installation of an LSI retrofit emission control system is free from defects in workmanship or materials which cause the LSI retrofit emission control system to fail to conform to the emission control performance level it was verified to, or to the requirements in the California Code of Regulations, Title 13, Sections 2781 to 2786 and 2789. The warranty period and the extent of the warranty coverage provided by (installer's name) must be the same as the warranty provided by the product manufacturer, and the same exclusions must apply.

OWNER'S WARRANTY RESPONSIBILITY

As the engine or equipment owner, you are responsible for presenting your engine or equipment and LSI retrofit emission control system to (installer's name) as soon as a problem with the installation is detected.

If you have questions regarding your warranty rights and responsibilities, you should contact (Insert chosen installer's contact) at 1-800-xxx-xxxx or the California Air Resources Board at 9528 Telstar Avenue, El Monte, CA 91731, or (800) 363-7664, or electronic mail: helpline@arb.ca.gov.

(c)(1) *Annual Warranty Report.* The applicant must submit a warranty report to the Executive Officer by February 1 of each calendar year. The warranty report must include the following information:

(A) Annual and cumulative sales, and annual and cumulative leases of equipment installed with LSI retrofit emission control systems—(California only).

(B) Annual and cumulative production of LSI retrofit emission control systems (California only).

(C) Annual summary of warranty claims (California only). The summary must include:

i. A description of the nature of the claims and of the warranty replacements or repairs. The applicant must categorize warranty claims for each LSI retrofit emission control system group by the component(s) part number(s) replaced or repaired.

ii. The number and percentage of LSI retrofit emission control systems of each model for which a warranty replacement or repair was identified.

iii. A short description of the LSI retrofit emission control system component that was replaced or repaired under warranty and the most likely reason for its failure.

(E)(D) Date the warranty claims were filed and the engine family and application the LSI retrofit emission control systems were used with. The reason(s) for any instances in which warranty service is not provided to end-users that file warranty claims. The applicant may also want to report instances where the applicant chose to honor warranty claims even though the applicant has determined that those warranty claims were invalid or that they were not required per Section 2787 of this regulation.

(c)(2) *Periodic Warranty Reports.*

(A) The applicant must submit a warranty report within 30 calendar days if there are three or more warranty claims for the same component or same part number repaired or replaced; or, if there are four or more total warranty claims, or four percent of the cumulative number of LSI retrofit systems subject to these warranty provisions, whichever is greater. The warranty report must include the following information:

i. A description of the nature of the claims and of the warranty replacements or repairs. The applicant must categorize warranty claims for each LSI retrofit emission control group by the component(s) part number(s) replaced or repaired.

ii. The number and percentage of LSI retrofit emission control systems of each model for which a warranty replacement or repair was identified.

iii. A short description of the LSI retrofit emission control system component that was replaced or repaired under warranty and the most likely reason for its failure.

iv. Date the warranty claims were filed and the engine family and application the LSI retrofit emission control systems were used with.

v. The reason(s) for any instances in which warranty service is not provided to end-users that file warranty claims. The applicant may also want to report instances where the applicant chose to honor warranty claims even though the applicant has determined that those warranty claims were invalid or that they were not required per Section 2787 of this regulation.

(B) The applicant must comply with the requirements specified pursuant to Section 2787(c)(2)(A), above, for warranty claims submitted to the applicant after the reporting dates of the periodic warranty report.

NOTE: Authority cited: Sections 39002, 39003, 39500, 39600, 39601, 39650–39675, 40000, 43000, 43000.5, 43011, 43013, 43018, 43105, 43600 and 43700, Health and Safety Code. Reference: Sections 43000, 43009.5, 43013, 43018, 43101, 43104, 43105, 43106, 43107, 43204, 43205 and 43205.5, Health and Safety Code.

HISTORY

1. New section filed 4–12–2007; operative 5–12–2007 (Register 2007, No. 15).

§ 2788. Determination of Emissions Reduction.

(a) *Calculation of Emissions Reduction.* The emissions reduction verified for an LSI retrofit emission control system is based on the average of all valid test results, as specified in Sections 2783(g) and 2784(f), before (baseline) and after (control) implementation of the LSI retrofit emission control system. Test results from both the emission testing and durability testing are to be included. If the applicant chooses to perform either the zero hour or the 2500-hour durability baseline test, but not both, those results must be used to calculate the reductions obtained in both the zero hour and 2500-hour control tests.

(1) *Percentage Reduction.* The percentage reduction for a given pair of baseline and control test sets (where a “set” consists of all test cycle repetitions) is the difference between the average baseline and average control emissions divided by the average baseline emissions, multiplied by 100 percent. The average of all such reductions, as shown in the equation below, is used in the verification of an LSI retrofit emission control system.

$$\text{Percentage Reduction} = 100 \times \frac{\sum (\text{baseline}_{\text{AVG}} - \text{control}_{\text{AVG}}) / \text{baseline}_{\text{AVG}}}{\text{Number of control test sets}}$$

Where:

$$\begin{aligned} \sum &= \text{sum over all control test sets} \\ \text{baseline}_{\text{AVG}} \text{ or } \text{control}_{\text{AVG}} &= \text{average of emissions from all} \\ &\quad \text{baseline or control test repetitions within a given set} \end{aligned}$$

(2) *Absolute Emission Level.* The absolute emission level is the average control emission level, as defined in the following equation:

$$\text{Absolute Emission Level} = \frac{\sum (\text{control}_{\text{AVG}})}{\text{Number of control test sets}}$$

(b) *Categorization of the LSI Retrofit Emission Control System.* The Executive Officer shall categorize an LSI retrofit emission control system to reduce HC and NOx emissions based on its verified emissions reductions. An LSI retrofit emission control system that reduces HC and NOx will be assigned its verified percentage reduction or verified emissions reduction level, pursuant to section 2782(f).

The Executive Officer may lower the verification level or revoke the verification status of a verified LSI retrofit emission control group if the applicant fails to observe the requirements of Sections 2786 or 2787. The Executive Officer must allow the applicant an opportunity to address the possible lowering or revocation of the verification level in a corrective report to the Executive Officer and the Executive Officer may make this determination based on all relevant information.

NOTE: Authority cited: Sections 39002, 39003, 39500, 39600, 39601, 39650–39675, 40000, 43000, 43000.5, 43011, 43013, 43018, 43105, 43600 and 43700, Health and Safety Code. Reference: Sections 39650–39675, 43000, 43009.5, 43013, 43018, 43101, 43104, 43105, 43106, 43107 and 43204–43205.5, Health and Safety Code; and Title 17 California Code of Regulations Section 93000.

HISTORY

1. New section filed 4–12–2007; operative 5–12–2007 (Register 2007, No. 15).

§ 2789. In-Use Compliance Requirements.

(a) *Applicability.* These in-use compliance requirements apply to all LSI retrofit emission control systems for off-road applications. It is the responsibility of the applicant to perform in-use compliance testing for each verified LSI retrofit emission control group. Testing is required when 50 units within a given LSI retrofit emission group have been sold or leased in the California market.

(b) *Test Period.* Applicants must obtain access to and test LSI retrofit emission control systems, as described below in (c), (d), and (e), once they have been operated between 1,500 and 2,000 hours or between 22 and 29 months, whichever comes first.

(c) *Selection of LSI Retrofit Emission Control Systems for Testing.* For each LSI retrofit emission control group, the Executive Officer will identify a representative sample of engines or equipment equipped with LSI retrofit emission control systems for in-use compliance testing. The engines or equipment with the selected LSI retrofit emission control systems installed must have good maintenance records and may receive a tune-up or normal maintenance prior to testing. The applicant must obtain information from the end users regarding the accumulated hours of usage, maintenance records (to the extent practicable), operating conditions and a description of any unscheduled maintenance that may affect the emission results. If the specified information is not available for the engine or equipment selected, the Executive Officer may select a different engine or equipment for testing. Upon notification that an engine or equipment has been selected, an applicant would have 6 months to provide an in-use compliance testing proposal for approval by the Executive Officer. Testing would begin when the engines had accumulated sufficient hours of service; testing must be completed within one year of notification.

(d) *Number of LSI Retrofit Emission Control Systems to be Tested.* The number of LSI retrofit emission control systems an applicant must test will be determined as follows:

(1) A minimum of four LSI retrofit emission control systems in each LSI retrofit emission control group must be tested. For every system tested that does not reduce emissions by at least 90 percent of the lower bound of its initial verification level, two more LSI retrofit emission control systems from the same group must be obtained and tested. The total number of systems tested shall not exceed ten per LSI retrofit emission control group.

(2) At the discretion of the Executive Officer, applicants may begin by testing more than the minimum of four LSI retrofit emission control systems. Applicants may concede failure of an emission control system before testing a total of ten LSI retrofit emission control systems.

(e) *In-use Compliance Emission Testing.* Applicant must measure emissions using one of the following test procedures for in-use compliance emission testing:

(1) *Laboratory Testing.* Remove the selected engines or the retrofit emission control systems for testing in a laboratory. Applicants must follow the testing procedure used for initial emissions reduction verification as described in Section 2783. For engines originally verified to a percentage reduction, both baseline and control tests are required; for engines originally verified to an absolute emission, only control tests are required. In addition, applicants must use the same test cycle(s) that they used to verify the LSI retrofit emission control system originally.

(2) *Testing Installed Engines.* Test the selected engines while they remain installed in the equipment. Applicants must follow the U.S. EPA field-testing procedures as specified in 40 CFR part 1065, subpart J, as adopted July 13, 2005. The accuracy and precision of the measurement system used for in-use testing must be at least ± 5 percent or better. For engines originally verified to a percentage reduction, both baseline and control tests are required; for engines originally verified to an emission level, only control tests are required.

(3) *Alternative In-Use Testing.* The Executive Officer may approve an alternative to the in-use testing described above, on a case-by-case basis.

sis. The proposed alternative must use scientifically sound methodology and be designed to accurately determine whether the LSI retrofit emission control system is in compliance with the requirements that are specified in the verification Executive Order. If the applicant wants to use an alternative in-use test procedure, the applicant should submit the proposed alternative in-use test procedure at the same time the applicant submits the proposed verification testing procedure (pursuant to Section 2782(b) for LSI retrofit control system verification. If the applicant proposes an alternative test to determine in-use emissions of the LSI retrofit system, the applicant must provide data to show that the emission test results from the proposed alternative test are consistent with the emission test results derived from engine dynamometer test for the test cycle(s) that was used in the initial verification of the LSI retrofit system.

(f) If an LSI retrofit emission control system fails catastrophically during the in-use compliance testing, the applicant must provide an investigative report detailing the causes of the failure to the Executive Officer within 90 days of the failure.

(g) The Executive Officer may, with respect to any LSI retrofit emission control system sold, leased, offered for sale, or manufactured for sale in California, order the applicant to make available for compliance testing and/or inspection a reasonable number of LSI retrofit emission control systems, and may direct that the retrofit emission control systems be delivered at the applicant's expense to the state board at the Haagen-Smit Laboratory, 9528 Telstar Avenue, El Monte, California or where specified by the Executive Officer. The Executive Officer may also, with respect to any LSI retrofit emission control system being sold, leased, offered for sale, or manufactured for sale in California, have an applicant compliance test and/or inspect a reasonable number of units at the applicant or manufacturer's facility or at any test laboratory under the supervision of the ARB Executive Officer.

(h) *In-Use Compliance Report.* The applicant must submit an in-use compliance report to the Executive Officer within three months of completing testing. The following information must be reported for each of the minimum of four LSI retrofit emission control systems tested:

- (1) Parties involved in conducting the in-use compliance tests.
- (2) Quality control and quality assurance information for the test equipment.
- (3) LSI retrofit emission control group name and manufacture date.
- (4) Equipment and type of engine (engine family name, make, model year, model, displacement, etc.) the LSI retrofit emission control system was applied to.
- (5) Estimated hours the LSI retrofit emission control system was in use.

(6) Results of all emission testing.

(7) Summary of all maintenance, adjustments, modifications, and repairs performed on the LSI retrofit emission control system.

(i) The Executive Officer may request the applicant to perform additional in-use testing if the warranty claims exceed the thresholds specified in section 2787(c)(2)(A) or based on other relevant information. As noted in section 2787(c)(2)(A), if warranty claims exceed the specified thresholds, the applicant must notify the Executive Officer and submit a warranty report within 30 calendar days of that time.

(j) *Conditions for Passing In-Use Compliance Testing.* For an LSI retrofit emission control system to pass in-use compliance testing, emission test results must indicate that the retrofit system reduced emissions by at least 90 percent of the lower bound of the emissions reduction level to which the Executive Officer originally verified it to. If the first four LSI retrofit emission control systems tested within an LSI retrofit emission

control group meet this standard, the LSI retrofit emission control group passes in-use compliance testing. If any of the first four LSI retrofit emission control systems tested within an LSI retrofit emission control group fail to reduce emissions by at least 90 percent of the lower bound of the emissions reduction level to which the Executive Officer originally verified it to, and if more than four units are tested, at least 70 percent of all units tested must pass the 90 percent standard for the LSI retrofit emission control group to pass in-use compliance testing. For each failed test, for which the cause of failure can be attributed to the product and not to maintenance or other engine-related problems, two additional units must be tested, up to a total of ten units per LSI retrofit emission control group.

(k) *Failure of In-use Compliance Testing — Remedial Action.* If the LSI retrofit system from an emission control group does not meet the minimum requirements for in-use compliance testing, the applicant must submit a remedial report within 90 days after the in-use compliance report is submitted. The remedial report must include:

- (1) Summary of the in-use compliance report.
- (2) Detailed analysis of the failed LSI retrofit emission control systems and possible reasons for failure.
- (3) Remedial measures to correct or replace failed LSI retrofit emission control systems as well as the rest of the in-use LSI retrofit emission control systems.

(l) The Executive Officer may evaluate the remedial report, annual warranty report, and all other relevant information to determine if the LSI retrofit emission control group passes in-use compliance testing. The Executive Officer may request more information from the applicant. Based on this review, the Executive Officer may lower the verification level or revoke the verification status of a verified LSI retrofit emission control group. The Executive Officer may also lower the verification level or revoke the verification status of a verified LSI retrofit emission control group, if the applicant does not conduct in-use compliance testing in accordance with this section, or if the Executive Officer conducts in-use compliance testing in accordance with this section (including alternative testing) and the LSI retrofit emission control group does not pass the standards in this section. The Executive Officer must allow the applicant an opportunity to address the possible lowering or revocation of the verification level in a remedial report to the Executive Officer prior to taking action lowering or revoking the verification level, and shall consider all relevant information.

NOTE: Authority cited: Sections 39002, 39003, 39500, 39600, 39601, 39650–39675, 40000, 43000, 43000.5, 43011, 43013, 43018, 43105, 43600 and 43700, Health and Safety Code. Reference: Sections 43000, 43009.5, 43013, 43018, 43101, 43104, 43105, 43106, 43107, 43204, 43205 and 43205.5, Health and Safety Code.

—Noncommercial, citizenship and alien status requirements, 13:450.00-13:450.06

See also PERSONAL RESPONSIBILITY AND WORK OPPORTUNITY RECONCILIATION ACT

Forms

—Financial responsibility restricted licenses, 13:75.20-13:77.17

—Minors under age eighteen, 13:50.40

Fraud

—Applications, 13:25.01

—Disciplinary guidelines, 13:110.04

Hazardous agricultural materials endorsement, medical requirements, 13:28.20

Health questionnaire, 13:28.23

Hearing impaired persons, accommodation of at drivers' license suspension or revocation hearings, 13:115.03

Hearings

—Denial, 13:15.05

—Suspension or revocation, 13:115.01-13:115.10

House car endorsement, 13:147.00

Identification cards

See IDENTIFICATION CARDS

Identification requirements, 13:15.00, 13:20.06, 13:25.01

Immigration status

—Appeals hearings, 13:15.05

—Documentation requirements, 13:15.00

—Issuance, terms of, 13:15.03

Medical certificates issued by motor vehicles department, 13:28.19

Medical requirements, 13:28.18

—Disciplinary guidelines, 13:110.04

—Firefighter licenses, restricted, 13:28.22

—Hazardous agricultural materials endorsement, 13:28.20

—Health questionnaire, 13:28.23

—Lapses of consciousness, disorders characterized by, 13:110.01, 13:110.02

—Reexaminations, 13:100.01

—Restricted Class A licenses, 13:28.21

Minors under age eighteen

—Forms, 13:50.40

—Instructions, minimum, 13:50.45

Name requirement, 13:15.06

—Identification documentation required, 13:20.04

Negligent operation, disciplinary guidelines, 13:110.04

Physical requirements, 13:28.18

Problem Driver Pointer System, 13:15.01

Provisional licenses

See Student licenses, this heading

Reinstatement

—Prerequisites, 13:124.93

—Reissue fee, 13:140.00

Restricted licenses

—Following accidents, 13:77.05-13:77.17

—Application, 13:77.10

—Employment restriction, 13:77.15

DRIVERS' LICENSES—continued

Restricted licenses—continued

—Following accidents—continued

—Fees, 13:77.05

—Medical treatment restriction, 13:77.17

—School transportation restriction, 13:77.16

—Suspension of license, critical need to drive, 13:118.00

Revocation

See Suspension or revocation, this heading

Social security number verification, 13:15.04

Student licenses, 13:344.10-13:344.34

—Age qualification, 13:344.22

—Alcohol addiction, grounds for refusal, 13:344.22

—Application

—Identification required, 13:344.18

—Records, 13:344.32

—Cancellation, 13:344.26

—Contents, 13:344.24
